

AI SUMMIT 2020 SEOUL

Market Transformation Through AI Startups

Gleb Chuvpilo
December 2020

Thundermark Capital

Gleb Chuvpilo, Managing Partner

Investor

- **Venture Partner @ Peak State Ventures** and **Rewired** (Venture Capital funds).
- **Portfolio Manager @ Clarium Capital** (Peter Thiel's global macro hedge fund).
- **AI-Driven Quantitative Trader @ Goldman Sachs** (\$10B market-neutral hedge fund).

Serial Entrepreneur

- **Founding Engineer @ Pager** (\$62.6M raised; VCs include NEA & Lux; Partnership with Horizon Health covering 3.8 million patients).
- **Co-Founder & Head of R&D @ Ride** (TPG Growth portfolio company; acquired by Enterprise Holdings in 2016).
- **Co-Founder & CEO @ Authy** (Y Combinator class 2012; acquired by Twilio in 2015).

Scholar

- **MS in Electrical Engineering & Computer Science @ MIT**. Focus: Artificial Intelligence and Robotics.
- **MBA in Finance & Strategic Management @ Wharton**. Focus: Venture Capital Investment Strategy.
- **Chartered Financial Analyst (CFA) & Member of the New York Society of Security Analysts (NYSSA)**.

Researcher

- **Software Engineer @ Palantir Technologies** (built Artificial Intelligence algorithms for Palantir Metropolis).
- **Researcher in AI & Robotics @ MIT Computer Science and Artificial Intelligence Lab** (designed SLAM algorithms for autonomous underwater robots for the US Navy).
- **Researcher in Computational Genomics @ Broad Institute at MIT and Harvard** (with Nick Patterson).

What is Common Across AI Startups?

Deep Learning Revolution

Error rates on ImageNet Visual Recognition Challenge, %

Machines are now better at vision than humans (source: Stanford)

Example of the Stanford vision AI algorithm in action

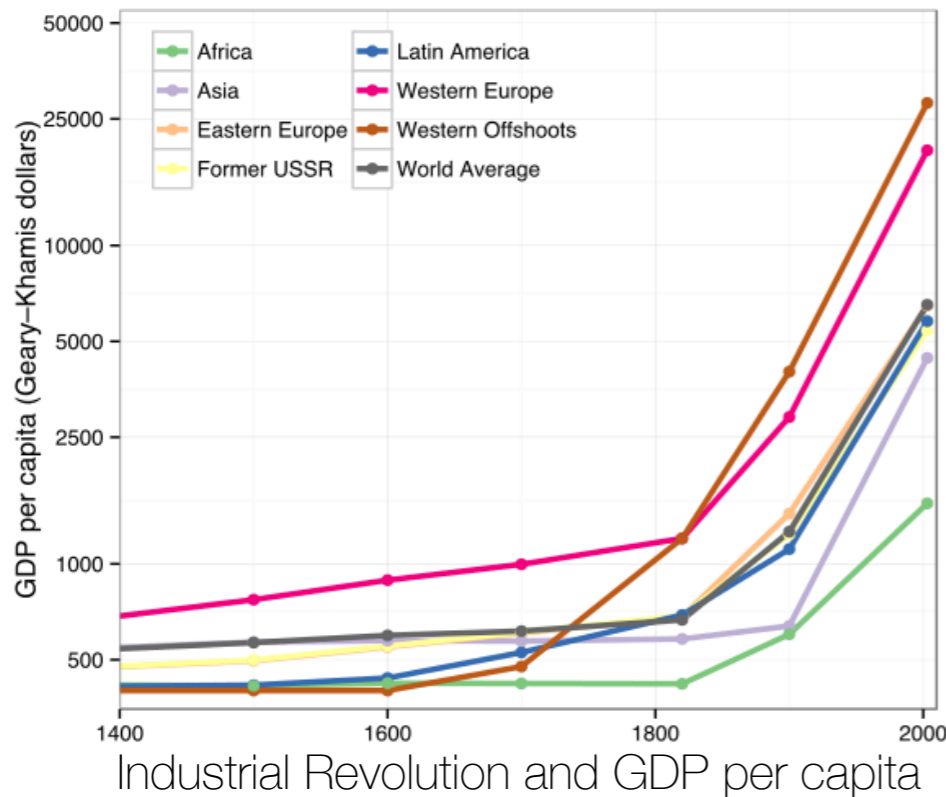

- Deep Learning is a class of **Machine Learning** techniques that combine large neural networks (millions of free parameters), high performance computing (thousands of processors running in parallel), and Big Data (e.g. millions of color images or recorded chess games).
- Deep Learning is **revolutionizing perception** of the world by software agents (vision, voice, natural language, etc), and is now beating humans at many of these tasks.
- Deep Learning is also **supercharging capabilities** of industrial and consumer robots, as well as autonomous vehicles, since perception is crucial to embodied AI.

A Bit of History Steam Engine Amplified Our Muscle

Population explosion after steam engine was introduced*

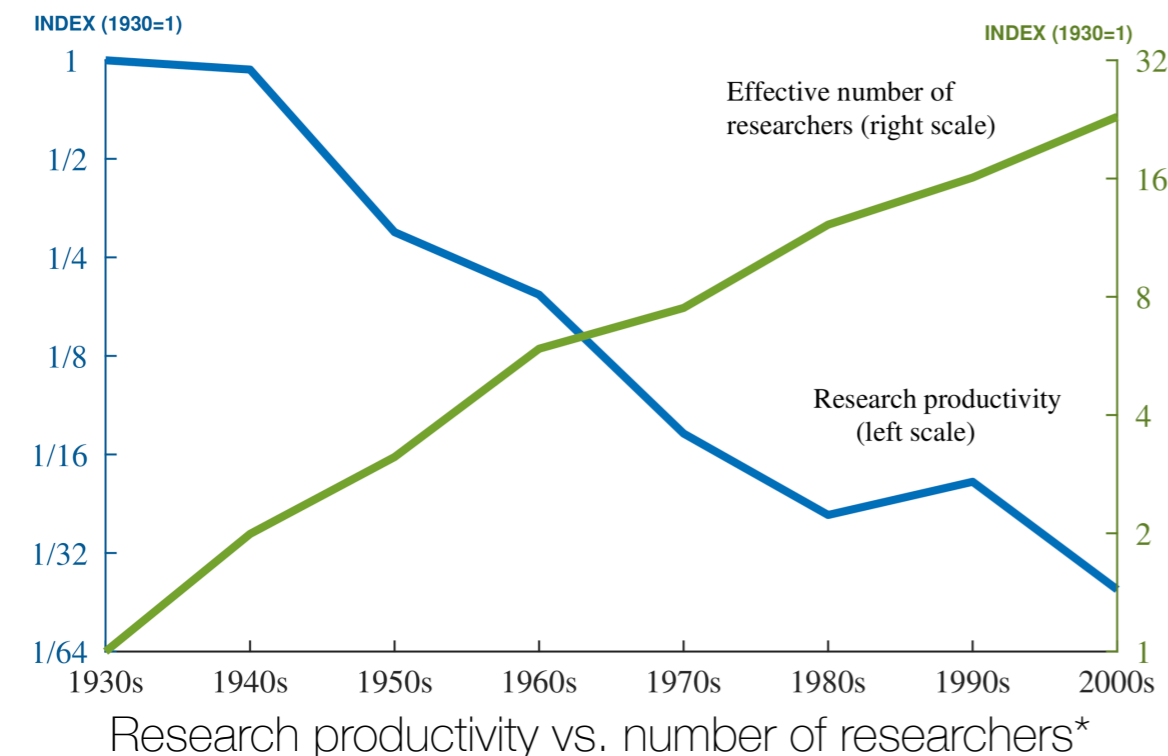

- James Watt's **steam engine** introduced in 1775 allowed humans to overcome the limitations of muscle power with mechanical power.
- This enabled **simultaneous rapid developments** in mechanical engineering, chemistry, metallurgy, electricity, etc.
- The result was an **explosion** in both human population and human social development.
- The Industrial Revolution ushered in humanity's **first machine age**: for the first time our progress was driven almost entirely by technology, rather than biology.
- That technology was easy to copy, which caused **rapid globalization** on top of rapid technological development.

A Bit of History

Now AI is Amplifying Our Intelligence

- We live in an age of **paradox**. Systems using **AI** match or **surpass human-level performance** in more and more domains, yet measured **productivity growth** has **declined** by half over the past decade, and real income has stagnated since the late 1990s.
- Our solution to this productivity paradox is to leverage a **different flavor of AI called IA**, or **Intelligence Amplification**, invented along with the now-forgotten science of **Cybernetics** by Norbert Wiener and Ross Ashby in the 1940s.
- This investment thesis is effectively a **long exposure to productivity gains resulting from innovation in AI**.

Who's Leading this AI Revolution?

USA Has 6x Lead Over China
