Chapter I. Theory of Distributions	1
Introduction to Chapters I, II, III	1
§1. Spaces of infinitely differentiable functions	2
1.1. Properties of the convolution	2
1.2. Approximation by C_0^∞ -functions	3
1.3. Proof of Proposition 1.1	5
1.4. Proof of property b) of the convolution	5
§2. Definition of a distribution	6
2.1. Examples of distributions	6
2.2. Regular functionals	7
2.3. Distributions in a domain	8
§3. Operations with distributions	9
3.1. Derivative of a distribution	9
3.2. Multiplication of a distribution by a C^∞ -function	9
3.3. Change of variables for distributions	10
§4. Convergence of distributions	10
4.1. Delta-like sequences	12
§5. Regularizations of nonintegrable functions	14
5.1. Regularization in \mathbb{R}^1	15
5.2. Regularization in \mathbb{R}^n	17
§6. Supports of distributions	20

6.1.	General form of a distribution with support at 0	20
6.2.	Distributions with compact supports	22
§7.	The convolution of distributions	24
7.1.	Convolution of $f \in \mathcal{D}'$ and $\varphi \in C_0^\infty$	24
7.2.	Convolution of $f \in \mathcal{D}'$ and $g \in \mathcal{E}'$	26
7.3.	Direct product of distributions	27
7.4.	Partial hypoellipticity	28
§8.	Problems	30
Chapter II. Fourier Transforms		33
§9.	Tempered distributions	33
9.1.	General form of a tempered distribution	35
§10.	Fourier transforms of tempered distributions	37
10.1.	Fourier transforms of functions in \mathcal{S}	38
10.2.	Fourier transform of tempered distributions	39
10.3.	Generalization of Liouville's theorem	41
§11.	Fourier transforms of distributions with compact supports	42
§12.	Fourier transforms of convolutions	45
§13.	Sobolev spaces	46
13.1.	Density of $C_0^\infty(\mathbb{R}^n)$ in $H_s(\mathbb{R}^n)$	49
13.2.	Multiplication by $a(x) \in \mathcal{S}$	50
13.3.	Sobolev's embedding theorem	51
13.4.	An equivalent norm for noninteger	52
13.5.	Restrictions to hyperplanes (traces)	53
13.6.	Duality of Sobolev spaces	54
13.7.	Invariance of $H_s(\mathbb{R}^n)$ under changes of variables	55
§14.	Singular supports and wave front sets of distributions	57
14.1.	Products of distributions	61
14.2.	Restrictions of distributions to a surface	63
§15.	Problems	65
Chapter III. Applications of Distributions to Partial Differential Equations		69
§16.	Partial differential equations with constant coefficients	69
16.1.	The heat equation	70
16.2.	The Schrödinger equation	72
16.3.	The wave equation	73
16.4.	Fundamental solutions for the wave equations	74
16.5.	The Laplace equation	78

16.6.	The reduced wave equation	81
16.7.	Faddeev's fundamental solutions for $(-\Delta - k^2)$	84
§17.	Existence of a fundamental solution	85
§18.	Hypoelliptic equations	87
18.1.	Characterization of hypoelliptic polynomials	89
18.2.	Examples of hypoelliptic operators	90
§19.	The radiation conditions	91
19.1.	The Helmholtz equation in \mathbb{R}^3	91
19.2.	Radiation conditions	93
19.3.	The stationary phase lemma	95
19.4.	Radiation conditions for $n \geq 2$	98
19.5.	The limiting amplitude principle	101
§20.	Single and double layer potentials	102
20.1.	Limiting values of double layers potentials	102
20.2.	Limiting values of normal derivatives of single layer potentials	106
§21.	Problems	107
Chapter IV.	Second Order Elliptic Equations in Bounded Domains	111
	Introduction to Chapter IV	111
§22.	Sobolev spaces in domains with smooth boundaries	112
22.1.	The spaces $\overset{\circ}{H}_s(\Omega)$ and $H_s(\Omega)$	112
22.2.	Equivalent norm in $H_m(\Omega)$	113
22.3.	The density of C_0^∞ in $\overset{\circ}{H}_s(\Omega)$	114
22.4.	Restrictions to $\partial\Omega$	115
22.5.	Duality of Sobolev spaces in Ω	116
§23.	Dirichlet problem for second order elliptic PDEs	117
23.1.	The main inequality	118
23.2.	Uniqueness and existence theorem in $\overset{\circ}{H}_1(\Omega)$	120
23.3.	Nonhomogeneous Dirichlet problem	121
§24.	Regularity of solutions for elliptic equations	122
24.1.	Interior regularity	123
24.2.	Boundary regularity	124
§25.	Variational approach. The Neumann problem	125
25.1.	Weak solution of the Neumann problem	127
25.2.	Regularity of weak solution of the Neumann problem	128
§26.	Boundary value problems with distribution boundary data	129

26.1.	Partial hypoellipticity property of elliptic equations	129
26.2.	Applications to nonhomogeneous Dirichlet and Neumann problems	132
§27.	Variational inequalities	134
27.1.	Minimization of a quadratic functional on a convex set.	134
27.2.	Characterization of the minimum point	135
§28.	Problems	137
Chapter V. Scattering Theory		141
Introduction to Chapter V		141
§29.	Agmon's estimates	142
§30.	Nonhomogeneous Schrödinger equation	148
30.1.	The case of $q(x) = O\left(\frac{1}{(1+ x)^{\frac{n+1}{2}+\alpha+\varepsilon}}\right)$	148
30.2.	Asymptotic behavior of outgoing solutions (the case of $q(x) = O\left(\frac{1}{(1+ x)^{\frac{n+1}{2}+\alpha+\varepsilon}}\right), \alpha > 0$)	149
30.3.	The case of $q(x) = O\left(\frac{1}{(1+ x)^{1+\varepsilon}}\right)$	149
§31.	The uniqueness of outgoing solutions	151
31.1.	Absence of discrete spectrum for $k^2 > 0$	155
31.2.	Existence of outgoing fundamental solution (the case of $q(x) = O\left(\frac{1}{(1+ x)^{\frac{n+1}{2}+\delta}}\right)$)	156
§32.	The limiting absorption principle	157
§33.	The scattering problem	160
33.1.	The scattering problem (the case of $q(x) = O\left(\frac{1}{(1+ x)^{n+\alpha}}\right)$)	160
33.2.	Inverse scattering problem (the case of $q(x) = O\left(\frac{1}{(1+ x)^{n+\alpha}}\right)$)	162
33.3.	The scattering problem (the case of $q(x) = O\left(\frac{1}{(1+ x)^{1+\varepsilon}}\right)$)	163
33.4.	Generalized distorted plane waves	164
33.5.	Generalized scattering amplitude	164
§34.	Inverse boundary value problem	168
34.1.	Electrical impedance tomography	171
§35.	Equivalence of inverse BVP and inverse scattering	172
§36.	Scattering by obstacles	175
36.1.	The case of the Neumann conditions	179
36.2.	Inverse obstacle problem	179
§37.	Inverse scattering at a fixed energy	181
37.1.	Relation between the scattering amplitude and the Faddeev's scattering amplitudes	181

37.2.	Analytic continuation of T_r	184
37.3.	The limiting values of T_r and Faddeev's scattering amplitude	187
37.4.	Final step: The recovery of $q(x)$	190
§38.	Inverse backscattering	191
38.1.	The case of real-valued potentials	192
§39.	Problems	193
Chapter VI.	Pseudodifferential Operators	197
	Introduction to Chapter VI	197
§40.	Boundedness and composition of ψ do's	198
40.1.	The boundedness theorem	198
40.2.	Composition of ψ do's	199
§41.	Elliptic operators and parametrices	204
41.1.	Parametrix for a strongly elliptic operator	204
41.2.	The existence and uniqueness theorem	206
41.3.	Elliptic regularity	206
§42.	Compactness and the Fredholm property	207
42.1.	Compact operators	207
42.2.	Fredholm operators	208
42.3.	Fredholm elliptic operators in \mathbb{R}^n	211
§43.	The adjoint of a pseudodifferential operator	211
43.1.	A general form of ψ do's	211
43.2.	The adjoint operator	214
43.3.	Weyl's ψ do's	215
§44.	Pseudolocal property and microlocal regularity	215
44.1.	The Schwartz kernel	215
44.2.	Pseudolocal property of ψ do's	217
44.3.	Microlocal regularity	218
§45.	Change-of-variables formula for ψ do's	221
§46.	The Cauchy problem for parabolic equations	223
46.1.	Parabolic ψ do's	223
46.2.	The Cauchy problem with zero initial conditions	225
46.3.	The Cauchy problem with nonzero initial conditions	226
§47.	The heat kernel	228
47.1.	Solving the Cauchy problem by Fourier-Laplace transform	228
47.2.	Asymptotics of the heat kernel as $t \rightarrow +0$.	230
§48.	The Cauchy problem for strictly hyperbolic equations	231
48.1.	The main estimate	233

48.2.	Uniqueness and parabolic regularization	235
48.3.	The Cauchy problem on a finite time interval	237
48.4.	Strictly hyperbolic equations of second order	240
§49.	Domain of dependence	243
§50.	Propagation of singularities	247
50.1.	The null-bicharacteristics	247
50.2.	Operators of real principal type	247
50.3.	Propagation of singularities for operators of real principal type	249
50.4.	Propagation of singularities in the case of a hyperbolic Cauchy problem	255
§51.	Problems	258
Chapter VII. Elliptic Boundary Value Problems and Parametrices		263
Introduction to Chapter VII		263
§52.	Pseudodifferential operators on a manifold	264
52.1.	Manifolds and vector bundles	264
52.2.	Definition of a pseudodifferential operator on a manifold	265
52.3.	Elliptic ψ do's on a manifold	266
§53.	Boundary value problems in the half-space	266
53.1.	Factorization of an elliptic symbol	266
53.2.	Explicit solution of the boundary value problem	268
§54.	Elliptic boundary value problems in a bounded domain	270
54.1.	The method of "freezing" coefficients	270
54.2.	The Fredholm property	273
54.3.	Invariant form of the ellipticity of boundary conditions	276
54.4.	Boundary value problems for elliptic systems of differential equations	276
§55.	Parametrices for elliptic boundary value problems	278
55.1.	Plus-operators and minus-operators	278
55.2.	Construction of the parametrix in the half-space	281
55.3.	Parametrix in a bounded domain	284
§56.	The heat trace asymptotics	285
56.1.	The existence and the estimates of the resolvent	285
56.2.	The parametrix construction	286
56.3.	The heat trace for the Dirichlet Laplacian	288
56.4.	The heat trace for the Neumann Laplacian	293
56.5.	The heat trace for the elliptic operator of an arbitrary order	294
§57.	Parametrix for the Dirichlet-to-Neumann operator	296

57.1.	Construction of the parametrix	296
57.2.	Determination of the metric on the boundary	300
§58.	Spectral theory of elliptic operators	301
58.1.	The nonselfadjoint case	301
58.2.	Trace class operators	302
58.3.	The selfadjoint case	305
58.4.	The case of a compact manifold	309
§59.	The index of elliptic operators in \mathbb{R}^n	311
59.1.	Properties of Fredholm operators	311
59.2.	Index of an elliptic ψ do	313
59.3.	Fredholm elliptic ψ do's in \mathbb{R}^n	316
59.4.	Elements of K -theory	317
59.5.	Proof of the index theorem	321
§60.	Problems	324
Chapter VIII.	Fourier Integral Operators	329
	Introduction to Chapter VIII	329
§61.	Boundedness of Fourier integral operators (FIO's)	330
61.1.	The definition of a FIO	330
61.2.	The boundedness of FIO's	331
61.3.	Canonical transformations	333
§62.	Operations with Fourier integral operators	334
62.1.	The stationary phase lemma	334
62.2.	Composition of a ψ do and a FIO	335
62.3.	Elliptic FIO's	337
62.4.	Egorov's theorem	338
§63.	The wave front set of Fourier integral operators	340
§64.	Parametrix for the hyperbolic Cauchy problem	342
64.1.	Asymptotic expansion	342
64.2.	Solution of the eikonal equation	344
64.3.	Solution of the transport equation	346
64.4.	Propagation of singularities	348
§65.	Global Fourier integral operators	349
65.1.	Lagrangian manifolds	349
65.2.	FIO's with nondegenerate phase functions	350
65.3.	Local coordinates for a graph of a canonical transformation	353
65.4.	Definition of a global FIO	358
65.5.	Construction of a global FIO given a global canonical transformation	360

65.6.	Composition of global FIO's	365

Preface

This book is based on the lectures on partial differential equations that I have given for many years at UCLA. It does not assume any knowledge of partial differential equations and can be considered as a first graduate course in linear PDE. However, some basic knowledge of the Fourier transform, Lebesgue integrals and elementary functional analysis is required. It is organized as lecture notes with emphasis on clarity and accessibility.

We shall briefly describe the content of the book. The first three chapters are the elementary theory of distributions and Fourier transforms of distributions with applications to partial differential equations with constant coefficients. It is similar to the first chapters of the books by Gelfand and Shilov [GSh] and Shilov [Sh]. Additional material includes the wave front sets of distributions, Sobolev spaces, the stationary phase lemma, the radiation conditions, and potential theory.

In Chapter IV the Dirichlet and the Neumann boundary value problems are considered for second order elliptic equations in a smooth bounded domain. The existence, uniqueness, and regularity of solutions are proven. A nontraditional topic of this chapter is the proof of the existence and uniqueness of the solutions of the Neumann and Dirichlet problems for homogeneous equations in Sobolev spaces of negative order on the boundary.

Chapter V is devoted to scattering theory including inverse scattering, inverse boundary value problem, and the obstacle problem.

Chapter VI starts with the theory of pseudodifferential operators with classical symbols. It is followed by the theory of parabolic Cauchy problems based on pseudodifferential operators with symbols analytic in the half-plane and heat kernel asymptotics.

The next topic of Chapter VI is the Cauchy problem for hyperbolic equations of order $m \geq 2$, the domains of dependence of solutions to hyperbolic equations, and Hörmander's theory [H1] of propagation of singularities for the equations of real principal type with applications to hyperbolic equations.

In Chapter VII the Fredholm property for elliptic boundary value problems and parametrices in smooth domains are studied following the approach of the author's book [E1]. The main application of the parametrix is the study of heat trace asymptotics as $t \rightarrow 0$. The parametrix construction allows one to compute explicitly two leading terms of the heat trace asymptotics for the cases of Dirichlet and Neumann boundary conditions. Chapter VII concludes with elements of the spectral theory of elliptic operators and the proof of the index theorem for elliptic operators in \mathbb{R}^n following the works of Atiyah-Singer [AtS1], [AtS2] and Seeley [Se3].

The last Chapter VIII is devoted to the theory of Fourier integral operators. Starting with the local theory of FIO, we proceed to the global theory. We consider only a subclass of Hörmander's FIOs (see [H1]), assuming that the Lagrangian manifold of the FIO corresponds to the graph of a canonical transformation. In particular, having a global canonical transformation, we construct a global FIO corresponding to this canonical transformation. Next, following Maslov [M1], [M2], [MF], we construct a global geometric optic solution for a second order hyperbolic equation on arbitrary time interval $[0, T]$.

Chapter VIII concludes with a section on the oblique derivative problem. The oblique derivative problem is a good example of nonelliptic boundary value problem, and it attracted the attention of many mathematicians: Egorov-Kondrat'ev [EgK], Malutin [Mal], Mazya-Paneah [MaP], Mazya [Ma], and others. The section is based on the author's paper [E3], and it uses the FIOs to greatly simplify the problem. Similar results are obtained independently by Sjöstrand [Sj] and Duistermaat-Sjöstrand [DSj].

At the end of each chapter there is a problem section. Some problems are relatively simple exercises that help to study the material. Others are more difficult problems that cover additional topics not included in the book. In those cases hints or references to the original sources are given.

Acknowledgments

I want to thank my friend and collaborator Jim Ralston for many fruitful discussions and advice. I am very grateful to my former students Joe Benish, Brian Sako, Carol Shubin, Borislava Gutarz, Xiaosheng Li and others who took notes during my classes. These notes were the starting point of this book. I express my deep gratitude to the anonymous referees whose

remarks and suggestions greatly improved the book. I am very thankful to Neelesh Tiruvilumala for pointing out a mistake in an earlier draft. I am also grateful to Bernard Lascar and Ciprian Manolescu for valuable comments. I am especially grateful to my wife Marina who prepared the manuscript. Without her help this book would not be written.

My deepest gratitude to the editor Natalya Pluzhnikov for the outstanding work of improving and correcting the manuscript. It is impossible to overestimate her contribution.

Finally, I am very grateful to Sergei Gelfand for encouragement to write a book.

- 50 **Y. A. Abramovich and C. D. Aliprantis**, An invitation to operator theory, 2002

For a complete list of titles in this series, visit the
AMS Bookstore at www.ams.org/bookstore/.

This book is a reader-friendly, relatively short introduction to the modern theory of linear partial differential equations. An effort has been made to present complete proofs in an accessible and self-contained form.

The first three chapters are on elementary distribution theory and Sobolev spaces with many examples and applications to equations with constant coefficients. The following chapters study the Cauchy problem for parabolic and hyperbolic equations, boundary value problems for elliptic equations, heat trace asymptotics, and scattering theory. The book also covers microlocal analysis, including the theory of pseudodifferential and Fourier integral operators, and the propagation of singularities for operators of real principal type. Among the more advanced topics are the global theory of Fourier integral operators and the geometric optics construction in the large, the Atiyah-Singer index theorem in \mathbb{R}^n , and the oblique derivative problem.
