

# LINCS: Towards Building a Trustworthy Litigation Hold Enabled Cloud Storage System

*By*

**Shams Zawoad, Ragib Hasan and John Grimes**

*Presented At*

The Digital Forensic Research Conference

**DFRWS 2015 USA** Philadelphia, PA (Aug 9<sup>th</sup> - 13<sup>th</sup>)

DFRWS is dedicated to the sharing of knowledge and ideas about digital forensics research. Ever since it organized the first open workshop devoted to digital forensics in 2001, DFRWS continues to bring academics and practitioners together in an informal environment. As a non-profit, volunteer organization, DFRWS sponsors technical working groups, annual conferences and challenges to help drive the direction of research and development.

# Outline

- Background
  - Litigation Hold | Spoliation | Model
- Motivation
  - Case Study | Current Solution | Research Gap
- Litigation hold enabled Cloud Storage (**LINCS**) system
  - Threat Model | Protocol | Security | Results | Tool
- Conclusion & Future Work

# Background | Litigation Hold

- Legal notice to a defendant that triggers the preservation of ESI
- Preservation obligation comes from common law, statutes, regulations, or a court order

## Litigation holds in the cloud

- Defendant's data is now under the direct control of a third party

# Background | Spoliation

- Deliberate destruction or modification of ESI by a litigant party
- Defendant produces proof of preservation of litigation hold
- Plaintiff provides the evidence of spoliation
- Can cost reputation, fines, penalties, etc.

# Background | Litigation Hold Model

$T_s$ : Litigation hold is issued

$T_e$ : Litigation hold ends

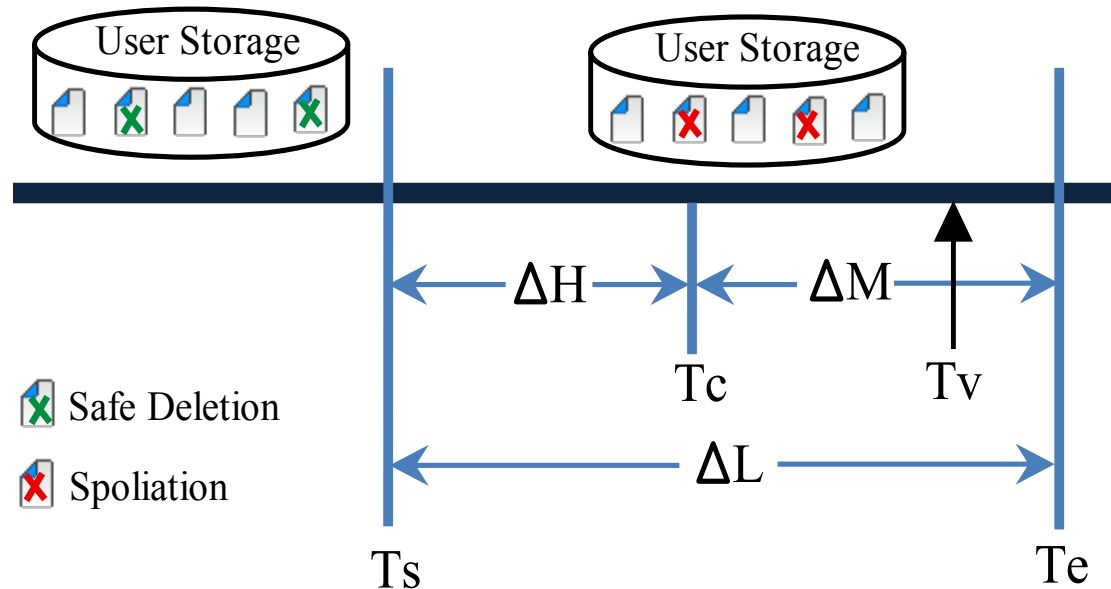

$$\Delta L = T_e - T_s$$

$T_c$ : CSP turns malicious

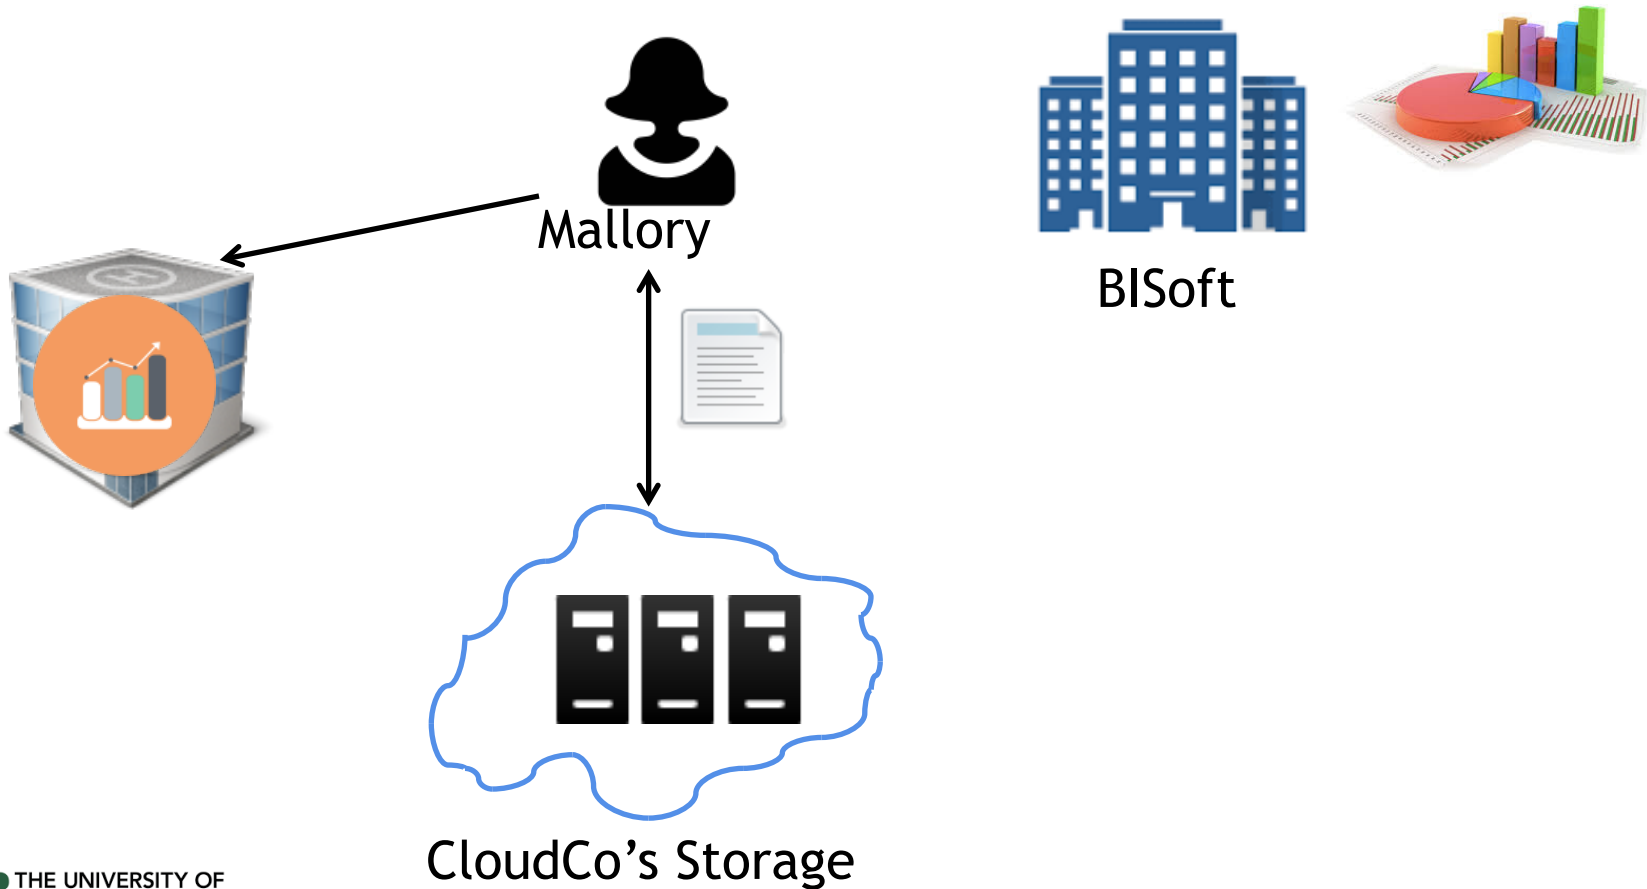

$$\Delta H = T_c - T_s, H > 0$$

$$\Delta M = T_e - T_c$$

$T_v$ : Verification time

# Motivation | Case Study

# Motivation | Current Solutions

- Legal hold framework in clouds [Schmidt (2012)]
- Provable Data Possession schemes in clouds [Ateniese et al. (2007); Erway et al. (2009)],

-Schmidt, O., 2012. Managing a legal hold on cloud documents. US Patent App.13/543,254.

-Ateniese, G., Burns, R., Curtmola, R., Herring, J., Kissner, L., Peterson, Z., Song, D., 2007. Provable data possession at untrusted stores. In: 14th ACM conference on Computer and communications security. ACM, pp. 598–609.

-Erway, C., Kupcu, A., Papamanthou, C., Tamassia, R., 2009. Dynamic provable data possession. In: 16th ACM conference on Computer and communications security. ACM, pp. 213–222.

# Motivation | Research Gap

- Schmidt (2012): Cloud providers are considered as trustworthy
- PDP: Metadata are generated by clients, who are considered as trustworthy
- No one considered the collusion between CSP, plaintiff and defendant.

# Proposing LINC*S*

- **L**itigation hold **e**nabled **C**loud **S**torage (*LINC*S**)
- Defendant or a plaintiff can collude with a malicious CSP
- Secure verifiable proof of file creation and deletion.

# LINCS | Threat Model

- Removes files on hold from the cloud storage
- Denies the ownership of files presented by plaintiff

- Bypass the proof of deletion preservation system
- Remove the proof of file
- Present an act of spoliation as a safe deletion operation
- deny hosting a file presented by plaintiff

# LINCS | Threat Model

- Remove file without defendant's consent.
- Present a safe deletion operation as an act of spoliation
- Plant a back-dated fake file to the defendant's storage

- External attackers extract information from proofs of files or the proofs of file deletions

# LINCS | File Upload Protocol

$$FCM_U^i = \langle (H(F_i) | F_{ID}^i | CT_U), \text{Sig}(H(F_i) | F_{ID}^i | CT_U) \rangle$$

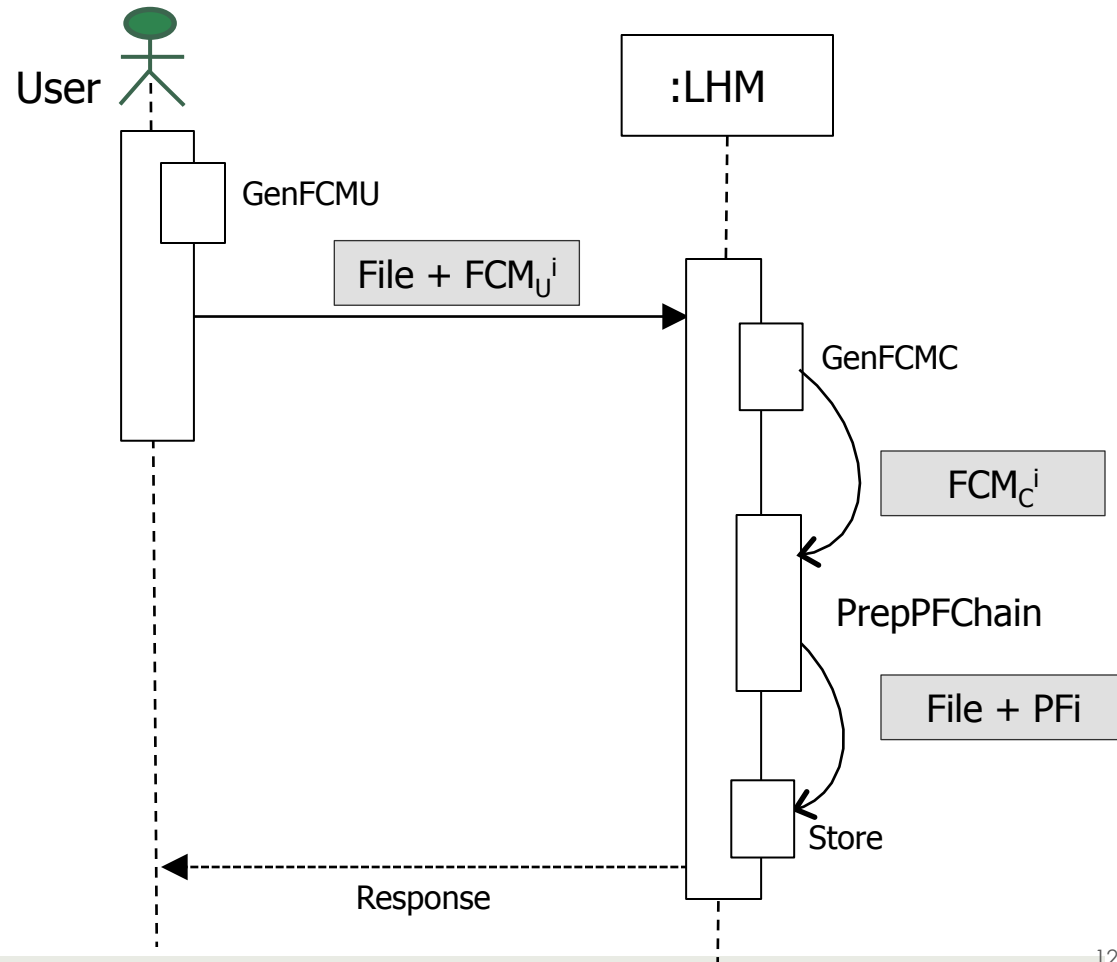

$$FCM_C^i = \langle (H(F_i) | F_{ID}^i | CT_C), \text{Sig}(H(F_i) | F_{ID}^i | CT_C) \rangle$$

$$PF^i = \langle \text{Mac}_{MK_C^i}(CS^i), (CS^i) \rangle$$

$$CS^i = \langle FCM_U^i | FCM_C^i \rangle$$

$$MK_C^i = \langle \text{MKey}(H(MK_C^{i-1})) \rangle,$$

$$MK_C^0 = \langle \text{MKey}(H(S_C)) \rangle$$

# LINCS | File Deletion Protocol

$$FDR^i = \langle (H(F_i) | F_{ID}^i | DT_U), \text{Sig}(H(F_i) | F_{ID}^i | DT_U) \rangle$$

$$FDA^i = \langle (H(F_i) | F_{ID}^i | DT_C), \text{Sig}(H(F_i) | F_{ID}^i | DT_C) \rangle$$

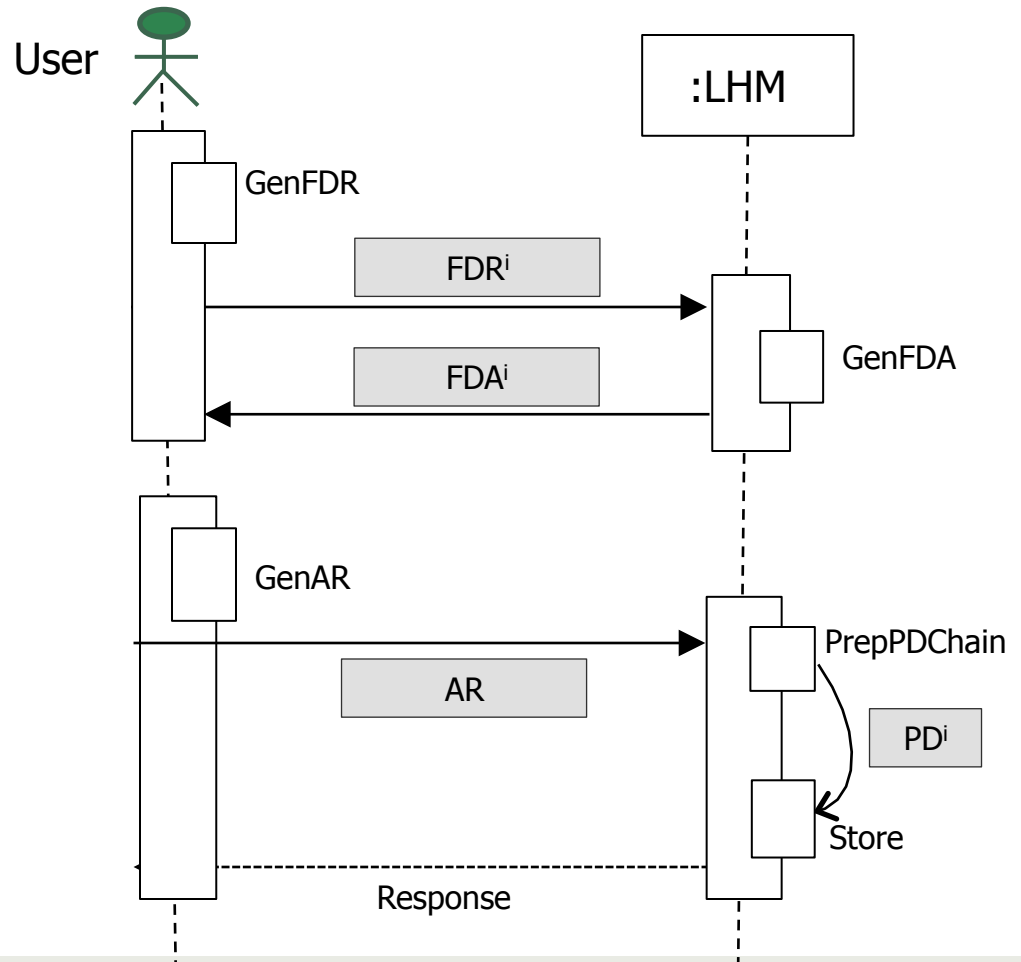

$$AR = \langle (\text{Response} | F_{ID}^i | AT_U), \text{Sig}(\text{Response} | F_{ID}^i | AT_U) \rangle$$

$$PD^i = \langle \text{Mac}_{MK_D^i}(DS^i), (DS^i) \rangle$$

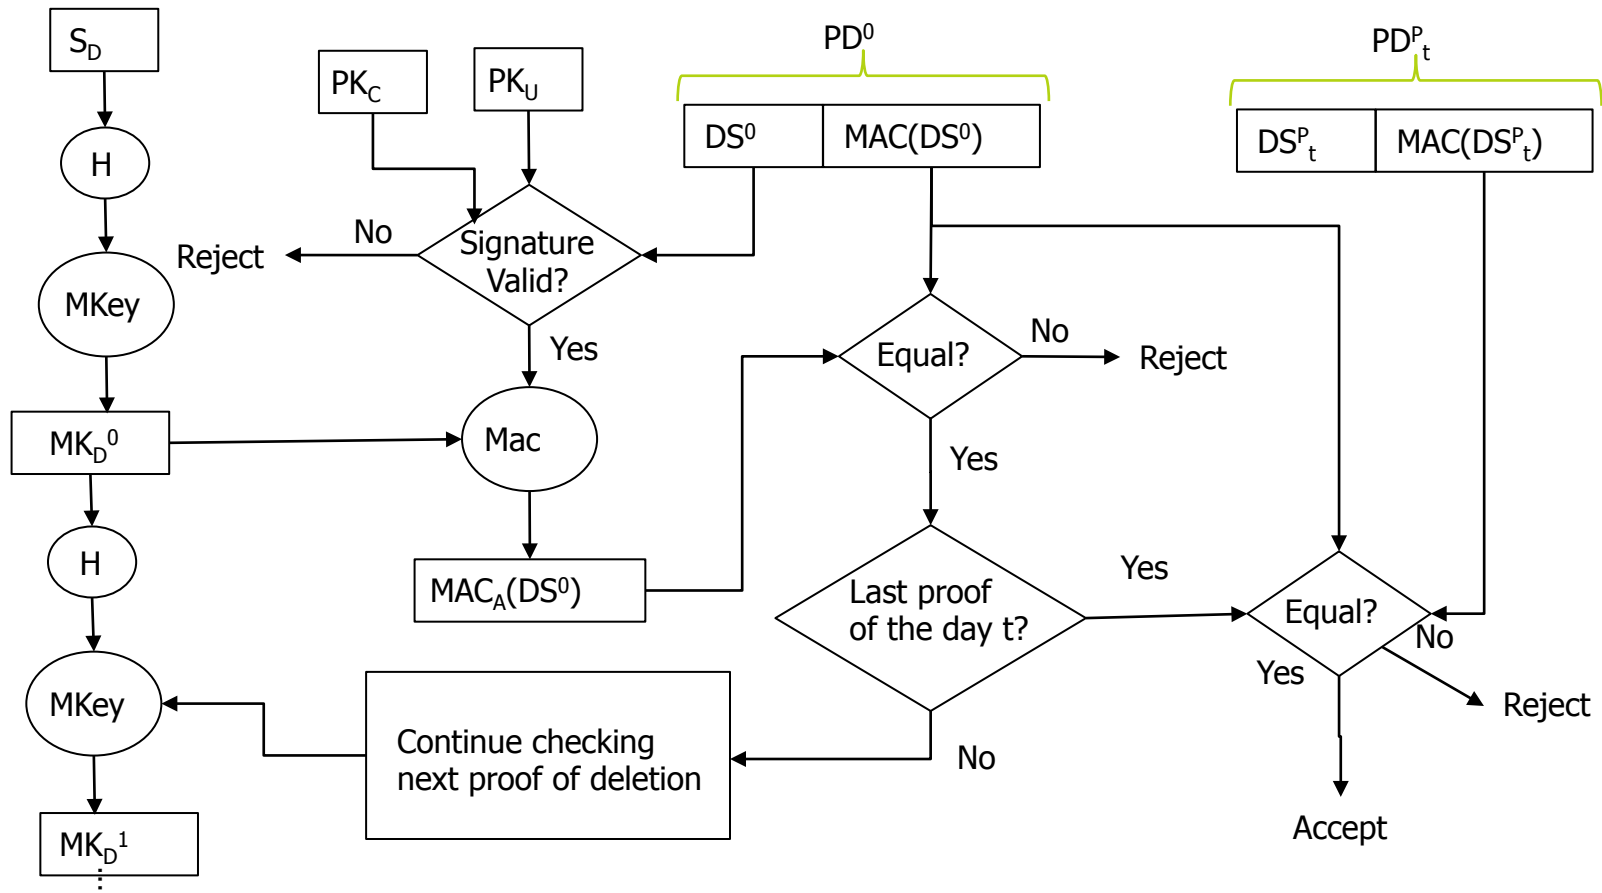

$$DS^i = \langle FDR^i | FDA^i | AR \rangle$$

$$MK_D^i = \langle \text{MKey}(H(MK_D^{i-1})) \rangle,$$

$$MK_D^0 = \langle \text{MKey}(H(S_D)) \rangle$$

# LINCS | Verification

# LINCS | Security Propositions

**Proposition 1:** Defendant cannot deny the possession of a file  $F^i$

- $P^{F^i}$  is attached with the  $F^i$  a metadata.
- $P^{F^i}$  includes  $FCM_U^i$ , which contains the signature of the defendant

# LINCS | Security Propositions

**Proposition 2:** *Defendant cannot deny the proof of deletion PD<sup>i</sup> for the F<sup>i</sup> file*

- PD<sup>i</sup> for the F<sup>i</sup> contains file deletion request FDR<sup>i</sup> and acknowledgement receipt AR
- Defendant signed these two components

# LINCS | Security Propositions

**Proposition 3:** If  $F^d$  is removed before  $T_s$ ,  $PD^d$  cannot be placed after  $T_s$

- $PD^{d+1}$  will be appeared after  $PD^{d-1}$  in the altered proof of deletion chain.
- At  $i=d$ , the auditor creates  $MAC_A(DS^{d+1})$  from the MAC key  $MK_D^d$ , but the actual  $MAC(DS^{d+1})$  was created using  $MK_D^{d+1}$

# LINCS | Security Propositions

**Proposition 4:** If  $F^d$  is removed after  $T_s$ ,  $PD^d$  cannot be placed before  $T_s$

- $PD^d$  will be appeared after  $PD^j$  in the altered proof of deletion chain.
- $MAC_A(DS^d) \neq MAC(DS^d)$ , since the  $MAC(DS^d)$  was not calculated using the key  $MK_D^{j+1}$

# LINCS | Security Propositions

**Proposition 5:** Auditor can detect the act of spoliation if a defendant removes a file  $F^d$  during  $\Delta L$  and *the plaintiff presents the file  $F^d$  to the court*

- There must be a proof of deletion  $PD^d$
- $PF^d$  can prove the existence of the file  $F^d$  in the defendant's cloud storage

# LINCS | Security Propositions

**Proposition 6:**  $F^d$  is removed without the defendant's consent, the plaintiff cannot prove this deletion as an act of spoliation.

- The plaintiff needs to present the proof of deletion  $PD^d$
- $PD^d$  should contain the defendant's signature with the  $FDR^d$  and the AR

# LINCS | Security Propositions

**Proposition 7:** CSP cannot add a fake file  $F^f$  to the defendant's storage without being detected by the auditor.

- The  $PF^f$  includes  $FCM_U^f$ , which is signed by the defendant.
- Presenting the  $F^f$  file as a backdated file requires modification in the chain of PF

# LINCS | Security Propositions

**Proposition 8:** An adversary cannot identify the content of the file  $F_i$  from the  $PF_i$  or  $PD_i$

- $PF_i$  and the proof of deletion  $PD_i$  are created from the hash of the  $F_i$
- One- way, collusion resistant hash function prevents reverse engineering the proofs

# LINCS | Results

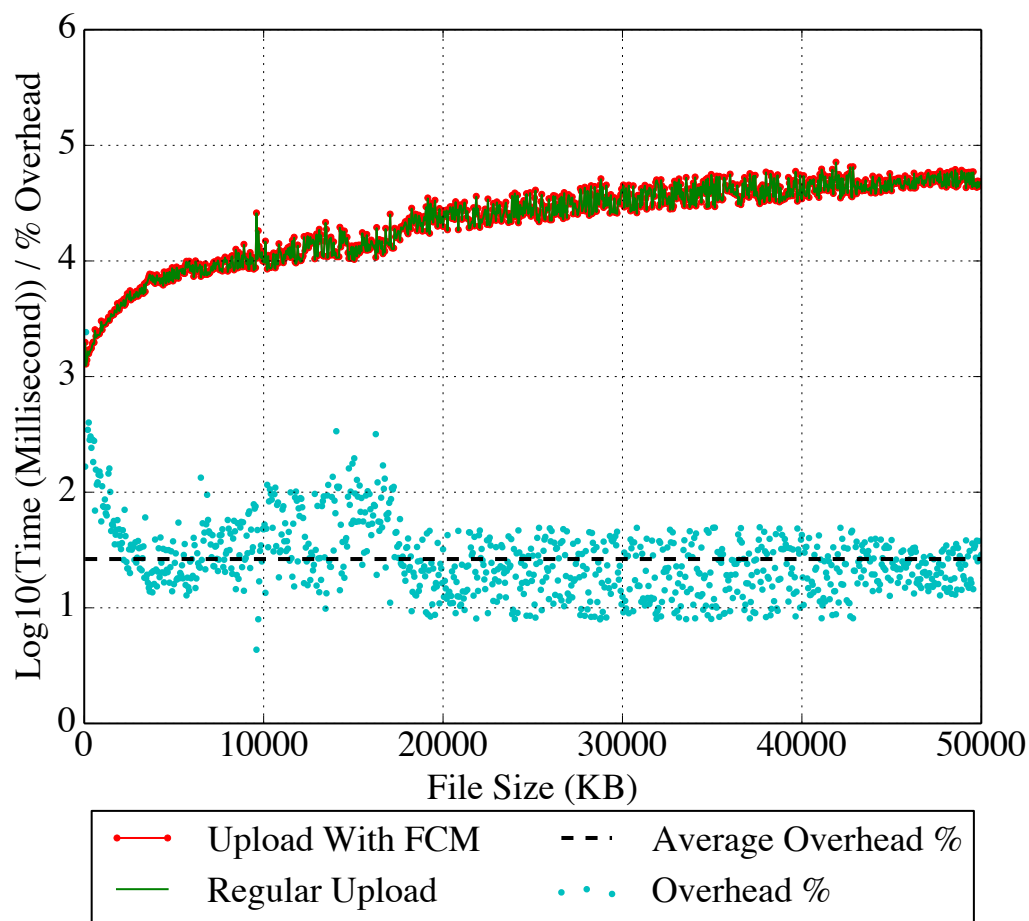

## System Configuration

- Ftp server in an AmazonEC2 medium (m1.medium) instance running Ubuntu 12.04.4 LTS
- (LHM) module was running inside the EC2 instance
- RSA (2048 bit) for encryption, SHA-256
- Oracle JDK (version 1.7.051) to implement the modules of *LINCS*

Item	Reason
t-800.txt	Invalid PF
t-850.txt	Invalid PF
t-900.txt	Invalid PF
t-950.txt	Invalid PF

# Conclusion & Future Work

- Defined a model of trustworthy litigation holds in clouds
- Proposed *LINCS* that ensures trustworthy management of litigation holds in a cloud storage.
- Future Plan:
  - Include dynamic behavior of the cloud storage,
  - New files creation after Ts,
  - Security of the special types of file, such as MBOX or EML .

# Thank You

# LINCS | Proof Creation Performance

# LINCS | Security | Lemma

**Lemma 1:**  $PF^i$  is the proof provided by the user and the CSP about the existence of the  $F^i$  file

**Lemma 2:**  $PD^i$  is the proof provided by the user and the CSP about the deletion of the  $F^i$  file.

**Lemma 3:** The secret keys and the initial secrets  $S_D$  and  $S_C$  cannot be accessed by an adversary.

**Lemma 4:** CSP cannot alter the published proofs or deny the existence of the published proofs
