

LIGHTNIN[®] CLASSIC **Clamp-Mount and** **Fixed-Mount Mixers**

Proven
performance.
Guaranteed
results.

YOU AND LIGHTNIN. THE RIGHT MIX.

LIGHTNIN

High shear. High Flow. High performance.

For your high shear or high flow mixing applications, there's a time-tested *LIGHTNIN*[®] CLASSIC Clamp-Mount or Fixed-Mount Mixer that's right for you. In fact, there have been more *LIGHTNIN* CLASSIC Mixers installed throughout the world than any other single mixer model.

How to make a great mixer even better.

Over the years, the original CLASSIC design has been enhanced in hundreds of subtle, but meaningful ways. As a result, the CLASSIC Mixer you purchase today reflects decades of continual improvement based upon years of actual performance history in just about every known fluid mixing application. And with *LIGHTNIN*'s exclusive 100% performance guarantee, you buy with complete confidence, just as hundreds of thousands of satisfied customers have done before you.

LIGHTNIN's exclusive 100% performance guarantee.

When you partner with *LIGHTNIN*, you buy with confidence, knowing your CLASSIC mixer will perform to your complete satisfaction.

LIGHTNIN's 100% performance guarantee says a lot about these mixers and your *LIGHTNIN* sales engineer. In addition, all CLASSIC mixers are backed by *LIGHTNIN*'s standard mixer warranty.

Call your *LIGHTNIN* sales engineer to discuss your mixer selection to qualify for your application guarantee.

Match the CLASSIC Mixer to Your Application

Table based on tank where liquid level is within 1.5 times tank diameter. There is no single mixer selection for any given application; mixer selection may vary with temperatures, retention times, tank shapes and specific application requirements.

Viscosity/Gallorage

LIGHTNIN CLASSIC Direct Drive Mixers For High Fluid Shear Applications.

Clamp-mount XD Series

Where high fluid shear is desirable for small batch mixing.

Easy-positioning handle facilitates proper in-tank placement and removal.

Built-in dampener pad between housing ball and clamp socket minimizes vibration.

Single supplied wrench fits both clamp and chuck.

Standard DURA-MIX Motor is specifically designed for mixer service.

Motor and shaft are coupled directly with pilot and keyway for accurate alignment and positive connection.

One-piece aluminum housing provides exact alignment and superior mechanical strength.

Positive chuck grips the tapered flat on the mixer shaft to prevent unintentional shaft release. For added stability, rigid coupling is standard for longer shafts. Coupling is welded to the shaft.

Standard clamp securely mounts to tank rim or support. Mixer adjusts 90° vertically, 360° horizontally for optimal in-tank positioning. Indexed ball and socket lets you precisely duplicate settings. Cup mount option retains vertical and horizontal movement with indexing in a permanent mixer mount.

Important Reminder About Tank Selection and Mixer Mounting

In addition to specifying the *LIGHTNIN CLASSIC* mixer that's right for your mixing application, keep in mind that mixer performance greatly depends on proper tank selection and impeller placement. Here are some helpful tips to help you take full advantage of the performance characteristics of your CLASSIC mixers.

- If there are no restrictions on tank geometry, select a cylindrical vessel, making sure the liquid level is between one and one-and-a-half times the diameter of the tank.
- Impeller location should be approximately one impeller diameter from the bottom of the tank.
- The distance between any two impellers in the same tank should be equal to at least two impeller diameters for gear drive CLASSIC mixers and at least four impeller diameters for direct drive mixers.

XD230	2.30	130												
XD350	3.50	135												

Centered – Creates vortexing in an unbaffled tank. While normally undesirable, vortexing accelerates the dispersing and dissolving of light liquids and hard-to-wet powders.

Fixed-mount XDO Series for open tanks

For large tanks and continuous processes that require extra long shafts and the stability of permanent installation.

- Shaft safety cover.
- See XD Series for common mixer features.
- Shock mounts protect drive against high fluid forces

Angular Off-Center – Aiming the shaft off center prevents vortexing, and eliminates the need for tank baffles. Off center positioning achieves strong top to bottom turnover. Suitable for most mixing and blending.

Repositioning During The Batch Clamp-mount CLASSIC mixers make it easy to reposition the impeller when more than one kind of mixing action is required.

Tank Baffles – Four vertical baffles spaced 90° apart are required to avoid vortexing when shafts and impellers are center mounted. Baffle width depends on fluid viscosity and other factors. Consult your LIGHTNIN sales engineer.

"D" is overall shaft length and varies with application.

Angle risers are furnished only when specified.

Direct Drive

Fixed-mount XDC Series for closed tanks

Features removable coupling for added stability in applications requiring long overhung shafts.

- Coupling is rabbetted and keyed to assure positive alignment.
- Standard ASA 150# series flanges are available in solid steel or steel faced with 316 stainless. Other materials and special flanges are available.
- Standard 60 psig stuffing box features 7 rings of die-molded packing with separators; a lubricant distributing GFT lantern ring, grease fitting and adjustable 316SS packing gland. Available accessories include cooling or heating jacket.
- Optional stuffing box for lower pressures features 2 rings of die-molded packing and a packing gland.
- See XD Series for common mixer features.

Fixed-mount XDDS Series for closed tanks

With double mechanical seals

- Mechanical seal provides maximum sealing with minimum maintenance.
- See XD and XDC Series for common mixer features.

"D" is overall shaft length and varies with application.

Clamp-mount XDA Series air drive mixers

Operate wherever compressed air is available.

- 1/3, 1 and 3 hp
- Safe for use in flammable or explosive environments.
- Air control valve varies speeds.
- Lightweight design for easy handling.
- To extend mixer life, optional air line lubrication system filters air supply, regulates pressure and automatically adds oil to lubricate motor.

LIGHTNIN CLASSIC Gear Drive Mixers For High Fluid Flow Applications.

Clamp-mount XJ Series

Provides the high torque that's required to mix viscous fluids in the 15,000 to 100,000 centipoise range.

Single reduction, internal helical gears provide high torque and are exceptionally compact and quiet.

Built-in dampener pad between housing ball and clamp socket minimizes vibration.

Single supplied wrench fits both clamp and chuck.

Standard clamp securely mounts to tank rim or support. Mixer adjusts 90° vertically, 360° horizontally for optimal in-tank positioning. Indexed ball and socket lets you precisely duplicate settings. Cup mount option retains vertical and horizontal movement with indexing in a permanent mixer mount.

Easy-positioning handle facilitates proper in-tank placement and removal.

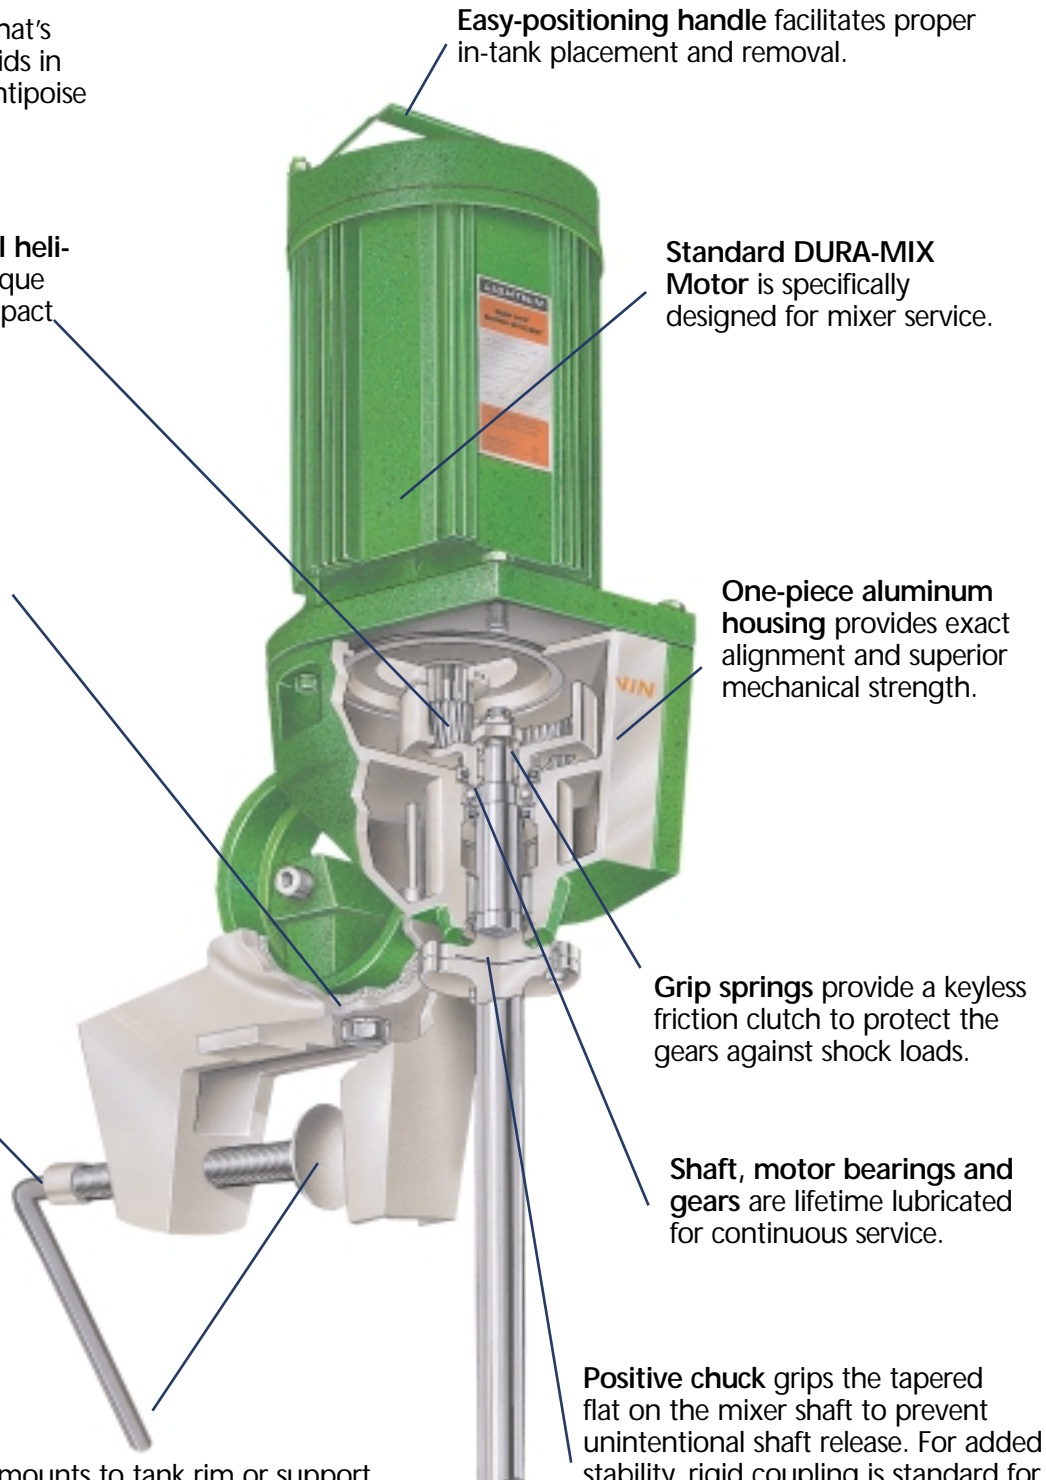

Standard DURA-MIX Motor is specifically designed for mixer service.

One-piece aluminum housing provides exact alignment and superior mechanical strength.

Grip springs provide a keyless friction clutch to protect the gears against shock loads.

Shaft, motor bearings and gears are lifetime lubricated for continuous service.

Positive chuck grips the tapered flat on the mixer shaft to prevent unintentional shaft release. For added stability, rigid coupling is standard for longer shafts. Coupling is welded to the shaft. (Optional rigid coupling is shown. Standard construction is the positive chuck.)

Always the Right Impeller

Over the years, *LIGHTNIN* engineers have developed the world's largest selection of high-performance impellers to meet your specific mixing requirements.

For example, *LIGHTNIN*'s high-efficiency A310 and A320 impellers develop 50% more mixing for the same horsepower, compared with conventional three-bladed, marine-type props.

A310 impellers are available in stainless, Hastelloy® alloys, titanium and other materials, and can be polymer or rubber coated.

A320 impellers improve blending and reduces power consumption in higher viscosity applications. It continually operates as an axial flow impeller in the transitional regime.

A310

A320

See page 10 for additional impeller options.

Fixed-mount XJQ Series for open tanks

For large tanks and continuous processes which require extra long shafts and the stability of permanent installation.

- Units supplied with shaft safety cover.
- See XJ Series for common mixer features.
- Shock mounts protect drive against high fluid forces to prolong mixer life.

Impeller options

- The R100 radial flow turbine promotes efficient gas dispersion and gas/liquid mass transfer.
- The A100 propeller provides efficient mixing when higher fluid shear rates are required for hard-to-wet powders.
- Ring Guard impellers prevent damage from dip tubes, temperature probes and other in-tank devices.
- Folding impellers fit into the bung of 55-gallon drums and carboys as small as 1-7/8 inch in diameter. Opens to sizes from 3 to 5 inches.

Angle risers are furnished only when specified.

Gear Drive

Clamp-mount XJA Series air drive mixers

Operate wherever compressed air is available.

- 1/3, 1 and 3 hp
- Safe for use in flammable or explosive environments.
- Air control valve varies speeds.
- Impossible to burn out the motor, even with a stalling overload.
- Lightweight design for easy handling.

Energy efficient DURA-MIX™ Motors

Designed Specifically For Mixer Service

- 6-8 percentage points higher than a standard efficient motor.
- Can be wired from 200 VAC to 480 VAC, 50 or 60 Hertz, 3 phase.
- Class FJ insulation better suited to withstand overloads or adverse conditions than Class B insulation.
- Thermostats can be wired in series with starter relay or connected to alarm. Single-phase motors have built-in manual reset circuit breakers.
- Available explosion-proof motors are available in 1/4 to 3.5 hp which meet NEC requirements for Class I, Group D and Class II, Groups F and G. Thermal protector shuts off unit if operating temperature exceeds safe limits.

Fixed-mount SXJ and SXJS Series side-entering mixers

Help maintain suspension for varying levels of stored materials. Also used where there isn't space for a top-entering mixer.

- Installed mixers are normally supported entirely by the tank mounting flange. Tie rods or mixer support legs can be furnished if tank nozzle lacks sufficient strength and rigidity.
- Choice of stuffing box or mechanical seal.
- Stuffing box includes 6 packing rings, lantern ring, grease fitting and adjustable packing gland. Optional shut-off device lets you repack with a full tank.
- Shut-off device permits mechanical seal change with a full tank

Gear Drive

Fixed-mount, double-reduction XL Series mixers for larger vessels

Let you increase or decrease mixer speed as process requirements warrant by simply changing gears.

- DURA-MIX motor available in 1 to 5 hp. Bearings are lubricated for life. Explosion-proof model available.
- Double reduction gears and bearings are grease-lubricated for life.
- Standard rigid coupling facilitates installation of lower shaft and turbine.
- Shafts can be specified up to 15 feet for deep tanks.
- Optional angle risers eliminate the need for baffles in open tanks.

Angle risers are furnished only when specified.
