# Electrical Systems in Equations

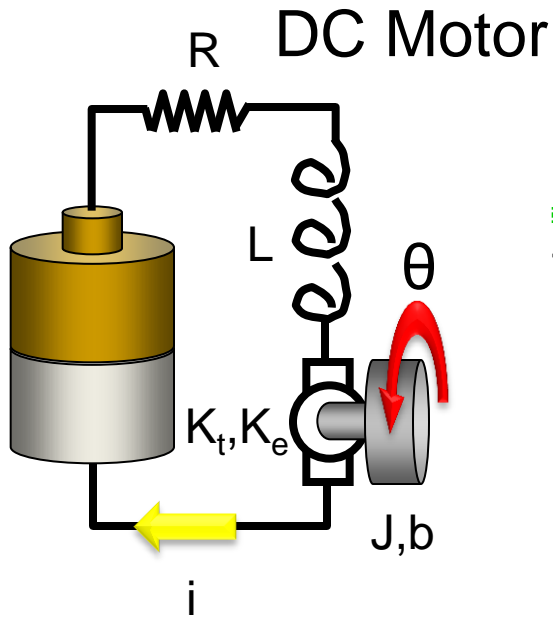

$$v = K_e \omega + i_m R_{wind} + L_{wind} \frac{di_m}{dt}$$

$$T = K_t i_m - D \omega - J \frac{d\omega}{dt}$$

## Simulink Model

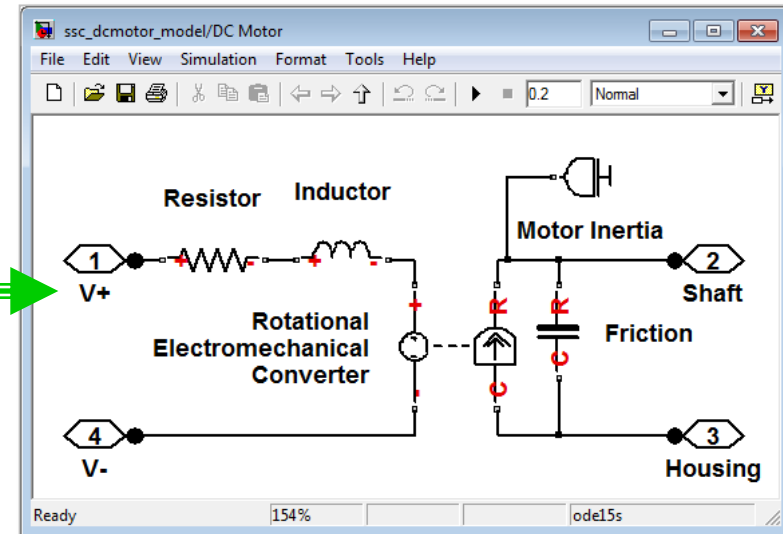

# Electrical Systems in Simscape

$$v = K_e \omega + i_m R_{wind} + L_{wind} \frac{di_m}{dt}$$

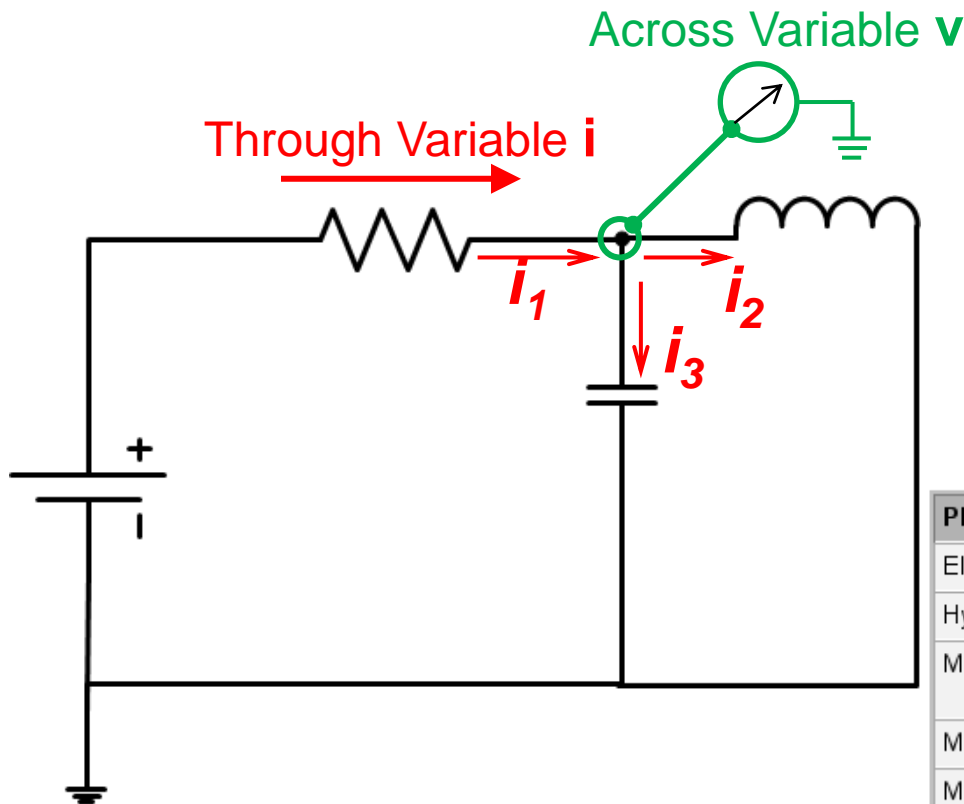

$$T = K_t i_m - D\omega - J \frac{d\omega}{dt}$$

- Simscape model advantages
  - Easier to read than equations
  - Quicker to create
  - More intuitive – easier to explain to other engineers

# How Does Simscape Work?

## - Network Approach

$$\text{Power} = \text{Through} \times \text{Across}$$

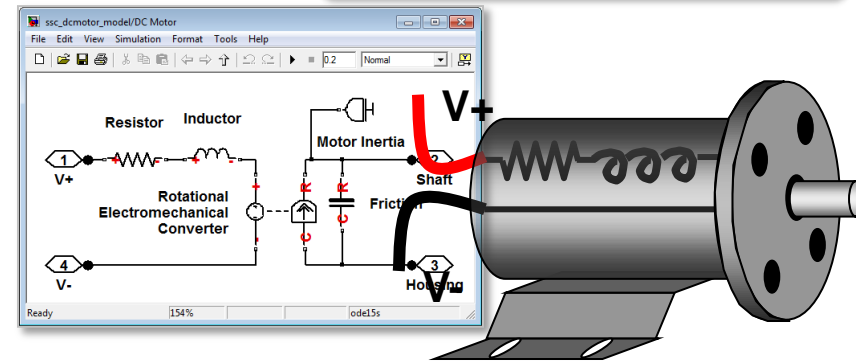

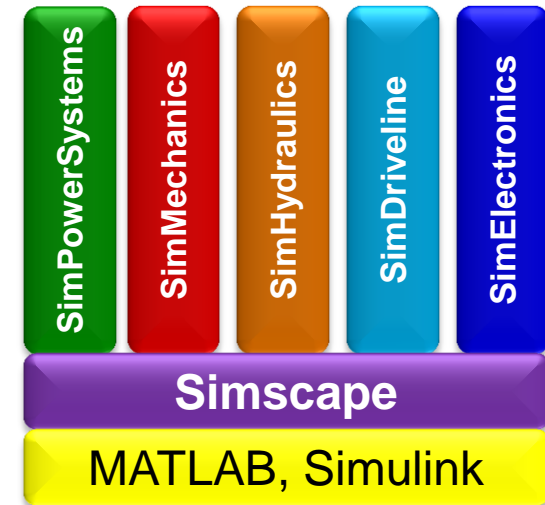

Kirchhoff's Law:

$$i_1 = i_2 + i_3$$

Physical Domain	Across Variable	Through Variable
Electrical	Voltage	Current
Hydraulic	Pressure	Flow rate
Magnetic	Magnetomotive force (mmf)	Flux
Mechanical rotational	Angular velocity	Torque
Mechanical translational	Translational velocity	Force
Pneumatic	Pressure and temperature	Mass flow rate and heat flow
