

Fronius Datalogger Web

Operating Instructions

System monitoring

42,0426,0064,EA 005-04042013

Introduction Thank you for the trust you have placed in our company and congratulations on buying this high-quality Fronius product. These instructions will help you familiarize yourself with the product. Reading the instructions carefully will enable you to learn about the many different features it has to offer. This will allow you to make full use of its advantages.

Please also note the safety rules to ensure greater safety when using the product. Careful handling of the product will repay you with years of safe and reliable operation. These are essential prerequisites for excellent results.

Controls, connections and indicators

Safety

WARNING! Operating the device incorrectly can cause serious injury and damage. Do not use the functions described until you have thoroughly read and understood the following documents:

these operating instructions

all operating instructions for system components, especially the safety rules

Controls, connections and indicators

Function No.

Solar Web connection LED (1)

- lights up green: when there is an existing connection to 'Fronius Solar.web' lights up red: when there is no connection to 'Fronius Solar.web' but one is required
- does not light up: when no connection to 'Fronius Solar.web' is required

(2) Supply LED

- lights up green: when there is sufficient power coming from 'Fronius Solar Net' - 'Fronius Datalogger Web' is operational
- does not light up: when there is no power or not enough power coming from 'Fronius Solar Net' - an external power source for 'Fronius Datalogger Web' is required
- flashing red: during updating
 - **IMPORTANT** Do not interrupt the power supply while updating.

lights up red: the update process failed

(3) **Relay connection**

°2° Equipped as an NCC (normally closed contact) and NOC (normally open contact), switches when there is an error

(4) **Connection LED**

- lights up green: when there is an active connection within 'Fronius Solar Net'
- lights up red: when there is an interrupted connection within 'Fronius Solar _ Net'

(5) WLAN LED

- lights up green: when there is a network connection
 - lights up red: when there is no network connection
- does not light up: the 'WLAN stick' is not inserted

x

ľ

0

No. Function

(6) Alarm switch

for switching the alarm function on/off

Alarm off:

Alarm function, relay and buzzer deactivated

Alarm on:

Alarm function, relay and buzzer activated; when 'Alarm on' is selected, the buzzer and relay are briefly activated as a test of the alarm function

(7) IP address switch

used to switch from an assigned IP address to a default IP address '169.254.0.180' (only relevant to LAN)

Assigned IP:

'Fronius Datalogger Web' operates using an assigned IP address (factory setting 192.168.1.180). The IP address can be set on the 'Fronius Datalogger Web' website

169.254.0.180:

'Fronius Datalogger Web' operates using a fixed IP address 169.254.0.180; the fixed IP address is used for a direct connection to a PC without having to pre-configure the PC

،

(8) LAN connection Ethernet interface colored blue for connecting an Ethernet cable

(9) USB connection USB interface for connecting the 'WLAN stick' or 'WLAN stick outdoor' options

(10) Power supply connection 12 V DC / 1 A, electronic fuse protection for supplying power to external components (e.g., external routers)

(11) External power supply connection for connecting an external power supply when the power supply within 'Fronius Solar Net' is insufficient (a.g., when the many DATCOM components are in

Solar Net' is insufficient (e.g., when too many DATCOM components are installed in 'Fronius Solar Net').

Important The external power supply unit for the Fronius Datalogger Web must have a secure disconnect between components supplying grid voltage (SELV or Class 2 for USA/Canada).

The output of the power supply unit may not exceed a max. of 15 VA / 1.25 A. If the power supply is sufficient, the Supply LED (2) lights up green.

(12) Solar Net IN connection

'Fronius Solar Net' input colored red for connecting other DATCOM components (e.g., inverters, sensor cards)

(13) Solar Net OUT connection 'Fronius Solar Net' output colored red for connecting other DATCOM components (e.g., inverters, sensor cards)

Installing Fronius Datalogger Web

Safety

WARNING! Operating the device incorrectly can cause serious injury and damage. Do not use the functions described until you have thoroughly read and understood the following documents: these operating instructions all operating instructions for system components, especially the safety rules

- NOTE! Installing the 'Fronius Datalogger Web' Datalogger requires knowledge of network technology.
- **Configuration ex-**

amples

NOTE! When networking several DATCOM components, a termination plug must be placed on each free IN and/or OUT connection of a DATCOM component.

Preparation

IMPORTANT Please follow the operating instructions for the inverter as well as the 'Fronius IG DATCOM Detail' operating instructions.

- 1 Install 'Fronius Datalogger Web' in the proper position using the screws and installation anchors provided in the scope of supply
- 2 Insert the red Solar Net cable into the Solar Net output (OUT) of the 'Fronius Com Card'
- 3 If the 'Fronius Com Card' is the last DATCOM component in the network: Insert a terminating plug into the Solar Net OUT connection

Installing 'Fronius Datalogger Web'

CAUTION! DATCOM components and/or the PC/laptop will be damaged if the Ethernet or Solar Net cables are connected incorrectly.

- The Ethernet cable should only be inserted into the LAN connection (colored blue)
- The Solar Net cable should only be inserted into the Solar Net IN or Solar Net OUT connections (colored red)

- Insert the red Solar Net cable into the Solar Net output (OUT) of the 'Fronius Com Card'
- 2 If the 'Fronius Com Card' is the last DATCOM component in the network: Insert a terminating plug into the Solar Net OUT connection

If there are additional DATCOM components in the network after the 'Fronius Datalogger Web':

Insert an additional Solar Net cable into the Solar Net OUT connection

- [3] Insert the blue Ethernet cable into the LAN connection
- Insert the blue Ethernet cable into the PC/laptop or into a corresponding network connection

Fronius Datalogger Web network configuration

General

The network configuration function patented by Fronius enables the 'Fronius Datalogger

	 Web' to: establish an easy connection between 'Fronius Datalogger Web' and the PC/laptop make settings display important system data
Requirements	NOTE! The network configuration of the 'Fronius Datalogger Web' Datalogger re- quires knowledge of network technology.
	If the 'Fronius Datalogger Web' is being integrated into an existing network, the 'Fronius Datalogger Web' address must be adapted to the network.
	Example: Network address range = 192.168.1.x, subnet mask = 255.255.255.0
	- An IP address between 192.168.1.1 and 192.168.1.254 must be assigned to the 'Fro- nius Datalogger Web.'
	 The IP address selected may not be already assigned in the network. The subnet mask must correspond to the existing network (e.g., 255.255.255.0).
	If the 'Fronius Datalogger Web' will be sending service messages and/or data to 'Fronius Solar.web,' then a gateway address and a DNS server address must also be entered. 'Fro- nius Datalogger Web' uses the gateway address to access the Internet. The IP address of the DSL router can be used as a gateway address, for example.
	 IMPORTANT 'Fronius Datalogger Web' may not have the same IP address as the PC/laptop. 'Fronius Datalogger Web' cannot connect by itself to the Internet. A router must be used for a DSL connection to the Internet.
	If the network connection uses WLAN, then one of the following options is required: - 'WLAN stick' (41,0018,0070) - 'WLAN stick outdoor' (41,0018,0071)
'Fronius Datalog- ger Web' network configuration	 The Fronius Datalogger Web network configuration comprises the following steps: Installing 'Fronius Datalogger Web' and going to the 'Fronius Datalogger Web' homepage Entering network data Setting 'Fronius Datalogger Web' for the WLAN connection Setting the IP address and connecting 'Fronius Datalogger Web' to the network
Installing 'Fro- nius Datalogger Web' and going to the 'Fronius Data- logger Web' homepage	 Only if you are using the WLAN network connection: connect the 'WLAN stick' or 'WLAN stick outdoor' option to the USB port Install 'Fronius Datalogger Web'

3 Set the IP address switch on the 'Fronius Datalogger Web' to '169.254.0.180'

4 Wait approx. 1 minute until the 'Connectivity' icon appears in the PC/laptop taskbar.

<u>s</u>

5 Open the PC's/laptop's Internet browser (e.g., Microsoft Internet Explorer)

6 Enter 'http://169.254.0.180' in the address field

The 'Fronius Datalogger Web' website will appear.

Entering network The 'Fronius Datalogger Web' website will appear. **data**

[1] Click on the 'Settings' menu item

The 'Settings' submenu is displayed.

2 Click on 'Network'

The 'Network' submenu is displayed.

Firmware update	

- *) WLAN can only be used when one of the two options ('WLAN stick' or 'WLAN stick outdoor') is inserted in the 'Fronius Datalogger Web.'
- Select the type of Internet connection (LAN or WLAN) (1) 4

5 Click on 'Save' (2)

After the changes have been loaded, the message 'Changes have been applied' is displayed.

6 Click on 'OK'

The Internet connection data are displayed.

IMPORTANT You may also have to enter a gateway and a DNS server depending on the Internet connection option selected.

For example, if 'LAN' was selected for the Internet connection, a gateway and a DNS server must be entered for the 'LAN' interface.

[7] Click on 'LAN' or 'WLAN' in the 'Network' submenu depending on the network connection interface you are using.

The interface settings are displayed (LAN or WLAN).

Realume total view

Select either a static or dynamic IP address (3)

Obtain IP address statically (factory setting):

 The user enters a fixed (static) IP address for the 'Fronius Datalogger Web' and also manually sets the subnet mask, gateway address and the DNS server address (from provider). Obtain IP address dynamically:

Obtain IP address dynamically:

- The 'Fronius Datalogger Web' obtains its IP address from a DHCP server (DHCP = dynamic host configuration protocol).
- The DHCP server must be configured so that the 'Fronius Datalogger Web' is always assigned the same IP address. This enables you to always know under which IP address the 'Fronius Datalogger Web' can be reached.
- If the DHCP server supports the 'DNS dynamic updates' function, a name can be entered for the 'Fronius Datalogger Web' in the 'Hostname' field. The connection to the 'Fronius Datalogger Web' can then take place via the name instead of the IP address.

Example: Hostname = samplesystem, Domain name = fronius.com

The 'Fronius Datalogger Web' can be accessed via the 'samplesystem.fronius.com' address

9 Click on 'Save' (4)

After the changes have been loaded, the message 'Changes have been applied' is displayed.

10 Click on 'OK'

The interface settings are displayed (LAN or WLAN).

Setting 'Fronius Datalogger Web' for the WLAN connection The following steps are only required if you decide to use the WLAN network connection at a later date.

Click on 'WLAN' in the 'Network' submenu.

- 2 Enter the settings for the WLAN interface
- Click on 'WLAN management' in the 'Network' submenu.

'WLAN management' is displayed with the available networks (1).

You can use the arrow keys (8) and the 'Save Order' key (9) to change the sequence of displayed networks.

Setting the IP address and connecting 'Fronius Datalogger Web' to the network Set the IP address switch on the 'Fronius Datalogger Web' to 'assigned IP'

The network settings are applied.

2 Connect 'Fronius Datalogger Web' to the respective network via the LAN or WLAN connection

Network settings for PC/laptop

General

The PC/laptop is also a member of the network and must also be assigned a unique network address like the Datalogger.

If the PC is already integrated in the network, no further settings are required.

The 'Internet Protocol (TCP/IP) Properties' window will appear.

Internet Protocol (TCP/IP) Pro	perties ? 🔀
General Alternate Configuration	
You can get IP settings assigned au this capability. Otherwise, you need the appropriate IP settings.	tomatically if your network supports to ask your network administrator for
Obtain an IP address automatic	cally
Use the following IP address: -	
IP address:	
Subnet mask:	· · · · ·
Default gateway:	
Obtain DNS server address au	tomatically
OUse the following DNS server a	addresses:
Preferred DNS server:	
Alternate DNS server:	
	Advanced
	OK Cancel

If a DHCP server is available in the network:

Select 'Obtain an IP address automatically'

If a DHCP server is not available in the network:

- 7a Select 'Use the following IP address'
- 7b Assign a unique IP address to the PC/laptop

Example: Network address range = 192.168.1.x, subnet mask = 255.255.255.0

- An IP address between 192.168.1.1 and 192.168.1.254 must be assigned to the PC/laptop.
- The IP address selected may not be already assigned in the network.
- The subnet mask must correspond to the existing network (e.g., 255.255.255.0).
- The 'Default gateway' setting is not relevant to the 'Fronius Datalogger Web' connection.

IMPORTANT The PC/laptop must not have the same IP address as the 'Fronius Datalogger Web.'

6 When the 'Use a proxy server for your LAN' option is not activated like in the picture, the setting options below it are grayed and not accessible.

When 'Use a proxy server for your LAN' is activated:

- Click on 'Advanced'
- Enter the IP address of the 'Fronius Datalogger Web' in the 'Exceptions' field, e.g., 192.168.1.180 Click on "OK"

Connecting to 'Fronius Datalogger Web' via Internet browser

General	The connection to the 'Fronius Datalogger Web' via an Internet browser is suitable for ac- cessing simple information by several PC users in a LAN (e.g., company networks, schools).
	For example, total and daily yields can be accessed and/or inverter comparisons can be made on the 'Fronius Datalogger Web' website.
Requirements	 At least a LAN or WLAN connection Internet browser (e.g., Microsoft Internet Explorer IE6.0, Firefox 2) PC/laptop in the same network segment as the 'Fronius Datalogger Web'
Connecting to	1 Open Internet browser

'Fronius Datalogger Web' via Internet browser

Enter the IP address or the hostname and domain name of the 'Fronius Datalogger Web'

The 'Fronius Datalogger Web' website will appear.

Assign an IP address or hostname as per the section 'Fronius Datalogger Web network configuration'.

For the network administrator

To access the Datalogger website outside of the LAN:

Configure the network router so that requests are forwarded to port 80/TCP on the Datalogger

Connecting to 'Fronius Datalogger Web' via 'Fronius Solar.access'

General	The connection to detailed long-term the photovoltaic sy	the 'Fronius Dat data recording a /stem.	alogger Web' via and offers full setti	'Fronius Solar.acco ings options and da	ess' is suitable for ata preparation for

*) Assigned IP address or assigned hostname for 'Fronius Datalogger Web'

Connecting to 'Fronius Datalogger Web' via 'Fronius Solar.access' 1 Open 'Fronius Solar.access' software

2 Select 'PV Systems'

3 Select the desired photovoltaic system

After a brief time, the connection is made to the selected photovoltaic system. 'Online' and the version of the Datalogger will be displayed in the bottom left status bar.

Deactivate Automatic Download

For the network	To access the Datalogger outside of the LAN:
administrator	- Configure the network router so that requests are forwarded to port 80/TCP and port
	15015/TCP on the Datalogger

Connecting to 'Fronius Datalogger Web' via the Internet and 'Fronius Solar.web'

General	Using the connection to the 'Fronius Datalogger Web' via the Internet and 'Fronius So- lar.web,' you can access archived data and realtime PV system data from anywhere via the Internet. In addition, you can also provide other users with guest access so that they can view your photovoltaic system as well as make a comparison of several systems.
Function over- view	The Datalogger is connected to the Internet (e.g., via a DSL router). The Datalogger logs on to 'Fronius Solar.web' on a regular basis and sends its saved data every day. 'Fronius Solar.web' can establish active contact with 'Fronius Datalogger Web', e.g., to dis- play realtime data.
Requirements	 Internet access Internet browser IMPORTANT 'Fronius Datalogger Web' cannot connect by itself to the Internet. A route er must be used for a DSL connection to the Internet. Registration of photovoltaic system with 'Fronius Solar.web' (1) The Datalogger ID is required for the registration. The Datalogger ID is available in Settings / System Information. In order to access realtime data in 'Fronius Solar.web,' the 'Yes' selection option must be activated under 'Send current data to Solar.web,' the 'Daily at' or 'Hourly' selection option must be activated under 'Send archive data to Solar.web' in 'Fronius Datalogger Web' (2). In order to access archived data in 'Fronius Solar.web,' the 'Daily at' or 'Hourly' selection option must be activated under 'Send archive data to Solar.web' in 'Fronius Datalogger Web' (3).

Accessing data from 'Fronius Dat- alogger Web' via the Internet and	To access realtime and archived data from 'Fronius Datalogger Web' using 'Fronius So- lar.web': Open the 'Solar Electronics' heading on the Fronius website 'www.fronius.com'			
'Fronius So- lar.web'	Start 'Fronius Solar.web' For more information about 'Fronius Solar.web,' see the online help.			
For the network administrator	Configure the firewall so that the IP address of the Datalogger can send data to port 49049/ UDP from 'solarweb.fronius.com.'			
	DSL routers mostly enable you to send data to the Internet and, therefore, do not normally have to be configured.			

Calculating the data volume

General	During operation of the 'Fronius Datalogger Web' data accumulate, that must be transmit- ted over the internet. Calculating the data volume is necessary for the selection of an appropriate internet con- nection. The following calculation of the data volume provides an overview about the amount of data accumulating during the operation of the 'Fronius Datalogger Web'.			
Firmware ver- sions for calculat- ing the data volume	The calculation of the data v sion V 2.3.x-x and below. Due to expanded range of fu ume.	volume is based on the 'Fronius Datalog unctions higher firmware versions may o	gger Web' firmware ver- cause a higher data vol-	
Calculating the data volume	The calculation of the data logger Web'.	volume depends on the active function	s of the 'Fronius Data-	
	Function	Data volume		
	Making available current data within 'Fronius So- lar.web'	singular ¹⁾	150 Byte 32 kByte/h	
	Viewing current data in 'Fronius Solar.web'	Current total view per sensor card / sensor box	42 kByte/h + 300 kByte/h	
		Current comparison view per inverter	13 kByte/h + 4 kByte/h	
		website	0 kByte/h	
		PV system comparison view	0 kByte/h	
	Sending archive data /	(memory sectors per day	²⁾ x 4 kByte) + 8 kByte	
	logging data to 'Fronius Solar.web'	transmission time 3)	600 Byte/Minute	
	Communication of ser- vice messages or errors	With daily communication per service message or error	1 kByte/day + 300 Byte	
		With immediate communication per service message or error	1 kByte	
	 only after a data log Calculation of the m "Calculating memor depends on the qua 	ger reboot or a disconnected internet o emory sectors per day according to cha y capacity" lity of ther internet connection	connection apter "Logging" section	

IMPORTANT! Since the values listed in the table are "raw data" of the 'Fronius Datalogger Web' and due to differences by various counting variants at the providers settlement, increase the calculated total value about 10 - 20 %.

If the functions are disabled, no data volume accumulates.

An update of the 'Fronius Datalogger Web' firmware also requires a certain data volume. This data volume depends on the size of the update package and can not be considered in the pre-calculation of the data volume.

Calculation exam- ples	Example 1 - home PV system	
	1 inverter;	+ 0,15 kByte
	No sensor card / sensor box;	
	The 'Fronius Datalogger Web' has a 24 h internet connection;	+ 32 kByte/h x 24 h = 768 kByte
	Archive data are sent to the 'Fronius So- lar.web';	
	30 minutes transmission time; Inverter runs 14 h/day;	+ 0,6 kByte/min x 30 min = 18 kByte
	15 minutes save interval; (according to section "Calculating memory capacity" 1 memory sector per day re- sults)	+ (1 memory sectors/day x 4 kByte) + 8 kByte = 12 kByte
	Current data are daily viewed for 15 min- utes	+ 42 kByte/h x 0,25 h = 10,5 kByte
	Average error rate is assumed to be one service message per day	+ 1 service message x 1 kByte = 1 kByte
	Subtotal without safety	0.15 kByte
		768,00 kByte
		18,00 kByte
		12,00 kByte
		10,50 KByte 1 00 kByte
		809,65 kByte
	Safety factor is calculated with 10%	809,65 kByte + 10 %
	End result	890,615 kByte/day
	Example 2 - industrial PV system	
	100 inverters;	+ 0,15 kByte
	The 'Fronius Datalogger Web' has a 24 h internet connection;	+ 32 kByte/h x 24 h = 768 kByte
	Archive data are sent to the 'Fronius So-	
	120 minutes transmission time;	+ 0,6 kByte/min x 120 min = 72 kByte
	5 minutes save interval:	+ (173 memory sectors/day x 4 kByte)
	(according to section "Calculating memory	+ 8 kByte
	capacity" 173 memory sectors per day re- sults)	= 700 kByte

The current total view and the current comparison view are daily viewed for 2 h.	+ 42 kByte/h x 2 h + 300 kByte/h x 10 x 2 h + (13 kByte/h + 100 x 4 kByte/h) x 2 h = 6910 kByte
Average error rate is assumed to be 50 service messages per day	+ 50 service messages x 1 kByte = 50 kByte
Subtotal without safety	0,15 kByte 768,00 kByte 72,00 kByte 700,00 kByte 6910,00 kByte 50,00 kByte 8500,15 kByte
Safety factor is calculated with 10%	8500,15 kByte + 10 %
End result	9350,165 kByte/day (appr. 9,35 MByte/day)

General information for the network administrator

General firewall settings	The firewall must be configured as follows in order to be able to use the different 'Froniu Datalogger Web' functions:					
		49049/UDP output	15015/TCP input	80/TCP input		
	Sending service messages	х	-	-		
	Connecting to Datalogger via 'Fronius Solar.web'	x	- X	-		
	Connecting to Datalogger via 'Fronius Solar.access'	-		X		
	Access to the 'Fronius Datalogger Web' website	-	-	x		
	Service messages are sent via Fron	ius Solar.web.				
Sending service messages via a DSL Internet con- nection	Normally, no additional router config tion for accessing 'Fronius Solar.web tions from the LAN to the Internet ar	uration is requir ' and/or sending e open.	red for a regular D g service message	SL Internet connec- s, because connec-		
Using 'Fronius Solar.web' and	However, an Internet connection is required to use 'Fronius Solar.web' and send service messages. 'Fronius Datalogger Web' cannot connect by itself to the Internet. A router must be used for a DSL connection to the Internet.					
messages						

'Fronius Datalogger Web' views

Overview

The following views are displayed on the 'Fronius Datalogger Web' website:

- Current total view
- Current comparison view

Current total view

The Current total view contains:

- PV system power data
- CO₂ savings per day and total
- Yield per day and total
- Sensor Card data (if available)

Sensor Card data in graphic display (1): the first three measuring channels of 'Sensor Card 1' are displayed

Sensor Card data under graphic display (2): starting with Sensor Card 0, the first four active measuring channels of Sensor Cards available in the system are displayed

Current compari- son view	Several inve comparison	erters in the same PV system can be compared to each other in the Current view.
	The realtime module con for each inv	e inverter AC power is displayed as a percentage of the power from the solar nected to the respective inverter (shown in a bar diagram). A bar is displayed erter. The bar color indicates the power range of the inverter:
	Green:	the inverter power corresponds to the average power of all inverters
	Yellow:	the inverter power deviates slightly from the average power of all inverters
	Red:	the inverter power deviates strongly from the average power of all invert- ers or an error has occurred in the inverter

'Fronius Datalogger Web' settings

Overview The following selection options are available in the 'Settings' menu of the 'Fronius Datalogger Web' website:

- Passwords
- Date / Time *)
- Views
- Logging
- Network

- Solar.web
- Service Messages
- System Information
- Firmware Update

*) The Date/Time setting is mandatory

The individual selection options will be explained in the following sections.

Accessing and editing selection options	 Realtime total view Realtime comparison view Settings Passwords DateTime Views 	 Connect to 'Fronius Datalogger Web' Click on the 'Settings' menu item Click on the desired selection option The desired selection option will open

A Make a direct connection to 'Fronius Datalogger Web' as per the 'Quick Installation' leaflet

The 'Fronius Datalogger Web' website will appear (no request for passwords)

2 Enter new passwords

Time/Date

The date and time handle several tasks in the system. The time and date are saved for every data record that is logged.

NOTE! You must set the time and date in order to operate 'Fronius Datalogger Web.' This is the only way in which Datalogger data can be recorded.

Time/Date

- (1) Datalogger time display
- (2) Datalogger date display
- (3) Datalogger time zone

- (4) Date/Time setting option: synchronize to PC/laptop or manual
- (5) Automatically adjust for daylight savings time

IMPORTANT For the automatic daylight savings time setting, the correct time zone must be selected.

- (6) Time from PC/laptop for PC synchronization setting Field for setting the time for the manual setting
- (7) Date from PC/laptop for PC synchronization setting
- (7a) Calendar icon
- (7b) Calendar (opens when you click on the calendar icon)
- (8) Field for setting the time zone
- (9) 'Synchronization' button
- (10) 'Cancel' button

Views

General

Configuration of the 'Fronius Datalogger Web' website takes place in the views. The language, yield and data for the Comparison and Total view can be set here. A sub-menu is available for settings related to inverters and Sensor Cards.

Views

'General' view You can en

You can enter the charge rate per kWh and the currency for calculating the yield in 'Yield' (1). The yield is shown in the Current total view.

You can enter the CO2 savings per kWh and the unit for calculating the CO2 savings in 'CO2 factor' (2). The CO2 savings are shown in the Current total view.

The 'Fronius Datalogger Web' website will appear in the language set in the browser or in the last language selected. The language can be changed in the language selection fields (3).

Inverter views

The data for the comparison view is defined in 'Inverters:'

- Select an inverter to be displayed in the Comparison view
- 2 Enter the respective solar module power for each inverter (the nominal output of the inverter is entered by default)
- 3 Assign PV power to the respective inverter using the 'Accept' button
- 4 Click on 'Save'

The settings for the Comparison view are applied.

				rionius batalogger vieu
			Sensor Cards	e en ·
	Realtime total view	Course out a		
	F Realtime comparison view	Sensor Card 1		
	+ Settings	Measuring Channel	Channel Hame

	 Firmware update 			

A specific channel name can be assigned to each sensor value of a Sensor Card in 'Sensor Cards' (e.g., wind speed).

- Select Sensor Card for which the channel names are to be changed
- 2 Enter the desired channel names

The settings for the Total view are applied.

Logging

General The Datalogger saves the realtime data of all inverters as well as all sensor cards and Fronius sensor boxes integrated into the system at regular intervals. The save interval can be defined in a range of 5 - 30 minutes.

> The data can be prepared, archived and viewed easily with a PC or laptop using the "Fronius Solar.access" software.

Logging

Memory capacity	The Datalogger has a memory capacity of up to 5 years and 7 months for a PV system we one inverter and a save interval of 15 minutes. However, the memory capacity is reduced accordingly depending on the number of inverters and/or Fronius sensor cards/boxes that are integrated into the system.	ith ert-
Calculating mem- ory capacity	1 Determine logging points for inverters and Fronius sensor cards/boxes	
	Logging points per day = Save interval [min]	
	Logging duration [min] For inverter: e.g., 14 hours = 840 minutes For Fronius Sensor Card/Fronius Sensor Box: 24 hours = 1440 minutes 2 Calculate the total logging points	
	Total logging points = = (number of inverters x logging points per day) + (number of Fronius Sensor Carc Boxes x logging points per day)	ls/
	3 Determine memory sectors per day	

	Momony approx par day -	Total logging points				
	memory sectors per day =	114				
	[4] Round to whole numbers					
	5 Determine memory capacity					
	_					
	Memory capacity [days] =	2048				
		Memory sectors per day				
Calculation exam- ple	2 inverters, logging duration = 14 hou 1 Fronius Sensor Card, logging durat	urs (840 minutes) tion = 24 hours (1440 minutes)				
	Save interval = 15 minutes					
	1. Logging points per day:					
	Inverter logging points =	840 min	— = 56			
		15 min	- 50			
		1440 min	- 00			
	Sensor Card logging points =	15 min	— = 96			
	2. Total logging points:					
	Total logging points = (2 x 56) +	(1 x 96) = 208				
	(2 x 56) 2 inverters, (1 x 96)	1 Sensor Card				
	3. Memory sectors per day:					
	Memory sectors =	208 114	— = 1,825			
	4. Rounded:					
	1 825 - 2					
	5. Memory capacity [days]:					
	Memory capacity = $\frac{2048}{2}$	} — = 1024 days (= 2 years, 9 n	nonths, 18 days)			
	2					
	Memory capacity [days] =	2048				
		Memory sectors per day				
Overwriting data when memory is full	When the Datalogger memory is full, t	the oldest data will be overwritte	en by the newest data			

'Delete Data' but- All 'log data' saved to 'Datalogger Web' is deleted using the 'Delete Data' button. **ton**

EN-US

IMPORTANT The power supply to 'Datalogger Web' must not be interrupted during the deletion process.

Network

General

The 'Network' selection option is used to configure 'Fronius Datalogger Web' for integration with an existing network.

For more information about network configuration for 'Fronius Datalogger Web,' please see the section 'Fronius Datalogger Web network configuration.'

Network

Network diagnostics The 'Network diagnostics' selection option under 'Network' is used to enter 'ping' and 'trace route commands.'

'Ping command'

The 'ping command' is used to determine whether or not a 'host' is available and how much time a data transfer will take.

Sending a 'Ping command':

Enter a host name in the 'Host' field

Click on the 'Ping' button

- 'Ping command' is sent -
- The resulting data is displayed _

'Trace route command'

A 'trace route command' is used to determine the intermediate stations the data takes to reach the 'host.'

Sending a 'trace route command':

[1] Enter a host name in the 'Host' field 2 Click on the 'Trace route' button

'Trace route command' is sent

- The resulting data is displayed -

Solar.web

General The 'Solar.web' selection option is used to make a direct connection to 'Fronius Solar.web' from 'Fronius Datalogger Web.'

For more information about 'Fronius Solar.web,' please see the section 'Connecting to Fronius Datalogger Web via the Internet and Fronius Solar.web' or the 'Fronius Solar.web' online help.

Service messages

General

es

Service messages as well as errors from inverters, the 'Fronius String Control,' etc. are sent to the Datalogger and saved. The 'Service messages' selection option is used to define how service messages are communicated. Communication can take place via:

- E-mail
- Fax
- SMS
- Relay contact _
- Buzzer

Service messages can be analyzed further using 'Fronius Solar.web' or 'Fronius Solar.access.'

Fronius Datalogger Web

en en

Service messagoniu Service messages (1)PV System Na **[**] (2) Language . Pass Date/Time Message to (3) + Views (4)+ Loggin (8) Fast · Nertu (9) (10)(11)+ Solar web Service message (16)(17) (18)

(1)PV system name Included in the service message text

> **IMPORTANT** The system name is used to identify the PV system that sent the message. Always enter a system name.

- (2) Selection field for the language in which the service message should be sent
- (3) Message to e-mail recipient Activate to send service messages to one or more e-mail addresses
- (4) Field for up to a max. of 10 e-mail addresses Separate e-mail addresses with ';'
- (5) Selection field to determine whether the service message will be sent immediately via e-mail or at a specific time
- (6) Selection field for the time when a service message will be sent via e-mail

EN-US

- (7) 'Send test e-mail' button
- Message to fax recipient
 Activate to send service messages to a fax number
- (9) Field to enter country code Example: +43 = country code for Austria
- (10) Field to enter the fax area code
- (11) Field to enter the fax number
- (12) Field for sending daily
- (13) Selection field for the time when a service message will be sent via fax
- (14) 'Send test fax' button
- (15) Message to SMS recipient Activate to send service messages as an SMS to a telephone number
- (16) Field to enter country code Example: +43 = country code for Austria
- (17) Field to enter area code
- (18) Field to enter the telephone number
- (19) Field for sending daily
- (20) Selection field for the time when a service message will be sent via SMS
- (21) 'Send test SMS' button

IMPORTANT Check your settings by sending a test message.

- (22) 'Save' button
- (23) 'Cancel' button
- (24) Field to enter country code For a direct warning onsite.

Along with the acoustical signal of the buzzer, additional warnings can also be triggered via the relay output (e.g., signal horn, warning light). The relay contact is an NCC (normally closed contact) and NOC (normally open contact) and is designed for the following max. voltage/current values: 42 V AC / 6 A 60 V DC / 400 mA 40 V DC / 1 A 30 V DC / 6 A

The buzzer and relay are activated or deactivated using the Alarm switch on the Datalogger. An alarm is acknowledged by switching it briefly to 'Alarm off.'

When 'Alarm on' is selected, the buzzer and relay are briefly activated as a test function.

- (25) 'Run test' button Switches the relay and buzzer on for 1 second when the Alarm switch is set to 'Alarm on'
- (26) 'Reset alarm' button Resets a triggered alarm, switches off the relay and buzzer

System information

- (2) 'Reset to factory settings' button with the following selection options:

All settings except for the network Used to reset 'Datalogger Web' to factory settings. Network settings remain unchanged.

All settings

Used to reset 'Datalogger Web' and network settings to factory settings

IMPORTANT Using the 'Reset to factory settings' button does not affect the time and date settings. When 'Datalogger Web' is reset to factory settings, the time and date settings must be checked.

Firmware update

General

You can update the 'Fronius Datalogger Web' firmware from the 'Firmware update' selection option. A 'firmware update' can be carried out via LAN or web.

Automatic update search

When the 'Automatic update search' option (1) is activated, 'Datalogger Web' will automatically search once a day for updates. If new updates are available, they will be shown in the grey display bar (2).

Manual update search

When the 'Automatic update search' function is deactivated, there will be no automatic update search.

To search manually for updates, use the 'Check now' button (3)

Realtime total view Configuration Realtine comparison view Automatic update search (check.now.) 	Service messages System information Firmware update	Save Cancel	connection.

Firmware update via web

Procedure:

- 1 Use your Internet browser to open the 'Fronius Datalogger Web' website
- [2] Open Settings / Firmware update
- 3 Click on the 'Run update' button

NOTE! The update process can take several minutes. The power supply to the 'Fronius Datalogger Web' and the Internet connection should not be interrupted during this time. The web interface and the connection to 'Fronius Solar.access' or 'Fronius Solar.web' will not be available during the update process.

The update is complete when the 'Supply LED' lights up green.

If the connection to the server should fail:

- deactivate the firewall for the duration of the update
- retry the update

IMPORTANT If a proxy server is used to connect to the Internet:

- The 'Use proxy server for Web update' selection option must be activated
- The required data must be entered
