

## Signals, CS&C Competency Management System Guidance for the Rail Safety Worker (RSW)

### PURPOSE

The purpose of this document is to provide the Rail Industry with guidance on the MTM Signals, CS&C, and Signalling Project Competency Management system.

It contains suggested practices for compiling documents and evidence to place within Onsite. In addition, shows examples of completed documents that would be expected to be provided for an MTM assessment.

It allows the RSW to undertake their competency assessment with confidence and knowing that their assessment will comply with MTM requirements.

It also allows the RSW to compile all evidence and complete all forms prior to gaining a current and certified MTM signals assessor.

### Suggested Process to follow for an Assessment

#### Example of “suggested, “Process to follow for a RIW to gain competency within MTM Signals and CS&C Competency Management System

- Refer at all times to the MTM Signal and CS&C document L1-CHE-MAN 003 Signals Rail Safety Worker Competence (The Manual) and the associated Appendix One Matrix. These are commonly referred to as the ‘manual’.
  - Note that all MTM competency documents and forms are available on the Metro Academy Website. <http://www.metrotrains.com.au/academy/>
  - The suggested process is to undertake the assessment “outside of the Onsite database”, and then when assessment is complete, to then place within the “onsite” system to continue the process.
  - And to only apply for the “skills’ (each line on the SoC is a skill) that are required to undertake anticipated works for the upcoming 4 years (as it is quite easy in the updated MTM CMS to apply for upgrades on an SoC)
1. Complete the process for gaining a RIW card and register as a RIW, and supply the 100 points identification and obtain your RIW card and RIW number.
  2. Complete all mandatory training for the role, such as;
    - a. MTM Safety Leadership,
    - b. Train Track Safety Awareness,
    - c. MTM signal standards inductions (**Note that the previous VRIOGS versions are NOT acceptable to MTM**),
    - d. Around the track role,

- e. OH&S white card safety induction,
  - f. Site specific and other possibly required items for the Role.
  - g. Health and medical assessments
3. Complete all necessary courses to gain competency in signalling and rail systems courses for specific technology such as CBI, CBTC, axle counters, train control systems-please refer to the “Manual’
  4. Where a RSW is seeking competency levels 2 and 3 then specific MTM “domain knowledge” such as the following are obtained.
    - a. MTM signal principles
    - b. MTM signal standards,
    - c. train dynamics,
    - d. headways
    - e. line speeds
    - f. curves and gradients knowledge,
    - g. Pass Assets
    - h. DMS procedures, cell library, symbols, seed files,etc
    - i. MTM signals standard plans,
    - j. MTM rules and operational procedures,
    - k. type of rolling stock
    - l. traction bonding, electrolysis, earthing, lightning and protection systems
    - m. power supplies, emergency services supplies
    - n. interfaces to other rail operators
    - o. communications architecture and Victrack services
    - p. Train control systems and disaster recovery centre systems and architecture, etc
    - q. Network assets and locations
    - r. And other requirements associated to the rail systems areas as they are necessary for;
      - i. SAP production,
      - ii. control tables
      - iii. and other “skills”.

Note that each line on a SoC is a “**skill**” and requires a combination of both training and work experience to obtain a competence in that skill.

5. Complete the “Request for Assessment Form”, sign, have it witnessed and dated
6. Complete the “Work Experience Record Form’ with all individually identified references W1,W2,etc and all associated referenced attachments, supervisor to sign and date and work experiences to also capture simple, or complex work experiences. Note that only the WER relevant to the actual assessment being undertaken is required (not a complete history of the RSW). Ideally this is 25 pages or less.
7. Complete the “Education and Training Records Form’ and all associated referenced attachments, T1,T2, etc scanned and placed within that one file, have supervisor sign and date
8. Complete the “ Checklist” for the **role**, with all training and work experience references against every skill( each line within the checklist), and note that it is **the RSW themselves that complete the comments** area on the right hand side of the checklist area, with sufficient comments to validate the level self-assessed
9. Complete the “draft self-assessed SoC” for the Role, with levels self assessed taken from the checklist and then directly transferred to the SoC. The RSW should sign and date the draft SoC.

10. Undertake the assessment and complete the final checklist, and the final SoC for the role, with the assessor and SME, all to sign and date.

## **PRIOR to heading to Onsite to load any competency documents**

11. Have all files ready, scanned, and electronically saved and placed within a folder prior to heading to Onsite to do any uploading of files
12. All files should be named correctly
  - a. Persons RIW number
  - b. first name then last name
  - c. then actual file name
13. All files should be correct size-ideally below 2 meg (but WER, training can be larger and up to 5 or in some areas up to 10 meg, and ideally under 25 pages)
14. All files should be scanned correctly with regards
  - a. file size,
  - b. orientation
  - c. and also in colour if at all possible-especially with certificates
15. All pages in files should be orientated to be able to be read on a computer without any need to rotate
16. All blank pages in files should be removed to save on file size
17. **Request for assessment- form** to place into onsite under its own area
18. **Checklist form** to place into onsite under its own area
19. **MTM Safety Leadership training** certificate to be placed in its own area
20. **MTM Signal induction** to be placed in its own area
21. **Resume** or CV to be placed into its own area
22. **MTM Draft SoC for the Role** to be placed in its own area
23. **MTM Final SoC for the Role**
  - a. Is to have any other company specific competency sheet for the person added to it when scanned, and the MTM SOC should be the first document read
  - b. Final MTM SoC to be saved only-BUT **SENT TO THE ASSESSOR** for them to upload within Onsite (as the RSW cannot upload their own final SoC)

24. **Request for upgrade form**-When doing an upgrade SOC the request for **upgrade form** is used—and the form is **actually a combined request for upgrade form** and a **combined checklist** associated for the upgrade.
  - a. The form should be placed into both the area in onsite for the,
    - i. request for assessment, and
    - ii. checklist
25. **Training records** and as one single file and not separate certificates, to place into onsite under the “educational level” that is relative and required for the RSW in the **ROLE** as defined in Appendix One, for an engineer or designer this would be called the “degree or bachelor” qualification. And for trades area this might be diploma, certificate 4, certificate 3
  - a. The training and education record should also have within it all scanned certificates that are labelled as T1, T2, T3, T4 etc to match the entry in the actual record sheet.
  - b. It should also include the engineering degree and/or statements associated with the degree.
  - c. It should also capture the MTM Safety Leadership training, plus the MTM signal standards induction
  - d. It should also include the company spreadsheet or training records with all training courses
26. **The Work Experience Record** to be placed under its own name in Onsite
27. Capture any additional items for trackside safety or “around track “under their own folders in Onsite
28. All companies should also capture all electronic native versions of all files from the RSW, all word and all excel versions to save-not just the PDF versions.
29. All training records and scanned certificates should be kept in the companies competency system filing folder

**See also;**

- **sample documents of;**
  - Work experience records
  - Education and training records
  - Numbered training certificates
  - Resume
  - Request for assessment
  - Draft SoC
  - Final SoC
- **tick list for compilation of all documents and evidence required for the assessment process**
- **checklist with comments and guidance**

**EXAMPLE**

**TICKLIST**

**Name-**

**Role being applied for-**

**Date-**

**Tick List of items required for an assessment**

yes/ no	Checklist Items
	All information for the RSW to become a registered RIW within Onsite/Pegasus, and obtained 100 point check, obtained their RIW card and their RIW number
	Unique Student Number (USN) obtained
	Request for Competency Assessment included and signed and also witnessed
	Obtained the persons resume/CV and authenticated
	Education and training record sheet completed and signed
	National Certified training certificates and competencies captured
	Training certificates provided for Industry or Equipment Training
	Degree, diploma, grad dip, tertiary education captured
	All actual degrees, certificates, captured and labelled correctly, T1, T2, T3, etc
	MTM Safety Leadership training (SLT) completed and certificate captured in training register
	Work Experience Record (WER) provided and all WER labelled correctly and all work experiences signed and dated
	MTM Signalling Standards Induction assessed by assessor
	Checklist for the ROLE completed, signed by SME, assessor and dated
	Applicant has completed a Draft Statement of Competency-SoC for the Role
	Applicant has completed the final SoC for the Role as the assessed version
	MTM Track Safety Awareness certificate if required
	OHS Induction certificate if required
	Site Induction if required
	Medical and Health Assessment for Rail Safety Workers if required
	The RSW Company CMS profile is captured
	Company excel sheet RSW training register for the person
	All training records, work experience, SoC have been labelled correctly as files (the persons first name last name then the name of the file)
	All pages on all files are orientated to be able to be read on computer screen without need to rotate
	All files sizes are of 2 meg or below where possible (except WER, training records)
	All files saved in correct areas of the BT /Company server and in correct folders
	All files are scanned as required in either black and white, or colour as per MTM requirements
	The MTM and also the Company CMS are placed together and scanned as <b>ONE FILE</b> , with the MTM SoC being to first read document
	Capture all electronic files and place in the persons folder within Company system, and also Capture the <b>native versions</b> of all files from the RSW (word and excel versions)
	1-All files are uploaded to onsite for selection of the Role and then 2-Place training records under the required qualification for the role (degree, diploma, certificate) 3-select the assessor ( <b>DO NOT PUT FINAL SOC onto Onsite</b> )

**Resume/CV**

# Resume/CV

Note-As a minimum the following information should be provided in a resume/CV

**Persons Name**- First Name Last Name

**Address**- Street number, Street, Suburb, City, Postcode

**Contact details**- land line, mobile phone, email address

**Qualifications**-such as;

- Degree,
- certificate, diploma, certificates of attendance
- other qualifications

**Licences**- such as;

- drivers licence,
- plant operator,
- Electricians A Grade,
- B Grade licence,
- ACMA cabler

## **Employment History**

1-Current work ROLE,

- work location ,
- Employer
- and other details of actual works being undertaken

2-Previous work ROLES,

- work Locations,
- Employers
- and other details of actual works being undertaken

## **Referees-**

Persons that could be contacted freely to obtain reference advice/checks or other information related to the person, and work performance, job history or other related details

AND TRAINING  
RECORDS**

## EDUCATION AND TRAINING RECORD

Form number: 2F-26

Version: 1

Effective from: 1<sup>st</sup> February 2018

L4-CHE-FOR-071

### Notes for Completing Education & Training Record

- 1) *The Education and Training Record Sheet may be included as part of a Log Book such as the IRSE Log Book or other corporate record system*
- 2) *The description of the training course or subject shall be specifically referenced along with the results, qualification or competencies gained. It is important to indicate when and for how long the course was undertaken.*
- 3) *The course or subject details shall be verified by a supervisor for the work. This verification shall also confirm the qualification or competencies gained.*
- 4) *The record shall be updated for the previous year by the 31 March each year.*
- 5) *It is recommended that the Record is updated on a 3 monthly basis.*
- 6) *Candidates shall keep a scanned copy of certificates for completed training and submit with the Education & Training Record.*
- 7) *Identify these certificates as T1, T2, T3 etc and continue counting in sequence. Scan certificates into one file.*

### Education Record

- a) Include all courses and qualifications completed since leaving school.
- b) This only includes courses and qualifications that are part of formal education.
- c) You must include the month/year when the course started and month/year when the course was completed.
- d) You must include the name of the training institution and where it is located (city, state, country).
- e) You must attach a copy of the Certificate gained at the end of the course as to the qualification attained. This must be a certified copy of the original.
- f) You must include a copy of the academic record showing all of the units of the course undertaken and passed. Do not include individual certificates for individual course units.

### Industry Training Record

- a) Include all training and courses undertaken which are for signalling equipment or your professional development.
- b) You must include the month/year when the course started and month/year when the course was completed.
- c) You must include the name of the training organisation (may be the signalling or equipment supplier) and where the course was undertaken.
- d) You must attach a copy of the Certificate gained at the end of the course or the course units completed. This must be a certified copy of the original.

### Work Based Training Record

- a) Include all training skills that you have learnt **on the job** to attain a level 1 in a skill.
- b) Provide details of the workplace assessor or supervisor who certified you with the skill and the date of certification.
- c) Provide a clear description of the skill gained.
- d) Provide the dates or period when the work episodes were undertaken.

### Training Certificates

Scanned copies of training certificates (in colour) should be included in the file with this record.

The verification signature confirms that the original has been sighted by the verifier.

In cases where the original is not available, the verifier shall take reasonable steps to confirm that the training has been undertaken and qualification or competency gained.

# SIGNALS COMPETENCY WORK EXPERIENCE RECORD

Form number: 2F-25

Version: 1

Effective from: 1<sup>st</sup> February 2018

L4-CHE-FOR-070

Person:

**David Fleming**

RIW:

**000 123 456**

### Introduction

The Work Experience Record Sheet is a critical element in the establishment of the experience of signalling staff. The person's experience is the basis of demonstrating that the person has moved from a training level to a level that permits independent performance of signalling work tasks. Without a properly endorsed Signalling Work Experience Record, alternative processes involving detailed interviews are required. A Resume or a Curriculum Vitae is not permitted as an alternative.

### Supervisor Verification

The Supervisor for the Work Performed must endorse the record. The Supervisor in signing the Record Sheet is attesting to the performance of the tasks, the responsibility levels and may be held responsible for any inaccuracies in this endorsement. The Supervisor must complete details in the table below regarding his/her details.

### Notes for Completing Work Experience Record

1. The Work Experience Record Sheet may be included as part of a Log Book such as the IRSE log book or other corporate work record system. The format does not need to match this template exactly, but it must include all of the items and be completed to achieve the same outcome.
2. The description of the tasks should specifically reference the relevant role of the person, the responsibility level and the competencies performed as detailed on your Statement of Competency. The level of competency exercised should also be indicated. Please see separate notes on how to correctly describe the work level and competency.
3. The task and responsibility shall be verified by a supervisor for the work or the project. Verification confirms task, role, responsibility, and competency.
4. The record shall be updated for the current year by the 31 December each year.

It is recommended that the Record is updated on a 1 month basis, no longer than 3 months and at the end of project work.

### Details of Verification Supervisors

*I declare that the information that I have verified on this form and the attached Signalling Work Experience Record is true and correct and fully provides all relevant details for the Assessment of the Signalling Competencies of the nominated person.*

# SIGNALS COMPETENCY WORK EXPERIENCE RECORD

Form number: 2F-25

Version: 1

Effective from: 1<sup>st</sup> February 2018

L4-CHE-FOR-070

Name: <b>David Fleming</b>		Identification Competency Reference: <b>000123456</b>				
Dates From/To	Employer/Client & Infrastructure Owner	Description of Task: Description of Role(s) in terms of Competencies, levels and complexity	Ref	Equipment or System Types	Verification Signature and Name & ID or Ref from page 1.	Supervisor Observations (Assessment / Follow-up / Competence Cross Reference)
August 2011 to September 2013	GTD and MTM network Vline ARTC	<p><b>My Role was as a Signal design engineer</b>  <b>Activities undertaken</b> by myself were; undertaking signal design at Tottenham, and within the sunshine interlocked area on the RRL project.            Designing signal arrangement plans (SAP), control tables (CT), signal equipment box and equipment room layouts, signal and power cable running plans, power supply circuits, local and through circuits for signals, level crossings, points, train detection, signal mechanisms.            I also designed the track circuit and cross bonding plans for the traction return systems for the 1500 v DC network.            Also designed the HVI, CSEE type track circuits, M23A point machine and Siemens S700 in bearer points operating circuits.            Designed LED signal and trainstop circuits.            Design also included both SSI and Westlock at Sunshine with regards data design and hardware. Use of standards, principles, VRIOGS documents, equipment manuals, specifications and project requirements to undertake the design.</p> <p>Also provided mentoring and guidance to graduate signal engineers on the project.</p> <p>I attended project and design meetings.            I also attended risk workshops, as both attendee and in one instance a facilitator.            This work was complex and designed within a busy operational environment and complex systems for signalling and interfaces to equipment and other operators such as VLine and ARTC.</p>	W1	Miniature relays 2200v, 110 v signal power systems HVI, CSEE track circuits Siemens M23A points, Siemens S700 points Westlock CBI SSI CBI LED signals JAE trainstops SAP plans CT plans Earthing and lighting, surge protection circuits Equipment housings Traction power return and cross bonds Impedance bonds Spark gaps	JV 000234678  xxxxxxxx	<p>All work was undertaken and performed in a professional and competent manner.            With an excellent result for all involved.</p> <p>All work was undertaken and performed in a professional and competent manner.            With an excellent result for all involved.</p>

# SIGNALS COMPETENCY WORK EXPERIENCE RECORD

Form number: 2F-25

Version: 1

Effective from: 1<sup>st</sup> February 2018

L4-CHE-FOR-070

Name: <b>David Fleming</b>		Identification Competency Reference: <b>000123456</b>				
Dates From/To	Employer/Client & Infrastructure Owner	Description of Task: Description of Role(s) in terms of Competencies, levels and complexity	Ref	Equipment or System Types	Verification Signature and Name & ID or Ref from page 1.	Supervisor Observations (Assessment / Follow-up / Competence Cross Reference)
June 2013 to May 2015	Altkom and within MTM network	<p><b>My Role was as a Signal design engineer</b>  <b>Activities undertaken</b> by myself were; the data design for Smartlock CBI at the Southern Cross station. I undertook the data design, and hardware design. Along with this I also designed inputs to the Metrol train control system, and the communications links and systems                      As part of this, I used the VRIOG standards, MTM principles, MTM DPN and other engineering manuals, plus the project specifications as input to design, and used the training manuals and product guidance notes for the CBI.</p> <p>I also designed the power supply system including all earthing, lightning, and surge protection, use of clean and dirty wiring for the CBI systems.                      During the project, I also undertook some type approvals of products as object controllers, with risk assessments.                      This was a complex area, with difficult works in and around the various signal control centres and other operators</p>	W2	Smartlock CBI Object controllers Power supply systems for signalling Risk assessments Type approvals Train control Communications systems Cabling systems	HJ 000123876  xxxxxxx	Work was performed well, and suggest a review of this in the next 3 months
June 2015 to April 2016	UPL and within MTM network	<p><b>My Role was as a Signal design engineer</b>  <b>Activities undertaken</b> by myself were the local circuits and through circuit design along with traction bonding and cross bonding plans for Westall signalling, with inputs to both relay interlocking and Smartlock CBI.</p> <p>Part of this also included type approval of new power supplies and risk assessments and use of project, VRIOGS, and MTM standards, principles and specifications</p>	W3	Smartlock CBI, miniature and large relays, power supplies, cables, LED signals MK3, M23A points, CSEE and HVI track circuits, traction and bonding systems, type approvals, risk assessments		All work was undertaken and performed in a professional and competent manner. With an excellent result for all involved.

**EXAMPLE**

**CHECKLIST**

# CHECK LIST FOR THE ROLE

**The Applicant is required to complete this form prior to submitting to the Assessor.**

**The applicant is to read the following instructions to ensure that this form is correctly filled out.** The information provided in this form is to demonstrate the skill competency level sought by the applicant.

**NOTE - If no evidence is available then the respective Competency item cannot be certified.**

The evidence required may include both training recorded in your Education & Training Record as well as activities recorded in your Work Experience Record.

**Step 1** The Applicant is to complete this form on a computer to be able to choose all of the available options. Options are highlighted in grey with drop down menu or options to insert words.

**Step 2** The applicant nominates the proposed 'Skill' level for each item,

**Step 3** The applicant completes each item by adding references to Training and Work Experience. Please review the examples to ensure that the Assessor easily understands the references.

**Step 4** The applicant ensures that they have provided the appropriate number and type of Work Experience references for the nominated 'skill' level. See reference below.

**Training Records** This includes from educational institutions, Registered Training Organisations, past training records of Rail Infrastructure Operators and assessments by other organisations. It shall also include training in specific equipment by industry suppliers, which shall demonstrate that competency has been gained, and not just attendance at course. In some cases, specific equipment training is mandatory.

**The Work Experience Record / Log Book** is a record of professional work undertaken, including the level of responsibility and type of work task. This should indicate the level of complexity of the task. This must be endorsed by the engineering or project supervisor for the respective work. The Work Experience should reference work done in terms of competencies on the competency certificate.

The applicant shall provide Work Experience Record activities as detailed below for each 'skill'.

## Level 0

This level depicts that there is no certified knowledge

## Level 1

To attain a Level 1 competence the applicant must demonstrate successfully completed training in the activity, proved by a Certificate of Attainment. Alternatively, the applicant may have verified work experience showing Work Based Training covering the skill. Typically, 3 **Work Based Training** work experience episodes under mentorship are required for level 1.

## Level 2

To attain a Level 2 competence in addition to the requirements for Level 1, an individual must be able to demonstrate by means of verified work experience that they have carried out the activity a **minimum of four times**, independently, in a simple or routine task.

Where a competence is a broadening of a similar well experienced activity, then it is acceptable to gain a level 2 by providing evidence of carrying out the activity a **minimum of two** times, independently, in a simple or routine task.

An example would be where an individual has 4 verified experiences in DC track circuits and has 2 verified experiences on HVI track circuits. The individual would be able to gain a Level 2 in both activities due to the similarity in technologies.

## Level 3

Level 3 can only be gained through verified experience gained including experience within the AROs in addition to the requirements for Level 2. To attain a Level 3 competence an individual must be able to demonstrate by means of verified work experience that they have carried out the activity **a minimum of five times**, independently, in a complex task.

Where a competence is a broadening of a similar well experienced activity, then it is acceptable to gain a level 3 by providing evidence of carrying out the activity a **minimum of three** times, independently, in a complex task.

An example would be where an individual has 5 verified experiences in DC track circuits and has three verified experiences on HVI track circuits. The individual would be able to gain a Level 3 in both activities due to the similarity in technologies.

Greater than half of these work experience activities shall be performed on the Metro network in accordance with Metro Signalling Standards clearly demonstrate the high level of understanding of Metro standards, practices and domain knowledge

**Assessor:** xxxxxxxx **Date:** xxxxxxxx

**SME:** xxxxxxxx **Date:** xxxxxxxx

For: **David Fleming**

The relevant information has been used in the assessment of the nominee for:

**Signal Design Engineer** **Select the correct ROLE**

**Assessment Checklist- ASSESSOR to check and “tick” all items**

Assessor	Checklist Item
	<b>Information provided by candidate</b>
	Signed Request for Assessment included
	Training Records provided for National Certified Competencies
	Training Records provided for Industry or Equipment Training
	Work Experience Record (WER) provided
	MTM Signalling Standards Induction passed
	Track Safety Awareness certificate
	OHS Induction certificate
	Site Induction
	Health Assessment for Rail Safety Workers
	All of the above information loaded into Rail Industry worker (Rail Safety Worker) database.
	<b>Assessment Checklist and Draft Statement of Competency</b>
	Applicant has completed a Draft Statement of Competency
	Applicant has provided Training references for all skills
	Applicant has provided Work Experience References for all skills
	<b>Assessor confirms</b>
	Drug & Alcohol Policy compliance checked on Request for Assessment
	All the above information collated and recorded
	Scanned copy of information loaded into Rail Industry worker (Rail Safety Worker) database.
	Assessor Certification provided of this Checklist and SoC
	Assessor is ARO approved for this 'signalling role' or is working with an approved Subject Matter Expert (SME)
	All information has been assessed and recorded assessments for all competencies
	All issues have been assessed
	Assessor has arranged upload of the Assessment Checklist to Rail Industry Worker site
	<b>Draft Certificate of Competency</b>
	Certificate and Agreement signed by applicant
	Certificate signed by Assessor

**NOTE**

**Assessor to initial each page in this area as being true and correct as assessed and to ensure no missed pages xxxxxxxx**

## Technical Documents and Investigation

EVIDENCE	Self- asses sed Level	Training	Work Experience	Initial Comments by Assessed RSW and final comments by assessor	Asses sed Level
Signal Standards				A level 2 is required in this area for those wishing to undertake SAP and CT designs	
Type Approvals	RSW Self- asses sed level	Training reference must be placed here for all skills	WER references must be placed in this area for all skills	In all these areas on the entire form the RSW must add comments here on training, WER numbers done, and if simple or complex and which ARO area worked upon	Agree d and asses sed level level
Technical Specifications					
Risk Assessments					
Functional Specifications & Manuals					
Conduct Technical Investigations					
Conduct Safety Investigations					
MTM - Signal Design Induction	2	T11		When the signal induction has been satisfactorily completed, a practitioner level can be acquired. This must be the MTM version and not any previous VRIOGS versions	2
MTM/VRIOGS - Signal Symbol Library				Knowledge of DMS, cell library, symbols, sample and standard plans is required	
MTM - Signalling Principles				A level 2 is required in this area for those wishing to undertake SAP and CT designs	
List any other skills in further technology and capture here and then take to the SoC

**CBTC Design system**

EVIDENCE	Self-assessed Level	Training	Work Experience	Initial Comments by Assessed and final comments by assessor
Cityflo 650#				For this skill it is mandatory that a product supplier/manufacturer training course be undertaken before any competency level is obtained
	RSW Self-assessed level	Training reference must be placed here for all skills	WER references must be placed in this area for all skills	In all these areas on the entire form the RSW must add comments here on training, WER numbers done, and if simple or complex and which ARO area worked upon
List any other skills in further technology and capture here and then take to the SoC				

#See attached sheets for Cityflo 650 specific competency

**CBTC Design Data**

EVIDENCE	Level	Training	Work Experience	Initial Comments by Assessed

**EXAMPLE DRAFT SOC**

**Statement of Competency**

This is to verify that **RIW PERSONS NAME**

Has been assessed and certified in the following competencies required of an **Signal Design Engineer**

**Technical Documentation & Investigations**

Signal Standards	2
Type Approvals	2
Technical Specifications	2
Risk Assessments	2
Functional Specifications & Manuals	2
Conduct Technical Investigations	2
Conduct Safety Investigations	2
MTM - Signal Design Induction	2
MTM/VRIOGS - Signal Symbol Library	2
MTM/VRIOGS - Signalling Principles	2

**Design Process**

Documentation Drawing Controls	1
CAD Process and Drawing Proficiency	1
Circuit Correlation	1

**Design, Checking, Verification & Review**

Signalling Drawings		
	D	C
Signal Arrangement Plans	3	2
Bonding & Signal Apparatus Plans	2	0
Impedance & Cross Bonding Plans	2	0
Control Tables	2	1
Cable Running Plans	2	0
Contact Analysis Sheets	2	0
Equipment Box Layouts	2	0
Control & Indication Diagram (ie Panel Drawings)	2	0
Mechanical Drawings (ie Signal / Point Layouts)	2	0
Equipment and Generator Room Layouts	2	0
Signalling Diagram	2	0
Signal Sighting Forms	2	0
Level Crossing Focusing Diagram / Layout	2	0
Train Control System Block Diagram	2	1
Locking Diagrams & Tables	2	1

**Equipment Classes**

	D	C
Signal Power Distribution Supply System	3	2
Controlled & Automatic Signals	2	1
Train Protection – TPWS	2	1
Train Protection – Train stop	2	1
Level Crossing Road Protection	2	1
Level Crossing Pedestrian Crossing	2	1
Traffic Light Coordination Arrangements	2	1
Track Circuits – Audio Frequency (Jointless)	2	1
Track Circuits – AC	2	1
Track Circuits – DC, HVI	2	1
Track Circuits – Non-vital IPI, PSO	2	1
Points – Off Rail (M23A / LZW / GRS)	2	1
Points – On Rail (Clamp / Claw Lock)	2	1
Axle Counters Thales/Frauscher/Siemens	2	1
Telemetry and Interface Processors	2	1
Siding Gates and Controls	2	1
Mechanical Signalling Equipment	0	0
Mechanical Interlocking Frames	0	0

**Interlocking Systems**

**Proficiency Level**

**LEVEL 0 – No certified knowledge on the subject**

**LEVEL 1 – Supervised Practitioner**

**LEVEL 2 – Practitioner**

**LEVEL 3 – Expert**

*This Certificate is issued under the Rail Safety Legislation requirements of Victoria.*

**ASSESSOR CERTIFICATION.**

The Assessor hereby Certifies that details on this Certificate of Competency have been assessed in accordance with the MTM & VRIOGS Standards, Procedures and Instructions for Assessment; that the applicant has demonstrated that he/she is able to perform the tasks covered by the Competency; and that the supporting documentation has been received and recorded. MTM relies on this certification as demonstrating competency

This certificate is only valid while working for the nominated Organisation and contracted to or employed by MTM or Alliance Partner. Conditions apply for transferring the Competency to work with a different organisation

**Assessed by:**

Assessor's Signature: \_\_\_\_\_

Assessor's Name: \_\_\_\_\_

Date: \_\_\_\_\_

**Engaged SME**
