

About MONO ATOMIC TRACE ELEMENTS

Examples of using our unique MONO Atomic Trace elements, and the massive effect they have on growth and resistance to disease and pests.

Leyland Minter, in the picture with Roger Green, is owner of Australia's largest Organic Garden supplies, and is demonstrating the trials he did with only using Mono Atomic "Ormus" trace elements on his plants. Notice in his left hand, these plants were given ormus and nothing else – and are 4-6 times larger.

High Spin State Superconducting Matter

The term ORMUS comes from Orbitally Rearranged Monatomic Elements (ORMEs), an attempt to describe the nature of this unusual phenomenon. The ORME represents a huge subject area, involving state-of-the-art chemistry, physics, physiology and interpretations of Sumerian, Egyptian and other histories including the alchemical western esoteric traditions.

The precious metals known to exist in this 'ormes' state (known as the "light platinum group") are cobalt, nickel, copper, ruthenium, rhodium, palladium, silver, and osmium, iridium, platinum, and gold (known as the "heavy platinum group"). These minerals are known as super conductors and can in a monatomic, super deformed, high spin, and low energy state, lose their chemical reactivity and metallic nature, thereby resulting in a state of Superconductivity. These precious metals have the unique ability to remain stable in the monatomic form, which can then lead to effects ranging from Levitation (weight losses) to Zero-Point Energy applications and to fundamental biological and/or human physiological effects.

'Orbitally Rearranged Monatomic Elements' for example Monatomic Gold was the element of choice for many of the ancient major civilizations. It was used by the ancient Egyptians, Sumerians, & Hebrews. The ancient Egyptians called this stuff "mfkzt". The texts of the Old Kingdom gave the Philosophers' Stone many names. It was called the golden tear from the eye of Horus, "that which issues from the mouth of the Creator" (the Christian Word), and the "spittle or the semen of the Father in Heaven". With the rise of the Heliopolitan Amun, it later became the hidden Light, the unknowable name of the God whose title was Amun and whose symbol was the ram. The modern name is ORMUS, ORME and White-Gold, it has also been known as an elixir, Manna, Shewbread, the snot, monatomic elements, AuM, the polymers, m-state, Shem-an-na, micro clusters, super deformed high-spin elements, exotic atoms, Semen of the Gods, Schefa Food, Bread of the Presence of God, MFKZT, Elixir of Life, the lapis, the Sophic Hydrolith of the Wise, Erinaes Philothes Philolithes, Apa itu, Batu Surgawi, Bubuk Putih, Manna dan Salwa, chrysopoeia, dew, occult gold, aurum potable, water of gold, and The Philosophers' Stone.

This and various other names have been used by Alchemists and by high priests of ancient civilizations. Ormus is the material alchemists have sought: the magic elixir of longevity. The Philosopher's Stone was an alchemical "medicine" sought by alchemists in order to bring about a permanent transmutation of base metals into gold. The Philosopher's Stone had several names, including the "materia prima" and the "magnum opus". Many "recipes" for the Philosopher's Stone were concocted throughout the centuries, usually either containing a silver or gold alloy which could be changed again into the pure metal, making alchemists believe that the metal had been transformed, or a "white or yellow metallic alloy superficially resembling silver or gold". Only a small quantity of the Philosopher's Stone was said to be required in order to transform large quantities of base metals into gold.

Alchemy. - The word is derived from the Arabian phrase "al-kimia," which refers to the preparation of the Stone or Elixir by the Egyptians. The Arabic root "kimia" comes from the Coptic "khem" that alluded to the fertile black soil of the Nile delta. Esoterically and hieroglyphically, the word refers to the dark mystery of the primordial or First Matter (the Khem), the One Thing through which all creation manifests. Alchemy, then, is the Great Work of nature that perfects this chaotic matter, whether it is expressed as the metals, the cosmos, or the substance of our souls

It is believed that the various unusual properties of ORMUS make it difficult to detect using standard analysis methods. ORMES are virtually undetectable by conventional means because they lack a d-orbital electron. However, they do show a distinguishing infrared doublet located between 1400 and 1600 cm⁻¹

They are extraordinary elemental substances. They are thought to be mainly precious metals, in which the electrons are re-arranged in such a way as to render them non-metallic, chemically non-reactive and, under some conditions, superconductive.

When natural source elements are transformed into ORMUS, they no longer display original properties (toxic when ingested), but assume a nontoxic, easily assimilated form. Using processes developed after years of research, and rediscovered from ancient traditions, some source elements may be transformed into ormus, such as seawater, lava and salts. Certain super foods and super herbs concentrate the 'orme' minerals more than other foods. Ormes are found in every organism including the human body. Essiac tea, sheep sorrel, aloe vera and slippery elm bark are high in rhodium and iridium if grown in volcanic soil.

Magnesium, calcium and other minerals are also found in trace form. Rhodium orme is non-toxic, even at high concentrations. Rhodium and ruthenium play an important role in our DNA. The ormes iridium and gold speed up the metabolism of the body, possibly by up to 40 %, and they do not enter the bloodstream nor the kidneys, but rather enter the acupuncture system of channels and meridians, spinal cord and thymus.

ORMUS is concentrated in volcanic soils. Plants grown in these soils absorb it, growing healthier with substantially more nutrients. Food with this energy supports proper nutrient absorption & toxin elimination, balances your body's pH, and repairs & regenerates cells. ORMUS energy may be how our cells communicate with our consciousness.

Note:

THERE IS NO MEDICAL ADVICE HERE! Just information....

More than a decade ago, David Hudson, a farmer in Phoenix Arizona, stumbled upon the fabulous Philosophers' Stone while trying to mine and refine gold on his farm. He realized with some excitement that he had discovered a repeatable formula. Even better, his formula could be scaled-up from a laboratory to a chemical plant. This was something that had eluded alchemists for at least three thousand years. Hudson's discovery is now a controversial subject at the forefront of pharmaceutical and industrial technologies based on high spin state mono-atomic or single atom elements of iridium, rhodium and gold. He has developed high spin mono-atomic states for many of the transition elements including gold. David Hudson believes that White gold's unique among the monatomic elements because it is able to correct DNA deficiencies by a denaturing process. He hypothesizes that eating larger doses of monatomic elements may decelerate the aging process and perhaps even reverse it. White gold would relax the damaged and allow it to correct and recombine.

David Hudson is a fourth generation Arizona farmer who became interested in extracting gold and silver from the tailings of old mining sites near his 675-acre farm. When he began the recovery process he soon discovered that gold and silver were being lost because of the buildup of powdery substance referred to as "ghost gold" by many miners and metallurgists. Hudson's curiosity led him to work with spectroscopists at Cornell University and other

labs to discover the elemental ingredients of this powder. Initial findings of the sample yielded iron, silica, and aluminum. Further extraction of these elements left 98% of the powder intact. The surprise was that this 98% consisted of nothing, which could be identified through normal spectroscopic analysis. Hudson knew that this "nothing" could be seen, felt, tasted and weighed. It had to be SOMETHING and he was determined to find out what IT was. In the course of his research he found a paper from the Soviet Academy of Sciences stating that proper spectroscopic analysis requires a 300 second burn instead of the 15 second burn used in the United States. Utilizing the Soviet technique of fractional vaporization, Hudson discovered that his sample contained the elements palladium, platinum, ruthenium, rhodium, iridium and osmium. Even more astounding was his discovery that each of the nonmetallic elemental forms was a superconductor, a substance that allows an electric current to flow without resistance even in the absence of a continually applied potential. Hudson continued his research and found four papers by the U.S.

Naval Research Facility showing that cells of living tissues communicate with each other by a process identical to superconductivity, but the nature of the superconducting substance was unknown. On a hunch, Hudson analyzed the brain tissue of pigs and cattle and found the brain dry matter weight was 5% rhodium and iridium! As a result of Hudson's research, he knew that the electrons flowing through a superconductor pair off and are converted to a light frequency in the process. He theorized that this might be the same process occurring in human cells. Hudson discovered papers published by Bristol-Myers-Squibb Laboratories and others, which indicated intense experimentation was being done utilizing precious elements in the treatment of cancer. These elements were shown to interact with the cell by a vibration frequency or by light transfer to correct the mutant DNA. When Hudson applied his proprietary method of analysis to Essiac Tea (an alternative treatment for cancer), he discovered high levels of rhodium and iridium. He also found that Acemannan, a derivative of the aloe Vera plant currently being tested on AIDS patients, is 90% rhodium

And a quote from David Hudson in this specific regard, he stated: "I'm not a doctor, so I can't practice medicine. Anything that is administered to someone for the purpose of curing a disease is medicine ... My purpose in this was not to cure diseases and illness, but I did want to know: Does it work? ... I can tell you, it's been used on Lou Gehrig's disease; it's been used on MS; it's been used on MD; it's been used on arthritis ... I can tell you that at 2 mg. a day it totally has gotten rid of Kaposi Sarcomas (KS) on AIDS patients (there's 32,000mg. in an ounce, 2mg. is nothing). And it gets rid of KS. I can tell you that for people who have taken it at 2mg. injections, within 2 hours their white blood cell count go from 2,500 to 6,500. I can tell you that Stage-4 cancer patients have taken it orally, and after 45 days have no cancer any place in their body."

ORMUS exists in scientifically unseen and immeasurable places. For instance, when a tree is planted in a pot, placed in appropriate light and watered regularly, it will grow, gaining in mass & weight. Research has proven that this growth is more than the sum of the pot, plant, soil, water and light. Plants are capable of forming elements that did not preexist in their external environment. Some believe the gain is from absorbing and concentrating the ORMUS elements from the soil and light they grow in.

When a body ingests this ORMUS energy, the vital life force, holy spirit, prana or chi is enhanced, producing extraordinary healing & rejuvenating effects for your body, mind and

soul. Ancient seers around the world considered this to be the elixir of longevity.

Nano particles

Nano particles are much smaller than atoms, one-billionth of a meter in size (twenty million nanos are the size of one atom). While our visible world is three-dimensional (having width, length & depth), a nano is two-dimensional: if it were turned on its side, it would disappear. Without depth or weight, but with a large surface area, a Nano holds an enormous amount of energy. It is this two-dimensional characteristic that gives a nano its incredible amount of un-spent energy. But this energy is not in every atom. Very few sources of this power exist in concentrated quantity. Nano particles containing ORMUS are abundantly available in nature and can be extracted from volcanic sources, gold bearing ores & sands, and seawater. They can also be produced from precious metals, using ancient, but recently rediscovered alchemical techniques.

It looks like these are an entirely new class of materials.

The primary form in which gold occurs in seawater is in its monatomic state. Nowhere is this symbiosis more evident than in the cross benefit between deep ocean created ORMES like materials - combined with the correct- so called 'Effective Microorganisms' for agriculture.

ORMUS Book list

Robert Cox, Stuart Nettleton and Laurence Gardner. These three gentlemen have written fine books with the ORMUS materials as a main subject. Rob's book *The Pillar of Celestial Fire* discusses these materials primarily from the Hindu and Egyptian historical perspectives. Stuart's book *The Alchemy Key* discusses these materials primarily from the Middle Eastern and Masonic historical perspectives. And Laurence Gardner's books *Genesis of the Grail Kings* and *Lost Secrets of the Sacred Ark* discuss these materials from the perspective of the Sumerian, Egyptian and Hebrew traditions. Here are some quotes from Laurence Gardner

"So, given the facilities of today's scientific advancement and our knowledge of atoms and nuclei, is it possible (as it was in the distant past) to convert gold into a sweet-tasting, ingestible white powder? Is it possible for that powder to outweigh its optimum weight of gold? Is it also possible for that it powder to underweight itself and to weigh less than nothing? Under such circumstances, is it possible that the powder can disappear from sight into another dimension of space-time and then be returned to its original state? The answers to each of these questions is 'yes' — for this is the post-Star Fire mystery of the Phoenix, and it is the key to the Messianic bloodline enhancement through the fire-stone. As to why the firestone was called 'high ward' by the ancient Mesopotamians, we shall now discover as we enter the realm of high spin metallurgy. (Then he goes on to discuss David Hudson)"The 17th-century philosopher, Eirenaeus Philalethes (revered by Isaac Newton, Robert Boyle, Elias Ashmole and other Royal Society colleagues of his era), produced a work in 1667 entitled 'Secrets Revealed'. In this treatise he discussed the nature of the Philosophers' Stone, which was commonly thought to transmute base metal into gold. Setting the record straight, Philalethes made the point that the Stone was itself made from gold, and that the philosopher's art was in perfecting this process. He stated: "Our Stone is nothing but gold digested to the highest degree of purity and subtle fixation. It is called a stone by virtue of its fixed nature; it resists the action of fire as successfully as any stone. In

species it is gold, more pure than the purest; it is fixed and incombustible like a stone, but its appearance is that of a very fine powder".
