STEC Outdoor Power Equipment, LLC Joins Gehl Dealer Network

Gehl, a leading manufacturer of compact equipment for agriculture and construction markets, is pleased to welcome STEC Outdoor Power Equipment, LLC to the Gehl dealer network. STEC Outdoor Power Equipment provides expert sales, service and parts support to Anderson, South Carolina and the surrounding area for Gehl skid loaders, compact track loaders, compact excavators, and articulated loaders. “We are excited to enter into a new partnership with STEC Outdoor Power Equipment, LLC,” said Eric Burkhammer, Manitou Americas Vice President of Sales and Marketing. “We are confident that Gehl compact equipment will be a strong asset to the landscaping, construction, and agricultural needs in this market.” To learn more about STEC Outdoor Power Equipment visit www.stecope.com.

Gehl is a leading manufacturer and distributor of skid loaders, track loaders, articulated loaders, compact excavators and telescopic handlers used worldwide in construction and agricultural applications. Founded in 1859, the company - now Manitou Americas - is headquartered in West Bend, Wis. For more information contact Manitou Americas at 262-334-9461.

Keith Clack of Metroquip Presented 2015 Mustang Top Dealer Award

Mustang, a leading manufacturer of compact equipment for agriculture and construction markets, presented Keith Clack of Metroquip in Marietta, GA with the 2015 Mustang Top Dealer Award. This prestigious award is based on the overall sales performance for North American Mustang Dealers in 2015. Metroquip was recognized and awarded for their top performance at the Manitou Americas corporate headquarters in West Bend, WI, during the “Next Big Thing” new product introduction dealer event.

“I would like to commend Metroquip for their excellent sales performance this past year. They have demonstrated commitment to their customers, dedication to our Mustang brand, and are a proven leader for our growing dealer network,” said

Eric Burkhammer, Vice President of Sales and Marketing for Manitou Americas, Inc. “We are pleased to partner with Metroquip and I’m proud to present them with our Mustang 2015 Top Dealer Award.”

ARI Recognized as One of Achievers 50 Most Engaged Workplaces in North America

ARI®, a leading global fleet services provider specializing in complex car and truck fleets, is pleased to announce that it has been recognized as one of the Achievers 50 Most Engaged Workplaces™ in North America. This annual award recognizes top employers that display leadership and innovation in engaging their workplaces.

“We are tremendously proud of this honor,” said ARI President Chris Conroy. “Our success as an organization is due in no small part to our employees, and it is important to us to ensure that they have a voice in the organization, that they know the company is committed to their growth personally and professionally, and that we maintain a culture of open communication and collaboration.”

The Achievers 50 Most Engaged Workplaces™ Awards panel of judges evaluated each applicant based on the Eight Elements of Employee Engagement™: Communication, Leadership, Culture, Rewards & Recognition, Professional & Personal Growth, Accountability & Performance, Vision & Values and Corporate Social Responsibility.

Mack Defense Partners with JWF Defense Systems, LLC

Mack Defense today announced a partnership with JWF Defense Systems, LLC, a wholly-owned division of JWF Industries, Inc. of Johnstown, Pennsylvania for the assembly of the Mack Defense Lakota 6x6 vehicle system. In addition to assembly, the partnership includes the manufacture of the vehicle’s armored hull. The versatile Lakota 6x6 combines exceptional capabilities with numerous configurations, offering end users a highly adaptable vehicle designed to meet the needs of a variety of missions.

“We look forward to working with JWF Defense Systems on the assembly of these vehicle solutions along with production of their armored hulls,” said Ryan Werling, president of Mack Defense. “JWF Defense has a long tradition of supporting the U.S. Department of Defense, and we are excited to have them as part of our team. In addition to the partnership for the Lakota, we also believe there is an opportunity for JWF to participate in the assembly of other armored vehicle programs that we are pursuing around the globe.”

Hampton Wideman Transitioned to Takeuchi-US Western Regional Business Manager

Takeuchi-US, a global innovation leader in compact equipment, has transitioned Hampton Wideman to the position of western regional business manager, effective as of June 1. Previously, Wideman was the southwest regional business manager for the past two years.

In his new role, Wideman is responsible in his territory to manage dealer relationships, develop new and existing markets, assist with inventories, and direct sales plans and program promotions. The lateral move is, in part, to bring more experience to the territory and to further develop dealer relations.

“Hampton has seen tremendous growth in his tenure as a regional business manager and will bring this experience to the western region,” said Kim Robinson, director of sales, Takeuchi-US. “We know he will do a great job throughout the region and it will be a seamless transition for him.”

I-80 EQUIP MENT

Established in 2006, I-80 Equipment is the world's leading provider of quality reconditioned bucket trucks, digger derrick trucks, cable placers, forestry trucks, crane trucks, grapple trucks, track machines and much more. We take pre-owned trucks and restore them to a like-new state, both inside and out.

Our reconditioning process is extremely thorough: we make sure that each part of the truck is inspected and that any deficient part or surface is repaired or replaced. From taking apart the engine to service all small parts, to boom and hydraulic repairs, our mechanics inspect every part of the truck. They also recondition the exterior of the truck, from repairing rust damage to fixing damaged frames. Our ASE-certified mechanics, Altec-certified boom technicians who are well-versed in all lines, and truck body experts ensure that every truck and equipment piece is fully functional and job ready. Our commitment to comprehensive reconditioning sets us apart from the competition, giving our ve-

hicles the highest level of quality you can receive from a pre-owned truck.

I-80 equipment recently began selling new trucks as well, so now we offer both new and reconditioned trucks to fit the needs of an even greater number of customers. We offer trucks and equipment from all major brands, like International, Terex, Kenworth, ETI, Duralift, Altec, Elliott, Ford, Dodge and Chevrolet. Further highlighting I-80's commitment to using first-rate parts and equipment, we are a Jasper Engines & Transmissions Preferred Installer.

Our recent partnerships with industry leaders ETI and Duralift have increased the strength of our brand and furthered our ability to provide top-quality options for our customers.

While most of our customers are in North America, we market to the entire world. We cater to anyone who desires a top new or reconditioned utility truck. We have sold trucks to customers in all 50 states, Canada, the

Caribbean, and even exotic locations like Micronesia, Scotland and Guam.

We take pride in being the best at what we do, going that extra mile to bring trucks and equipment back to full functionality and performance. We at I-80 Equipment will continue looking for ways to provide our customers with the best possible value before, during, and after the purchase. For those in the market, I-80 Equipment truly is the home of the job ready truck!

More information about our company, as well as our full selection of trucks, equipment and services, can be found at www.i80equipment.com. We have also posted many YouTube videos highlighting our trucks and our top-notch reconditioning process, so you can see each one of our trucks along with examples of our labor-intense and detailed reconditioning process.

Buckle-Up For A Palletable Evolution

Midwest Precision Products' "Seatbelts For Pallets" Lock-In Collaborative, Sustainable, & Eco-Friendly Packaging Solutions

Plastics take 100 to 400 years to break down in a landfill. Every year Americans make enough plastic film to shrink-wrap the state of Texas. Notably, 33% of all landfill waste originates from some kind of packaging. In addressing these eco-challenging issues, more and more companies are looking for ways to “go green” with their packaging products by leveraging eco-friendly, sustainable, biodegradable, or natural alternatives.

While helping the environment is one benefit of eco-friendly packaging, packing products using fewer and more sustainable materials reap additional rewards including: optimized product warehousing and stacking, a less packaging material-intensive alternative to shrink film bundling, long lasting durability, safety, and labor saving ease-of-use across a wide variety of industries.

Midwest Precision Products, Inc. (MPP: North Royalton, OH) has been a world leader in providing retractable, reusable, self-contained cargo restraints for material handling applications since 1992. In a continuing effort to advance sustainable packaging solutions, MPP has been collaborating with one of the oldest thermoforming and structural foam

molding companies in Michigan, Robinson Industries (Coleman, MI), to create eco-friendly systems that combine their “Seatbelts for Pallets” with Robinson’s returnable synthetic pallets.

Sustainable System Synthesis:

For many years, Robinson molded pallets and containers strictly for the automotive industry but, over the past few years, the company has expanded its operations to serve the retail, sporting goods, food and beverage, solar, agriculture, and office furniture markets. MPP has been collaborating with them in the early stages of design and engineering for max usage for a variety of these applications to provide a uniquely sustainable packaging system for a myriad of industries.

Robinson’s reusable plastic pallets, industrial storage containers, plastic shipping containers, and custom industrial packaging are primarily made out of polyethylene and polypropylene which outperform wood pallets and crates. The material is lighter in weight, making them easier to handle for worker safety and more cost-effective to transport. Since

ROME

Manufacturing Heavy Duty Construction and Agricultural Implements Since 1932

ROME PLOW COMPANY IMPLEMENTS

The ROME brand name has always been tied to heavy duty Construction and Agricultural disc plows.

ROME continues to manufacture the same style of implements that has made the ROME PLOW brand name famous for over 80 years.

ROME also manufactures pivot dump and ejector scrapers for the AG and Construction Industries.

This includes a full line of Earth Moving Scrapers and precision land levelers, such as land planes and float planes.

For more information on our products or for the closest authorized ROME dealer please contact us.

770-748-4450
www.romeplow.com

they are reusable, they offer a longer life cycle making them more cost-effective.

Producing new plastic from recycled material uses only two-thirds of the energy required to manufacture it from raw materials. Over 50% of Robinson's materials are recycled vs. virgin resin on their products—using extruded plastic flat sheets, which are injection molded, thermoformed, and vacuumed down.

Ultimately, the system is made with a structural foam base and vacuum form lid with totes placed between them. Two trays will make up a layer, and multiple stacks go up based on client need. The MPP retractable belts simply attach and reattach per repeatable loading/unloading operations.

Key MPP Seatbelt Specs:

- 59"-to-148" working length using 1" or 2" wide black polyester seatbelt style webbing.
- Male tongue end attaches to female style buckle.
- Unit is spring biased to retract at all times. Unit will "take-up" webbing slack at all times.
- All steel components are corrosion resistant with zinc plating or powder coating.

MPP also conducts comprehensive testing upon each new lot of manufactured products in their state-of-the-art Testing Laboratory to meet the highest performance specifications set by select customers and industry standards.

Seatbelt System Savings:

This sustainable system combination optimizes Robinson's recycled pallets with MPP's retractable

"seatbelt" straps eliminating plastic stretch wrap and the metal or plastic banding responsible for many injuries and landfill waste. As both elements in the system combine to offer a repeatable asset, it is able to withstand the rough handling of a typical logistics system across a multitude of years providing a rapid return on investment (ROI) and achieving a lower cost-per-trip vs. single-use expendable packaging.

Coupled with returnable synthetic pallets, MPP's retractable seatbelt products are progressively replacing antiquated, expendable options such as shrink wrap, steel binding, and wood skids. Additional substantial benefits of this reusable packaging system include: advanced product protection, ergonomics, durability, potential automated interface, safety, and the reduction of significant annual direct disposal costs.

Notably, labor cost reductions are also realized by reducing time intensive activities such as unpacking parts, consolidating and separating waste, and transporting it out of the plant. The ability to increase line speed and affect productivity may also provide vital advantages via streamlining integrated in-process and outbound material handling systems.

Seatbelt System Applications:

MPP's "Seatbelts for Pallets" and Robinson have partnered successfully in recent years in Tier 1 Automotive market sectors. An ISO 9001 registered company, MPP is also a principal GM Approved Supplier. Robinson is Tier 1 approved for their structural foam and vacuum-formed lids and pallets.

Typically, Tier 1 automotive customers purchase large bulks of MPP seatbelts in a 4-belt standard system, which includes Robinson's 45" x 48" trays, tops, and bottoms. These are used for transport of a wide variety of automotive assembly components. Robinson does all turnkey

America's Trench Box Builder™

customized trays and design while collaborating with MPP for system usage and advanced customization.

The strength of the systems' collective material design configuration is ideal for Tier 1's overall multiple use and product protection requirements, often outlasting the 6-8 year engine cycle lifetime. Tier 1 clients typically have the systems tested using shake tables, etc., to ensure they meet their standards for system usage and customization optimization.

Big-Box retailers are also benefitting from the system's economic, ergonomic, and ecological versatility. In recent years, a major custom retailer of home furnishings based out of Europe has adopted the system to optimize their customized usage needs. Robinson's 35" x 80" trays, tops, and bottoms (often with unique shaped lids) combine with MPP's retractors/buckles in a simple turn one-down, turn one-up, and lock configuration.

The 80" footprint was required to custom fit the client's long-shaped, slim-lined products into trucks. The system is designed for a 6-8 year reuse cycle, with a replacement system in place for MPP's seatbelts (if needed).

Buckle-Up Conclusion / Expansion:

The MPP/Robinson seatbelts and pallets system is providing retailers and manufacturers with an edge in meeting demanding economic and environmental production goals.

Whereas key vertical markets including Material Handling, Automotive, Food & Beverage, and Pharmaceutical are currently implementing the system, growing market sectors such as big-box e-commerce retailers are adopters on the horizon. Key players in these booming markets are currently conducting time, safety, and ergonomic analytic studies vs. antiquated stretch wrap and strapping systems.

Low-Dust Application of Stabilization Materials

Fast, Accurate and Consistent!

Sizes from 8 to 27 Tons

Truck Mounted

CORPORATE PROFILE: Midwest Precision Pallets, Inc. (MPP) is the world leader in providing retractable, self-contained cargo restraints for material handling applications in key industries including: the Material Handling, Automotive, Food & Beverage, and Pharmaceutical—amongst others. Our “Seatbelts for Pallets” products, coupled with returnable synthetic pallets, replace costly and antiquated shrink wrap, steel binding, and wood skids. MPP is a principal GM Approved Supplier and remains the only ISO 9001:2008 registered company in the industry.

© 2016 MIDWEST PRECISION PRODCUTS, INC.

According to MPP’s President Jeff Rogers, “Many potential clients don’t know the seatbelt system—so education is paramount for retailers and manufacturers to take advantage of the “green” reusable, sustainable seatbelts and pallets system benefits.”

Robinson’s Sales Manager Mark Weidner stated, “We see more and more companies trying to reduce their waste and scrap to zero. The ultimate goal is that nothing goes to the landfill. Our system’s collective benefits help them achieve this goal—along with other benefits such as nesting design for max usage, space, and ergonomics.”

THE USA

“This new-to-world design will fundamentally change temporary lighting on job sites. Just one of these high output lights is able to accomplish the same job as several larger, corded products,” said Jason Isaacs, Product Manager for Milwaukee Tool. “With the launch of the M18 RADIUS™ LED Compact Site Light, our users will no longer have to rely on extensions cords and outdated light technology, such as halogen or metal halide, to light their jobsites.”

Capable of providing 4400 lumens of light, the new M18™

Compact Site Light can illuminate large workspaces for hours on a single charge. The Site Light features TRUE-VIEW™ Technology, which utilizes the most advanced LED technology and optical designs to deliver a consistent beam, optimized color temperature, and true representation of colors and detail leading to a more productive work area.

The Site Light also has the versatility to hang upside down or horizontally through the use of integrated hanging features. An AC input and output also allows the user the option of stringing multiple lights together through the use of extension cords.

For the most complete control over light positioning, the Site Light’s 360 degree light can be directed through the use of Electronic Bay Switches. The Electronic Bay Switching also extends run time by giving the user the ability to turn off sections of the light that are not needed.

A durable high impact polycarbonate lens design can survive harsh jobsite conditions, delivering superior impact durability. Additionally, with an IP54 rating, the Site Light is protected from dust and water. Similar to all of Milwaukee’s high output LED lights, the new Site Light also features a limited lifetime LED warranty, and a 5-year warranty on the light.

For additional utility, the light also includes a carry handle for easy transportation to and from the worksite. Included with every light is a 3.5’ aluminum cable that will allow a user to secure the light in a particular location.

Powered by Milwaukee RED LITHIUM batteries*, the new M18 RADIUS™ LED Compact Site Light is compatible with the M18™ cordless system, now offering more than 100 power tool products. Committed to its focus on the user and investment in game-changing technology, Milwaukee® will continue to design and develop lighting solutions with the ability to adapt, perform and survive the demands of professional use.

DEWALT® Launches Range of Innovative Anchoring Solutions and Announces Transition of Powers Brand to DEWALT

The addition of DEWALT Anchors and Fasteners to DEWALT's concrete products category is part of a continued strategy to deliver a complete, cordless solution for all concrete and masonry applications.

DEWALT announces a new range of innovative anchoring and fastening solutions designed for performance and productivity. Central to the offering is the pairing with DEWALT's range of 20V MAX* and new FLEXVOLT™ cordless rotary hammers along with a full range of accessories and setting tools. The addition of FLEXVOLT™ Rotary Hammers allows for a new leap in DEWALT's pursuit of a fully cordless system solution for concrete and masonry applications. With the addition of the anchors and fasteners line, DEWALT can now offer a full system for the entire project from the design phase through construction and completion.

The new range of DEWALT anchors will launch in the back half of 2016, and the existing Powers range of anchors and fasteners will transition to the DEWALT brand over a period of time. As pioneers in their fields, DEWALT has been developing innovative installation tools, and Powers Fasteners has been creating anchor solutions for construction projects throughout the world. Powers is a leader in the concrete and masonry fastening industry, specializing in providing solutions for the design and specification phases of construction. Once construction begins, DEWALT has been the trusted brand of choice for Contractors using professional power tools. Both DEWALT and Powers products have been used in the design and construction of many of the world's most iconic structures.

In 2012, Powers Anchors and Fasteners became part of the DEWALT family, part of the key mission to own the entire project, from the design phase and through the construction phase. Since then, the hard work of bringing the two companies together has been underway. Engineers from both companies began working together, collaborating to design anchors and tools alongside one another to deliver a complete system focused on performance and productivity. Significant investments have been made in expanding the Field Engineering program, a team that works side by side with Structural Engineers to assist in the selection, design and specification of construction fasteners. "The results of this investment have been significant. The latest construction reports show that our products are now specified on many of the largest jobsites throughout the U.S. Today, we unveil the next phase we've been working toward since 2012: a complete, cordless instal-

lation tool and anchoring system solution under one brand," said Director of Marketing, Sean Kelly. To insure a successful brand transition, the Powers brand will remain on DEWALT Anchors packaging as "Engineered By Powers." This strategy will be used on all packaging and literature.

DEWALT Cast-In-Place Anchors

Part of the DEWALT Anchors launch is an updated and extended range of cast-in-place anchors. Meant to be used in construction projects where the anchors are placed prior to the concrete being poured, a growing trend for construction sites in the U.S., these new DEWALT anchors are designed to deliver fast and reliable installations leveraging the trend toward BIM (Building Information Modeling).

DEWALT Woodknocker® II

For use in wood concrete form applications, this cast-in-place insert anchor is designed to be more stable than previous de-

signs. Improvements include a much wider base that reduces the likelihood of accidental kick over after installation. Also, the nails are raised and now sit inside the base, removing the sharp points of the nails when handling prior to installation. A new membrane design has been added to the underside of the base to reduce the likelihood of concrete seeping into the threads during the concrete pour. Additionally, a multi-thread option has been added to the range, allowing for the installer to have the option for 3/8" or 1/2" rod hanging, a useful flexibility if the job requirements change after the concrete is poured. Upon launch the parts are expected to have approvals to meet the latest in building code standards.

DEWALT Bang-It®

For use in metal deck applications, this cast-in-place insert is used. The existing range is updated to include a multi-thread option for 3/8" or 1/2" rods. All Parts are on track to have FM, UL, and ICC approvals upon launch.

DEWALT Deck Insert™ (DDI™)

Metal deck forms are corrugated and the placement of the anchors must be exact according to the design of the project. The new DDI™ insert solves this common issue and allows a cast-in-place insert to be placed on any surface of the deck including the incline where traditional metal deck inserts cannot be installed. The long, steel brace allows for installation in any position needed and delivers a rod beneath the surface of the deck at the same height since the part is always installed in the top of the deck flute. Pre-mounted screws allow for fast installation. A shoulder feature on the bolt insures the proper embedment depth. All diameters are planned to have the approvals required for the latest building code standards.

DEWALT Post-Installation Anchors

While the increased productivity benefit of the cast-in-place method causes it to be the growing trend, the majority of construction projects continue to utilize the conventional post-installation method of anchoring. Like with cast-in-place anchors, quick installation is the top request from contractors.

Screw-Bolt+™

For the Contractor installing structural components such as columns or beams as well as non-structural components like windows, warehouse racking or railing, the new Screw-Bolt+™ allows for faster installation compared to a conventional anchor**. Special geometry of the threads and dust relief grooves in the core allow for fast installation. This new system removes the need for a manual torque wrench for proper installation. A DEWALT Impact Wrench can be matched with the size of anchor and used for fast installation. The installation method of this new anchor is performed much like installing a screw into wood.

The design of the anchor allows it to have this fast installation method yet still has the high holding performance needed. The Screw-Bolt+™ will replace the Innovative Powers Wedge-Bolt®. The new design can be installed with a standard ANSI drill bit and is designed to install in dense aggregate and high compressive strength concrete. The new design is on track to launch with a full array of approvals designed to meet the latest building codes.

Hangermate®+

For the MEP (Mechanical, Electrical, and Plumbing) Contractors hanging pipe, cable trays and other components to ceilings, this new line of anchors shares the same thread and shank design of concrete Screw-Bolt+™ and is a fast and easy method for rod hanging. The broad range includes many different options to cover the various application needs of these trades in the three key application materials: concrete slabs, wood joists, and metal structural components. Options within the range include female & male threads integrated into the anchor ready to receive a hanger and also options for special circumstances like heads that swivel giving nearly 90 degrees of rotation for flexible positioning. The Hangermate®+ line is on track to have a full selection of approvals required for the latest building code upon launch.

Adhesive Anchoring Solutions

Also a post-installation method of anchoring, the adhesive anchoring process is used to bond rebar or threaded rod into drilled holes in concrete and masonry. The post install rebar application is one that has very specific requirements to be completed correctly. To be approved for use, a matched system must be developed and tested together to insure the stringent approval requirements are met. On track to launch with these approvals for a front half 2017 launch is a matched system including a FLEXVOLT™ SDS Max Rotary Hammer with the performance to drill the deep holes required, a hollow drill bit range to clean the holes while drilling, and both acrylic and epoxy adhesives powered by a 20V MAX* dispenser. Additionally, a hollow drill bit range will be available to be used with our powerful Perform & Protect™ dust extractors and when used with the DEWALT FLEXVOLT™ portable power station, it allows the application to be completed on battery power only.

20V MAX* - Maximum initial battery voltage (measured without a workload) is 20 volts. Nominal voltage is 18.

**5/8" Screw-Bolt+™ compared to 5/8" SD1 using the allowed impact wrench for the Screw-Bolt+™ and the required manual torque wrench for the SD1.

DEWALT's Perform & Protect™ line of power tools is designed to provide a high level of one or more of the following: control, dust containment, or low vibration, without sacrificing performance.

The ARS711 Hydraulic Puller

The ARS711 hydraulic puller from Condux Tesmec is ideal for a wide range of pulling applications including power transmission and distribution cable installation. The ARS711 features a 286 hp, Volvo Penta Tier 4 Diesel Engine, compliant with US EPA Tier 4 Final emissions legislation.

The unit also offers a hydraulic motor with dual displacement positions for two pull settings: high pull mode and high speed mode. In high pull mode, the unit offers a maximum pulling force of 40,000 lbs. at a pulling speed of 1.5 mph, and 20,000 lbs. of pull force at a maximum speed of 2.9 mph. In high speed mode, the ARS711 offers a maximum pulling force of 27,000 lbs. at a pulling speed of 2.0 mph, and 13,500 lbs. of pull force at a maximum speed of 4.0 mph.

The ARS711 is available as a modular unit, allowing greater flexibility for job site transport and set up, while providing the ability for end-user mounting on an existing chassis.

Milwaukee M12 M-SPECTOR FLEX SYSTEM

Milwaukee Tool continues to expand its M12™ offering with the introduction of the new M12™ M-SPECTOR FLEX™ SYSTEM. Designed from the ground-up to give users the versatility they need, the new recordable inspection camera features an innovative PIVOTVIEW™ camera head cable that gives users full control of the camera head for faster positioning.

“Anyone who has used an inspection camera can relate to the frustration of trying to feed a cable just right while watching what is happening on the screen,” said Ben Cabot, Product Manager for Milwaukee Tool. “Whether it’s trying to position the camera head, being able to see further, or keeping the display in viewing position, the M12™ M-SPECTOR FLEX™ System solves the biggest challenges that have frustrated users for years – delivering the easiest and fastest way to inspect on the market.”

The game-changing PIVOTVIEW™ camera head pivots 270° with the turn of a dial. Users have complete control over the positioning of the camera head throughout the entire inspection, without the need to feed a cable multiple times – saving time and frustration.

Coxreels Now Offering Various Stainless Steel Options

Coxreels is pleased to offer various stainless steel grade choices to our customers, ideally servicing exact specification needs. Coxreels offers complete stainless steel reels and powder-coated steel reels with stainless steel fluid paths. Now customers can choose between 316 and 304 grade stainless steels for their fluid paths on many reel types to best match the necessary corrosion resistance of their reel according to the application. Coxreels stainless steel reel spools and frames will remain 302/304 grade stainless and are optionally available in an electro-polished finish for additional corrosion resistance.

302/304 and 316 are the two primary stainless steel types used in the reel industry. With inherent metallurgical differences, each category offers different levels of corrosion protection and cost. The 302/304 are the most commonly used stainless steels and are found in most applications where corrosion resistant steel is required such as food and beverage, sanitation, dairy, pharma, appliances and sinks. 316 grade stainless steel is commonly considered the most corrosion resistance of the stainless steel grades and can be up to 4X more resistant to corrosion than 302/304.

Dillon Jaw Nuts and Keys

With the advancement of machine tool technology including greater horsepower, larger material cuts, and higher machine tool speeds, the stress and mechanical forces upon jaw nuts and t-nuts being used within these operating conditions has greatly increased. Jaws nuts and keys made from case hardened 1018 CRS can fracture, crack, and break under high speed machine stress loads causing damaged workpieces and chucks, and endangering operators. Manufactured from 4140 heat treated steel, Dillon Jaw Nuts and Keys provide superior wear resistance, impact resistance, higher tensile strength, and extended jaw nut life. Operator safety and chuck life are greatly improved by eliminating the use of low carbon jaws nuts and t-nut in the machining process.

Dillon Jaw Nuts, T-nuts, and Keys are available to fit all popular power chucks from 6" in diameter to 24" in diameter including Forkhardt, Gamet, Howa, Kitigawa, Matsumoto (MMK), Nikko, Pratt Burnerd, Rohm, Samchully, Schuck, SMW, SMW-Autoblok, and more. Standard sizes are stocked for immediate shipment. They are ideal for workholding applications requiring durability and high strength such as high speed machining.

RUGGED PROTECTION

FOR YOUR FORKLIFT'S BATTERY

RUGGEDIZED SHUT DOWN TIMER

- Designed to protect your vehicle's battery from over discharge
- Programmed to automatically turn off electrical loads at a low voltage battery level, or at a preset time after the vehicle's ignition has been shut off
- No special tools required for installation
- Potted to protect against heat, moisture and humidity
- Can be installed in a vehicle or forklift's engine compartment (12V or 24V inputs)

To learn more about how Lind's **Ruggedized Shut Down Timer** can meet your mobile power needs, contact Lind at **1.800.897.8995**, via email at info@lindelectronics.com or visit us online at www.lindelectronics.com.

Mi-T-M Corporation Releases HAE Series Pressure Washers

Mi-T-M Corporation announces the newly released HAE Series Pressure Washers. These all-electric belt drive pressure washers come standard with heat exchanger cartridges to provide consistent and efficient hot water on-demand.

The HAE Series Pressure Washers are hard-wired to a heat exchanger and feature an industrial 6.0 or 8.0-HP electric motor, triplex piston General pump, stainless-steel and brass unloader, external downstream detergent injector and stainless-steel base and frame with rubber isolators.

A revolutionary cartridge design and heat exchanger supplies a 120°F to 130°F temperature rise within 3 to 5 minutes. Features include an adjustable thermostat, stainless-steel coils in aluminum casings and powder coated steel frame. This pressure washer delivers hot water on-demand while eliminating the need for constant cleaning; perfect for cleaning grease and oil from any surface.

Towmasters, Inc. App Update

Towmaster, Inc., manufacturer of equipment trailers and truck bodies, releases a major update to their original iOS trailer app. This new version is faster, more intuitive, and offers a new slider menu. The app continues to be an exclusive in the trailer manufacturer's industry.

"Our trailer marketing app was the first of its kind in the trailer industry when it was released three years ago, and Towmaster continues to offer the only app in the industry of its kind", states Shane Zeppelin, Marketing Manager at Towmaster. "Our app provides an easy reference for customers and dealers on the products we sell, and our new version includes more information than the original."

Towmaster's app contains PDFs of all of Towmaster's trailer models, an extensive image gallery, links to Towmaster's web site, YouTube videos, and social media, plus you can send images and PDFs from directly within the app. Need to contact one of our sales reps? Simply go to the contact screen and click the email or phone number.

The update is available now on iOS devices with an Android update currently in development.

ISOLATED PROTECTION

TO PREVENT GROUND LOOPS

The Lind Isolated Power Adapters provide a regulated, isolated DC output to power laptops, thin clients, monitors and other devices from a DC voltage source. Output and input DC returns are isolated, allowing the prevention of possible electrical noise caused by ground loops.

The Isolated Power Adapter's electronics are enclosed by an epoxy-sealed case to protect the internal circuits from damage caused by shock and/or vibration. Its durable construction withstands extensive wear and tear in any harsh mobile environment. Snap-in connections make replacing missing or damaged cables from anywhere in the field easy and hassle-free.

Lind's Isolated Power Adapters are built to work with most existing laptop brands and models. These adapters can also be designed for custom applications. Contact Lind to discuss solutions for your exact mobile power needs.

CLYDESDALE

SKID BASE SELF-ERECTING PORTABLE CONCRETE BATCH PLANT

Improve the quality and efficiency of your mobile batch plant operations with the new Stephens Clydesdale skid base system. Specially designed features reduce the typical installation and operating costs and help increase your margins. You can count on Stephens for the highest quality equipment, service & support.

- Highly Portable 14' Travel Height
- Concrete Foundation May Not be Required, Consult Local Engineer
- No Crane
- Up to 200 cy/hr
- Hydraulic Self-Erect

Stephens CONCRETE EQUIPMENT

Why buy a Stephens?

- Owned by the Stephens Family since 1957
- Honest, reliable, second-to-none sales & service
- In-house CNC Machine Shop
- Simple and easy to service & maintain
- Standard, off the shelf parts
