| LESSON PLAN FOR The Celebrated Jumping Frog of Calaveras County |  |
| :--- | :--- |
| Concept or Topic: Graphing and <br> Analyzing Data | Suggested Grade Level: 3-5 |
| Subject: Math and Science | Suggested Time Frame: 2 one hour <br> lessons |
| Objective(s): Students will create a bar graph representing the measurements collected <br> over three frog jumping trials with 3 variables, average the results and compare and <br> contrast the data with 90\% accuracy. |  |
| State Standards: MA 3 1.2: describe methods to collect, organize, and represent <br> categorical and numerical data <br> MA 3 1.8: create tables or graphs to represent categorical and numerical data <br> MA 3 1.10: read and interpret information from graphs <br> Science: 7.1 Evidence is used to formulate explanations |  |
| Assessment Options: The final assessment will be their completed bar graph, including <br> all the components of a bar graph. Students will also be asked to write a detailed <br> paragraph interpreting the data represented and will prove or disprove their hypothesis. |  |
| Vocabulary: Students will review vocabulary words by playing a game of "guess the <br> word. Teacher tapes an index card on the back of each student with one of the <br> vocabulary words written on it. Then in a group, students ask others questions of others <br> about their word by using the definition. Students may not ask "Am I the horizontal <br> axis?' They may ask, "Am I the x axis or Am I the axis that goes across the paper?" <br> When the student has guessed their word on their back, they report to the teacher and <br> have the card removed. This game may be played several times. <br> Vocabulary: <br> Vertical axis, horizontal axis, distance, centimeter, meter, variable, question, hypothesis, <br> outcome, conduct, average |  |
| Subject Area Integration: Other subject areas that would be integrated are <br> communication arts. |  |
| Background Information: Students will need to have had exposure to the short story |  |
| The Celebrated Jumping Frog of Calaveras County by Mark Twain. Students will also |  |
| need to have had prior knowledge of bar graphs and how to create them, introduction to |  |
| steps of the scientific method as well as an understanding of metric and customary |  |
| measurement. |  |

## LESSON PLAN FOR The Celebrated Jumping Frog of Calaveras County

Materials: Materials needed are: The Celebrated Jumping Frog of Calaveras County, rulers or meter sticks, paper (can be a graphic organizer), small paper clips, large paper clips, writing utensil and a template to create an origami frog.

## Technology:

## Related Twain Quotes/Passages:

Supposing is good, but finding out is better. (Mark Twain Autobiography)
Every time you stop a school, you will need to build a jail. (Speech 11/23/1900)
Lesson Sequence:
Hook/Intro: Remind students of the story of Celebrated Jumping Frog of Calaveras County. Teacher will jump with empty back pack and have students predict how far teacher jumped. Students will Pair Share observations.

Teaching of the Concept:
Suggested Questions:
How far do you think I jumped?
What variables will change the distance I jumped?
How does this relate to the story?
What type of experiment can you brainstorm to test your questions and hypothesis'?
How do you think we should report the data we collect?
What would be the best way to represent our data that is collected?
Learning Activity:

1. Students will follow written and modeled directions to create the origami jumping frog.
2. Students will need to create their question and hypothesis regarding their experiment.
3. Students will set up measurement area for jumping trials.
4. Students will practice jumping frogs. Then conduct 3 jumping trials while recording their data in metric.
5. Teacher will model and explain averaging data.
6. Students will conduct experiment with $1^{\text {st }}$ variable by placing a small paper clip on the back of the frog. Students will jump frogs 3 times. Record data and average.
7. Students will conduct experiment with $2^{\text {nd }}$ variable by placing a large paper clip on the back of the frog. Students will jump frogs 3 times. Record data and average.
8. Students will decide how to take collected data and create a bar graph of the averages.
9. Students will need prove or disprove their hypothesis.

## LESSON PLAN FOR The Celebrated Jumping Frog of Calaveras County

10. Students will analyze data and write a one paragraph synopsis of their findings.

## Review/Closure:

Students will share results in small groups. Teacher will group 4-5 students in small groups. Students will be instructed to share graphs. Discuss how they are similar and different. Students will discuss if they proved or disproved their hypothesis and why. Students will read their synopsis to each other and using the rubric, determine if they met the standards of the rubric.

Closure: Discuss results of hypothesis and brainstorm other experiments that could be used with the jumping frog.

Homework: Exit Slip: students will take a copy of the story home and share with a family member how they integrated math, science and reading. Parent will initial the slip and student returns the form to the teacher.
Strategies for Exceptional Students:
Provide pre-made graph, have students work in small groups with assistance, provide given data for the graph, allow students to create graph using manipulatives like blocks. Gifted students may suggest other ideas for measuring and graphing, or may apply to some other area.

Suggested Follow-Up Activities:

- Create a class chart of the data; create a variety of graphs using the same data, use non-standard measurements.
- Identify endangered species of frogs and collect data regarding their expected survival, etc.
- Graph students' favorite stories, etc.
- Plan a "frog" jumping contest with students as frogs. Involve PE teacher.
- Study the lengths that other animals can jump and create a graph.

| CATEGORY | 4 | 3 | 2 | 1 |
| :--- | :--- | :--- | :--- | :--- |
| Accuracy of Plot | All bars are plotted <br> correctly and are easy to <br> see. A ruler is used to <br> neatly make the bars, if <br> not using a computerized <br> graphing program. | All bars are plotted <br> correctly and are <br> easy to see. | All bars are plotted <br> correctly. | Bars are not <br> plotted correctly <br> OR extra points <br> were included. |
| Units | All units are <br> described (in a key <br> or with labels) and <br> are appropriately <br> sized for the data <br> set. | Most units are <br> described (in a key <br> or with labels) and <br> are appropriately <br> sized for the data <br> set. | All units are <br> described (in a key <br> or with labels) but <br> are not <br> appropriately sized <br> for the data set. | Units are neither <br> described NOR <br> appropriately sized <br> for the data set. |
| Neatness and <br> Attractiveness | Exceptionally well designed, <br> neat, and antractive. Colors <br> that go well together are <br> used to make the graph <br> more readable. A ruler and <br> graph paper (or graphing <br> computer program) are <br> used. | Neat and relatively <br> attractive. A ruler and <br> graph paper (or <br> graphing computer <br> program) are used to <br> make the graph more <br> readable. | Lines are neatly <br> drawn but the <br> graph appears <br> quite plain. | Appears messy <br> and "thrown <br> together" in a <br> hurry. Lines are <br> visibly crooked. |
| Data Table | Data in the table is <br> well organized, <br> accurate, and easy <br> to read. | Data in the table is <br> organized, <br> accurate, and easy <br> to read. | Data in the table is <br> accurate and easy <br> to read. | Data in the table is <br> not accurate and/or <br> cannot be read. |
| Labeling of X axis | The X axis has a clear, <br> neat label that describes <br> the units used for the <br> independent variable <br> (e.g, days, months, <br> participants' names). | The X axis has a clear <br> label that describes the <br> units used for the <br> independent variable. | The X axis has a <br> label. | The X axis is not <br> labeled. |
| Tabeling of y Axis | The X axis has a <br> clear, neat label that <br> describes the units <br> used for the <br> independent <br> variable (e.g, days, <br> months, <br> participants' <br> names). | The Y axis has a <br> clear label that <br> describes the units <br> used for the <br> independent <br> variable. | The Y axis has a <br> label | The Y axis is not <br> labeled. |

## 6+1 Trait Writing Model : Jumping Frogs
