

Life of Fred Edgewood

Stanley F. Schmidt, Ph.D.

Polka Dot Publishing

A Note Before We Begin the Fifth Book in the Series

Life of Fred: Edgewood. You may be wondering, what's Edgewood?

Thinking of *Life of Fred: Apples*, you might wonder if Edgewood is some kind of tree. It isn't.

Thinking of *Life of Fred: Butterflies*, *Life of Fred: Cats*, and *Life of Fred: Dogs*, you might suppose that Edgewood is some kind of insect or animal. It isn't.

Edgewood is a place. Some readers (99%) might never have heard of Edgewood, Kentucky.

WHAT IS EDUCATION ALL ABOUT?

Years ago, when I was teaching a geometry class in high school, I drew an isosceles triangle on the board. (*Isosceles* is pronounced eye-SAUCE-a-lees.)

One student raised his hand and objected, "Mr. Schmidt, we haven't had isosceles triangles before."

I told him, "It's okay. It's something new."

He evidently didn't like the idea of learning new things. By the tenth grade, he figured that the rest of his life should just be a review of the things he already knew.

Education is new stuff.

Entertainment is ❖ hearing another rock band,

❖ watching another soap opera episode, or

❖ reading another murder mystery.

Of course, there's no law that says that learning can't be both. It is my hope that this book is both.

MATHEMATICS AND FUN?

YES!

It depends so much on how it is taught. I majored in math when I was a student at the university. I got a C in some of the math classes where the teaching was poor.

It's possible to make almost *any subject* distasteful.

Let's do **a little PLAYING** and see how we could mess up the teaching of . . .

MUSIC For a list of 213 symphonies, you are required to memorize the composer's name, the date of composition, the number of movements, and the key signature. The test will be next Monday. (We choose Monday to ruin your weekend.)

ART For a list of 213 paintings, etc.

BASEBALL For the 213 games that the Edgewood ballplayers played from 1996 to 1999, you are required to memorize the final scores of each of those games, and the batting order. The test will be next Monday.

GERMAN Here is your vocabulary list of 213 words.

makaber = ghoulish

der Galgen = gibbet

denkwürdig = memorable

das Verhältnis = ratio

mit hängenden Schultern stehen = to slouch

The test will be on Monday.

PIZZA (This subject was hard to make boring. It took me several minutes to figure out how to make the teaching of pizza anything but delightful.)

Here is a list of some cheeses that begin with the letter G: Gabriel, Galette du Paludier, Galette Lyonnaise, Galloway Goat's Milk Gems, Gammelost, Gaperon a l'Ail, Garrotxa, Gastanberra, Geitost, Gippsland Blue, Gjetost, Gloucester, Golden Cross, Gorgonzola, Gornyaltajski, Gouda, Goutu, Gowrie, Grabetto, Graddost, Grafton Village Cheddar, Grana Padano, Grand Vatel, Grataron d' Areches, Gratte-Paille, Graviera, Greuilh, Greve, Gris de Lille, Gruyere, Gubbeen, and Guerbigny.

For each cheese, write a 250-word report that details how that cheese has been used in pizzas, its place(s) of manufacture, and current prices in major cities around the world.

On the other hand, learning is inherently fun. People love to find out new things. Some people will spend an hour each day watching or reading the news. Or watching quiz shows on television.

HOW TO LEARN FROM THIS BOOK

Please have a pencil and paper available. After all, this is a math book!

My daughter Jill

Write out the answers to each Your Turn to Play before turning the page and seeing my answers. Don't just read the questions and look at the answers. Not much learning happens when you take that shortcut.

CALCULATORS?

Not now. There will be plenty of time later (when you hit Pre-Algebra). Right now in arithmetic, our job is to learn the addition and multiplication facts by heart.

*With my best wishes
for your adventure with Fred,
Stan*

Contents

Chapter 1	Wednesday Morning.	13
	when telephones brush your teeth	
	concurrent lines	
	squares, rectangles, parallelograms, etc.	
	six billion (6,000,000,000)	
	ordinal and cardinal numbers	
Chapter 2	Meeting Troubles.	19
	difficulties when jogging	
	obeying road signs	
	evergreen and deciduous trees	
	rhombus	
	parallel lines	
Chapter 3	Facing Your Fears.	25
	winter weather in Kansas and warmth in Ecuador	
	definition of <i>function</i>	
	constant functions	
Chapter 4	Where's Edgewood?.	31
	Red Sea, Tripoli, Eritrea, Ireland, Scotland on a map	
	"Zebra in Thought" by Kingie	
	median averages	
	trapezoids	
	"carrying the one" in addition	
Chapter 5	On the Bus.	37
	getting exactly what we deserve	
	Kansas, Missouri, and Kentucky (heading east)	
	cardinality of a set	
	writing numerals in words	
	$8609262942055 - 8609262942055 = 0$	
Chapter 6	Fame.	43
	being famous is sometimes a big bother	
	solving $2^x = 5$	
	bar graphs	

Chapter 7	Reading on the Bus.	49
	bar graph of camels eaten	
	metamathematics	
	math poetry to learn addition	
	finding a rhyme for <i>seventeen</i>	
	trillion	
	couplets	
	<i>strait</i> doesn't mean <i>straight</i>	
Chapter 8	Bus Stop.	55
	words for a tombstone	
	only time in the history of the world	
	if Fred were a writer	
	$1,000 > 700$	
Chapter 9	In Missouri.	61
	writing a biography	
	$x < \$1$	
	the four emotions	
	what can cause you not to think straight	
	right angles	
Chapter 10	A View from the Bus.	67
	adding two-digit and three-digit numbers	
	laws in different states	
	a Tyrannosaurus Rex was not part of the scenery	
	6% in pictures	
Chapter 11	A Glass of Polka Dots.	73
	difference between polka dots and a bunch of dots	
	mathematicians play	
	finding patterns	
	matrix—rows and columns	
	four sentence patterns	
	one number, seven digits	
Chapter 12	Sharing.	79
	pronouns	
	Fyodor Mikhaylovich Dostoyevsky	
	half hour and quarter hour	

Chapter 13	Flying.	85
	why you should fasten your seat belt	
	mistakes—small, medium, and big	
	jogging 5 miles per hour for 2 hours	
Chapter 14	Food and Warmth.	91
	half dozen—computed three ways	
	9,000 calories among 9 people	
	gibbous moons	
Chapter 15	Errors.	97
	two kinds of errors—Categories One and Two

	why it's called Turkeyfoot Middle School	
	one way to feel lonely	
	north and south on a map	
Chapter 19	To KITTENS.	121
	what it means to matriculate	
	counting by fives	
Index.		125

Chapter One

Wednesday Morning

Fred loved the early morning. It was one of his seven favorite parts of the day. Today was the 1855th day of his life.

The sky was beginning to get light. Fred quietly got out of his sleeping bag and stood up.

He thought of the day that he would be tall enough to bump his head on the underside of his desk. But today wasn't that day. Fred was much shorter than most five-year-olds.

He walked quietly to the window. He didn't want to wake his doll Kingie. The room smelled a bit because of the dogs that had been there. Opening the window, he let in some cool morning air.*

From the third-story window of the math building, Fred could look out over the KITTENS campus. In the early morning light, the trees were gray-green.

* For English majors: You don't write: *Opening the window, some cool air flowed in*, because that would mean that the cool air opened the window.

You don't write: *While brushing my teeth, the phone rang*. That says that the phone was brushing your teeth.

He put on a T-shirt, jogging shorts, socks, and running shoes and headed out the door. He walked quickly down the hallway past the nine vending machines (four on one side and five on the other), down two flights of stairs, and out into the semi-darkness of a February morning in Kansas.

Fred jogged through the campus. He passed the campus tennis courts and dreamed of the day he would be big enough to swing a tennis racquet.

He passed the university chapel where he attends Sunday school with the children of other faculty members.

When he got to the place where Tangent Road, Archimedes Lane, and Newton Street all met, he had to decide which direction to head.

Lines are **concurrent** if they all meet at the same point.

Fred decided to head to the right (east) on Tangent Road. It was long and straight. He was warmed up by now and changed from jogging to running.

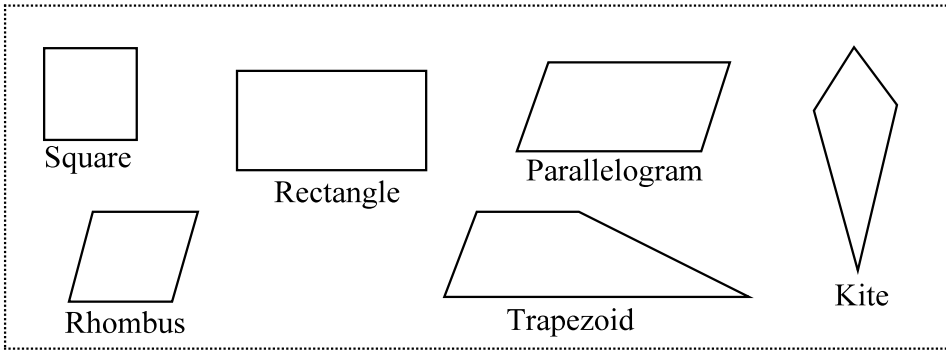

He felt the joy of being alive. As he ran the miles down Tangent Road, he let his thoughts

just drift. It was a little like dreaming while you are awake.

***** He thought of the Wizard of Oz play he had been in when he was in kindergarten.

***** He thought of the kitty that he had owned on Monday.

***** He thought of his geometry class and how he would present all the quadrilaterals (four-sided figures) in class today:

***** When he saw the trees on Tangent Road, he thought of lines from a poem he had memorized:

What can nestlings do
In the nightly dew?
Sleep beneath their mother's wing
Till day breaks anew.

If in field or tree
There might only be
Such a warm soft sleeping-place
Found for me! *

* From Christina Rossetti's "A Chill."

***** He thought that none of those quadrilaterals would make “a warm soft sleeping-place.” They were too pointy. Instead, a nice ellipse made out of silk filled with cotton balls would be a nice place to snuggle.

Fred liked to run east on Tangent Road. He could see the dawn of the new day. This was his new day but he was willing to share it with the seven billion others on the planet. (7,000,000,000. Nine zeros.)

Fred liked the idea of sharing. He sang out a happy “Good Morning” to each animal or plant that he passed along the road:

Good morning Ant!

Good morning Butterfly!

Good morning Carrot!

Good morning Dove!

Good morning Eagle!

Good morning Frog!

Good morning Giant,
long-tailed, big-toothed,
two-horned monster.

Please take out a piece of paper and write down the answers. Then turn the page and compare your answers to mine.

You will learn a lot more by writing down your thoughts than just reading the questions and then looking at the answers.

Please.

Your Turn to Play

1. Just for fun . . .

Fred was creating a whole alphabet using animals or plants. He started with: ant, butterfly, carrot, dove, eagle, frog.

Instead of Giant, long-tailed, big-toothed, two-horned monster, he might have said hello to a geranium or a goldfish or a groundhog.

Finish his list, starting with a plant or animal starting with H and going all the way to Z.

You may need a little help when you get to U and X. The umbrella bird can be found in South America.

There is a frog found in the streams of southern Africa called a xenopus. Pronounced ZEN-neh-pess.

2. This is the 1855th day of Fred's life. Ordinal numbers are numbers such as first, second, and 1855th.

Fred is 1855 days old. What are numbers such as one, two, and 1855 called?

.....ANSWERS.....

1. Your answers will probably be different than mine.

Here is my list of plants or animals from H to Z:

Hippo, hyacinth, hog

Ice plant, iris, ibex

Jasmine, jaguar, jerboa

Kangaroo, koala

Lotus, lion, leopard, laurel

Magnolia, mouse, moose

Orange, otter, ox

Panther, poppy, petunia

Quail, quince

Rose, rat, racoon, rhino

Sunflower, snail, snake

Turtle, tulip, tangerine

Umbrella bird

Violets, viper

Walnut, walrus, weasel

Xenopus

Yak, yucca

Zebra, zinnia

jerboa

magnolia

viper

2. Numbers used in counting are called cardinal numbers.

The cardinal number associated with $\{A, *, \odot\}$ is 3.

The cardinality of $\{ \}$ is 0.
