Outline

- Magnetism
- MR Magnets
 - Permanent
 - Resistive
 - Super-conducting
- Shim System
- Gradient System
- RF System

Slide # 2

Objectives

Upon completion of this course, the attendee should...

1. Have an understanding of magnetism & magnetic properties
2. Understand various MR imagers
3. Have an understanding various system components
4. Learn the difference between magnet, shim, gradients and RF systems
5. Understand various MR components, their "job" and operation.

Slide # 3

Magnetism

- Fundamental property of matter
 - Like mass
 - Like charge
- Magnetic Susceptibility
- Magnetic Properties

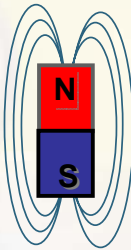

Slide # 5

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved.

Magnetic susceptibility

The ability for a material to become magnetized

- Diamagnetic materials
- Paramagnetic materials
- Super paramagnetic materials
- Ferromagnetic materials

Slide # 6

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved.

Diamagnetic Materials

Dia-Magnetic Characteristics

- Paired Electrons
- Electron Cloud protects nucleus
- Negative susceptibility
- Low susceptibility
- "D"oes not fly into the magnet

Dia-Magnetic Material

- Wood
- Glass
- Plastic
- Metals

gold
silver
Stainless Steel

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 7

Paramagnetic Materials

Para-Magnetic Characteristics

- Unpaired Electrons
- no protection for the nucleus
- Positive susceptibility
- Low susceptibility

Para-Magnetic Material

- Gadolinium contrast agents

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 8

Ferromagnetic Materials

Ferro-Magnetic Characteristics

- ½ filled Electron shells
- no protection for the nucleus
- Positive susceptibility
- High susceptibility
- "F"lies into the magnet

Ferro-Magnetic Material

- Iron
- Steel

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 9

Magnetic Properties

Dia-Magnetic

- Wood
- Plastic
- Glass

Para-Magnetic

- gadolinium
- manganese

Super Paramagnetic

- Contrast agents
- Iron Oxide
- T2 agents

Ferro-Magnetic

- Iron
- Steel

How to Make a Magnet

Permanent magnets

- Magnetize ferromagnetic materials
- Permanently magnetized

Electromagnets

- Current in wires
- Requires current to remain magnetized

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 11

Right Hand Thumb Rule

B = magnetic field

e = electrons flowing in current

I = current

- Wrap fingers of right had around the wire
- Point thumb in the direction of current
- Fingers point in the direction of the magnetic field (B)

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 12

Solenoid Electromagnet

Strength of the magnetic field of a solenoid

$$\frac{2 \pi N I}{\text{space}} = B$$
 I = current
 B = magnetic field

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 13

Magnetic Field Strength

- Tesla (T)
 - Within the bore
- Gauss (g)
 - Outside the imager
- 1T = 10,000 g

Resistive Magnet Imager

- Electro-Magnet
 - Current within conductors
 - Resistance within the conductors
- Requires current to be on
 - Can be turned off
- Light in weight
- Low field strength
- Vertical or Horizontal field

Clinical Imagers with field strengths up to 3.0 T
Research systems at 7.0 T and >

$I = \text{current}$

$B = \text{magnetic field}$

He = liquid helium
Cryogen for superconductivity

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 25

Superconducting Magnet Imager

- Superconducting Electro-Magnet
 - Current within conductors
 - Supercooled to remove resistance
 - Needs cryogenics (liquid helium)
- Always on
- High field strength
- Horizontal field
 - Rare exceptions

Helium Turrent & bursting disk

Magnetic System Components

- The Main Magnet (B_0)
- The Shim Magnet
- The Gradient Magnet
- The RF Magnet (B_1)

Image courtesy of Philips Medical

- And you thought that there was only one magnet in the MR imager!

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 30

Magnetic – Shim System

- The Main Magnet (Bo)
- The Shim Magnet
 - Maintain homogeneity
 - Units of PPM
 - Parts per million
 - Passive or active
 - Passive (shim plates, no current)
 - Active (shim coils, requires current)
- The Gradient Magnet
- The RF Magnet (B)

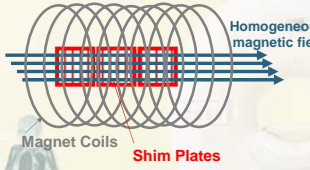

Image courtesy of Philips Medical

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 31

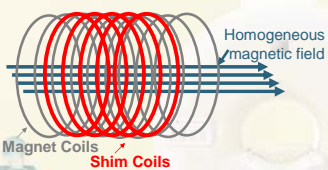

Passive Shim

- Passive shim = NO current
- Shim plates within the imager near the magnet
- Shim plates are installed during imager manufacturing

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 32

Active Shim

- Active shim implies current
- Shim coils within the imager near the magnet
- Shim coils are resistive magnets and require current in order to run
- Systems typically shimmed by the service engineer

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 33

Homogeneity

- Homogeneity is expressed in units of ppm
- PPM = parts per million or one 1/1,000,000
- 1T = 10,000 g
- 1 ppm inhomogeneity = + or - .01 gauss
- Field strength can be 10,000.01 g to 10,000.00 g
- if the frequency is 42 megahertz (million hertz)
- then the homogeneity is 42 Hz

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 34

Shim Power Supply

- Located within the equipment room
- Must be “on” for the shim system to work
- Otherwise homogeneity suffers
- Image quality is compromised

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 35

Gradient “Magnetic” System

- The Main Magnet (Bo)
- The Shim Magnet
- The Gradient Magnet
 - Spatial localization
 - Refocus Signals
 - Linear gradation (slope)
 - Time varied magnetic field
 - Units
 - Millitesla per meter (Mt/m)
 - Gauss per centimeter (g/cm)
 - 10 Mt/m = 1 g/cm
- The RF Magnet (B1)

Image courtesy of Philips Medical

Gradient compensation

Static field B_0

Inhomogeneity
In Static field B_0

Z gradient
Superior to inferior

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 40

Gradient Units

Gradients can be expressed in several units of measure including:

- Strength (amplitude)
 - mT/M (millitesla per meter)
- Strength (amplitude)
 - g/cm (gauss per centimeter)
 - 10 mT/M = 1 g/cm
- Rise Time μ (microseconds)
 - (time to reach maximum amplitude)
- Slew Rate (combines rise time with strength)
 - Tesla per meter per second (T/M/s)
- Duty cycle (% of time the gradient can "work")

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 41

Gradient Amplifiers

- X, Y, Z gradient amps
- Each has master/slave configuration
- Located in the computer room
- Uses resistive components
- Requires current

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 42

Electromagnetic Radio Wave

- The Main Magnet (Bo)
- The Shim Magnet
- The Gradient Magnet
- The RF Magnet (B1)
 - To excite the proton spins
 - B1 field
 - Oscillating magnetic field
 - Larmor Frequency

Image courtesy of Philips Medical

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 43

Resonance

The RF Frequency

The Larmor Equation

- calculates the precessional frequency based on B_0

- Precessional Frequency or Larmor frequency
 - The rate at which the spins wobble, or precess
- Wobble or precess in cycles per second
 - One cycle is once around the precessional path
 - One cycle is one sine wave
 - One cycle per second = 1 Hertz (Hz)
 - MHz , megahertz = 1,000,000 cycles per second

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 47

Larmor Frequency

In order to calculate the precessional (Larmor) frequency

- The magnetic moment of the proton
- The spin angular momentum of the proton

Gyro-magnetic ratio = γ
 Magneto-gyric ratio = γ

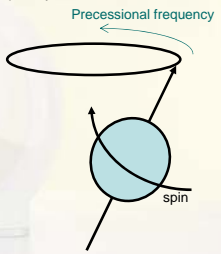

- The field strength of the magnet

Magnetic field strength = B_0

This is known as the Larmor equation

$$\omega_0 = B_0 \gamma$$

Larmor or Precessional Frequency = ω Magnetic field strength = B
 Gyro-magnetic ratio = γ
 Magneto-gyric ratio = γ

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 48

Calculating the Larmor Frequency

$$\omega_0 = B_0 \gamma$$

ω for 1H (hydrogen) = 42.6 MHz/T
If the Field strength (B_0) is 1.0 Tesla

ω for 1H (hydrogen) = 42.6 MHz/T
If the Field strength (B_0) is 1.5 Tesla

Then...

$$\omega_0 = (1.0T) \times (42.6 \text{ MHz/T})$$

$$\omega_0 = 42.6 \text{ MHz (Megahertz)}$$

Then...

$$\omega_0 = (1.5T) \times (42.6 \text{ MHz/T})$$

$$\omega_0 = 63.9 \text{ MHz (Megahertz)}$$

Slide # 49

Radiofrequency Energy?

• Do we use radiation in MR?

• Electromagnetic spectrum

• X-rays

– High energy

– Ionizing radiation

• MR Radiofrequency

– Low energy

– Non-ionizing

At 1.5T the frequency is roughly 64 MHz.
In most cities, channel 3 broadcasts at roughly 64 Mhz.

RF Coils

MAGNETOM Concerto

Extremity Array Coil, small and large.
Dual phased array receive coils with 2 coil elements each.
Internal dimensions (WxHxD):
Small coil: 6 x 6.3 x 8.3 in
Large coil: 7.8 x 8.3 x 8.3 in

Special coil kit

Multipurpose Coil 4.3 in
Single channel receive coil

Body Spine Array Coil is available in S, M, L, XL. The Coil Kit includes size M and L.

CP Head/Neck Array Coil
2 channel array receive coil
2 additional neck coil elements

Shoulder Array Coil
Dual Phased Array receive coil
Inner vertical opening 7.6 in

Faraday's Law of Induction

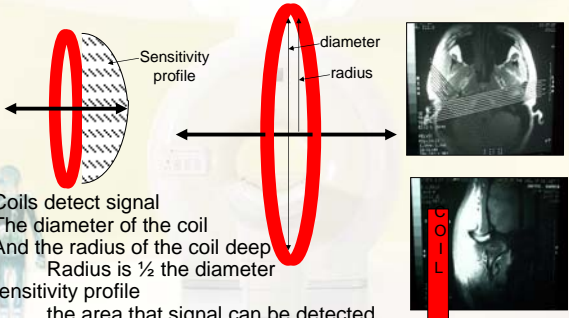

- Drag a magnet across a conductor, a voltage is created (induced) within the conductor

- $dB / dt = dV$
Change of magnet divided by time = voltage
- $\Delta B / \Delta t = \Delta V$

Copyright 2006 Imaging Education Associates, LLC. All Rights Reserved. Slide # 57

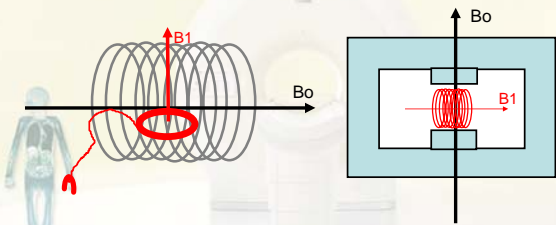

Sensitivity Profiles for Coils

- Coils detect signal
- The diameter of the coil
- And the radius of the coil deep
- Radius is 1/2 the diameter
- Sensitivity profile
- the area that signal can be detected

Induced signals in MR

Linear coils are like antennas...
Electrons in the antenna are forced up-when the signal is heading up, and down, when down

Quadrature coils are like antennas...
configured perpendicularly
Signal is forced up, down and to the side, thus better signal!
