Note:

Are Client Counts Unduplicated?

Unduplicated

Number of States with Unduplicated Counts

43

This table uses data from URS Table 2a, Table 2b and from the US Census Bureau. All denominators use US Census data from 2017

US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA's Block Grant Regions.

State Notes:

Table 2a

Age Age is calculated at midpoint of the reporting period Gender The most recent gender was used for reporting

Race The most recent race was used for reporting. Race not available includes clients identified as 'other race'.

Overall See General Notes

Table 2b

Age Age is calculated at midpoint of the reporting period Gender The most recent gender was used for reporting Race The most recent ethnicity was used for reporting

Appropriateness Domain: Percent of Adults and Children Served Who Meet the Federal Definition for SMI/SED and Percent of Adults and Children Served Who Have Co-Occurring MH/AOD Disorders, FY 2018

Nebraska Reporting Period: 7/1/2017 To: 6/30/2018

| Adults and Children who meet the Federal Definition of SMI/SED | State | US Average | US Median | States Reporting |
|---|-------|------------|-----------|---------------------|
| Percent of Adults served through the SMHA who meet the Federal definition for SMI | 52.3% | 70.3% | 73.0% | 56 |
| Percent of Children served through the SMHA who meet the Federal definition for SED | 48.4% | 69.7% | 69.5% | 54 |

| Co-occurring MH and Substance Abuse Consumers | State | US Average | US Median | States Reporting |
|--|-------|------------|-----------|---------------------|
| Percent of Adults served through the SMHA who had a co-occurring MH and AOD disorder | 19.8% | 27.5% | 27.0% | 56 |
| Percent of Children served through the SMHA who had a co-occurring MH and AOD disorder | 0.7% | 4.2% | 3.0% | 53 |
| Percent of Adults served through the SMHA who met the Federal definitions of SMI who also have a substance abuse diagnosis | 23.3% | 25.7% | 24.0% | 55 |
| Percent of Children served through the SMHA who met the Federal definitions of SED who also have a substance abuse diagnosis | 0.7% | 7.3% | 3.0% | 52 |

Note

This table uses data from URS Table 12.

How are the number of clients with co-occurring disorders counted and calculated?

1) Individuals had both mental health service and reported substance use diagnosis. 2) Individuals received treatment in a dual diagnosis service.

^{*} Reported under Hispanic Ethnicity.

Note:

This table uses data from URS tables 5a and 5b.

Type of Medicaid Data Reported

Data based on Medicaid Eligibility, not Medicaid Paid Services.

People Served by Both includes people with any Medicaid

State Notes

5a Age The most recent race data was used for reporting.
5a Gender The most recent gender was used for reporting.

5a Overall Based on Insurance Status and Medicaid Status fields. Medicaid status was reported for the most recent admission date within the fiscal year.

5b Overall Based on Insurance Status and Medicaid Status fields. Medicaid status was reported for the most recent admission date within the fiscal year. This is the same population as

presented in Table 5a distributed by ethnicity.

Note:

Admission Rate= number of admissions divided by total served during the year

US Admissions During Year uses data from states reporting data only. States are only included in "US Total Served" if they also reported data on admissions.

US Total Served During Year is calculated using data in URS Table 3.

This table uses data from URS Table 3 and 6.

Table 3 State Notes:

Age Age is caluclated at midpoint of reporting period

Overall Clients who received services in more than one setting are duplicated between rows. Consumer ID, which is a unique value assigned to each person served, was used for unduplication

Gender The most recent gender was used for reporting

Table 6 State Notes:

Hospital Includes all individuals admitted to a State Regional Mental Health Center (forensic and non-forensic).

Other Inpatient Includes clients admitted to one of the psychiatric inpatient hospitals within Nebraska, other than a State Regional Mental Health Centers.

Residential None

Community Includes clients receiving outpatient services at a State Regional Mental Health Center or clients receiving services at a community provider.

Overall For clients without a discharge date, length of stay was calculated using June 30, 2017 as a 'discharge date'. Also see General Notes.

What populations are reported?

All Clients

Number of States Reporting All Clients:

49

Number of States Reporting Some Clients:

9

| When is Employment Status Measured? | At Admission | At Discharge | Monthly | Quarterly | Other |
|-------------------------------------|--------------|--------------|---------|-----------|---|
| NE | Yes | Yes | - | Yes | Annual re-registration and re- authorization |
| US | 42 | 29 | 4 | 5 | 27 |

Note:

Consumers employed as a % of those in labor force uses adults employed and unemployed as the denominator.

Consumers employed as % of known employment status uses the sum of persons employed, unemployed and not in labor force as the denominator.

This table uses data from URS Table 4.

State Notes:

Age Age is calculated at midpoint of reporting period

Gender The most recent gender was used for reporting

Overall See General Notes

^{*}In Labor Force is the sum of consumers employed and unemployed.

^{**}With Known Employment Status is the sum of consumer employed, unemployed and not in labor force.

Outcomes Domain: Employment Status of Adult Mental Health Consumers Served in the Community by Diagnosis, FY 2018

Nebraska Reporting Period: 7/1/2017 To: 6/30/2018

| | | | State | | | Employed as a % of Labor Force | | Employed as % of Known Employment Status | | % of Consumers with Dx | | |

General Notes FY 2018

Nebraska

| URS Table Number | General Notes |
|---------------------|---|
| All | Individuals included in this reporting are those who were served in a mental health or dual service during fiscal year (FY) 2018 through the Nebraska DHHS Division of Behavioral Health (DBH). This report does not include individuals served through Medicaid funding. In FY16, DBH and the Nebraska Behavioral Health System (NBHS) changed data systems for collection of service and treatment data, converting from a vendor-operated system to a new Centralized Data System (CDS) hosted by DHHS-DBH. Data clean up during data migration, new data entry specifications for collection of key fields (including, but not limited to SSN, DOB) and quarterly alerts to prompt providers to review and update other client fields (for example, employment, living status, criminal justice involvement, pregnancy status) have resulted in improved reporting and the accuracy of deduplication. In addition, consistency has improved due to quarterly trainings for providers' super users on system updates and due to the creation of a library of recorded video trainings for users. |
| All | DBH has observed an overall increase in the number of "Unknown" and missing data across services. This is believed to be caused by the use of "Unknown" as the default option in required data fields. DBH is working to improve the drop down response lists in the Centralized Data System(CDS) to require treatment providers to be more intentional in selecting the most accurate response. This change will be implemented in the CDS by February 2019. |
| All | DBH uses unique Consumer ID's to identify clients and deduplicate client encounters/records. |
| 3 | Increase in counts for community programs and residential treatment centers is due to expanded and improved data collection and reporting. |
| 5A | The population for Table 5a is the same population represented in Table 2a. The DBH, which is the state mental health authority (SMHA), does not operate Medicaid in Nebraska, therefore the individuals represented in Table 5a do not include all Medicaid Mental Health funded individuals. It should also be noted that DBH no longer provides a portion of the funding for Medicaid mental health services. This change from two funding sources to one funding source has resulted in a decrease in the number of individuals served who are directly reported to the DBH. As provided by Medicaid, an estimated additional 2,868 individuals received MH services funded by Medicaid in FY18. |
| 6 | Table 6 has been updated after review of data and additional analyses. |
| 6 | This table represents the turnover of the clients shown in Table 2a. Total Served at Beginning of Year (unduplicated): This population includes clients with admission dates before July 1, 2017 and who were discharged after July 1, 2017, or were not discharged. Clients are unduplicated. Admissions During the Year (duplicated), the population was limited to records with admission date which occurred between July 1, 2017 and June 30, 2018. All unique admission dates were counted for each service type. Discharges during the year (duplicated), the population was limited to records with discharge date which occurred between July 1, 2017 and June 30, 2018. All unique discharge dates were counted for each service type. Length of Stay (in Days): Discharged Patients, the population was limited to those persons included in the previous column. Mean and Median number of days was calculated by subtracting the Admission date from the Discharge date of each record. For Clients in Facility for Less than 1 Year: Average Length of Stay (in Days): Residents at end of year: the population was limited to persons who were admitted between July 1, 2017 and June 30, 2018, and did not have a discharge date. Length of stay was calculated as follows: (June 30, 2018-Admission Date). For Clients in Facility More than 1 Year: Average Length of Stay (in Days): Residents at end of year: the population was limited to persons who were admitted prior to July 1, 2017, and did not have a discharge date. Length of stay was calculated as follows: (June 30, 2018-Admission Date). |
| 6 | The counts for state hospital previously submitted in Table 6 were found to be incorrect as it was uncovered that duplicate records with unique encounter numbers for admissions and discharges had been included in the data import from the state hospital. This impacted both admission and discharge counts which have since been updated in Table 6 to reflect the actual number of admissions and discharges to the state hospital during FY2018. Increased efforts to improve discharge planning from the state hospital for better overall system flow through from the state hospitals to community based services have resulted in increased discharges at the state hospital in FY2018. |
| 6 | The increase from FY2017 to FY2018 in Number of Consumers Admitted and Served in Community Programs is believed to primarily be due to improved and expanded data collection. Beginning July 2016, the SMHA began requiring providers to enter services into the Centralized Data System (CDS) that were not previously required to be entered. Even more services were built into the CDS and included in reporting for FY2018. This work continues to allow DBH to more accurately reflect the number of persons served. |

| URS Table Number | General Notes |
|---------------------|---|
| 6 | The decrease in consumers served at the beginning of the year in other psychiatric inpatient settings is due to continuous data efforts to improve accuracy in reporting through discharging records in a more timely manner so as not to give a false impression of how many are in service at the beginning of the year. Increased efforts to safely care for individuals in community hospitals has created an increase in admissions and discharges during FY2018 in other psychiatric inpatient settings, while slightly decreasing admissions to the state hospital. |
| 6 | The increase in consumers served in and admitted to residential treatment centers is due to revision of who is included in the count. Previously only adolescents admitted to one of the adolescent psychiatric units at a state psychiatric hospital had been included; however, upon further review of the definition for residential treatment it was determined that all residential centers for treatment, youth and adult, should be included. This change resulted in an increased count of both individuals served and admitted to residential treatment centers. |
| 7A | Table 7A has been updated to include previous missing dollar amounts. |
| 7 | Table 7 has been updated to include previous missing dollar amounts. Medicaid funding contains \$6,950,137 of state funds used in MOE calculations. There are \$0 (zero) in expenditures reported for "State Hospital" since these funds are not included in the Nebraska MHBG State Mental Health Agency budget for purposes of the Maintenance of Effort (MOE). Full implementation of System of Care resulted in an increase of other funds expended during FY18, while timing of the availability of Block Grant funds impacted the respective year's expenditures across multiple categories. |
| 8 | In FY18, Nebraska did not spend any MHBG dollars on non-direct services. |
| 9 | DBH drew a stratified random sample of individuals who received services from community mental health and/or dual providers for the second half of Calendar Year (July to December 2017). The sample drawn was used to conduct the annual consumer survey for adults. All youth caregivers for youth receiving services during the same timeframe were requested to complete a youth survey. |
| 11 | This is the same SAMPLE as presented in Table 9SC distributed by the rest of 5 domains. |
| 12 | The Percent of adults meeting Federal definition of SMI represents the total number of adults (18 and above) found in Table 14A (SMI population) divided by the total number of adults (18 and above) found in Table 2A (Total MH population served). See Table 14A note for SMI definitions. Percentage of children/adolescents meeting Federal definition of SED represents the total number of children/adolescent (3-17 years old) found in Table 14A (SED population) divided by the total number of children/adolescent (3-17 years old). See Table 14A comments for SED definitions. It should be noted that the state's FY17 definitions for SMI and SED include additional parameters for inclusion in that a diagnosis is now expected to accompany the other indicators, unless the provider specifically identifies the individual meets SMI or SED criteria. |
| 12 | The Percentage of adults served by the SMHA who also have a diagnosis of substance abuse includes individuals in the reporting population who also 1) have an indicated Substance Use Disorder diagnosis and/or 2) received treatment in a dual diagnosis program. This count is then divided by the total number of Adults in the population. It includes the children/adolescent population served by SMHA who also 1) have an indicated Substance Use Disorder diagnosis and/or 2) received treatment in a dual diagnosis program. This count is then divided by the total number of children/adolescents in the population. |
| 12 | Percentage of adults meeting Federal definition of SMI who also have a diagnosis of substance abuse includes those in the population who meet the Federal definition for SMI and meet the substance use disorder and / or dual criteria (as described in comment 12). This count is then divided by the total number of adults with SMI in the population (Table 14A). Percentage of children/adolescents meeting the Federal definition of SED who also have a diagnosis of substance abuse problem includes those in the population who meet the Federal definition for SED and meet the substance use disorder and / or dual criteria (as described in comment 12). This count is then divided by the total number of children/adolescents with SED in the population (Table 14A). |
| 12 | The decreases from FY2017 to FY2018 in the percent of children and adults served by the SMHA with co- occurring MH/SUD diagnoses is believed due to a change in process for data collection and analysis. First, the description of clinical presentation is now reliant on data entry from the provider without assistance from an Administrative Service Organization (ASO) for higher level authorized services. Previously, Magellan (acting as a contracted ASO) helped ensure inclusion of all diagnoses regardless of whether they related directly to the service expectations. The current data system and electronic authorization process allows entry of both MH and SUD diagnoses; however, only requires providers to include diagnoses directly related to the service expectations and authorizations in order to gain an automatic authorization approval through the data system. Work is underway to address the need for providers to capture all behavioral health diagnoses a person is presenting with at the time of service, regardless of service type. In addition to this and as previously mentioned in comment 7, more service providers are now required to enter consumer data into the data system. Many of these services focus less on clinical disposition and diagnosis and thus would be less likely to include diagnoses beyond those required for the service type (e.g. Supported Employment, Supported Housing, Peer Support, and Recovery Support). Analysis for FY2018 did not include individuals who may have also received a treatment for a substance use disorder. |

| URS Table | General Notes |
|-----------|--|
| Number | |
| 14A | This table represents the distribution of the adult SMI and children/adolescent SED population. This population is a subset of the population presented in Table 2A. See note 5 for more information. NE State SMI Definition: Client is age 18 or older AND has at least one of the following ICD-10 diagnoses: F20.0, F20.1, F20.2, F20.3, F20.5, F20.81, F20.89, F20.9, F22, F23, F24, F25.0, F25.1, F25.8, F25.9, F28, F29, F30.10, F30.11, F30.12, F30.13, F30.2, F30.3, F30.4, F30.8, F30.9, F31.0, F31.10, F31.11, F31.12, F31.13, F31.2, F31.30, F31.31, F31.32, F31.4, F31.5, F31.60, F31.61, F31.62, F31.63, F31.64, F31.70, F31.71, F31.72, F31.73, F31.74, F31.75, F31.77, F31.77, F31.78, F31.81, F31.89, F31.9, F32.0, F32.1, F32.2, F32.3, F32.4, F32.5, F32.8, F32.9, F33.0, F33.1, F33.2, F33.3, F33.40, F33.41, F33.42, F33.42, F33.8, F34.8, F34.9, F39, F44.89 AND meets at least one of the following criteria: GAF score less than 60; indicated functional deficit; is SSI/SSDI eligible or potentially eligible; was admitted to Community Support, Assertive Community Treatment, Psychiatric Residential Rehabilitation, Day Treatment, Day Rehabilitation, Day Support, Vocational Support, or related psychiatric rehabilitation services OR Client is age 18 or older AND Provider selected YES for Meets SMI Criteria. NE State SED Definition: Client is age 3-17 years AND has at least one of the following ICD-10 diagnoses: F20.0, F20.1, F20.2, F20.3, F20.5, F20.81, F20.89, F20.9, F22, F23, F24, F25.0, F25.1, F25.8, F25.9, F28, F29, F30.10, F30.11, F30.12, F30.13, F31.22, F31.63, F31.62, F31.63, F31.64, F31.70, F31.71, F31.72, F31.73, F31.74, F31.75, F31.76, F31.77, F31.78, F31.81, F31.89, F31.9, F32.0, F32.1, F32.2, F32.3, F32.4, F32.5, F32.8, F32.9, F33.0, F33.1, F33.22, F33.3, F33.40, F33.41, F33.42, F33.8, F33.9, F34.8, F34.9, F39, F44.89, 300.01, 300.21, 300.3, 301.13, 307.1, 307.23, 307.51, 309.81, 312.34, 314, 314.01, 314.1, 314.2, 314.8, 314.9, F40.01, F41.0, F42, F43.10, F43.11, F43.12, F44.89, F50.00, F50.01, F50.02, F50.2, F63.81, F90.0, F9 |
| 14A | The increase from FY2017 to FY2018 in the total number of Multi-racial consumers with SMI/SED is consistent with an overall increase over time in the number of people reporting their Race as "Two or more races" in the State of Nebraska. According to the US Census Bureau, the State of Nebraska experienced a 3.54% change in the percent of Nebraska residents reporting "Two or More Races" between 2016 and 2017. Furthermore, it is believed that providers and consumers alike are increasingly acknowledging all races an individual identifies with and recording race with more detail. |
| 14A | The decrease from FY2017 to FY2018 in the total number of American Indian/Alaska Native consumers with SMI/SED is expected to be the result of an increase in the number of services provided on reservations. Currently tribes do not enter data in the CDS; however, discussions are ongoing in an effort to begin. |
| 15 | In addition to the overall increase in consumer data collected in FY2017, it is believed that the increase from FY2017 to FY2018 in the number of consumers whose living arrangements were Residential Care is due to the SMHA and State Behavioral Health Regions holding several trainings for providers about using the Centralized Data System during which the importance of selecting and updating consumer fields was underscored, particularly for key fields related to National Outcomes Measures. It is believe this effort also improved data reporting on Crisis Residence and Jail/Correctional Facilities causing a decrease in both living arrangement types from FY2017 to FY2018. |
| 16 | The increase from FY2017 to FY2018 in the number of children with SED is expected to be the result of increased services being included for collection and reporting in the CDS. |
| 20A/20B | Increased efforts to improve discharge planning and overall system flow through from the state hospitals to community based services have resulted in increased FY2018 discharges as compared to FY2017 for both nonforensic and forensic populations. This improved discharge planning process along with increased efforts to safely care for individuals in community hospitals and settings has helped decrease readmissions into the state hospital within both 30 and 180 days. It should also be noted that while in FY2017 there were readmission rates higher than 0% (as those seen in FY2018) for both non-forensic (n=5 for those who readmitted) and forensic (n=6 for those who readmitted) within 180 days, both counts of readmissions in FY2017 were small and comparable to the FY2018 counts of zero. |
