Managing Video File Size with Handbrake

You can download the compression software known as "Handbrake" here: http://handbrake.fr/old.php

Make sure to download version 0.9.5. This version will allow you to specify a target video file size unlike more recent versions.

Once you have the software you will drag your video file onto the "Handbrake" icon-

Indbrake The software will open and you will see this screen:

The red circled area is the known as the "Destination" or the location where you will save the file. In this instance, the file will be saved on to the desktop. From this screen select the "Video" tab, circled in purple.

Compressing Video for Tk20 Using Windows Movie Maker

1. Open Windows Live Movie Maker. (If you are not on a computer with Movie Maker installed, you can download if for free from Microsoft.) = My Movie - Windows Live Movie Maker

Home

🔏 Cut

Animations

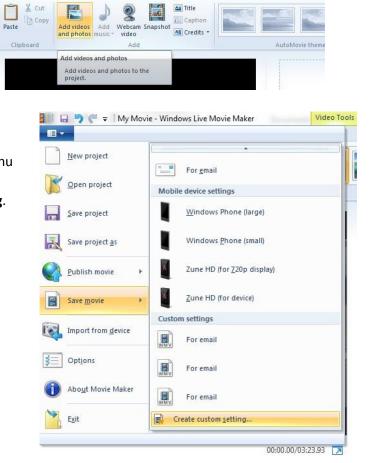

Visual Effects

Project

A Title

View

- 2. Click the Add videos and photos button, and navigate to your video file, or drag and drop your file into Movie Maker. If you need to combine more than one video, add them in the order they need to be in.
- 3. When your video is finished loading, go to the file menu and click on Save Movie. A submenu will open with several options for saving; pick Create Custom Setting.

4. A new window will open. Begin by choosing For email in the drop down menu next to Setting. The standard settings for email will be shown. If the estimated file size is adequate (length of video x MB per minute of video = <100MB), Close the dialog box and skip to Step 7, otherwise continue with the next step.

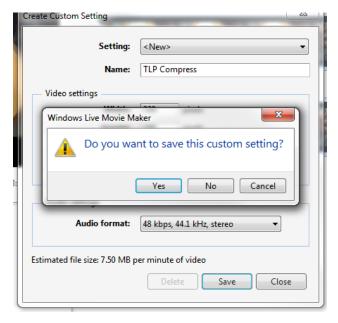

Setting:	For email	▼
Name:	For email	
Video settings		
Width:	320	pixels
Height:	240	pixels
Bit rate:	1500	kbps
Frame rate:	29.97	fps
Audio settings Audio format:	48 kbps, 4	14.1 kHz, stereo 🔻
Estimated file size: 11.07 MB	per minute	of video

- 52

 Reduce the file size by lowering the **Bit rate** by 1000 kbps until you've reached the appropriate size (length of video x MB per minute of video = <100MB).

Create Custom Setting	×
Setting:	For email 🔹
Name:	TLP Compress
Video settings	
Width:	320 pixels
Height:	240 pixels
Bit rate:	1000 kbps
Frame rate:	29.97 fps
Audio settings Audio format:	48 kbps, 44.1 kHz, stereo ▼
Estimated file size: 7.50 MB p	per minute of video
	Delete Save Close

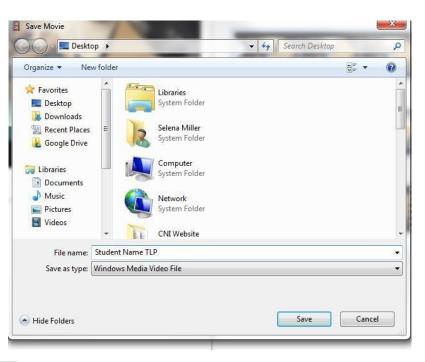

Now that you have the right settings, you want to enter a new name (TLP Compress, e.g.) into the space next to Name. This will help you to easily identify the Custom Settings when you go to save your movie. *Then, change the Setting from For email to <New>. This will automatically bring up the option to save the custom setting. Select Yes, Save the new setting and then Close the Create Custom Setting window.
 *Do not change to <New> until after you rename the setting.

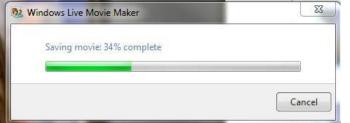

7. Back on the Main Menu, hover over **Save movie** until the submenu appears. Scroll down to the Custom Setting name you chose (or select **For email** under Common Settings if you're coming from Step 5) and select it.
