

ORBITAL SYMMETRY CONTROL OF PERICYCLIC REACTIONS

CHEMISTRY 650 SPRING 2002 R. MAGID

BOOKS AND REVIEW ARTICLES

As a means of organizing the review literature for this course, books and articles are grouped beginning on p. 3 under the following headings:

- I. Books: General discussions of orbital symmetry theory and pericyclic reactions.
- II. Books: Specific reactions that are controlled by orbital symmetry.
- III. Books: Theoretical treatments related to orbital symmetry.
- IV. Reviews: General discussions of pericyclic reactions: theory and experimental data.
- V. Reviews: Specific reactions that are controlled by orbital symmetry.
 - A. Electrocyclic reactions
 - B. Cycloadditions
 - C. Sigmatropic reactions
 - D. Miscellaneous reactions
 - E. Reactions in two or more of categories A-D
- VI. Reviews: Theoretical treatments related to orbital symmetry.

Most of the books in I-III are on reserve in the main library. Some are in the Chemistry Department Reading Room (room 653). Those that the library doesn't have may often be found in the extensive(?) private collection of RMM. Within each heading, the articles have been arranged more or less chronologically; where it appeared appropriate to collect articles on similar topics, this was done. Nearly all of these articles are written in English. Those that aren't can be identified by their foreign language titles.

Discussions of orbital symmetry are now appearing in nearly all of the new undergraduate and graduate organic texts. A partial listing of some of the better of these brief introductory treatments follows:

Introductory Texts

1. Morrison, R. T.; Boyd, R. N. *Organic Chemistry*, 6th ed.; Allyn and Bacon: Boston, 1992; Chapter 28.
2. Loudon, M. *Organic Chemistry*, 3rd ed.; Benjamin/Cummings: Menlo Park, CA, 1995; Chapter 25.
3. Jones, M., Jr. *Organic Chemistry*, 2nd ed.; Norton, New York, 2000; Chapter 21.
4. Solomons, T. W. G.; Fryhle, *Organic Chemistry*, 7th ed.; Wiley: New York, 1988; Special Topic G.
5. Hornback, J. M. *Organic Chemistry*, Brooks/Cole: Pacific Grove, CA, 1998; Chapter 20.
6. Bruice, P. Y. *Organic Chemistry*, 3rd ed.; Prentice-Hall: Upper Saddle River, NJ, 2001; Chapter 28.
7. Fessenden, R. J.; Fessenden, J. S. *Organic Chemistry*, 6th ed.; Brooks/Cole, Pacific Grove, CA, 1998; Chapter 21.
8. McMurry, J. *Organic Chemistry*, 5th ed.; Pacific Grove, CA, 2000; Chapter 30.

Advanced Texts

1. Breslow, R. *Organic Reaction Mechanisms: An Introduction*, 2nd ed.; W. A. Benjamin: New York, 1969; Chapter 8 and Special Topics 4 and 8.
2. Alder, R. W.; Baker, R.; Brown, J. M. *Mechanism in Organic Chemistry*; Wiley-Interscience: London, 1971; Chapter 4.
3. Hirsch, J. A. *Concepts in Theoretical Organic Chemistry*; Allyn and Bacon: Boston, 1974; Chapter 3.
4. Gilliom, R. D. *Introduction to Physical Organic Chemistry*; Addison-Wesley: Reading, MA, 1970; Chapter 4.
