

McIDAS-V: An open source data analysis and visualization tool for multi- SSEC and hyperspectral satellite data

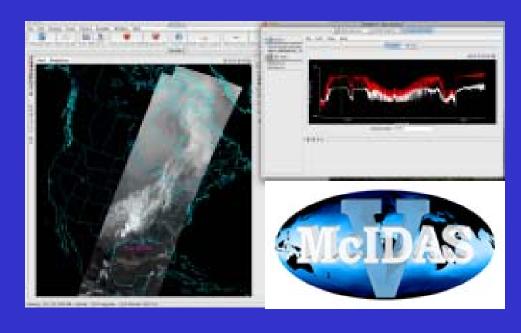

ITSC-XVI, Angra do Reis, Brazil, 7 May 2008

Tom Achtor, Tom Rink, Tom Whittaker, Dave Parker, Gail Dengel, Jon Beavers, Jessica Staude, Becky Schaffer, Ray Garcia, Bruce Flynn, Dee Wade

Space Science & Engineering Center (SSEC) at the **University of** Wisconsin - Madison

What is McIDAS?

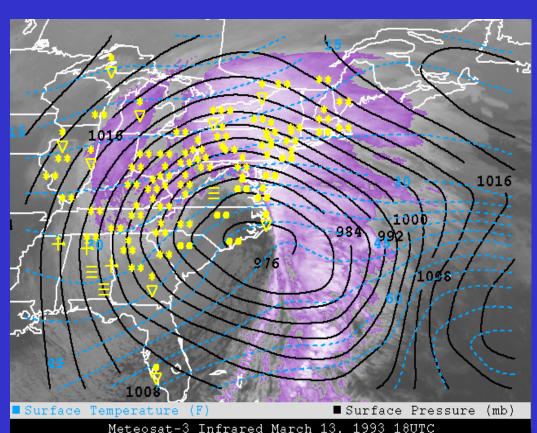

(Man computer Interactive Data Access System)

• Collection of user programs and libraries for visualizing and analyzing geophysical data (focus on

environmental satellites)

- UNIX, PC & Mac capable
- A synergistic tool that integrates numerous data types into one system
- First developed in the early 1970s
- Still in use world-wide at research, operational, educational, and commercial sites

McIDAS-X Users (MUG has about 50 members)

- NOAA NESDIS, AWC, SPC, TPC, etc.
- NASA STS, LaRC, MSFC, JPL
- Unidata 130 universities, colleges and international educational collaborators
- International EUMETSAT, Spain, Greece, Mexico, Australia
- Industry Honeywell, Weathernews, Universal Weather, Meteorlogix, Weather Central, etc.

Why the Change?

- McIDAS software (written in Fortran 77 & C)
 has a 30+ year heritage resulting in limited
 potential
- METOP, NPOESS and GOES-R operational satellite data cannot be optimally utilized
 - great increase in data rates
 - new tools for working with these large data sets
- Platform / OS dependence
- New data analysis and visualization concepts are now available (e.g. 4-D)

McIDAS-V Requirements

- Create a <u>powerful and versatile software system</u> for environmental data processing, analysis and visualization
- Continue to <u>fully support McIDAS Users' Group</u> (MUG) and McIDAS-X functionality as users transition to McIDAS-V
- Support existing and evolving needs of <u>scientific research and</u> <u>algorithm/applications development</u> for new programs
- Support operational users by providing frameworks in McIDAS-V, enabling a natural transition path for research results into operations
- Use system to <u>educate students</u> in remote sensing and physical sciences; involve students in its development, evolution and use

What is McIDAS-V

$McIDAS-X \rightarrow VisAD + IDV + HYDRA = McIDAS-V$

VisAD

Developer: Bill Hibbard, UW SSEC

- Open-source, Java library for building interactive and collaborative visualization and analysis tools
- Features include:
 - Powerful mathematical data model that embraces virtually any numerical data set
 - General display model that supports 2- and 3-D displays, multiple data views, direct manipulation
 - Adapters for multiple data formats (netCDF, HDF-5, FITS, HDF-EOS, McIDAS, Vis5D, etc.) and access to remote data servers through HTTP, FTP, DODS/OpenDAP, and OpenADDE protocols
 - Metadata can be integrated into each data object

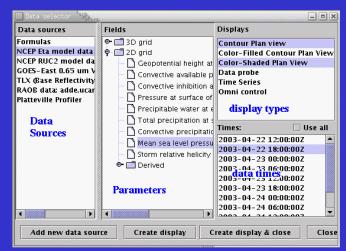

IDV-Integrated Data Viewer

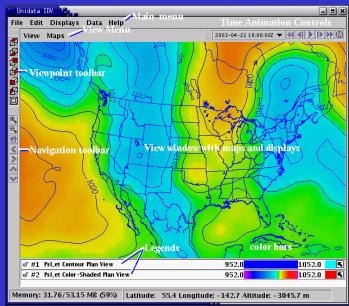

Developers: Unidata (Don Murray/Jeff McWhirter)

- Unidata developed, VisADbased, scientific analysis and visualization library and toolkit
- Open Source, JavaTM framework and reference application
- Provides 2- and 3-D displays of geo-scientific data (plus, of course, animations)
- Stand-alone or networked application

http://www.unidata.ucar.edu/idv

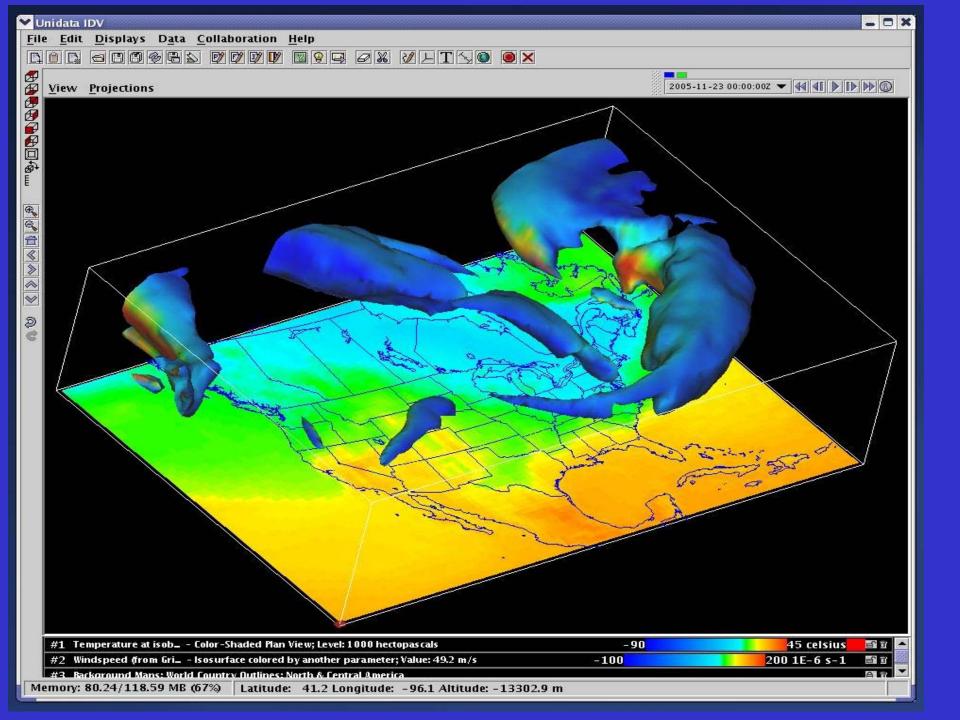

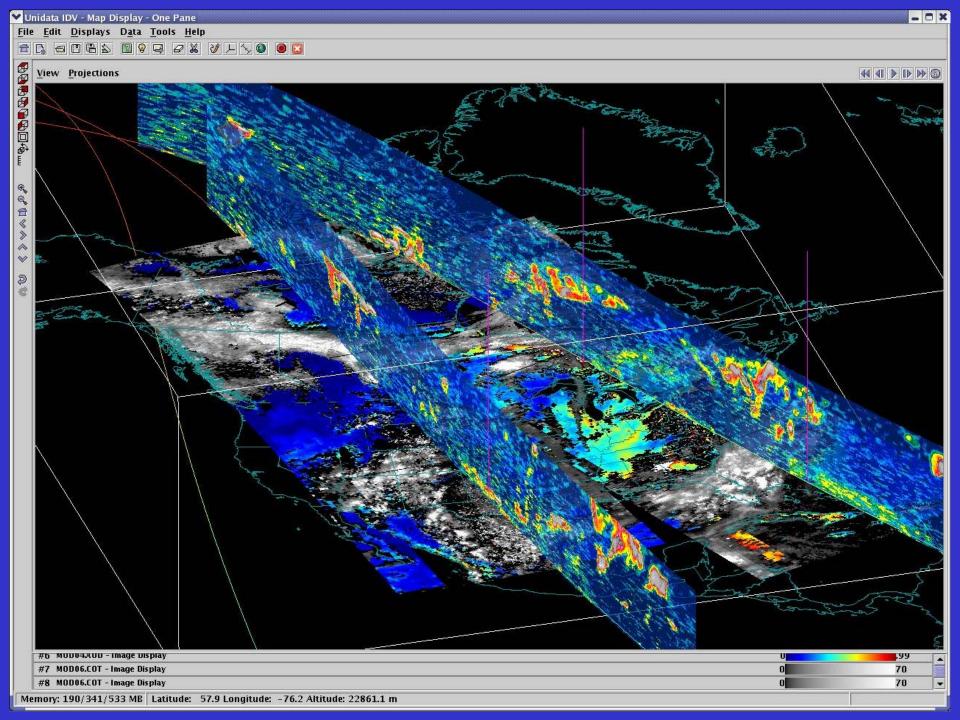

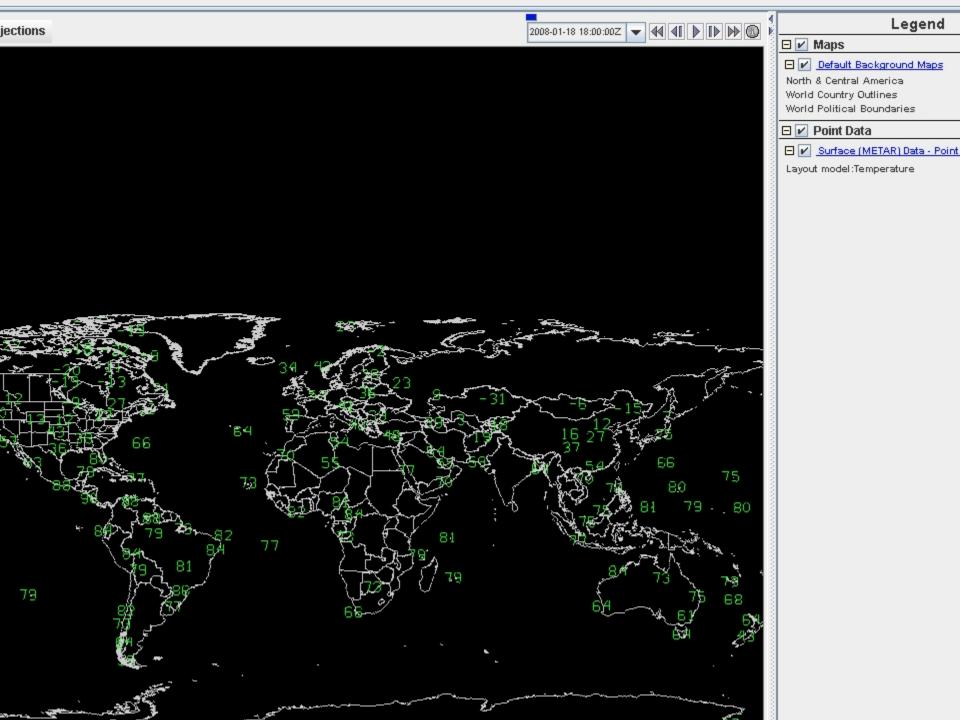

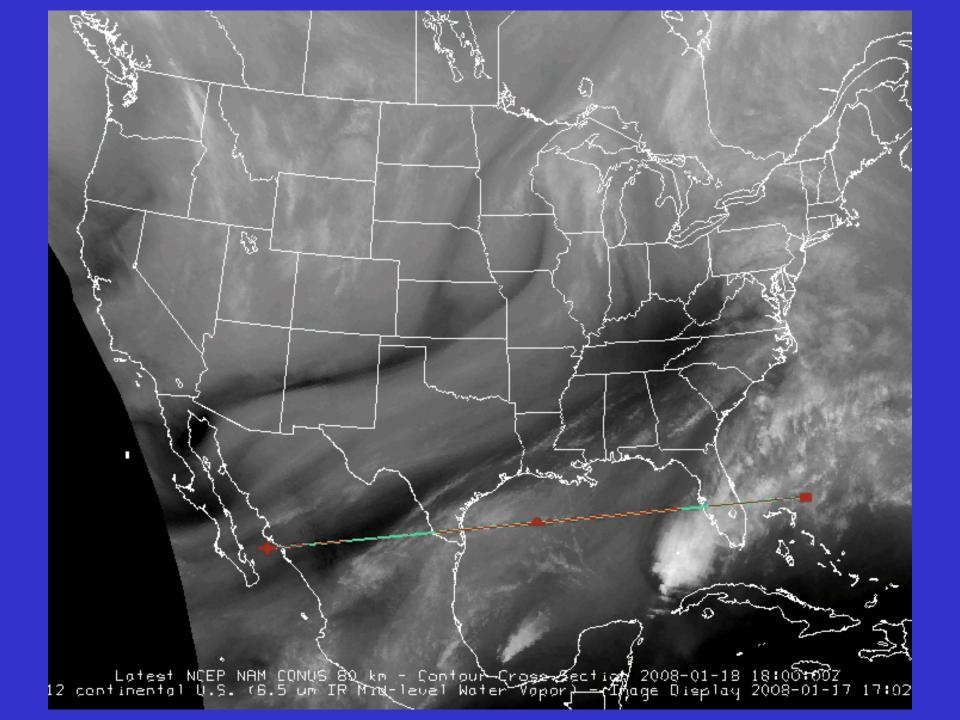

Why VisAD and IDV?

- VisAD brings the Data Model and advanced display capabilities
- IDV is a "reference application" that provides a framework for fetching, selecting and displaying data
- Both in Java and Open Source
- Use Jython (Python running in Java) as scripting language
- Many other supporting libraries available

The "X to V" Bridge

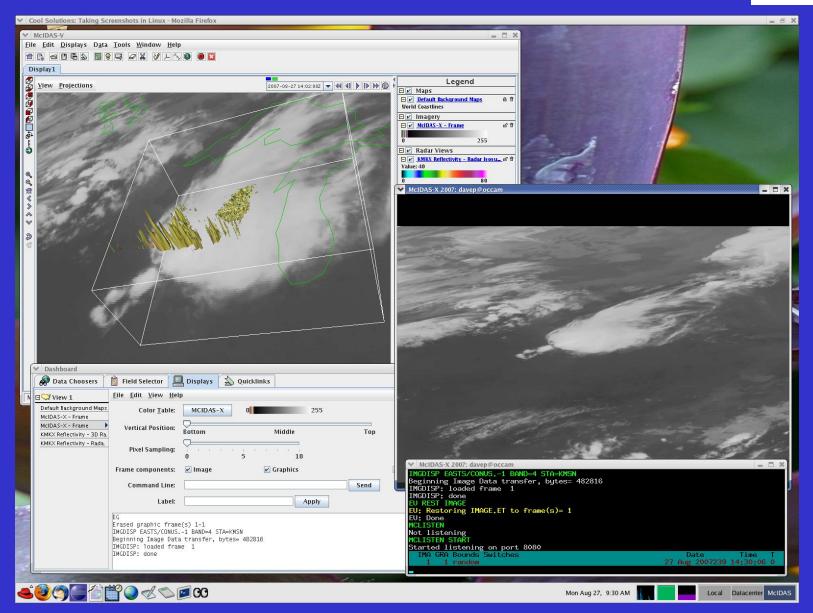

- Interacts with a McIDAS-X remote session
- Users provides command line input in a McIDAS-V Data Chooser that sends commands to a server running McIDAS-X
- Runs all McIDAS-X commands, including status, text, imagery and graphics
 - McIDAS-X output displayed in McIDAS-V
- Allows bi-directional interactive communication between McIDAS-V and McIDAS-X

The "X to V" Bridge

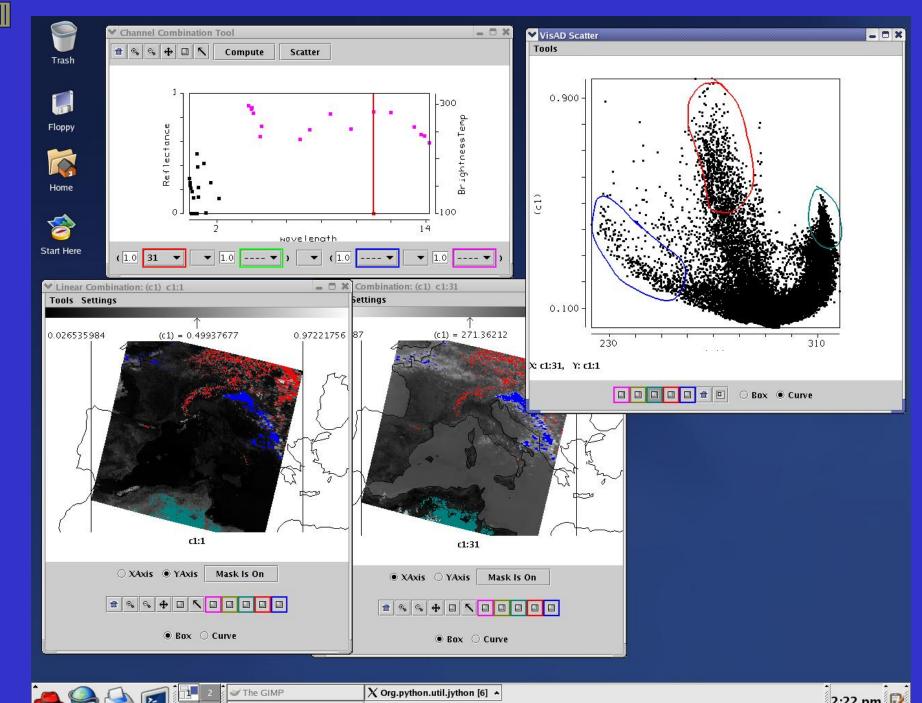

HYDRA

Interrogation of multi- and hyper-spectral data Developer: Tom Rink SSEC

- Display individual pixel location and spectral band measurements
- Combine spectral channels in linear functions and display resulting image products
- Construct false color images from multiple channel combinations
- Create scatter plots of spectral channel combinations
- Locate image pixels in scatter plots and vice versa
- Display transects of measurements
- Compare Level 2 products (e.g. soundings of temperature and moisture as well as spectra from selected pixels)
- Integrated data and product analysis/evaluation between Geostationary and Polar observing platforms

Inferring ash cloud height from AIRS clear sky and in ash soundings

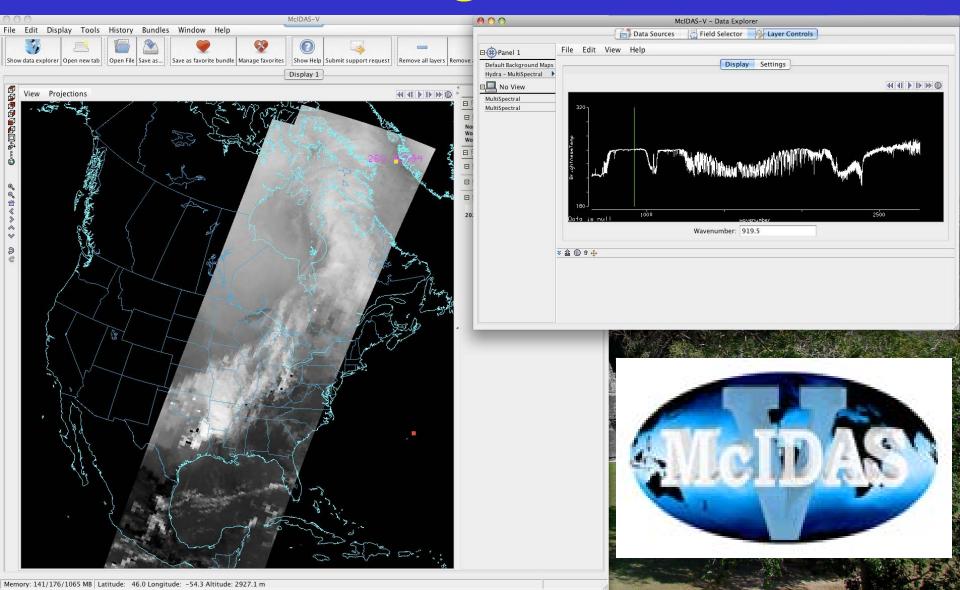

Offline-Online in LW CO₂

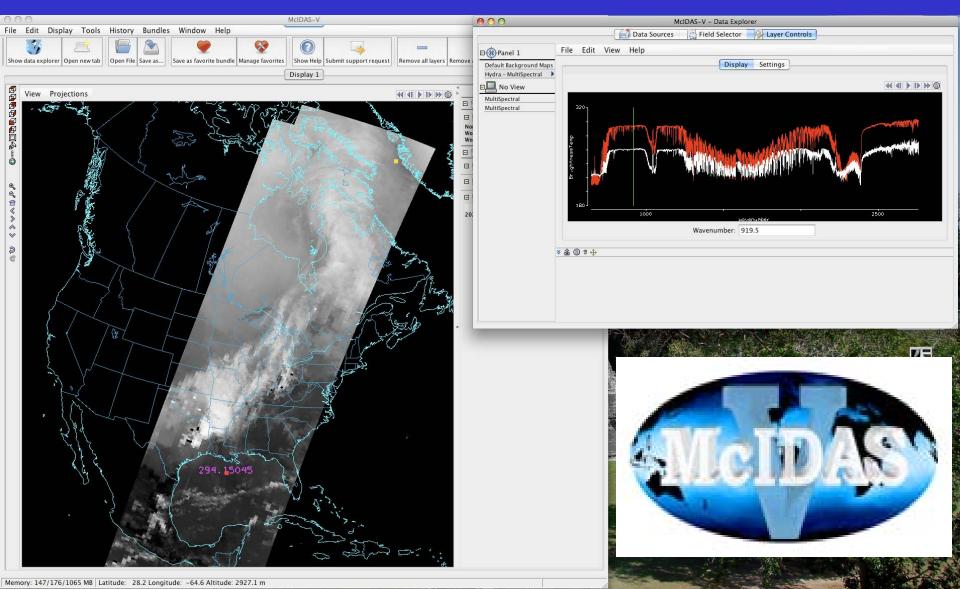

Offline-Online in H₂O

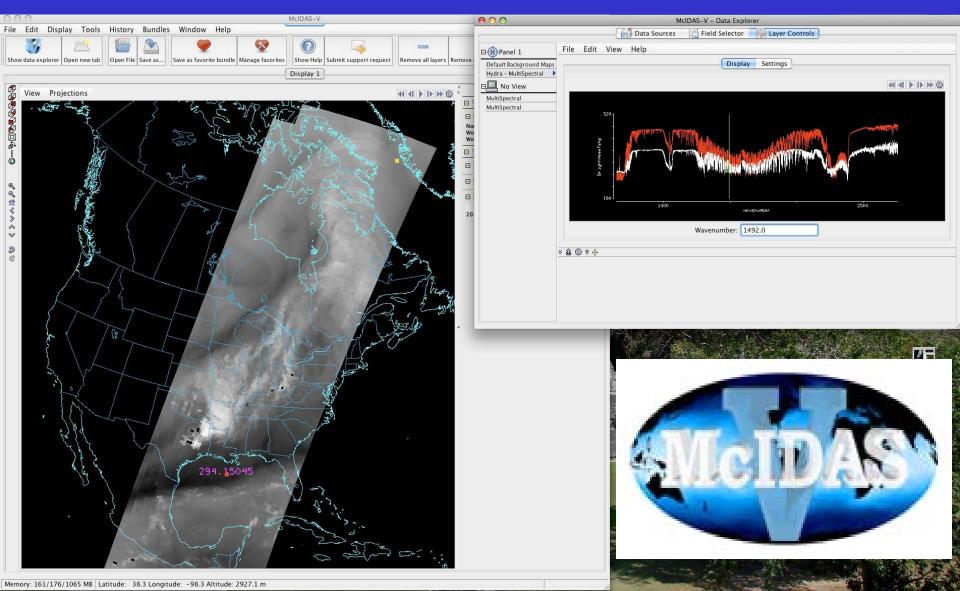

Hydra Integration into McIDAS-V IASI granule

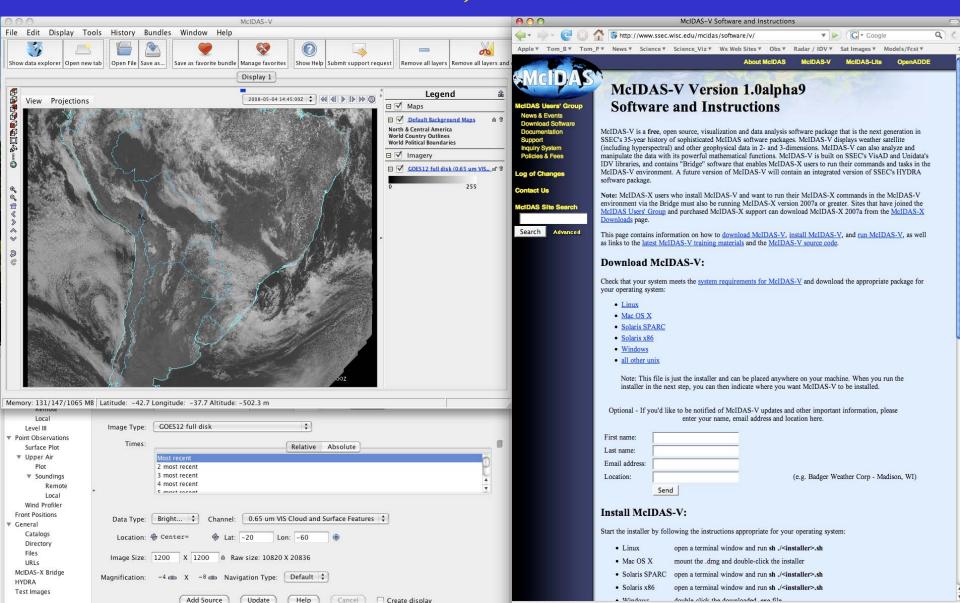

Hydra Integration into McIDAS-V pointers select location of spectra

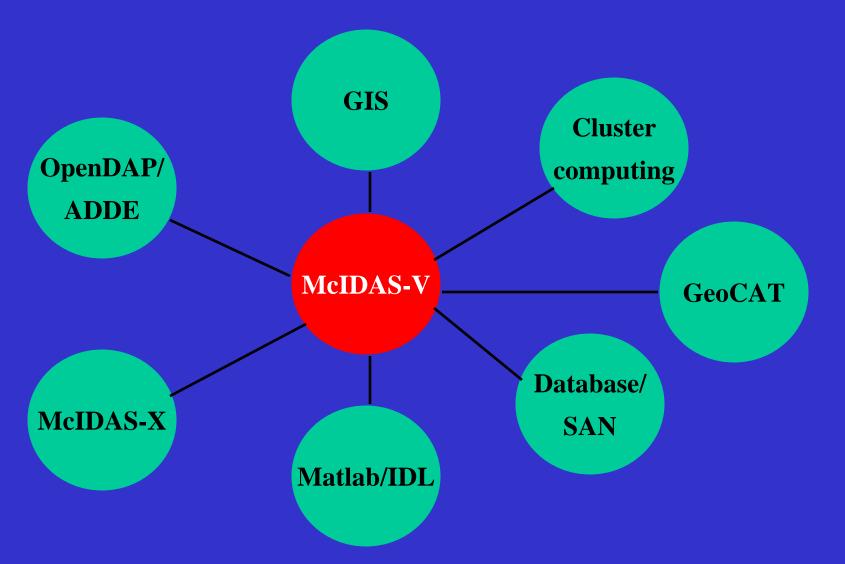

Hydra Integration into McIDAS-V slider bar selects spectral band display

McIDAS-V web page software, manuals

McIDAS-V is a collection of software tools, and networked services and data designed to take advantage of a scalable distributed computing environment to meet user needs

McIDAS-V Future Work

- Complete HYDRA integration (summer '08)
- Further enhancement of the 'X to V Bridge'
 - Alpha 0.6 release at 10/2007 MUG meeting
- Provide full capabilities for Direct Broadcast data acquisition, analysis and display
- Support data analysis and visualization capabilities and applications for advanced satellite systems, including METOP, NPP/NPOESS and GOES R
 - Innovative data analysis and visualization tools
 - Broad array of formats and services
 - Data management and accessibility

McIDAS-V software

McIDAS-V is free, open source software

available at

http://www.ssec.wisc.edu/mcidas/software/v/
