

# NLE Training Guide National Level Exercise 2011

Version 4.0—Expires 03/31/2011

# **Document Control:**

It should be recognized that this is a "living" document and changes may need to be made to course dates, times, delivery methods and objectives in order to address the widest possible audience. For that reason, this guide will be delivered on a regular basis with a version number and corresponding release and expiration dates to assist in determining the latest version.

Version	Release Date	Changes	Expiration Date
1.0	11/29/2010	First Release	12/31/2010
1.1	12/2/2010	Updated Dates	12/31/2010
2.0	12/23/2010	Added Document Control page, added Delivery methods, added Version number to cover and footer	01/31/2011
3.0	01/31/2011	Revised training schedule for highly recommended training, added course descriptions for highly recommended training, added IS-250 and Mitigation training opportunities, detailed course delivery times, revised format for Federal 508 compliance	02/28/2011
4.0	02/28/2011	Added PCII training for Private Sector audience and Fundamentals of Management and Support Coordination for Federal Response training	03/31/2011

# Introduction:

As part of the National Level Exercise 2011 (NLE 11), the Federal Emergency Management Agency's (FEMA) National Exercise Division (NED) and Emergency Management Institute (EMI) have developed a series of training programs to assist in preparing participants for the upcoming New Madrid Seismic Zone (NMSZ) full scale exercise.

These programs have been broken into two key components: Highly Recommended Training and Additional Recommended Training.

The purpose of this training guide is to provide users with an easy way to identify and access the training information that is pertinent to their Audience: type (Federal Headquarters, Federal Regional, State/Local/Tribal, and Private Sector/NGO).

In an effort to ease navigating this document, links have been provided to help the user find the most important information quickly. Links are provided in the "Table of Contents", "Calendar View", and "Highly Recommended Training by Audience: Type" that will take the reader to a full course description. Additional links are provided for course registration.

Any questions relative to this guide or training for NLE 11 can be addressed to the National Training Working Group at NEP@dhs.gov.

To register for any of the Highly Recommended Training courses, please visit the following URL: <u>https://www.seeuthere.com/NLE2011\_Highly\_Recommended\_Training\_Site.</u>

### **Delivery Methods:**

EMI will be utilizing several different delivery methods for NLE 11-related training. It is important that participants understand what methods are being utilized for each course and how those methods are employed. The highly recommended training series are being offered via Video Teleconference (VTC) or Webinar, while the majority of the additional recommended training is web-based. Several of the additional recommended programs are field delivered.

**Video Teleconference (VTC):** Video Teleconference delivery will be provided through the use of video/audio technology distributed over the Internet. This delivery method will require participants to be present at a pre-determined location hosting the VTC training. A list of host sites will be provided to participants and prospective participants as far in advance of the scheduled training as possible.

**Webinar:** Webinar delivery will also be provided over the Internet; however, participants will be provided with a URL and dial-in number/password for participation. Registrants will view a PowerPoint presentation through the provided URL while listening to a live presentation relative to the topic. This method will allow for interaction between the participants and the presenter. Like the VTCs, the dial-in number/password and URL will be provided to participants and prospective participants as far in advance of the scheduled training as possible.

**Web based:** Web based training is provided via the Internet as a self-paced, self-study program. These offerings can be taken at any time and allow the student to follow the offering at their own pace. Participants can find these training courses at <u>https://training.fema.gov</u>.

**Field Delivery:** Field delivery refers to programs that must be offered in the field by an authorized/accredited training site. These programs are generally scheduled in advance and require participants to be present at the field delivery location.

### **Additional Notes:**

Each of the Highly Recommended Training courses will be offered from 9:00 am - 12:00 pmEastern Standard Time (EST). It should be noted that these classes may not run for the entire three (3) hour period; however, this is to ensure adequate time for discussion between participants and question and answer sessions with the presenters.

For VTC offerings, it is recommended that prospective registrants check with their individual state training officers, or exercise officers, to determine if there will be host site locations within their state or region.

# Highly Recommended Training by Date:

Dates:	December 15–21, 2010 (no classes on weekends)
	New Madrid Seismic Zone Plan Overview
Description:	This course will provide a general overview of the background, history and threats associated with the New Madrid Seismic Zone (NMSZ). In addition to providing details about the fault line and its catastrophic potential, this program will provide a summary of the guiding principles for responding to and recovery from a large-scale event along the NMSZ. These principles will assist in defining actions to be taken and stress the importance of a coordinated strategy for a rapid response for the delivery of critical resources in the event of a nonotice earthquake occurring within the NMSZ.
<b>Delivery:</b>	VTC
Times:	9:00 am-12:00 pm Eastern Standard Time
Audience:	Federal Government Headquarters Element Federal Government Regional Response Element State/Local/Tribal Government Private Sector/Nongovernmental Organizations (NGO)

**Dates:** February 22–25, 2011

**Course Title:** Incident Action Plan (IAP) Training

Description: This course will provide an overview of the Incident Action Planning process. The Incident Command System (ICS) emphasizes systematic and orderly planning in response to mitigating emergencies, and the Incident Action Plan is the central tool for planning during response to such incidents. This fluid planning deliverable is written and implemented at the outset of the response and revised throughout the duration of the incident. This program will provide guidance on how to develop, write and implement a solid incident action plan.
 Delivery: VTC

**Times:** 9:00 am–12:00 pm Eastern Standard Time

Audience: State/Local/Tribal Government

Private Sector/Nongovernmental Organizations (NGO)

Page Number: <u>81</u>

Dates:	February 28–March 4, 2011
<b>Course Title:</b>	Response Doctrine and Incident Management Training (NRF/NIMS)
Description:	The National Response Framework (NRF) serves as a guide to how the Nation conducts an all-hazards approach to responding to major incidents. By linking all levels of government, non-governmental organizations, and the private sector, this scalable, flexible and adaptable coordinating structure is the groundwork for large-scale incident response management. This course will provide an overview of the NRF and an overview of the National Incident Management System (NIMS) to serve as a refresher for Federal response doctrine.
<b>Delivery:</b>	Webinar

Course Title:	Earthquake Mitigation for Hospitals, FEMA P-767
course rue.	
Course Objective:	Hospitals have unique non-structural components, including special equipment and unique infrastructure systems. Even during smaller sized earthquakes, non-structural components of hospitals can cause injury and/or varying amounts of damage. Furthermore, hospitals must remain operational during and after an earthquake. By using sound, cost effective mitigation techniques, operations can be maintained, and losses can be reduced, and in some cases eliminated. This training provides hospital personnel and other stakeholders interested in hospital safety a basic earthquake hazard overview, risk analysis methods, and techniques on how to reduce structural and non-structural risks from earthquake hazards in hospital and/or medical facilities.

Course Title: Course Objective:	Earthquake Safety & Mitigation for Schools Webinar Numerous school buildings located in multiple States and U.S. territories are vulnerable to earthquake damage and losses. This includes potential death and injury of students, teachers, and staff; damage to or collapse of buildings; damage and loss of furnishings, equipment, and building contents; disruption of educational programs and school operations; and inability of the community to use schools as temporary shelters. At this webinar, you will learn the following: how to assess and analyze your earthquake risks; how to develop an actionable plan to reduce and manage earthquake risks; how to initiate an earthquake risk reduction plan for existing school buildings that were not designed and constructed to meet modern building codes; how to secure "non-structural" elements of the school facility; how to apply "incremental seismic rehabilitation" to protect buildings and ensure occupant safety; and why "incremental seismic rehabilitation" is an affordable alternative for school safety.

For course information, contact the EMI course manager, Joe Gerbrick, at Joseph.Gerbrick@dhs.gov.
<b>Course Title:</b>	Guide to Points of Distribution—IS 26
Course Objective:	This guide was developed to support the Points of Distribution (POD) overview video and provide an in depth look into the planning, operations, and demobilization stages of a POD mission. The lessons detail the staffing and procedures any state will need to plan for, execute, and shut down POD operations. The guide also includes key lessons such as safety, equipment, and resource accountability and informs the reader about the Adopt a POD program being used by the state of Washington.

Course Link:	http://training.fema.gov/EMIWeb/IS/IS200b.asp
Course Title:	Incident Action Plan Training
Course Objective:	This course will provide an overview of the Incident Action Planning process. The Incident Command System (ICS) emphasizes systematic and orderly planning in response to mitigating emergencies, and the Incident Action Plan is the central tool for planning during response to such incidents. This fluid planning deliverable is written and implemented at the outset of the response and revised throughout the duration of the incident. This program will provide guidance on how to develop, write and implement a solid incident action plan.

Course Title:	Incident Management Team Development
Course Objective:	<i>Team Development</i> . An important part of the IMT program is team development. This is where the members of an IMT work as a team, and learn the knowledge and skills needed to perform effectively in a learning environment under stressful, dynamic conditions. Team decision-making is a critical aspect of effective IMTs, and this skill must be developed by the team as a whole in an exercise/activity environment so that it can be applied appropriately during an emergency.
	Team development for Type 3 IMTs is provided as part of the Type 3 IMT Technical Assistance Program. The six-day offering, All-Hazard IMT (O305), covers information related to major/complex incidents at the regional or state level, involving local, mutual aid, regional, state, and national resources. It also includes information on national mobilization.
	<i>ICS Position-Specific Professional Development</i> .DHS/Incident Management System Integration Division, along with NWCG, USFA, the U.S. Coast Guard, and the Environmental Protection Agency, has developed ICS Type 3 position specific professional development opportunities. The performance-based position-specific development consists of sixteen classroom-based courses:
	<ul> <li>All-Hazard Incident Commander</li> </ul>
	<ul> <li>All-Hazard Operations Section Chief</li> </ul>
	<ul> <li>All-Hazard Planning Section Chief</li> </ul>
	<ul> <li>All-Hazard Logistics Section Chief</li> </ul>
	<ul> <li>All-Hazard Finance/Administration Section Chief</li> </ul>
	<ul> <li>All-Hazard Safety Officer</li> </ul>
	<ul> <li>All-Hazard Liaison Officer</li> </ul>
	<ul> <li>All-Hazard Public Information Officer</li> </ul>
	<ul> <li>All-Hazard Situation Unit Leader</li> </ul>
	<ul> <li>All-Hazard Resource Unit Leader</li> </ul>

	<ul> <li>All-Hazard Supply Unit Leader with Ordering Manager</li> </ul>
	<ul> <li>All-Hazard Finance/Administration Unit Leaders</li> </ul>
	<ul> <li>All-Hazard Facility Unit Leader</li> </ul>
	<ul> <li>All-Hazard Division/Group Supervisor</li> </ul>
	– To be completed:
	<ul> <li>All-Hazard Communication Unit Leader</li> </ul>
	<ul> <li>All-Hazard Intelligence and Investigation</li> </ul>
Delivery:	ICS position specific courses will be coordinated by EMI.
	<i>Field Mentoring</i> . Field mentoring consists of Type 3 Incident Management Team (IMT) members deployed to an incident where they will be mentored by an experienced Type 1 or Type 2 IMT. This allows the Type 3 IMT member to become actively involved in or monitor the functions, tasks, and responsibilities of the position they will be performing on their Type 3 IMT. Field mentoring provides Type 3 IMT members with hands-on experience through meaningful tasks and assignments enhancing knowledge of their position—to learn first-hand about IMT operations during major emergencies/incidents. Type 3 IMT members may have some tasks reviewed and signed off in their ICS position task books (PTB) during these assignments. Assignments are intended to be both personal and professional development opportunities. <i>NOTE: due to a limited number of appropriate incidents,</i> <i>field mentoring is only available for Type 3 IMTs developed under</i> <i>USFA's Type 3 IMT Technical Assistance Program.</i>
	Established Type 3 Incident Management Teams who are available for field mentoring opportunities need to contact Stephen N. Foley or Cathy Broughton at the beginning of each month indicating that they are available that month. Established teams are those who have completed the AHIMT curriculum and have a fully rostered team. They have provided USFA with:
	<ul> <li>A letter/e-mail authorizing the team to deploy for field mentoring.</li> <li>Remember travel and expenses are the responsibility of the team, not USFA.</li> </ul>
	<ul> <li>Complete team list (including individual contact information) with their ICS position designation, documentation that they have completed the AHIMT course, and any position specific class (USFA or NWCG).</li> </ul>
	<ul> <li>Point of contact information for the team leader (24/7), including cell/home/office phone numbers, PDA, and e-mail.</li> </ul>
	Teams should plan on a five day deployment with travel on either end for a total of seven days. If you do not have a Go-Bag checklist, USFA can provide a 'sample." Additional information is available in the AHIMT Technical Assistance Program Team Manual.

Introduction to Incident Command (ICS 100) for Federal Workers— IS-100.Fwa
This course provides Federal workers a familiarization with ICS principles, how they can be applied in incidents, and how to interface with response personnel. The course has the same objectives as the IS-100.a course. Additional content has been added to explain how the ICS principles apply to an incident that involves Federal assistance under the Stafford Act or National Response Framework. The overall course goal is to promote response partnerships by:
<ul> <li>Familiarizing you with how ICS principles are used to manage incidents.</li> </ul>
<ul> <li>Preparing you to interface with other Federal agencies and with State, tribal and local response partners.</li> </ul>

Course Title:	Introduction to the Incident Command System (ICS 100) for Public Works—IS-100.PWb
Course Objective:	ICS 100.PW, Introduction to the Incident Command System for Public Works, introduces the Incident Command System (ICS) and provides the foundation for higher level ICS training. This course describes the history, features and principles, and organizational structure of ICS. It also explains the relationship between ICS and the National Incident Management System (NIMS). This course uses the same objectives and content as other ICS courses with public works examples and exercises. Note: IS-100.PWb is an updated version of the IS-100.PW course. If you have successfully completed IS-100.PW or 100.PWa, you may want to review the new version of the course. For credentialing purposes, the courses are equivalent.

<b>Course Title:</b>	Introduction to the Incident Command System for Schools—IS-100.SCa
Course Objective:	The Emergency Management Institute developed the Introduction to ICS
	for Schools (IS-100.SCa for Schools) course in collaboration with the U.S. Department of Education. The course is designed primarily for
	kindergarten through high school personnel.
	The overall course goal is to promote school safety by:
	<ul> <li>Familiarizing you with how ICS principles can be applied in school- based incidents.</li> </ul>
	– Preparing you to interface with community response personnel.

Course Title:	Introduction to the Public Assistance Process—IS-630
<b>Course Objective:</b>	This course is an introductory level course designed for federal, state,
	tribal and local emergency management staff with responsibilities in FEMA's Public Assistance program. It is highly recommended for non- public assistance personnel who need a basic understanding of the
	process.
	Four units of instruction cover such topics as an overview, eligibility, kickoff meeting, project formulation, and small project validation. The materials include a section on "How to take this course," an interactive summary activity, and a resource center which includes public assistance policy publications, forms, glossary, link to FEMA's web site, and an end of course examination.

<b>Course Title:</b>	NIMS Communications and Information Management—IS-704
Course Objective:	This interactive computer-based course introduces you to the Communications and Information Management component of the National Incident Management System (NIMS). NIMS provides a consistent nationwide template to enable all government, private-sector, and nongovernmental organizations to work together during domestic incidents. Effective emergency management and incident response activities rely on flexible communications and information systems that provide a common operating picture to emergency management/response personnel and their affiliated organizations. Establishing and maintaining a common operating picture and ensuring accessibility and interoperability are the principal goals of the Communications and Information Management component of NIMS. Properly planned, established, and applied communications enable the dissemination of information among command and support elements and, as appropriate, cooperating agencies and organizations.

Course Title:	Protected Critical Infrastructure Information (PCII) Orientation for the Private Sector
Course Objective:	During an emergency, it is paramount for first responders to use Critical Infrastructure Information (CII) in a timely manner in order to determine the best course of action. Since the majority of our nation's CII is owned by the private sector, the Department of Homeland Security (DHS) established the Protected Critical Infrastructure Information (PCII) Program to protect a company's security and proprietary information from unauthorized disclosures. This course will introduce owners and operators of infrastructure, and other members of the private sector to the purpose, safeguards and benefits of using the PCII Program to protect sensitive information pertaining to their infrastructure.

Course Title:	Recovery from Disaster: The Local Government Role—E210
Course Objective:	The resident version of this course is designed for local disaster recovery teams consisting of emergency managers, city/county administrators, public works directors, building inspectors, and community planners. The course focuses on the roles and responsibilities of each team member, and provides guidance on developing a local disaster recovery plan. Best practices in disaster recovery are summarized in a CD-ROM toolkit included in course materials. Participants are given the opportunity to develop an outline of their own recovery plan during the course.

Course Title:	Reducing the Risks of Nonstructural Earthquake Damage, FEMA 74
Course Objective:	Nonstructural failures have accounted for the majority of earthquake damage in several recent U.S. earthquakes. Thus, it is critical to raise awareness of potential nonstructural risks, the costly consequences of nonstructural failures, and the opportunities that exist to limit future losses. Nonstructural components of a building include all of those components that are not part of the structural system; that is, all of the architectural, mechanical, electrical, and plumbing systems, as well as furniture, fixtures, equipment, and contents. Windows, partitions, granite veneer, piping, ceilings, air conditioning ducts and equipment, elevators, computer and hospital equipment, file cabinets, and retail merchandise are all examples of nonstructural components that are vulnerable to earthquake damage. The primary purpose of this training is to explain

	the sources of nonstructural earthquake damage and to describe methods for reducing the potential risks in simple terms.

	incidents. By linking all levels of government, non-governmental organizations, and the private sector, this scalable, flexible and adaptable coordinating structure is the groundwork for large-scale incident
	response management. This course will provide an overview of the NRF and an overview of the National Incident Management System (NIMS) to serve as a refresher for Federal response doctrine.
