

FarmTRX™

MOISTURE SENSOR 2.0
QUICK START GUIDE

Congratulations on the purchase of your FarmTRX™ Moisture Sensor! The Moisture Sensor installs at the base of the clean grain elevator and displays live and average sensed grain moisture values using your smartphone or tablet. Upon data upload to the Web App, our cloud-based application, moisture data will be processed into automatically corrected moisture maps.

This guide describes how to get started using the Moisture Sensor in combination with the Yield Monitor.

Install at the base of the clean grain elevator on the lower door with a single opening.

Monitor crop moisture while harvesting using the FarmTRX Harvest App. For moisture sensors installed independently on augers, grain carts or dryers, connect, monitor, and track moisture through the dedicated upcoming FarmTRX Moisture App.

Review precision moisture maps through the FarmTRX Web App, our cloud-based application.

OVERVIEW OF USING THE FARMTRX MOISTURE SENSOR

1. Refer to the Yield Monitor Installation Manual at www.FarmTRX.com/documentation/ to ensure the correct installation of your Yield Monitor.
2. Connect your mobile device to the Yield Monitor via Bluetooth®. If the Moisture Sensor is connected to the Yield Monitor it will automatically be detected. Confirm connection in one of two ways:
 - a. Check the Moisture Tile on the Live Harvesting screen of the Moisture App. The tile will appear blue and display the Current sensed moisture if connected.

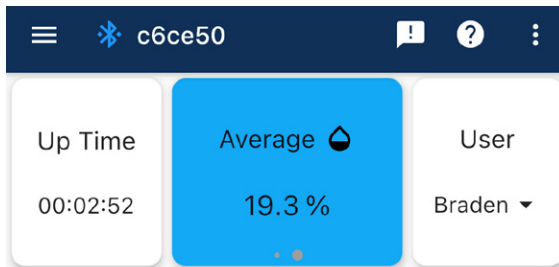

No Moisture Sensor Connected

Moisture Sensor Connected

Swipe the Moisture Tile from right to left to change the display to Average sensed moisture.

Average Moisture

Average moisture represents the moisture values over your current running totals.

After installing the Moisture Sensor, clear your harvest totals by navigating to Advanced Settings and pressing the Reset Totals button. Totals will be automatically reset when you change crops. Resetting totals does not delete any yield data.

Live Harvesting Data

Last Reset: August 19, 2021 14:20:28

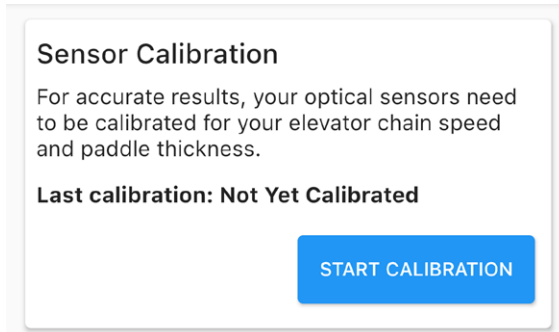

RESET TOTALS

This will only reset your Live Harvesting totals and will not delete data from your yield monitor.
You can not reset totals while a calibration session is active.

- b. If the Sensor has been successfully connected it will be registered on the Advanced Settings page.

OVERVIEW

1. It is recommended to run an initial Yield Monitor Sensor Calibration after installation and before first use. This will establish a baseline value for the Sensor (e.g., empty paddles passing over the Sensor). Make sure the surface of the Sensor is free of dirt or residual grain. Navigate to the Calibration Menu from the Device Calibration section of the main menu.

2. Begin Harvesting. The Moisture Sensor will automatically gather and send moisture readings to the Yield Monitor Power Unit located in the cab of the combine. Live moisture data will display on your phone or tablet and be uploaded to the Web App when performing a cloud sync.
3. Perform a one-time calibration of the Moisture Sensor for each crop being harvested. You can adjust and correct the sensed moisture using a simple adjustment factor below.

ADJUSTING MOISTURE SENSOR READINGS

To adjust your Moisture Sensor reading, long-press the moisture tile.

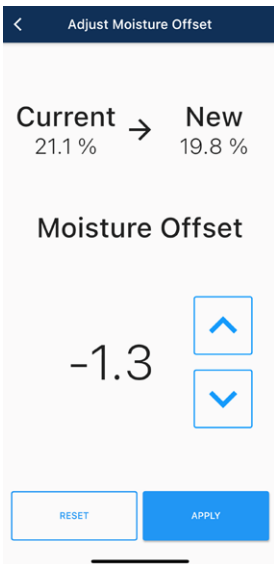

(hold your finger on the

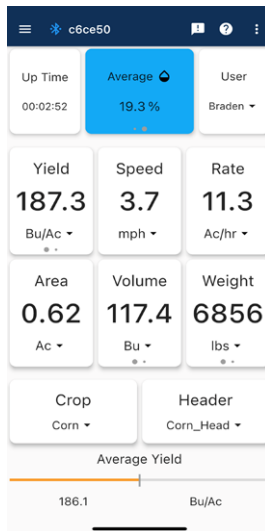

tile for 2 seconds).

Under Adjust Moisture Offset, shift the calculated moisture up or down. The top of the screen will show the current average moisture value and the updated average moisture based off the new adjustment. Since the moisture offset represents average moisture, please allow a few minutes of harvest prior to making adjustments.

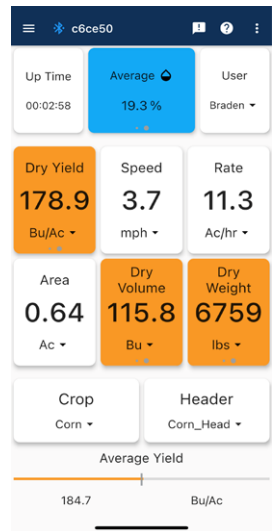

The updated moisture adjustment will be applied to future moisture readings. It will also be applied to previous readings for that field when processed into maps.

Wet Yield

Dry Yield

4. View the effect of moisture on yield by swiping the Yield Tile left or right to view wet (as-harvested) vs market (dry) values.
5. Change the Market (dry) moisture levels by editing the crop table, accessible from the Add/Edit Crops section of the main menu.
6. Upload data to the Web App for processing.
