

THE EXPERT'S VOICE® IN OPEN SOURCE

Beginning Fedora

From Novice to Professional

The complete guide to Fedora—includes everything you need to know to master this popular Linux-based operating system.

PART 1 ■ ■ ■ Introducing the World of Linux

CHAPTER 1	Welcome!	3
	What Is Linux?	3
	The Age of Linux	5
	The Problems with Windows	6
	The Benefits of Linux	7
	Crash-Free	7
	Security	7
	Free and Shareable	8
	Compatible with Older Hardware	8
	The Linux Community	8
	Summary	9
CHAPTER 2	A History and Politics Lesson	11
	In the Beginning	11
	The GNU Project	13
	Proprietary Software and the GPL	14
	GNU and Linux Together	15
	Different Flavors of Linux	15
	Linux Today	16
	Modern Linux Development	16
	Summary	17

CHAPTER 3	The Realities of Running Linux	19
	Learning to Use Linux	19
	Who Uses Linux?	20
	Getting Ahold of Linux	20
	Using Fedora	21
	Summary	22

PART 2 ■ ■ ■ Installing Fedora

CHAPTER 4	Preinstallation Steps	25
	Understanding Partitioning	25
	Freeing Up Space	27
	Reclaiming Space	28
	Removing Windows	28
	Using Another Hard Disk	28
	Backing Up Your Data	29
	Backing Up E-mail Files	30
	Making Notes	30
	Summary	31
CHAPTER 5	Installing Fedora	33
	An Overview of the Installation Process	33
	Step-by-Step Guide	33
	Step 1: Booting from the DVD-ROM	34
	Step 2: Selecting Your Language	35
	Step 3: Confirming Your Keyboard Layout	36
	Step 4: Installing or Upgrading Fedora	36
	Step 5: Partitioning the Disk	37
	Step 6: Installing the GRUB Boot Loader	41
	Step 7: Configuring Network Devices	42
	Step 8: Setting the Time Zone	43
	Step 9: Setting the Root Account Password	44
	Step 10: Selecting Software to Install	45
	Step 11: Waiting During Package Installation	48
	Step 12: Postinstallation Configuration	50
	Summary	55

CHAPTER 6	Solving Installation Problems	57
	Preinstallation Problems	57
	Problem	57
	Solution	57
	Problem	58

PART 3 ■ ■ ■ The No-Nonsense Getting Started Guide

CHAPTER 7	Booting Fedora for the First Time	69
	Starting Up	69
	Logging In	70
	Exploring the Desktop	72
	First Impressions	73
	Desktop Elements	74
	Quick Desktop Guides	75
	Running Programs	77
	Working with Virtual Desktops	77
	Using the Mouse	79
	Copying and Pasting Text	80
	Summary	80
CHAPTER 8	Getting Everything Up and Running	81
	Fedora Hardware Support	81
	Proprietary vs. Open Source Drivers	82
	Viewing Your Hardware	83
	Getting Online	84
	Using an Ethernet Card	85
	Joining a Wireless Network	87
	Using WEP or WPA Encryption	88
	Configuring Dial-Up Internet Access	92
	Using a USB-Based DSL Modem	93
	Working with a Proxy Server	93
	Setting Up Online Software Repositories	94
	Configuring E-Mail and Instant Messaging	96
	Configuring E-Mail Access	97
	Setting Up Instant Messaging	98
	Adding a Printer	100
	Configuring a Local Printer	100
	Configuring a Network Printer	102
	Configuring a Windows/SMB Shared Printer	103
	Setting Up Digital Imaging Devices	103
	Transferring Photos from a Digital Camera	104
	Configuring a Scanner	105
	Using a USB Memory Stick	106
	Installing 3D Graphics Card Drivers	107
	Installing an NVIDIA Driver	107

Configuring Bluetooth	107
Pairing Bluetooth Devices	108
Transferring Files Between Bluetooth Devices	108
Using a Bluetooth Keyboard or Mouse	109
Configuring Sound Cards	110
Summary	111
CHAPTER 9	How to Secure Your Computer
	113
Windows Security vs. Linux Security	113
Root and Ordinary Users	114
Common-Sense Security	116
Securing GRUB	117
Online Updates	119
The Fedora Firewall	120
Installing Firestarter	120
Configuring Firestarter	121
Setting Inbound Rules	122
Setting Outbound Rules	123
Turning Off Diagnostic Services	124
Summary	125
CHAPTER 10	Personalizing Fedora: Getting Everything Just Right
	127
Changing the Look and Feel	127
Altering the Theme	127
Changing Individual Theme Components	128
Installing Additional Components	129
Changing the Wallpaper	131
Setting Font Preferences	132
Configuring Input Devices	133
Configuring Mouse Options	133
Changing Keyboard Settings	134
Creating Keyboard Shortcuts	135
Personalizing Login Options	136
Changing Your Login Picture	137
Adding and Removing Desktop Items	138
Adding a Shortcut	138
Creating a Launcher	138
Creating a Link	139
Adding and Removing Menus	140
Adding All the Menus to a Panel	140
Adding the Applications Menu to a Panel	140
Deleting a Menu	141

Personalizing the Panels	141
Working with Applets	142
Setting Power-Saving Features	143
Controlling Monitor Shutoff	143
Spinning Down the Hard Disk	144
Summary	145
CHAPTER 11	Fedora Replacements for Windows Programs
Available Software	147
A Quick Start with Common Linux Programs	149
Word Processing: OpenOffice.org Writer	149
Spreadsheet: OpenOffice.org Calc	151
Presentations: OpenOffice.org Impress	152
Database: OpenOffice.org Base	153
E-Mail/Personal Information Manager: Evolution	154
Web Browser: Firefox	155
Audio Playback: Rhythmbox and CD Player	156
Movie Playback: Totem Movie Player	158
CD/DVD Burning: Nautilus	159
Photo Editing: The GIMP	159
Other Handy Applications	160
Summary	166
CHAPTER 12	Managing Your Files
Understanding File System Concepts	167
Drive References	167
Case Sensitivity	167
File Access and Storage	168
Using Nautilus	169
File and Folder Icons	173
Special Nautilus Windows	174
Launching Files and Running Programs	175
Accessing Windows Files	177
Working with Files in Windows Partitions	177
Accessing Networked Files	178
Accessing Removable Storage Devices	178
Ejecting Media from Drives	179
Summary	180

PART 4 ■ ■ ■ The Shell and Beyond

CHAPTER 13	Introducing the BASH Shell	183
	What Is the BASH Shell?	183
	Why Bother with the Shell?	184
	When Should You Use the Shell?	186
	Getting Started with the Shell	186
	Running Programs	187
	Getting Help	188
	Running the Shell via a Virtual Console	189
	Working with Files	190
	Listing Files	192
	Copying Files	193
	Moving Files	194
	Deleting Files	195
	Changing and Creating Directories	195
	Summary	196
CHAPTER 14	Understanding Linux Files and Users	197
	Real Files and Virtual Files	197
	Users and File Permissions	199
	Viewing Permissions	201
	Typical Data File Permissions	203
	Altering Permissions	204
	The File System Explained	205
	Mounting	208
	Using the mount Command	208
	Mounting a Drive Manually	209
	Removing a Mounted System	211
	File Searches	211
	Using the find Command	211
	Using the locate Command	212
	Using the whereis Command	213
	File Size and Free Space	213
	Viewing File Sizes	213
	Finding Out the Amount of Free Space	214
	Summary	215

CHAPTER 15	Working with Text Files	217
	Viewing Text Files	217
	Using the cat Command	217
	Using the less Command	217
	Using the head and tail Commands	218
	Using a Command-Line Text Editor	219
	Understanding vi Modes	220
	Using vi to Edit a File	224
	Creating a New Text File Using vi	225
	Searching Through Files	226
	Using grep to Find Text	226
	Using Regular Expressions	227
	Comparing Text Files	229
	Summary	229
CHAPTER 16	Taking Control of the System	231
	Viewing Processes	231
	Controlling Processes	234
	Killing Processes	234
	Controlling Zombie Processes	236
	Using Other Commands to Control Processes	237
	Controlling Jobs	238
	Summary	239
CHAPTER 17	Cool Shell Tricks	241
	Using Autocompletion	241
	Autocompletion with Files and Paths	241
	Viewing Available Options	242
	Using Keyboard Shortcuts	243
	Shortcuts for Working in BASH	243
	Shortcuts for System Control	244
	Using the Command History	244
	Piping and Directing Output	245
	Piping the Output of Commands	246
	Redirecting Output	247
	Summary	248

PART 5 ■ ■ ■ Multimedia

CHAPTER 18	Digital Music	249
	Understanding the Legalities of Playback	249
	Playing Music Files	250
	Installing Codecs	250
	Using Rhythmbox	251
	Listening to Audio CDs	252
	Tuning In to Online Radio Stations	253
	Using Streamtuner	253
	Ripping Music from CDs	254
	Choosing a Format	254
	Adding MP3 Support to Sound Juicer	255
	Ripping Tracks	255
	Creating Your Own CDs	257
	Summary	257
CHAPTER 19	Movies and Multimedia	259
	Watching Videos	259
	Installing VLC Media Player	260
	Installing Codecs	261
	Installing RealPlayer	262
	Playing Back Video	262
	Watching DVDs	263
	Playing Flash Animations	264
	Installing Java	264
	Watching TV	266
	Checking for Video Input	266
	Installing Tvtime	266
	Summary	267
CHAPTER 20	Image Editing	269
	Getting Pictures onto Your PC	269
	Introducing The GIMP	270
	Editing Images with The GIMP	274
	Making Color Corrections	276
	Cropping and Cloning	277
	Sharpening	278
	Applying Filters	279
	Summary	283

PART 6 ■ ■ ■ Office Tasks

CHAPTER 21	Making the Move to OpenOffice.org	287
	Office Similarities	287
	OpenOffice.org Key Features	288
	File Compatibility	289
	The Right Fonts	291
	Copying Windows Fonts	292
	Installing TrueType Core Fonts	292
	Summary	294
CHAPTER 22	OpenOffice.org Overview	295
	Introducing the Interface	295
	Customizing the Interface	296
	Adding Functions to Toolbars	296
	Adding a New Toolbar	299
	Customizing Menus	299
	Configuring OpenOffice.org Options	299
	Using OpenOffice.org Core Functions	304
	Using Wizards	304
	Getting Help	304
	Inserting Objects with Object Linking and Embedding	304
	Creating Macros	305
	Saving Files	306
	Summary	307
CHAPTER 23	In Depth: Writer	309
	Formatting Text	309
	The Formatting Toolbar	309
	The Context Menu	310
	The Style and Formatting Palette	310
	Spell-Checking	311
	Inserting Pictures	312
	Working with Tables	313
	Mail Merging	314
	Adding Headers and Footers	317
	Summary	318

CHAPTER 24	In Depth: Calc	319
	Entering and Formatting Data	319
	Deleting and Inserting Data and Cells	320
	Working with Formulas	320
	Using the Function Wizard	321
	Summing Figures	321
	Sorting Data	322
	Creating Charts	323
	Using Filters	325
	Summary	326
CHAPTER 25	In Depth: Impress	327
	Creating a Quick Presentation	327
	Working in Impress	328
	Animating Slides	330
	Applying Fontwork	331
	Using 3D Effects	332
	Exporting a Presentation As a Flash File	334
	Summary	335
CHAPTER 26	In Depth: Base	337
	Getting Started with Base	337
	Creating a Database	339
	Adding a Table	339
	Creating a Form	341
	Adding Controls to the Form Manually	342
	Using the Database	343
	Summary	344
CHAPTER 27	In Depth: Evolution	345
	Evolution Modes	345
	Basic E-Mail Tasks	347
	Sending and Receiving E-Mail	347
	Reading E-Mail	348
	Deleting Messages	348
	Flagging Messages	349
	Composing a Message	350
	Creating an E-Mail Signature	351

Advanced E-Mail Tasks	352
Creating New Folders	352
Dealing with Junk E-Mail	353
Sorting and Filtering Messages	353
Creating Search Folders	355
Contacts	355
Adding or Editing Contact Information	356
Creating a Contact List	357
Calendars	358
Specifying Appointment Types	358
Adding or Editing a Diary Entry	358
Tasks	359
Summary	360

PART 7 ■ ■ ■ Keeping Your System Running

■ CHAPTER 28	Installing and Removing Software	363
	Software Installation Basics	363
	Formats of Linux Installation Files	364
	Package Management	365
	Managing Software via the GUI	369
	Using Pirut to Install Software	369
	Using Pirut to Remove Software	372
	Using Pirut to Search for Software	373
	Applying Package Updates with Pup	374
	Managing Software from the Shell	374
	Using rpm to Install and Remove Software	375
	Using Yum to Install and Remove Software	378
	Adding Installation Sources	381
	Compiling from Source	383
	Summary	390
■ CHAPTER 29	Managing Users	391
	Understanding User and Group Accounts	391
	Users and Groups	391
	Root User	392
	UIDs and GIDs	392

Adding and Deleting Users and Groups	393
Adding and Deleting Users via the GUI	393
Creating and Deleting Groups via the GUI	395
Adding and Deleting Users and Groups at the Command Line	396
Adding and Changing Passwords	396
Summary	397
CHAPTER 30 Optimizing Your System	399
Speeding Up Booting	399
Understanding Bootup	399
Reducing the Boot Menu Delay	402
Optimizing Run-Level Services	403
Optimizing Hard Disk Settings	407
Benchmarking Your Hard Disk	407
Changing Hard Disk Settings	408
Making Disk Optimizations Permanent	409
Prelinking	410
Running Prelink	410
Deactivating Prelinking	410
Freeing Disk Space	412
Removing Unused Software	412
Adding Space to an Existing Logical Volume	413
Summary	415
CHAPTER 31 Backing Up Data	417
What Data Should You Back Up?	417
Using Pybackpack	418
Backing Up Data via Pybackpack	419
Including Files and Folders in the Backup Job	420
Excluding Files and Folders from the Backup Job	420
Restoring Data via Pybackpack	421
Burning a Backup File to CD/DVD	422
Burning a CD/DVD with GnomeBaker	422
Making Backups from the Command Line	423
Creating TAR Files	424
Compressing TAR Archives	424
Extracting Files from a TAR Archive	425
Viewing TAR Archive Information	425
Saving a TAR File to CD/DVD	425
Burning a CD/DVD with Nautilus	426
Summary	426

CHAPTER 32	Scheduling Tasks	427
	Scheduling with crontab	427
	Creating a Scheduled Task	427
	Scheduling with anacron	429
	Using at to Schedule One-Off Tasks	431

About the Authors

■ **SHASHANK SHARMA** has contributed articles extensively to Linux.com and NewsForge. He conducts classes on various aspects of Linux at the Indian Institute of Technology (IIT), Delhi.

Using Linux since 1997, Shashank has helped several newbies with his 1000-plus posts at the popular LinuxQuestions.org forum board. Interested in the workings of free/open source software licenses, he actively participates in the discussions on the Creative Commons mailing list. His blog on licensing (www.linuxlala.net/) is regularly linked to by major web sites such as IPcentral and LXer.

■ **KEIR THOMAS** is an award-winning author who has written several best-selling beginning-level Linux titles for Apress. A former computer magazine editor, he has been writing about computers, operating systems, and software for a decade. He has also edited many computing titles.

Keir currently works as a full-time author and has written four books for Apress. He lives on the side of a mountain in England, and his hobbies include hiking and playing musical instruments.

About the Technical Reviewer

■ **PAUL W. FRIELDS** is an engineer with a background in digital forensics and investigation who has taught Linux to hundreds of technical and law enforcement professionals. He has been a Linux user and advocate since 1997, and spends some of his spare time working on various parts of the Fedora Project, which he joined before the release of Fedora Core 1 in 2003. He serves as one of the senior managers of the Fedora Documentation Project, packages software for inclusion in the distribution, and evangelizes Fedora and Linux to entities in both the private and public sectors. He also served as one of the inaugural members of the Fedora Project Board from 2006 to 2007, joining a select few community members in managing the overall program direction for Fedora.

The remainder of his time is devoted to his wife and children, and his part-time work as a professional musician.

Preinstallation Steps

The first part of this book discussed the pros and cons of using Linux as part of your day-to-day life. It was intended to help you evaluate Linux and understand what you're buying into should you decide to make it your operating system of choice. Now, we move on to actually installing Linux and, specifically, Fedora, which is included with this book on a DVD.

Installing any kind of operating system is a big move and can come as something of a shock to your PC. However, Fedora makes this complicated maneuver as easy as possible. Its installation routines are very advanced compared to previous versions of Linux, and even compared to other current distributions.

What does saying that you're going to install Fedora actually mean? This effectively implies three things:

- Somehow all the files necessary to run Fedora are going to be put onto your hard disk.
- The PC will be configured so that it knows where to find these files when it first boots up.
- The Fedora operating system will be set up so that you can use it.

However, in order to do all this and get Fedora onto your PC, you must undertake some preparatory work, which is the focus of this chapter.

Understanding Partitioning

Chances are, if you're reading this book, your PC already has Windows installed on it. This won't present a problem. In most cases, Fedora can live happily alongside Windows in what's called a *dual-boot setup*, where you can choose at startup which operating system to run. However, installing Fedora means that Windows must make certain compromises. It needs to cohabit your hard disk with another operating system—something it isn't designed to do.

The main issue with such a situation is that Windows needs to shrink and make some space available for Fedora (unless you install a second hard disk, which is discussed later in this chapter). Fedora isn't able to use the same file system as Windows, and it needs its own separately defined part of the disk. Actually, it requires more than one part of the disk. Each of these parts is known as a *partition*. All of this can be handled automatically by the Fedora installation routine, but it's important that you know what happens.

All hard disks are split into partitions, which are large chunks of the disk created to hold operating systems (just like a large farm is partitioned into separate fields). A partition is usually multiple gigabytes in size, although it can be smaller. You can view your disk's partitions using the Disk Management tool in Windows XP and Windows 2000, as shown in Figure 4-1. You can access this tool by opening Control Panel, clicking the Administrative Tools icon, selecting Computer Management, and then choosing Disk Management.

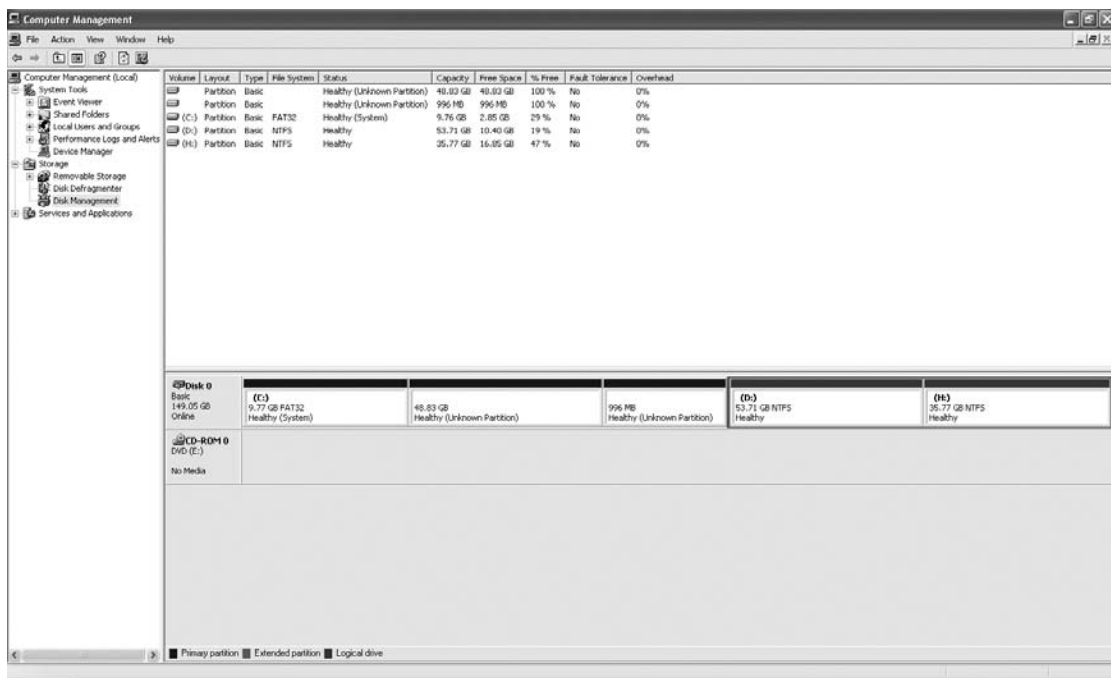

Figure 4-1. You can view your disk's partitions using Windows XP's Disk Management tool.

Most desktop PC systems have just one partition, unless the user has specifically created new partitions. As mentioned, Fedora needs two partitions of its own. During installation, Fedora creates fresh partitions alongside the Windows partition. It creates two partitions: the `/boot` and a Logical Volume Management (LVM) partition that contains root (`/`) and the swap partitions.

In addition, the Fedora installation routine writes a new *boot sector* (also known as a *boot loader*). The boot sector is located at the very beginning of the disk and contains a small program that then runs another program that lets you choose between operating systems (and therefore partitions) when you first boot up.

Note Not all Linux distributions have the ability to repartition the hard disk. In fact, at the time of writing, it's pretty rare. Most expect to simply take over the entire hard disk, wiping Windows in the process (although they'll always ask the user to confirm this beforehand). We suggest that you use the KNOPPIX Live CD to resize NTFS partitions.

Of course, Fedora cannot shrink a Windows partition that is packed full of data, because no space is available for it to reclaim; and perhaps more importantly, Fedora does not completely support NTFS yet.

FEDORA AND WINDOWS FILE SYSTEMS

One of the benefits of dual-booting Linux and Windows is that Fedora lets you access the files on the Windows partition. This is quite handy and facilitates the easy exchange of data.

If the Windows partition is FAT32—used on Windows 95, 98, Me, and (sometimes) XP—then Fedora can both read and write files to the partition. However, if the file system is NTFS—used with Windows NT, 2000, and (sometimes) XP—then Fedora will make the file system available as read-only. We discuss in Chapter 14 software that enables you to write to an NTFS partition.

Freeing Up Space

The first step before installing Fedora alongside Windows is to check how much free space you have in your Windows partition. To see the amount of free space you have, double-click My Computer, right-click your boot drive, and select Properties. The free space is usually indicated in purple on a pie-chart diagram, as shown in Figure 4-2.

Figure 4-2. *Fedora needs free disk space in which to install, so you might need to clean up your Windows partition.*

You need to have at least 2 GB of free space in your Windows partition for Fedora to use. You'll need more space if you wish to install a lot of programs. If you don't have enough free space, you have several options: reclaim space, remove Windows, or use a second hard disk.

Reclaiming Space

On Windows XP, you can run the Disk Cleanup tool to free some space on your hard disk. Click the Disk Cleanup button beneath the pie-chart diagram showing the free disk space (see Figure 4-2). Disk Cleanup is also accessible by choosing Start ► All Programs ► Accessories ► System Tools ► Disk Cleanup.

You might also consider turning off System Restore. This consumes a lot of disk space, which you can therefore reclaim. However, deactivating System Restore will mean that you lose the possibility of returning your system to a previous state should anything go wrong. To access the System Restore control, right-click My Computer, click Properties, and then click the System Restore tab.

If you still cannot free up enough disk space, consider uninstalling unused software via the Add/Remove Programs applet within Control Panel. If you have any large games installed, consider removing them first, because they usually take up substantial amounts of hard disk space. You might also consider deleting movie and MP3 music files, which are renowned for eating up hard disk space. The average MP3 is around 4 MB, for example, and one minute of video at 240 × 180 resolution typically takes up 10 MB of disk space!

Removing Windows

Some users might prefer a second, more radical option: getting rid of Windows completely and letting Fedora take over the entire hard disk. If you feel confident that Fedora will fulfill your needs, this is undoubtedly the most straightforward solution. You'll be able to do this during installation. However, this will also mean that any personal data you have will be lost, so you should first back up your data (as described shortly).

Caution You should be aware that installing Windows back onto a hard disk that has Fedora on it is troublesome. Windows has a Darwinian desire to wipe out the competition. If you attempt to install Windows on a Fedora hard disk, it will overwrite Linux.

Using Another Hard Disk

A third option for making room for Fedora is attractive and somewhat safer in terms of avoiding the potential for data loss, but also potentially expensive: fitting a second hard disk to your PC. You can then install Fedora on this other hard disk, letting it take up the entire disk. Unlike Windows, Fedora doesn't need to be installed on the primary hard disk and is happy on a secondary drive.

A second hard disk is perhaps the best solution if you're low on disk space and want to retain Windows on your system. However, you'll need to know how to install the new drive or find someone to do it for you (although step-by-step guides can be found on the Web—just search using Google or another search engine). In addition, if your PC is less than 12 months old, there is a possibility that you'll invalidate your guarantee by opening up your PC.

If you have an old PC lying around, you might also consider installing Fedora on it, at least until you're sure that you want to run it on your main PC. As noted in Chapter 1, one of the best features of Fedora is that it runs relatively well on older hardware. For example, a Pentium II with 256 MB of memory should allow for a decent performance.

NO-INSTALL LINUX

If you want to use the Linux operating system but leave your hard disk untouched, you might consider a number of additional options. Perhaps the most popular is to use a “live” version of Linux. A live version of Linux is one that boots and runs entirely from a CD (or DVD); it doesn’t touch the user’s hard disk. The most popular is KNOPPIX (www.knoppix.org/). The distribution we discuss throughout this book, Fedora, also offers two live CD versions, albeit ones that can be installed as well.

Using Linux in this way involves downloading an ISO image (a single large file of around 650 MB), which then must be burned to CD using a Windows program like Nero. Once the CD has been created, you simply boot from it in order to run Linux (after you ensure that your PC’s BIOS is set to boot from CD, as explained in Chapter 5).

Alternatively, you might consider using virtual PC software. This type of software runs under Windows and re-creates an entire PC hardware system within software—effectively a PC within a PC. The hard disk is contained within one or two Windows files. Linux can then be installed on these virtual PC systems. When the program is switched to full-screen mode, it’s impossible to tell you’re running inside a computer system created in software. Two commercially available examples are considered worthwhile by many: VMware (www.vmware.com/) and Microsoft’s Virtual PC (www.microsoft.com/windowsxp/virtualpc/). You should be aware that both are designed to be professional-level tools, so they are quite expensive. You can also obtain open source renditions of virtual PC software, such as QEMU (<http://fabrice.bellard.free.fr/qemu/>).

Another option in its infancy at the time of writing is Cooperative Linux, or coLinux for short (www.colinux.org/). This is a set of Windows programs that aims to let Linux run under Windows using emulation. Unfortunately, setting up and using coLinux requires some expert knowledge, so you might want to wait until you have more experience with Linux.

Backing Up Your Data

Whichever route you decide to take when installing Fedora, you should back up the data currently on your computer beforehand. Possibly the easiest way of doing this is to burn the data to CD-R/RW discs using a program like Nero and a CD-R/RW drive.

If you take the coexistence route, installing Fedora alongside Windows, backing up your data should be done for insurance purposes. Although the Fedora Project tests all its software thoroughly and relies on community reporting of bugs, there’s always the chance that something will go wrong. Repartitioning a hard disk is a major operation and carries with it the potential for data loss.

If you intend to erase the hard disk when installing Fedora (thereby removing Windows), you can back up your data, and then import it into Fedora.

Table 4-1 shows a list of common personal data file types, their file extensions, where they can be typically found on a Windows XP system, and notes on importing the data into Fedora. Note that earlier versions of Windows (95, 98, and Me) may differ when it comes to data storage locations.

Table 4-1. *Data That Should Be Backed Up*

Type of File	File Extensions	Typical Location	Notes
Office files	.doc, .xls, .ppt, .pdf, etc.	My Documents	Microsoft Office files can be opened, edited, and saved under Fedora using the OpenOffice.org suite. PDF documents can be viewed with the Evince program.
E-mail files	N/A	N/A	The Evolution mail client used by Fedora cannot import data directly from Microsoft Outlook or Outlook Express. However, there is a convoluted but effective workaround, which is described in the next section.
Digital images	.jpg, .bmp, .tif, .png, .gif, etc.	My Pictures (within My Documents)	Fedora includes a variety of programs to both view and edit image files.
Multimedia files	.mp3, .mpg, .avi, etc.	Various	With some additional downloads (discussed in Chapter 18), programs under Fedora can play MP3 music files and most movie file formats.
Internet Explorer Favorites	None	\Documents and Settings\ <username>\Favorites	Your Favorites list cannot be imported into Fedora, but the individual files can be opened in a text editor in order to view their URLs, which can then be opened in the Fedora web browser.
Miscellaneous Internet files	Various	Various	You might also want to back up web site archives or instant messenger chat logs, although hidden data such as cookies cannot be imported.

Backing Up E-mail Files

Microsoft e-mail cannot be easily imported into Fedora because Microsoft prefers to create its own proprietary file formats, rather than use open standards recognized by the rest of industry. Most e-mail programs use the MBOX format, and this is true of Fedora as well as programs created by the Mozilla Foundation (the organization behind the Firefox web browser). However, Microsoft uses its own DBX file format for Outlook Express and PST format for Outlook.

As a workaround, you can download and install the free Mozilla Thunderbird e-mail client (available from www.mozilla.com) on your Windows system. In Thunderbird, select Tools ► Import to import your messages from Outlook, Outlook Express, or even the popular Eudora mail client. You will then be able to back up Thunderbird's mail files and import them into Evolution under Fedora.

To find where the mail files are stored, in Thunderbird, select Tools ► Account Settings, and then look in the Local Directory box. Back up each file that corresponds to a folder within your mail program—for example, Inbox, Sent, and so on. Note that you only need to back up the files *without* file extensions. You can ignore the .sbd folders as well as the .msf files.

Making Notes

When you're backing up data, a pencil and paper come in handy, too. You should write down any important usernames and passwords, such as those for your e-mail account and other online services. You might want to write down the phone number of your dial-up connection, for example, or your DSL/cable modem technical settings.

Caution Don't forget to back up "hidden" data, such as Internet passwords.

In addition, remember to jot down essential technical details, such as your IP address if you are part of a network of computers using static addresses (this will usually be relevant only if you work in an office environment).

Tip If you've forgotten any passwords, several freeware/shareware applications are able to “decode” the asterisks that obscure Windows passwords and show what's beneath them. A good example is Asterisk Password Reveal, which you can download from www.paqtool.com/product/pass/pass_001.htm. Sites like Download.com (www.download.com/) offer similar applications.

Note that you don't need to write down information such as hardware interrupt (IRQ) or memory addresses, because hardware is configured automatically by Fedora. However, it might be worth making a note of the make and model of some items of internal hardware, such as your graphics card, modem (dial-up, DSL, or cable), and sound card. This will help if Fedora is unable to automatically detect your hardware, although such a situation is fairly unlikely to arise. You can garner this information by right-clicking My Computer on your desktop, selecting Properties, and then clicking the Hardware tab. Then click the Device Manager button. Instead of writing everything down, you might consider taking a screenshot by pressing the Print Scr button and then using your favorite image editor to print it.

Tip Fedora works with a wide variety of hardware, and in most cases, it will automatically detect your system components. If you're in any doubt, you can consult the forums at www.fedoraforum.org (in particular, the Hardware Help forums). You might also consider subscribing to one or more of the Fedora mailing lists at www.redhat.com/mailman/listinfo. Remember that an important element of Fedora is its community of users, many of whom will be very willing to answer any questions you might have!

Once you're certain that all your data is backed up, you can move on to the next chapter, which provides a step-by-step guide to installing the operating system.

Summary

The aim of this chapter has been to prepare both you and your computer for the installation of Fedora. We've looked at how your hard disk will be partitioned prior to installation and the preparations you should make to ensure your hard disk has sufficient free space. You also learned about the types of files you might choose to back up, in addition to vital details you should record, such as usernames and passwords for your online accounts.

In the next chapter, we move on to a full description of the Fedora installation procedure, which will guide you through getting Fedora onto your computer.
