

Mabuhay Kubo (Tagalog)

= Welcome home

Bahay Kubo (Nipa Hut) is considered a Filipino cultural heritage, a symbol of being together. If you look inside, a typical Nipa hut has no partition walls for rooms to accommodate the whole family.

Nipa-Huts

The Nipa hut or Bahay Kubo is a kind of stilt house that is native to the cultures of the Philippines.

It is also known as Payag or Kamalig in other languages of the Philippines. Its architectural principles resemble many Filipino traditional houses and buildings built after pre-colonial times.

This includes the colonial period "bahay na bato", a noble version of the bahay kubo with Spanish and some Chinese main influence and has developed into the dominant urban architecture in the past.

And there are also contemporary buildings like the Coconutpalast, the Sto. Niño Shrine and the Modernist; Cultural Center of the Philippines and National Arts Center, which are modern buildings that used Bahay-Kubo as a side influence.

Kubos

Bahay na bato or bahay na luma is a noble version of bahay kubo with Spanish and some Chinese influence.

This design evolved over time, but retained the architectural roots of the Nipa hut.

Most often it looks like a stilt nipa hut standing on stone blocks or bricks in Spanish style as a foundation instead of wooden or bamboo sticks.

Bahay na bato

Over time, the Kubos have evolved considerably due to the influence of immigrant Europeans.

Our design is subject to the European building standard.

Thus, the walls (double walls), windows and doors are insulated to maintain a pleasant coolness inside.

**All supply lines are also "flush-mounted".
All sockets are type F with 230 Volt voltage.**

In the Philippines there is also 230 Volt voltage, but with a frequency of 60 Hz.

We produce our own electricity with a frequency of 50 hz.

Living Atmosphere

Open, cosy and appealing living atmosphere

Kubo Sizes

Kubos can be built in any size with different designs. Each Kubo is handmade by the Bamboo makers and is therefore an unique specimen, since no mass production exists so far.
