Impact of Geography on Ancient Greece

[Table of Contents](#)

Big Question – How did the geography of Greece shape economic, social, and political development and patterns of trade and colonization?

Mountains covered 75 % of terrain, separating Greece into small isolated regions. City-states develop.
No central government!

Scarcity of level land for farming grains caused rivalries between city-states.

Rugged, hilly terrain was ideal for growing crops such as **grapes and olives**.

Many **deep harbors and calm waters** invited sea trade.

Overseas trade and travel made easy by many seas, islands, and coastal settlements.

Lack of resources and farmland + overpopulation **forced** Greeks to establish **colonies**.

Roman Mythology

What was the source of Roman mythology?

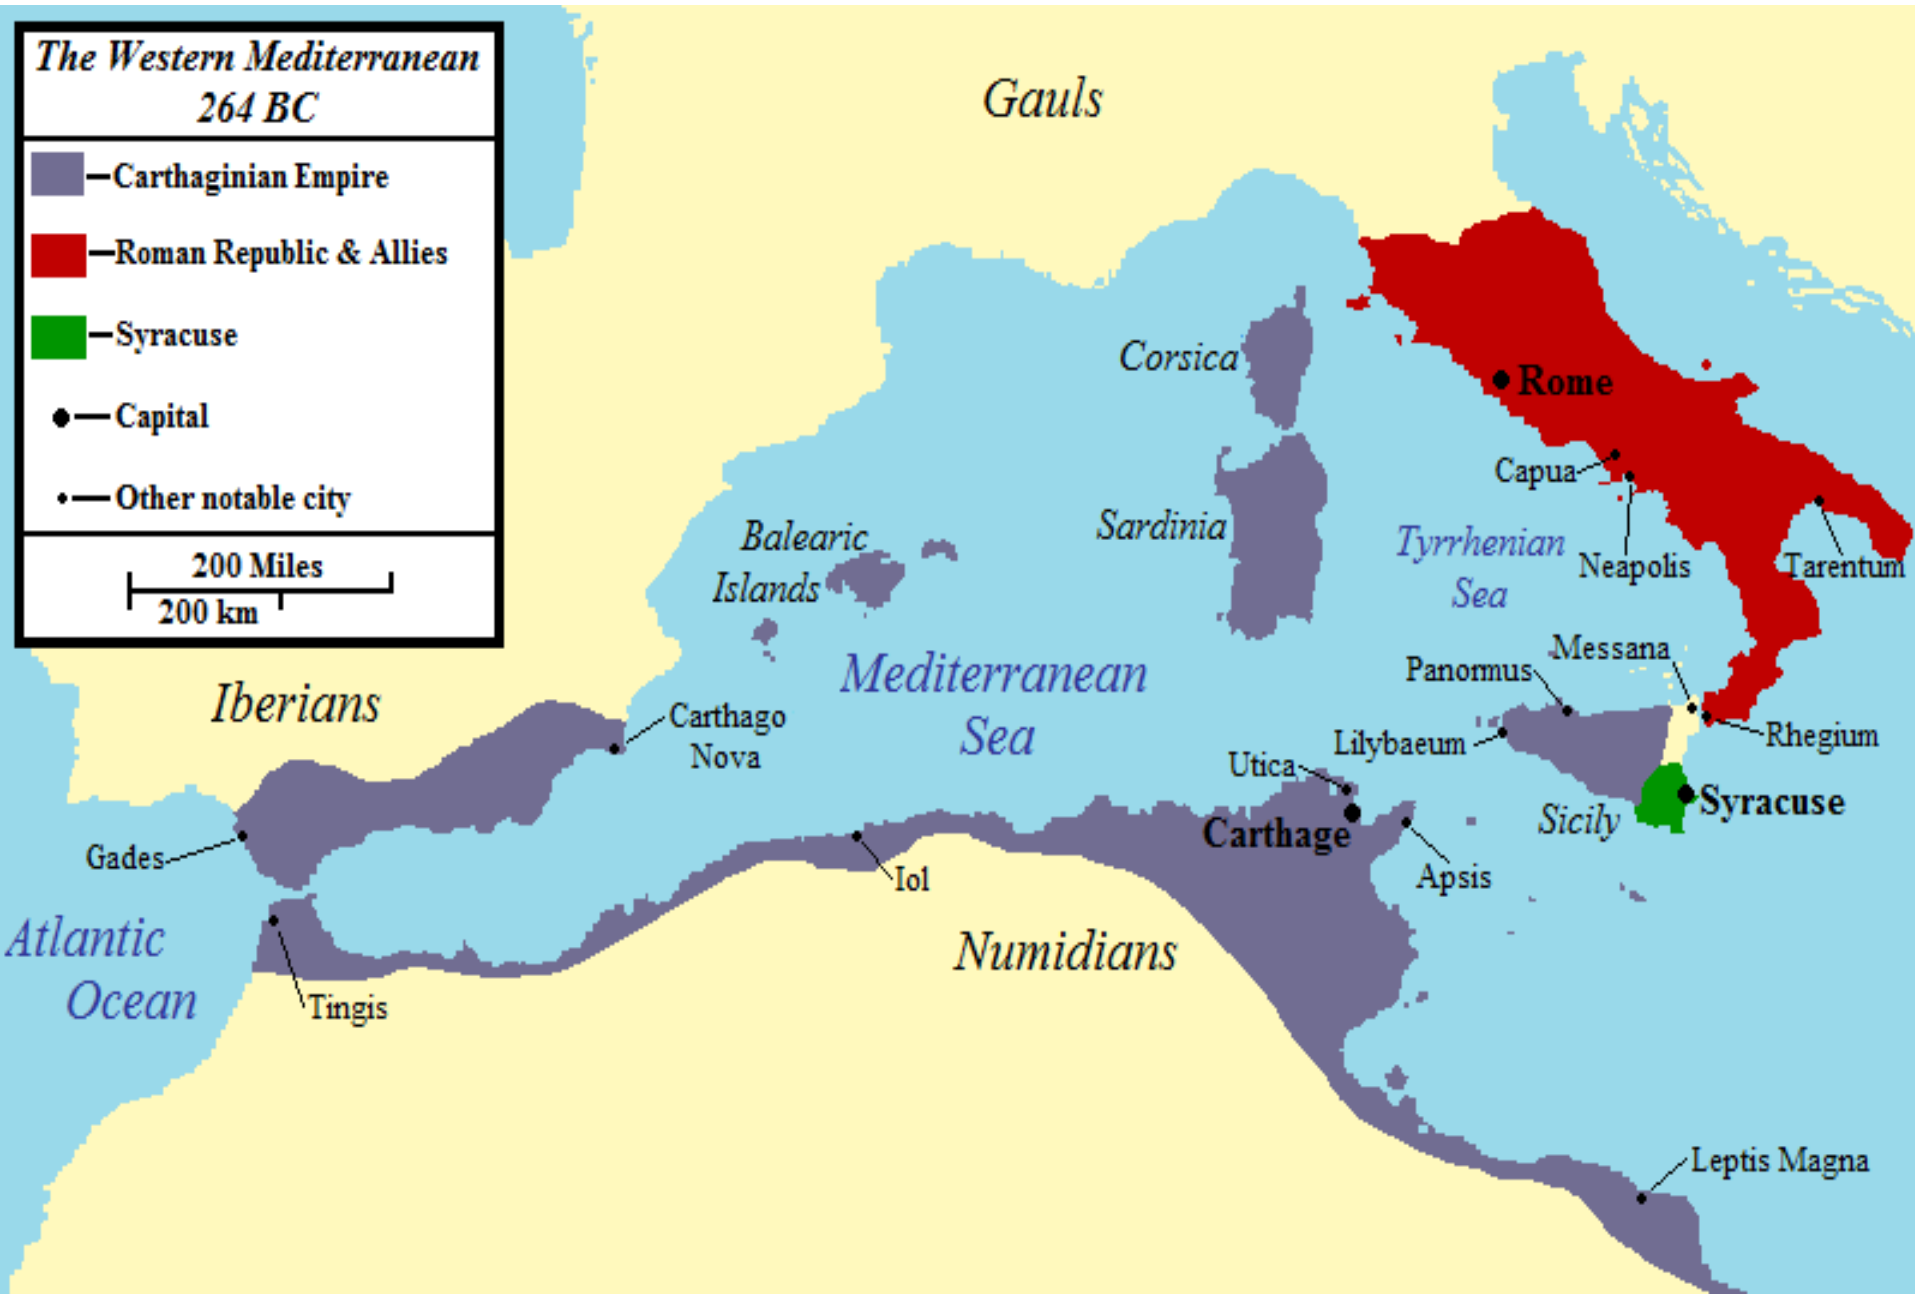

Roman mythology was based on the Greek polytheistic religion.

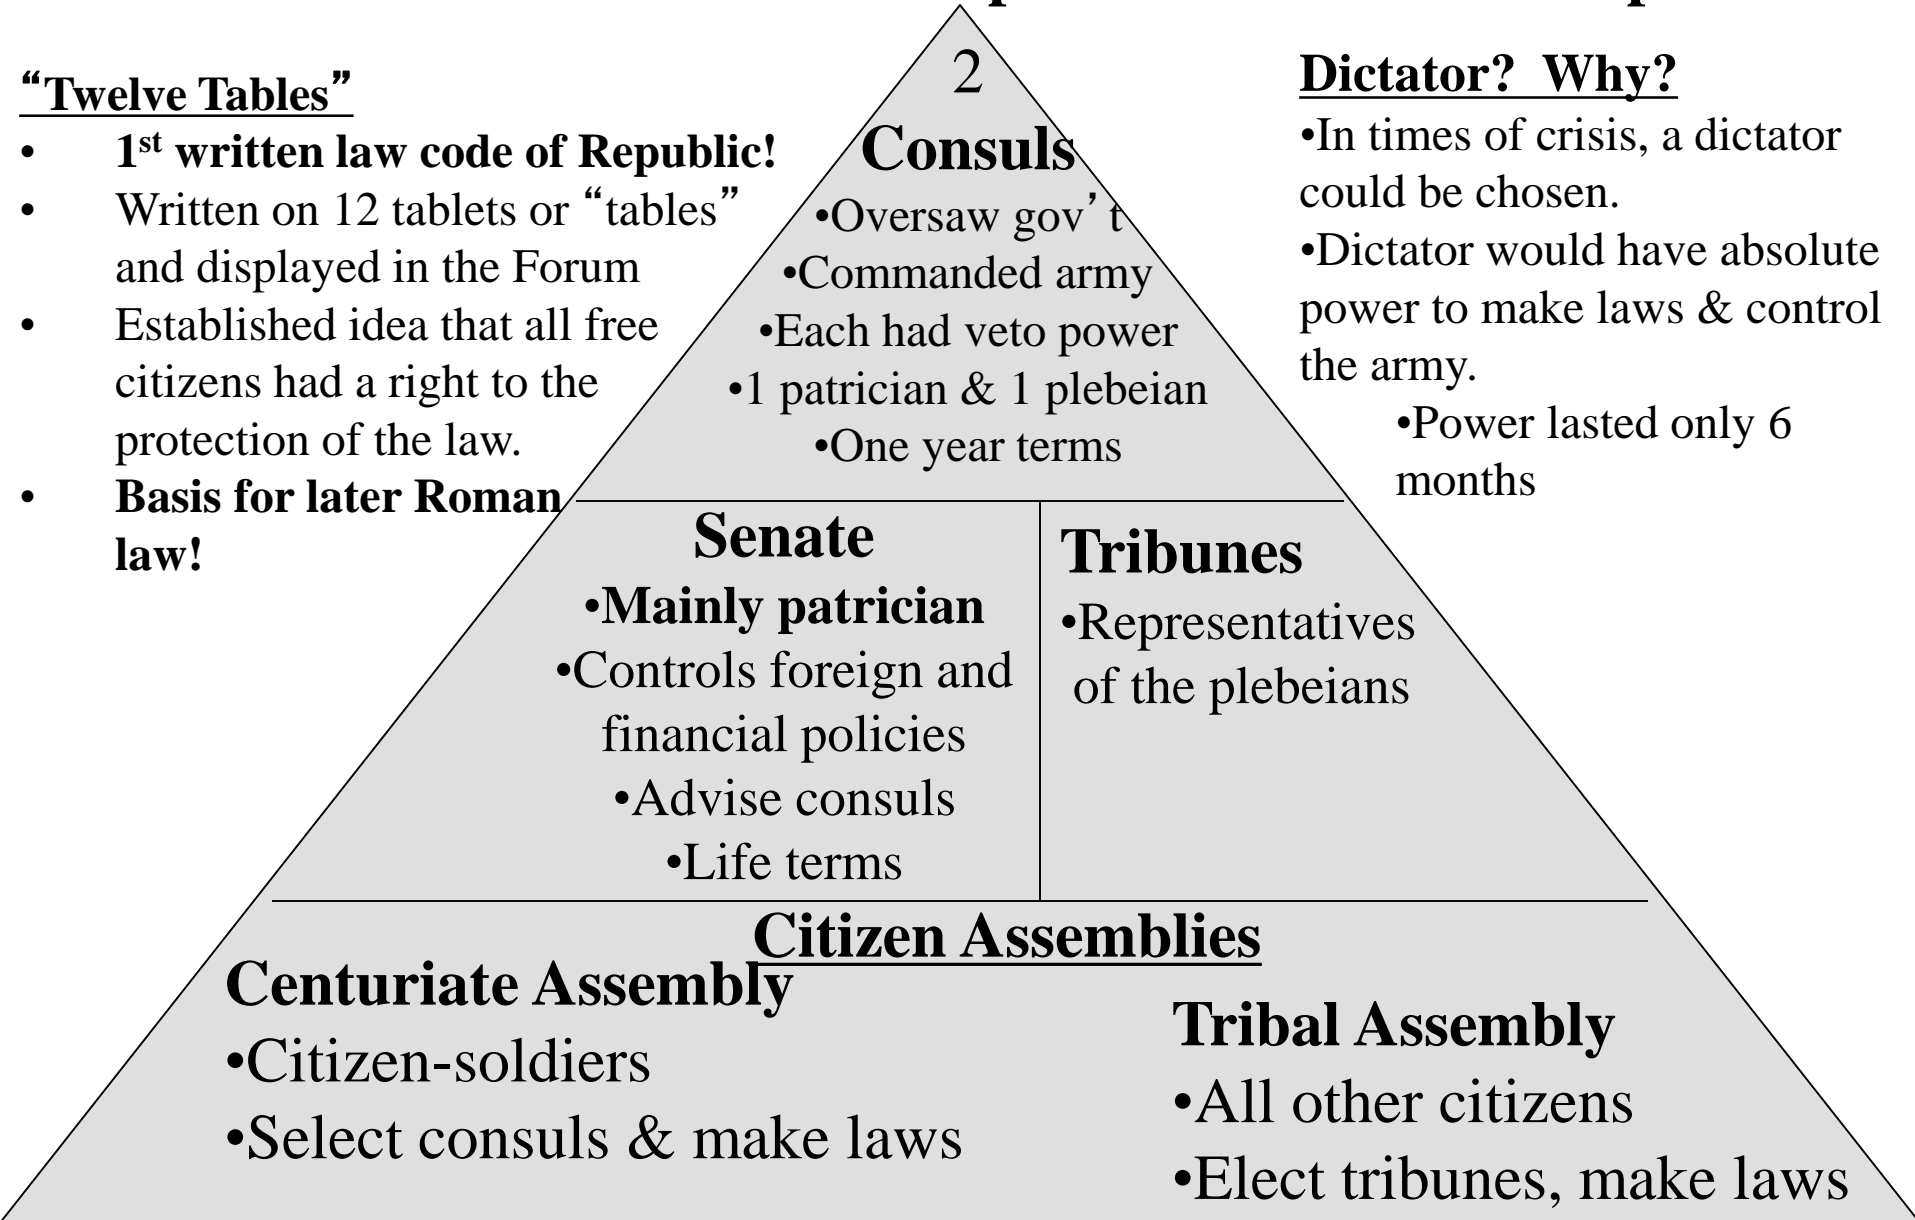

Used to explain natural phenomena and life events.

Romans adopted Greek gods and gave them Latin names.

Rome and Carthage prior to Punic Wars

Government features of the representative Roman Republic

Citizenship = Patrician & Plebeian men, selected foreigners; rights/responsibilities = taxes & military service

Rome's Lex XII Tabularum

The Twelve Tables

When some of the new American states demanded a "Bill of Rights" as a condition for ratification of the 1789 Constitution, the Congress proposed Twelve amendments loosely based on the Roman Twelve Tables. Of the twelve proposed amendments, ten (numbers three to twelve) were passed quickly. The first proposal, on the timing of Congressional pay raises, passed 200 years later as the 27th amendment. The last of the twelve, which would have defined the number people in a congressional district, has never passed.

A not-too-fanciful depiction of Romans "accessing" the Twelve Tables in the Forum

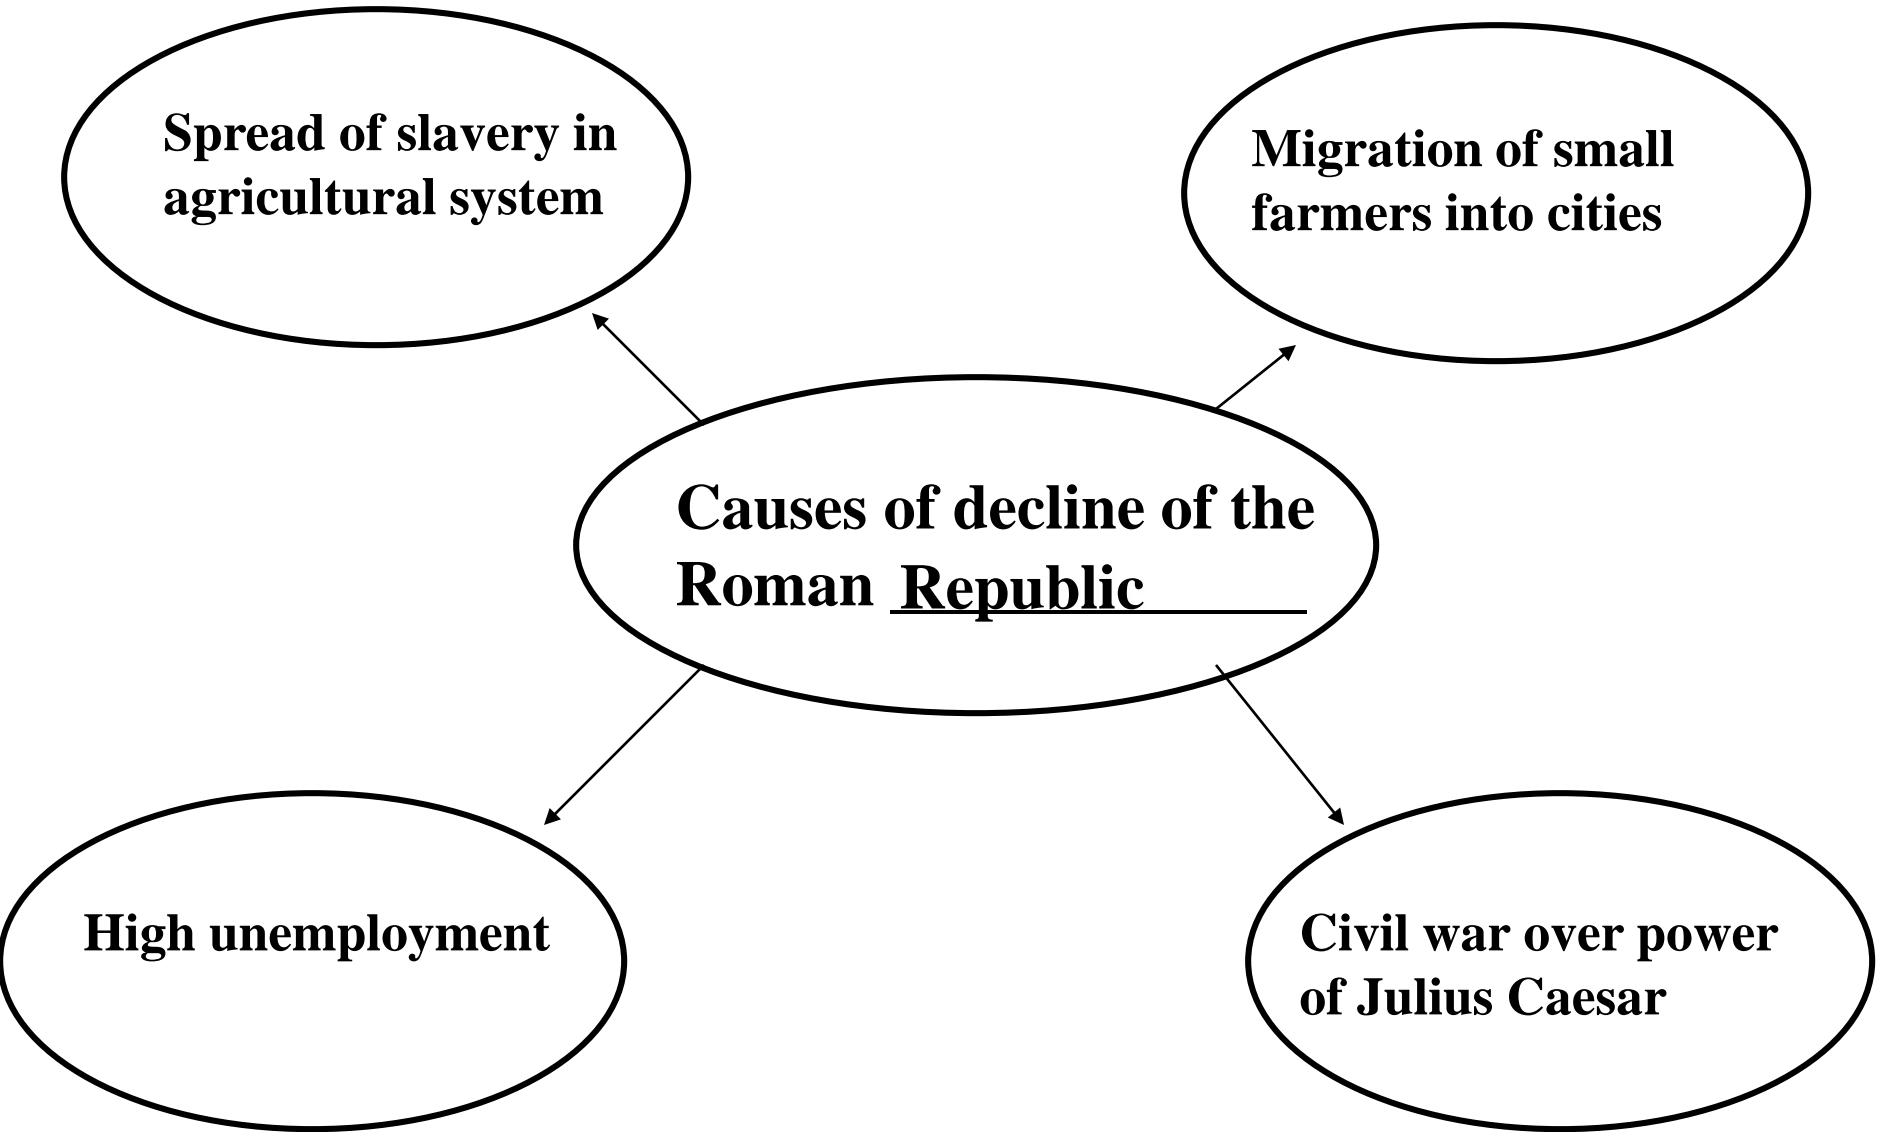

After modeling the US Constitution on the Polybius description of the Roman Republic, they modeled the Bill of Rights on the Roman 12 Tables
