

MapShareVic

Overview

Where things exist in Victoria are important facts which help us understand the way things are and help us make informed decisions about future places and management. MapshareVic holds a wealth of spatial data and information which will enable you to compile authoritative maps and tabular data on many themes in Victoria.

Specifications

You may see a different view depending if you are browsing using a Desktop, Tablet or Handheld device.

Many factors can influence the performance of this application on your viewer

We recommend

- minimum 10 Mbps network
- Chrome browser
- The latest versions of the browsers should be used. *If old incompatible versions of Internet Explorer, Firefox or Chrome are being used there will be a reduction in performance*

Basics

Desktop Viewer

Below are the main components to MapshareVic: using a Desktop Viewer

Try each of these components, get familiar with how they work and what they do

Select the XY option to expand the coordinates options for the cursor position

	Lat: 36.615° S	X: 2397484	East: 755200	MGRS: 54H YE 552 440
	Long: 143.854° E	Y: 2542099	North: 5944000	Zone: 54

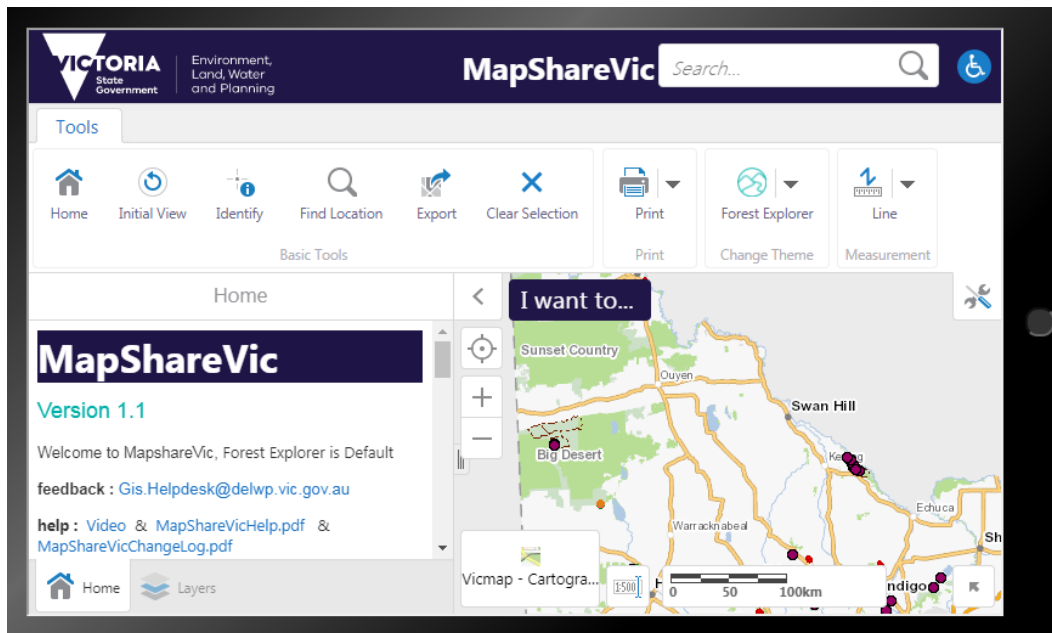

Projections

GDA94 Latitude/Longitude **VicGrid 94** X/Y **MGA Zone 54 and 55** East/North
MGRS Military Grid Reference System (not visible since 25 June 2018 upgrade)

Home Panel View

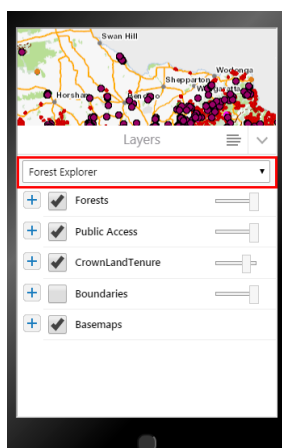

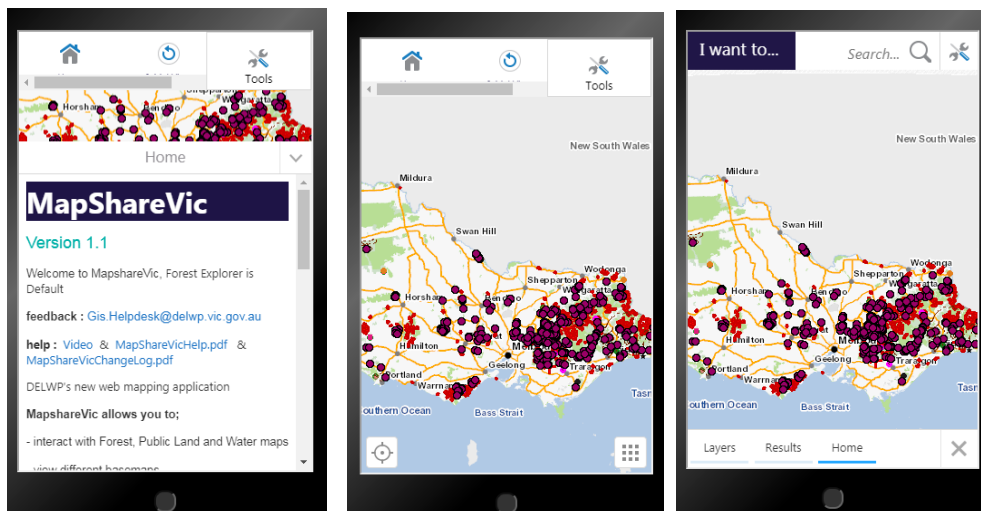

The Welcome page or default Panel view is Home, which will give you general web application information, including contact details

Tablet Viewer

Handheld Viewer

Toolbars and options are hidden for the best view of the map

Change Layer Themes to Property, Water, Public Land and Wetland using the drop down list

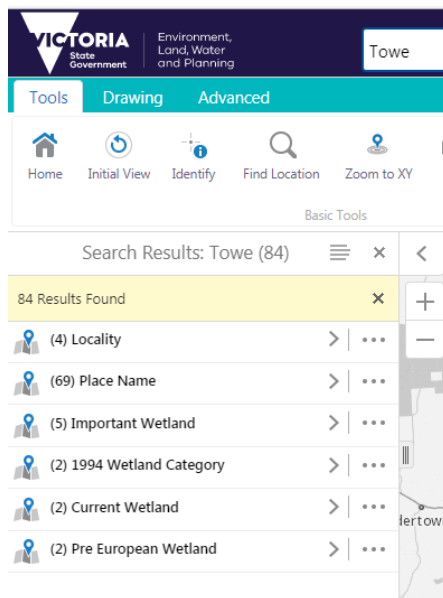

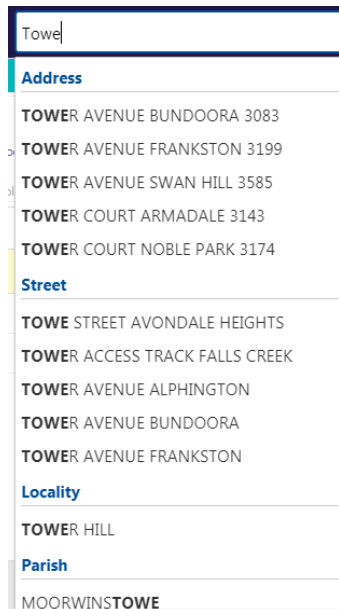

Search

Global Search

The Global Search box allows you to search for address/spi/localities/features on the map and can be used in 2 ways, for an immediate zoom to a selection or with a click of the **enter** button the results will be displayed in a Results Panel View for further selection.

1. Search – suggestions given for selection
2. Search – results shown on left panel

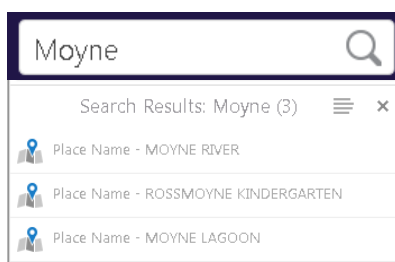

Search 1 – Zooms to single selected option

Property	Start typing	Result
Address	12 vic ...	12 VICARAGE DRIVE WOLLERT 3750
Council Number	937375 ...	937375 WHITTLESEA
Parcel		
SPI (Lot\Plan)	1726\PS ...	1726\PS728834
Lot on Street	Lot 1726 vic ...	Lot 1726 VICARAGE DRIVE WOLLERT
Crown description – Township	Township Ball ...	Township Ballan Allot 1 Sec 17
Crown description – Parish	Parish Ball ...	Parish Ballarat Allot 1 Sec 2A
P-Number	P123 ...	P123004
Street		
Street Name and Locality	VICARAGE DRI ...	VICARAGE DRIVE WOLLERT 3750
Other		
Locality	MEL ...	MELBOURNE SOUTH
Council/LGA	KING ...	KINGSTON
Parish	MEL	MELLER

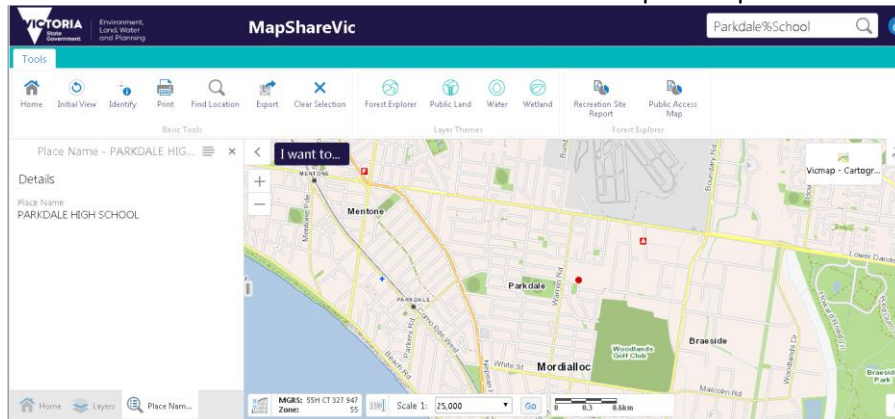

Search 2 – Displays search results

When you type a word into the Search box and select the **Enter** button, the results start to display in the results list immediately. More items display in the Results List as they are found.

These are now grouped for easier selection of numerous results, click the arrow

Results. Click on one of the search results and the map will reposition to its location.

Tablet View

The screenshot displays the MapShareVic web application interface. At the top left, the logo for the VICTORIA State Government is visible, along with the text "Environment, Land, Water and Planning". The main header area contains the "MapShareVic" logo and a search bar with the text "2\PS411821" entered. A red box highlights the search bar with the text "Enter Locality, Address or SPI to find". Below the search bar, there is a "Tools" section with icons for Home, Initial View, Identify, Print, and Export. A "Basic Tools" section is also present. On the left side, a search results panel is open, showing "Search Results: 2\PS411821 (1)" and a single result "2\PS411821" with a location pin icon. Below the results, it says "Displaying 1 - 1 (Total: 1)" and "Page 1 of 1". The main map area shows a geographical view of the Hume region, including Merriang-hurdle Creek Plantations, Mount Buffalo National Park, and NugNug. A scale bar at the bottom indicates 0, 3, and 6 km. The map is titled "Vicmap - Cartogra..." and "Mount Buffalo National P".

Find Location tool

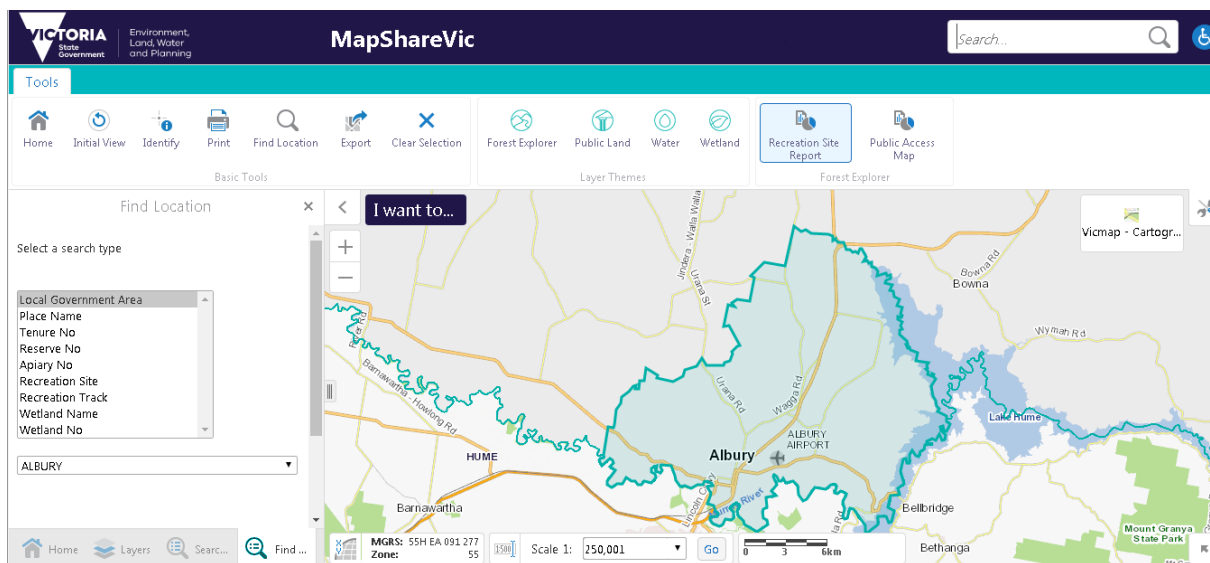

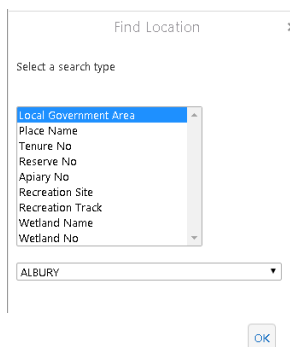

Select the Find Location button in the Toolbar

The options will change depending which Theme you are currently in

For Forest Explorer Theme the following options are available

Select or Enter an **option** and then the **OK** button and the map **will automatically zoom** to the location

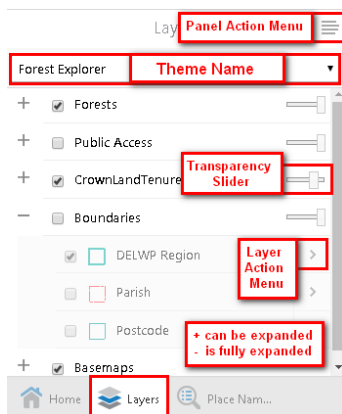

Layer Panel View

Layer Control This panel displays the spatial layer list.

From here you can use the check boxes to select the layers you want shown on your map. Some layers have additional Layer action tools to allow you to see the Metadata about the layer.

Below are the components

Expand and Contract Layer lists with the **+** and **-** options

Turn Layers on/off with the Checkboxes.

Use the Transparency slider to view layers below.

Access additional tools with the Panel Action and Layer Action Menus

- Layer Panel Action Menu, displays the legend

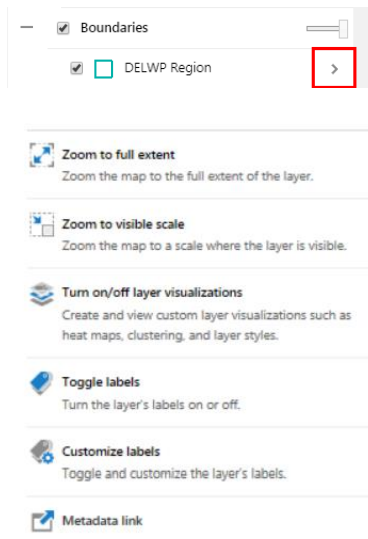

Note : Only the Layers with a tick will be displayed in the legend

Check the current Theme being displayed on the map

Layer Action menu

Select the > at the right of the Layer Name to display the Layer Action menu shown below

Zoom to full extent

Zoom the map to the full extent of the layer.

Zoom to visible scale

Zoom the map to a scale where the layer is visible.

Turn on/off layer visualizations

Create and view custom layer visualisations such as Heat Maps, Clustering and Layer Styles.

- For an outline only visualization, select white for the fill and then max the transparency

Toggle labels

Turn the layer's labels on or off.

Customize labels

Toggle and customise the layer's labels.

Metadata link

Click this Metadata link to view the Metadata about the layer.

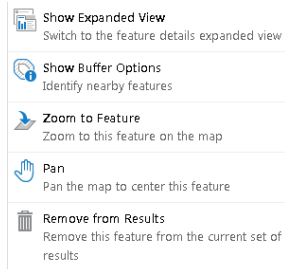

Panel Action Menu

Depending on the Panel View you have active, different menus will appear

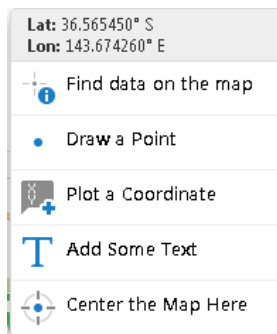

Layer Panel Action Menu

Results Panel Action Menu -

Right Click on Map Menu

Printing

There are a number of different Print templates for you to choose from:

Layout –

A4 Landscape – DELWP, A3 Landscape – DELWP, A4 Portrait – DELWP, A3 Portrait – DELWP, A4 Portrait – Basic Style, A4 Portrait – Simple

Output format –

You can choose a number of different Output formats – default is PDF, Rtf, Tiff, BMP, Gif, Jpeg, Png, GeoTIFF.

Resolution –

You can choose between Low (96dpi) – Default, Medium (144 dpi), High (216 dpi) or Quality(360dpi).

Grid –

You can choose to print your map with a Grid. None is the default, or choose: VicGrid Latitude/Longitude MGA Zone 54 MGA Zone 55

Map Scale –

Current scale is the default, or you can choose Current Extent, or a range of scales based on the Base Map scales.

Title –

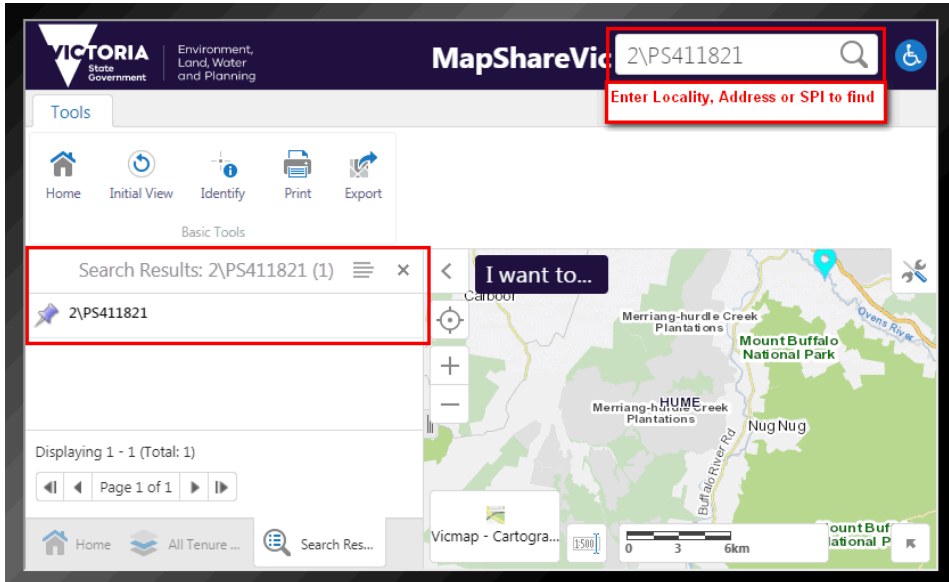

You can add a Title to your map.

Lock print preview with map –

Lock print preview with map You can see exactly where the print extent will be with this ticked.

Tablet View Help

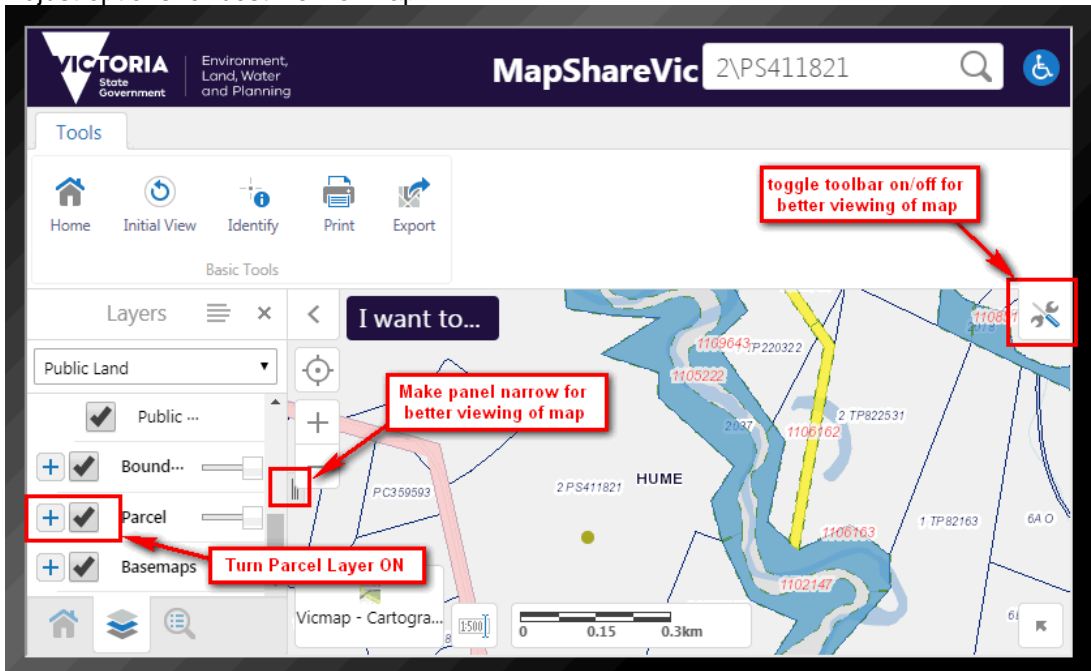

Search for a location

Select Result in the left panel, and the Map will zoom to this location

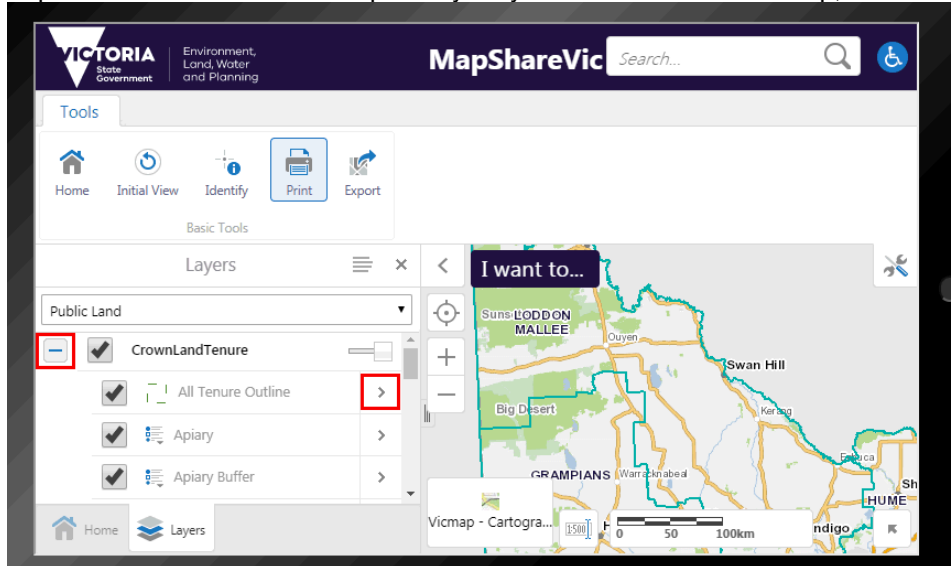

Adjust options for best view of Map

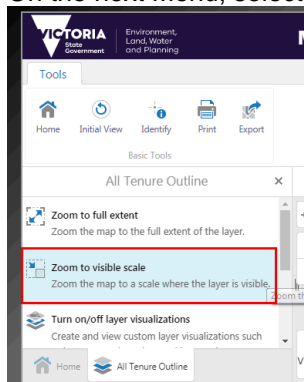

Display data on the map, when you can't see it

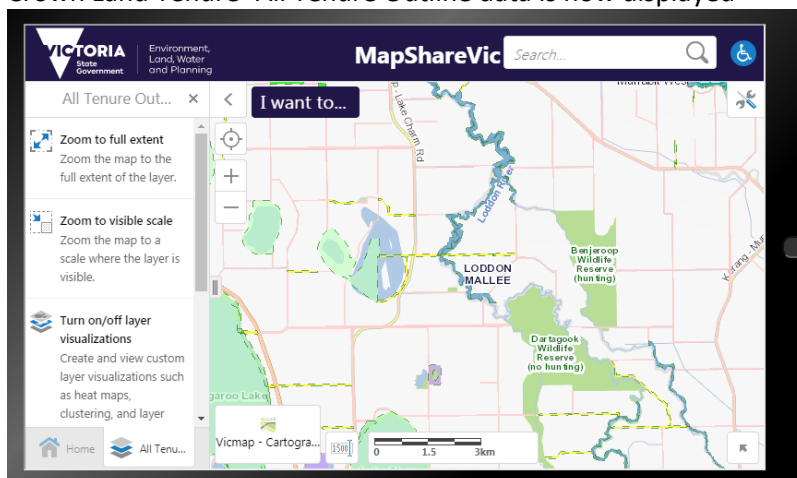

Expand the  for the Group of Layers you wish to see on the map, then select the arrow 

On the next Menu, select **Zoom to visible scale**

Crown Land Tenure- All Tenure Outline data is now displayed

If you still can't see the data then check for known problems

Map Projections

The cursor position can be shown in several different projections

Select the XY option to expand the coordinates options for the cursor position

	Lat: 36.615° S	X: 2397484	East: 755200	MGRS: 54H YE 552 440
	Long: 143.854° E	Y: 2542099	North: 5944000	Zone: 54 n

Projections

GDA94 Latitude/Longitude **VicGrid 94** X/Y **MGA Zone 54 and 55** East/North
Military Grid Reference System (**MGRS**)

- The Geocentric Datum of Australia 1994 (**GDA94**) is Australia's official geodetic datum.
- The **VicGrid94** projection has been chosen as the projection of choice as it is the most accurate projection with minimal distortions for the state of Victoria mapping applications.
- The Map Grid of Australia 1994 (**MGA**) is the standard map projection associated with GDA94.
- The Military Grid Reference System (**MGRS**) is the geocoordinate standard used by NATO militaries for locating points on the earth.

Layer name is grey and is not displayed

Some Layers will only display at certain scale range, this is to optimise the speed of the display of the map for the user.

If the Layer name is black then it is visible at the map scale, however if the Layer name is grey, then this data is not displayed even if it is ticked, because it is outside its scale range.

All the Layers in Property and Parcel are grey, and not visible at this scale. This data is not visible as the amount of detail would not be able to be seen and would slow the display time for the user considerably

Layer name is grey, so not visible at this scale 1:50,000. They are visible at 1:70,000 to 1:100,000 and above 1:100,000 respectively

This Layer name is black so it is visible at this scale 1:50,000 see contours are shown. In this case the name gives user a clue, 1-70K indicates it is visible between the scales of 1:1 and 1:70,000

To display the data on the map from the layer name in *grey italics*

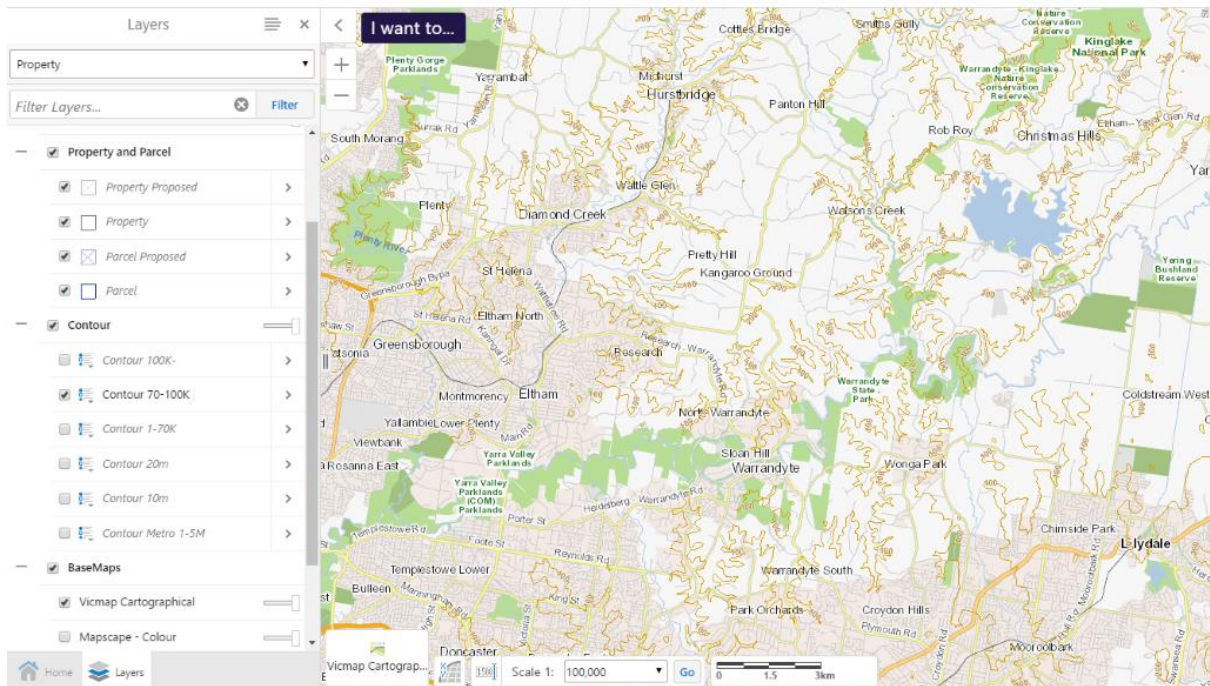

Select the **>** on the required layer, **Contour 70-100K**, and select the **Zoom to visible scale** option which will zoom the map to 1:100,000

The Layer name changes to black

Contours are displayed at 1:100,000 using the **Layer Contour 70-100K**, which is now black

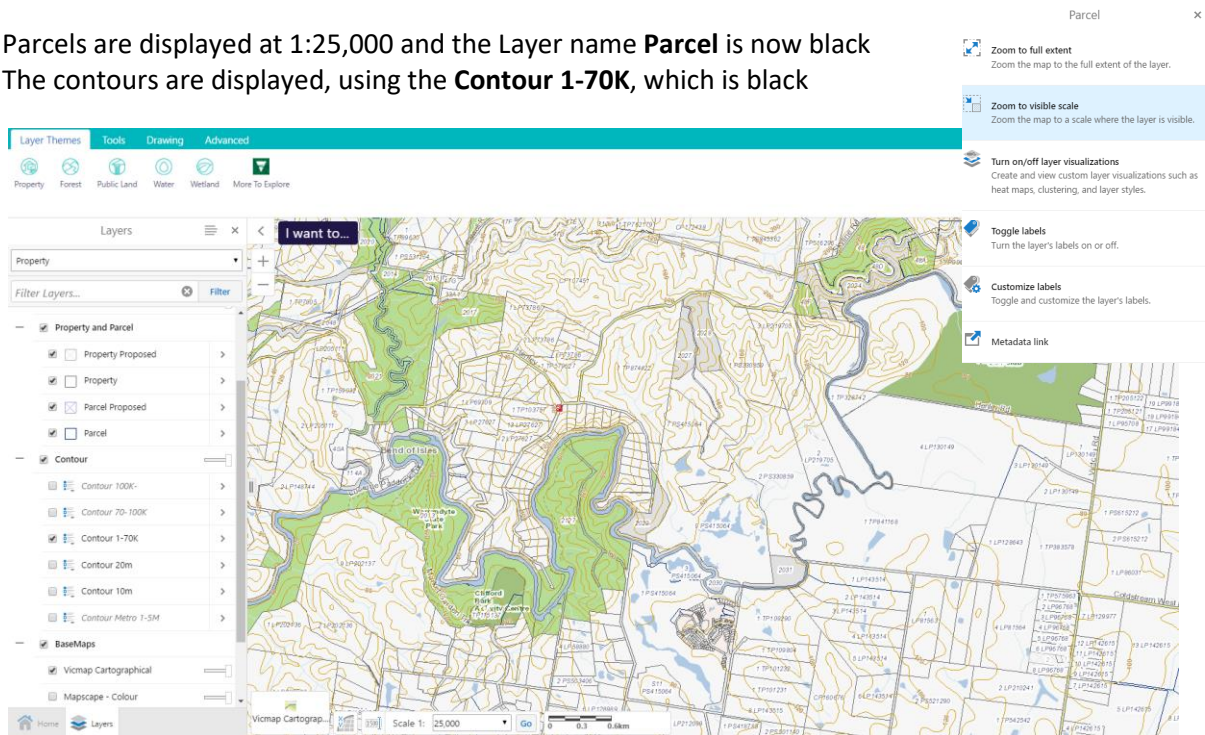

Select the **>** on the required layer, **Parcel**,

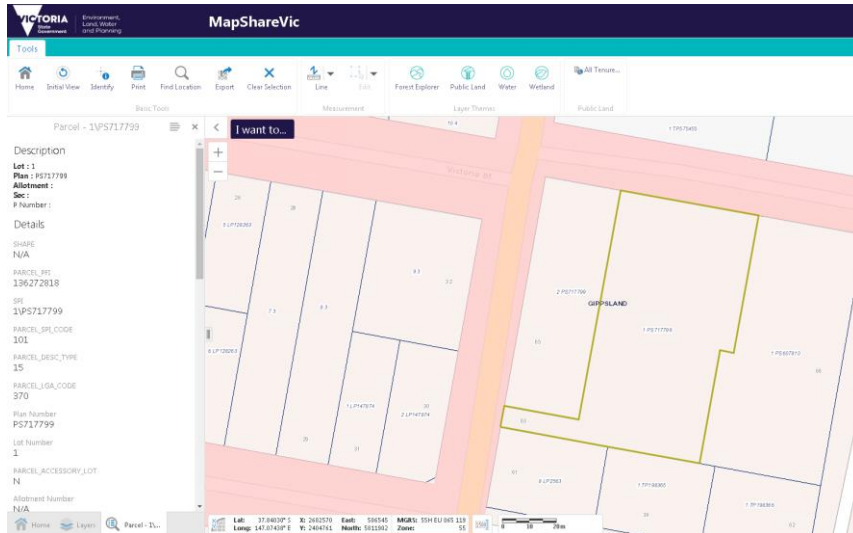

and select the **Zoom to visible scale** option which will zoom the map to 1:25,000

Parcels are displayed at 1:25,000 and the Layer name **Parcel** is now black
The contours are displayed, using the **Contour 1-70K**, which is black

How to measure Areas quickly

- Select the required feature with the Identify tool

- Select the Panel Action Menu in the upper right hand side of the panel

- Select the Measurement option

Measure Area

Measure the area of the currently selected polygon

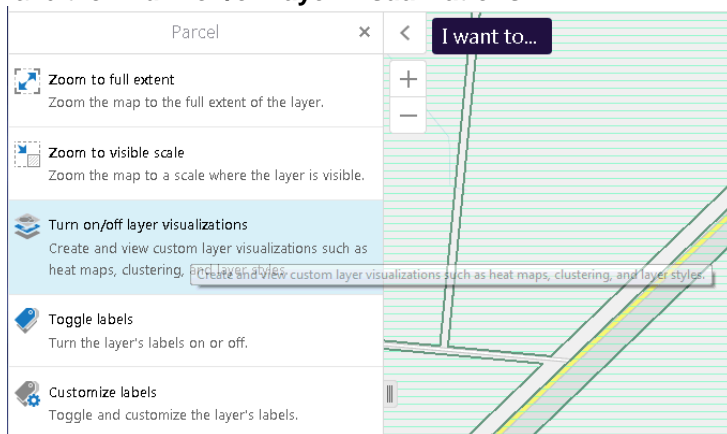

Change the look of data

The capability to style the vector layers containing lines, points or polygons is available - including parcel boundaries as shown in the image below...

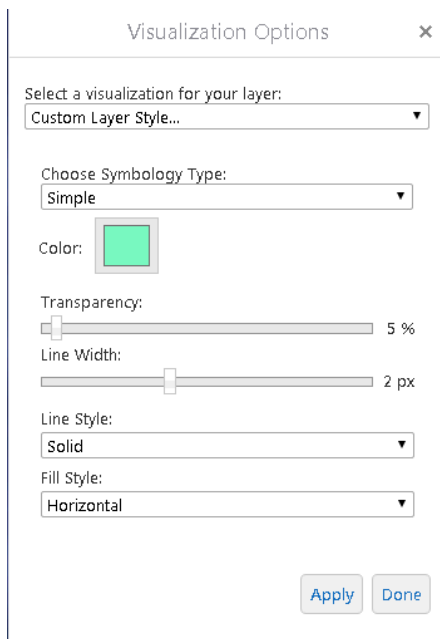

Select the **>** on the required layer,

and then **Turn on/off layer Visualizations**

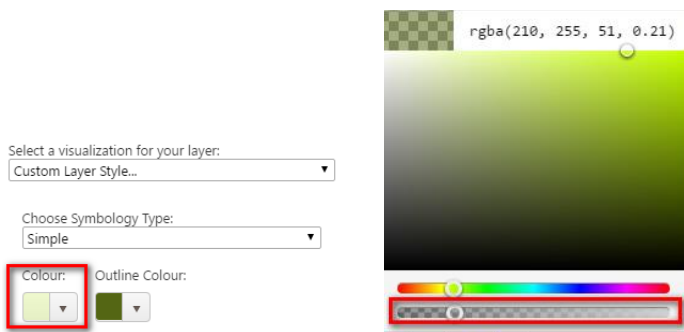

Options available

For a transparent fill choose the opacity required in the Colour option

Simply select **None** to go back to the default style

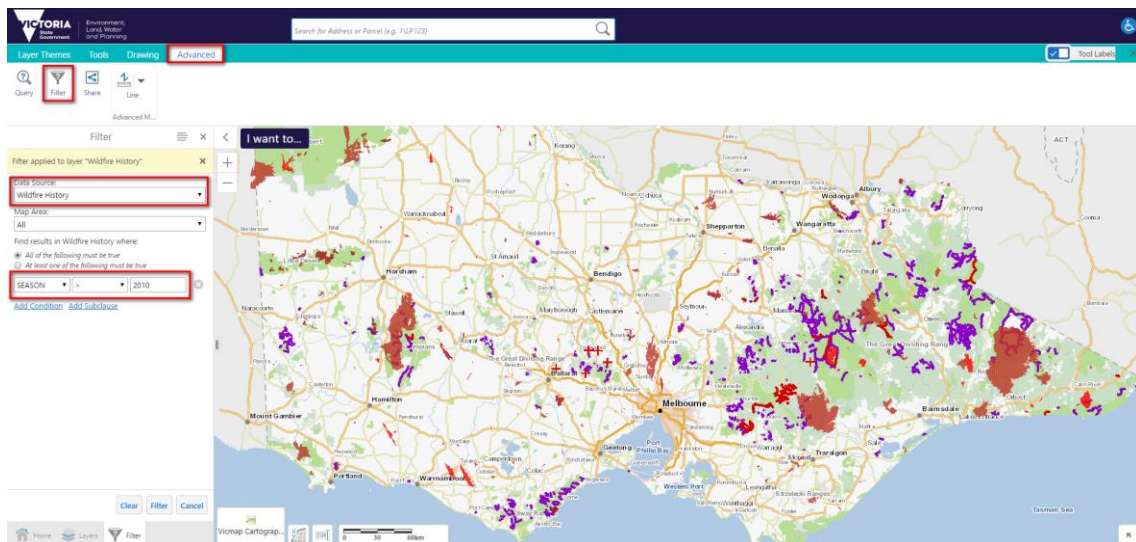

How to filter your data in the map view

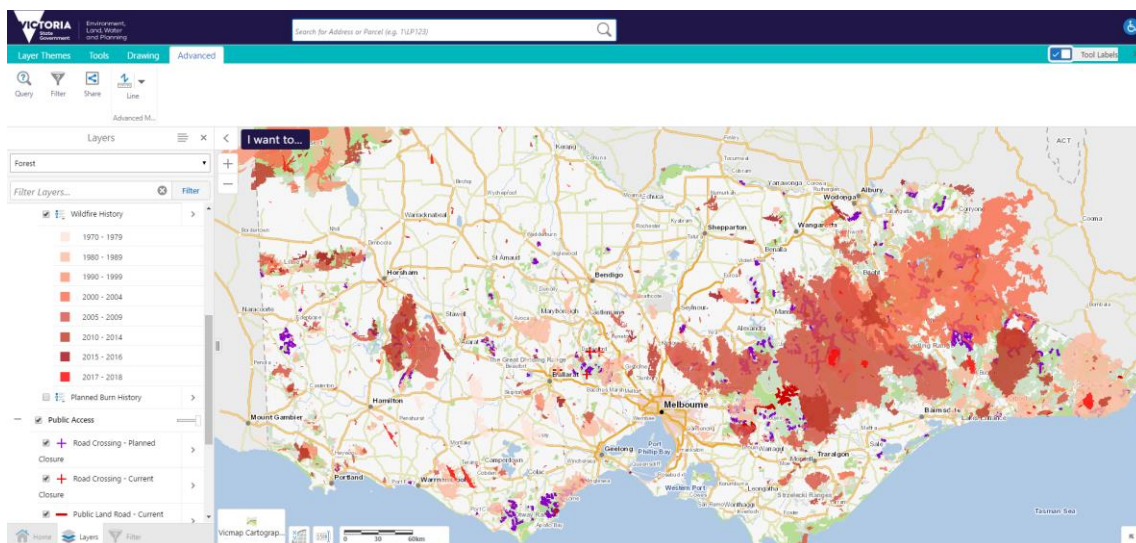

You can filter any data layer using the fields available to display the information you require. The filter tool is located in the Advanced tab, see the example below to show how it works.

- To display only the Wildfire History after 2010, select the **Advanced** tab, then **Filter** tool.
- In the form that appears, select the Layer **Wildfire History, Season > 2010** as shown below.
- You can see that only the wildfires that occurred after 2010 are now displayed.
- To return to the normal display, just select the Clear button.

Map View of Wildfire Layer with Filter of all data after 2010

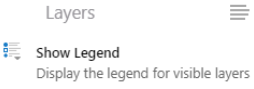

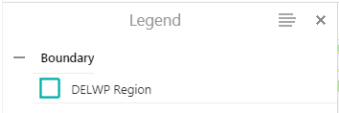

Map View of Wildfire Layer with no Filter

FAQ and Known Problems

Frequently asked questions

How do I display the Legend

- Select the  button in the Tools tab
- or
- Select the button  at the top right hand corner of the Layer Panel
- 
 - Select Show Legend
 - The Legend Panel will display showing only those layers that are currently visible
- 
 - Select the button  at the top right hand corner to return to the Layer Panel

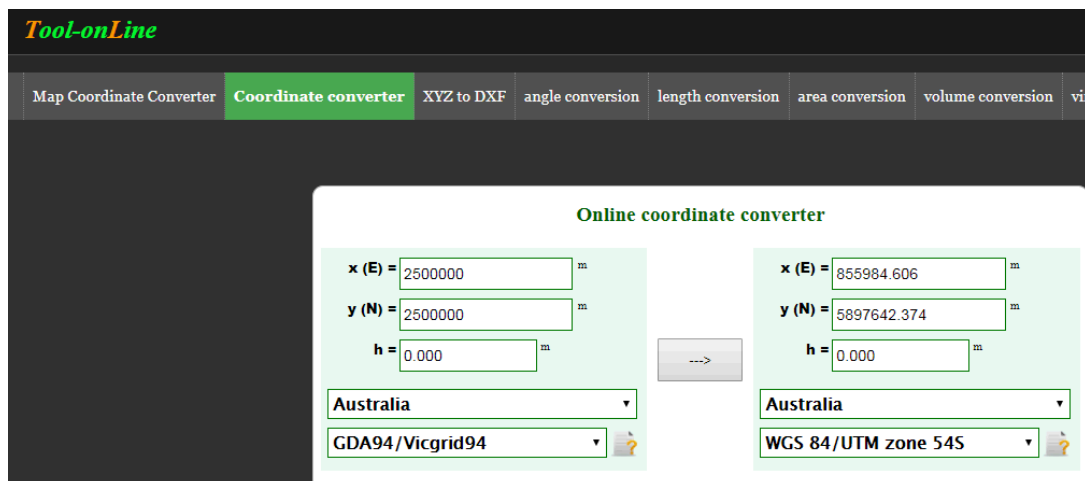

How do I convert Co-ordinates

- Select the XY  co-ordinates at the bottom right corner of map
- Different Projection co-ordinate information will appear

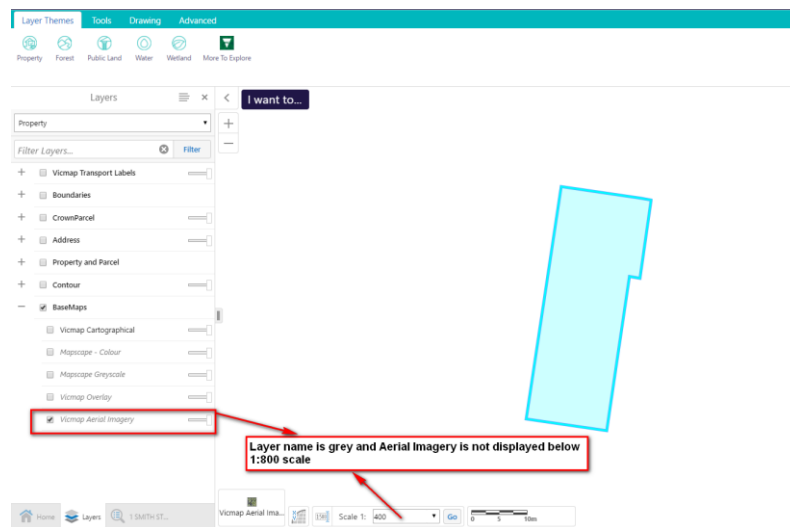

To convert coordinates use the following online resource

<http://tool-online.com/en/coordinate-converter.php>

Vicmap Aerial Imagery not displaying

This basemap does not display below 1:800 scale. This data is made available for us to use as is, and we can not change the display properties.

Change the scale to 1:800 and the Imagery will display

Known Problem

The data is not displaying

There is a current bug in displaying more than 7 layers in the same mapservice, for eg. Forest which we are investigating....

If you are having problems displaying data, you may require to untick/tick the layers until only a maximum of 6 layers are ticked or until the data required is displayed on the map.
