LESSON 2: INTRODUCTION TO CONTROL PROGRAMMING USING LABVIEW

1

LEARNING OBJECTIVES

After this presentation you will be able to

- ✘ Identify the sections of the LabVIEW development environment.
- ✘ Identify the variable types in LabVIEW
- ✘ Identify and utilize control structures in LabVIEW.
- ✘ Construct a user interface using LabVIEW.
- ✘ Link programs to data acquisition hardware using MAX driver software
- ✘ List the types of I/O available on data acquisition hardware

2

Lesson_2_et438b.pptx

CONTROL PROGRAMMING AND DATA ACQUISITION USING LABVIEW

LabVIEW is a graphical programming language that allows rapid development of programs that:

Read analog input signal data

Read switch input (digital) signal data

Process and store data

Display data and system status

Write analog output signals

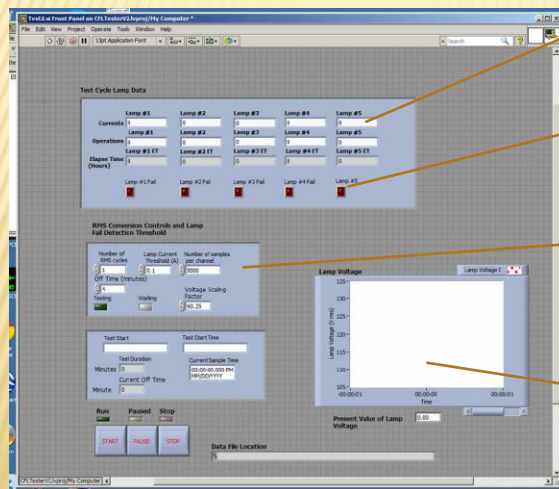

Write digital output signals for on/off control

3

Lesson_2_et438b.pptx

LABVIEW EXAMPLE

Compact Florescent Light Testing Controller

Analog inputs
read lamp
currents

Digital outputs
control lamp
operation

Analog samples
processed to give
RMS V and I
values

Plot monitors
lamp voltage
over time

4

LABVIEW PROGRAMMING ENVIRONMENT

LabVIEW is a graphical programming environment

This screenshot shows the LabVIEW interface with two windows: 'Untitled 1 - Front Panel' and 'Untitled 1 - Block Diagram'. The Front Panel is on the left, and the Block Diagram is on the right. A 'Controls and Indicators Palette' is open in the center. Callouts include: 'Create user interface here' pointing to the Front Panel; 'Front Panel' in an orange oval; 'Block Diagram (back panel)' in an orange oval; 'Create program here' pointing to the Block Diagram; and 'Palette changes to programming functions when you click on block diagram' pointing to the 'Tools' palette in the Block Diagram window.

LABVIEW PROGRAMMING ENVIRONMENT

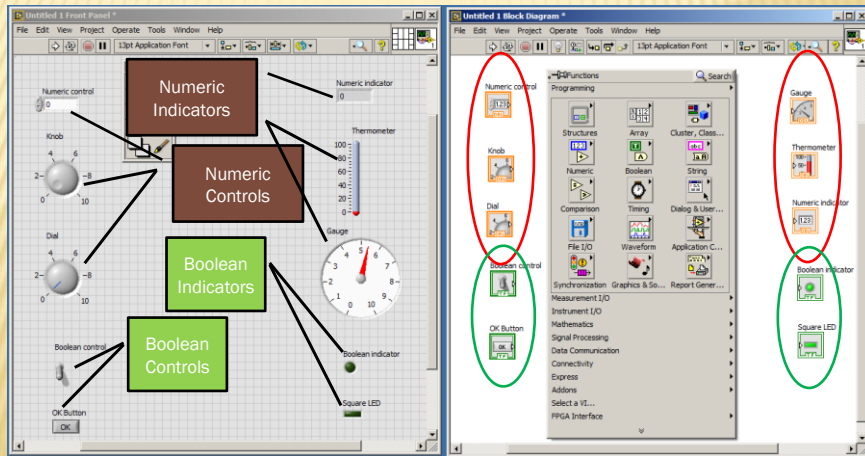

This screenshot shows the LabVIEW interface with the same two windows. Callouts include: 'Program Control Run/Stop Pause' pointing to the top toolbar of the Front Panel window; and 'Tool Palette' pointing to the 'Tools' palette in the Block Diagram window, which is circled in red. A secondary callout 'Operate Value Pointer Text Wiring Debug Tools' points to the icons within the Tool Palette.

Lesson_2_et438b.pptx

LABVIEW PROGRAMMING ENVIRONMENT

In LabVIEW Input variables = controls

Output variables = indicators

7

Lesson_2_et438b.pptx

LABVIEW PROGRAMMING ENVIRONMENT

Other data types in LabVIEW

Integers

(Signed and Unsigned) I32 I16 I8 U32 U16 U8

Strings

Arrays of characters

Data Structures in LabVIEW Programming

Arrays

Collect data of the same type. 1-D and multi-D Indexing begins at 0

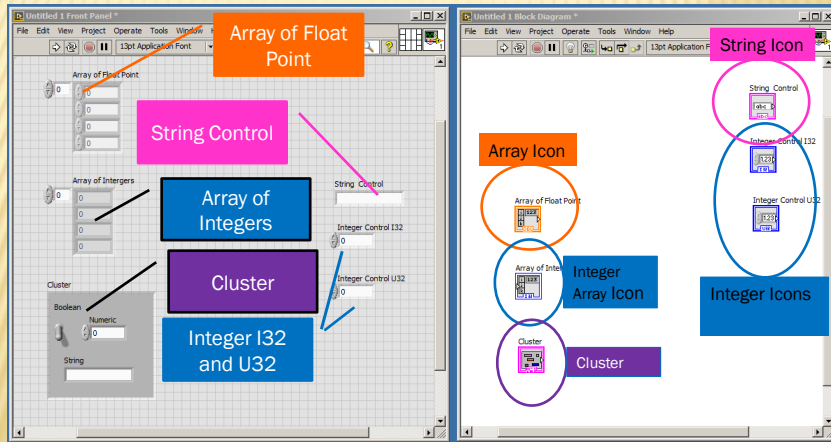

Clusters

Collect data of dissimilar data same types. Only include indicators or controls

8

LABVIEW PROGRAMMING ENVIRONMENT

Data Types and Structures in LabVIEW Programming

LABVIEW PROGRAMMING STRUCTURES

Graphical Programming Structures

FOR Loop – Repeats enclosed instructions for a predetermined amount of iterations (N)

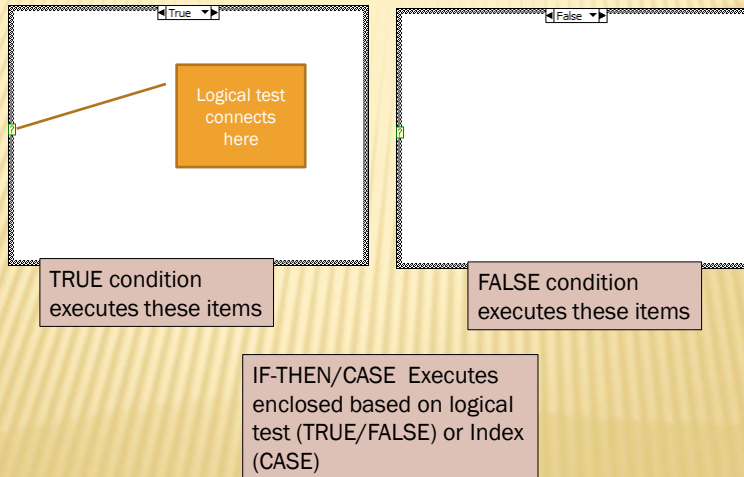

WHILE Loop – Repeats enclosed instructions until stop condition is met

Index, i, in both structures holds current iteration number

Lesson 2_et438b.pptx

LABVIEW PROGRAMMING STRUCTURES

Graphical Programming Structures

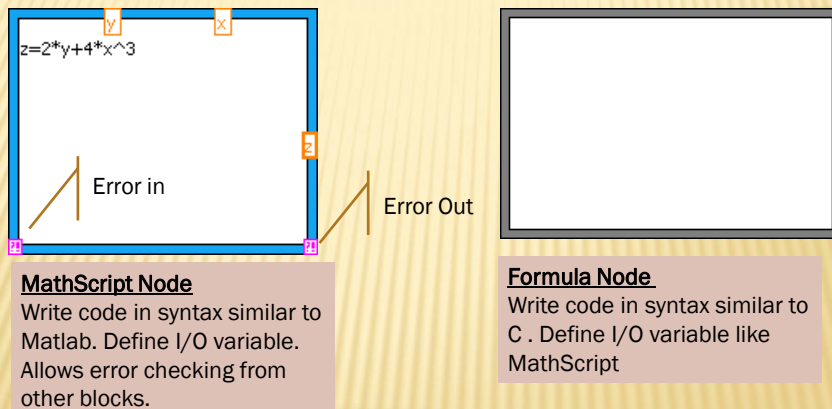

11

Lesson 2_et438b.pptx

LABVIEW PROGRAMMING STRUCTURES

Computed nodes, when written code is simpler

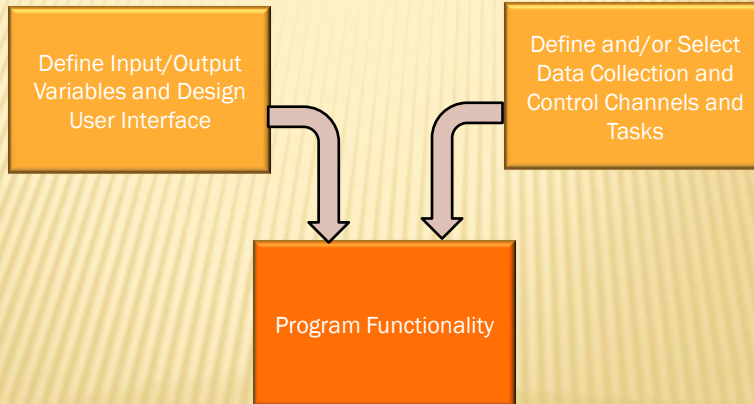

12

Lesson_2_et438b.pptx

PROGRAMMING IN LABVIEW

Control and Data Acquisition Programming

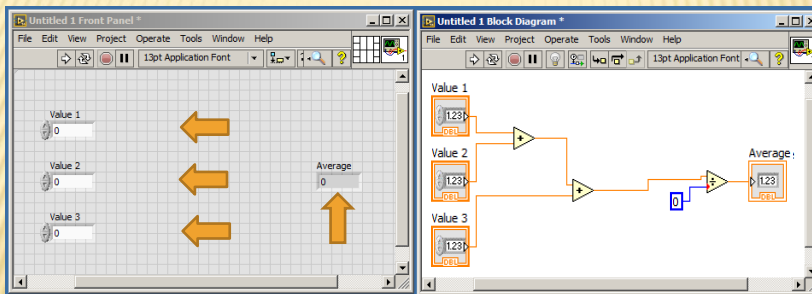

13

Lesson_2_et438b.pptx

PROGRAMMING STEPS

Define the I/O and design the interface

Place the programming blocks on back panel

Wire the programming blocks on back panel to make a functional program

See more programming examples on the course website and in D2L

14

DEVELOPING DATA ACQUISITION AND CONTROL PROGRAMS IN LABVIEW

Overview of Data Acquisition and Control Program Structure

Hardware
NI-6024
NI 6221

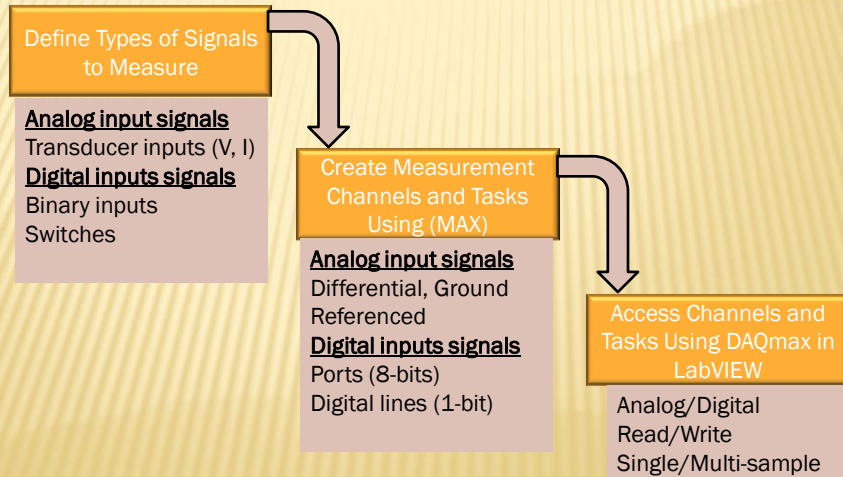

Measurement and Automation Explorer

Define I/O Tasks and channels

LabVIEW Program

DATA ACQUISITION IN LABVIEW

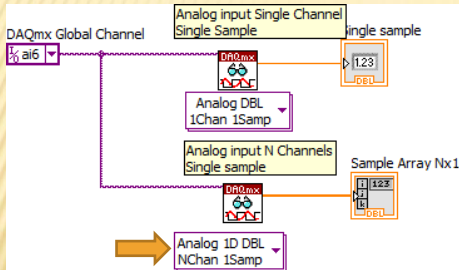

Connecting to the outside world with Measurement and Automation Explorer (MAX)

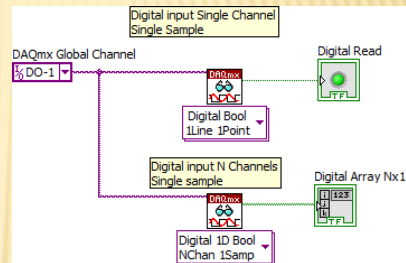

Lesson_2_et438b.pptx

DATA ACQUISITION IN LABVIEW

Reading Analog Inputs

Reading Digital Inputs

Access the DAQ functions from the Measurement I/O choice on the programming palette

Polymorphic Virtual Instrument (VI). Click to change nature.
