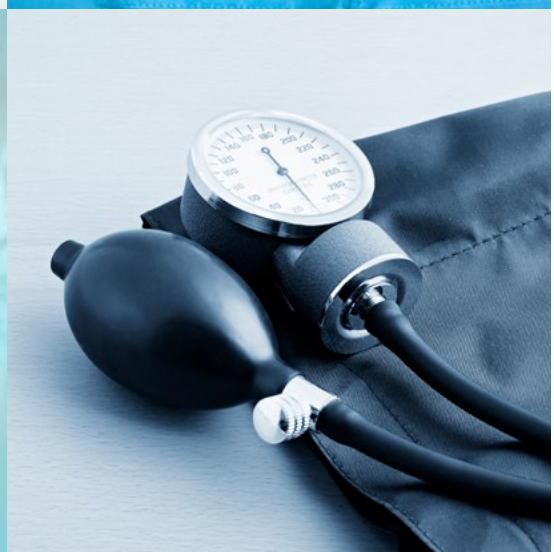
MEDICAL EQUIPMENT COMPATIBILITY GUIDE



PDI®

BE THE DIFFERENCE®

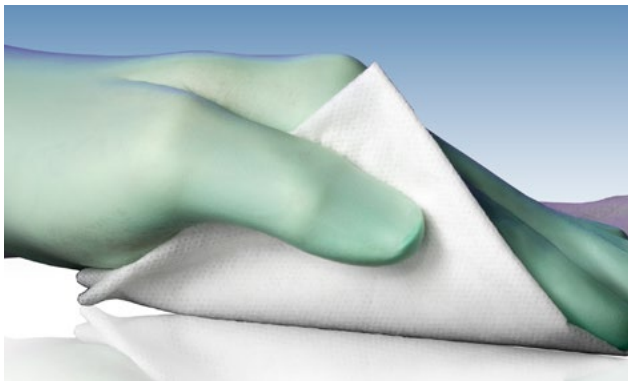
FOR THE LIFE OF YOUR EQUIPMENT

The compatibility between medical equipment and the disinfectants used to clean them is crucial.

Disinfecting equipment with products not designed for their surface materials can cause surfaces to become unsightly, brittle and cracked (Environmental Stress Cracking). That can result in surfaces becoming increasingly hard to disinfect and possibly harbor harmful bacteria. Eventually this could render the equipment unusable or in need of replacement.

Unfortunately there is no one disinfectant that is compatible with all surfaces, fabrics and equipment in your facility.

Following is a list of medical equipment and compatible PDI products. Use of non-approved products may void the manufacturer's warranty. The information contained in this guide is based upon and representative of manufacturers' IFUs and recommendations. It does not indicate testing conducted by PDI.



PDI products have a long history of success with products that protect patients, medical personnel and medical equipment. Our SUPER SANI-CLOTH® GERMICIDAL DISPOSABLE WIPES have been on the market since 1995 and are the #1 surface disinfection product in the US.

At PDI, we are constantly working with equipment manufacturers to add more equipment to our list. If your equipment is not on our list, please contact your sales representative or email us at: Service@PDI.com

Please use this legend as a guide to compatibility
