SPECIAL TESTS

MAF Sensor Contamination Test

This test will aid in the diagnosis of a contaminated MAF Sensor.

A contaminated MAF Sensor will over estimate airflow at idle resulting in a rich condition. This will cause the Long Term Fuel Trim (LTFT) to learn a negative (lean) value. If this value is less than -15% this indicates the MAF Sensor may be contaminated.

Note: If this is a dual-bank engine both LTFT-B1 and LTFT-B2 must be shifted negative together to indicate possible contamination.

- You now have the power to choose! Special Tests with Data Stream are now only loaded if the user wants to see live data.

When you touch in the box labeled "Touch here to view Live Data" you will not have access to your command buttons until live data is loaded:

After Live Data is loaded you will once again have access to your command buttons:

The screenshot shows the 'SPECIAL TESTS' interface for a 2003 Chevrolet Malibu LS 3.1. The main test is 'Cruise Inhibit', with a 'Command State: On'. Below this are four data cards: 'A/C Relay Command' (Off), 'Barometric Pressure' (252, 76 kPa, 5), 'Cruise Control Active' (Yes), and 'Cruise Control Inhibit Reason'. At the bottom are 'On', 'Off', and 'Exit' buttons. The interface includes a left sidebar with vehicle info and a top navigation bar with 'Capture', 'Sort', and 'Menu' options.

- Additionally, the paging of this live data stream in Special Tests has been improved to be more robust and consistent with paging in regular Data Stream.

Special Tests

- Even more Ford Power Balance Improvements:
 - ALL Protocols: Added stability improvements to allow the test to be run multiple times in a row without rebooting the system.
 - SCP Protocol: Added extended run time. Previously, the keep alive was preventing the test for running longer than 5 minutes.

- DTC Descriptions can now be viewed on Special Test windows.
 - NOTE: If the DTC description is unavailable, it will display “DTC Description Unavailable” as shown below.

Pending and Current DTCs

- P0172 : System Too Rich (Bank 1)
- P0122 : Throttle/Pedal Position Sensor/Switch "A" Circuit Low Input
- P0324 : No Description Available
