FIELDS OF INTEREST

My research interests are focused on making tighter links between sedimentologic observations from outcrop analogs and subsurface reservoir prediction. I have worked across all depositional systems but am most well versed in deep-water settings. My teaching interests are rooted in interdisciplinary topics and I enjoy teaching diverse groups of geologist, geophysicists and engineers and bridging the gap between quantitative and qualitative, particularly in problems where significant uncertainty exists. My teaching is often focused on the practical applications of geomodelling, flow simulation, probability theory and risk assessment.
