## **UNIT 2: TRIGONOMETRIC FUNCTIONS**

- *Lesson 1: Right-Triangle Trigonometry*
- *Lesson 2: Trigonometric Applications*
- *Lesson 3: Angles and Radian Measure*
- *Lesson 4: Trigonometric Functions*
- *Lesson 5: Basic Trigonometric Identities*

# Lesson 1: Right-Triangle Trigonometry

Objectives:

- Define the six trigonometric ratios of an acute angle in terms of a right angle.
- Evaluate trigonometric ratios, using triangles and on a calculator.

## Warm Up 🔥

- a. Write  $35^{\circ}15'27''$  in decimal form      b. Write  $48.3625^{\circ}$  in DMS form

### Example 1: Evaluating Trigonometric Ratios

Evaluate the six trigonometric ratios of the angle theta shown in the figure.

### Example 2: Special Right Triangles

Fill in the missing sides.

### Example 3: Evaluating Trigonometric Ratios

Evaluate the six trigonometric ratios of the angle theta shown in the figure.

a.  $30^\circ$

b.  $60^\circ$

c.  $45^\circ$

## Lesson 2: Trigonometric Applications

Objectives:

- Solve triangles using trigonometric
- Solve applications using triangles

### Warm Up 🔥

- a. What does it mean to solve a triangle?

#### Example 1: Finding a Side of a Triangle

Find side  $x$  of the right triangle in the given triangle.

a.

#### Example 2: Finding an Angle of a Triangle

Find the measure of angle  $\theta$  in the given triangle.

a.

### Example 3: Solving a Right Triangle

Solve the right triangle given.

a.

b.

### Example 4: Applications

According to the safety sticker on a 20-foot ladder, the distance from the bottom of the ladder to the base of the wall on which it leans should be one-fourth of the length of the ladder: 5 ft.

a. How high up the wall will the ladder reach?

b. If the ladder is in this position, what angle does it make with the ground?

**Example 5: Applications**

A flagpole casts a 60-foot shadow when the angle of elevation from the edge of the shadow to the top of the flagpole is  $35^\circ$ .

- a. Draw a diagram and find the height of the flagpole.

**Example 6: Application**

A wire needs to reach from the top of a building to a point on the ground. The building is 10m tall, and the angle of depression from the top of the building to the point on the ground is  $22^\circ$ .

- a. How long should the wire be?

**Example 7: Indirect Measurement**

A person on the edge of a canal observes a lamp post on the other side with an angle of elevation of  $12^\circ$  to the top of the lamp post and an angle of depression of  $7^\circ$  to the bottom of the lamp post from eye level. The person's eye level is 152 cm (about 5ft).

- a. Find the width of the canal.
  
  
- b. Find the height of the lamp post.

## Lesson 3: Angles and Radian Measure

Objectives:

- Use a rotating ray to extend the definition of angle measure to negative angles and angles greater than  $180^\circ$ .
- Define radian measure and convert angle measures between degrees and radians.

### Warm Up 🔥

Graph the following angles in standard position. Label the vertex, initial side, and terminal side.

a.  $75^\circ$

b.  $210^\circ$

c.  $-270^\circ$

### Example 1: Coterminal Angles

Find two angles, one positive and one negative, that are coterminal with the angle given in standard position.

a.  $60^\circ$

b.  $-75^\circ$

### ***A different way to measure Angles***

*The degree is commonly used in applications involving surveying and navigation. However, in the late 1800s, mathematicians began to see the need for another unit of measure, called a \_\_\_\_\_, that would simplify certain mathematical and physical formulas.*

### ***Radian Measure***

*The definition of a radian is based on the concept of a \_\_\_\_\_, which is a circle of radius \_\_\_\_\_ unit with its center at the origin (0,0).*

*The radian measure of an angle is based on the length of an \_\_\_\_\_ on the unit circle.*

What is the Circumference of a Circle?

### **Example 2: Drawing angles in radian measure.**

Draw the angle provided and provide one positive and negative coterminal angle.

a.  $\frac{\pi}{4}$  radians

b.  $\frac{3\pi}{4}$  radians

c.  $-\frac{5\pi}{4}$  radians

d.  $-\pi$  radians

e.  $-\frac{3\pi}{2}$  radians

### ***Quadrantal Angles***

The angle formed if the terminal side lies on one of the \_\_\_\_\_.

### **Example 3: Converting between degrees and radians.**

Use the following conversion factor to convert to radians.

*Degrees to Radians*

$$\text{_____} \left( \frac{\pi \text{ radians}}{180^\circ} \right)$$

a.  $45^\circ$

b.  $-225^\circ$

c.  $450^\circ$

Use the following conversion factor to convert to degrees.

*Radians to Degrees*

$$\text{_____} \text{ radians} \left( \frac{180^\circ}{\pi \text{ radians}} \right)$$

d.  $\frac{\pi}{3}$  radians

e.  $-\frac{3\pi}{4}$  radians

f.  $-\frac{\pi}{12}$  radians

## *Arc Length and Area of a Sector*

A Sector is a region of a circle that is bounded by **two** \_\_\_\_\_ and an \_\_\_\_\_ of the circle.

The Central Angle  $\theta$  of a sector is the angle formed by the **two** \_\_\_\_\_.

The arc length  $S$  and area  $A$  of a sector with radius  $r$  and central angle  $\theta$  (measured in radians) are as follows:

Arc Length:

Area:

### **Example 4: Finding Arc Length and Area**

Find the arc length and the area of a sector with the given radius  $r$  and central angle  $\theta$ .

a.  $r = 3m, \theta = \frac{5\pi}{12}$

b.  $r = 5m, \theta = \frac{3\pi}{4}$

## Lesson 4: Trigonometric Functions

Objectives:

- Define the trigonometric ratios in the coordinate plane.
- Define the trigonometric functions in terms of the unit circle.

### Warm Up

Find the sine, cosine, and tangent, of the angle  $\theta$ , whose terminal side passes through the point  $(-3, -2)$ .

#### **General Definitions of Trigonometric Functions**

The trig functions of an angle in standard position may be defined in terms of the ordered pair for any point \_\_\_\_\_ on its terminal side and the distance \_\_\_\_\_. By the Pythagorean theorem,  $r =$

#### **Trig Functions of an Angle in Standard Position:**

$$\sin \theta = \frac{y}{r}$$

$$\csc \theta = \frac{r}{y}$$

$$\cos \theta = \frac{x}{r}$$

$$\sec \theta = \frac{r}{x}$$

$$\tan \theta = \frac{y}{x}$$

$$\cot \theta = \frac{x}{y}$$

### ***The Unit Circle***

The unit circle has the center \_\_\_\_\_  
and a radius of \_\_\_\_\_.

### **Example 1: Use the Unit Circle**

Use the unit circle to evaluate the six trigonometric functions of the given angle.

a.  $\theta = 270^\circ$

b.  $\theta = 2\pi$

### ***Reference Angle Relationships***

Let  $\theta$  be an angle in standard position. The reference angle for  $\theta$  is the \_\_\_\_\_  
angle  $\theta'$  formed by the terminal side of  $\theta$  and the \_\_\_\_\_ axis.

**Example 2: Find Reference Angles.**

Find the reference angle  $\theta'$  for the given values of  $\theta$ :

a.  $\theta = 130^\circ$

b.  $\theta = -100^\circ$

c.  $\theta = -295^\circ$

d.  $\theta = \frac{3\pi}{4}$

e.  $\theta = \frac{5\pi}{3}$

f.  $\theta = -\frac{7\pi}{4}$

***Evaluating Trigonometric Functions***

*Reference angles allow you to evaluate a trigonometric function for any angle  $\theta$ . The sign of the trigonometric function depends on the quadrant in which  $\theta$  lies.*

**Example 3: Special Right Triangle Review.**

Fill in the following two special right triangles if you are given that the shortest side of each triangle is 1 unit.

**Example 4: Use Reference Angles to Evaluate Functions.**

Find the exact value of each of the following trigonometric functions:

a.  $\tan 300^\circ$

b.  $\sin \frac{3\pi}{4}$

c.  $\csc 240^\circ$

d.  $\sin\left(-\frac{7\pi}{4}\right)$

e.  $\cos(-210^\circ)$

f.  $\cot\left(-\frac{\pi}{6}\right)$

g.  $\tan(270^\circ)$

h.  $\sec(-4\pi)$

i.  $\sin 240^\circ$

j.  $\tan(150^\circ)$

k.  $\sec(-315^\circ)$

l.  $\cot(-150^\circ)$

m.  $\cos\left(-\frac{3\pi}{4}\right)$

n.  $\csc\frac{7\pi}{6}$

o.  $\tan\left(\frac{8\pi}{3}\right)$

p.  $\sin\left(-\frac{5\pi}{6}\right)$

## Lesson 5: Basic Trigonometric Identities

Objectives:

- Develop basic trigonometric identities.

### Warm Up

Identify the trigonometric function equivalent to the given function.

a.  $\frac{1}{\tan \theta}$

b.  $\frac{\sin \theta}{\cos \theta}$

c.  $\frac{1}{\sec \theta}$

d.  $\frac{1}{\csc \theta}$

### ***Fundamental Trigonometric Identities***

A trigonometric equation that is true for all values of the variables for which both sides of the equation are defined is called a \_\_\_\_\_.

### ***Reciprocal Identities***

$$\frac{1}{\sin \theta} = \frac{1}{\cos \theta} = \frac{1}{\tan \theta} =$$

### ***Tangent and Cotangent Identities***

$$\frac{\sin \theta}{\cos \theta} = \frac{\cos \theta}{\sin \theta} =$$

### ***Pythagorean Identities***

$$\sin^2 \theta + \cos^2 \theta =$$

$$1 + \tan^2 \theta =$$

$$1 + \cot^2 \theta =$$

### ***Cofunction Identities***

$$\sin\left(\frac{\pi}{2} - \theta\right) =$$

$$\cos\left(\frac{\pi}{2} - \theta\right) =$$

$$\tan\left(\frac{\pi}{2} - \theta\right) =$$

### ***Negative Angle Identities***

$$\sin(-\theta) =$$

$$\cos(-\theta) =$$

$$\tan(-\theta) =$$

**Example 1: Find Trigonometric Values**

Use the given information to find the values of the other five trigonometric functions of  $\theta$ .

a.  $\sin\theta = \frac{4}{5}$  and  $\frac{\pi}{2} < \theta < \pi$

b.  $\tan\theta = \frac{5}{12}$  and  $\pi < \theta < \frac{3\pi}{2}$

**Example 2: Simplify a Trigonometric Expression**

Simplify the expression

a.  $\tan\left(\frac{\pi}{2} - \theta\right)\sin\theta$

b.  $\tan(-\theta)\cos\theta$

c.  $\csc\theta\cot^2\theta + \frac{1}{\sin\theta}$

d.  $\sin\theta + \cos\theta\cot\theta$

e.  $\sin x\cot x\sec x$

f.  $\frac{\tan x \csc x}{\sec x}$

g.  $\frac{\cos\left(\frac{\pi}{2} - \theta\right) - 1}{1 + \sin(-\theta)}$

### **Verifying Identities**

You can use the fundamental identities from this chapter to \_\_\_\_\_ new trigonometric identities. When verifying an identity, begin with the expression on one side. Use \_\_\_\_\_ and trigonometric properties to manipulate the expression until it is \_\_\_\_\_ to the other side.

### **Example 3: Verify a Trigonometric Identity**

Verify the identity

a.  $\frac{\sec^2 \theta - 1}{\sec^2 \theta} = \sin^2 \theta$

b.  $\sec \theta - \cos \theta = \sin \theta \tan \theta$

c.  $\sin \theta (\tan \theta + \cot \theta) = \sec \theta$

d.  $\cot(-\theta) = -\cot \theta$

e.  $\csc^2 x (1 - \sin^2 x) = \cot^2 x$

f.  $\cos x \csc x \tan x = 1$

g.  $(\tan^2 x + 1)(\cos^2 x - 1) = -\tan^2 x$

## Unit 2 Lesson 5 - Verify Trigonometric Identities - Practice

For numbers 1 & 2: Find the values of the other five trigonometric functions of  $\theta$ .

1.  $\sin \theta = \frac{-15}{17}, \pi < \theta < \frac{3\pi}{2}$

2.  $\cot \theta = \frac{-2}{5}, \frac{\pi}{2} < \theta < \pi$

3.  $\tan \theta = \frac{3}{4}, 0 < \theta < \frac{\pi}{2}$

4.  $\cos \theta = \frac{5}{6}, \frac{3\pi}{2} < \theta < 2\pi$

For numbers 3-8: Simplify the expression.

3.  $\sec(-x)\cot(-x)\sin(-x)$

4.  $\frac{\cos^2 x}{\sin x} + \sin x$

$$5. \quad \frac{1 - \cos^2 x}{\cos^2 x}$$

$$6. \quad \sin^3 x + \cos\left(\frac{\pi}{2} - x\right)\cos^2 x$$

$$7. \quad \csc(-x) - \csc(-x)\cos^2 x$$

**For numbers 8-13: Verify the Identity.**

$$8. \quad \cos x \sec x = 1$$

$$9. \quad 1 - \tan^2 x = 2 - \sec^2 x$$

$$10. \quad \frac{\tan^2 x}{\sec x} = \sec x - \cos x$$

$$11. \quad \tan\left(\frac{\pi}{2} - x\right) \sin x = \cos x$$

$$12. \quad \frac{\cos^2 x}{1 + \tan^2 x} + \frac{\sin^2 x}{\sec^2 x} = \cos^2 x$$

$$13. \quad \frac{\sin\left(\frac{\pi}{2} - x\right) - 1}{1 - \cos(-x)} = -1$$

For numbers 14-24: Simplify the expression.

14.  $\frac{\sin(-\theta)}{\cos(-\theta)}$

15.  $\cos\theta + \cos\theta \tan^2\theta$

16.  $\frac{\cos\left(\frac{\pi}{2} - x\right)}{\csc x}$

17.  $\sin\left(\frac{\pi}{2} - \theta\right) \sec\theta$

18.  $\tan(-x) \csc x$

19.  $-\cos x \tan(-x)$

20.  $\sec x \tan^2 x + \sec x$

21.  $\sin\left(\frac{\pi}{2} - x\right) \tan x$

22.  $\frac{\sin(-\theta)}{\tan(-\theta)}$

23.  $\cos^2 x + \sin^2 x - \csc^2 x$

24.  $\frac{\sin\left(\frac{\pi}{2} - x\right)}{\sec x}$

**For numbers 25-31: Verify the Identity.**

25.  $\sin x \csc x = 1$

26. 
$$\frac{\cos\left(\frac{\pi}{2} - \theta\right) + 1}{1 - \sin(-\theta)}$$

27. 
$$\frac{\csc^2 \theta - \cot^2 \theta}{1 - \sin^2 \theta} = \sec^2 \theta$$

28.  $\sin x + \cos x \cot x = \csc x$

$$29. \quad \frac{\cot^2 \theta}{\csc \theta} = \csc \theta - \sin \theta$$

$$30. \quad \frac{\sin^2 x - 1}{\cot^2 x} = -\sin^2 x$$

$$31. \quad \tan\left(\frac{\pi}{2} - x\right) \cot x = \csc^2 x - 1$$
