

CENTER FOR FAMILY & DEMOGRAPHIC RESEARCH

Making Graphs with Excel

Summer 2014 Workshop Series

WHY-

CHARTS?

Picture Superiority Effect

Information is better remembered in tests of recall and item recognition when presented as pictures rather than words

Fruit <

Why is it so
difficult for—

SOCIOLOGISTS?

How do you process?

- **Analytical**
- **Logical**
- **Precise**
- **Repetitive**
- **Organized**
- **Details**
- **Scientific**
- **Detached**
- **Literal**
- **Sequential**

- **Creative**
- **Imaginative**
- **General**
- **Intuitive**
- **Conceptual**
- **Big picture**
- **Heuristic**
- **Empathetic**
- **Figurative**
- **Irregular**

I Propose we Marry 4 the Two
The pun is intended!

Organization of Presentation

- **Structure of an Excel Chart**
- **Different Types of Excel Charts**
- **Basic Principles of Chart Design**
- **Graphing Interaction Effects**
- **Creating a Chart with a Double Axis**

What makes up-

**THE STRUCTURE OF
AN EXCEL CHART?**

Let's Dissect...

Sources: U.S. Census Bureau, American Community Survey, 2008-2011; HMI spending data— Hawkins et al., 2013.

Source ←

What are-

THE DIFFERENT

TYPES OF CHARTS?

Histograms

A vertical bar chart that depicts the distribution of a set of data

Histograms, example

Scores: 1,1,2,2,2,2,2,3,3,3,3,4,4,5

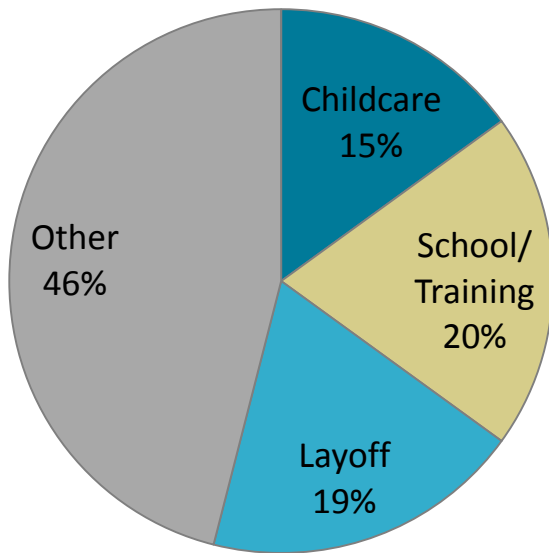

Pie Charts

Generally used to show percentage or proportional data classified into nominal or ordinal categories

Pie Charts, examples

Simple Pie

Top Reasons for Fathers Leaving the Workforce in 2008

Source: Survey of Income and Program Participation, 2008 March Supplement

Pie-of-Pie

Percent of births by informal marital status of mother, 2005-2010

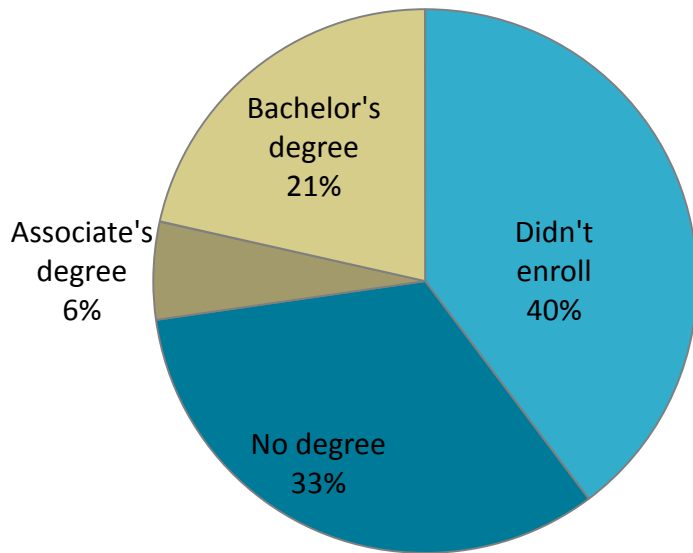

Source: NSFG 2006-2010

Pie Charts, examples

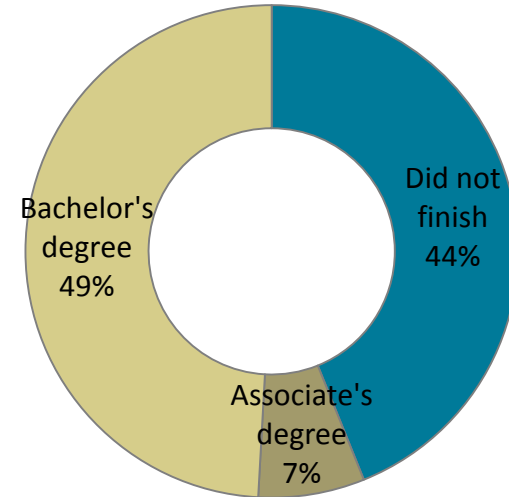

Simple Pie

College experiences of young adults (by age 25)

Doughnut

Percent of young adults who enroll in a 4-year program by degree earned by age 25

Source: National Longitudinal Survey of Youth 1997, Rounds 1-13: 1997-2009 weighted. U.S. Department of Labor, Bureau of Labor Statistics, NCFMR analyses of valid cases.

Bar Chart, example

Prevalence of Pre-union First Birth across Demographic Characteristics

Prevalence of Pre-union First Birth by Race/Ethnicity:
Whites

Hispanics

Blacks

Source: National Longitudinal Survey of Youth 1997 (NLSY97), Rounds 1-13: 1997-2009 (weighted). U.S. Department of Labor, Bureau of Labor Statistics, NCFMR analyses of valid cases.

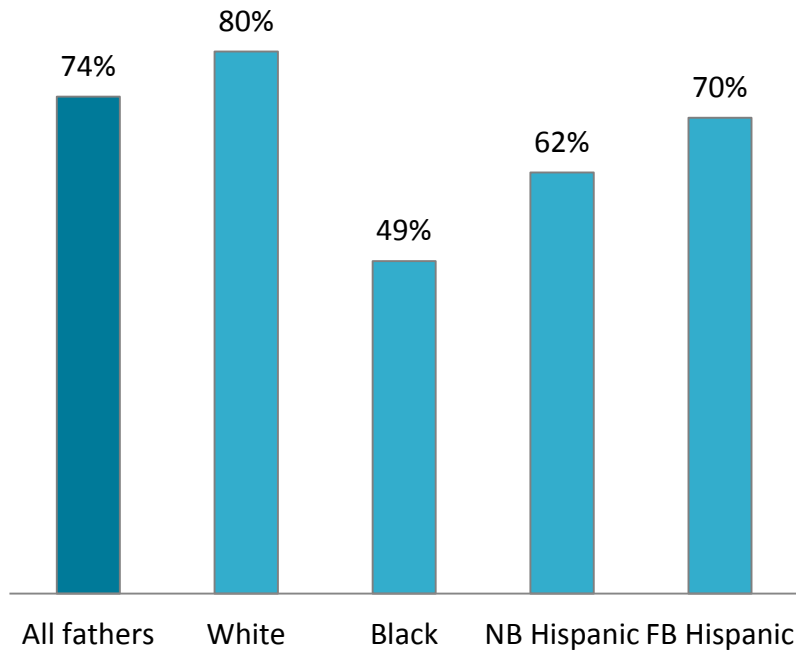

Column & Bar Charts

Useful for showing data changes over a period of time or for illustrating comparisons among items

Column Charts, examples

Simple

Fathers Living with All of Their Children
Race, Ethnicity & Nativity

Source: NSFG 2006-2010

Side-by-Side

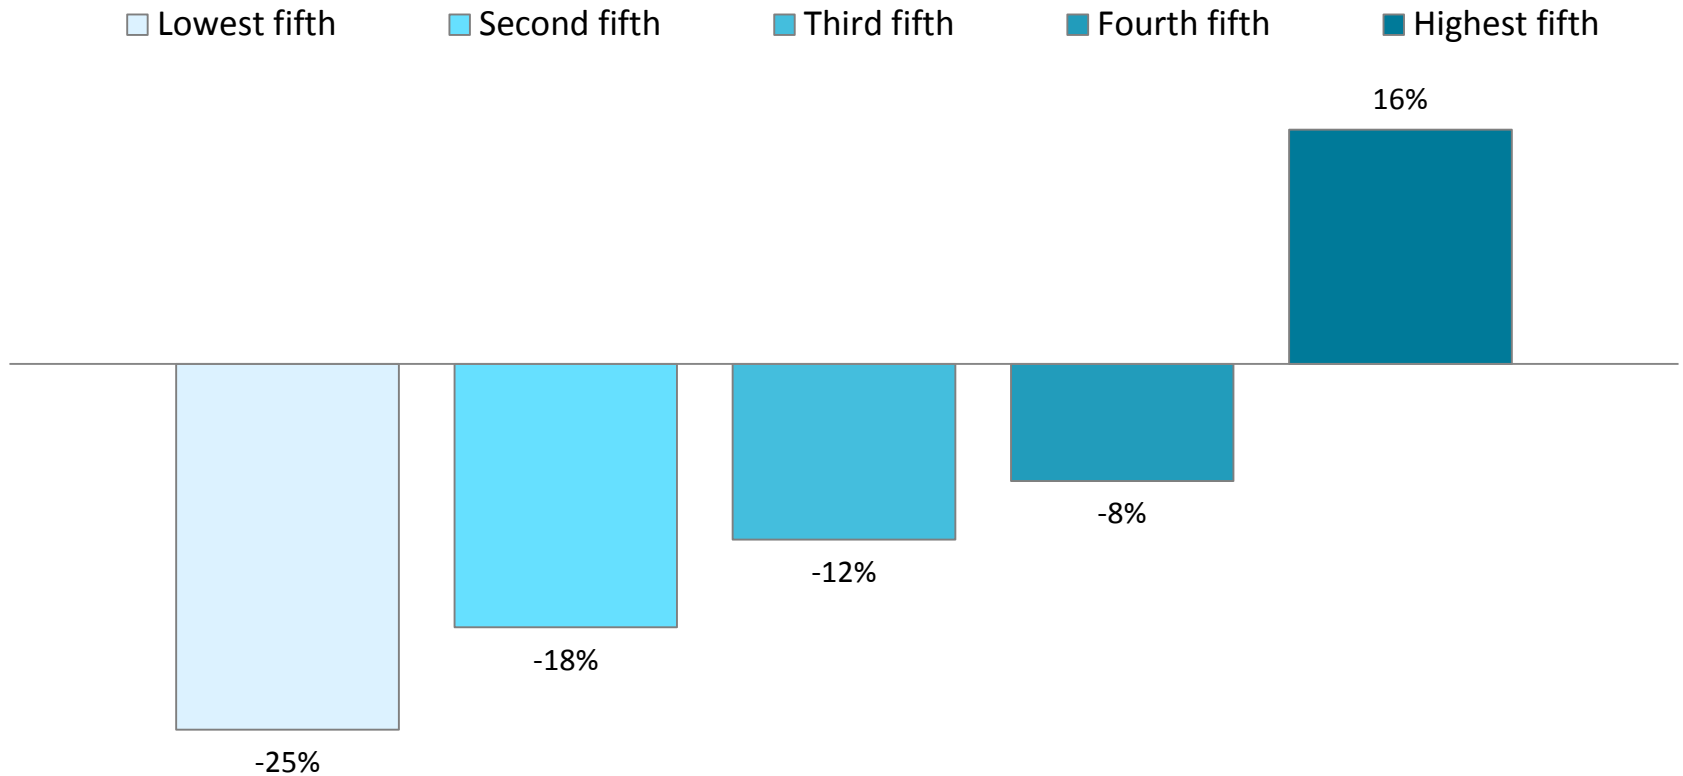

Percentage of Same-Sex Couple
Households with Minor Children by Sex of
Couple and Race/Ethnicity of Household
Head

Source: U.S. Census Bureau, American Community Survey, 1-Year Estimates, 2012

Column Charts, examples

Percent Change in Share of Aggregate Income from 1970-2009

Source: U.S. Census Bureau, Current Population Survey, Annual Social and Economic Supplements

Column Charts, examples

**Public Assistance Participation among U.S. Children in Poverty
by Family Structure, 2010**

Source: U.S. Census Bureau, American Community Survey, 1-Year Estimates, 2010

Column Charts, examples

Changes in the Shares of Births to Single and Cohabiting Mothers Under Age 40

Sources: 1980-1984 data, Bumpass & Lu (2000) using NSFH, 1987/1988; 1990-1994 & 1997-2001 data, Kennedy & Bumpass (2008) using NSFG 1995 & NSFG 2002; 2005-2009, NCFMR analyses using NSFG 2006-2010.

Line Charts

Ideal for showing trends over time

Line Charts, examples

Share of Married Mothers Experiencing a Premarital Birth, by Race and Marriage Cohort

Source: The Integrated Fertility Survey Series (IFSS) is a project of the Population Studies Center and the Inter-university Consortium for Political and Social Research at the University of Michigan, with funding from the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD, grant 5R01 HD053533; Pamela J. Smock, PI).

Line Charts, examples

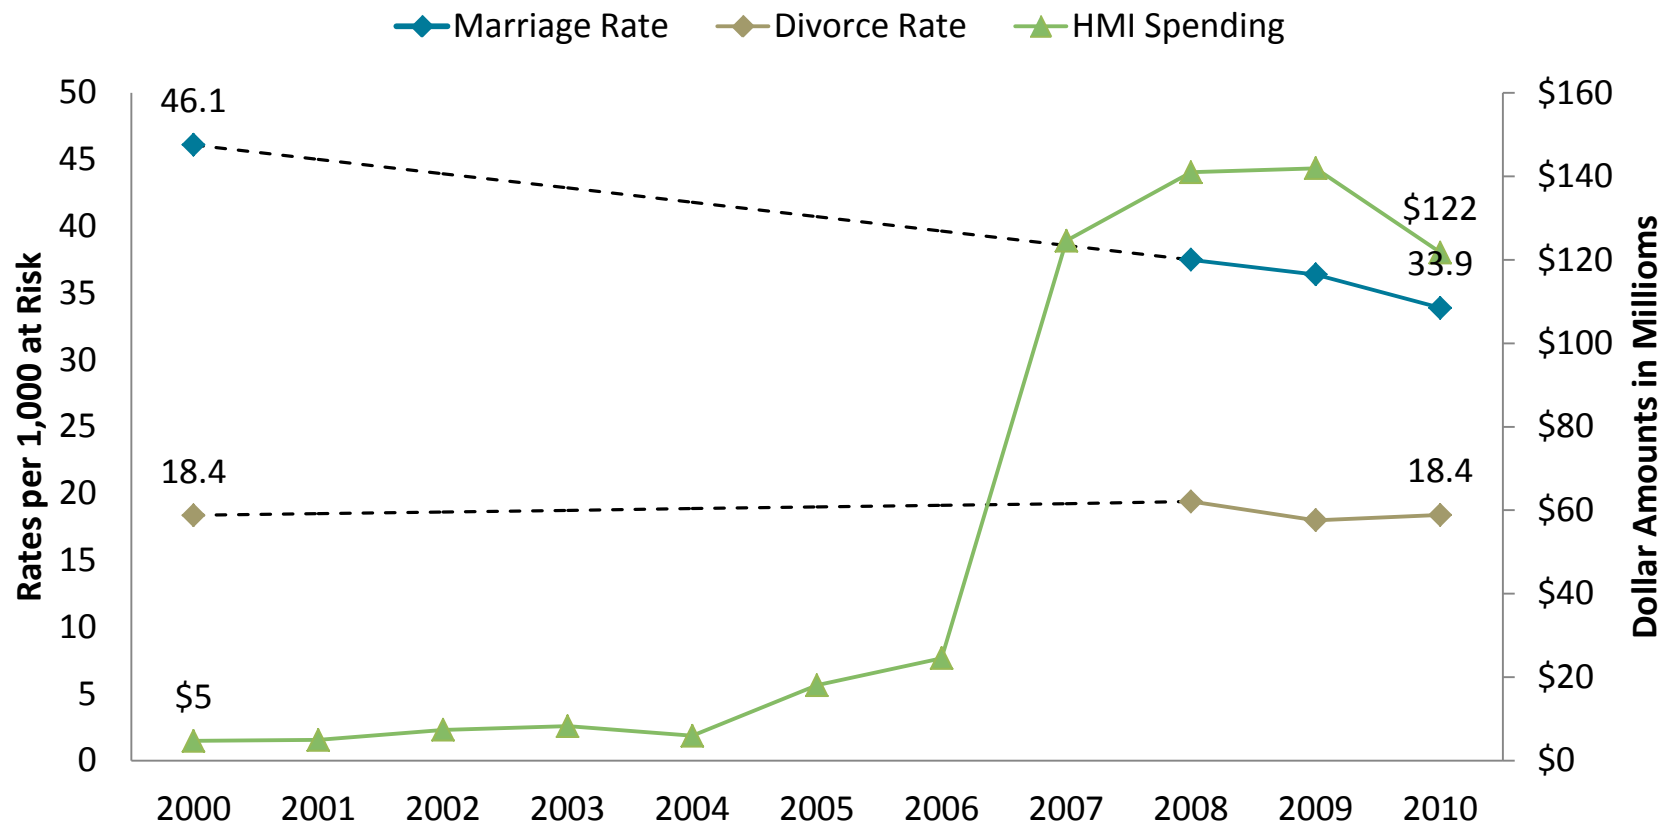

Young Adults Living in a Parent's Household and Economic Recession Years by Sex and Ages, 1940-2010

Source: U.S. Census Bureau, Decennial Census, 1940-2000 (IPUMS); U.S. Census Bureau, American Community Survey, 1-year estimates 2010 (IPUMS)

Line Charts, examples

Annual HMI Spending and Marriage & Divorce Rates, 2000 - 2010

Sources: CDC/NCHS, National Vital Statistics System, 2000; Glass & Levchak, 2010, NCFMR County-Level Marriage & Divorce Data, 2000; U.S. Census Bureau, Decennial Census, 2000; U.S. Census Bureau, American Community Survey, 1-Year Estimates, 2008 – 2010; HMI Spending data – Hawkins et al., 2013.

Line Charts, examples

Crossover in median age at first marriage and first birth: Rising proportion of births to unmarried women, 1980-Present

Sources:

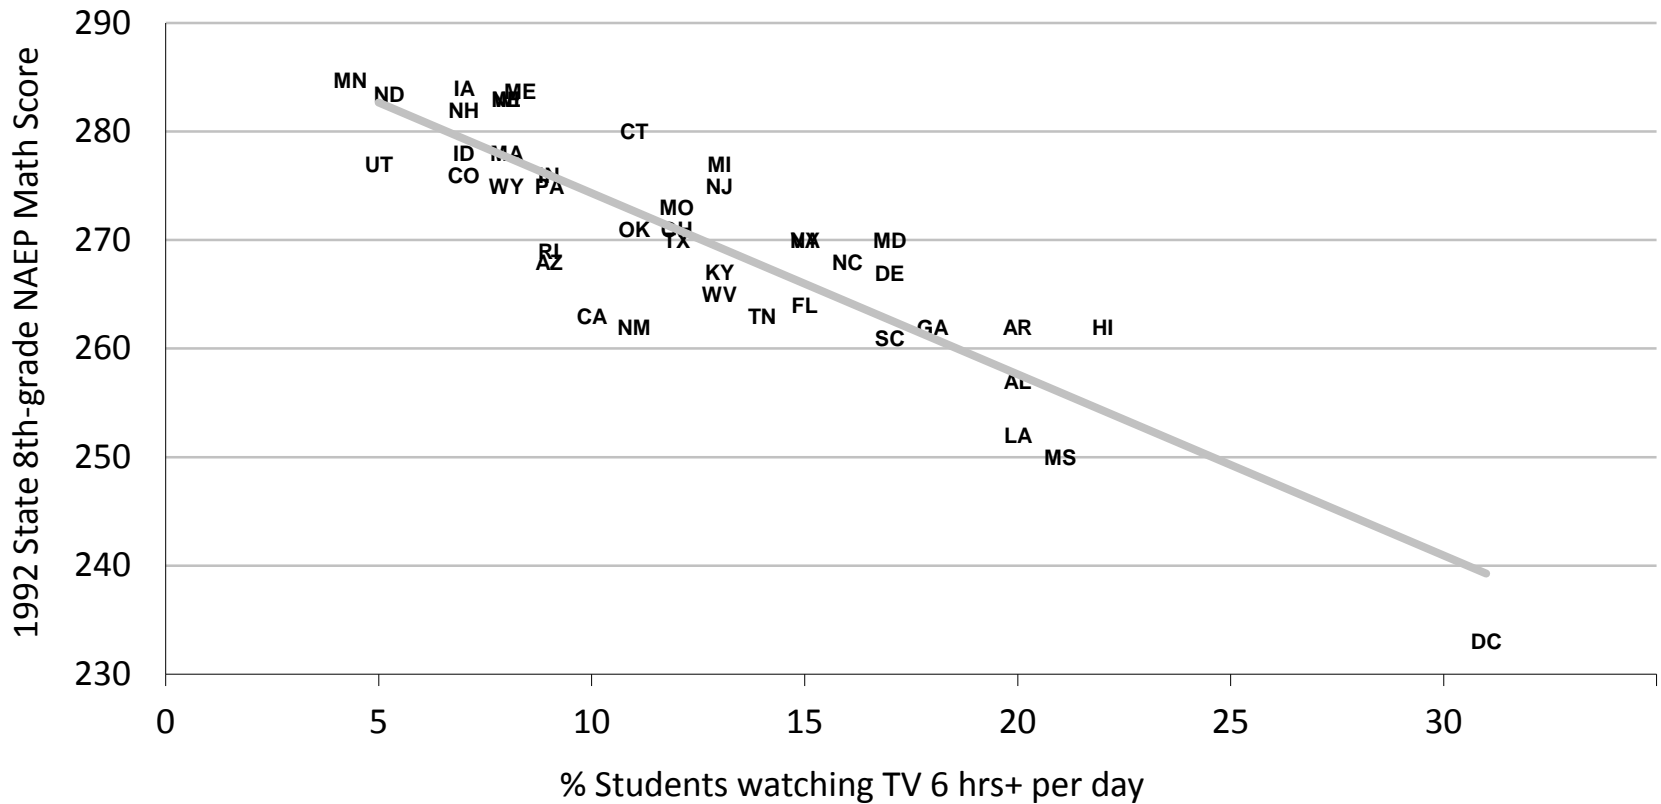

1. U.S. Census Bureau, Current Population Survey, March and Annual Social and Economic Supplements, 2012 and earlier.
2. Centers for Disease Control and Prevention. National Center for Health Statistics. Vital Stats. <http://www.cdc.gov/nchs/vitalstats.htm>. [March 2013].
3. Martin JA, Hamilton BE, Ventura SJ, et al. Births: Final data for 2009. National vital statistics reports; vol 60 no 1. Hyattsville, MD: National Center for Health Statistics. 2011.
4. Hamilton BE, Martin JA, Ventura SJ. Births: Preliminary data for 2010. National vital statistics reports web release; vol 60 no 2. Hyattsville, MD: National Center for Health Statistics. 2011.

Scatter Plots

Commonly used to show the relationship between two variables e.g. correlation

Scatter Plots, example

State Math Scores and Students' TV Viewing Habits

Source: National Center for Educational Statistics, 1994

Area Charts

**Show percentage or proportional data
classified into nominal or ordinal categories
over time**

Area Charts, example

Marital Status of U.S. Population Aged 15 and Older, 1970-2012

Source: 1970-2000 data, U.S. Census Bureau, Current Population Survey, March and Annual Social and Economic Supplements.
2008 and 2012 data, U.S. Census Bureau, American Community Survey, (IPUMS)

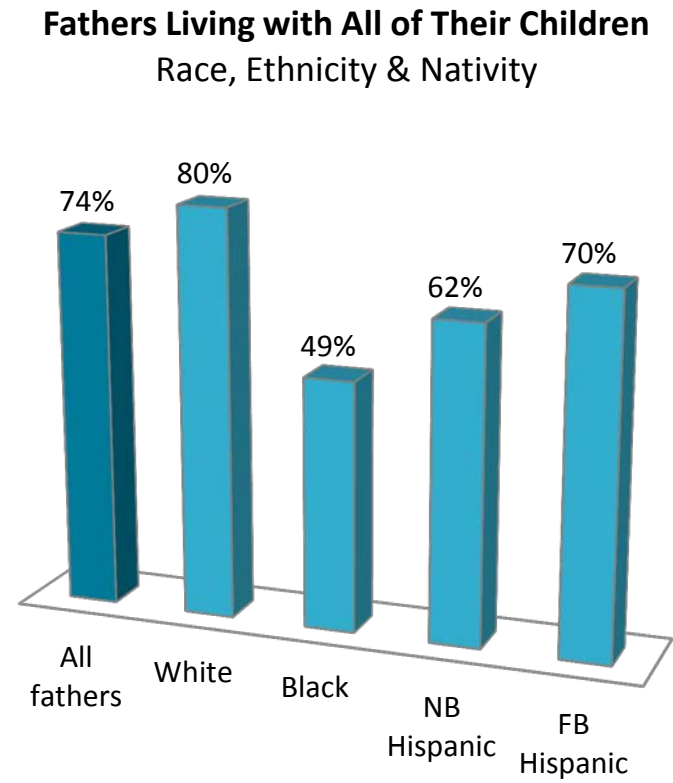

What are some-

**BASIC PRINCIPLES OF
CHART DESIGN?**

1. Simplify

- **Minimize ink-to-data ratio**
- **Remove unneeded chart elements**
 - **Gridlines**
 - **Chart borders**
 - **Axis titles**
 - **Legends**
 - **Markers & data labels**
 - **Decimal points (in axis & data labels)**
 - **Trend lines**
 - **NO 3D charts!!!!!!!!!!!!!!!!!!!!!!**
- **Sort data in a meaningful way**

Example of a 3D Chart:

2. Color vs. Black & White

- **When in doubt → black & white**
- **Color *can* help tell a story**
- **Color = branding (e.g. CFDR, NCFMR, BGSU)**
 - **Use a cohesive and consistent color palette**
 - **Be mindful of how audience will view**
 - **Excel vs. Word vs. PDF**
 - **Color vs. B&W print copy**

3. Do NOT Use Distorted Charts

- **Do NOT misrepresent your data!**
- **Use appropriate and consistent axis and scales**

4. Present Related Charts Simultaneously

- **One-after-another or side-by-side if possible**
- **Emphasizes importance of appropriate axis and scales**

5. Know Your Audience

- **Academics vs. lay folks**
- **Undergraduate students vs. graduate students**
- **Graduate students vs. professors**
- **PAA presentation vs. job talk**

6. TMC = TMI

- **Too many charts (TMC) is as bad as too much information (TMI) → Do NOT overload your audience!**

Let's apply some principles:

Which is easier to understand?

Sources: U.S. Census Bureau, American Community Survey, 2008-2011; HMI spending data— Hawkins et al., 2013.

7. Do you need a chart?

\$117 million

The amount annual
HMI spending in the
U.S. increased from
2000 – 2010

Sources: U.S. Census Bureau, American Community Survey, 2008-2011; HMI spending data– Hawkins et al., 2013.

How do I-

**CHART INTERACTION
EFFECTS?**

Logistic Regression Predicting Ever Marrying

- **An interaction between a categorical and continuous predictor** (DeMaris 2004, p 143):

$$E(Y) = \beta_0 + \delta_1 \text{Black} + \beta_1 \text{Parity} + \gamma_1 \text{Black} * \text{Parity}$$

- **The subpop consists of only White and Black women**
- **Black is a dummy variable**
- **Parity indicates number of live births, range 0-15**
- **Analyses is weighted**

Logistic Regression Predicting Ever Marrying, cont.

• Stata Output for Full Model:

```
. svy, subpop(blkwht): logistic evermar black PARITY PARITYblk, coef  
(running logistic on estimation sample)
```

Survey: Logistic regression

```
Number of strata   =          56      Number of obs       =      12279  
Number of PSUs    =          152      Population size     =     61754741  
Subpop. no. of obs =           8568  
Subpop. size      =     45835139  
Design df        =              96  
F(   3,   94)    =       186.25  
Prob > F        =       0.0000
```

evermar	Coef.	Linearized Std. Err.	t	P> t	[95% Conf. Interval]	
black	-.4698438	.1172022	-4.01	0.000	-.7024885	-.2371992
PARITY	1.458909	.0707637	20.62	0.000	1.318444	1.599374
PARITYblk	-.9253343	.0978554	-9.46	0.000	-1.119576	-.7310928
_cons	-.8652098	.0616793	-14.03	0.000	-.9876423	-.7427772

Logistic Regression Predicting Ever Marrying, cont.

- **Table of Results**

Logistic Regression Predicting Ever Marrying

	Model 1 (Zero-Order)		Model 2		Model 3 (Full)	
	Coef.	SE	Coef.	SE	Coef.	SE
Black	-0.854	0.325 ***	-1.589	0.113 ***	-0.470	0.117 ***
Parity	1.040	0.054 ***	1.150	0.053 ***	1.459	0.071 ***
Black X Parity					-0.925	0.098 ***
Constant			-0.679	0.06 ***	-0.865	0.062 ***

Logistic Regression Predicting Ever Marrying, cont.

- **Equation for Full Model**

$$E(Y) = \beta_0 + \delta_1 \text{Black} + \beta_1 \text{Parity} + \gamma_1 \text{Black} * \text{Parity}$$

- **Equation for Black Women**

$$E(Y) = \beta_0 + \delta_1 + \beta_1 \text{Parity} + \gamma_1 * \text{Parity}$$

- **Equation for White Women**

$$E(Y) = \beta_0 + \beta_1 \text{Parity}$$
