

Multidisciplinary Approach to Interstitial Lung Diseases

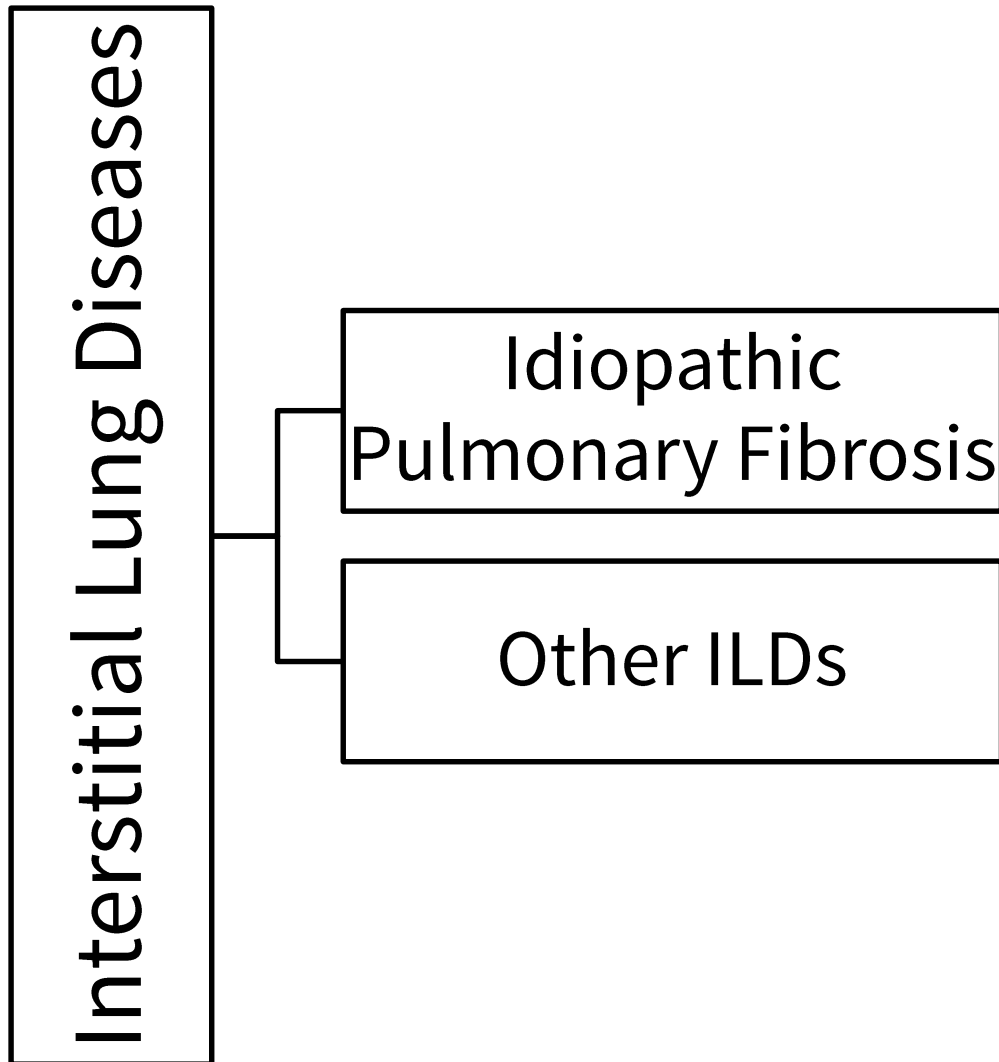

RISHI RAJ

Case Study: Mr. D.S

Mr. D.S

- 64 YEAR OLD MALE
- SLOWLY PROGRESSIVE COUGH AND DYSPNEA OVER LAST FEW YEARS, MORE FOR THE LAST ONE YEAR
- BASILAR CRACKLES ON EXAM
- CXR SHOWED INTERSTITIAL OPACITIES
- REFERRED TO YOUR CLINIC FOR A FORMAL EVALUATION

Broad/Simplistic categories of ILDs

Survival differs in ILDs

Treatment of non-IPF related ILDs

IMMUNOSUPPRESSIVE/CYTOTOXIC MEDICATIONS ARE USEFUL IN TREATING NON-IPF ILDs INCLUDING CRYPTOGENIC ORGANIZING PNEUMONIA, HYPERSENSITIVITY PNEUMONITIS, CONNECTIVE TISSUE ASSOCIATED ILD ETC.

- Corticosteroids
- Azathioprine
- Mycophenolate
- Cyclophosphamide
- Others

Patients with IPF should generally not be treated chronically with corticosteroids

Corticosteroids for idiopathic pulmonary fibrosis (Review)

Richeldi L, Davies HRHR, Spagnolo P, Luppi F

**THE COCHRANE
COLLABORATION®**

Patients with IPF on prednisone and azathioprine are more likely to die or be hospitalized than those on placebo

Nintedanib reduces rate of FVC decline in IPF patients

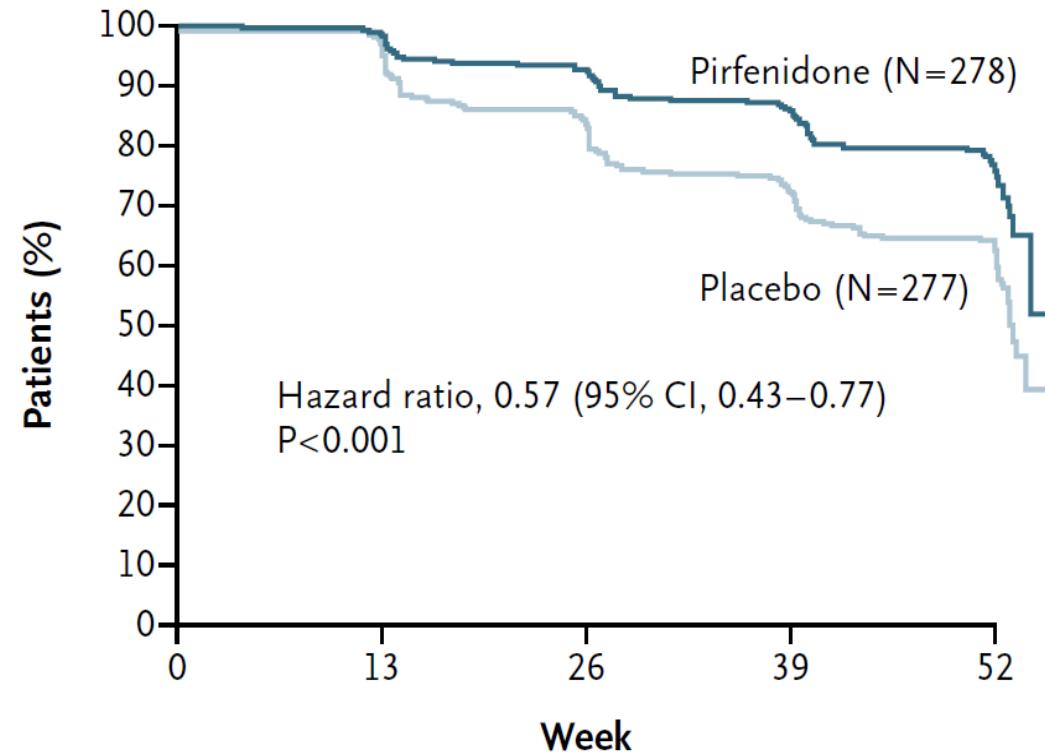

Pirfenidone reduces the rate of decline of FVC

B Change in FVC

D Progression-free Survival

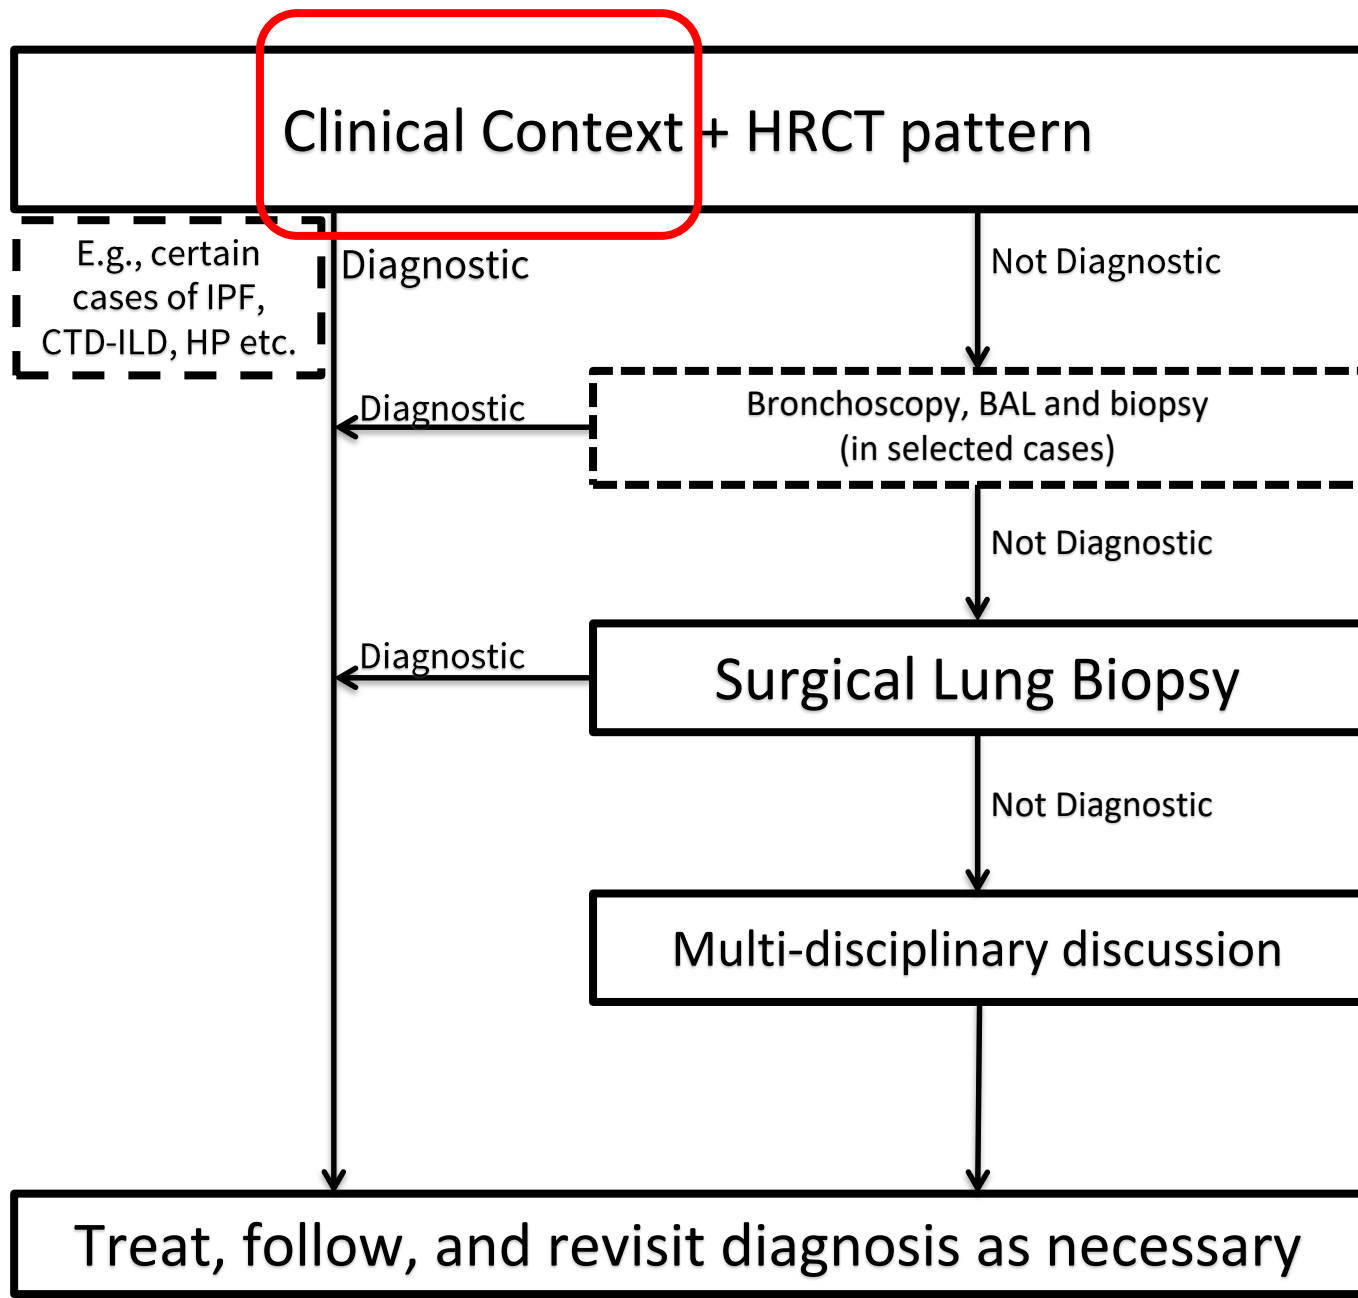

No. at Risk

Pirfenidone	276	269	243	219	144
Placebo	273	262	225	192	113

Mr. D.S

- 64 YEAR OLD MALE
- SLOWLY PROGRESSIVE COUGH AND DYSPNEA OVER LAST FEW YEARS, MORE FOR THE LAST ONE YEAR
- BASILAR CRACKLES ON EXAM
- CXR SHOWED INTERSTITIAL OPACITIES
- REFERRED TO YOUR CLINIC FOR A FORMAL EVALUATION

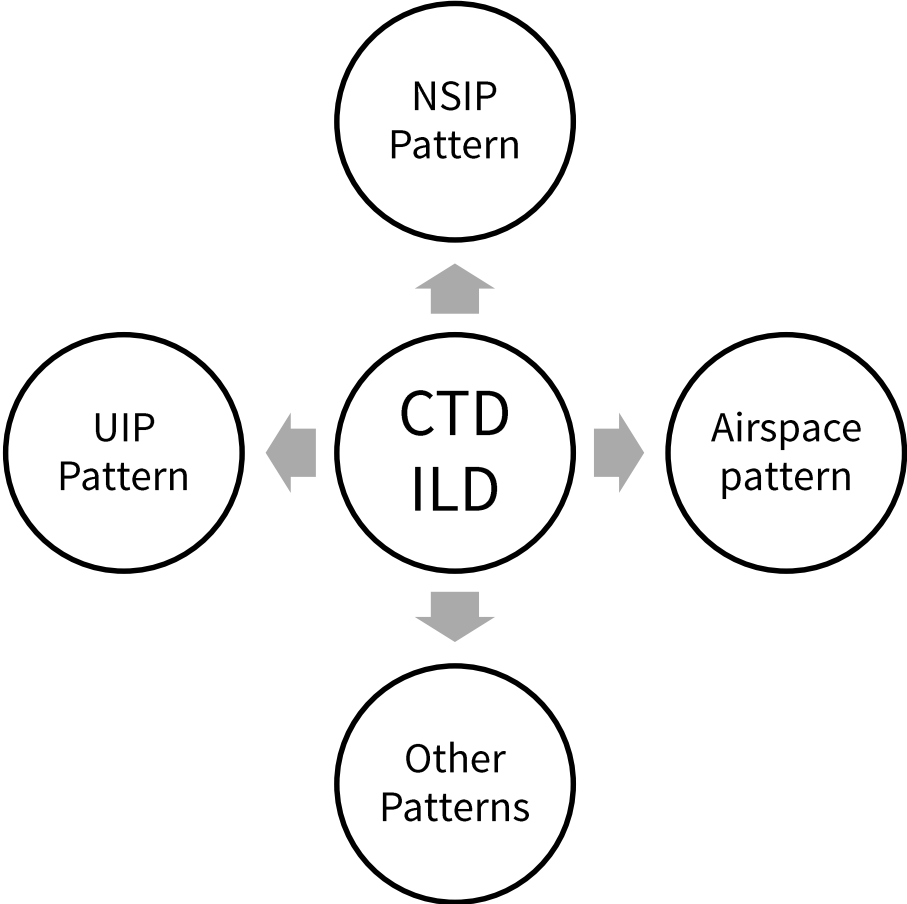

E.g., certain cases of IPF, CTD-ILD, HP etc.

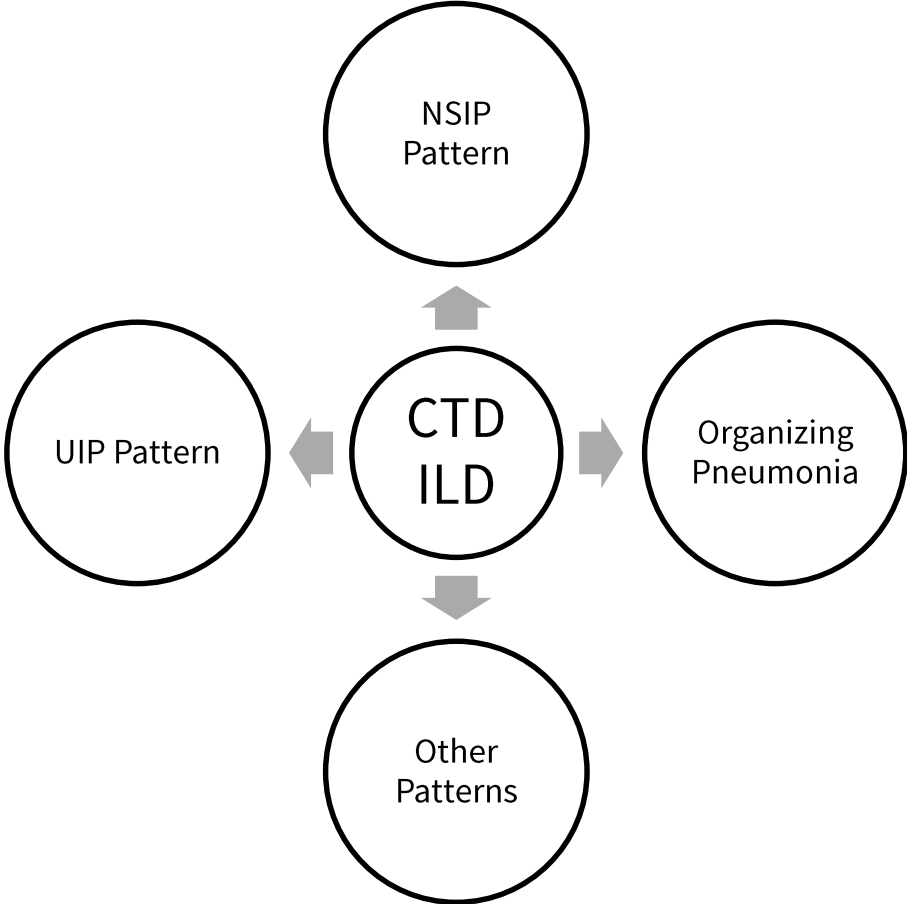

Clinical exam is **THE** most important tool in the
diagnosis of Interstitial Lung Diseases

ILD from one etiology can present with different radiologic and histopathologic patterns

RADIOLOGIC PATTERNS

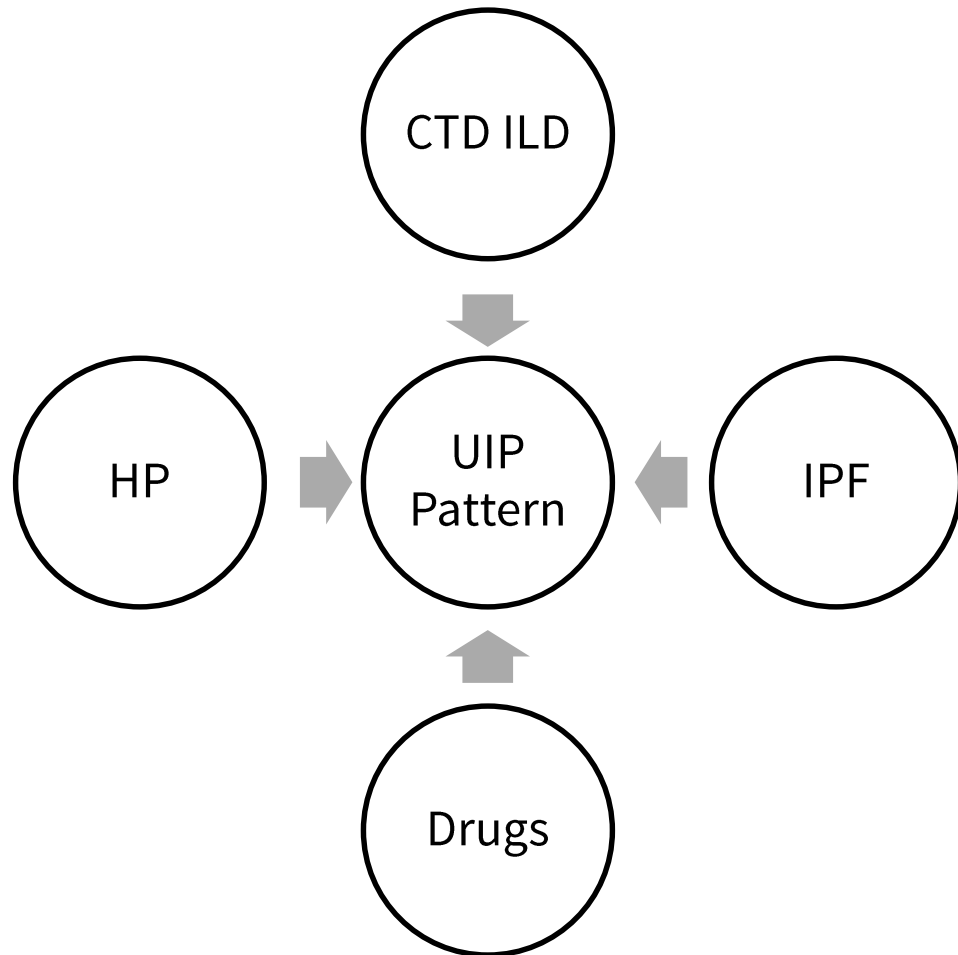

HISTOPATHOLOGIC PATTERNS

ILDs from different etiologies share the same radiologic and histopathologic patterns

RADIOLOGIC PATTERNS

HISTOPATHOLOGIC PATTERNS

ILD Questionnaires

Date: _____ Name: _____ MR# _____

Stanford University Medical Center
Center for Interstitial Lung Disease: New Patient Questionnaire

Radiographs and other workup as indicated

SEROLOGIC TESTING

- Rheumatoid factor
- Anti-Scl 70
- Etc.

FORMAL RHEUMATOLOGY CONSULTATION

Inhalational Exposures (Hypersensitivity Pneumonitis)

Agent*	Source	Disease
Microbes		
Thermophilic actinomycetes	Moldy plant materials	Farmer's lung
<i>Saccharopolyspora rectivirgula</i> (<i>Micropolyspora faeni</i>)	Moldy hay	
<i>Thermoactinomyces vulgaris</i>	Moldy hay, compost	Farmer's lung, mushroom-worker's lung, composter's lung
<i>Thermoactinomyces sacchari</i>	Sugar cane residue	Bagassosis
<i>Bacillus subtilis</i>	Detergent enzymes	Detergent-worker's lung
<i>Aspergillus clavatus</i>	Moldy grains	Malt-worker's lung
<i>Aspergillus versicolor</i>	Animal bedding	Dog house disease
<i>Aspergillus</i> species	Tobacco mold	Tobacco-worker's lung
<i>Penicillium casei</i>	Cheese mold	Cheese-washer's lung
<i>Penicillium frequentans</i>	Moldy cork	Suberosis
<i>Penicillium chrysogenum</i>	Moldy wood dust	Woodworker's lung
<i>Cryptosporium corticale</i>	Moldy maple bark	Maple bark-stripper's lung
<i>Aureobasidium pullulans</i>	Moldy sequoia dust	Sequoiosis
<i>Aureobasidium</i> species	Contaminated water	Sauna-taker's disease
<i>Alternaria</i> species	Wood or wood pulp	Woodworker's lung
<i>Merulius lacrymans</i>	—	Dry rot lung
<i>Botrytis cinerea</i>	Grape mold	Winegrower's lung or Späetlase lung
<i>Trichosporon cutaneum</i>	Mold in Japanese homes	Summer-type HP
<i>Cephalosporium</i>	Sewage	Sewage-worker's lung
<i>Mucor stolonifer</i>	Paprika	Paprika-splitter's lung
<i>Candida albicans</i>	Saxophone mouthpiece	Sax lung
<i>Mycobacterium avium-intracellulare</i>	Contaminated water	Hot tub lung
Mixed amoeba, fungi, and bacteria	Cold mist and other humidifiers, air conditioners	Nylon plant or office worker's or air conditioner's lung, ventilation pneumonitis
Bacteria and fungi	Contaminated metal-working fluids	Machine-operator's lung
Animals		
Avian proteins	Bird excreta, blood, or feather	Bird-breeder's lung, bird-fancier's lung, pigeon-breeder's lung
Rat proteins	Rat urine or serum	Rodent-handler's lung
Gerbil proteins	Gerbil	Gerbil-keeper's lung
Animal fur protein	Animal fur	Furrier's lung
Ox and pork protein	Pituitary snuff	Pituitary snuff-taker's lung
Mollusk shell protein	Mollusk shell dust	Oyster shell lung
Fish	Fish meal dust	Fishmeal-worker's lung
Wheat weevil	Flour	Miller's lung
Silk worm larvae proteins	Silk worm larvae	Sericulturist's lung
Plants		
Soybean	Soybean hulls	Soybean-worker's lung
Coffee	Coffee bean dust	Coffee-worker's lung
<i>Lycoperdon</i> species	Puffballs	Lycoperdonosis
Chemicals		
Isocyanates	Paints, plastics	Paint-refinisher's lung
Anhydrides	Plastics	Chemical-worker's lung, plastic-worker's lung, epoxy-worker's lung
Pauli's reagent	—	Pauli's reagent lung
Bordeaux mixture	Vineyard fungicide	Vineyard-sprayer's lung
Pyrethrum	Insecticides	Insecticide lung
Metals		
Cobalt	—	Hard metal lung disease
Beryllium	—	Berylliosis

*The more frequent causative agents are listed in bold type.

Medications and Occupations

OCCUPATIONAL LUNG DISEASES

- Occupational history
- ALL occupations

DRUGS

- Common drugs
 - › Nitrofurantoin
 - › Methotrexate
 - › Amiodarone
 - › Etc.

The screenshot shows the PNEUMOTOX ON LINE website interface. At the top, there is a navigation bar with links for BROWSE, NEWS, ABOUT, and CONTACT. Below the navigation bar is the website title "The Drug-Induced Respiratory Disease Website" and a list of authors and their contributions. The main content area is divided into two sections: "DRUGS" and "PATTERNS". Under "DRUGS", there is a list of drugs with their corresponding patterns and a star rating. The drugs listed are Abacavir, Abciximab, Acebutolol, Acenocoumarol, and Acetazolamide. The patterns are represented by colored boxes with letters and numbers. The star ratings are 2, 3, 2, 1, and 1 respectively. On the right side, there is a search bar and a "NOTE LEGEND" section.

Drug	Patterns	Star Rating
Abacavir	Ia, If, B*, Bb, Vd, B*, Vd	2
Abciximab	B*, Xf	3
Acebutolol	Ib, Id, Ve, Ve, Xg	2
Acenocoumarol	Vk, V	1
Acetazolamide	B*, Xf, Xh	1

Mr. D.S: Additional history

- SMOKED 1 PACK/DAY UNTIL 15 YEARS AGO
- INTERMITTENT WOODWORKING, BUT NOW WEARS MASK
- SOME MOLD IN BATHROOM IN HOME BUT OTHERWISE NO SIGNIFICANT MOLD INFESTATION
- DOWN CLOTHING AND BEDDING AT HOME
- NO DIAGNOSIS OF A CONNECTIVE TISSUE DISEASE BUT COMPLAINTS OF JOINT PAIN IN HANDS AND FEET WITHOUT ASSOCIATE SWELLING
- PHYSICAL EXAM DID NOT SHOW ANY EVIDENCE OF ACTIVE OR PAST CONNECTIVE TISSUE DISEASE

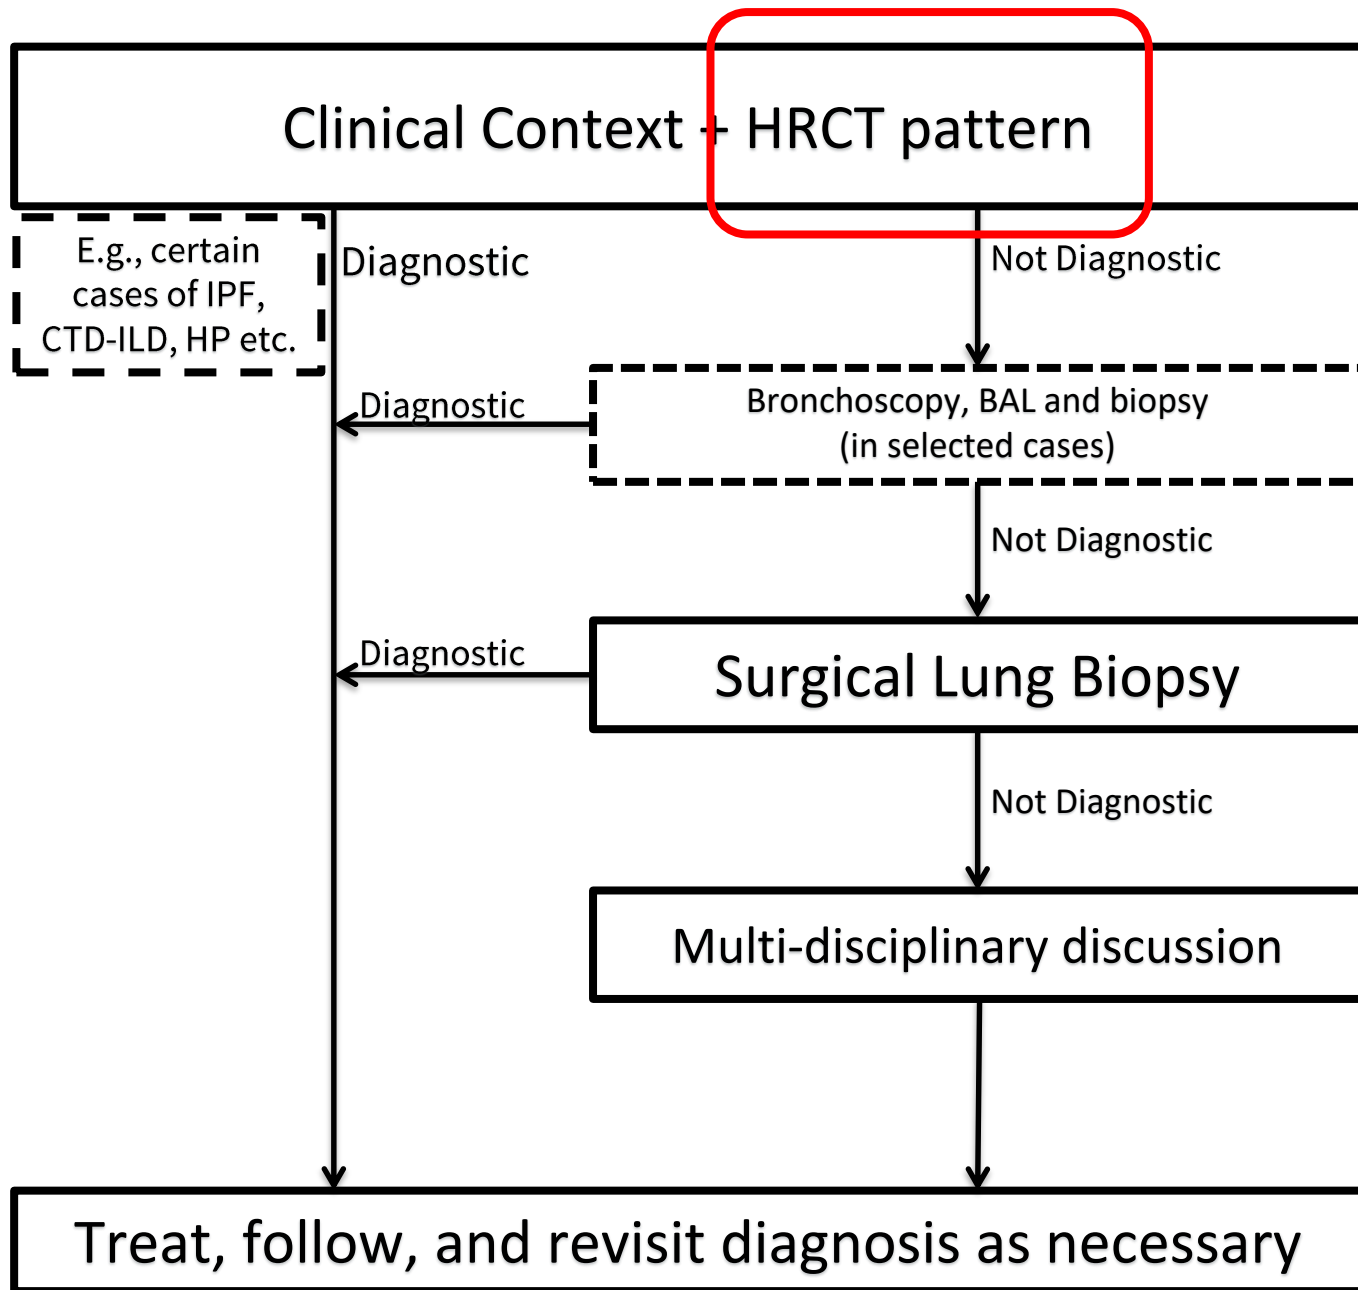

Mr. D.S: Working Diagnostic Considerations

- IDIOPATHIC PULMONARY FIBROSIS
- CHRONIC HYPERSENSITIVITY PNEUMONITIS
- RHEUMATOID ARTHRITIS ASSOCIATED CONNECTIVE TISSUE DISEASE

Mr. D.S

- THE CRP, ESR, ANA, ANTI SCL 70, SSA, SSB, MYOSITIS PANEL WERE ALL NEGATIVE EXCEPT FOR SLIGHT ELEVATION IN RF AND A POSITIVE ANTI CCP

E.g., certain cases of IPF, CTD-ILD, HP etc.

HIGH RESOLUTION CT CHEST

VARIOUS PATTERNS

CT Chest: Usual Interstitial Pneumonia Pattern

Raghu G, et al. AJRCCM 2018;198:e44-68.

CT Chest: Probable Usual Interstitial Pneumonia Pattern

Raghu G, et al. AJRCCM 2018;198:e44-68.

Stanford University

CT Chest: Indeterminate Pattern

Raghu G, et al. AJRCCM 2018;198:e44-68.

University

CT Chest: Alternative Diagnosis Pattern

Raghu G, et al. AJRCCM 2018;198:e44-68.

HIGH RESOLUTION CT CHEST

INTERSTITIAL LUNG DISEASE PROTOCOL

Conventional vs High Resolution CT

CONVENTIONAL

HIGH RESOLUTION CT

Prone vs. Supine Images

Inspiratory

Expiratory

Inspiratory

Air trapping is better appreciated on expiratory images

Expiratory

Mr. D.S: HRCT Images

Mr. D.S: HRCT Images

Mr. D.S: HRCT Images

Mr. D.S:

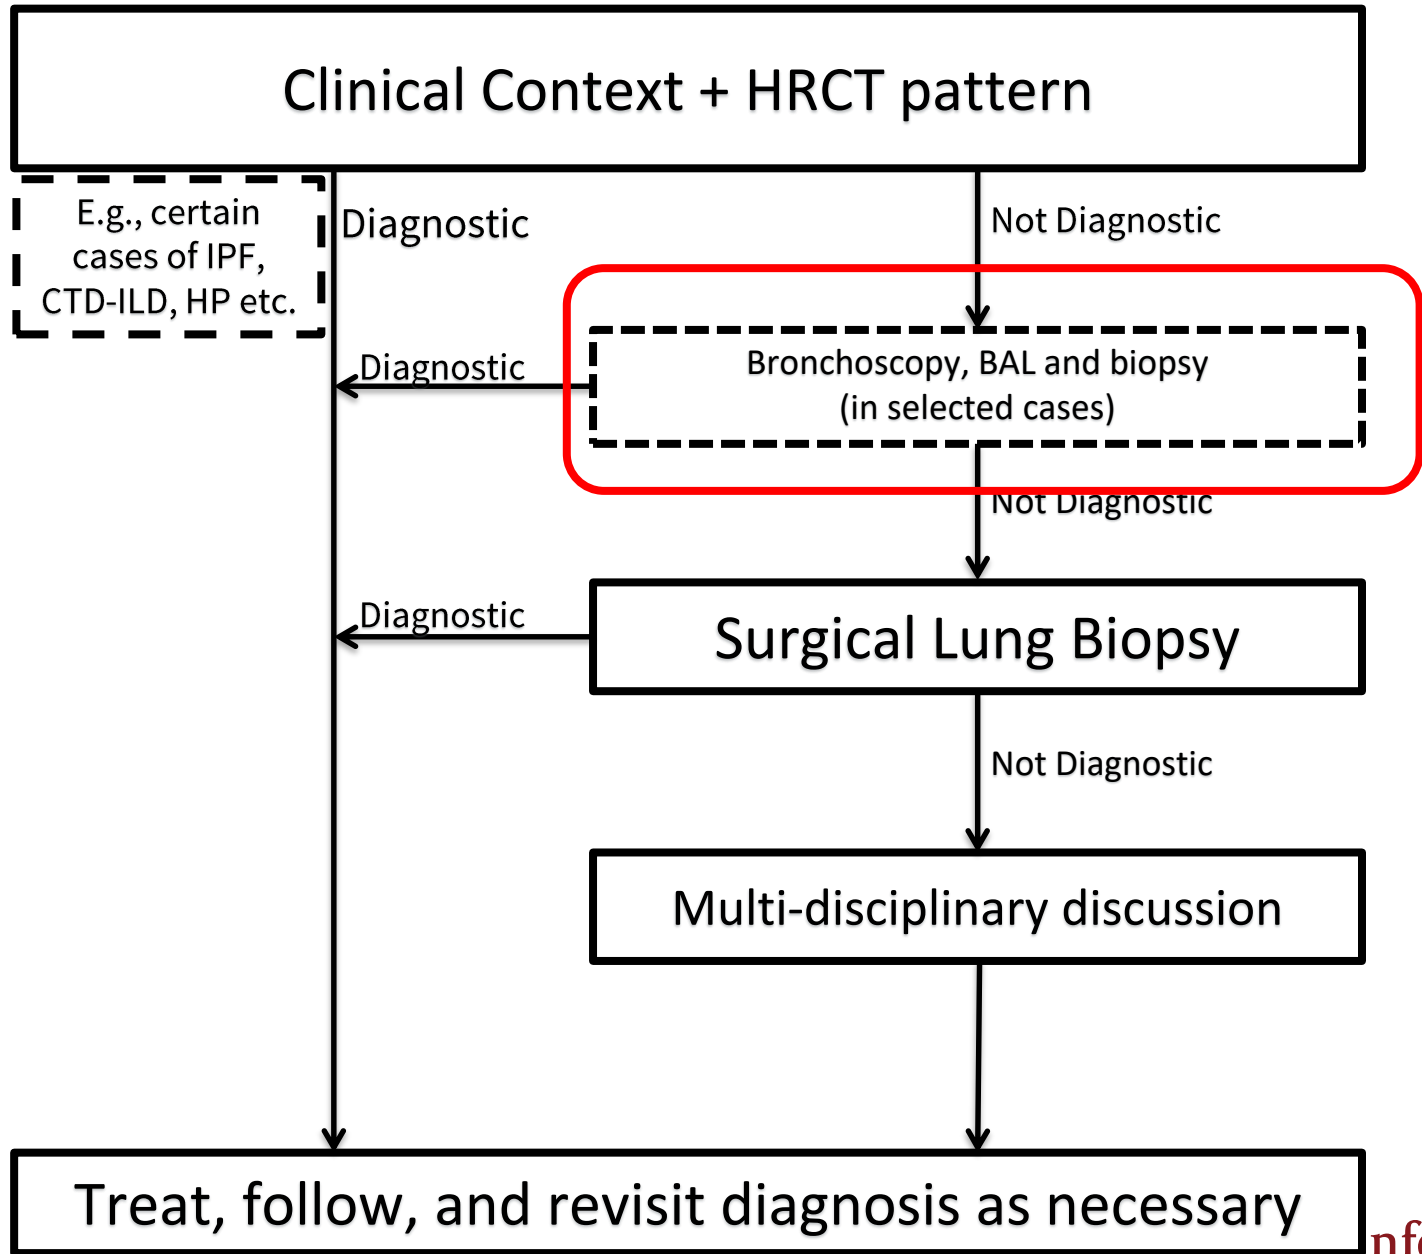

- CT CHEST SHOWED AN INDETERMINATE UIP PATTERN
- NOT HELPFUL IN NARROWING THE DIFFERENTIAL DIAGNOSIS

Mr. D.S: Working Diagnostic Considerations

- IDIOPATHIC PULMONARY FIBROSIS
- CHRONIC HYPERSENSITIVITY PNEUMONITIS
- RHEUMATOID ARTHRITIS ASSOCIATED CONNECTIVE TISSUE DISEASE

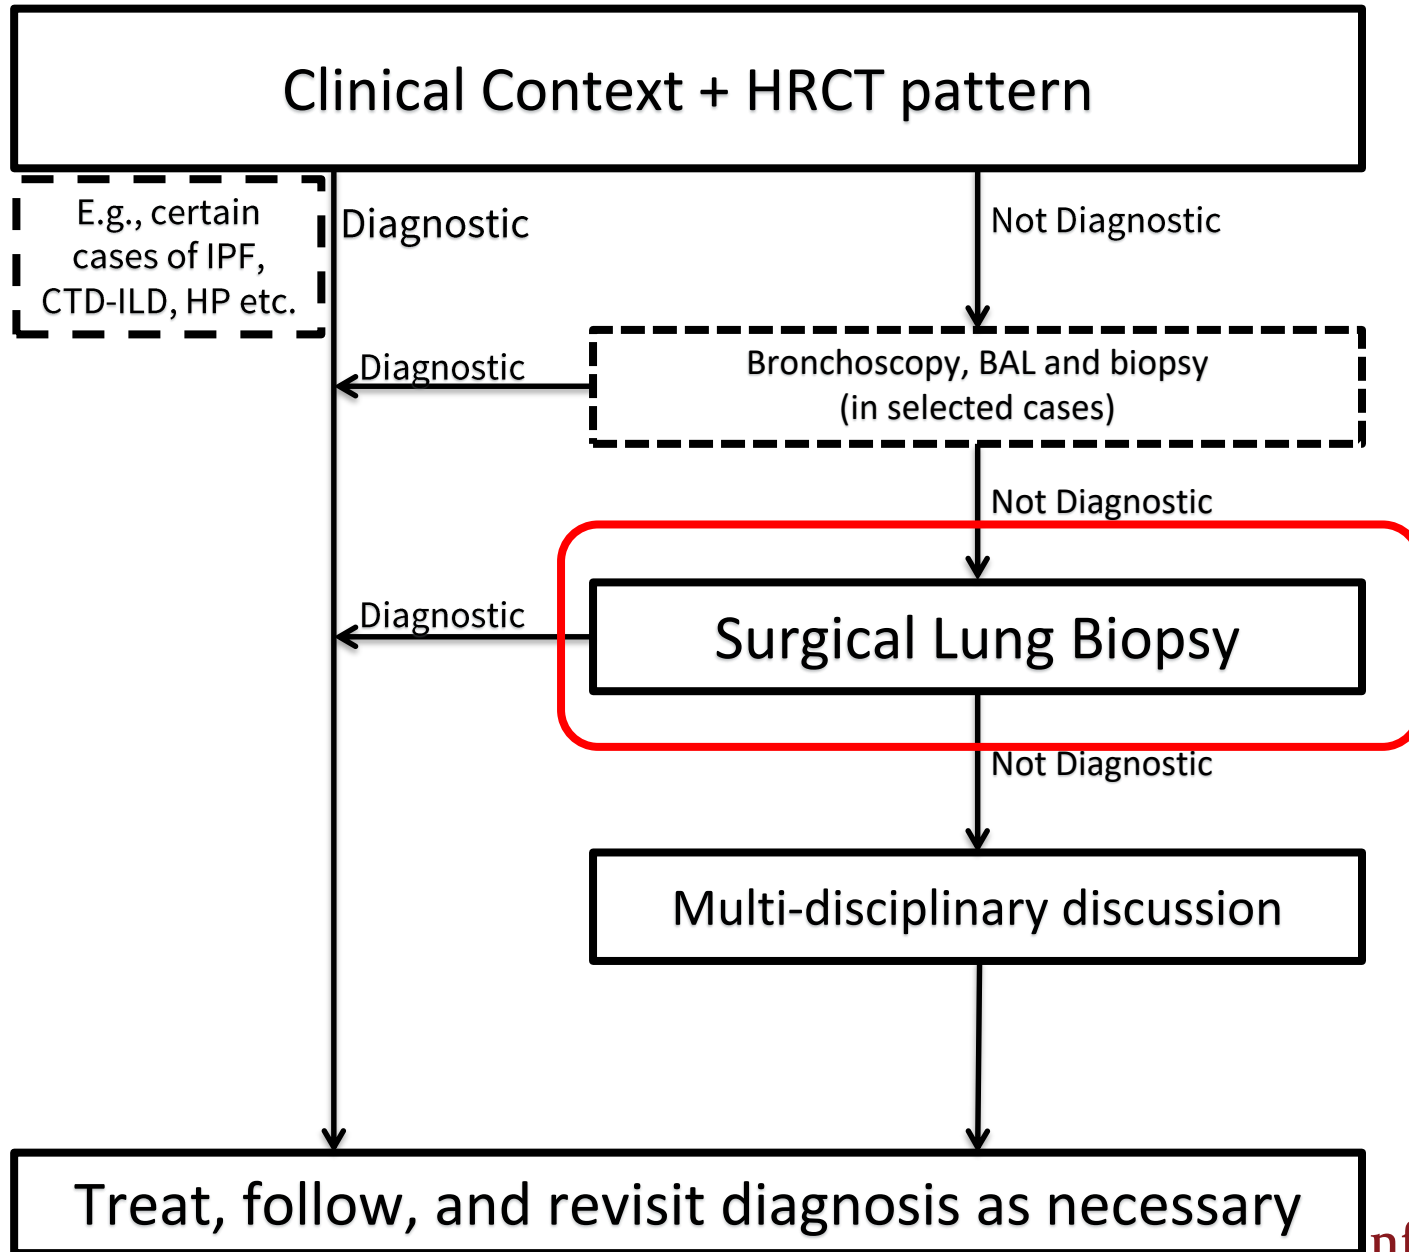

Mr. D.S:

- REFERRED TO RHEUMATOLOGY
- THE PATIENT DID NOT MEET CRITERIA FOR CONNECTIVE TISSUE DISEASE AND RHEUM RECOMMENDED TO DIAGNOSE AND TREAT THE ILD AS IF IT WAS NOT RELATED TO A CONNECTIVE TISSUE DISEASE

Bronchoscopy, lavage and biopsy

Surgical Lung Biopsy

THORACOSCOPIC (VATS) LUNG BIOPSY

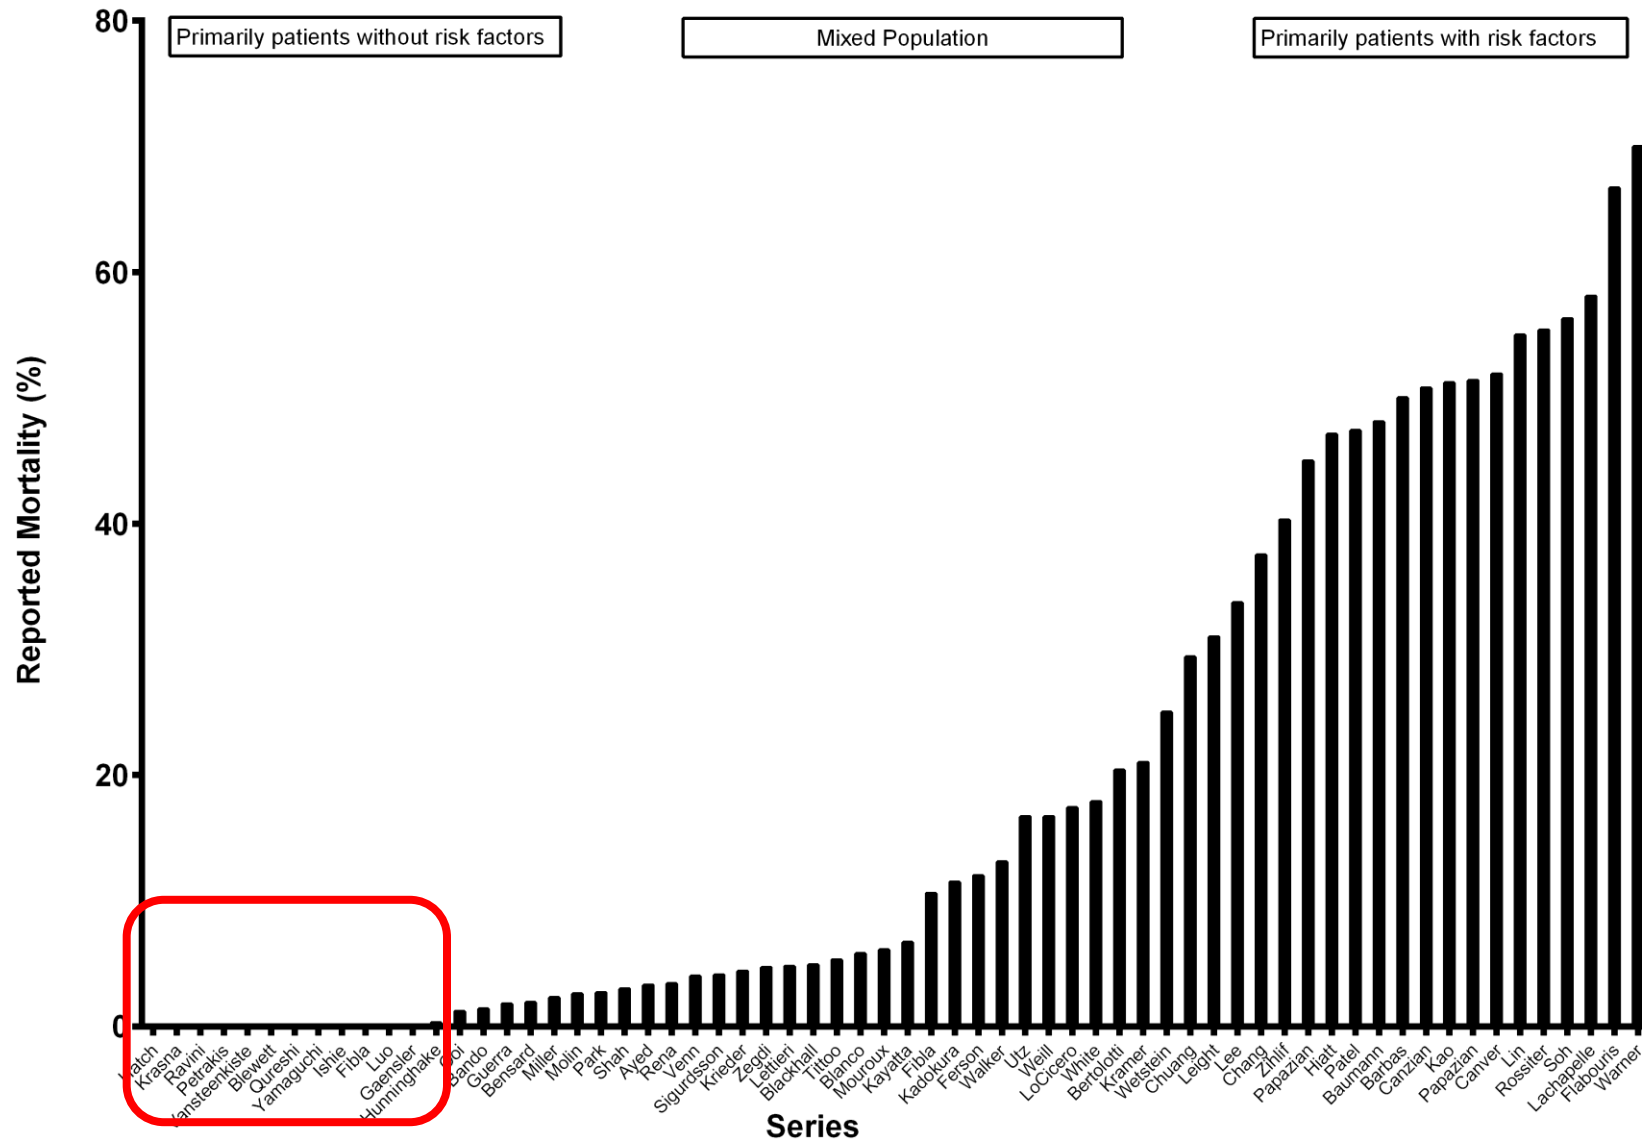

- 3 incisions (5-10 mm)
- Access to all aspect of the chest
- Favored approach if patients will tolerate anesthesia

POSTOPERATIVE CARE

- Chest tube in place (overnight)
- Majority are home in 1-2 days (>90% in our practice)
- Primary concern is air leak

Mortality following surgical lung biopsy

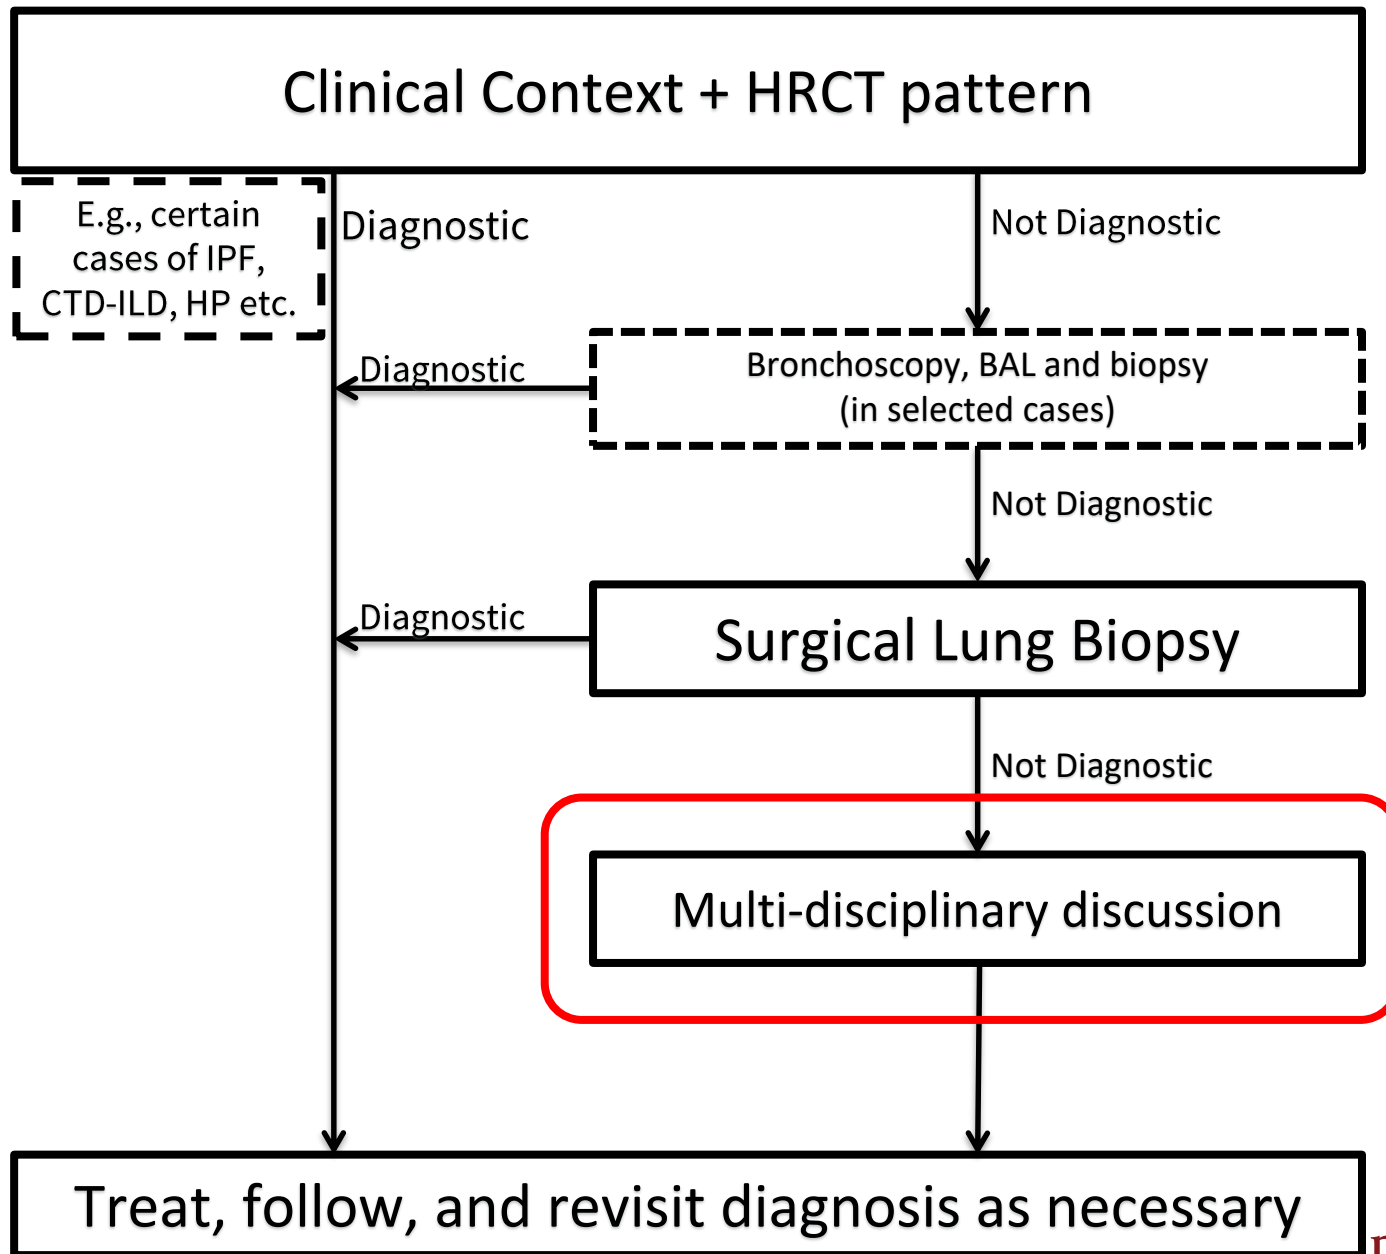

Raj et al. Chest 2016

Mr. D.S:

- REFERRED FOR A SURGICAL LUNG BIOPSY (VATS)
- UNEVENTFUL PROCEDURE AND RECOVERY

Mr. D.S: Surgical Lung Biopsy

Agreement on the final diagnosis increases with multidisciplinary discussion

91 ILD PATIENTS

STEP 1

- Expert clinicians and radiologists independently reviewed HRCT
- Opinion: Definite, probable, possible and not UIP

STEP 2

- Clinicians and radiologists reviewed HRCT with clinical information
- No discussion between participants

STEP 3

- Clinician and radiology conference; discussed results with each other

STEP 4

- Conference: Clinicians, radiologists and pathologists discussing cases and their diagnoses

STEP 5

- All discussants tried to reach a consensus diagnosis

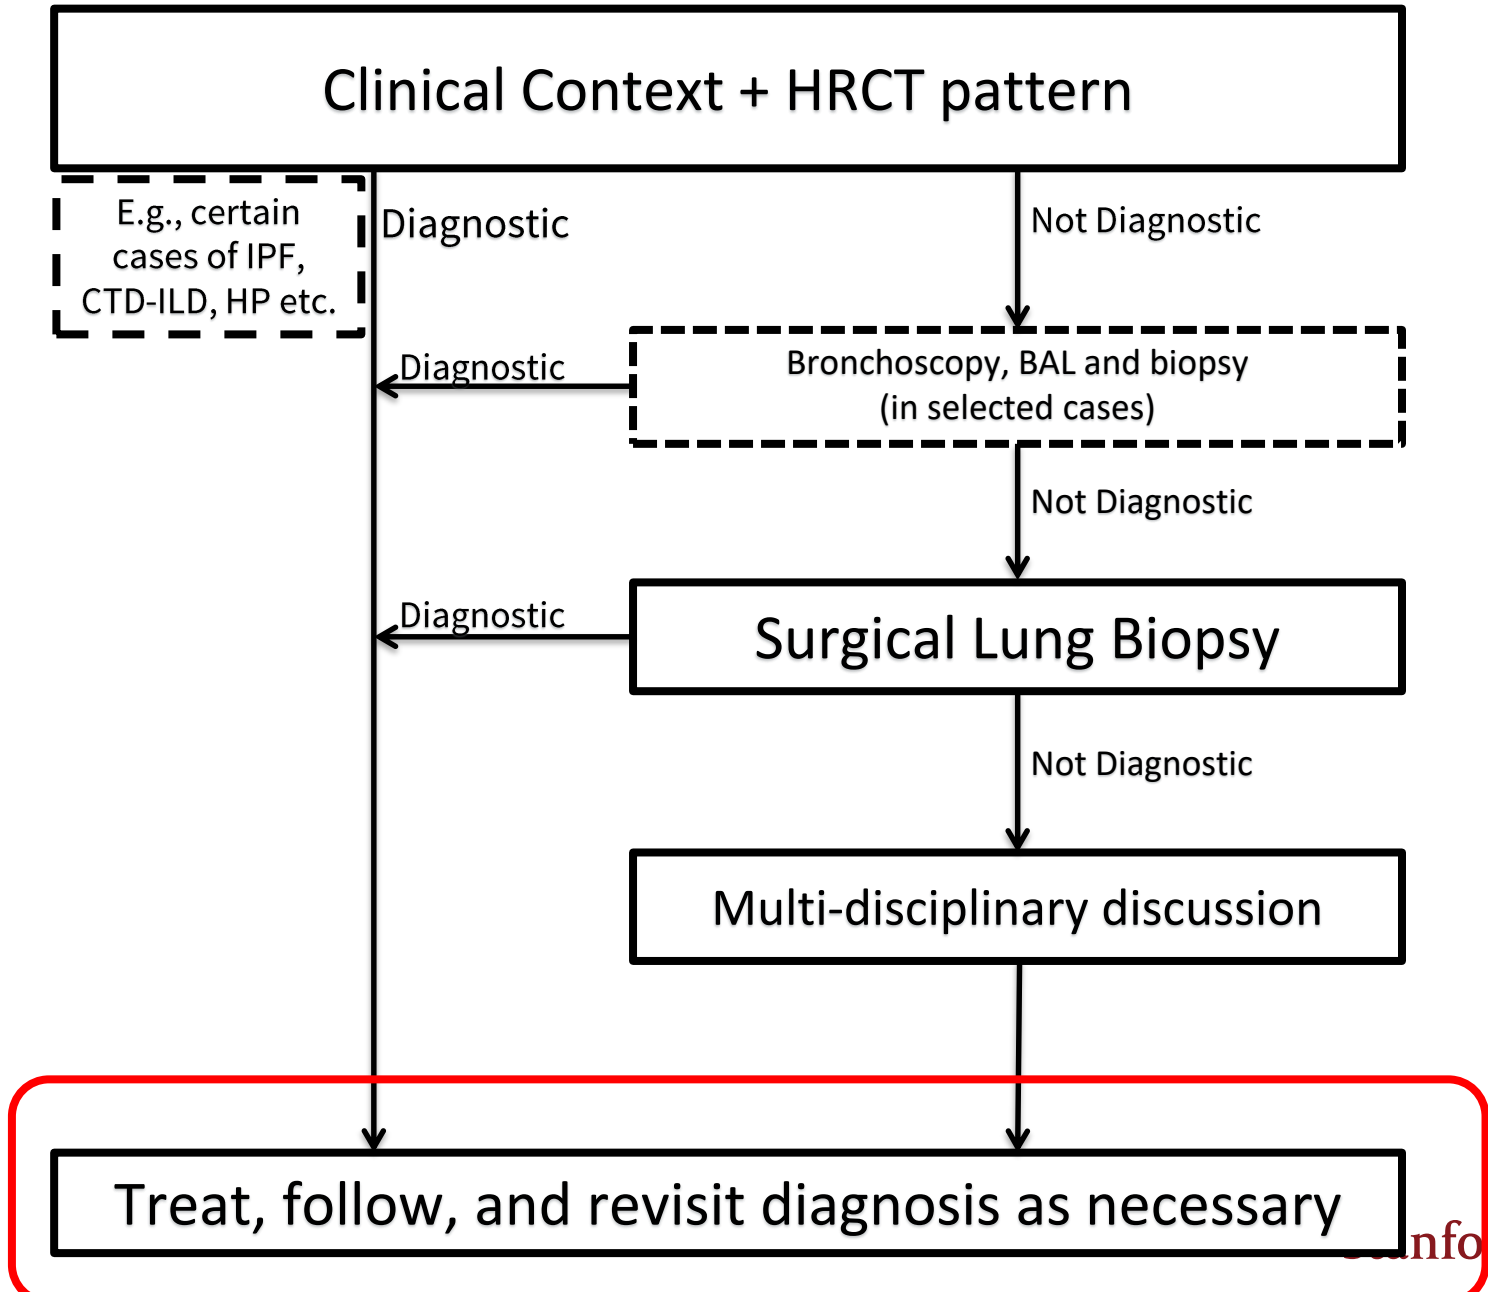

Flaherty et al. AJRCCM 2004

Stanford Multidisciplinary Interstitial Lung Disease Conference

- PULMONARY MEDICINE
- THORACIC RADIOLOGY
- PULMONARY PATHOLOGY
- RHEUMATOLOGY
- LUNG TRANSPLANT
- THORACIC SURGERY
- CLINICAL RESEARCH

Mr. D.S: Final Diagnosis

CONSENSUS MULTIDISCIPLINARY DIAGNOSIS: IDIOPATHIC PULMONARY FIBROSIS

Mr. D.S: Clinical Course

- STARTED ON ANTI-FIBROTIC MEDICATIONS
- TOLERATED WELL EXCEPT FOR MILD AND MANAGEABLE SYMPTOMS

Mr. D.S: Clinical Course

QUALIFIED FOR, AND ENROLLED IN A TRIAL FOR NOVEL THERAPEUTIC AGENT FOR
IDIOPATHIC PULMONARY FIBROSIS

Mr. D.S: Clinical Course

- STABLE FOR 3 YEARS, AND THEN PROGRESSED CLINICALLY
- RECEIVED A DOUBLE LUNG TRANSPLANT AND DOING WELL 1 YEAR POSTOPERATIVELY

Questions
