CAMBER & CASTER ADJUSTMENT KITS ONLY TOE OEM!

AT LAST "FULL" – Front and Rear Wheel Alignment – AGAIN MEANS WHAT IT SAYS

NEW CAR INDUSTRIES BEST KEPT SECRET

Since the 1990's cost cutting and the ever increasing speed of assembly lines means only front and rear Toe "directional adjustment" OEM! No Camber to change tire "contact angle" to resolve costly premature edge tire wear, improve traction. No Caster to correctly resolve steering pull and improve steering response.

With K-MAC - Again ongoing adjustment to suit your own driving conditions - high cambered roads, altered height through lowering or load carrying, fitting wide profile tires or adjust for curb knock damage.

FRONT & REAR SUPERIOR REPLACEMENT BUSHINGS

Worn expensive OEM bushes are replaced at same time with "precisely" adjustable Camber & Caster (Single Wrench) kits - they also being the highest wearing bushes. Advantage with most K-MAC unique patented design bushings over OEM is that they have twice the load bearing area and are 2 axis / mono ball self aligning – without the use of air voids. Allowing improved braking and steering response.

Front / Rear Bush kits

Including "2-Axis / Mono Ball" designs
Up to 4 times load bearing area other brands

***ADJUSTABLE BUSHINGS**

Suit virtually all incl. AMG, Black Series
Bolt-on - (Extraction / Insertion tubes supplied)

FRONT & REAR

Camber, Caster, Toe
Precise, Accurate
Adjustment

WITH K-MAC YOU FIX IT RIGHT THE 1ST. TIME

The experience of manufacturing
adjuster kits longer than anyone else.

Design breakthrough / Patented system
... Only requires single wrench to
precise adjust to required spec's on car
(accurately under load)

- Unlike "adjustable upper rear arms" K-MAC bushes retain tire clearance to outer fender
- Also are replacement for the '8' highest wearing Front & Rear suspension bushes

PLUS . . .

- ✓ Improves traction
- ✓ Steering response
- ✓ High speed control
- ✓ Reduces dive / lift
- ✓ Resolve steering pull

- ✓ Essential altering height or wide profile tires fitted
- ✓ Allows ongoing adjustment for curb knock damage
- ✓ Longer bush life through twice the load bearing area
- ✓ Can adjust (single wrench) for extra Camber on track days
- ✓ No Modifications, simply replacing existing bushings

OWNERS SAY

K-MAC "Competition Proven - Non Slip Lock System"

CLS 55 AMG

• "Used to be 6-10k down to the cords. Bought K-Mac bushings and started doing my own alignments, now it's 30+. That's a whole year for me. I went through 6 grand worth of tires in the first 2 years of ownership. Had to take control of the situation."

CLK 55 AMG

• "Factory set up caused the outside edges of the tires to wear excessively. . ."
"Ride quality is significantly improved, steering input is instant and responsiveness is fantastic."

• "I installed the K-MAC front kit yesterday. I was impressed with the quality, and the parts to help remove the old bushings and install the new ones were a life saver. The kit has enough adjustment to completely fix the front camber on my lowered CLK55. I have the rear kit ready to go for next weekend."

E63 AMG

• "The E63 Mercedes that we installed the K-MAC bushings on. . . And lowered it one inch. It is unbelievable how well it handles now. They should build cars that way from the factory!"

E320

• "I'd endorse K-MAC any time; so much control / adjustment available. I had everything professionally installed of course. Nothing out there matches K-MAC bushings; it was money worth spent."

Genuine K-MAC — Leaders in Suspension Engineering since 1964!

FINALLY FRONT & REAR ONGOING
CAN ADJUST
TIRE CONTACT ANGLES!

Camber, Caster (and extra Toe)

IMPROVE TRACTION & PREMATURE EDGE TIRE WEAR

AUDI TO VOLVO - Including all Mercedes 'AMG', BMW 'M', Porsche '911'

FIX IT RIGHT THE 1st. TIME. . . AND ONGOING ADJUSTMENT CAPABILITY!

The often quoted reassuring statement. . . **"FULL FRONT AND REAR WHEEL ALIGNMENT"**. . . is actually only **Front & Rear "Toe" - directional adjustment!** (even the most exotic models AMG and Black Series). Since the mid 90's no Camber or Caster to change tire "contact angles" which is essential to resolve costly, premature edge tire wear, improve traction and correctly fix steering pull. Its all to do with cost cutting and the ever increasing speed of vehicle assembly lines.

Many owners become increasingly frustrated, constantly changing tire brands or going from one dealer or alignment shop to another, not realizing that **TOE ONLY ADJUSTMENT APPLIES!**

That the real problem to their alignment woes is the lack of Front Camber and Caster and Rear Camber adjustment.

MAXIMUM POSSIBLE ADJUSTMENT RANGE

Its no wonder - Experience of Manufacturing Front & Rear kits longer than any other company (In-house - not importing / relabeling, which also allows total control over quality & rapid / constant development). (and always appreciate ideas to further improve)

CAMBER - Allows to actually change the tire "contact angle", resolving costly, premature edge wear by increasing the wear area and also traction. Along with ability to reduce understeer or oversteer.

CASTER - Correctly resolves steering pull, increases steering response, with better turn in and high speed directional control, along with reduced dive / lift under brake and acceleration.

The above Camber and Caster facility's is the proper solution - with capability of ongoing, precise adjustment to return vehicle to factory specs anytime. Result of day to day commuting - high cambered roads, load carrying, sagged suspension, altering height, fitting wide profile tires / wheels or curb knock damage.

There are available (front only) "offset fluted bolts". But they are inaccurate "one only" position, allowing on Mercedes strut suspension a very minimal 0.3 of one degree (3mm - 1/8") offset. One for Camber and one for Caster with both requiring labor intensive removal each time to change setting.

At K-MAC we saw the need therefore to design precisely adjustable bolt-on kits, like the OEM adjusters prior to the mid 90's, provide again the full range of adjustment capability (3 to 4 times that of the one only position "slotted bolts") - with the unique K-MAC design breakthrough - a patented "single wrench" adjustment system - accurate on car (under load) direct on alignment rack - no more time consuming disassembly required.

Providing Camber and Caster for the Front and Camber for the Rear (with Extra Rear Toe adjustment to compensate for this new Camber facility). All are supplied with bush extraction and insertion tubes. (Rear Camber can be fitted on vehicle).

Added bonus is the 4 Front and 4 Rear bushes replace the highest wearing suspension bushings. Also having twice the load bearing area and with over 50 years of proven bush design experience means noiseless, long term, maintenance free reliability. The Front bushes are "2 axis / self aligning" without the use of OEM oil and air voids. This allows improved traction under braking and steering response (most aftermarket bushes only delete the air voids - which can prevent the multi link / angled suspension arms traveling through their required arcs, causing undue harshness, binding / locking up and lead to even more wheel hop, loss of traction). Its no wonder situations in all out competition racing where for driver and spectator safety, race safety scrutineers rule that only K-MAC bushings allowed to be used.

TRACK DAYS - Bushings allow to dial in extra negative Camber (and track width) to reduce understeer and the ability to hit those corner apex's every time. To go deeper into the corners, with improved traction and braking response. In the pursuit of pole setting lap times for race day! **(Also see Strut Adjusters)**. Situations in all out competition racing where Race Safety scrutineers ongoing inspection/evaluation rule only K-MAC bushings allowed to be used!

The K-MAC Rear Camber (and Toe) adjustable bushings also decrease "rear end flex" and can be finely tuned for maximum traction on race days. (Also see Rear Bushings for the Multi link '6' rear arms).

NOTE: Another feature with the K-MAC Rear Camber and Toe kits is that importantly adjustment of Camber (to reduce inner edge tire wear, improve traction) moves lower arms / tires inwards - unlike aftermarket "Upper Camber Arms" which - besides being difficult to access, adjust - move "top of tire" outwards, diminishing essential clearance to outer fender.

FRONT KITS

Incl. all AMG, Black Series (Extraction/ Insertion tubes included) ⑥
FIX PREMATURE EDGE TIRE WEAR, STEERING PULL, IMPROVE TRACTION
REDUCE DIVE / LIFT UNDER BRAKE/ACCELERATION, IMPROVE HI-SPEED CONTROL
ESSENTIAL LOWERING, WIDE PROFILE TIRES / WHEELS, CURB KNOCK DAMAGE
REPLACING THE HIGHEST WEARING "BUSHINGS" AT SAME TIME

Incl. all Airmatic, ABC, 4 Matic [BUSHINGS also 2 axis / Mono Ball where applicable]

**2009-2017 W212 / S212(E), W218(CLS)
E63 AMG. CLS63 AMG**

FRONT CAMBER & CASTER ADJUSTABLE BUSH KIT

K-MAC unique patented design - finally allowing precise, single wrench adjustment accurately (under load) and all directional 2 axis bushings, with twice the load bearing area of OEM bushes. Extraction & Insertion tubes included.

*** ALSO ADDITIONAL (Coil Spring Models) REPLACEMENT "STRUT TOP MOUNTS" Precise Camber & Caster Adjustable (up to 3 degrees) RACE DAYS** More traction (Increase Neg. Camber / Reduce understeer)

*** These models are strut (no upper wishbone) suspension**

STAGE 2 (STREET / RACE) Featuring very latest design upgrades . . . Allows even more Camber and Caster adjustment - less understeer for Race / Competition. K-MAC patented design biggest (and quickest) adjustment system (also fits with strut brace). No height increase. Not steel or soft billet alloy but ultimate aircraft 7075 grade aluminum. Similar centers to OEM but elastomer - not rubber for improved steering response. Another K-MAC feature - separate H/Duty radial thrust bearings for steering loads (and prevents spring drag / binding). Designed to fit with OEM diam. springs or all brands of Coil-Overs 60 - 70mm I.D. Centers are also replaceable.

Also STAGE 3 (FULL RACE) . . .

Same features as above Stage 2 (Street/Race) but without elastomer. No flex - Tauter / Quicker response times, More effective shock control. Includes Extra H/Duty self align spherical bearings (Self lubed/PTFE lined). Centers are also replaceable.

REAR CAMBER & EXTRA TOE ADJUSTABLE BUSH KIT

K-MAC unique patented design finally allowing precise, single wrench adjustment accurately under load. **Also includes Toe adjustment - doubling the existing adjustment range to compensate for the new Camber addition.** Bush Extraction & Insertion tubes included - Allowing Camber bushings to be replaced on vehicle.

CAMBER AND CASTER ADJUSTMENT. Providing adjustment for the 1st time. Similar features to rear Adjusters. Reduce costly / premature inner edge tire wear and improve traction.

REAR KITS Incl. all AMG, Black Series (Extraction/ Insertion tools included) 13

RESOLVE PREMATURE EDGE TIRE WEAR, TRACTION AND REAR END CONTROL ALLOWING ONGOING FULL ADJUSTMENT/ SINGLE WRENCH FOR THE 1st. TIME ESSENTIAL LOWERING, WIDE PROFILE TIRES / WHEELS, CURB KNOCK DAMAGE REPLACING THE HIGHEST WEARING "BUSHINGS" AT SAME TIME

Incl. all Airmatic, ABC, 4 Matic

BUSHINGS also 2 axis / Mono Ball where applicable

ALSO AVAILABLE - Street / Competition

'Complete 'Rear' Link Bush Upgrade

Replacement for the '6' Multi Link arms

(Kit eliminates the soft rubber OEM bushings)

REAR BUSHES - FULL SET 12

(use in addition to Camber / Toe kit which is also designed to reduce flex)

Includes Bush Extraction / Insertion Tubes

- **SIGNIFICANTLY IMPROVE REAR END STABILITY** •

ACCURATELY LOCATES REAR SUSPENSION AGAINST UNWANTED FLEX / TWITCHING - AND SUBSEQUENT LOSS OF TRACTION ESPECIALLY WHEN APPLYING POWER TO LANE CHANGE / OVERTAKE.

Unlike unforgiving short life delrin style bushes that soon pound out, K-MAC incorporates all the proven features needed for extended bush life - Maximum diameter, but lightweight alloy casings with bonded elastomer bushings to contain side loads and large load bearing nickel chromed steel inners - What you would expect from a company with over 50 years in bush design technology.

PRODUCT BACKGROUND RE K-MAC BUSHINGS

50 Years Market Leadership - Through Innovation - Not Imitation

- ◆ **K-MAC BUSHINGS SIMPLY REPLACE** and overcome the premature failure of existing OEM bushings, which can cause suspension sag, rattles, squeaks, and resultant loss of brake, traction and steering response. All kits are supplied with bush extraction/insertion tubes and instructions.
- ◆ **OEM rubber bushes use air voids** for “two-axis” movement (which is essential as majority today's vehicles have multi link arms with different angle mount points) but the air voids can also allow shudder, wheel hop and loss of traction under braking and acceleration .
- ◆ **While the majority of aftermarket brands eliminate these air voids**, but in so doing they restrict the two-axis movement which can increase binding, locking up as arms travel through there required arcs. This causing even more severe wheel hop, loss of traction!
- ◆ **K-MAC bushes where needed therefore feature a unique “two-axis mono ball” design.** Allowing power to the ground / maximum traction / braking. The K-MAC designs also significantly extend wear life having more than twice the load bearing area of OEM bushes. With over 50 years of proven bush design technology means they are noiseless, long term, maintenance free.
- ◆ **There is (directional) Toe adjustment and tire rotation ex-factory** – but with K-MAC bushes, the front suspension becomes full and precise “Camber and Caster” adjustable and the rear “Camber” - (as well as providing additional Rear Toe adjustment).
- ◆ **Result - K-MAC bushes reduce costly edge tire wear**, improve traction and high-speed directional control. Reduce dive / lift under brake / acceleration and allow “ongoing” adjustment capability to resolve steering pull or curb-knock damage. Essential wide-profile tires, altering height or for gaining extra negative Camber (and track width) with less understeer on race days!

WITH ADJUSTMENT BEING JUST A “SINGLE WRENCH”
This K-MAC patented invention has revolutionised the industry . . .

Where other brands require the labour intensive shimming of control arms or removal of actual bushings each time, then to reinsert at a different setting - now with K-MAC it is done on car, direct on alignment rack (accurately under load). Simply by rotating the bush bolt head to the precise setting required.

● **COMPETITION PROVEN** ● **BIGGEST ADJUSTMENT** ● **NON SLIP LOCK SYSTEM** ●
