

MPACT

Math and Computational Thinking Through 3D Making

Hanging Mobile

MPACT

Introduction

This hanging mobile activity is designed for families with children in grades 4-7. It includes activities for making and math.

This picture shows the one kind of mobile that you can make. It also show the parts of the mobile. You can make many different mobile designs. You'll make it for a friend, a family member, or a community center.

Just follow the steps in this activity, that lead you through design and making—and learning math along the way.

For Grown Ups

This activity is for you and your kids to do together or for your kids to do on their own. You don't have to know the math in advance. Be open to exploration, and ask questions such as "How did you do that?" and "How do you know?"

For Children

Gather the following materials and get ready to make a set of shapes. Along the way you'll learn a bit of math. If you get stuck on any step, take a breath and try again. It's okay if you need to restart and use more materials. Good luck and have fun!

Gather Materials

Tools

- Scissors
- Tape
- Glue
- Pencils or pens
- Small object found in your house to hang on mobile
- Optional: paint, markers, glitter, ribbon, or something to decorate the objects.

For arms – A straight stick about 10-15 inches long. It can be:

- A twig from a tree, or
- A skewer, or
- An old paintbrush, or
- Anything you can find

Paper for 3D objects

- Stiff paper or thin cardboard. It can be:
 - Cereal boxes
 - File folders
 - Cardstock
- Plain paper. It can be:
 - printer paper
 - decorative paper
- Graph paper
 - You can print the graph paper on the next pages or
 - use a ruler to make your own.

String for attaching parts. It can be:

- String
- Twine
- Yarn
- Anything stringy you can find

Plan and Design

Collect Ideas

- Choose a friend, family member, or community organization to make a mobile for.
- Find out what they like: colors, shapes, animals, or other ideas you have.
- Make notes about what they like, so you can remember this later.

Hanging Mobile Requirements

- The mobile must have at least one arm.
- The mobile must have at least three objects hanging from the arm/s.
- Two objects must be geometric shapes made with nets.
- The other objects can be anything about the same size as the shapes (The heavier helps).
- The mobile with all the objects hanging must balance.

Sketch out a design

- On paper, draw the mobile: arms, string, and objects. Draw two different ideas.
- Check if they meet the requirements.
- Choose the idea you want to use.

Fold Net into a Cube

A cube is a 3-dimensional shape with six square faces. Look for a cube around the house.

Net of Cube

A net is a flat shape you can fold to make a 3D shape.

- On paper, draw the net of a cube you see here. It can be any size that fits on your paper.
- Cut out the net.
- Fold the net to make a cube shape. This is your pattern for making a cube for your mobile.
- Talk about it: How did you know how to fold the net?

Different ways of making a net for a cube

Make a net by tracing a small square

Make a net by taping together small squares

Make a net with graph paper

Do this if you have tape

Do this if you have graph paper

Make a net by tracing a small square

You'll need a sheet of letter sized paper (8.5 x 11 inches), scissors, and a pencil or pen.

Step 1: Fold in half

Step 2: Unfold

Make a net by tracing a small square (cont.)

Step 3: Fold to center

Step 4: Fold to center

Step 5: Unfold

Step 6: Cut out one strip

Step 7: Fold diagonal line to make a square.

Step 8: Fold down

Step 9: Unfold

Step 10: Cut out square

Make a net by tracing a small square (cont.)

Step 11: Use the square to trace

Step 12: Trace the square to make a "t" shape

Step 13: Cut out shape

Step 14: Finished net

Make a net with squares

Step 1: Fold in half

Step 2: Unfold

Step 3: Fold to center

Step 4: Fold to center

Make a net with squares (cont.)

Step 5: Cut out two strips

Step 6: Fold diagonal line

Step 7: Fold down

Step 8: Unfold

Step 9: Cut out square

Step 10: Make 6 squares

Step 11: Use the squares to make a "t" shape

Step 12: Tape the squares together

Make a net with graph paper

Step 1: Decide on how many units

You know that the net must have 4 squares in a row. Count the total number of units of the longest side. What's the length of the side of the biggest square you can make?

Step 2: Count the units and draw a square

Step 3: Make a "t" shape with squares

Step 4: Cut out around the shape

Step 5: Finished net

Make a net of another shape

Cylinder

Cube

Square pyramid

Triangular prism

Rectangular prism

- Choose another 3D shape to make with a net. (See the shapes in the image to the left.)
- Draw the net on paper. Imagine folding it up. Change the net until you think it will work.
- Cut out the net.
- Test it: Fold it to make your shape. If it works, you will use this net to make more nets. If it doesn't work, fix your net.

Here is an example net.

Talk about it: What 3D shape can be formed from this net?

Make the 3D shapes

Use the nets you just made.

1. Put the nets flat on thin cardboard or thick paper.
2. Trace around the nets with a pencil to draw the nets on the thin cardboard. Or you can glue your paper net on the thin cardboard.
3. Cut out the cardboard nets.
4. Decorate the cardboard nets with pens or markers.
5. Fold up the cardboard nets into 3D shapes.
6. Attach a string for the shape to hang from.
7. Tape the edges of your net together to make the 3D shape.
8. Add more decorations, as you like.

Put together the mobile

You need the arm, the string, and the objects for your mobile. The objects are the 3D shapes you made and one you found around the house.

1. Hang the two 3D shapes you made at either end of the arm.
2. Balance the arm on your finger. Tie a string to this place on the arm. The string should hang above and below the arm.
3. Hang an object from the middle string.

Give the mobile to the user

1. Bring the mobile to the person or group you made it for.
2. Hang the mobile for them. Let them watch it moving.
3. Ask if it fits with the ideas they gave you when collecting ideas.

Try spatial reasoning with nets

Given a net, which cube is **NOT** possible?

If you are not sure, make the nets below and decorate them the same way. Fold the nets into cubes. Rotate your cubes to help you find the cubes that are possible and the cubes that are not possible.

These spatial reasoning challenges come from 123test.com. For more spatial reasoning challenges, check it out at: <https://www.123test.com/spatial-reasoning-test/>.

Learn about surface area

You have made two 3D shapes from nets.

Talk about it: Describe how the net is related to its 3D shape. Try to explain it to a younger child.

The surface area of a 3D shape is the sum of the areas of the faces of the shape. These faces make up the net of the 3D shape.

Calculate the **surface area** of this rectangular prism. Sketch a net to help you.

The surface area of a 3D shape is the sum of the area of the shapes in the net.

You can get it by figuring out the area of each face. Some of the faces may be the same shape.

Additional Resources

Play this game to learn more about nets of cubes. There are fun animations when you check your

answers. <https://www.nctm.org/Classroom-Resources/Illuminations/Interactives/Cube-Nets/>

Take this quiz to boost your spatial reasoning skills.

<https://www.123test.com/spatial-reasoning-test/>

What shape would this net make?

Answer Key

Make a net of another shape, page 12

It is a pyramid with a square at the bottom. So, a square pyramid

Try spatial reasoning with nets, page 14

Top cube answer: D

Bottom cube answer: B

Learn about surface area, page 15

28 square units

Additional Resources, page 16

It's a triangular prism

About MPACT

MPACT is made possible by an Education Innovation and Research grant by the U.S. Department of Education to develop and implement a program bringing the exciting and ever-more-broadly-used technologies of 3D modeling and printing to middle schoolers in 50 classrooms. 90% of MPACT's funding comes from the EIR. 10% comes from our generous donors—including the gift of your time.
