

Medication Manager Icon and Status Guide

Overview

Pharmacy Medication Manager

Use Pharmacy Medication Manager to enter pharmacy orders and manage drug therapy for a patient. Pharmacy Medication Manager assists you with the basic tasks of identifying a patient, selecting drugs or other pharmacy products, and entering, reviewing, and modifying orders. Pharmacy Medication Manager allows you to access a dynamic store of clinical, demographic, and therapeutic information about each patient. You can check a patient's health status and then implement an individualized drug therapy.

Use Pharmacy Medication Manager to perform the following tasks:

- Enter and view basic demographic information about the patient, including allergies, reason for the visit to the facility, health problems, and current pharmacy orders.
- Enter and modify medication, intermittent, and continuous orders.
- Review frequency, product, dispense category, projected administration times, or price schedule information for an order. Create a custom frequency for a medication or intermittent order.
- Enter order comments and product notes. You can use pharmacy shortcuts to quickly create order comments and product notes. Create order comments for use within PharmNet and for use throughout Cerner Millennium applications.
- Perform profile actions on pharmacy orders. You can cancel, copy, discontinue, inquire, modify, renew, reschedule, resume, and suspend orders. You can also access history, create a label for an order, or provide a patient with a medication pass.
- To quickly perform the same profile action for all of a patient's orders, you can use the All Actions commands. You can use the All Actions commands to accept, discontinue, reject, resume, suspend, or verify all orders displayed in a patient's profile.
- For orders entered and profile actions performed by a pharmacy technician or other clinician, a pharmacist can accept or reject the action. Further, the pharmacist can verify all details for an order or profile action.
- View results for a patient across the continuum of care, such as results from the radiology or laboratory department.

Medication Manager Toolbar

The Pharmacy Medication Manager toolbar contains the following elements:

Button	Action
	Select New Patient - Clears the current display and allows you to select a new patient.
	Demographics - Displays the Demographics dialog box.
	Launch PowerChart - Launches PowerChart (PowerChart.exe) allowing you to view the patient's results.

	Rx Clinical Note - Opens Clinical Notes which allows you to view, modify and add patient clinical notes. The Clinical Notes functionality when accessed through PharmNet has been customized. For information regarding what Clinical Note functionality is available when accessed through PharmNet, see the PharmNet
	Bars Options - Displays the (SlideBar Options) context menu.
	Spreadsheet Options - Displays the (Spreadsheet Options) context menu.
	Refresh Unverified Orders - Updates the Unverified Orders Monitor with the latest data. Use this option when more than one person is working with unverified orders at the same time.
	Patient Label - Allows you to request non-order specific patient labels that can be attached to an alternate container. Add Lifetime Cumulative Drug Administration - Opens the Lifetime Cumulative Dosing window, which allows you to view the cumulative dose total for a certain drug on the selected patient and view a complete history of dispense and administration events for the patient.
	View IV Compatibility Profile - Opens the The IV Compatibility Profile dialog box, which enables you to view the the drug compatability of all IV drugs displayed on a patient's medication profile.
	Owe Monitor - Shows all orders entered with owed doses. Owe Monitor Dialog Box
	Order Image Viewer - Opens the Order Image Viewer.
	Charge Credit - Opens a new instance of Charge/Credit (each time this option is selected). If you have a patient profile open when you select this option then that patient is displayed in Charge/Credit (as well as Medication Manager). If you do not have a patient profile open when you select this option then no patient profile is displayed in Charge Credit. Note
	Mini Monitor - Tracks the number of unverified orders entered in Pharmacy Medication Manager and other Cerner Millennium applications.

Patient has no known medication allergies

Patient has no known allergies

Status Guide for Unverified Orders

Verifying an Order

A pharmacist can verify an unverified order or profile action. This is used to verify the medication order on a patient's acute profile.

Rejecting an Order

A pharmacist can reject a new unverified order or an unverified profile action. This is used to reject the order as it is written and send it back to the provider asking for changes to be made in dose, route, frequency, etc.

Viewing History for an Order

You can view history for a pharmacy order and information associated with its dispensing events and verification process. For instance, you can look up details for any labels requested or about the formulation of the pharmacy product.

Inquiring About an Order

Use the Inquire profile action to view details for an order. This is used to view the details of a medication order without verifying the order.

Modifying an Order

You can modify details, such as dose, frequency, and rate, for an active order. This is used to modify the details of a medication order without verifying the order.

Renewing an Order

Use the renew profile action when an order's stop date and time are extended by the physician.

Requesting a Label for an Existing Order

You can request an additional label if the original label is damaged or lost or if an extra dose of a drug is needed.

Copying an Order

To save time and place an order quickly, you can copy details for a canceled, void, discontinued or active, or end-state order and use them to create a new order. The original order is used as a template.

Discontinuing an Order

When you discontinue an order, doses for it no longer are dispensed.

Assigning the Void Status to an Order

You can void an order if it has been entered in error. Void an order placed for the wrong patient or when the wrong pharmacy product is selected for a pharmacy order. You can void an order with or without doses.

Requesting a Medication Pass for an Order

You can request a medication pass, or PassMed, for a patient who is leaving the facility for a brief period and must continue the course of therapy provided by the pharmacy order.
