I. Introduction

1. The European Communities appeals certain issues of law and legal interpretations developed in the Panel Report, *European Communities – Conditions for the Granting of Tariff Preferences to Developing Countries* (the "Panel Report").[1] The Panel was established to consider a complaint by India against the European Communities regarding the conditions under which the European Communities accords tariff preferences to developing countries pursuant to Council Regulation (EC) No. 2501/2001 of 10 December 2001 "applying a scheme of generalised tariff preferences for the period from 1 January 2002 to 31 December 2004" (the "Regulation").[2]

2. The Regulation provides for five preferential tariff "arrangements" [3], namely:

[1]WT/DS246/R, 1 December 2003.

[2]*Official Journal of the European Communities*, L Series, No. 346 (31 December 2001), p. 1 (Exhibit India-6 submitted by India to the Panel).

[3]Regulation, Art. 1.2.

(a) general arrangements described in Article 7 of the Regulation (the "General Arrangements");

(b) special incentive arrangements for the protection of labour rights;

(c) special incentive arrangements for the protection of the environment;

(d) special arrangements for least-developed countries; and

(e) special arrangements to combat drug production and trafficking (the "Drug Arrangements").[4]

3. All the countries listed in Annex I to the Regulation are eligible to receive tariff preferences under the General Arrangements[5], which provide, broadly, for suspension of Common Customs Tariff duties on products listed as "non-sensitive" and for reduction of Common Customs Tariff *ad valorem* duties on products listed as "sensitive".[6] The General Arrangements are described in further detail in paragraphs 2.4 and 2.5 of the Panel Report. The four other arrangements in the Regulation provide tariff preferences *in addition* to those granted under the General Arrangements.[7] However, only some of the country beneficiaries of the General Arrangements are also beneficiaries of the other arrangements. Specifically, preferences under the special incentive arrangements for the protection of labour rights and the special incentive arrangements for the protection of the environment are restricted to those countries that "are determined by the European Communities to comply with certain labour [or] environmental policy standards"[8], respectively. Preferences under the special arrangements for least-developed countries are restricted to certain specified countries.[9] Finally, preferences under the Drug Arrangements are provided only to 12 predetermined countries, namely Bolivia, Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Nicaragua, Pakistan, Panama, Peru, and Venezuela.[10]

4. India is a beneficiary of the General Arrangements but not of the Drug Arrangements, or of any of the other arrangements established by the Regulation. In its request for the establishment of a panel, India challenged the Drug Arrangements as well as the special incentive arrangements for the protection of labour rights and the environment.[11] However, in a subsequent meeting with the Director-General regarding the composition of the Panel—and later in writing to the European Communities—India indicated its decision to limit its complaint to the Drug Arrangements, while reserving its right to bring additional complaints regarding the two "special incentive arrangements".[12] Accordingly, this dispute concerns only the Drug Arrangements.

[4] *Ibid.*

[5] Panel Report, para. 2.4.

[6] Regulation, Arts. 7.1-7.2.

[7] *Ibid.*, Arts. 8-10. For example, these tariff preferences include further reductions in the duties imposed on certain "sensitive" products.

[8] Panel Report, para. 2.3. See Regulation, Arts. 14 and 21, and Annex I (Columns E and G).

[9] Regulation, Annex I (Column H).

[10] *Ibid.* (Column I); Panel Report, paras. 2.3 and 2.7.

[11] Request for the establishment of a panel by India, WT/DS246/4, 9 December 2002, p. 2.

[12] Panel Report, para. 1.5.

5. The Panel summarized the effect of the Drug Arrangements as follows:

> The result of the Regulation is that the tariff reductions accorded under the Drug Arrangements to the 12 beneficiary countries are greater than the tariff reductions granted under the General Arrangements to other developing countries. In respect of products that are included in the Drug Arrangements but not in the General Arrangements, the 12 beneficiary countries are granted *duty free* access to the European Communities' market, while all other developing countries must pay the *full duties applicable under the Common Customs Tariff*. In respect of products that are included in both the Drug Arrangements and the General Arrangements and that are deemed "sensitive" under column G of Annex IV to the Regulation with the exception for products of CN codes 0306 13, 1704 10 91 and 1704 10 99, the 12 beneficiary countries are granted *duty-free* access to the European Communities' market, while all other developing countries are entitled only to *reductions in the duties applicable under the Common Customs Tariff*. [13] (original italics)

6. India requested the Panel to find that "the Drug Arrangements set out in Article 10" [14] of the Regulation are inconsistent with Article I:1 of the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994") and are not justified by the Decision on Differential and More Favourable Treatment, Reciprocity, and Fuller Participation of Developing Countries (the "Enabling Clause").[15] In the Panel Report, circulated to Members of the World Trade Organization (the "WTO") on 1 December 2003, the Panel concluded that:

(a) India has the burden of demonstrating that the European Communities' Drug Arrangements are inconsistent with Article I:1 of GATT 1994;

(b) India has demonstrated that the European Communities' Drug Arrangements are inconsistent with Article I:1 of GATT 1994;

(c) the European Communities has the burden of demonstrating that the Drug Arrangements are justified under paragraph 2(a) of the Enabling Clause; [and]

(d) the European Communities has failed to demonstrate that the Drug Arrangements are justified under paragraph 2(a) of the Enabling Clause[.][16]

The Panel also concluded that the European Communities had "failed to demonstrate that the Drug Arrangements are justified under Article XX(b) of GATT 1994".[17] Finally, the Panel concluded, pursuant to Article 3.8 of the *Understanding on Rules and Procedures Governing the Settlement of*

[13] *Ibid.*, para. 2.8. See also, *ibid.*, para. 2.7.

[14] *Ibid.*, para. 3.1 (referring to India's first written submission to the Panel, para. 67).

[15] GATT Document L/4903, 28 November 1979, BISD 26S/203 (attached as Annex 2 to this Report).

[16] Panel Report, para. 8.1(a)-(d).

[17] *Ibid.*, para. 8.1(e).

Disputes (the "DSU"), that "because the Drug Arrangements are inconsistent with Article I:1 of GATT 1994 and not justified by Article 2(a) of the Enabling Clause or Article XX(b) of GATT 1994, the European Communities has nullified or impaired benefits accruing to India under GATT 1994."[18]

7. On 8 January 2004, the European Communities notified the Dispute Settlement Body of its intention to appeal certain issues of law covered in the Panel Report and certain legal interpretations developed by the Panel, pursuant to paragraph 4 of Article 16 of the DSU, and filed a Notice of Appeal[19] pursuant to Rule 20 of the *Working Procedures for Appellate Review* (the "*Working Procedures*").[20] On 19 January 2004, the European Communities filed its appellant's submission.[21] On 30 January 2004, Pakistan notified its intention to appear at the oral hearing as a third participant.[22] On 2 February 2004, India filed its appellee's submission.[23] On the same day, Costa Rica, Panama, Paraguay, and the United States each filed a third participant's submission, and Bolivia, Colombia, Ecuador, Peru, and Venezuela filed a joint third participant's submission as the Andean Community.[24] Also on 2 February 2004, Brazil notified its intention to make a statement at the oral hearing as a third participant, and Mauritius notified its intention to appear at the oral hearing as a third participant.[25] Finally, on 2 February 2004, El Salvador, Guatemala, Honduras, and Nicaragua jointly notified their intention to make a statement at the oral hearing as third participants.[26] On 4 February 2004, Cuba notified its intention to appear at the oral hearing as a third participant.[27] By letter dated 16 February 2004, Pakistan submitted a request to make a statement at the oral hearing.[28] No participant objected to Pakistan's request, which was authorized by the Division hearing the appeal on 18 February 2004.[29]

8. The oral hearing in this appeal was held on 19 February 2004. The participants and third participants presented oral arguments (with the exception of Cuba and Mauritius) and responded to questions posed by the Members of the Division hearing the appeal.

II. Arguments of the Participants and Third Participants

A. *Claims of Error by the European Communities – Appellant*

1. The Relationship Between Article I:1 of the GATT 1994 and the Enabling Clause

9. The European Communities argues that the Panel erred in finding that the Enabling Clause is an "exception" to Article I:1 of the GATT 1994 and in assigning to the European Communities the burden of justifying the Drug Arrangements under the Enabling Clause. Furthermore, the European Communities submits, the Panel erred in finding that Article I:1 applies to measures covered by the Enabling Clause. The European Communities requests the Appellate Body to reverse the Panel's consequent finding that the Drug Arrangements are inconsistent with Article I:1 of the GATT 1994 and, because India made no claim with respect to the Enabling Clause, to refrain from assessing the Drug Arrangements under the Enabling Clause.

10. According to the European Communities, the Panel's main reason for deciding that the Enabling Clause is an exception to Article I:1 was that the Enabling Clause does not provide "positive rules establishing obligations in themselves".[30] In the European Communities' view, however, the fact that developed countries are not legally obliged to implement schemes pursuant to the Generalized System of Preferences ("GSP") does not mean that the Enabling Clause does not impose positive obligations, or that it is an exception to Article I:1. The European Communities argues that the Panel's reasoning suggests that, if a WTO provision applies only when a WTO Member takes a particular step that it is not obliged to take, that provision cannot create a positive obligation and must be an exception. According to the European Communities, this test is not consistent with Appellate Body decisions and "would lead to manifestly absurd results".[31] For example, the European Communities contends, this test would mean that the following provisions do not impose positive rules establishing obligations in themselves, despite contrary reasoning in previous Appellate Body decisions: Article 27.4 of the *Agreement on Subsidies and Countervailing Measures* (the "*SCM Agreement*"); Article 3.3 of the *Agreement on the Application of Sanitary and Phytosanitary Measures* (the "*SPS Agreement*"); Article 2.4 of the *Agreement on Technical Barriers to Trade*; and Article 6 of the *Agreement on Textiles and Clothing*.[32] According to the European Communities, Articles VI and XIX of the GATT 1994 would also be rendered exceptions under the Panel's reasoning, contrary to well-established GATT and WTO panel practice.

11. The European Communities suggests that the Panel should have begun its analysis by examining the ordinary meaning of the word "notwithstanding" in the Enabling Clause. This ordinary meaning, in the view of the European Communities, does not compel the Panel's finding that the Enabling Clause is an "exception" to Article I:1. This is apparent from the dissenting opinion in the Panel Report and the Panel's own recognition that the definition of "notwithstanding" is not dispositive of this question. Therefore, the European Communities argues, in accordance with the basic rules of treaty interpretation in Article 31 of the *Vienna Convention on the Law of Treaties* (the "*Vienna Convention*")[33], the Panel should have proceeded to examine the relevant "content"[34],

[30] European Communities' appellant's submission, para. 32 (quoting Panel Report, para. 7.35, itself quoting Appellate Body Report, *US – Wool Shirts and Blouses*, p. 16, DSR 1997:I, at 337).

[31] *Ibid.*, para. 34.

[32] *Ibid.*, para. 35 (referring to Appellate Body Report, *Brazil – Aircraft*, paras. 134-141; Appellate Body Report, *EC – Hormones*, paras. 97-104; Appellate Body Report, *EC – Sardines*, para. 275; and Appellate Body Report, *US – Wool Shirts and Blouses*, pp. 12-17, DSR 1997:I, at 333-338).

[33] Done at Vienna, 23 May 1969, 1155 U.N.T.S. 331; 8 International Legal Materials 679.

context, and object and purpose of the Enabling Clause in order to identify the relationship between the Enabling Clause and Article I:1. Instead, the European Communities observes, the Panel simply "assumed"[35] that the Enabling Clause is an exception to Article I:1.

12. Turning to the content and context of the Enabling Clause, the European Communities submits that the Enabling Clause provides a comprehensive set of rules that positively regulate the substantive content of GSP schemes, to the exclusion of the rules in Article I:1 of the GATT 1994. Specifically, the European Communities emphasizes that the words "generalized, non-reciprocal and non discriminatory" in footnote 3 of the Enabling Clause are distinct from and are intended to replace the most-favoured-nation ("MFN") obligation in Article I:1. The European Communities also argues that, according to the Panel's own reasoning, footnote 3 should be interpreted in the context of the Agreed Conclusions of the Special Committee on Preferences of the United Nations Conference on Trade and Development (the "Agreed Conclusions")[36] and the submissions by developed countries to that committee. As such, the detailed obligations created by paragraph 2(a), footnote 3, and paragraph 3(c) of the Enabling Clause go far beyond "mere 'anti-abuse' safeguards".[37] The European Communities contends that the Enabling Clause is unlike the chapeau of Article XX of the GATT 1994, which neither regulates the substantive content of measures adopted by Members, nor replaces the substantive rules from which Article XX derogates.

13. The European Communities relies in support of its argument on the position of the Enabling Clause within the GATT 1994 and the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*"). Thus, the European Communities contends that if paragraph 2(a) of the Enabling Clause were an exception to Article I:1, it would typically be found in Article I, or immediately after that Article. This is not the case, however. The Enabling Clause is a separate decision complementing Part IV of the GATT 1994, which is entitled "Trade and Development". In the view of the European Communities, Part IV of the GATT 1994 and the Enabling Clause cannot be "mere 'exception[s]'" to the GATT 1994.[38] Rather, the European Communities argues, they constitute a "special regime" for developing countries to address inequalities among the WTO Membership.[39]

14. The European Communities submits that its understanding of the relationship between Article I:1 and the Enabling Clause is supported by the object and purpose of the Enabling Clause, in accordance with the rules of treaty interpretation. The European Communities emphasizes that the Enabling Clause is "the most concrete, comprehensive and important application"[40] of the principle of special and differential treatment. In the view of the European Communities, special and differential treatment is "the most basic principle of the international law of development"[41], and it constitutes *lex specialis* that applies to the exclusion of more general WTO rules on the same subject matter. In concluding that the Enabling Clause is an "exception" to Article I:1, the Panel chose to "disregard"[42] this principle. Moreover, the European Communities argues, characterizing special and differential treatment as an "exception" suggests that this principle "is *discriminatory* against the developed

[34]European Communities' appellant's submission, paras. 18 and 39, and heading 2.5.1.

[42]*Ibid.*, para. 23.

country Members".[43] In fact, special and differential treatment is designed to achieve effective equality among Members. Therefore, the European Communities contends that the Panel's reasoning undermines the principle of special and differential treatment and challenges its "legitimacy".[44] The European Communities also asserts that the Panel was "oblivious"[45] to certain elements of the drafting history of the Enabling Clause, which indicate that the Contracting Parties intended to strengthen the legal status of GSP schemes in the GATT by replacing the Waiver Decision on the Generalized System of Preferences (the "1971 Waiver Decision")[46] with the Enabling Clause.

15. The European Communities further contends that special and differential treatment is critical to achieving one of the fundamental objectives of the *WTO Agreement*, as identified in its Preamble: ensuring that developing countries "secure a share in the growth in international trade commensurate with the needs of their economic development".[47] Therefore, according to the European Communities, the object and purpose of the Enabling Clause clearly distinguish it from exceptions such as those found in Article XX(a) and (b) of the GATT 1994, which generally allow Members to adopt "legitimate policy objectives"[48] that are *separate and distinct* from the objectives of the *WTO Agreement*. In the European Communities' view, the Appellate Body decision in *Brazil – Aircraft* confirms that the fact that a provision confers special and differential treatment is highly relevant in determining whether that provision constitutes an exception.

16. The European Communities notes the Panel's suggestion that absurd results would flow from characterizing the Enabling Clause as excluding the application of Article I:1 because it "would mean that GSP imports from different developing countries could be subject to different taxation levels in the importing country's domestic market."[49] According to the European Communities, the Panel confuses *tariff measures* covered by paragraph 2(a) with the *imported products* to which such measures apply. Finding that the Enabling Clause excludes the application of Article I:1 would mean only that Article I:1 does not apply to a *tariff measure* falling within paragraph 2(a) of the Enabling Clause. It would not mean, as the Panel suggested, that Article I:1 does not apply with respect to *imported products* covered by such a *tariff measure*.

17. The European Communities submits that, as a result of the Panel's erroneous findings that the Enabling Clause is an "exception" to Article I:1 and that the Enabling Clause does not prevent the continued application of Article I:1, the Panel found that the European Communities bears the burden of justifying the Drug Arrangements under the Enabling Clause. According to the European Communities, the Enabling Clause imposes "positive obligations"[50] and is not an exception. As such, it is India that must, in the first instance, claim that the Drug Arrangements are inconsistent with the Enabling Clause and thereby bear the burden of demonstrating that inconsistency. According to the European Communities, India made no claim under the Enabling Clause. Consequently, the European Communities requests the Appellate Body to reverse the Panel's finding that the Drug Arrangements are inconsistent with Article I:1 of the GATT 1994 and to refrain from examining the consistency of the Drug Arrangements with the Enabling Clause.

2. Whether the Drug Arrangements are Justified Under the Enabling Clause

18. The European Communities makes a "subsidiary" appeal, which would arise only if the Appellate Body were to find that the Enabling Clause is an exception to Article I:1 of the GATT 1994, or that India made a valid claim under the Enabling Clause. Specifically, the European Communities claims "subsidiarily"[51] that the Panel erred in finding that the Drug Arrangements are not "justified"[52] under paragraph 2(a) of the Enabling Clause and, therefore, requests the Appellate Body to reverse this finding.

19. According to the European Communities, this finding of the Panel was based on two erroneous legal interpretations. The first alleged error relates to the Panel's interpretation of the term "non-discriminatory" in footnote 3 of the Enabling Clause as requiring GSP schemes to provide "identical" preferences to "all" developing countries without differentiation, except with regard to *a priori* import limitations as permissible safeguard measures. The second error alleged by the European Communities concerns the Panel's interpretation of the term "developing countries" in paragraph 2(a) of the Enabling Clause as meaning *all* developing countries, except with regard to *a priori* limitations.

20. The European Communities asserts that the Panel's interpretation of the word "non-discriminatory" in footnote 3 of the Enabling Clause is erroneous because the phrase "generalized, non-reciprocal and non discriminatory" in footnote 3 merely refers to the description of the GSP in the 1971 Waiver Decision and, of itself, does not impose any legal obligation on preference-granting countries.[53] Even assuming such obligations existed, the European Communities maintains, the Panel failed to take into account the context of footnote 3 and the object and purpose of the Enabling Clause. Properly interpreted, the European Communities argues, the word "non-discriminatory" allows a preference-granting country to accord differential tariff treatment in its GSP scheme to developing countries that have different development needs according to "objective criteria", provided that tariff differentiation is an "adequate" response to these differences.[54]

21. The European Communities emphasizes that the immediate context for interpreting the term "non-discriminatory" in footnote 3 includes the terms "generalized" and "non-reciprocal" in that same footnote. These three terms express "distinct requirement[s]"[55], according to the European Communities, and they must be interpreted so that each is compatible with the other two, without being rendered redundant.

22. According to the European Communities, the ordinary meaning of the word "generalized" and the negotiating history indicate that GSP schemes are not required to cover *all* developing countries. The word "generalized" in footnote 3 was intended to distinguish these preferences from "special" preferences, which were granted to selected developing countries for political, historical, or geographical reasons. The European Communities maintains that consultations in the United Nations Conference on Trade and Development ("UNCTAD") led to a compromise in the Agreed Conclusions such that developed countries would, "in general"[56], recognize as beneficiaries those countries that

[51] *Ibid.*, para. 67.

[53] European Communities' response to questioning at the oral hearing.

[54] European Communities' appellant's submission, para. 4.

[55] *Ibid.*, para. 80.

[56] *Ibid.*, para. 87.

considered themselves as developing countries, although a developed country might decide to exclude a country *ab initio* on grounds it considered "compelling".[57]

23. In contrast to the term "generalized", the European Communities argues, the word "non-discriminatory" relates to whether developed countries may grant different preferences to individual developing countries that have already been recognized as beneficiaries of a GSP scheme. The European Communities submits that the Panel's interpretation of "non-discriminatory", as requiring that identical preferences be granted to *all* developing countries, would render redundant the term "generalized".

24. Referring to the term "non-reciprocal" in footnote 3, the European Communities argues that reciprocity, in connection with inter-state relations, generally refers to an exchange of identical or similar benefits. In contrast to the word "unconditionally" found in Article I:1 of the GATT 1994, the European Communities argues, the word "non-reciprocal" was not intended to prevent developed countries from attaching all types of conditions to preferences granted under GSP schemes. Rather, in the European Communities' view, the word "non-reciprocal" only prohibits developed countries from imposing conditions of *reciprocity*. The European Communities contends that the Panel's interpretation of "non-discriminatory" precludes the imposition of *any* conditions on the granting of preferences, thereby rendering redundant the word "non-reciprocal" in footnote 3. In addition, the European Communities claims, the Panel's interpretation equates *conditional* preferences with *discriminatory* preferences. In fact, according to the European Communities, a preference is not rendered discriminatory by virtue of a condition being attached to it if the condition applies equally to, and is capable of being fulfilled by, all GSP beneficiaries "that are in the same situation".[58]

25. The European Communities maintains that its interpretation of "non-discriminatory" in footnote 3 does not render redundant paragraph 2(d) of the Enabling Clause, as the Panel suggested. In the view of the European Communities, the scope of paragraph 2(a) differs from that of paragraph 2(d) in three respects. First, paragraph 2(a) applies to preferences granted by *developed* countries, whereas paragraph 2(d) includes preferences granted by *any* WTO Member. Secondly, paragraph 2(a) relates only to preferences under GSP schemes, whereas paragraph 2(d) relates to any measures imposed in favour of developing countries. Thirdly, paragraph 2(a) applies only to tariff measures, whereas paragraph 2(d) applies to any kind of "special treatment".[59] In addressing only the last of these differences, the European Communities argues, the Panel's reasoning was "manifestly flawed".[60]

26. The European Communities points out that the Panel found that paragraph 3(c) of the Enabling Clause allows developed countries to differentiate in their GSP schemes in only two ways, namely, in connection with least-developed countries and in the implementation of *a priori* limitations. According to the European Communities, the Panel arrived at this interpretation despite the absence of any such restriction in the text of paragraph 3(c) and despite the Panel's acceptance of the European Communities' argument that the "needs" described in paragraph 3(c) extend to individual or common needs of particular categories of developing countries. In fact, the European Communities argues, paragraph 3(c) lends contextual support to the European Communities' interpretation of the word "non-discriminatory" in footnote 3. The European Communities claims that the objective described in paragraph 3(c) is best achieved by allowing developed countries to design their GSP schemes so as to take into account the development needs of certain categories of developing countries.

[57] European Communities' appellant's submission, paras. 85 and 87.

[58] *Ibid.*, para. 120.

[59] *Ibid.*, para. 122 (quoting Enabling Clause, para. 2(d) (attached as Annex 2 to this Report)).

[60] European Communities' appellant's submission, para. 125.

27. The European Communities argues that the Panel's contrary interpretation of paragraph 3(c) stems from the Panel's concern that developed countries might abuse their discretion by distinguishing arbitrarily between developing countries. In the view of the European Communities, such policy concerns cannot replace the text of paragraph 3(c). Furthermore, the European Communities submits that this concern is unwarranted because the European Communities' interpretation of "non-discriminatory" would not allow a preference-granting country to distinguish between developing countries on the basis of political, historical, or geographical ties. Rather, a distinction would be allowed only if it: (i) pursued an "objective which is legitimate in the light of the objectives of the Enabling Clause" and the principle of special and differential treatment; and (ii) represented a "reasonable" and "proportionate" means of achieving that objective.[61] In order to assess whether these criteria are met, panels need to analyze the relevant facts.

28. The European Communities contends that, because of the Panel's erroneous legal interpretations, the Panel made insufficient factual findings in order for the Appellate Body to complete the legal analysis regarding the consistency of the Drug Arrangements with footnote 3. Nevertheless, should the Appellate Body decide to complete this analysis, the European Communities requests the Appellate Body to find that the Drug Arrangements are consistent with the term "non-discriminatory" in footnote 3 and, therefore, with paragraph 2(a) of the Enabling Clause.

29. The European Communities contends that, although tariff preferences may not be an "adequate" or "appropriate" response to other development problems, drug production and trafficking form major economic activities in the relevant countries, which activities cannot be eliminated without the provision of "alternative licit activities".[62] Therefore, the European Communities claims that tariff preferences are an appropriate response to the drug problem, as recognized by the Members of the WTO—through the Preamble to the *Agreement on Agriculture* and the waiver for the United States' Andean Trade Preference Act[63]—and the United Nations—through other instruments. Furthermore, the European Communities argues that the Drug Arrangements are non-discriminatory because the drug problem affects individual developing countries in different ways, and because beneficiaries under the Drug Arrangements are designated according to the impact of the drug problem in those countries.

30. The European Communities distinguishes the "object and purpose" of the Enabling Clause from that of Article I:1 of the GATT 1994. Article I:1 focuses on providing equal conditions of competition for imports of like products from WTO Members, whereas the Enabling Clause embodies special and differential treatment for developing countries and, therefore, aims to provide unequal competitive opportunities to respond to the needs of such countries. The European Communities claims that, in the light of the objectives associated with special and differential treatment, providing additional preferences to countries with particular development needs is not discriminatory in the context of the Enabling Clause. However, the Panel failed to take into account these objectives. The European Communities contends that the Panel should have interpreted the objectives described in the Preamble to the *WTO Agreement* in a harmonious manner, instead of assuming that the objective of eliminating discrimination prevails over the objective of ensuring that developing countries secure a share of international trade commensurate with their development needs.

31. The European Communities contends that the Panel relied selectively and incorrectly on certain UNCTAD texts to support its findings. According to the European Communities, some of these documents do not assist in interpreting footnote 3 of the Enabling Clause.[64] In several cases, this is because they relate not to the issue of non-discrimination, but to the exclusion of certain developing countries *ab initio* from GSP schemes.[65] The European Communities contends that several other documents that the Panel relied on contain merely "expectations"[66] or "aim[s]"[67] of particular parties, rather than agreed statements of "legally binding" obligations.[68] Finally, the European Communities argues, the Agreed Conclusions do not purport to be an exhaustive regulation of GSP schemes. Therefore, in the European Communities' view, the allowance under the Agreed Conclusions for differentiation in favour of least-developed countries does not mean that the Agreed Conclusions prohibit all other forms of differentiation between developing countries.

[61] *Ibid.*, para. 135.

[62] European Communities' appellant's submission, paras. 144-145.

[63] *Ibid.*, para. 148 (referring to Waiver Decision on the United States – Andean Trade Preference Act, GATT Document L/6991, 19 March 1992, BISD 39S/385; renewed 14 October 1996, WT/L/184).

32. The European Communities submits that the practice by developed countries of seeking waivers in order to provide more favourable treatment to a limited number of developing countries—as highlighted by the Panel—does not mean that such treatment may not otherwise be provided. According to the European Communities, the waivers mentioned by the Panel all relate to the restriction of preferences *ab initio* to particular countries in a particular region. The European Communities further points out that, in seeking these waivers, the preference-granting countries did not claim that the preferences were restricted to developing countries with development needs of a specific kind.

33. The European Communities contends that the Panel's interpretation of the term "developing countries" in paragraph 2(a) of the Enabling Clause is erroneous because it is entirely dependent on the Panel's erroneous interpretation of the word "non-discriminatory". In the European Communities' view, as the word "non-discriminatory" in footnote 3 of the Enabling Clause allows Members to differentiate between developing countries with different development needs, it follows for the same reasons that paragraph 2(a) does not require Members to grant the same preferences to *all* developing countries.

34. For these reasons, the European Communities requests the Appellate Body to reverse the Panel's finding that the Drug Arrangements are inconsistent with paragraph 2(a) of the Enabling Clause and, in particular, with footnote 3 thereof.

B. *Arguments of India – Appellee*

1. The Relationship Between Article I:1 of the GATT 1994 and the Enabling Clause

35. India argues that the Panel correctly found that the Enabling Clause is an "exception" to Article I:1 of the GATT 1994 and requests the Appellate Body to uphold this finding. In addition, India submits that it made a claim against the Drug Arrangements under the Enabling Clause and that, therefore, the Appellate Body should examine the consistency of the Drug Arrangements under the Enabling Clause, even if it finds that the Enabling Clause is not an exception to Article I:1.

36. India contends that the Panel's test as to what is an "exception" is consistent with previous Appellate Body decisions. According to India, the Appellate Body drew an important distinction in *US – Wool Shirts and Blouses* between "positive rules establishing obligations in themselves" and "exceptions" to those obligations.[69] India states that an exception is an "affirmative defence"[70] and, accordingly, panels examine the consistency of a challenged measure with an exception only if the Member complained against invokes the exception to justify its measure. This leaves the Member with the choice of which exceptions to invoke and prevents exceptions being turned into rules. In other words, in India's view, a Member needs to comply with a provision that is an exception only when the Member invokes that exception to justify an inconsistency with another provision.

37. Applying this reasoning to the present dispute, India characterizes paragraph 2(a) of the Enabling Clause as an "exception" to Article I:1, because it grants developed-country Members a "conditional right"[71] to provide tariff preferences to developing-country Members under the conditions contained in paragraphs 2(a) and 3 of the Enabling Clause. India submits that these paragraphs impose conditions only on Members who invoke the Enabling Clause as a defence, whereas Article I:1 imposes obligations regardless of the defence invoked.

38. India argues, with reference to the *Vienna Convention*, that "subsequent practice"[72] supports its interpretation. First, India maintains that all waivers for preferential tariff treatment for products from developing countries have permitted derogations from Article I without mentioning the Enabling Clause. Indeed, according to India, the fact that the European Communities requested a waiver[73] from its obligations *under Article I:1* in respect of the Drug Arrangements cannot be reconciled with the European Communities' position that the Enabling Clause excludes the application of Article I:1. Secondly, India refers to two GATT panels that examined, first, the consistency of a challenged measure under Article I:1, before proceeding to consider whether the measure was authorized under the Enabling Clause. India regards this as evidence of the "common understanding" of the

Contracting Parties to the *General Agreement on Tariffs and Trade 1947* (the "GATT 1947") regarding the relationship between Article I:1 and the Enabling Clause.[74]

39. India disputes the European Communities' contention that the Enabling Clause is not an exception to Article I:1 because the Enabling Clause constitutes *lex specialis*. India argues, with reference to a study by the International Law Commission and certain Appellate Body decisions[75], that the "maxim *lex specialis derogat legi generali*"[76] means not that a special rule necessarily excludes the application of a related general rule, but that the two rules apply cumulatively, and the special rule prevails over the general rule only to the extent of any conflict between the two rules. Thus, India maintains, developing-country Members have not waived their rights under Article I:1, which applies "cumulatively" with the Enabling Clause, except to the extent that these provisions are in conflict with each other.[77]

40. India also contests the European Communities' reliance on the Appellate Body decisions in *Brazil – Aircraft* and *EC – Hormones*. India states that these appeals related to Article 27.2(a) of the *SCM Agreement* and Article 3.1 of the *SPS Agreement*, both of which provisions explicitly exclude other provisions. India argues that, in contrast, the Enabling Clause does not clearly exclude the application of Article I:1 of the GATT 1994. In India's view, this supports India's contention that Article I:1 and the Enabling Clause apply "concurrently".[78]

41. India claims that, even if the Appellate Body were to find that the Enabling Clause is not an exception to Article I:1, the Appellate Body should assess the consistency of the Drug Arrangements with the Enabling Clause because India did make a claim under the Enabling Clause. The European Communities' argument to the contrary, according to India, is "factually baseless".[79] India highlights that it originally requested the establishment of a panel "to examine whether [the Drug Arrangements] are consistent with Article I:1 … *and ... the Enabling Clause*".[80] In addition, India maintains that, in its first and second written submissions to the Panel, it requested the Panel to find that the Drug Arrangements "*are not justified [by] the Enabling Clause*".[81] Moreover, India states that the European Communities acknowledged in its first written submission to the Panel that the Enabling Clause forms part of India's claim[82], and that the Panel confirmed India's inclusion of this claim in paragraph 7.61 of the Panel Report.

42. India submits that it does not follow from India's characterization of the Enabling Clause as an "exception"—which was a "procedural argument" regarding the allocation of the burden of

[74]India's appellee's submission, para. 43 (referring to GATT Panel Report, *US – Customs User Fee*, 1988, BISD 35S/245, at 289-290; and GATT Panel Report, *US – MFN Footwear*, 1992, BISD 39S/128, at 153).

[81]*Ibid.*, para. 56 (quoting India's first written submission to the Panel, para. 67; and India's second written submission to the Panel, para. 164). (italics added by India in its appellee's submission)

[82]*Ibid.*, para. 58 (referring to European Communities' first written submission to the Panel, paras. 57, 141, and 206).

proof—that India made no "substantive" claims under the Enabling Clause.[83] India maintains that, in response to questioning by the Panel, it "merely stated that the Enabling Clause is not a *material element* of India's *claim under Article I:1 of the GATT*."[84] Furthermore, India reiterated its request for the Panel to examine the consistency of the Drug Arrangements with the Enabling Clause at the second substantive meeting of the Panel and at the interim review stage. In addition, India maintains that the Panel would have had "competence"[85] to assess the Drug Arrangements under the Enabling Clause even if the Panel had found that the Enabling Clause is not an exception to Article I:1.[86] In India's view, requiring India to resubmit its claims under the Enabling Clause to a new panel would be contrary to the "fundamental principle of good faith"[87] and the objectives of the dispute settlement system.[88] India asserts that the question of which party bears the burden of proof "does not affect the outcome of this dispute".[89]

43. Finally, India emphasizes that the European Communities has not yet obtained a waiver from its obligations under Article I:1 with respect to the Drug Arrangements and that only the WTO Members can provide such a waiver.

44. For these reasons, India requests the Appellate Body to uphold the Panel's finding that the Enabling Clause is an exception to Article I:1 of the GATT 1994.

2. Whether the Drug Arrangements are Justified Under the Enabling Clause

45. India requests the Appellate Body to uphold the Panel's finding that the Drug Arrangements are not justified under the Enabling Clause. In particular, India maintains that paragraph 2(a) of the Enabling Clause does not authorize the European Communities to differentiate between developing-country Members that are beneficiaries under the European Communities' GSP scheme.

46. At the outset, India submits that the present dispute focuses not on the European Communities' initial selection of particular developing countries as beneficiaries under its GSP scheme, but on the European Communities' treatment of developing countries already identified as beneficiaries under that scheme. Therefore, according to India, the Appellate Body is not required to examine legal issues arising from the initial selection of beneficiaries under the Enabling Clause. Rather, India urges the Appellate Body to find that the term "developing countries" in footnote 3 of the Enabling Clause includes at least those countries that are beneficiaries under a given GSP scheme, and that the words "products originating in developing countries" in paragraph 2(a) refer to products originating in any of those beneficiary countries.

47. India argues that its interpretation is reinforced by the nature of the MFN principle embodied in Article I:1 as "a fundamental norm of the rules-based multilateral trading system of the WTO".[90] India points to Appellate Body decisions as support for its view that "derogations" from Article I:1

[83] *Ibid.*, para. 70.

[84] *Ibid.*, para. 64. (original italics)

[85] *Ibid.*, heading II.B.3.

[86] *Ibid.*, paras. 70-71 (referring to Panel Report, *US – Wool Shirts and Blouses*; Appellate Body Report, *EC – Hormones*, footnote 71 to para. 109 and footnote 180 to para. 197; and DSU, Arts. 7.2 and 11).

[87] *Ibid.*, para. 72 (referring to Appellate Body Report, *US – FSC*, para. 166).

[88] India's appellee's submission, para. 74 (referring to DSU, Arts. 3.3-3.4 and 3.7).

[89] *Ibid.*, para. 73.

[90] *Ibid.*, para. 1.

exist only where provided for explicitly.[91] India emphasizes that paragraph 2(a) of the Enabling Clause does *not* specifically state that developing countries waive their rights to MFN treatment. Moreover, the object and purpose of the Enabling Clause, as well as its drafting history, indicate that the developing countries did not agree to relinquish their MFN rights as between themselves in agreeing to paragraph 2(a) of the Enabling Clause.

48. India contends that the Drug Arrangements are not "non discriminatory preferences beneficial to the developing countries" within the meaning of footnote 3 of the Enabling Clause. First, India relies on dictionary definitions to ascertain that the ordinary meaning of "non-discriminatory preferences" in footnote 3 is "preferential tariff treatment that is applied equally".[92] Secondly, India finds "contextual guidance"[93] on the meaning of "non-discriminatory" in Articles I, XIII, and XVII of the GATT 1994. According to India, these provisions confirm that "non-discrimination" refers to the provision of "equal competitive opportunities" in relation to non-tariff measures and of "formally equal[] treatment" in relation to tariff measures.[94] In addition, in India's submission, the inclusion of the word "unjustifiable" before the word "discrimination" in the chapeau of Article XX of the GATT 1994 demonstrates that a Member's reasons for distinguishing between products of different origin are not relevant to whether such distinction constitutes discrimination.

49. Turning to the words "generalized" and "non-reciprocal" in footnote 3, India argues that the word "generalized" refers to the countries that should be included *ab initio* as beneficiaries under a GSP scheme, whereas the word "non-discriminatory" refers to the treatment of products originating in beneficiary countries. Even if "generalized" meant that all developing countries must be included *ab initio* as beneficiaries, in India's view, the "additional requirement"[95] imposed by the word "non-discriminatory" would still be relevant in addressing the separate question of how products from beneficiary countries should be treated. India contests the European Communities' argument that the Panel's interpretation of "non-discriminatory" renders redundant the word "non-reciprocal" in footnote 3. India suggests that reciprocity is a "principle of trade negotiations"[96], whereas "non-discriminatory" addresses the implementation of the results of such negotiations. India argues that Part IV of the GATT 1994 (entitled "Trade and Development") was added to the original GATT provisions because it is possible to comply with the principle of non-discrimination while insisting on non-reciprocity in negotiations.

50. India contends that paragraph 2(a) of the Enabling Clause and Article I:1 of the GATT 1994 must be interpreted in a harmonious manner so as to give effect to both provisions.[97] With this in mind, India submits that the Enabling Clause should be interpreted to authorize only those deviations from the MFN principle that are necessary in order for GSP schemes to operate. Thus, the Enabling Clause authorizes developed-country Members to exclude other developed countries from their GSP schemes, because Members could not grant any tariff preferences under these schemes if such exclusion was not authorized. However, in India's view, the Enabling Clause does not authorize tariff

[95] *Ibid.*, para. 148.

[96] *Ibid.*, para. 153.

[97] India's appellee's submission, para. 83 (referring to Appellate Body Report, *Korea – Dairy*, para. 81; Appellate Body Report, *Argentina – Footwear (EC)*, para. 81; and International Court of Justice, Preliminary Objections, *Right of Passage over Indian Territory (Portugal v. India)*, 1957, ICJ Reports, p. 142).

preferences that differentiate between developing countries, as tariff preferences under GSP schemes can be and are granted to developing countries without differentiation of this kind. According to India, a contrary interpretation would be inconsistent with the need to interpret paragraph 2(a) and Article I:1 so as to avoid conflict between the two provisions.

51. India derives support for its interpretation from several provisions of the Enabling Clause. In particular, India reads paragraphs 2(a) and 2(d) together as identifying three categories of countries: the developed countries, the developing countries, and the least-developed countries. In India's view, under the Enabling Clause, the developed countries "relinquished" their MFN rights in respect of preferential tariff treatment in favour of developing and least-developed countries, whereas the developing countries "relinquished" their MFN rights only in respect of preferential treatment in favour of least-developed countries.[98] However, India sees nothing in the text of the Enabling Clause to indicate that developing countries have similarly relinquished their MFN rights in relation to preferential treatment accorded by developed countries to other developing countries. India suggests that the European Communities itself recognized this fact prior to this dispute.[99] India maintains that paragraph 2(d) was specifically inserted to allow differentiation of a kind that was not previously allowed under the 1971 Waiver Decision. India argues that the European Communities' current interpretation of "non-discriminatory" in footnote 3 would render paragraph 2(d) redundant, contrary to the "principle of effectiveness in treaty interpretation".[100]

52. The opening words of paragraph 3(c) demonstrate, according to India, that paragraph 3(c) of the Enabling Clause does not provide for derogations from obligations imposed under paragraph 2(a), (b), or (d). Further, unlike paragraphs 5 and 6, paragraph 3(c) does not refer to "individual" or "particular" needs of developing countries. India argues that this shows that the "needs" intended by the drafters under paragraph 3(c) are the needs of "developing countries as a whole".[101]

53. India draws support for its reading of paragraph 2(a) from the object and purpose of the Enabling Clause. According to India, the purpose includes: facilitating "mutually acceptable arrangements"[102] that were "unanimous[ly] agree[d]"[103] in UNCTAD; replacing "special preferences"[104] granted only to some developing countries with generalized preferences that do not differentiate between developing countries; and, promoting the trade of developing countries without raising barriers to or creating undue difficulties for the trade of other Members, as confirmed in paragraph 3(a). India points to several UNCTAD texts to confirm these purposes[105], arguing that the European Communities offers no such support for its contrary views. India regards differentiation between developing countries under a GSP scheme as inconsistent with paragraph 3(a) because it creates difficulties for the trade of other developing countries by "divert[ing] competitive

[98] *Ibid.*, paras. 3 and 5.

[104] *Ibid.*, paras. 147 and 190.

[105] *Ibid.*, paras. 158-184 (referring to Agreed Conclusions; Resolution 21(II); Resolution 24(II) of the Second Session of UNCTAD; Charter of Algiers, paras. (a) and (d); and OECD Special Report, part II).

opportunities"[106] from one country to another. In addition, India contends that linking GSP benefits to "the situation or policies"[107] of beneficiaries reduces the certainty and value of such benefits.

54. India contends that the European Communities' interpretation of paragraph 3(c) would mean that developed countries "would have *the obligation*"[108] to differentiate between developing countries according to their individual needs. This would have the "absurd consequence"[109] that a measure eliminating tariffs on products from *all* least-developed countries, without differentiating between those countries would be open to challenge under paragraph 3(c). Moreover, India argues that it would result not only in the European Communities' scheme, but in all GSP schemes being inconsistent with the Enabling Clause because they do not differentiate between developing countries based on their *individual* development needs. India also maintains that the European Communities' suggestion that its interpretation would best fulfil the objectives of paragraph 3(c) is inconsistent with the rule that treaty interpretation should be based on the text and not on policy considerations that are not reflected in the text.

55. For these reasons, India requests the Appellate Body to uphold the Panel's finding that the Drug Arrangements are not justified under the Enabling Clause.

C. *Arguments of the Third Participants*

1. Andean Community

56. The governments of Bolivia, Colombia, Ecuador, Peru, and Venezuela (jointly, the "Andean Community") submit that the Panel erred in finding that the Enabling Clause is an "exception" to Article I:1 of the GATT 1994 and in finding that Article I:1 applies concurrently with the Enabling Clause. The Andean Community also contends that, contrary to the Panel's finding, the Drug Arrangements are consistent with the Enabling Clause. Accordingly, the Andean Community supports the European Communities' contention that the Drug Arrangements are "fully WTO-compatible".[110]

57. The Andean Community argues that the Enabling Clause establishes "a self-standing regime"[111], meaning that Article I:1 of the GATT 1994 does not apply to GSP schemes.[112] According to the Andean Community, the ordinary meaning of the word "notwithstanding" in paragraph 1 of the Enabling Clause confirms this interpretation, as do the context, and object and purpose of the Enabling Clause. In addition, the "history, ... practice and ... current role"[113] of the Enabling Clause indicate that GSP schemes provide the "most concrete and relevant form"[114] of special and differential treatment. This supports the concept of the Enabling Clause as a self-standing regime. According to the Andean Community, because measures falling within the Enabling Clause are to be judged solely

[106] *Ibid.*, para. 192.

[108] *Ibid.*, para. 14. (original italics)

[109] *Ibid.*, para. 15.

[110] Andean Community's third participant's submission, para. 97.

[111] See, for example, *ibid.*, paras. 8, 12, and 27.

[112] *Ibid.*, para. 9 (referring to Appellate Body Report, *Brazil – Aircraft*, para. 139).

[113] *Ibid.*, para. 13.

[114] *Ibid.*, para. 21.

under the Enabling Clause, India was required to make a claim under the Enabling Clause. As India did not do so, the Andean Community maintains, India's claim should be dismissed.

58. The Andean Community submits further that, even if the Enabling Clause is an exception to Article I:1, this characterization is not determinative of which party bears the burden of proof. The Andean Community asserts that the Panel erred in assigning the burden. According to the Andean Community, under the Panel's allocation of the burden of proof, every GSP scheme would be open to challenge, with the burden falling on each preference-granting country to establish the consistency of its GSP scheme with the Enabling Clause. The Andean Community claims that the assigning of the burden of proof is "a fundamental initial decision upon which every further consideration is based", such that the Appellate Body "should reverse on this element alone".[115]

59. Regarding the consistency of the Drug Arrangements with the Enabling Clause, the Andean Community submits, first, that the Panel did not properly interpret the historical texts serving as context and preparatory work for the Enabling Clause. The Andean Community emphasizes the "aspirational tone"[116] of these texts and argues that the Panel "mischaracterize[d]"[117] certain texts as binding or reflecting "unanimous agreement".[118] Secondly, turning to the interpretation of the term "non-discriminatory" in the Enabling Clause, the Andean Community contends that the Panel wrongly equated this concept with MFN treatment. The Andean Community further alleges that the Panel's allowance for *a priori* limitations under the Enabling Clause is contrary to the Panel's own interpretation of "non-discriminatory".

60. In the view of the Andean Community, "a prohibition of discrimination is a command not to treat equal situations differently, or different situations equally"[119] and, accordingly, the word "non-discriminatory" in the Enabling Clause does not require that identical treatment be granted to all developing countries. The Andean Community suggests that differentiating between developing countries—taking into account their objectively different situations—does not constitute discrimination. The Andean Community argues that the "production and trafficking of illicit drugs have far-reaching, unparalleled and unquantifiable implications for the economic and social development"[120] of affected developing countries. By providing preferential access for "alternative products"[121] and, thereby, seeking to reduce the importance of drugs as an economic activity, the European Communities responds to these countries' specific needs. The Andean Community asserts that this response is consistent with the requirements of the Enabling Clause.

2. Costa Rica

61. Costa Rica submits that the Panel erred in finding that the Drug Arrangements are not justified under the Enabling Clause. Costa Rica asserts that the Panel based this finding on erroneous interpretations of the terms "non-discriminatory" and "developing countries" contained in footnote 3 and paragraph 2(a), respectively, of the Enabling Clause. Accordingly, Costa Rica supports the European Communities' request that the Appellate Body reverse this finding.

[115]Andean Community's third participant's submission, para. 41.

[116]*Ibid.*, para. 50.

[117]*Ibid.*, para. 56. (original underlining)

[118]*Ibid.*, para. 55.

[119]*Ibid.*, para. 64.

[120]*Ibid.*, para. 78.

[121]*Ibid.*, para. 87.

62. Costa Rica contends that, instead of relying on the ordinary meaning of these terms of the Enabling Clause in context, the Panel relied on other instruments that "cannot be properly considered context for the interpretation of the Enabling Clause".[122] Costa Rica maintains that this led to the Panel's incorrect finding that "non-discriminatory" treatment under footnote 3 of the Enabling Clause is synonymous with identical or unconditional treatment. Costa Rica asserts that had the Panel interpreted the Enabling Clause in accordance with Article 31 of the *Vienna Convention*—in the light of the object and purpose of the Enabling Clause and the 1971 Waiver Decision—it would have found that "the 'non-discriminatory' standard prohibits developed countries from according tariff preferences that make an unjust or prejudicial distinction between different categories of developing countries."[123]

63. In addition, according to Costa Rica, the Panel erred in concluding that the term "developing countries" in paragraph 2(a) of the Enabling Class means *all* developing countries. In Costa Rica's view, in interpreting this term, the Panel relied on its incorrect interpretation of the term "non-discriminatory" and failed to examine paragraph 1 of the Enabling Clause as relevant context. Moreover, Costa Rica is of the opinion that it is not appropriate to consider the *travaux préparatoires* as a supplementary means of interpretation under Article 32 of the *Vienna Convention* in interpreting paragraph 2(a). However, even if this were appropriate, the drafting history of the 1971 Waiver Decision confirms that the term "developing countries" means less than all developing countries.

3. Panama

64. Panama submits that the Panel erred in finding that the Enabling Clause is an "exception" to Article I:1 of the GATT 1994. Panama maintains that the Enabling Clause is "*per se* an autonomous rule"[124] that permits the granting of more favourable treatment to developing countries. Panama also contests the Panel's finding that the Drug Arrangements are incompatible with the Enabling Clause. In particular, Panama argues that the Panel erred in interpreting the term "non-discriminatory" in footnote 3 of the Enabling Clause as requiring preference-granting countries to accord identical treatment to all developing countries. Panama therefore states that it is "completely in agreement with the arguments by the European Communities".[125]

65. Panama is of the view that, if the Enabling Clause were an exception to Article I of the GATT 1994, it would be included as a waiver decision in the GATT 1994.[126] Because the Enabling Clause is not so included, Panama contends, it is an "independent" and "special" rule governing the differential and more favourable treatment accorded to developing countries under the schemes set out in paragraph 2 of the Enabling Clause.[127] Panama submits that "the Enabling Clause creates a standalone mechanism that is linked to the general principle contained in GATT Article I:1"[128] and, as such, constitutes an "autonomous right"[129] of WTO Members.

[122]Costa Rica's third participant's submission, para. 6.

[123]*Ibid.*, para. 15.

[124]Panama's third participant's submission, para. 4.

[125]Panama's third participant's submission, para. 1.

[126]Paragraph 1(b)(iii) of the language of Annex 1A incorporating the GATT 1994 into the *WTO Agreement*.

[127]Panama's third participant's submission, paras. 5-6.

[128]*Ibid.*, para. 10.

[129]*Ibid.*, para. 8.

66. Panama argues that the Enabling Clause is not an affirmative defence but, rather, "excludes the application of ... Article I:1".[130] As such, Panama claims, it was up to India to claim that the Drug Arrangements do not fall within the scope of paragraph 2(a) of the Enabling Clause and are inconsistent with paragraph 3(c) thereof. Because India did not do so, Panama argues, the Appellate Body should refrain from assessing the consistency of the Drug Arrangements with the Enabling Clause.

67. According to Panama, "non-discrimination" does not mean equal treatment. Panama submits that the fact that the Drug Arrangements are not extended to all developing countries does not mean that they discriminate between developing countries. In addition, Panama maintains that the obligation imposed in paragraph 3(c) of the Enabling Clause must be interpreted in order to allow some flexibility for preference-granting countries to provide preferential treatment that "effectively help[s] 'generalized' needs".[131] In this respect, Panama claims, the Drug Arrangements satisfy the "requirement" in paragraph 3(c) because they respond to "specific growth needs".[132]

4. Paraguay

68. Paraguay contends that the Panel was correct in finding that the Enabling Clause is an "exception" to Article I:1 of the GATT 1994. In addition, Paraguay agrees with the Panel's interpretation of paragraph 2(a) of the Enabling Clause and the Panel's consequent finding that the Drug Arrangements are not justified by the Enabling Clause. Accordingly, Paraguay supports India's request that the Appellate Body uphold these findings.

69. According to Paraguay, where a Member's measure differentiates between other Members in a manner inconsistent with Article I:1 and does not fall within any specific exceptions such as the Enabling Clause or Article XX of the GATT 1994, the only way for that Member to impose its measure in accordance with its WTO obligations is to seek a waiver under Article IX of the *WTO Agreement*. Paraguay maintains that the Drug Arrangements are inconsistent with Article I:1 and that the European Communities has received no such waiver in respect of them.

70. Paraguay contests the European Communities' characterization of the Enabling Clause as a "different, parallel legal regime".[133] Paraguay maintains that Article I:1 forms the "primary basis" for WTO trade and that exceptions to Article I:1 must be founded on "properly established legal rules".[134] In Paraguay's view, the Enabling Clause is an exception to Article I:1 and is a part of the GATT 1994, and the GSP recognized in the Enabling Clause is "a permanent mechanism of the rules-based multilateral trading system".[135]

71. Paraguay emphasizes that developing countries did not renounce their right to MFN treatment under Article I:1 of the GATT 1994 in agreeing to the Enabling Clause. According to Paraguay, the Enabling Clause was adopted to replace the "special preferences"[136] provided by developed countries to certain developing countries, with a generalized system under which all developing countries would benefit. Paraguay argues that the only distinction that the WTO draws within the category of developing countries is in recognizing the category of least-developed countries, as explicitly stated in

[130] *Ibid.*, para. 17.

[131] *Ibid.*, para. 23.

[132] *Ibid.*, para. 13.

[133] Paraguay's third participant's submission, para. 13.

[134] *Ibid.*, para. 12.

[135] *Ibid.*, para. 11.

[136] *Ibid.*, para. 14.

paragraph 2(d) of the Enabling Clause. As such, in Paraguay's view, the "condition"[137] of non-discrimination in footnote 3 means that benefits granted to some developing countries must be granted to all such countries. Therefore, Paraguay submits that tariff preferences pursuant to the Enabling Clause must apply to all developing countries.

5. United States

72. The United States contends that the Panel misconceived the relationship between the Enabling Clause and Article I:1 of the GATT 1994. The United States also submits that the Panel erred in concluding that the term "non-discriminatory" in footnote 3 of the Enabling Clause requires preference-granting countries to accord "identical" treatment to all beneficiaries and that, consequently, paragraph 2(a) covers only identical preferences extended to *all* developing countries. Accordingly, the United States supports the European Communities' request that the Appellate Body reverse the Panel's legal interpretation of the terms "non-discriminatory" in footnote 3 and "developing countries" in paragraph 2(a) and, consequently, reverse the Panel's finding that the Enabling Clause is an "exception" to Article I:1.

73. Beginning with the relationship between Article I:1 and the Enabling Clause, the United States claims that the Panel failed to consider the entire text of the Enabling Clause and the context and object and purpose of the Enabling Clause and of the GATT 1994. The United States argues that the Panel "misconstru[ed]" the statement of the Appellate Body in *US – Wool Shirts and Blouses* and applied this statement "as a mechanical 'test'" without due regard to the term "notwithstanding" in the Enabling Clause.[138] The United States observes that the Panel examined the ordinary meaning of "notwithstanding" in paragraph 1 of the Enabling Clause only after the Panel had concluded that the Enabling Clause is an "exception". In addition, in the view of the United States, the reasoning underlying the Panel's conclusion that the Enabling Clause is an exception "would result in ... inconsistencies and absurd results"[139] because several WTO obligations apply only if a Member chooses to take the action addressed in the relevant provision.

74. The United States submits that the Enabling Clause is part of the overall balance of rights and obligations in the covered agreements and, as such, is a "separate provision authorizing the types of treatment provided therein", "in spite of" the MFN obligation in Article I:1.[140] In other words, the United States maintains that, contrary to the finding of the Panel, the Enabling Clause *is* a "positive rule establishing obligations in itself".[141] The United States emphasizes that several aspects of the Enabling Clause are unrelated to Article I:1 and that the Enabling Clause is incorporated into the GATT 1994. The United States also argues that, unlike Article XX of the GATT 1994, the Enabling Clause "*encourages*"[142] developed-country Members to grant preferences to developing-country Members. In the view of the United States, "[p]lacing the burden on developed countries to defend actions they take to benefit developing countries ... would create a *disincentive* for developed countries" to take such action.[143]

[137] *Ibid.*, para. 27.

[138] United States' third participant's submission, paras. 2-3.

[139] *Ibid.*, para. 5.

[140] *Ibid.*, paras. 3 and 10.

[141] *Ibid.*, para. 4.

[142] United States' third participant's submission, para. 8. (original italics)

[143] *Ibid.*, para. 9. (original italics)

75. Turning to footnote 3 of the Enabling Clause, the United States contests the Panel's "assum[ption]"[144] that the term "non-discriminatory" in footnote 3 imposes obligations on preference-granting countries. In the view of the United States, "[t]his footnote is simply a cross-reference to where the Generalized System of Preferences is described."[145] Because the Panel began its analysis "from a false premise", the United States suggests that the Panel's finding as to footnote 3 "should be rejected on that basis alone".[146] In any case, the United States contends, the Panel erroneously arrived at a "one size fits all"[147] obligation to grant "identical" tariff preferences to "all" developing countries. Furthermore, according to the United States, the fact that the Panel understood the Enabling Clause to allow *a priori* limitations demonstrates that the term "non-discriminatory" does not preclude *all* conditions. The United States asserts that the Panel focused not on the text, but on a policy concern—the prevention of "abuse"[148] by preference-granting countries. In the United States' view, the Panel's focus on this policy concern is inconsistent with Article 3.2 of the DSU and led to an incorrect interpretation of "non-discriminatory".

76. With respect to paragraph 3(c) of the Enabling Clause, the United States argues that the Panel wrongly interpreted this provision as imposing an obligation not to provide differentiated GSP benefits. In doing so, the United States submits, the Panel failed to recognize that the term "generalized" in footnote 3 ensures that the responses of preference-granting countries to the needs of developing countries do not result in tariff advantages accorded primarily to select countries.

77. Finally, the United States contends that the Panel's interpretation of "developing countries" in paragraph 2(a) as referring to *all* developing countries is "completely dependent"[149] on its erroneous interpretation of "non-discriminatory". Moreover, the United States argues, the Enabling Clause refers only to "developing countries" or "the developing countries", and not to "*all* developing countries".[150]

III. Issues Raised in This Appeal

78. The following issues are raised in this appeal:

(a) Whether the Panel erred in concluding that the "special arrangements to combat drug production and trafficking" (the "Drug Arrangements"), which are part of Council Regulation (EC) No. 2501/2001 (the "Regulation")[151], are inconsistent with Article I:1 of the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994")[152], based on the Panel's findings that:

(i) the Decision on Differential and More Favourable Treatment, Reciprocity, and Fuller Participation of Developing Countries (the "Enabling Clause")[153] is an "exception"[154] to Article I:1 of the GATT 1994;

(ii) the Enabling Clause "does not exclude the applicability"[155] of Article I:1 of the GATT 1994; and

(iii) the European Communities bears the burden of invoking the Enabling Clause and proving that the Drug Arrangements are consistent with that Clause[156]; and

(b) Whether the Panel erred in concluding that the European Communities failed to prove that the Drug Arrangements are justified under paragraph 2(a) of the Enabling Clause[157], based on the Panel's findings that:

(i) the term "non-discriminatory" in footnote 3 to paragraph 2(a) of the Enabling Clause requires that, pursuant to schemes under the Generalized System of Preferences ("GSP"), "identical tariff preferences"[158] be provided to all developing countries without differentiation, except as regards the implementation of *a priori* limitations; and

(ii) the term "developing countries" in paragraph 2(a) of the Enabling Clause means "all"[159] developing countries, except as regards the implementation of *a priori* limitations.

IV. The Relationship Between Article I:1 of the GATT 1994 and the Enabling Clause

79. We begin our analysis of the European Communities' appeal by examining its claim that the Panel improperly characterized the relationship between Article I:1 of the GATT 1994 and the Enabling Clause, and thus improperly allocated the burden of proof in this dispute.

A. *The Panel's Analysis and the Arguments on Appeal*

80. The Panel observed that the participants disagree on whether the Enabling Clause constitutes a "positive rule setting out obligations", or an "exception" authorizing derogation from one or more such positive rules.[160] Based on its understanding of the Appellate Body's decision in *US – Wool Shirts and Blouses*, the Panel determined that the Enabling Clause, in and of itself, does not establish legal obligations but, instead, contains requirements that are "only subsidiary obligations, dependent on the decision of the Member to take [particular] measures".[161] The Panel further concluded that the legal function of the Enabling Clause is to permit Members to derogate from Article I:1 "so as to

[144] *Ibid.*, para. 11.

[158] Panel Report, para. 7.161.

[159] *Ibid.*, para. 7.176.

[160] *Ibid.*, para. 7.32.

[161] *Ibid.*, para. 7.37.

enable developed countries, *inter alia*, to provide GSP to developing countries".[162] As a result, the Panel found that the Enabling Clause is "in the nature of an exception" to Article I:1.[163]

81. The Panel noted that the GATT 1994 includes several provisions in the nature of exceptions that serve to justify a measure's inconsistency with Article I:1, including Articles XX, XXI, and XXIV, and the Enabling Clause. According to the Panel, these exceptions reflect "legitimate objectives" that may be pursued by Members.[164] The Panel reasoned that, because a complaining party may not be able to discern the objectives of a given measure, particularly as they may not be apparent from the text of the measure itself, it is "sufficient" for a complaining party to demonstrate an inconsistency with Article I:1, without also establishing "violations" of any of the possible exception provisions.[165]

82. With respect to the present dispute, the Panel found that India could make its case against the European Communities solely by establishing the inconsistency of the Drug Arrangements with Article I:1.[166] Having done so, according to the Panel, it would then be incumbent upon the European Communities to invoke the Enabling Clause as a defence and to demonstrate the consistency of the Drug Arrangements with the requirements contained in that Clause.[167]

83. The Panel also examined whether Article I:1 applies to a measure covered by the Enabling Clause. It looked first to the ordinary meaning of the term "notwithstanding", as used in paragraph 1 of the Enabling Clause, and concluded on that basis that the Enabling Clause takes precedence over Article I "to the extent of conflict between the two provisions".[168] Nevertheless, the Panel declined to assume the exclusion of the applicability of a "basic GATT obligation" such as Article I:1 in the absence of a textual indication of Members' intent to that effect.[169] Thus, it also referred to World Trade Organization ("WTO") jurisprudence relating to other exception provisions, and concluded that the relationship between these exceptions and the obligations from which derogation is permitted is "one where both categories of provisions apply concurrently to the same measure, but where, in the case of conflict between these two categories of provisions, [the exception] prevails".[170] Accordingly, the Panel concluded, on the basis of both the ordinary meaning of the text of the provision and WTO case law, that Article I:1 applies to measures covered by the Enabling Clause and that the Enabling Clause prevails over Article I:1 "to the extent of the conflict between [them]".[171]

84. Finally, the Panel referred to the European Communities' reliance on the Appellate Body's decisions in *Brazil – Aircraft* and *EC – Hormones* and distinguished those cases from the present dispute. The Panel stated that the relationship between the provisions at issue in those cases was

[162] *Ibid.*, para. 7.38.

[163] *Ibid.*, para. 7.39.

[164] Panel Report, para. 7.40.

[165] *Ibid.*

[166] *Ibid.*

[167] *Ibid.*, para. 7.42.

[168] *Ibid.*, para. 7.44. Paragraph 1 of the Enabling Clause provides:

> Notwithstanding the provisions of Article I of the General Agreement, contracting parties may accord differential and more favourable treatment to developing countries, without according such treatment to other contracting parties. (footnote omitted)

[169] Panel Report, para. 7.44.

[170] *Ibid.*, para. 7.45.

[171] *Ibid.*

"different" from the relationship it had found between Article I:1 and the Enabling Clause.[172] In particular, the Panel determined that, in the two earlier disputes, one provision "clearly exclude[d]" the application of the other.[173] In contrast, the Panel had already found that the Enabling Clause does not exclude the applicability of Article I:1. In these circumstances, the Panel suggested that the Enabling Clause constitutes an "affirmative defence", in relation to which the responding party bears the burden of proof if that party invokes the Enabling Clause to justify its challenged measure.[174]

85. On appeal, the European Communities challenges the Panel's finding that the Enabling Clause is an "exception"[175] to Article I:1 of the GATT 1994 and that, therefore, the European Communities must invoke the Enabling Clause as an "affirmative defence"[176] to India's claim that the Drug Arrangements are inconsistent with Article I:1. The European Communities submits that the Enabling Clause is part of a "special regime for developing countries"[177], which "encourages"[178], *inter alia*, the granting of tariff preferences by developed-country Members to developing countries. As a result, the Enabling Clause exists "side-by-side and on an equal level" with Article I:1, and applies to the *exclusion* thereof, rather than as an exception thereto.[179] The European Communities argues, therefore, that India is required to bring a claim under the Enabling Clause if it considers that the European Communities' GSP scheme has nullified or impaired India's rights.[180] The European Communities requests us to refrain from examining the consistency of the Drug Arrangements with the requirements of the Enabling Clause because, according to the European Communities and as allegedly acknowledged by India before the Panel, India did not bring a claim under the Enabling Clause.[181]

86. India, by contrast, supports the Panel's understanding of the relationship between Article I:1 and the Enabling Clause. India argues that paragraph 2(a) of the Enabling Clause qualifies as an "exception" because the conditions therein must be complied with only by Members adopting a measure pursuant to the authorization granted by that provision. This differs from the most-favoured nation ("MFN") obligation in Article I:1.[182] Moreover, according to India, we are not precluded from addressing the consistency of the Drug Arrangements with the Enabling Clause because, contrary to the assertion of the European Communities, India did make a claim under that Clause before the Panel.[183] India submits that denying the Panel the "competence"[184] to evaluate this claim, even if the Enabling Clause is not regarded as an exception, would be inconsistent with the objectives of WTO dispute settlement, "namely to secure a 'prompt' and 'positive solution to a dispute', and 'achieve a

satisfactory settlement of the matter' in accordance with rights and obligations under the covered agreements."[185] According to India, this is particularly so because the European Communities had been on notice throughout the Panel proceedings of India's position that the Drug Arrangements are not justified by the Enabling Clause.[186]

B. *Relevance of the Relationship Between Article I:1 of the GATT 1994 and the Enabling Clause for the Allocation of the Burden of Proof*

87. We begin our analysis of the relationship between Article I:1 of the GATT 1994 and the Enabling Clause, and the attendant implications for the allocation of the burden of proof in this dispute, by recalling the observation of the Appellate Body in *US – Wool Shirts and Blouses*:

> [I]t is a generally-accepted canon of evidence in civil law, common law and, in fact, most jurisdictions, that the burden of proof rests upon the party, whether complaining or defending, who asserts the affirmative of a particular claim or defence.[187]

It is thus for the *complaining* party to raise a claim with respect to a particular obligation and to *prove* that the responding party is acting inconsistently with that obligation. It is for the *responding* party, if it so chooses, to raise a defence in response to an allegation of inconsistency and to *prove* that its challenged measure satisfies the conditions of that defence. Therefore, the question before us is whether India must raise a "claim" and prove that the Drug Arrangements are inconsistent with the Enabling Clause, or whether the European Communities must raise and prove, in "defence", that the Drug Arrangements are consistent with the Enabling Clause, in order to justify the alleged inconsistency of the Drug Arrangements with Article I:1.[188]

88. We recall that the Appellate Body has addressed the allocation of the burden of proof in similar situations. In cases where one provision permits, in certain circumstances, behaviour that would otherwise be inconsistent with an obligation in another provision, and one of the two provisions refers to the other provision, the Appellate Body has found that the complaining party bears the burden of establishing that a challenged measure is inconsistent with the provision permitting particular behaviour *only* where one of the provisions suggests that the obligation is not applicable to the said measure.[189] Otherwise, the permissive provision has been characterized as an exception, or defence, and the onus of invoking it and proving the consistency of the measure with its requirements has been placed on the responding party.[190] However, this distinction may not always be evident or readily applicable.

[185] *Ibid.*, para. 74 (quoting DSU, Arts. 3.3, 3.4, and 3.7). (footnotes omitted)

[186] *Ibid.*, para. 73.

[187] Appellate Body Report, *US – Wool Shirts and Blouses*, p. 14, DSR 1997:I, at 335.

[188] We are not concerned here with the situation where a complaining party brings a challenge solely under the provisions of the Enabling Clause, that is, without also claiming an inconsistency with Article I of the GATT 1994.

[189] See Appellate Body Report, *EC – Hormones*, para. 104; Appellate Body Report, *Brazil – Aircraft*, paras. 139-141; and Appellate Body Report, *EC – Sardines*, para. 275.

[190] See Appellate Body Report, *US – FSC (Article 21.5 – EC)*, paras. 131-133; and Appellate Body Report, *US – Wool Shirts and Blouses*, p.16, DSR 1997:I, at 337.

C. *Characterization of the Enabling Clause*

1. Text of Article I:1 and the Enabling Clause

89. In considering whether the Enabling Clause is an exception to Article I:1 of the GATT 1994, we look, first, to the text of the provisions at issue. Article I:1, which embodies the MFN principle, provides:

> *Article I*
>
> *General Most-Favoured-Nation Treatment*
>
> 1. With respect to customs duties and charges of any kind imposed on or in connection with importation or exportation or imposed on the international transfer of payments for imports or exports, and with respect to the method of levying such duties and charges, and with respect to all rules and formalities in connection with importation and exportation, and with respect to all matters referred to in paragraphs 2 and 4 of Article III,* any advantage, favour, privilege or immunity granted by any contracting party to any product originating in or destined for any other country shall be accorded immediately and unconditionally to the like product originating in or destined for the territories of all other contracting parties.

Article I:1 plainly imposes upon WTO Members the obligation to treat "like products ... equally, irrespective of their origin".[191]

90. We turn now to the Enabling Clause, which has become an integral part of the GATT 1994.[192] Paragraph 1 of the Enabling Clause, which applies to all measures authorized by that Clause, provides:

> Notwithstanding the provisions of Article I of the General Agreement, contracting parties may accord differential and more favourable treatment to developing countries, without according such treatment to other contracting parties. (footnote omitted)

[191] Appellate Body Report, *EC – Bananas III*, para. 190.

[192] In response to questioning at the oral hearing, the participants and third participants agreed that the Enabling Clause is one of the "other decisions of the CONTRACTING PARTIES" within the meaning of paragraph 1(b)(iv) of the language of Annex 1A incorporating the GATT 1994 into the *WTO Agreement*. That provision stipulates that:

> 1. The General Agreement on Tariffs and Trade 1994 ("GATT 1994") shall consist of:
>
> ...
>
> (b) the provisions of the legal instruments set forth below that have entered into force under the GATT 1947 before the date of entry into force of the WTO Agreement:
>
> ...
>
> (iv) other decisions of the CONTRACTING PARTIES to GATT 1947[.]

The ordinary meaning of the term "notwithstanding" is, as the Panel noted[193], "[i]n spite of, without regard to or prevention by".[194] By using the word "notwithstanding", paragraph 1 of the Enabling Clause permits Members to provide "differential and more favourable treatment" to developing countries "in spite of" the MFN obligation of Article I:1. Such treatment would otherwise be inconsistent with Article I:1 because that treatment is not extended to all Members of the WTO "immediately and unconditionally".[195] Paragraph 1 thus excepts Members from complying with the obligation contained in Article I:1 for the purpose of providing differential and more favourable treatment to developing countries, provided that such treatment is in accordance with the conditions set out in the Enabling Clause. As such, the Enabling Clause operates as an "exception" to Article I:1.

2. Object and Purpose of the *WTO Agreement* and the Enabling Clause

91. The European Communities' contention that the Enabling Clause is *not* in the nature of an exception appears to be founded on the European Communities' understanding of the object and purpose of the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*") and the Enabling Clause. We, too, look to the object and purpose of the *WTO Agreement* and the Enabling Clause to clarify whether the Enabling Clause was intended to operate as an exception to Article I:1.

92. The Preamble to the *WTO Agreement* provides that Members recognize:

> ... that there is need for *positive efforts* designed to ensure that developing countries, and especially the least developed among them, secure a share in the growth in international trade commensurate with the needs of their economic development[.][196] (emphasis added)

The Waiver Decision on the Generalized System of Preferences (the "1971 Waiver Decision")[197], which provided the initial authorization under the GATT for developed countries' GSP schemes and is explicitly referred to in footnote 3 of the Enabling Clause[198], offers relevant guidance in discerning the object and purpose of the Enabling Clause. In the Preamble to the 1971 Waiver Decision, the Contracting Parties recognized:

> ... that a principal aim of the CONTRACTING PARTIES is promotion of the trade and export earnings of developing countries for the furtherance of their economic development;

[193]See Panel Report, para. 7.44.

[194]*Shorter Oxford English Dictionary*, 5th ed., W.R. Trumble, A. Stevenson (eds.) (Oxford University Press, 2002), Vol. 2, p. 1948.

[195]GATT 1994, Art. I:1.

[196]Second recital. We note that Article XXXVI:3 of the GATT 1994 similarly provides:

> There is need for positive efforts designed to ensure that less-developed contracting parties secure a share in the growth in international trade commensurate with the needs of their economic development.

[197]GATT Document L/3545, 25 June 1971, BISD 18S/24 (attached as Annex D-2 to the Panel Report).

[198]Footnote 3 of the Enabling Clause states:

> As described in the Decision of the CONTRACTING PARTIES of 25 June 1971, relating to the establishment of "generalized, non-reciprocal and non discriminatory preferences beneficial to the developing countries" (BISD 18S/24).

> [and recognized] further that individual and joint action is essential to further the development of the economies of developing countries[.][199]

We understand, therefore, that the Enabling Clause is among the "positive efforts" called for in the Preamble to the *WTO Agreement* to be taken by developed-country Members to enhance the "economic development" of developing-country Members.[200]

93. According to the European Communities, the Enabling Clause, as the "most concrete, comprehensive and important application of the principle of Special and Differential Treatment", serves "to achieve one of the fundamental objectives of the WTO Agreement".[201] In the view of the European Communities, provisions that are exceptions permit Members to adopt measures to pursue objectives that are "not ... among the WTO Agreement's own objectives"[202]; the Enabling Clause thus does not fall under the category of exceptions. Pointing to this alleged difference between the role of measures falling under the Enabling Clause and that of measures falling under exception provisions such as Article XX, the European Communities contends that the *WTO Agreement* does not "merely tolerate" measures under the Enabling Clause, but rather "encourages" developed-country Members to adopt such measures.[203] According to the European Communities, to require preference-granting countries to invoke the Enabling Clause in order to justify or defend their GSP schemes cannot be reconciled with the intention of WTO Members to encourage these schemes.

94. We note, however, as did the Panel[204], that WTO objectives may well be pursued through measures taken under provisions characterized as exceptions. The Preamble to the *WTO Agreement* identifies certain objectives that may be pursued by Members through measures that would have to be justified under the "General Exceptions" of Article XX. For instance, one such objective is reflected in the recognition by Members that the expansion of trade must be accompanied by:

> ... the optimal use of the world's resources in accordance with the objective of sustainable development, [with Members] seeking both to protect and preserve the environment and to enhance the means for doing so in a manner consistent with their respective needs and concerns at different levels of economic development[.][205]

95. As the Appellate Body observed in *US – Shrimp*, WTO Members retained Article XX(g) from the *General Agreement on Tariffs and Trade 1947* (the "GATT 1947") without alteration after the conclusion of the Uruguay Round, being "fully aware of the importance and legitimacy of environmental protection as a goal of national and international policy".[206] Article XX(g) of the

[199]First and second recitals. Similarly, Article XXXVI:1(d) of the GATT 1994 provides:

> [I]ndividual and joint action is essential to further the development of the economies of less-developed contracting parties and to bring about a rapid advance in the standards of living in these countries[.]

[200]We discuss further the role of the Enabling Clause in the context of the covered agreements, *infra*, paras. 106-109.

[201]European Communities' appellant's submission, para. 20.

[202]*Ibid.*, para. 52.

[203]*Ibid.*, para. 53.

[204]See Panel Report, para. 7.52.

[205]*WTO Agreement*, Preamble, first recital.

[206]Appellate Body Report, *US – Shrimp*, para. 129.

GATT 1994 permits Members, subject to certain conditions, to take measures "relating to the conservation of exhaustible natural resources if such measures are made effective in conjunction with restrictions on domestic production or consumption". It is well-established that Article XX(g) is an *exception* in relation to which the responding party bears the burden of proof.[207] Thus, by authorizing in Article XX(g) measures for environmental conservation, an important objective referred to in the Preamble to the *WTO Agreement*, Members implicitly recognized that the implementation of such measures would not be discouraged simply because Article XX(g) constitutes a defence to otherwise WTO-inconsistent measures. Likewise, characterizing the Enabling Clause as an exception, in our view, does not undermine the importance of the Enabling Clause within the overall framework of the covered agreements and as a "positive effort" to enhance economic development of developing-country Members. Nor does it "discourag[e]"[208] developed countries from adopting measures in favour of developing countries under the Enabling Clause.

96. The European Communities acknowledges that requiring Members to pursue environmental measures through Article XX(g), an exception provision, may be logical because "the WTO Agreement is not an environmental agreement and ... it contains no positive regulation of environmental matters."[209] Because the *WTO Agreement* "regulate[s] positively the use of trade measures"[210], however, and the Enabling Clause "promotes" the use of trade measures to further the development of developing countries, the European Communities argues that Members should not be required to prove the consistency of their measures with the Enabling Clause.

97. We do not consider it relevant, for the purposes of determining whether a provision is or is not in the nature of an exception, that the provision governs "trade measures" rather than measures of a primarily "non-trade" nature. Indeed, in a previous appeal, the Appellate Body found that the proviso to Article XVIII:11 of the GATT 1994—a provision authorizing quantitative restrictions when taken in response to balance-of-payments difficulties—is a defence to be invoked by the responding party.[211] The fact that a provision regulates the use of "trade measures", therefore, does not compel a finding that it is for the complaining party to establish inconsistency with that provision, rather than for the defending party to rely on it as a defence.

98. In sum, in our view, the characterization of the Enabling Clause as an exception in no way diminishes the right of Members to provide or to receive "differential and more favourable treatment". The status and relative importance of a given provision does not depend on whether it is characterized, for the purpose of allocating the burden of proof, as a claim to be proven by the complaining party, or as a defence to be established by the responding party. Whatever its characterization, a provision of the covered agreements must be interpreted in accordance with the "customary rules of interpretation of public international law", as required by Article 3.2 of the

[207] *Ibid.*, para. 157; Appellate Body Report, *US – Wool Shirts and Blouses*, pp. 15-16, DSR 1997:I, at 337 (referring to GATT Panel Report, *Canada – FIRA*, para. 5.20; GATT Panel Report, *US – Section 337*, para. 5.27; GATT Panel Report, *US – Malt Beverages*, paras. 5.43 and 5.52; and Panel Report, *US – Gasoline*, para. 6.20).

[208] United States' third participant's submission, para. 9.

[209] European Communities' appellant's submission, para. 54.

[210] European Communities' appellant's submission, para. 54.

[211] Appellate Body Report, *India – Quantitative Restrictions*, paras. 134-136. We also note that GATT panels determined Article XI:2(c) of the GATT 1947 to constitute an "exception", even though that provision addresses "trade measures", namely quantitative restrictions. (See GATT Panel Report, *Japan – Agricultural Products I*, para. 5.1.3.7; GATT Panel Report, *EEC – Dessert Apples*, para. 12.3; and GATT Panel Report, *Canada – Ice Cream and Yoghurt*, para. 59)

Understanding on Rules and Procedures Governing the Settlement of Disputes (the "DSU").[212] Members' rights under the Enabling Clause are not curtailed by requiring preference-granting countries to establish in dispute settlement the consistency of their preferential measures with the conditions of the Enabling Clause. Nor does characterizing the Enabling Clause as an exception detract from its critical role in encouraging the granting of special and differential treatment to developing-country Members of the WTO.

99. In the light of the above, we *uphold* the Panel's finding, in paragraph 7.53 of the Panel Report, that the Enabling Clause is an "exception" to Article I:1 of the GATT 1994.

100. We examine now the European Communities' appeal regarding the Panel's finding that the Enabling Clause "does not exclude the applicability" of Article I:1 of the GATT 1994.[213] The European Communities argues that the Enabling Clause exists "side-by-side and on an equal level" with Article I:1, and thus applies to the exclusion of that provision.[214] In our view, the European Communities misconstrues the relationship between the two provisions.

101. It is well settled that the MFN principle embodied in Article I:1 is a "cornerstone of the GATT" and "one of the pillars of the WTO trading system"[215], which has consistently served as a key basis and impetus for concessions in trade negotiations. However, we recognize that Members are entitled to adopt measures providing "differential and more favourable treatment" under the Enabling Clause. Therefore, challenges to such measures, brought under Article I:1, cannot succeed where such measures are in accordance with the terms of the Enabling Clause. In our view, this is so because the text of paragraph 1 of the Enabling Clause ensures that, to the extent that there is a conflict between measures under the Enabling Clause and the MFN obligation in Article I:1, the Enabling Clause, as the more specific rule, prevails over Article I:1. In order to determine whether such a conflict exists, however, a dispute settlement panel should, as a first step, examine the consistency of a challenged measure with Article I:1, as the general rule. If the measure is considered at this stage to be inconsistent with Article I:1, the panel should then examine, as a second step, whether the measure is nevertheless justified by the Enabling Clause. It is only at this latter stage that a final determination of consistency with the Enabling Clause or inconsistency with Article I:1 can be made.

[212] In this regard, we recall the Appellate Body's statement in *EC – Hormones* that:

> ... merely characterizing a treaty provision as an "exception" does not by itself justify a "stricter" or "narrower" interpretation of that provision than would be warranted by examination of the ordinary meaning of the actual treaty words, viewed in context and in the light of the treaty's object and purpose, or, in other words, by applying the normal rules of treaty interpretation.

(Appellate Body Report, para. 104)

[213] Panel Report, para. 7.53.

[214] European Communities' appellant's submission, para. 22.

[215] Appellate Body Report, *Canada – Autos*, para. 69. See also, Appellate Body Report, *US – Section 211 Appropriations Act*, para. 297, which reads:

> Like the national treatment obligation, the obligation to provide most-favoured-nation treatment has long been one of the cornerstones of the world trading system. For more than fifty years, the obligation to provide most-favoured-nation treatment in Article I of the GATT 1994 has been both central and essential to assuring the success of a global rules-based system for trade in goods.

102. In other words, the Enabling Clause "does not exclude the applicability"[216] of Article I:1 in the sense that, as a matter of procedure (or "order of examination", as the Panel stated[217]), the challenged measure is submitted successively to the test of compatibility with the two provisions. But, as a matter of final determination—or *application* rather than *applicability*—it is clear that only one provision applies at a time. This is what the Panel itself found when, after stating that "as an exception provision, the Enabling Clause applies concurrently with Article I:1", it added "and *takes precedence* to the extent of the conflict between the two provisions."[218]

103. It is with this understanding, therefore, that we *uphold* the Panel's finding, in paragraph 7.53 of the Panel Report, that the Enabling Clause "does not exclude the applicability" of Article I:1 of the GATT 1994.

D. *Burden of Proof*

104. We now examine the implications of the relationship between Article I:1 of the GATT 1994 and the Enabling Clause for the allocation of the burden of proof in this dispute. As a general rule, the burden of proof for an "exception" falls on the respondent, that is, as the Appellate Body stated in *US – Wool Shirts and Blouses*, on the party "assert[ing] the affirmative of a particular ... defence".[219] From this allocation of the burden of proof, it is normally for the respondent, first, to *raise* the defence and, second, to *prove* that the challenged measure meets the requirements of the defence provision.

105. We are therefore of the view that the European Communities must *prove* that the Drug Arrangements satisfy the conditions set out in the Enabling Clause. Consistent with the principle of *jura novit curia*[220], it is not the responsibility of the European Communities to provide us with the legal interpretation to be given to a particular provision in the Enabling Clause[221]; instead, the burden of the European Communities is to adduce sufficient evidence to substantiate its assertion that the Drug Arrangements comply with the requirements of the Enabling Clause.

1. Responsibility for Raising the Enabling Clause

106. With respect to the legal responsibility for *raising* a defence as an issue in a dispute settlement proceeding, however, we regard the particular circumstances of this case as dictating a special approach, given the fundamental role of the Enabling Clause in the WTO system as well as its contents. The Enabling Clause authorizes developed-country Members to grant enhanced market access to products from developing countries beyond that granted to products from developed countries. Enhanced market access is intended to provide developing countries with increasing returns from their growing exports, which returns are critical for those countries' economic development. The Enabling Clause thus plays a vital role in promoting trade as a means of stimulating economic growth and development. In this respect, the Enabling Clause is not a typical "exception", or "defence", in the style of Article XX of the GATT 1994, or of other exception provisions identified by the Appellate Body in previous cases.

107. A brief review of the history of the Enabling Clause confirms its special status in the covered agreements. When the GATT 1947 entered into force, the Contracting Parties stated that one of its objectives was to "rais[e] standards of living".[222] However, this objective was to be achieved in countries at all stages of economic development through the *universally-applied* commitments embodied in the GATT provisions. In 1965, the Contracting Parties added Articles XXXVI, XXXVII, and XXXVIII to form Part IV of the GATT 1947, entitled "Trade and Development".[223] Article XXXVI expressly recognized the "need for positive efforts" and "individual and joint action" so that developing countries would be able to share in the growth in international trade and further their economic development.[224] Some of these "positive efforts" resulted in the Agreed Conclusions of the United Nations Conference on Trade and Development ("UNCTAD") Special Committee on Preferences (the "Agreed Conclusions")[225], which recognized that preferential tariff treatment accorded under a generalized scheme of preferences was key for developing countries "*(a)* to increase their export earnings; *(b)* to promote their industrialization; and *(c)* to accelerate their rates of economic growth."[226] The Agreed Conclusions also made clear that the achievement of these objectives through the adoption of preferences by developed countries required a GATT waiver, in particular, with respect to the MFN obligation in Article I:1.[227] Accordingly, the Contracting Parties adopted the 1971 Waiver Decision in order to waive the obligations of Article I of the GATT 1947 and thereby authorize the granting of tariff preferences to developing countries for a period of ten years.[228]

108. In 1979, the Enabling Clause expanded the authorization provided by the 1971 Waiver Decision to cover additional preferential measures and made the authorization a permanent feature of the GATT. In his report at the conclusion of the Tokyo Round of negotiations, the then-Director General observed:

---

[216]Panel Report, para. 7.53.

[217]*Ibid.*, para. 7.45.

[218]*Ibid.* (emphasis added)

[219]Appellate Body Report, p. 14, DSR 1997:I, at 335. (See also, Appellate Body Report, *US – FSC (Article 21.5 – EC)*, para. 133; and Appellate Body Report, *India – Quantitative Restrictions*, para. 136)

[220]The principle of *jura novit curia* has been articulated by the International Court of Justice as follows:

> It being the duty of the Court itself to ascertain and apply the relevant law in the given circumstances of the case, the burden of establishing or proving rules of international law cannot be imposed upon any of the parties, for the law lies within the judicial knowledge of the Court.

(International Court of Justice, Merits, *Case Concerning Military and Paramilitary Activities in and against Nicaragua (Nicaragua v. United States of America)*, 1986 ICJ Reports, p. 14, para. 29 (quoting International Court of Justice, Merits, *Fisheries Jurisdiction Case (United Kingdom of Great Britain and Northern Ireland v. Iceland)*, 1974 ICJ Reports, p. 9, para. 17))

[221]Compare Appellate Body Report, *EC – Hormones*, para. 156, which states:

> [N]othing in the DSU limits the faculty of a panel freely to use arguments submitted by any of the parties -- or to develop its own legal reasoning -- to support its own findings and conclusions on the matter under its consideration. A panel might well be unable to carry out an objective assessment of the matter, as mandated by Article 11 of the DSU, if in its reasoning it had to restrict itself solely to arguments presented by the parties to the dispute.

[222]GATT 1947, Preamble, first recital.

[225]Attached as Annex D-4 to the Panel Report.

[226]Agreed Conclusions, para. I.2 (Panel Report, p. D-8).

[227]*Ibid.*, paras. IX.1 and IX.2(*c*) (Panel Report, pp. D-13–D-14).

[228]1971 Waiver Decision, para. (*a*) (Panel Report, p. D-4).

> The Enabling Clause meets a fundamental concern of developing countries by introducing differential and more favourable treatment as an integral part of the GATT system, no longer requiring waivers from the GATT. It also provides the perspective against which the participation of developing countries in the trading system may be seen.[229]

Members reaffirmed the significance of the Enabling Clause in 1994 with the incorporation of the Enabling Clause into the GATT 1994.[230] The relationship between trade and development, and in particular the role of the Enabling Clause, remain prominent on the agenda of the WTO, as recognized by the Doha Ministerial Conference in 2001.[231]

109. We thus understand that, between the entry into force of the GATT and the adoption of the Enabling Clause, the Contracting Parties determined that the MFN obligation failed to secure adequate market access for developing countries so as to stimulate their economic development. Overcoming this required recognition by the multilateral trading system that certain obligations, applied to all Contracting Parties, could impede rather than facilitate the objective of ensuring that developing countries secure a share in the growth of world trade. This recognition came through an authorization for GSP schemes in the 1971 Waiver Decision and then in the broader authorization for preferential treatment for developing countries in the Enabling Clause.[232]

110. In our view, the special status of the Enabling Clause in the WTO system has particular implications for WTO dispute settlement. As we have explained, paragraph 1 of the Enabling Clause enhances market access for developing countries as a means of improving their economic development by authorizing preferential treatment for those countries, "notwithstanding" the obligations of Article I. It is evident that a Member cannot implement a measure authorized by the Enabling Clause without according an "advantage" to a developing country's products over those of a developed country. It follows, therefore, that every measure undertaken pursuant to the Enabling Clause would necessarily be inconsistent with Article I, if assessed on that basis alone, but it would be exempted from compliance with Article I because it meets the requirements of the Enabling Clause. Under these circumstances, we are of the view that a complaining party challenging a measure taken pursuant to the Enabling Clause must allege more than mere inconsistency with Article I:1 of the GATT 1994, for to do only that would not convey the "legal basis of the complaint sufficient to present the problem clearly".[233] In other words, it is insufficient in WTO dispute settlement for a complainant to allege inconsistency with Article I:1 of the GATT 1994 if the complainant seeks also to argue that the measure is not justified under the Enabling Clause. This is especially so if the

[229]European Communities' appellant's submission, para. 25 (quoting Report by the Director-General of GATT, in GATT, *The Tokyo Round of Multilateral Trade Negotiations* (1979), Vol. I, p. 99).

[230]Para. 1(b)(iv) of the language of Annex 1A to the *WTO Agreement* incorporating the GATT 1994 into the *WTO Agreement*.

[231]Ministerial Decision of 14 November 2001, *Implementation-related Issues and Concerns*, WT/MIN(01)/17, paras. 12.1-12.2.

[232]We recognize that an exemption for developing countries from certain GATT obligations also resulted from the 1954-1955 Review Session, where the Contracting Parties amended the GATT by adding Article XVIII for the benefit of developing countries facing balance-of-payments difficulties or seeking to nurture an infant industry. (See Reports Relating to the Review of the Agreement: Quantitative Restrictions, GATT Document L/332/Rev.1 and Addenda, adopted 2, 4 and 5 March 1955, BISD, 3S/170, paras. 3, 35-36, 44, and 52)

[233]DSU, Art. 6.2. See also, Appellate Body Report, *Korea – Dairy*, paras. 120, 124, and 127.

challenged measure, like that at issue here, is plainly taken pursuant to the Enabling Clause, as we discuss *infra*.[234]

111. Furthermore, the history and objective of the Enabling Clause lead us to agree with the European Communities[235] that Members are *encouraged* to deviate from Article I in the pursuit of "differential and more favourable treatment" for developing countries. This deviation, however, is encouraged only to the extent that it complies with the series of requirements set out in the Enabling Clause, requirements that we find to be more extensive than more typical defences such as those found in Article XX.

112. Paragraph 2 of the Enabling Clause identifies the four types of measures to which the authorization of paragraph 1 applies:

> (*a*) Preferential tariff treatment accorded by developed contracting parties to products originating in developing countries in accordance with the Generalized System of Preferences,[3]
>
> (*b*) Differential and more favourable treatment with respect to the provisions of the General Agreement concerning non-tariff measures governed by the provisions of instruments multilaterally negotiated under the auspices of the GATT;
>
> (*c*) Regional or global arrangements entered into amongst less-developed contracting parties for the mutual reduction or elimination of tariffs and, in accordance with criteria or conditions which may be prescribed by the CONTRACTING PARTIES, for the mutual reduction or elimination of non-tariff measures, on products imported from one another
>
> (*d*) Special treatment of the least developed among the developing countries in the context of any general or specific measures in favour of developing countries.
>
> [3] As described in the Decision of the CONTRACTING PARTIES of 25 June 1971, relating to the establishment of "generalized, non-reciprocal and non discriminatory preferences beneficial to the developing countries" (BISD 18S/24).

Measures that a Member claims are exempt from a finding of inconsistency with Article I by virtue of the Enabling Clause must fit within these sub-paragraphs, of which the most relevant for this case is paragraph 2(a), which provides for GSP schemes. As we discuss in greater detail *infra*[236], this provision requires the preferential treatment to be "in accordance with" the GSP and further defines this obligation through each of the terms "generalized, non-reciprocal and non discriminatory". Paragraphs 2(b)-(d) impose different obligations to be satisfied by a Member taking a measure pursuant to those provisions. Paragraph 3 identifies three conditions that must also be satisfied by *any* measure under the Enabling Clause. Paragraph 4 sets forth procedural conditions for the introduction, modification, or withdrawal of a preferential measure for developing countries.

[234]*Infra*, paras. 116-117.

[235]European Communities' appellant's submission, para. 53.

[236]*Infra*, paras. 142-174.

Paragraphs 5 through 9 include obligations that are not necessarily related to measures providing "differential and more favourable treatment".[237]

113. In the light of the extensive requirements set forth in the Enabling Clause, we are of the view that, when a complaining party considers that a preference scheme of another Member does not meet one or more of those requirements, the specific provisions of the Enabling Clause with which the scheme allegedly falls afoul, form critical components of the "legal basis of the complaint"[238] and, therefore, of the "matter" in dispute.[239] Accordingly, a complaining party cannot, in good faith, ignore those provisions and must, in its request for the establishment of a panel, identify them and thereby "notif[y] the parties and third parties of the nature of [its] case".[240] For the failure of such a complaining party to raise the relevant provisions of the Enabling Clause would place an unwarranted burden on the responding party. This due process consideration applies equally to the elaboration of a complaining party's case in its written submissions, which must "explicitly" articulate a claim so that the panel and all parties to a dispute "understand that a specific claim has been made, [are] aware of its dimensions, and have an adequate opportunity to address and respond to it".[241]

114. Exposing preference schemes to open-ended challenges would be inconsistent, in our view, with the intention of Members, as reflected in the Enabling Clause, to "encourage"[242] the adoption of preferential treatment for developing countries and to provide a practical means of doing so within the legal framework of the covered agreements. Accordingly, although a responding party must defend the consistency of its preference scheme with the conditions of the Enabling Clause and must prove such consistency, a *complaining* party has to define the parameters within which the *responding* party must make that defence.

115. The responsibility of the complaining party in such an instance, however, should not be overstated. It is merely to *identify* those provisions of the Enabling Clause with which the scheme is allegedly inconsistent, without bearing the burden of *establishing* the facts necessary to support such inconsistency. That burden, as we concluded above[243], remains on the responding party invoking the Enabling Clause as a defence.

116. We observe, moreover, that the measure challenged in this dispute is unmistakably a preferential tariff scheme, granted by a developed-country Member in favour of developing countries, and proclaiming to be in accordance with the GSP. The Drug Arrangements are found in Council Regulation (EC) No. 2501/2001, the title of which indicates the Regulation to be "applying a scheme

[237]See Enabling Clause (attached as Annex 2 to this Report).

[238]DSU, Art. 6.2, which provides:

> The request for the establishment of a panel shall be made in writing. It shall indicate whether consultations were held, identify the specific measures at issue and provide a brief summary of the legal basis of the complaint sufficient to present the problem clearly. In case the applicant requests the establishment of a panel with other than standard terms of reference, the written request shall include the proposed text of special terms of reference.

[240]*Ibid.*, para. 126 (referring to Appellate Body Report, *Brazil – Desiccated Coconut*, p. 22, DSR 1997:I, at 186; and Appellate Body Report, *EC – Bananas III*, para. 142).

[241]Appellate Body Report, *Chile – Price Band System*, para. 164.

[242]European Communities' appellant's submission, para. 53.

[243]*Supra*, para. 105.

of generalised tariff preferences for the period from 1 January 2002 to 31 December 2004". The first recital in the Preamble to the Regulation provides:

> Since 1971, the Community has granted trade preferences to developing countries, in the framework of its scheme of generalised tariff preferences.

In its original proposal for the Regulation, the European Commission explained:

> In 1994, the Commission adopted some guidelines on the *role of the GSP* for the ten-year period 1995 to 2004. A new regulation is required in order to implement *those guidelines* for the remainder of the period, i.e. the years 2002 to 2004. This memorandum is meant to explain the proposal for that new regulation.[244] (footnote omitted; emphasis added)

In its amended proposal, adding Pakistan to the list of beneficiaries under the Drug Arrangements, the European Commission further stated:

> Since the *GSP drug regime* was extended to the countries of the Andean Community and to those of the Central American Common Market, it provided an important incentive to allow for the substitution of illicit crops, enhance exports in order to create jobs not linked to drug production and trafficking and foster diversification.
>
> The problems which Pakistan is facing today, are similar. The *GSP drug regime* is therefore likely to stabilise its economic and social structures and thus consolidate the institutions that uphold the rule of law.[245] (emphasis added)

117. It is therefore clear, on the face of the Regulation and from official, publicly-available explanatory documentation, that the Drug Arrangements challenged by India in this dispute are part of a preferential tariff scheme implemented by the European Communities pursuant to the authorization in paragraph 2(a) of the Enabling Clause. As such, India would have been well aware that the Drug Arrangements must comply with the requirements of the Enabling Clause, and that the European Communities was likely to invoke the Enabling Clause in response to a challenge of inconsistency with Article I:1. Indeed, India admitted as much before the Panel.[246] India also must have believed that at least certain of those requirements were not being met and that, as a consequence, the inconsistency of the Drug Arrangements with Article I could not be justified. Accordingly, India, as

[244]Explanatory Memorandum to the Proposal for a Council Regulation applying a scheme of generalised tariff preferences for the period 1 January 2002 to 31 December 2004, para. 1 (attached to Amended Proposal for a Council Regulation applying a scheme of generalised tariff preferences for the period 1 January 2002 to 31 December 2004, 2001/0131 (ACC), at p. 3) (Exhibit India-7 submitted by India to the Panel).

[245]Explanatory Memorandum to the Amended Proposal for a Council Regulation applying a scheme of generalised tariff preferences for the period 1 January 2002 to 31 December 2004, 2001/0131 (ACC), p. 2, fourth and fifth recitals (Exhibit India-7 submitted by India to the Panel).

[246]See, for example, India's first written submission to the Panel, para. 44, which states: "[S]ince the Drug Arrangements are part of the EC's GSP scheme, it may reasonably be assumed that the EC will invoke the Enabling Clause as a defence."

the complaining party, should reasonably have articulated its claims of inconsistency with specific provisions of the Enabling Clause at the outset of this dispute as part of its responsibility to "engage in [dispute settlement] procedures in good faith in an effort to resolve the dispute".[247]

118. In sum, although the burden of *justifying* the Drug Arrangements under the Enabling Clause falls on the European Communities, India was required to do more than simply allege inconsistency with Article I. India's claim of inconsistency with Article I with respect to the measure challenged here is inextricably linked with its argument that the Drug Arrangements do not satisfy the conditions in the Enabling Clause and that, therefore, they cannot be justified as a derogation from Article I. In the light of the above considerations, we are of the view that India was required to (i) identify, in its request for the establishment of a panel, which obligations in the Enabling Clause the Drug Arrangements are alleged to have contravened, and (ii) make written submissions in support of this allegation. The requirement to make such an argument, however, does not mean that India must prove inconsistency with a provision of the Enabling Clause, because the ultimate burden of establishing the consistency of the Drug Arrangements with the Enabling Clause lies with the European Communities.[248]

2. Whether India Raised the Enabling Clause Before the Panel

119. We turn now to examine whether, in fact, India fulfilled these requirements and thereby sufficiently identified the scope of its claim before the Panel. In its request for consultations, India claimed that the Drug Arrangements and the special incentive arrangements for the protection of labour rights and the environment "nullify or impair the benefits accruing to India under the most-favoured-nation provisions of Article I:1 of the GATT 1994 and paragraphs 2(a), 3(a) and 3(c) of the Enabling Clause."[249] In its request for the establishment of a panel, India asked that a panel examine whether the aforementioned arrangements of the European Communities' GSP scheme "are consistent with Article I:1 of the GATT 1994 and the requirements set out in paragraphs 2(a), 3(a) and 3(c) of the Enabling Clause".[250] The Panel's terms of reference, therefore, included India's allegations that certain aspects of the European Communities' GSP scheme were not "consistent" with, or did not "meet the requirements set out in", paragraphs 2(a), 3(a), and 3(c) of the Enabling Clause.[251]

120. In its written submissions before the Panel, India clearly invoked paragraph 2(a) of the Enabling Clause as the basis for its allegation that the Drug Arrangements are not "justified" by the Enabling Clause.[252] For example, in its first written submission before the Panel, India stated:

> The tariff preferences under the Drug Arrangements are beneficial to some developing countries and detrimental to others and consequently do not comply with paragraph 2(a) of the Enabling Clause.[253]

121. India's second written submission before the Panel included a sub-heading entitled, "The EC has failed to demonstrate that under the Drug Arrangements it accords tariff treatment that is 'non-discriminatory' within the meaning of paragraph 2(a) of the Enabling Clause".[254] Under this sub-heading, India argued:

> [P]aragraph 2(a) of the Enabling Clause was meant to ensure that benefits under the GSP are extended to *all* developing countries, as opposed to some developing countries. Paragraph 2(a) of the Enabling Clause does not envisage selectivity. Instead, it requires that preferential tariff treatment is accorded to all developing countries.[255] (original italics)

India further argued that, even if the European Communities' interpretation of paragraph 2(a) were correct, the Drug Arrangements would not be "non-discriminatory", as required by footnote 3 to paragraph 2(a).[256]

[247]DSU, Art. 3.10. See also, Appellate Body Report, *US – FSC*, para. 166, which reads:

> Article 3.10 of the DSU commits Members of the WTO, if a dispute arises, to engage in dispute settlement procedures "in good faith in an effort to resolve the dispute". This is another specific manifestation of the principle of good faith which, we have pointed out, is at once a general principle of law and a principle of general international law. This pervasive principle requires both complaining and responding Members to comply with the requirements of the DSU (and related requirements in other covered agreements) in good faith. By good faith compliance, complaining Members accord to the responding Members the full measure of protection and opportunity to defend, contemplated by the letter and spirit of the procedural rules. (footnote omitted)

[248]Compare Appellate Body Report, *US – Certain EC Products*, para. 114, which states:

> On the basis of our review of the European Communities' submissions and statements to the Panel, we conclude that the European Communities *did not specifically claim* before the Panel that, by adopting the 3 March Measure, the United States acted inconsistently with Article 23.2(a) of the DSU. As the European Communities did not make a specific claim of inconsistency with Article 23.2(a), it *did not adduce any evidence or arguments* to demonstrate that the United States made a "determination as to the effect that a violation has occurred" in breach of Article 23.2(a) of the DSU. And, as the European Communities did not adduce any evidence or arguments in support of a claim of violation of Article 23.2(a) of the DSU, the European Communities could not have established, and *did not establish, a prima facie case* of violation of Article 23.2(a) of the DSU. (footnotes omitted; emphasis added)

[249]Request for consultations by India, WT/DS246/1, 12 March 2002, p. 1.

[250]Request for the establishment of a panel by India, WT/DS246/4, 9 December 2002, p. 2. In addition to the Drug Arrangements and the special incentives for the protection of labour rights and the environment, India also challenged the WTO-consistency of "any implementing rules and regulations, ... any amendments to any of the foregoing, and ... their application". (*Ibid.*)

[251]Request for the establishment of a panel by India, WT/DS246/4, 9 December 2002, pp. 1-2. The Panel's terms of reference incorporated these allegations by reference to document WT/DS246/4. (Constitution of the panel established at the request of India, WT/DS246/5, 6 March 2003, para. 2)

[252]India's first written submission to the Panel, heading IV.C. and para. 67; India's second written submission to the Panel, heading III.B. and para. 164. By the time of its first written submission to the Panel, India had indicated to the European Communities and to the Panel that this dispute was limited to the WTO-consistency of the Drug Arrangements, but that India reserved its right to challenge the special incentives for the protection of labour rights and the environment in a future dispute settlement proceeding. (See *supra*, para. 4; and Panel Report, para. 1.5) Both participants confirmed, in response to questioning at the oral hearing, that the measure at issue in this dispute was limited to the Drug Arrangements.

[253]India's first written submission to the Panel, para. 62.

[254]India's second written submission to the Panel, heading III.B.3.

[255]*Ibid.*, para. 95.

[256]*Ibid.*, paras. 119-128.

122. We find that India acted in good faith, in its written submissions before the Panel, explaining why, in its view, the Drug Arrangements fail to meet certain requirements of the Enabling Clause, namely, those present in paragraph 2(a). Such an explanation, in our view, was sufficient to place the European Communities on notice as to the reasons underlying India's allegation that the Drug Arrangements are not justified by the relevant provision of the Enabling Clause. With such notice, the European Communities could be expected to defend its challenged measure under the Enabling Clause, in relation to which the European Communities ultimately bears the burden of justification.

123. In allocating the burden of proof, therefore, we conclude that India was required to raise the Enabling Clause in making its claim of inconsistency with Article I:1. Once India had identified, in its panel request and through argumentation in its written submissions, the relevant obligations of the Enabling Clause that it claims were not satisfied by the Drug Arrangements, the European Communities was then required to prove that the Drug Arrangements met those obligations, having chosen to rely on the Enabling Clause as a defence.

124. Finally, we observe that the European Communities' appeal of the Panel's conclusion that the Drug Arrangements are inconsistent with Article I:1 of the GATT 1994 is "based on" the European Communities' claim that the Panel erroneously found that (i) the Enabling Clause is an "exception" to Article I:1; (ii) the Enabling Clause "does not exclude the applicability" of Article I:1; and (iii) the European Communities had the burden of proving the consistency of the Drug Arrangements with that Clause.[257] As we have not reversed any of these findings of the Panel[258], we do not need to review further and we *do not rule* on the Panel's conclusion that the Drug Arrangements are inconsistent with Article I:1 of the GATT 1994.[259]

[257]In its Notice of Appeal, the European Communities' reference to Article I:1 was limited to its decision to:

> ... seek[] review of the Panel's legal conclusion that [the Drug Arrangements] are inconsistent with Article I:1 ... This conclusion is based on the following erroneous legal findings:
>
> - that the Enabling Clause is an "exception" to Article I:1 of the GATT;
> - that the Enabling Clause does not exclude the applicability of Article I:1 of the GATT;
> - that the EC had the burden of proving that the Drug Arrangements were consistent with the Enabling Clause.

(Notification of an appeal by the European Communities, WT/DS246/7, 8 January 2004, p.1 (attached as Annex 1 to this Report))

[258]*Supra*, paras. 99, 103, and 123.

[259]Panel Report, paras. 7.60 and 8.1(b). The European Communities confirmed, in response to questioning at the oral hearing, that it is not appealing the Panel's conclusion, in paragraph 7.60 of the Panel Report, that the tariff advantages under the Drug Arrangements are inconsistent with Article I:1 because they are not accorded "unconditionally" to the like products originating in all other WTO Members.

125. For these reasons, we *modify* the Panel's finding, in paragraph 7.53 of the Panel Report, that "the European Communities bears the burden of invoking the Enabling Clause and justifying its Drug Arrangements under that provision." We *find* that it was incumbent upon India to *raise* the Enabling Clause in making its claim of inconsistency with Article I:1 of the GATT 1994, but that the European Communities bore the burden of *proving* that the Drug Arrangements satisfy the conditions of the Enabling Clause, in order to justify those Arrangements under that Clause. We *find*, further, that India sufficiently raised paragraph 2(a) of the Enabling Clause in making its claim of inconsistency with Article I:1 before the Panel. We turn now to examine whether the European Communities met its burden of justifying the Drug Arrangements under that provision.

V. Whether the Drug Arrangements are Justified Under the Enabling Clause

126. The European Communities "appeals subsidiarily" the Panel's finding that the Drug Arrangements are not justified under paragraph 2(a), should we "conclude that the Enabling Clause is an exception to GATT Article I:1, or that India made a valid claim under the Enabling Clause".[260] Having found that the Enabling Clause is in the nature of an exception to Article I:1 of the GATT 1994, we proceed to examine the European Communities' appeal as it relates to paragraph 2(a) of the Enabling Clause.

127. The European Communities challenges three of the Panel's findings, namely that:

(a) "the term 'non-discriminatory' in footnote 3 [to paragraph 2(a) of the Enabling Clause] requires that identical tariff preferences under GSP schemes be provided to all developing countries without differentiation, except for the implementation of a priori limitations"[261];

(b) "the term 'developing countries' in paragraph 2(a) [of the Enabling Clause] should be interpreted to mean *all* developing countries, with the exception that where developed countries are implementing a priori limitations, 'developing countries' may mean *less than all* developing countries"[262]; and, ultimately, that

(c) the European Communities failed "to demonstrate that the Drug Arrangements are justified under paragraph 2(a) of the Enabling Clause".[263]

128. Before addressing these specific issues, we will identify the precise scope of the appeal before us. In doing so, we note that both the European Communities and India agree that, in addressing paragraph 2(a) of the Enabling Clause, the Panel implicitly made findings on issues that were not before it. Thus, India submits that "[t]he issue before the Panel was not whether the EC could exclude from its GSP scheme countries claiming developing country status."[264] In India's view, that issue did not arise "because India and all the countries enjoying tariff preferences under the Drug Arrangements are beneficiaries under the EC's GSP scheme."[265] Also not before the Panel, according to India, was "whether the EC's mechanisms for the graduation of developing countries meet the requirements of

[260]European Communities' appellant's submission, para. 67.

[261]Panel Report, paras. 7.161 and 7.176.

[262]*Ibid.*, para. 7.174. (original italics; footnote omitted)

[263]*Ibid.*, para. 8.1(d).

[264]India's appellee's submission, para. 101.

[265]*Ibid.*

the Enabling Clause."[266] India emphasizes that it "did not submit any claims on these issues to the Panel because they are not relevant to the resolution of this dispute."[267] In other words, according to India, the legal issues raised in this dispute "relate exclusively"[268] to the treatment of those countries that a preference-granting country has included in its GSP scheme as beneficiaries. The European Communities echoes India's concern that the Panel read obligations into the Enabling Clause "in respect of issues which had not been raised by any of the parties and which [the Panel] did not have to address in order to resolve the dispute".[269]

129. Against this background, we understand India's claim before the Panel to have been limited to the consistency of the Drug Arrangements with the term "non-discriminatory" in footnote 3 to paragraph 2(a) of the Enabling Clause.[270] In particular, India's challenge to the Drug Arrangements is based on its submission that the term "non-discriminatory" prevents preference-granting countries from according preferential tariff treatment to any beneficiary of their GSP schemes without granting identical preferential tariff treatment to all other beneficiaries. Therefore, in this Report, we do not rule on whether the Enabling Clause permits *ab initio* exclusions from GSP schemes of countries claiming developing country status, or the partial or total withdrawal of GSP benefits from certain developing countries under certain conditions.

130. We note, moreover, that the European Communities has *not* appealed the Panel's interpretation of paragraph 3(c) of the Enabling Clause.[271] Instead, the European Communities has invoked that provision solely as "contextual support" for its interpretation of "non-discriminatory" in footnote 3.[272] We also note that the Panel made no findings in this case as to whether the Drug Arrangements are inconsistent with paragraph 3(a) or 3(c) of the Enabling Clause. Our mandate, pursuant to Article 17.6 of the DSU, is limited to "issues of law covered in the panel report and legal interpretations developed by the panel". Therefore, in this appeal, we are not required to, and we shall not address, the issue of whether the Drug Arrangements are consistent with paragraphs 3(a) and 3(c) of the Enabling Clause. This does not prevent us, of course, from examining those paragraphs as context for our interpretation of "non-discriminatory" in footnote 3.

131. With these considerations in mind, we turn to address the meaning of the term "non-discriminatory" in footnote 3. In doing so, we consider it useful to begin our analysis by setting out briefly the relevant findings of the Panel.

[266]India's opening statement at the oral hearing. By "graduation", we understand India to refer to the withdrawal of preferential tariff treatment with respect to specific products or designated developing countries on grounds of the degree of their development.

[267]India's opening statement at the oral hearing.

[268]India's appellee's submission, para. 103.

[269]European Communities' appellant's submission, para. 7.

[270]See *supra*, paras. 120-122.

[271]The European Communities refers to the Panel's finding, in paragraph 7.99 of the Panel Report, that paragraph 3(c) requires preference-granting countries to "provide product coverage and tariff cuts at levels in general no less than those offered and accepted in the Agreed Conclusions." The European Communities explains that "[s]ince this issue was not raised by India and is not directly relevant to the issues in dispute, ... the EC has not deemed [it necessary] to appeal it." (European Communities' appellant's submission, footnote 40 to para. 47)

[272]European Communities' appellant's submission, para. 126.

A. *Panel Findings*

132. The Panel stated at the outset that "[t]he main issue disputed by the parties is whether the Drug Arrangements are consistent with paragraph 2(a) of the Enabling Clause, particularly the requirement of 'non-discriminatory' in footnote 3 to this subparagraph."[273] Paragraph 2(a) reads:

> 2. The provisions of paragraph 1 apply to the following:
>
> (*a*) Preferential tariff treatment accorded by developed contracting parties to products originating in developing countries in accordance with the Generalized System of Preferences,[3]
>
> [3] As described in the Decision of the CONTRACTING PARTIES of 25 June 1971, relating to the establishment of "generalized, non-reciprocal and non discriminatory preferences beneficial to the developing countries" (BISD 18S/24). (footnote 2 omitted)

133. The Panel went on to examine, not the language of those provisions, but the meaning of paragraph 3(c) of the Enabling Clause, which reads:

> 3. Any differential and more favourable treatment provided under this clause:
>
> ...
>
> (*c*) shall in the case of such treatment accorded by developed contracting parties to developing countries be designed and, if necessary, modified, to respond positively to the development, financial and trade needs of developing countries.

The Panel explained that "[i]t is only possible to give a full meaning to paragraph 2(a) and footnote 3 after determining whether paragraph 3(c) allows differentiation among developing countries in 'respond[ing] positively to the development, financial and trade needs of developing countries'."[274]

134. Having found that the text of paragraph 3(c) "does not reveal whether the 'needs of developing countries' refers to the needs of *all* developing countries or to the needs of *individual* developing countries"[275], the Panel proceeded to examine "the drafting history in UNCTAD ... to identify the intention of the drafters on issues relating to the GSP arrangements."[276] The Panel concluded that paragraph 3(c) allows for differentiation among beneficiaries for the purposes of granting preferential treatment to least-developed countries and setting *a priori* import limitations for

[273]Panel Report, para. 7.65.

[274]Panel Report, para. 7.65 (quoting Enabling Clause, para. 3(c) (attached as Annex 2 to this Report)). In a footnote, the Panel explained further that "[t]he European Communities argue[d] that 'if the term "non-discriminatory" was interpreted as prohibiting any difference in treatment between developing countries, developed countries would be effectively precluded from responding positively to those needs, thus rendering [to] a nullity the requirement set forth in paragraph 3(c)'." (*Ibid.*, footnote 291 to para. 7.65 (quoting European Communities' first written submission to the Panel, para. 71))

[275]*Ibid.*, para. 7.78. (original italics)

[276]*Ibid.*, para. 7.80.

products originating in particularly competitive developing countries. The Panel asserted that "[n]o other differentiation among developing countries is permitted by paragraph 3(c)."[277]

135. Having made these findings based on its review of what it considered the "context" and "preparatory work"[278] of paragraph 3(c) of the Enabling Clause, the Panel turned to examine paragraph 2(a) and footnote 3 thereto. The Panel observed that the word "discriminate ... can have either a *neutral* meaning of making a distinction or a *negative* meaning carrying the connotation of a distinction that is unjust or prejudicial."[279] In order to determine the appropriate meaning of the term "non-discriminatory" as used in footnote 3, the Panel turned to the context of that term. According to the Panel, this context includes paragraphs 2(a), 2(d), and 3(c) of the Enabling Clause, with the "most relevant elements of context" being Resolution 21(II) of the Second Session of UNCTAD ("Resolution 21(II)")[280] and the Agreed Conclusions.[281] Based on its review of these documents, the Panel found that:

> … the clear intention of the negotiators was to provide GSP equally to all developing countries and to eliminate all differentiation in preferential treatment to developing countries, with the exception of the implementation of a priori limitations in GSP schemes.[282]

136. The Panel concluded:

> … that the requirement of non-discrimination, as a general principle formally set out in Resolution 21(II) and later carried over into the 1971 Waiver Decision and then into the Enabling Clause, obliges preference-giving countries to provide the GSP benefits to *all* developing countries without differentiation, except for the implementation of a priori limitations in GSP schemes.[283] (original italics)

137. The Panel found further support for its conclusion in its previous analysis of paragraph 3(c)[284] and in paragraph 2(d) of the Enabling Clause, which provides:

> 2. The provisions of paragraph 1 apply to the following:
>
> ...
>
> (*d*) Special treatment of the least developed among the developing countries in the context of any general or specific measures in favour of developing countries. (footnote omitted)

[277] *Ibid.*, para. 7.116.

[278] *Ibid.*, para. 7.88.

[279] *Ibid.*, para. 7.126. (original italics)

[280] Resolution 21(II) of the Second Session of UNCTAD, entitled "Expansion and Diversification of Exports of Manufactures and Semi-Manufactures of Developing Countries" (attached as Annex D-3 to the Panel Report).

[281] Panel Report, para. 7.128.

[282] *Ibid.*, para. 7.144.

[283] *Ibid.*

[284] *Ibid.*, paras. 7.148-7.149.

The Panel stated that the term "non-discriminatory" cannot be interpreted "to permit preferential treatment to less than all developing countries without an explicit authorization".[285] According to the Panel, "[s]uch explicit authorization is only provided for the benefit of the least-developed countries in paragraph 2(d) of the Enabling Clause and for the implementation of a priori limitations, as set out in the Agreed Conclusions."[286]

138. Turning to the "object and purpose" of the Enabling Clause, the Panel considered that "the objective of promoting the trade of developing countries and that of promoting trade liberalization generally"[287] are relevant for the interpretation of the term "non-discriminatory". The Panel determined, however, that the latter "contributes more to guiding the interpretation of 'non-discriminatory', given its function of preventing abuse in providing GSP."[288]

139. The Panel found further support for its interpretation in an examination of the "overall practice" of preference-granting countries[289], which, according to the Panel, "suggests that there was a common understanding of 'equal' treatment to all developing countries except for a priori measures, and that it was on this basis that the 1971 Waiver Decision was adopted."[290]

140. Based on its analysis described above, the Panel found that:

> ... the term "non-discriminatory" in footnote 3 requires that *identical* tariff preferences under GSP schemes be provided to *all* developing countries without differentiation, except for the implementation of a priori limitations.[291] (emphasis added)

141. Regarding the measure at issue in this dispute, the Panel found that:

> ... the European Communities' Drug Arrangements, as a GSP scheme, do not provide identical tariff preferences to *all* developing countries and that the differentiation is neither for the purpose of special treatment to the least-developed countries, nor in the context of the implementation of a priori measures. Such differentiation is inconsistent with paragraph 2(a), particularly the term "non-discriminatory" in footnote 3[.][292] (original italics)

Consequently, the Panel also found that "the European Communities has failed to demonstrate that the Drug Arrangements are justified under paragraph 2(a) of the Enabling Clause".[293]

[293] *Ibid.*, para. 8.1(d).

B. *Interpretation of the Term "Non-Discriminatory" in Footnote 3 to Paragraph 2(a) of the Enabling Clause*

142. We proceed to interpret the term "non-discriminatory" as it appears in footnote 3 to paragraph 2(a) of the Enabling Clause.

143. We recall first that the Enabling Clause has become a part of the GATT 1994.[294] Paragraph 1 of the Enabling Clause authorizes WTO Members to provide "differential and more favourable treatment to developing countries, without according such treatment to other WTO Members". As explained above, such differential treatment is permitted "notwithstanding" the provisions of Article I of the GATT 1994. Paragraph 2(a) and footnote 3 thereto clarify that paragraph 1 applies to "[p]referential tariff treatment accorded by developed contracting parties to products originating in developing countries in accordance with the Generalized System of Preferences"[295], "[a]s described in the [1971 Waiver Decision], relating to the establishment of 'generalized, non-reciprocal and non discriminatory preferences beneficial to the developing countries'".[296]

144. The Preamble to the 1971 Waiver Decision in turn refers to "preferential tariff treatment" in the following terms:

> *Recalling* that at the Second UNCTAD, unanimous agreement was reached in favour of the early establishment of a mutually acceptable system of generalized, non-reciprocal and non-discriminatory preferences beneficial to the developing countries in order to increase the export earnings, to promote the industrialization, and to accelerate the rates of economic growth of these countries;
>
> *Considering* that mutually acceptable arrangements have been drawn up in the UNCTAD concerning the establishment of generalized, non-discriminatory, non-reciprocal preferential tariff treatment in the markets of developed countries for products originating in developing countries[.][297] (original italics; underlining added)

145. Paragraph 2(a) of the Enabling Clause provides, therefore, that, to be justified under that provision, preferential tariff treatment must be "in accordance" with the GSP "as described" in the *Preamble* to the 1971 Waiver Decision. "Accordance" being defined in the dictionary as "conformity"[298], only preferential tariff treatment that is in conformity with the description "generalized, non-reciprocal and non-discriminatory" treatment can be justified under paragraph 2(a).

146. In the light of the above, we do not agree with European Communities' assertion[299] that the Panel's interpretation of the word "non-discriminatory" in footnote 3 of the Enabling Clause is erroneous because the phrase "generalized, non-reciprocal and non discriminatory" in footnote 3 merely refers to the description of the GSP in the 1971 Waiver Decision and, of itself, does not

[294] See *supra*, footnote 192.

[295] Enabling Clause, para. 2(a) (attached as Annex 2 to this Report).

[299] European Communities' response to questioning at the oral hearing.

impose any legal obligation on preference-granting countries. Nor do we agree with the United States that the Panel erred in "assum[ing]" that the term "non-discriminatory" in footnote 3 imposes obligations on preference-granting countries, and that, instead, footnote 3 "is simply a cross-reference to where the Generalized System of Preferences is described."[300]

147. We find support for our interpretation in the French version of paragraph 2(a) of the Enabling Clause, requiring that the tariff preferences be accorded "*conformément au Système généralisé de préférences*". The term "in accordance" is thus "*conformément*" in the French version. In addition, the phrase "[a]s described in [the 1971 Waiver Decision]" in footnote 3 is stated as "*[t]el qu'il est défini dans la décision des PARTIES CONTRACTANTES en date du 25 juin 1971*". Similarly, the Spanish version uses the terms "*conformidad*" and "*[t]al como lo define la Decisión de las PARTES CONTRATANTES de 25 de junio de 1971*". In our view, the stronger, more obligatory language in both the French and Spanish texts—that is, using "as defined in" rather than "as described in"—lends support to our view that only preferential tariff treatment that is "generalized, non-reciprocal and non-discriminatory" is covered under paragraph 2(a) of the Enabling Clause.[301]

148. Having found that the qualification of the GSP as "generalized, non-reciprocal and non discriminatory" imposes obligations that must be fulfilled for preferential tariff treatment to be justified under paragraph 2(a), we turn to address the Panel's finding that:

> ... the term "non-discriminatory" in footnote 3 requires that *identical* tariff preferences under GSP schemes be provided to *all* developing countries without differentiation, except for the implementation of a priori limitations.[302] (emphasis added)

149. The European Communities maintains that "'non-discrimination' is not synonymous with formally equal treatment"[303] and that "[t]reating differently situations which are objectively different is not discriminatory."[304] The European Communities asserts that "[t]he objective of the Enabling Clause is different from that of Article I:1 of the GATT."[305] In its view, the latter is concerned with "providing equal conditions of competition for imports of like products originating in all Members", whereas "the Enabling Clause is a form of Special and Differential Treatment for developing countries, which seeks the opposite result: to create unequal competitive opportunities in order to respond to the special needs of developing countries."[306] The European Communities derives contextual support from paragraph 3(c), which states that the treatment provided under the Enabling

[300] United States' third participant's submission, para. 11.

[301] We further note the existence of a 1999 WTO waiver allowing *developing* countries to grant special preferences to *least-developed* countries. (Waiver Decision on Preferential Tariff Treatment for Least-Developed Countries, WT/L/304, 15 June 1999 (the "1999 LDC Waiver")) That waiver applies only to "preferential tariff treatment ... provided on a generalized, non-reciprocal and non-discriminatory basis". (*Ibid.*, para. 2) As such, for tariff preferences to be justified thereunder, there is a *requirement* that the treatment be accorded on a "generalized, non-reciprocal and non-discriminatory *basis*." (emphasis added) We see no reason why *developed* countries would be permitted to provide preferential tariff treatment to developing countries under the Enabling Clause other than on a "non-discriminatory basis", when there is clearly a requirement for *developing* countries to provide such treatment to least-developed countries on a "non-discriminatory basis" under the 1999 LDC Waiver.

[302] Panel Report, para. 7.161.

[306] *Ibid.*

Clause "shall ... be designed and, if necessary, modified, to respond positively to the development, financial and trade needs of developing countries." The European Communities concludes that the term "non-discriminatory" in footnote 3 "does not prevent the preference-giving countries from differentiating between developing countries which have different development needs, where tariff differentiation constitutes an adequate response to such differences."[307]

150. India, in contrast, asserts that "non-discrimination in respect of tariff measures refers to formally equal[] treatment"[308] and that paragraph 2(a) of the Enabling Clause requires that "preferential tariff treatment [be] applied equally" among developing countries.[309] In support of its argument, India submits that an interpretation of paragraph 2(a) of the Enabling Clause that authorizes developed countries to provide "discriminatory tariff treatment *in favour of the developing countries* but not *between the developing countries* gives full effect to both Article I of the GATT and paragraph 2(a) of the Enabling Clause and minimises the conflict between them."[310] India emphasizes that, by consenting to the adoption of the Enabling Clause, developing countries did not "relinquish[] their MFN rights [under Article I of the GATT 1994] as between themselves, thus permitting developed countries to discriminate between them."[311]

151. We examine now the ordinary meaning of the term "non-discriminatory" in footnote 3 to paragraph 2(a) of the Enabling Clause. As we observed, footnote 3 requires that GSP schemes under the Enabling Clause be "generalized, non-reciprocal and non discriminatory". Before the Panel, the participants offered competing definitions of the word "discriminate". India suggested that this word means "'to make or constitute a difference in or between; distinguish' and 'to make a distinction in the treatment of different categories of peoples or things'."[312] The European Communities, however, understood this word to mean "'to make a distinction in the treatment of different categories of people or things, esp. *unjustly* or *prejudicially* against people on grounds of race, colour, sex, social status, age, etc.'"[313]

152. Both definitions can be considered as reflecting ordinary meanings of the term "discriminate"[314] and essentially exhaust the relevant ordinary meanings. The principal distinction between these definitions, as the Panel noted, is that India's conveys a "*neutral* meaning of making a distinction", whereas the European Communities' conveys a "*negative* meaning carrying the connotation of a distinction that is unjust or prejudicial."[315] Accordingly, the ordinary meanings of "discriminate" point in conflicting directions with respect to the propriety of according differential treatment. Under India's reading, any differential treatment of GSP beneficiaries would be prohibited, because such treatment necessarily makes a distinction between beneficiaries. In contrast, under the European Communities' reading, differential treatment of GSP beneficiaries would not be prohibited *per se*. Rather, distinctions would be impermissible only where the basis for such distinctions was improper. Given these divergent meanings, we do not regard the term "non-discriminatory", on its own, as determinative of the permissibility of a preference-granting country according different tariff preferences to different beneficiaries of its GSP scheme.

[315] Panel Report, para. 7.126. (original italics)

153. Nevertheless, at this stage of our analysis, we are able to discern some of the content of the "non-discrimination" obligation based on the ordinary meanings of that term. Whether the drawing of distinctions is *per se* discriminatory, or whether it is discriminatory only if done on an improper basis, the ordinary meanings of "discriminate" converge in one important respect: they both suggest that distinguishing among similarly-situated beneficiaries is discriminatory. For example, India suggests that all beneficiaries of a particular Member's GSP scheme are similarly-situated, implicitly arguing that any differential treatment of such beneficiaries constitutes discrimination. The European Communities, however, appears to regard GSP beneficiaries as similarly-situated when they have "similar development needs".[316] Although the European Communities acknowledges that differentiating between similarly-situated GSP beneficiaries would be inconsistent with footnote 3 of the Enabling Clause, it submits that there is no inconsistency in differentiating between GSP beneficiaries with "different development needs".[317] Thus, based on the ordinary meanings of "discriminate", India and the European Communities effectively appear to agree that, pursuant to the term "non-discriminatory" in footnote 3, similarly-situated GSP beneficiaries should not be treated differently.[318] The participants disagree only as to the basis for determining whether beneficiaries are similarly-situated.

154. Paragraph 2(a), on its face, does not explicitly authorize or prohibit the granting of different tariff preferences to different GSP beneficiaries. It is clear from the ordinary meanings of "non-discriminatory", however, that preference-granting countries must make available identical tariff preferences to all similarly-situated beneficiaries.

155. We continue our interpretive analysis by turning to the immediate context of the term "non-discriminatory". We note first that footnote 3 to paragraph 2(a) stipulates that, in addition to being "non-discriminatory", tariff preferences provided under GSP schemes must be "generalized". According to the ordinary meaning of that term, tariff preferences provided under GSP schemes must be "generalized" in the sense that they "apply more generally; [or] become extended in application".[319] However, this ordinary meaning alone may not reflect the entire significance of the word

[316] European Communities' appellant's submission, para. 175. (See also, *ibid.*, para. 186)

[317] *Ibid.*, para. 188.

[318] We note that the contrasting definitions proffered by the participants, as well as the convergence of those definitions on the fact that similarly-situated entities should not be treated differently, find reflection in the use of the term "discrimination" in general international law. In this respect, we note, as an example, the definitions of "discrimination" provided by the European Communities, in footnotes 56 and 57 of its appellant's submission:

> [56] ... Mere differences of treatment do not necessarily constitute discrimination … discrimination may in general be said to arise where those who are in all material respects the same are treated differently, or where those who are in material respects different are treated in the same way.

(quoting R. Jennings and A. Watts (eds.), *Oppenheim's International Law*, 9th ed. (Longman, 1992), Vol. I, p. 378)

> [57] ... Discrimination occurs when in a legal system an inequality is introduced in the enjoyment of a certain right, or in a duty, while there is no sufficient connection between the inequality upon which the legal inequality is based, and the right or the duty in which this inequality is made.

(quoting E.W. Vierdag, *The Concept of Discrimination in International Law*, (Martinus Nijhoff, 1973), p. 61)

[319] *Shorter Oxford English Dictionary*, 5th ed., W.R. Trumble, A. Stevenson (eds.) (Oxford University Press, 2002), Vol. 1, p. 1082.

"generalized" in the context of footnote 3 of the Enabling Clause, particularly because that word resulted from lengthy negotiations leading to the GSP. In this regard, we note the Panel's finding that, by requiring tariff preferences under the GSP to be "generalized", developed and developing countries together sought to eliminate existing "special" preferences that were granted only to certain designated developing countries.[320] Similarly, in response to our questioning at the oral hearing, the participants agreed that one of the objectives of the 1971 Waiver Decision and the Enabling Clause was to eliminate the fragmented system of special preferences[321] that were, in general, based on historical and political ties between developed countries and their former colonies.

156. It does not necessarily follow, however, that "non-discriminatory" should be interpreted to require that preference-granting countries provide "identical" tariff preferences under GSP schemes to "all" developing countries. In concluding otherwise, the Panel assumed that allowing tariff preferences such as the Drug Arrangements would necessarily "result [in] the collapse of the whole GSP system and a return back to special preferences favouring selected developing countries".[322] To us, this conclusion is unwarranted. We observe that the term "generalized" requires that the GSP schemes of preference-granting countries remain generally applicable.[323] Moreover, unlike the Panel, we believe that the Enabling Clause sets out sufficient conditions on the granting of preferences to protect against such an outcome. As we discuss below[324], provisions such as paragraphs 3(a) and 3(c) of the Enabling Clause impose specific conditions on the granting of different tariff preferences among GSP beneficiaries.

157. As further context for the term "non-discriminatory" in footnote 3, we turn next to paragraph 3(c) of the Enabling Clause, which specifies that "differential and more favourable treatment" provided under the Enabling Clause:

> ... shall in the case of such treatment accorded by developed contracting parties to developing countries be designed and, if necessary, modified, to respond positively to the development, financial and trade needs of developing countries.

158. At the outset, we note that the use of the word "shall" in paragraph 3(c) suggests that paragraph 3(c) sets out an obligation for developed-country Members in providing preferential

[320]Panel Report, paras. 7.135-7.137. The Panel also observed that statements by developed and developing countries indicated the aim of providing GSP schemes with a broad scope, encompassing the granting of preferences by *all* developed countries to *all* developing countries. (*Ibid.*, paras. 7.131-7.132)

[321]See also European Communities' appellant's submission, para. 175.

[322]Panel Report, para. 7.102.

[323]The European Communities argues in this respect that the GATT Contracting Parties and the WTO Members have granted a number of waivers, as mentioned in the Panel Report, for tariff preferences that are "confined *ab initio* and permanently to a limited number of developing countries located in a certain geographical region". (European Communities' appellant's submission, paras. 184-185 (referring to Panel Report, para. 7.160)) See also, Panel Report, footnote 31 to para. 4.32 (referring to Waiver Decision on the Caribbean Basin Economic Recovery Act, GATT Document L/5779, 15 February 1985, BISD 31S/20, renewed 15 November 1995, WT/L/104; Waiver Decision on CARIBCAN, GATT Document L/6102, 28 November 1986, BISD 33S/97, renewed 14 October 1996, WT/L/185; Waiver Decision on the United States – Andean Trade Preference Act, GATT Document L/6991, 19 March 1992, BISD 39S/385, renewed 14 October 1996, WT/L/184; Waiver Decision on The Fourth ACP-EEC Convention of Lomé, GATT Document L/7604, 9 December 1994, BISD 41S/26, renewed 14 October 1996, WT/L/186; and Waiver Decision on European Communities – The ACP-EC Partnership Agreement, WT/MIN (01)/15), 14 November 2001.

[324]*Infra*, paras. 157-168.

treatment under a GSP scheme to "respond positively" to the "needs of developing countries".[325] Having said this, we turn to consider whether the "development, financial and trade needs of developing countries" to which preference-granting countries are required to respond when granting preferences must be understood to cover the "needs" of developing countries *collectively*.

159. The Panel found that "the only appropriate way [under paragraph 3(c) of the Enabling Clause] of responding to the differing development needs of developing countries is for preference-giving countries to ensure that their [GSP] schemes have sufficient breadth of product coverage and depth of tariff cuts to respond positively to those differing needs."[326] In reaching this conclusion, the Panel appears to have placed a great deal of significance on the fact that paragraph 3(c) does not refer to needs of "*individual*" developing countries.[327] The Panel thus understood that paragraph 3(c) does not permit the granting of preferential tariff treatment exclusively to a sub-category of developing countries on the basis of needs that are common to or shared by only those developing countries. We see no basis for such a conclusion in the text of paragraph 3(c). Paragraph 3(c) refers generally to "the development, financial and trade needs of developing countries". The absence of an explicit requirement in the text of paragraph 3(c)[328] to respond to the needs of "all" developing countries, or to the needs of "each and every"[329] developing country, suggests to us that, in fact, that provision imposes no such obligation.[330]

160. Furthermore, as we understand it, the participants in this case agree that developing countries may have "development, financial and trade needs" that are subject to change and that certain development needs may be common to only a certain number of developing countries.[331] We see no reason to disagree. Indeed, paragraph 3(c) contemplates that "differential and more favourable treatment"[332] accorded by developed to developing countries may need to be "modified" in order to "respond positively" to the needs of developing countries. Paragraph 7 of the Enabling Clause supports this view by recording the expectation of "less-developed contracting parties" that their capacity to make contributions or concessions under the GATT will "improve with the progressive development of their economies and improvement in their trade situation". Moreover, the very purpose of the special and differential treatment permitted under the Enabling Clause is to foster

[325]We note that the European Communities agreed before the Panel that paragraph 3(c) of the Enabling Clause sets forth a "requirement". (European Communities' first written submission to the Panel, paras. 71 and 149)

[326]Panel Report, para. 7.149. (See also, *ibid.*, paras. 7.95-7.97 and 7.105)

[327]*Ibid.*, para. 7.78.

[328]The United States refers to Article 3.2 of the DSU to support its argument that "panels are barred from reading legal obligations into the Enabling Clause that are not found in the text." (United States' third participant's submission, para. 13)

[329]Panel Report, para. 7.105. (italics omitted)

[330]In this respect, we agree with the European Communities that paragraph 3(c) should "be interpreted in a manner which, while preserving its relevance, is both workable for developed countries and consistent with the requirements that the preferences be *non-discriminatory*." (European Communities' appellant's submission, para. 138 (original italics))

[331]The European Communities emphasized before the Panel that the "development, financial and trade needs of developing countries" referred to in paragraph 3(c) of the Enabling Clause "[o]bviously ... may vary between different categories of developing countries, as well as over time." (European Communities' first written submission to the Panel, para. 71) That "needs of developing countries" may change over time was also acknowledged by India in response to our questioning at the oral hearing. In addition, we understand India not to disagree that developing countries may have different individual needs, given that it argues that paragraph 3(c) should be interpreted as requiring "GSP schemes [to] respond to the needs of developing countries as a whole and not their individual needs." (India's appellee's submission, para. 124)

[332]Enabling Clause, para. 1 (attached as Annex 2 to this Report).

economic development of developing countries. It is simply unrealistic to assume that such development will be in lockstep for all developing countries at once, now and for the future.

161. In addition, the Preamble to the *WTO Agreement*, which informs all the covered agreements including the GATT 1994 (and, hence, the Enabling Clause), explicitly recognizes the "need for positive efforts designed to ensure that developing countries, and especially the least developed among them, secure a share in the growth in international trade commensurate with the needs of their economic development".[333] The word "commensurate" in this phrase appears to leave open the possibility that developing countries may have different needs according to their levels of development and particular circumstances. The Preamble to the *WTO Agreement* further recognizes that Members' "respective needs and concerns at different levels of economic development"[334] may vary according to the different stages of development of different Members.

162. In sum, we read paragraph 3(c) as authorizing preference-granting countries to "respond positively" to "needs" that are *not* necessarily common or shared by all developing countries. Responding to the "needs of developing countries" may thus entail treating different developing-country beneficiaries differently.

163. However, paragraph 3(c) does not authorize *any* kind of response to *any* claimed need of developing countries. First, we observe that the types of needs to which a response is envisaged are limited to "development, financial and trade needs". In our view, a "need" cannot be characterized as one of the specified "needs of developing countries" in the sense of paragraph 3(c) based merely on an assertion to that effect by, for instance, a preference-granting country or a beneficiary country. Rather, when a claim of inconsistency with paragraph 3(c) is made, the existence of a "development, financial [or] trade need" must be assessed according to an *objective* standard. Broad-based recognition of a particular need, set out in the *WTO Agreement* or in multilateral instruments adopted by international organizations, could serve as such a standard.[335]

164. Secondly, paragraph 3(c) mandates that the response provided to the needs of developing countries be "positive". "Positive" is defined as "consisting in or characterized by constructive action or attitudes".[336] This suggests that the response of a preference-granting country must be taken with a view to *improving* the development, financial or trade situation of a beneficiary country, based on the particular need at issue. As such, in our view, the expectation that developed countries will "respond positively" to the "needs of developing countries" suggests that a sufficient nexus should exist between, on the one hand, the preferential treatment provided under the respective measure authorized by paragraph 2, and, on the other hand, the likelihood of alleviating the relevant "development, financial [or] trade need". In the context of a GSP scheme, the particular need at issue must, by its nature, be such that it can be effectively addressed through tariff preferences. Therefore, only if a preference-granting country acts in the "positive" manner suggested, in "respon[se]" to a widely-recognized "development, financial [or] trade need", can such action satisfy the requirements of paragraph 3(c).

[333] *WTO Agreement*, Preamble, second recital.

[334] *WTO Agreement*, Preamble, first recital.

[335] The European Communities argues that tariff preferences are an appropriate response to the drug problem. In support of its argument, the European Communities refers to the Preamble to the *Agreement on Agriculture* and the waiver for the United States' Andean Trade Preference Act. In addition, the European Communities finds support in several international conventions and resolutions that have recognized drug production and drug trafficking as entailing particular problems for developing countries. (See Panel Report, paras. 4.71-4.74; and European Communities' appellant's submission, paras. 144-149)

[336] *Shorter Oxford English Dictionary*, 5th ed., W.R. Trumble, A. Stevenson (eds.) (Oxford University Press, 2002), Vol. 2, p. 2293.

165. Accordingly, we are of the view that, by requiring developed countries to "respond positively" to the "needs of developing countries", which are varied and not homogeneous, paragraph 3(c) indicates that a GSP scheme may be "non-discriminatory" even if "identical" tariff treatment is not accorded to "all" GSP beneficiaries. Moreover, paragraph 3(c) suggests that tariff preferences under GSP schemes may be "non-discriminatory" when the relevant tariff preferences are addressed to a particular "development, financial [or] trade need" and are made available to all beneficiaries that share that need.

166. India submits that developing countries should not be presumed to have waived their MFN rights under Article I:1 of the GATT 1994 *vis-à-vis* other developing countries[337], and we make no such presumption. In fact, we note that the Enabling Clause *specifically* allows developed countries to provide differential and more favourable treatment to developing countries "notwithstanding" the provisions of Article I.[338] With this in mind, and given that paragraph 3(c) of the Enabling Clause contemplates, in certain circumstances, differentiation among GSP beneficiaries, we cannot agree with India that the right to MFN treatment can be invoked by a GSP beneficiary *vis-à-vis* other GSP beneficiaries in the context of GSP schemes that meet the conditions set out in the Enabling Clause.

167. Finally, we note that, pursuant to paragraph 3(a) of the Enabling Clause, any "differential and more favourable treatment ... shall be designed to facilitate and promote the trade of developing countries and not to raise barriers to or create undue difficulties for the trade of any other contracting parties." This requirement applies, *a fortiori*, to any preferential treatment granted to one GSP beneficiary that is not granted to another.[339] Thus, although paragraph 2(a) does not prohibit *per se* the granting of different tariff preferences to different GSP beneficiaries[340], and paragraph 3(c) even contemplates such differentiation under certain circumstances[341], paragraph 3(a) requires that any positive response of a preference-granting country to the varying needs of developing countries not impose unjustifiable burdens on other Members.

168. Having examined the context of paragraph 2(a), we turn next to examine the object and purpose of the *WTO Agreement*. We note first that paragraph 7 of the Enabling Clause provides that "[t]he concessions and contributions made and the obligations assumed by developed and less-developed contracting parties under the provisions of the [GATT 1994] should promote the basic objectives of the [GATT 1994], including those embodied in the Preamble". As we have observed, the Preamble to the *WTO Agreement* provides that there is "need for positive efforts designed to ensure that developing countries, and especially the least developed among them, secure a share in the growth in international trade commensurate with the needs of their economic development".[342] Similarly, the Preamble to the 1971 Waiver Decision provides that "a principal aim of the CONTRACTING PARTIES is promotion of the trade and export earnings of developing countries for the furtherance of their economic development".[343] These objectives are also reflected in paragraph 3(c) of the Enabling Clause, which states that the treatment provided under the Enabling Clause "shall ... be designed and, if necessary, modified, to respond positively to the development, financial and trade needs of developing countries".

[337] India's appellee's submission, para. 94.

[338] Compare para. 1 of the Enabling Clause ("Notwithstanding the provisions of Article I") with para. (a) of the 1971 Waiver Decision ("the provisions of Article I shall be waived ... to the extent necessary").

[339] We note in this respect that the language contained in paragraph 3(a) of the Enabling Clause is reflected in waivers referred to in *supra*, footnote 323.

[340] *Supra*, paras. 153-154.

[341] *Supra*, paras. 162-165.

[342] *WTO Agreement*, Preamble, second recital.

[343] 1971 Waiver Decision, Preamble, first recital.

169. Although enhanced market access will contribute to responding to the needs of developing countries *collectively*, we have also recognized that the needs of developing countries may vary over time. We are of the view that the objective of improving developing countries' "share in the growth in international trade", and their "trade and export earnings", can be fulfilled by promoting preferential policies aimed at those interests that developing countries have in common, *as well as* at those interests shared by sub-categories of developing countries based on their particular needs. An interpretation of "non-discriminatory" that does not require the granting of "identical tariff preferences"[344] allows not only for GSP schemes providing preferential market access to all beneficiaries, but also the possibility of additional preferences for developing countries with particular needs, provided that such additional preferences are not inconsistent with other provisions of the Enabling Clause, including the requirements that such preferences be "generalized" and "non-reciprocal". We therefore consider such an interpretation to be consistent with the object and purpose of the *WTO Agreement* and the Enabling Clause.

170. The Panel took the view, however, that the objective of "elimination of discriminatory treatment in international commerce"[345], found in the Preamble to the GATT 1994, "contributes more to guiding the interpretation of 'non-discriminatory'"[346] than does the objective of ensuring that developing countries "secure ... a share in the growth in international trade commensurate with their development needs."[347] We fail to see on what basis the Panel drew this conclusion.

171. We next examine the relevance of paragraph 2(d) of the Enabling Clause[348] for the interpretation of "non-discriminatory" in footnote 3. The Panel characterized paragraph 2(d) as an "exception" to paragraph 2(a)[349] and relied on paragraph 2(d) to support its view that paragraph 2(a) requires "formally identical treatment".[350] In the Panel's view, if developed-country Members were entitled under paragraph 2(a) to differentiate between developing-country Members, then they would have been entitled under that paragraph alone to differentiate between developing and least-developed countries. Accordingly, "there would have been no need to include paragraph 2(d) in the Enabling Clause."[351]

172. We do not agree with the Panel that paragraph 2(d) is an "exception" to paragraph 2(a), or that it is rendered redundant if paragraph 2(a) is interpreted as allowing developed countries to differentiate in their GSP schemes between developing countries. To begin with, we note that the terms of paragraph 2 do not expressly indicate that each of the four sub-paragraphs thereunder is mutually exclusive, or that any one is an exception to any other. Moreover, in our view, it is clear from several provisions of the Enabling Clause that the drafters wished to emphasize that least-developed countries form an identifiable sub-category of developing countries with "special economic difficulties and ... particular development, financial and trade needs".[352] When a developed-country Member grants tariff preferences in favour of developing countries under paragraph 2(a), as we have

[344]Panel Report, para. 7.161.

[345]*Ibid.*, para. 7.157 (quoting GATT 1994, Preamble, second recital).

[346]Panel Report, paras. 7.157-7.158.

[347]*Ibid.*, para. 7.155 (referring to *WTO Agreement*, Preamble, second recital).

[348]Paragraph 2(d) deals with special treatment of least-developed countries "in the context of any general or specific measures in favour of developing countries".

[349]Panel Report, para. 7.147.

[350]*Ibid.*, para. 7.145.

[351]*Ibid.*, para. 7.145.

[352]Enabling Clause, para. 6 (attached as Annex 2 to this Report). Similarly, paragraph 8 of the Enabling Clause refers to the "special economic situation and [the] development, financial and trade needs" of least-developed countries.

already found[353], footnote 3 imposes a requirement that such preferences be "non-discriminatory". In the absence of paragraph 2(d), a Member granting preferential tariff treatment only to least-developed countries would therefore need to establish, under paragraph 2(a), that this preferential treatment did not "discriminate" against other developing countries contrary to footnote 3. The inclusion of paragraph 2(d), however, makes clear that developed countries may accord preferential treatment to least-developed countries distinct from the preferences granted to other developing countries under paragraph 2(a). Thus, pursuant to paragraph 2(d), preference-granting countries need not establish that differentiating between developing and least-developed countries is "non-discriminatory". This demonstrates that paragraph 2(d) does have an effect that is different and independent from that of paragraph 2(a), even if the term "non-discriminatory" does not require the granting of "identical tariff preferences"[354] to all GSP beneficiaries.

173. Having examined the text and context of footnote 3 to paragraph 2(a) of the Enabling Clause, and the object and purpose of the *WTO Agreement* and the Enabling Clause, we conclude that the term "non-discriminatory" in footnote 3 does not prohibit developed-country Members from granting different tariffs to products originating in different GSP beneficiaries, provided that such differential tariff treatment meets the remaining conditions in the Enabling Clause. In granting such differential tariff treatment, however, preference-granting countries are required, by virtue of the term "non-discriminatory", to ensure that identical treatment is available to all similarly-situated GSP beneficiaries, that is, to all GSP beneficiaries that have the "development, financial and trade needs" to which the treatment in question is intended to respond.

174. For all of these reasons, we *reverse* the Panel's finding, in paragraphs 7.161 and 7.176 of the Panel Report, that "the term 'non-discriminatory' in footnote 3 [to paragraph 2(a) of the Enabling Clause] requires that identical tariff preferences under GSP schemes be provided to all developing countries without differentiation, except for the implementation of a priori limitations."[355]

C. *The Words "Developing Countries" in Paragraph 2(a) of the Enabling Clause*

175. In addition to the Panel's interpretation of the term "non-discriminatory" in footnote 3 of the Enabling Clause, the European Communities appeals the Panel's finding that "the term 'developing countries' in paragraph 2(a) should be interpreted to mean *all* developing countries, [except as regards] *a priori* limitations".[356] The Panel's interpretation of paragraph 2(a) is premised on its findings that (i) footnote 3 permits the granting of different tariff preferences to different GSP beneficiaries *only* for the purpose of *a priori* limitations[357], and (ii) paragraph 3(c) permits the granting of different tariff preferences to different GSP beneficiaries *only* for the purposes of *a priori* limitations and preferential treatment in favour of least-developed countries.[358] We have concluded, contrary to the Panel, that footnote 3 and paragraph 3(c) do *not* preclude the granting of differential tariffs to different sub-categories of GSP beneficiaries, subject to compliance with the remaining conditions of the Enabling Clause. We find, therefore, that the term "developing countries" in paragraph 2(a) should not be read to mean "all" developing countries and, accordingly, that

[353]*Supra*, paras. 145-148.

[354]Panel Report, para. 7.161.

[355]Given our interpretation, which permits differentiation among GSP beneficiaries, it is not necessary for us to rule on whether *a priori* limitations are permitted under the Enabling Clause. (See also, *supra*, paras. 128-129)

[356]Panel Report, para. 7.174. (original italics) See also, European Communities' appellant's submission, para. 67.

[357]Panel Report, para. 7.170.

[358]Panel Report, para. 7.171.

paragraph 2(a) does not prohibit preference-granting countries from according different tariff preferences to different sub-categories of GSP beneficiaries.

176. Accordingly, we also *reverse* the Panel's finding, in paragraph 7.174 of the Panel Report, that "the term 'developing countries' in paragraph 2(a) [of the Enabling Clause] should be interpreted to mean *all* developing countries, with the exception that where developed countries are implementing a priori limitations, 'developing countries' may mean *less than all* developing countries."

D. *Consistency of the Drug Arrangements with the Enabling Clause*

177. We turn next to examine the consistency of the Drug Arrangements with the Enabling Clause.

178. We recall that, with respect to the Enabling Clause, the only challenge by India before the Panel related to paragraph 2(a) and, in particular, footnote 3 thereto.[359] In response, the European Communities argued that it found contextual support for its interpretation of paragraph 2(a) in the requirement, contained in paragraph 3(c), to respond positively to the needs of developing countries.[360] In rejecting the European Communities' interpretation of paragraph 2(a), the Panel did not determine whether the Drug Arrangements satisfy the conditions set out in paragraph 3(c), but, rather, limited its discussion of paragraph 3(c) to the relevance of that provision as context for its interpretation of paragraph 2(a). Thus, the Panel made a finding of inconsistency only with respect to paragraph 2(a) of the Enabling Clause.[361] The European Communities appeals this finding of inconsistency with paragraph 2(a).

179. Although paragraph 3(c) informs the interpretation of the term "non-discriminatory" in footnote 3 to paragraph 2(a), as detailed above[362], paragraph 3(c) imposes requirements that are separate and distinct from those of paragraph 2(a). We have already concluded that, where a developed-country Member provides additional tariff preferences under its GSP scheme to respond positively to widely-recognized "development, financial and trade needs" of developing countries within the meaning of paragraph 3(c) of the Enabling Clause, this "positive response" would not, as such, fail to comply with the "non-discriminatory" requirement in footnote 3 of the Enabling Clause[363], even if such needs were not common or shared by all developing countries. We have also observed that paragraph 3(a) requires that any positive response of a preference-granting country to the varying needs of developing countries not impose unjustifiable burdens on other Members.[364] With these considerations in mind, and recalling that the Panel made no finding in this case as to whether the Drug Arrangements are inconsistent with paragraphs 3(a) and 3(c) of the Enabling Clause[365], we limit our analysis here to paragraph 2(a) and do not examine *per se* whether the Drug Arrangements are consistent with the obligation contained in paragraph 3(c) to "respond positively to the development, financial and trade needs of developing countries" or with the obligation contained in paragraph 3(a) not to "raise barriers" or "create undue difficulties" for the trade of other Members.

[359] *Supra*, paras. 120-122.

[360] See Panel Report, para. 7.123; European Communities' first written submission to the Panel, paras. 70-71 and 149; and European Communities' second written submission to the Panel, paras. 48-52.

[361] Panel Report, para. 8.1(d).

[362] *Supra*, paras. 157-162.

[363] *Supra*, para. 165.

[364] *Supra*, para. 167.

[365] See *supra*, para. 134.

180. We found above that the term "non-discriminatory" in footnote 3 to paragraph 2(a) of the Enabling Clause does not prohibit the granting of different tariffs to products originating in different sub-categories of GSP beneficiaries, but that identical tariff treatment must be available to all GSP beneficiaries with the "development, financial [or] trade need" to which the differential treatment is intended to respond.[366] The need alleged to be addressed by the European Communities' differential tariff treatment is the problem of illicit drug production and trafficking in certain GSP beneficiaries. In the context of this case, therefore, the Drug Arrangements may be found consistent with the "non-discriminatory" requirement in footnote 3 only if the European Communities proves, at a minimum, that the preferences granted under the Drug Arrangements are available to all GSP beneficiaries that are similarly affected by the drug problem.[367] We do not believe this to be the case.

181. By their very terms, the Drug Arrangements are limited to the 12 developing countries designated as beneficiaries in Annex I to the Regulation.[368] Specifically, Article 10.1 of the Regulation states:

> Common Customs Tariff *ad valorem* duties on [covered products] which originate in a country that according to Column I of Annex I benefits from [the Drug Arrangements] shall be entirely suspended.

182. Articles 10 and 25 of the Regulation, which relate specifically to the Drug Arrangements, provide no mechanism under which additional beneficiaries may be added to the list of beneficiaries under the Drug Arrangements as designated in Annex I. Nor does any of the other Articles of the Regulation point to the existence of such a mechanism with respect to the Drug Arrangements. Moreover, the European Communities acknowledged the absence of such a mechanism in response to our questioning at the oral hearing. This contrasts with the position under the "special incentive arrangements for the protection of labour rights" and the "special incentive arrangements for the protection of the environment", which are described in Article 8 of the Regulation. The Regulation includes detailed provisions setting out the procedure and substantive criteria that apply to a request by a beneficiary under the general arrangements described in Article 7 of the Regulation (the "General Arrangements") to become a beneficiary under either of those special incentive arrangements.[369]

183. What is more, the Drug Arrangements themselves do *not* set out any clear prerequisites—or "objective criteria"[370]—that, if met, would allow for other developing countries "that are similarly affected by the drug problem"[371] to be *included* as beneficiaries under the Drug Arrangements.[372]

[366] *Supra*, para. 165.

[367] According to the European Communities, "the Drug Arrangements are *non-discriminatory* because the designation of the beneficiary countries is based only and exclusively on their development needs. All the developing countries that are similarly affected by the drug problem have been included in the Drug Arrangements". (European Communities' appellant's submission, para. 186 (original italics))

[368] The 12 designated beneficiary countries are: Bolivia, Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Honduras, Nicaragua, Pakistan, Panama, Peru, and Venezuela. (Regulation, Annex I (Column I))

[369] Regulation, Title III.

[370] European Communities' appellant's submission, paras. 4 and 139.

[371] *Ibid.*, para. 186.

[372] In response to Question 4 posed by India at the First Panel Meeting, the European Communities confirmed that the Regulation does not set out objective criteria for designating beneficiary countries under the Drug Arrangements. The European Communities stated:

> The criteria are not set out in the GSP Regulation. They are not contained in a public document.

(Panel Report, p. B-69, para. 5)

Indeed, the European Commission's own Explanatory Memorandum notes that "the benefits of the drug regime ... are given without *any* prerequisite."[373] Similarly, the Regulation offers no criteria according to which a beneficiary could be *removed* specifically from the Drug Arrangements on the basis that it is no longer "similarly affected by the drug problem". Indeed, Article 25.3 expressly states that the evaluation of the effects of the Drug Arrangements described in Articles 25.1(b) and 25.2 "will be without prejudice to the continuation of the [Drug Arrangements] until 2004, and their possible extension thereafter." This implies that, even if the European Commission found that the Drug Arrangements were having no effect whatsoever on a beneficiary's "efforts in combating drug production and trafficking"[374], or that a beneficiary was no longer suffering from the drug problem, beneficiary status would continue.[375] Therefore, even if the Regulation allowed for the list of beneficiaries under the Drug Arrangements to be modified, the Regulation itself gives no indication as to how the beneficiaries under the Drug Arrangements were chosen or what kind of considerations would or could be used to determine the effect of the "drug problem" on a particular country. In addition, we note that the Regulation does not, for instance, provide any indication as to how the European Communities would assess whether the Drug Arrangements provide an "adequate and proportionate response"[376] to the needs of developing countries suffering from the drug problem.

184. It is true that a country may be removed as a beneficiary under Annex I, either altogether or in respect of certain product sectors, for reasons that are not specific to the Drug Arrangements. Thus, Article 3 of the Regulation provides for the removal of a country from Annex I (and hence, from the General Arrangements and any other arrangements under which it is a beneficiary) if particular circumstances are met indicating that the country has reached a certain level of development. Article 12 provides for the removal of a country as a beneficiary under the General Arrangements and the Drug Arrangements with respect to a product sector where the country's level of development and competition has reached a certain threshold with respect to that sector. Neither Article 3 nor Article 12 appears to relate in any way to the degree to which the country is suffering from the "drug problem". Finally, Title V to the Regulation contains certain "Temporary Withdrawal and Safeguard Provisions" that are common to all the preferential arrangements under the Regulation. Although one reason for which the arrangements may be temporarily withdrawn is "shortcomings in customs controls on export or transit of drugs (illicit substances or precursors), or failure to comply with international conventions on money laundering"[377], this reason applies equally to the General Arrangements, the Drug Arrangements, and the other special incentive arrangements. Moreover, as the Panel appeared to recognize, this condition is not connected to the question of whether the beneficiary is a "seriously drug-affected country".[378]

[373]Explanatory Memorandum to the Proposal for a Council Regulation applying a scheme of generalised tariff preferences for the period 1 January 2002 to 31 December 2004, para. 35 (emphasis added) (attached to Amended Proposal for a Council Regulation applying a scheme of generalised tariff preferences for the period 1 January 2002 to 31 December 2004, 2001/0131 (ACC), at p. 3) (Exhibit India-7 submitted by India to the Panel).

[374]Regulation, Art. 25.1(b).

[375]In response to questioning at the oral hearing, the European Communities confirmed that, although the sixth recital to the Preamble of the Regulation provides that the Drug Arrangements "should be closely monitored", the list of beneficiaries will be unaffected by the monitoring described in Articles 25.1 and 25.2 of the Regulation.

[376]European Communities' appellant's submission, para. 133.

[377]Regulation, Art. 26.1(d).

[378]Panel Report, para. 7.216.

185. We note, moreover, that the Drug Arrangements will be in effect until 31 December 2004.[379] Until that time, other developing countries that are "similarly affected by the drug problem" can be included as beneficiaries under the Drug Arrangements only through an amendment to the Regulation. The European Communities confirmed this understanding in response to questioning at the oral hearing.

186. Against this background, we fail to see how the Drug Arrangements can be distinguished from other schemes that the European Communities describes as "confined *ab initio* and permanently to a limited number of developing countries".[380] As we understand it, the European Communities' position is that such schemes would be discriminatory, whereas the Drug Arrangements are not because "all developing countries are potentially beneficiaries" thereof.[381] In seeking a waiver from its obligations under Article I:1 of the GATT 1994 to implement the Drug Arrangements, the European Communities explicitly acknowledged, however, that "[b]ecause the special arrangements *are only available* to imports originating in [the 12 beneficiaries of the Drug Arrangements], a waiver ... appears necessary".[382] This statement appears to undermine the European Communities' argument that "all developing countries are potentially beneficiaries of the Drug Arrangements" and, therefore, that the Drug Arrangements are "non-discriminatory".[383]

187. We recall our conclusion that the term "non-discriminatory" in footnote 3 of the Enabling Clause requires that identical tariff treatment be available to all similarly-situated GSP beneficiaries. We find that the measure at issue fails to meet this requirement for the following reasons. First, as the European Communities itself acknowledges, according benefits under the Drug Arrangements to countries other than the 12 identified beneficiaries would require an amendment to the Regulation. Such a "closed list" of beneficiaries cannot ensure that the preferences under the Drug Arrangements are available to all GSP beneficiaries suffering from illicit drug production and trafficking.

188. Secondly, the Regulation contains no criteria or standards to provide a basis for distinguishing beneficiaries under the Drug Arrangements from other GSP beneficiaries. Nor did the European Communities point to any such criteria or standards anywhere else, despite the Panel's request to do so.[384] As such, the European Communities cannot justify the Regulation under paragraph 2(a), because it does not provide a basis for establishing whether or not a developing country qualifies for preferences under the Drug Arrangements. Thus, although the European Communities claims that the Drug Arrangements are available to all developing countries that are "similarly affected by the drug problem"[385], because the Regulation does not define the criteria or standards that a developing country must meet to qualify for preferences under the Drug Arrangements, there is no basis to determine whether those criteria or standards are discriminatory or not.

[379]Regulation, Arts. 1.1 and 41.2. We understand that the Regulation has been extended to 31 December 2005. (Council Regulation (EC) No. 2211/2003 of 15 December 2003 amending Regulation (EC) No. 2501/2001 applying a scheme of generalised tariff preferences for the period from 1 January 2002 to 31 December 2004 and extending it to 31 December 2005, *Official Journal of the European Union*, L Series, No. 332 (19 December 2003), p. 1)

[380]European Communities' appellant's submission, para. 185.

[381]*Ibid.*, para. 186.

[382]Council for Trade in Goods, Request for a WTO Waiver, *New EC Special Tariff Arrangements to Combat Drug Production and Trafficking*, G/C/W/328, 24 October 2001, p. 2. (emphasis added)

[383]European Communities' appellant's submission, para. 186.

[384]See *supra*, footnote 372.

[385]European Communities' appellant's submission, para. 186.

189. For all these reasons, we find that the European Communities has failed to prove that the Drug Arrangements meet the requirement in footnote 3 that they be "non-discriminatory". Accordingly, we *uphold*, for different reasons, the Panel's conclusion, in paragraph 8.1(d) of the Panel Report, that the European Communities "failed to demonstrate that the Drug Arrangements are justified under paragraph 2(a) of the Enabling Clause".

VI. Findings and Conclusions

190. For the reasons set out in this Report, the Appellate Body:

(a) upholds the Panel's finding, in paragraph 7.53 of the Panel Report, that the Enabling Clause is an "exception" to Article I:1 of the GATT 1994;

(b) upholds the Panel's finding, in paragraph 7.53 of the Panel Report, that the Enabling Clause "does not exclude the applicability" of Article I:1 of the GATT 1994;

(c) modifies the Panel's finding, in paragraph 7.53 of the Panel Report, that the European Communities "bears the burden of invoking the Enabling Clause and justifying its Drug Arrangements" under that Clause, by finding that it was incumbent upon India to *raise* the Enabling Clause in making its claim of inconsistency with Article I:1 of the GATT 1994, but that the European Communities bore the burden of *proving* that the Drug Arrangements satisfy the conditions of the Enabling Clause, in order to justify those Arrangements under that Clause; and finds, further, that India sufficiently raised paragraph 2(a) of the Enabling Clause in making its claim of inconsistency with Article I:1 before the Panel;

(d) need not rule on the Panel's conclusion, in paragraphs 7.60 and 8.1(b) of the Panel Report, that the Drug Arrangements are inconsistent with Article I:1 of the GATT 1994;

(e) reverses the Panel's finding, in paragraphs 7.161 and 7.176 of the Panel Report, that "the term 'non-discriminatory' in footnote 3 [to paragraph 2(a) of the Enabling Clause] requires that identical tariff preferences under GSP schemes be provided to all developing countries without differentiation, except for the implementation of a priori limitations";

(f) reverses the Panel's finding, in paragraph 7.174 of the Panel Report, that "the term 'developing countries' in paragraph 2(a) [of the Enabling Clause] should be interpreted to mean *all* developing countries, with the exception that where developed countries are implementing a priori limitations, 'developing countries' may mean *less than all* developing countries"; and

(g) upholds, for different reasons, the Panel's conclusion, in paragraph 8.1(d) of the Panel Report, that the European Communities "failed to demonstrate that the Drug Arrangements are justified under paragraph 2(a) of the Enabling Clause".

191. The Appellate Body therefore recommends that the Dispute Settlement Body request the European Communities to bring Council Regulation (EC) No. 2501/2001, found in this Report, and in the Panel Report as modified by this Report, to be inconsistent with Article I:1 of the GATT 1994 and not justified under paragraph 2(a) of the Enabling Clause, into conformity with its obligations under the GATT 1994.

ANNEX 1

WORLD TRADE ORGANIZATION

WT/DS246/7
8 January 2004
(04-0070)

Original: English

EUROPEAN COMMUNITIES – CONDITIONS FOR THE GRANTING OF TARIFF PREFERENCES TO DEVELOPING COUNTRIES

Notification of an Appeal by the European Communities
under paragraph 4 of Article 16 of the Understanding on Rules
and Procedures Governing the Settlement of Disputes ("DSU")

The following notification, dated 8 January 2004, from the Permanent Delegation of the European Commission, is being circulated to Members.

Pursuant to Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU") and Rule 20 of the Working Procedures for Appellate Review, the European Communities hereby notifies its decision to appeal to the Appellate Body certain issues of law covered in the report of the panel established in response to the request from India in the dispute *European Communities – Conditions for the Granting of Tariff Preferences to Developing Countries* (WT/DS246R).

The European Communities seeks review of the Panel's legal conclusion that the Special Arrangements to Combat Drug Production and Trafficking provided in Council Regulation (EC) No. 2501/2001 (the "Drug Arrangements") are inconsistent with Article I:1 of the *General Agreement on Tariff and Trade 1994* (the "GATT"). This conclusion is based on the following erroneous legal findings:

- that the Enabling Clause is an "exception" to Article I:1 of the GATT;
- that the Enabling Clause does not exclude the applicability of Article I:1 of the GATT;
- that the EC had the burden of proving that the Drug Arrangements were consistent with the Enabling Clause.

The above legal conclusion, and the related legal findings and interpretations are set out in paragraphs 7.31 to 7.60 and 8.1 (b) and (c) of the Panel report.

India did not make any claims under the Enabling Clause and, therefore, the Appellate Body should refrain from examining the consistency of the Drug Arrangements with the Enabling Clause. However, if the Appellate Body were to uphold the Panel's conclusion that the Drug Arrangements are inconsistent with Article I:1 of the GATT, or if the Appellate Body were to decide that India made a valid claim under the Enabling Clause, the European Communities appeals subsidiarily the Panel's legal conclusion that the European Communities "failed to demonstrate that the Drug Arrangements

are justified under paragraph 2(a) of the Enabling Clause". That conclusion is based on the following erroneous legal findings:

- that "the term "non-discriminatory" in footnote 3 to Paragraph 2(a) requires that identical tariff preferences under GSP schemes be provided to all developing countries without differentiation, except for the implementation of a priori limitations"; and

- that the term "developing countries" in Paragraph 2(a) means all developing countries.

This legal conclusion and the related legal findings and interpretations are set out in paragraphs 7.61-7.177 and 8.1(d) of the Panel report.

Finally the EC seeks review of the Panel's legal conclusion that the European Communities has nullified or impaired benefits accrued to India under GATT 1994, which is set out in paragraph 8.1(f) of the Panel report

ANNEX 2

DIFFERENTIAL AND MORE FAVOURABLE TREATMENT
RECIPROCITY AND FULLER PARTICIPATION
OF DEVELOPING COUNTRIES

Decision of 28 November 1979
(L/4903)

Following negotiations within the framework of the Multilateral Trade Negotiations, the CONTRACTING PARTIES *decide* as follows:

1. Notwithstanding the provisions of Article I of the General Agreement, contracting parties may accord differential and more favourable treatment to developing countries[1], without according such treatment to other contracting parties.

2. The provisions of paragraph 1 apply to the following:[2]

(*a*) Preferential tariff treatment accorded by developed contracting parties to products originating in developing countries in accordance with the Generalized System of Preferences,[3]

(*b*) Differential and more favourable treatment with respect to the provisions of the General Agreement concerning non-tariff measures governed by the provisions of instruments multilaterally negotiated under the auspices of the GATT;

(*c*) Regional or global arrangements entered into amongst less-developed contracting parties for the mutual reduction or elimination of tariffs and, in accordance with criteria or conditions which may be prescribed by the CONTRACTING PARTIES, for the mutual reduction or elimination of non-tariff measures, on products imported from one another

(*d*) Special treatment of the least developed among the developing countries in the context of any general or specific measures in favour of developing countries.

3. Any differential and more favourable treatment provided under this clause:

(*a*) shall be designed to facilitate and promote the trade of developing countries and not to raise barriers to or create undue difficulties for the trade of any other contracting parties;

(*b*) shall not constitute an impediment to the reduction or elimination of tariffs and other restrictions to trade on a most-favoured-nation basis;

[1] The words "developing countries" as used in this text are to be understood to refer also to developing territories.

[2] It would remain open for the CONTRACTING PARTIES to consider on an *ad hoc* basis under the GATT provisions for joint action any proposals for differential and more favourable treatment not falling within the scope of this paragraph.

[3] As described in the Decision of the CONTRACTING PARTIES of 25 June 1971, relating to the establishment of "generalized, non-reciprocal and non discriminatory preferences beneficial to the developing countries" (BISD 18S/24).

(*c*) shall in the case of such treatment accorded by developed contracting parties to developing countries be designed and, if necessary, modified, to respond positively to the development, financial and trade needs of developing countries.

4. Any contracting party taking action to introduce an arrangement pursuant to paragraphs 1, 2 and 3 above or subsequently taking action to introduce modification or withdrawal of the differential and more favourable treatment so provided shall:[4]

(*a*) notify the CONTRACTING PARTIES and furnish them with all the information they may deem appropriate relating to such action;

(*b*) afford adequate opportunity for prompt consultations at the request of any interested contracting party with respect to any difficulty or matter that may arise. The CONTRACTING PARTIES shall, if requested to do so by such contracting party, consult with all contracting parties concerned with respect to the matter with a view to reaching solutions satisfactory to all such contracting parties.

5. The developed countries do not expect reciprocity for commitments made by them in trade negotiations to reduce or remove tariffs and other barriers to the trade of developing countries, i.e., the developed countries do not expect the developing countries, in the course of trade negotiations, to make contributions which are inconsistent with their individual development, financial and trade needs. Developed contracting parties shall therefore not seek, neither shall less-developed contracting parties be required to make, concessions that are inconsistent with the latters' development, financial and trade needs.

6. Having regard to the special economic difficulties and the particular development, financial and trade needs of the least-developed countries, the developed countries shall exercise the utmost restraint in seeking any concessions or contributions for commitments made by them to reduce or remove tariffs and other barriers to the trade of such countries, and the least-developed countries shall not be expected to make concessions or contributions that are inconsistent with the recognition of their particular situation and problems.

7. The concessions and contributions made and the obligations assumed by developed and less-developed contracting parties under the provisions of the General Agreement should promote the basic objectives of the Agreement, including those embodied in the Preamble and in Article XXXVI. Less-developed contracting parties expect that their capacity to make contributions or negotiated concessions or take other mutually agreed action under the provisions and procedures of the General Agreement would improve with the progressive development of their economies and improvement in their trade situation and they would accordingly expect to participate more fully in the framework of rights and obligations under the General Agreement.

8. Particular account shall be taken of the serious difficulty of the least-developed countries in making concessions and contributions in view of their special economic situation and their development, financial and trade needs.

9. The contracting parties will collaborate in arrangements for review of the operation of these provisions, bearing in mind the need for individual and joint efforts by contracting parties to meet the development needs of developing countries and the objectives of the General Agreement.

---

[4] Nothing in these provisions shall affect the rights of contracting parties under the General Agreement.

APPELLATE BODY

Japan - Taxes on Alcoholic Beverages	AB-1996-2
Japan, Appellant/Appellee United States, Appellant/Appellee	Present:
Canada, Appellee European Communities, Appellee	Lacarte-Murˊ, Presiding Member Bacchus, Member El-Naggar, Member

A. Introduction

Japan and the United States appeal from certain issues of law and legal interpretations in the Panel Report, *Japan - Taxes on Alcoholic Beverages*[1] (the "Panel Report"). That Panel (the "Panel") was established to consider complaints by the European Communities, Canada and the United States against Japan relating to the Japanese Liquor Tax Law (Shuzeiho), Law No. 6 of 1953 as amended (the "Liquor Tax Law").[2]

The Panel Report was circulated to the Members of the World Trade Organization (the "WTO") on 11 July 1996. It contains the following conclusions:

> (i)Shochu and vodka are like products and Japan, by taxing the latter in excess of the former, is in violation of its obligation under Article III:2, first sentence, of the General Agreement on Tariffs and Trade 1994.
>
> (ii) Shochu, whisky, brandy, rum, gin, genever, and liqueurs are "directly competitive or substitutable products" and Japan, by not taxing them similarly, is in violation of its obligation under Article III:2, second sentence, of the General Agreement on Tariffs and Trade 1994.[3]

The Panel made the following recommendations:

---

[1] WT/DS8/R, WT/DS10/R, WT/DS11/R.

[2] Norway originally reserved its right as a third party to the dispute but subsequently informed the Panel that it was withdrawing its request to participate as a third party.

[3] Panel Report, para. 7.1.

7.2 The Panel recommends that the Dispute Settlement Body request Japan to bring the Liquor Tax Law into conformity with its obligations under the General Agreement on Tariffs and Trade 1994.[4]

On 8 August 1996, Japan notified the Dispute Settlement Body[5] of the WTO of its decision to appeal certain issues of law covered in the Panel Report and legal interpretations developed by the Panel, pursuant to paragraph 4 of Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "*DSU*") and filed a Notice of Appeal with the Appellate Body, pursuant to Rule 20 of the *Working Procedures for Appellate Review* (the "*Working Procedures*").[6] On 19 August 1996, Japan filed an appellant's submission.[7] On 23 August 1996, the United States filed an appellant's submission pursuant to Rule 23(1) of the *Working Procedures*. The European Communities, Canada and the United States submitted appellees' submissions pursuant to Rule 22 of the *Working Procedures*, on 2 September 1996. That same day, Japan submitted an appellee's submission pursuant to Rule 23(3) of the *Working Procedures*.

The oral hearing contemplated by Rule 27 of the *Working Procedures* was held on 9 September 1996. The participants presented their arguments and answered questions from the Division of the Appellate Body hearing the appeal (the "Division"). The participants answered most of these questions orally at the hearing. They answered some in writing.[8] The Division gave each participant an opportunity to respond to the written post-hearing memoranda of the other participants.[9]

B. Arguments of Participants

1. Japan

Japan appeals from the Panel's findings and conclusions, as well as from certain of the legal interpretations developed by the Panel. Japan argues that the Panel erred in its interpretation of Article III:2, first and second sentences of the General Agreement on Tariffs and Trade 1994 (the "GATT 1994"), which is an integral part of the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*").[10] According to Japan, with respect to both the first and second sentences of Article III:2, the Panel erred in: (1) disregarding the need to determine whether the Liquor Tax Law has the aim of affording protection to domestic production; (2) ignoring whether there is "linkage" between the origin of products and the tax treatment they incur and, in this respect, not comparing the tax treatment of domestic products as a whole and foreign products as a whole; and (3) not giving proper weight to the tax/price ratio as a yardstick to compare the tax burdens.

With respect to the first sentence of Article III:2, Japan argues that the Panel erred by virtually ignoring Article III:1, particularly the phrase "so as to afford protection to domestic production", as part of the context of Article III:2. Japan maintains also that the title of Article III forms part of the context of Article III:2, and that the object and purpose of the GATT 1994 and the *WTO Agreement* as a whole

[4]Panel Report, para. 7.2.

[9]Pursuant to Rule 28(2) of the *Working Procedures*.

[10]Done at Marrakesh, Morocco, 15 April 1994 and entered into effect on 1 January 1995.

must also be taken into account in interpreting Article III:2. Japan argues that the interpretation of Article III:2, first sentence, in the light of these considerations, requires an examination of both the aim and the effect of the measure in question. Japan also alleges that the Panel erred in placing excessive emphasis on tariff classification in finding that shochu and vodka are "like products" within the meaning of Article III:2, first sentence, arguing that the relevant tariff bindings indicate that these products are not "like".

With respect to the second sentence of Article III:2, Japan asserts that the Panel erred by failing to interpret correctly the principle of Article III:1, in particular, the language "so as to afford protection to domestic production", erroneously placing excessive emphasis on the phrase "not similarly taxed" in the Interpretative Note *Ad* Article III:2. Japan claims further that the Panel erred by failing to examine the issue of *de minimis* differences in the light of the principle of "so as to afford protection to domestic production"; the Panel examined the issue of *de minimis* differences only by comparing taxes in terms of taxation per kilolitre of product and taxation per degree of alcohol.

With respect to the points of appeal raised by the United States in its appellant's submission, Japan responds that the arguments advanced by the United States are not based on a correct understanding of the Japanese liquor tax system. Japan argues that the Liquor Tax Law has the legitimate policy purpose of ensuring neutrality and equity, particularly horizontal equity, and that it has neither the aim nor the effect of protecting domestic production. Japan asserts that it is not correct to conclude that all distilled liquors are "like products" under Article III:2, first sentence, or to conclude that the Liquor Tax Law is inconsistent with Article III:2 because it imposes a tax on imported distilled liquors in excess of the tax on like domestic products.

2. United States

The United States supports the Panel's overall conclusions, but appeals nonetheless. The United States alleges several errors in the findings of the Panel and the legal interpretations developed by the Panel in reaching its conclusions in the Panel Report. The United States maintains that the Panel erred in its interpretation of Article III:2, first and second sentences, principally as a result of an erroneous understanding of the relationship between Article III:2 and Article III:1. The United States contends that the Panel disregarded Article III:1, which the United States sees as an integral part of the context that must be considered in interpreting Article III:2, and Article III generally. The United States asserts that Article III:1 sets out the object and purpose of Article III and must therefore be considered in any interpretation of the text of Article III:2. The United States argues that the Panel did not look beyond the text of Article III:2 in interpreting Article III:2 and thereby fell into error.

More specifically, with respect to the first sentence of Article III:2, the United States submits that the Panel erred in finding that "likeness" can be determined purely on the basis of physical characteristics, consumer uses and tariff classification without considering also the context and purpose of Article III, as set out in Article III:1, and without considering, in particular, whether regulatory distinctions are made, in the language of Article III:1, "so as to afford protection to domestic production". The United States concludes that the Panel erred in its interpretation of Article III:2, first sentence in: failing to interpret Article III:2, first sentence, in the light of Article III:1, consistently with the analysis in *United States - Measures Affecting Alcoholic and Malt Beverages* ("*Malt Beverages*");[11] not finding that all distilled spirits constitute "like products" under Article III:2, first sentence; and drawing a connection between national treatment obligations and tariff bindings.

[11]Panel Report adopted on 19 June 1992, BISD 39S/206.

With respect to the second sentence of Article III:2 and the *Ad* Article thereto, the United States argues that the Panel erred with respect to the *Ad* Article to the second sentence in its interpretation of the term "directly competitive or substitutable products" by not considering whether a tax distinction is applied "in a manner contrary to the principles set forth in paragraph 1 of [Article III]", that is, "so as to afford protection to domestic production". The United States also claims that the Panel erred by using cross-price elasticity as the "decisive criterion" for whether products are "directly competitive or substitutable".

The United States contends as well that the Panel erred in not addressing the full scope of the products subject to the dispute and that there is inconsistency between the Panel's conclusions in paragraph 7.1(ii) of the Panel Report and in paragraphs 6.32-6.33 of the Panel Report. The United States further submits that the Panel erred in incorrectly assessing the relationship between Article III:2 and Article III:4 by stating that the product coverage of the two provisions is not identical.

Finally, the United States claims that the Panel erred in incorrectly characterizing adopted panel reports as "subsequent practice" within the meaning of Article 31(3)(b) of the *Vienna Convention on the Law of Treaties* (the "*Vienna Convention*").[12] According to the United States, adopted panel reports serve only to clarify, for the purposes of the particular dispute, the application of the rights and obligations of the parties to that dispute to the precise set of circumstances at that time. The *decision* to adopt a panel report constitutes a "decision" within the meaning of paragraph 1(b)(iv) of the language incorporating the GATT 1994 into the *WTO Agreement*, however, the adopted panel report as such does not constitute a "decision" in this sense.

With respect to the claims of error raised in Japan's appellant's submission, the United States responds that: the national treatment provisions in Article III of GATT 1994 can apply to origin-neutral measures; Japan's taxation under the Liquor Tax Law does have the aim and effect of affording protection to domestic production; and the tax/price ratios cited by Japan are not the appropriate basis for evaluating the consistency of taxation under the Liquor Tax Law with Article III:2.

3. European Communities

The European Communities support the Panel's conclusions, and largely agree with the legal interpretations of Article III:2, first and second sentences, employed by the Panel. With respect to Article III:2, first sentence, the European Communities submit that the Panel's reasons for adopting the interpretation in the Panel Report, and thus for rejecting a specific test of "aims and effects", are sound and "in accordance with customary rules of interpretation of public international law", as contemplated by Article 3.2 of the *DSU*.[13] The European Communities contend that the Panel made it clear that the essential criterion for a "like product" determination is similarity of physical characteristics and that tariff nomenclatures may be relevant for a determination of "likeness" because they constitute an objective classification of products according to their physical characteristics. The European Communities maintain that the Panel's decision to identify only vodka and shochu as "like products" for purposes of Article III:2 cannot be regarded as arbitrary or insufficiently motivated. Although not entirely satisfied with the Panel's conclusions on the range of products found to be "like" under Article III:2, first sentence, the European Communities claim that those conclusions primarily involve the assessment of facts and, therefore, are not

[12] 23 May 1969, 1155 *U.N.T.S.* 331; 8 *International Legal Materials* 679.

[13] Article 3.2 of the *DSU* states in pertinent part:

> ...The Members recognize that [the dispute settlement system] serves to preserve the rights and obligations of Members under the covered agreements, and to clarify the existing provisions of those agreements in accordance with customary rules of interpretation of public international law.

reviewable by the Appellate Body, which is limited to the consideration of issues of law under Article 17.6 of the *DSU*.[14]

With respect to Article III:2, second sentence, the European Communities argue that the Panel did not rule that cross-price elasticity is the decisive criterion for a determination that two products are directly competitive or substitutable, but rather ruled that such elasticity is only one of the criteria to be considered. The European Communities view the Panel's findings on the issue of the tax/price ratios as factual; however, if the Appellate Body nevertheless considers it necessary to rule on this issue, the European Communities argue that tax/price ratios are not the most appropriate yardstick for comparing tax burdens imposed by a system of specific taxes. The European Communities submit further that the Panel was correct in ignoring the linkage between differences in taxation and the origin of products. The European Communities assert that Japan's argument that the Liquor Tax Law is not applied "so as to afford protection to domestic production" of shochu because shochu is also produced in other countries and, therefore, is not an "inherently domestic product" rests on two wrong propositions: first, that "domestic production" of shochu is not "protected" if the same tax treatment is accorded to foreign shochu; and, second, that the mere fact that shochu is produced in third countries is sufficient to conclude that foreign shochu may benefit from the lower tax as much as domestic shochu and, consequently, that protection is not afforded only to domestic production. The European Communities further contend that the United States is incorrect to attribute to the Panel the statement that the product coverage of Article III:2 and Article III:4 is not equivalent.

With respect to the status of adopted panel reports, the European Communities conclude that the Panel's characterization of them as "subsequent practice in a specific case" is intrinsically contradictory, since the essence of subsequent practice is that it consists of a large number of legally relevant events and pronouncements. The European Communities' view is that one adopted panel report "would merely constitute part of a wall of the house that constitutes subsequent practice". The European Communities, therefore, ask the Appellate Body to modify the Panel's legal terminology on this issue. The European Communities further consider that the *decision* to adopt a panel report constitutes a "decision" within the meaning of paragraph 1(b)(iv) of the language of Annex 1A incorporating the GATT 1994 into the *WTO Agreement*, however an adopted panel report is not itself a "decision" in this sense.

[14] Article 17.6 of the *DSU* states:

> An appeal shall be limited to issues of law covered in the panel report and legal interpretations developed by the panel.

4. Canada

Canada confined its submissions and arguments on appeal to Article III:2, second sentence. Canada supports the Panel's legal interpretations of Article III:2, second sentence, as well as the conclusion of the Panel that the Liquor Tax Law is inconsistent with Article III:2, second sentence. Canada claims that the Panel properly found that the phrase "so as to afford protection" in Article III:1 does not require a consideration of both the aim and effect of a measure to determine whether that measure affords protection to domestic production. Canada argues further that: first, the Panel Report did not create a *per se* test in Article III:2, second sentence, and did not equate the reference to "so as to afford protection to domestic production" with a determination that directly competitive or substitutable products are "not similarly taxed"; second, the Panel had sufficient evidence before it to conclude that differential tax treatment under the Liquor Tax Law favours domestic shochu production; third, the Panel Report considered in detail the issue of the tax/price ratios and assigned them their proper weight in assessing the tax burden on the products in dispute; and, finally, the Panel interpreted the phrase "directly competitive or substitutable" properly and did not identify "cross-price elasticity" as *the* decisive criterion for assessment of whether products are directly competitive or substitutable.

With regard to the status of adopted panel reports, Canada argues that decisions to adopt panel reports under GATT 1947 constitute "decisions" under Article 1(b)(iv) of the GATT 1994.

C. Issues Raised in the Appeal

The appellants, Japan and the United States, have raised the following issues in this appeal:

1. Japan

(a) whether the Panel erred in failing to interpret Article III:2, first and second sentences, in the light of Article III:1;

(b) whether the Panel erred in rejecting an "aim-and-effect" test in establishing whether the Liquor Tax Law is applied "so as to afford protection to domestic production";

(c) whether the Panel erred in failing to examine the effect of affording protection to domestic production from the perspective of the linkage between the origin of products and their treatment under the Liquor Tax Law;

(d) whether the Panel failed to give proper weight to tax/price ratios as a yardstick for comparing tax burdens under Article III:2, first and second sentences;

(e) whether the Panel erred in interpreting and applying Article III:2, second sentence, by equating the language "not similarly taxed" in *Ad* Article III:2, second sentence, with "so as to afford protection" in Article III:1; and

(f) whether the Panel erred in placing excessive emphasis on tariff classification as a criterion for determining "like products".

2. United States

(a) whether the Panel erred in failing to interpret Article III:2, first and second sentences, in the light of Article III:1;

(b) whether the Panel erred in failing to find that all distilled spirits are "like products";

(c) whether the Panel erred in drawing a connection between national treatment obligations and tariff bindings;

(d) whether the Panel erred in interpreting and applying Article III:2, second sentence, by equating the language "not similarly taxed" in *Ad* Article III:2, second sentence, with "so as to afford protection" in Article III:1;

(e) whether the Panel erred in its conclusions on "directly competitive or substitutable products" by examining cross-price elasticity as "the decisive criterion";

(f) whether the Panel erred in failing to maintain consistency between the conclusions in paragraph 7.1(ii) of the Panel Report on "directly competitive or substitutable products" and the conclusions in paragraphs 6.32-6.33 of the Panel Report, and whether the Panel erred in failing to address the full scope of products subject of this dispute;

(g) whether the Panel erred in finding that the coverage of Article III:2 and Article III:4 are not equivalent; and

(h) whether the Panel erred in its characterization of panel reports adopted by the GATT CONTRACTING PARTIES and the WTO Dispute Settlement Body as "subsequent practice in a specific case by virtue of the decision to adopt them".

D. Treaty Interpretation

Article 3.2 of the *DSU* directs the Appellate Body to clarify the provisions of GATT 1994 and the other "covered agreements" of the *WTO Agreement* "in accordance with customary rules of interpretation of public international law". Following this mandate, in *United States - Standards for Reformulated and Conventional Gasoline*,[15] we stressed the need to achieve such clarification by reference to the fundamental rule of treaty interpretation set out in Article 31(1) of the *Vienna Convention*. We stressed there that this general rule of interpretation "has attained the status of a rule of customary or general international law".[16] There can be no doubt that Article 32 of the *Vienna Convention*, dealing with the role of supplementary means of interpretation, has also attained the same status.[17]

Article 31, as a whole, and Article 32 are each highly pertinent to the present appeal. They provide as follows:

ARTICLE 31
General rule of interpretation

[15] Adopted 20 May 1996, WT/DS2/9.

[16] *Ibid.*, at p. 17.

> 1.A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose.
>
> 2.The context for the purpose of the interpretation of a treaty shall comprise, in addition to the text, including its preamble and annexes:
>
> (a)any agreement relating to the treaty which was made between all the parties in connexion with the conclusion of the treaty;
> (b)any instrument which was made by one or more parties in connexion with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty.
>
> 3.There shall be taken into account together with the context:
>
> (a)any subsequent agreement between the parties regarding the interpretation of the treaty or the application of its provisions;
> (b)any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation;
> (c)any relevant rules of international law applicable in the relations between the parties.
>
> 4.A special meaning shall be given to a term if it is established that the parties so intended.
>
> ARTICLE 32
> *Supplementary means of interpretation*
>
> Recourse may be had to supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion, in order to confirm the meaning resulting from the application of article 31, or to determine the meaning when the interpretation according to article 31:
>
> (a)leaves the meaning ambiguous or obscure; or
> (b)leads to a result which is manifestly absurd or unreasonable.

Article 31 of the *Vienna Convention* provides that the words of the treaty form the foundation for the interpretive process: "interpretation must be based above all upon the text of the treaty".[18] The provisions of the treaty are to be given their ordinary meaning in their context.[19] The object and purpose of

[18]*Territorial Dispute (Libyan Arab Jamahiriya/Chad)*, *Judgment*, (1994) I.C.J. Reports, p. 6 at 20; *Maritime Delimitation and Territorial Questions between Qatar and Bahrain, Jurisdiction and Admissibility*, *Judgment*, (1995) I.C.J.Reports, p. 6 at 18.

[19]See, *e.g., Competence of the General Assembly for the Admission of a State to the United Nations* (*Second Admissions Case*) (1950), I.C.J. Reports, p. 4 at 8, in which the International Court of Justice stated: "The Court considers it necessary to say that the first duty of a tribunal which is called upon to interpret and apply the provisions of a treaty, is to endeavour to give effect to them in their natural and ordinary meaning and in the context in which they occur".

the treaty are also to be taken into account in determining the meaning of its provisions.[20] A fundamental tenet of treaty interpretation flowing from the general rule of interpretation set out in Article 31 is the principle of effectiveness (*ut res magis valeat quam pereat*).[21] In *United States - Standards for Reformulated and Conventional Gasoline*, we noted that "[o]ne of the corollaries of the 'general rule of interpretation' in the *Vienna Convention* is that interpretation must give meaning and effect to all the terms of the treaty. An interpreter is not free to adopt a reading that would result in reducing whole clauses or paragraphs of a treaty to redundancy or inutility".[22]

E. Status of Adopted Panel Reports

In this case, the Panel concluded that,

> ...panel reports adopted by the GATT CONTRACTING PARTIES and the WTO Dispute Settlement Body constitute subsequent practice in a specific case by virtue of the decision to adopt them. Article 1(b)(iv) of GATT 1994 provides institutional recognition that adopted panel reports constitute subsequent practice. Such reports are an integral part of GATT 1994, since they constitute "other decisions of the CONTRACTING PARTIES to GATT 1947".[23]

Article 31(3)(b) of the *Vienna Convention* states that "any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation" is to be "taken into account together with the context" in interpreting the terms of the treaty. Generally, in international law, the essence of subsequent practice in interpreting a treaty has been recognized as a "concordant, common and consistent" sequence of acts or pronouncements which is sufficient to establish a discernable pattern implying the agreement of the parties regarding its interpretation.[24] An isolated act is generally not sufficient to establish subsequent practice;[25] it is a sequence of acts establishing the agreement of the parties that is relevant.[26]

[20]That is, the treaty's "object and purpose" is to be referred to in determining the meaning of the "terms of the treaty" and not as an independent basis for interpretation: Harris, Cases and Materials on International Law (4th ed., 1991) p. 770; Jiménez de Aréchaga, "International Law in the Past Third of a Century" (1978-I) 159 Recueil des Cours p. 1 at 44; Sinclair, *The Vienna Convention and the Law of Treaties* (2nd ed, 1984), p. 130. See *e.g.* Oppenheims' International Law (9th ed., Jennings and Watts, eds., 1992) Vol. I, p.1273; *Competence of the ILO to Regulate the Personal Work of the Employer* (1926), P.C.I.J., Series B, No. 13, p. 6 at 18; *International Status of South West Africa* (1962), I.C.J. Reports, p. 128 at 336; *Re Competence of Conciliation Commission* (1955), 22 International Law Reports, p. 867 at 871.

[21]See also (1966) Yearbook of the International Law Commission, Vol. II, p. 219: "When a treaty is open to two interpretations one of which does and the other does not enable the treaty to have appropriate effects, good faith and the objects and purposes of the treaty demand that the former interpretation should be adopted."

[22]*United States - Standards for Reformulated and Conventional Gasoline*, WT/DS2/9, adopted 20 May 1996, p. 23.

[25]Sinclair, *supra.*, footnote 24, p. 137.

[26](1966) Yearbook of the International Law Commission, Vol. II, p. 222; Sinclair, *supra.*, footnote 24, p. 138.

Although GATT 1947[27] panel reports were adopted by decisions of the CONTRACTING PARTIES[28], a decision to adopt a panel report did not under GATT 1947 constitute agreement by the CONTRACTING PARTIES on the legal reasoning in that panel report. The generally-accepted view under GATT 1947 was that the conclusions and recommendations in an adopted panel report bound the parties to the dispute in that particular case, but subsequent panels did not feel legally bound by the details and reasoning of a previous panel report.[29]

We do not believe that the CONTRACTING PARTIES, in deciding to adopt a panel report, intended that their decision would constitute a definitive interpretation of the relevant provisions of GATT 1947. Nor do we believe that this is contemplated under GATT 1994. There is specific cause for this conclusion in the *WTO Agreement*. Article IX:2 of the *WTO Agreement* provides: "The Ministerial Conference and the General Council shall have the exclusive authority to adopt interpretations of this Agreement and of the Multilateral Trade Agreements". Article IX:2 provides further that such decisions "shall be taken by a three-fourths majority of the Members". The fact that such an "exclusive authority" in interpreting the treaty has been established so specifically in the *WTO Agreement* is reason enough to conclude that such authority does not exist by implication or by inadvertence elsewhere.

Historically, the decisions to adopt panel reports under Article XXIII of the GATT 1947 were different from joint action by the CONTRACTING PARTIES under Article XXV of the GATT 1947. Today, their nature continues to differ from interpretations of the GATT 1994 and the other Multilateral Trade Agreements under the *WTO Agreement* by the WTO Ministerial Conference or the General Council. This is clear from a reading of Article 3.9 of the *DSU*, which states:

> The provisions of this Understanding are without prejudice to the rights of Members to seek authoritative interpretation of provisions of a covered agreement through decision-making under the WTO Agreement or a covered agreement which is a Plurilateral Trade Agreement.

Article XVI:1 of the *WTO Agreement* and paragraph 1(b)(iv) of the language of Annex 1A incorporating the GATT 1994 into the *WTO Agreement* bring the legal history and experience under the GATT 1947 into the new realm of the WTO in a way that ensures continuity and consistency in a smooth transition from the GATT 1947 system. This affirms the importance to the Members of the WTO of the experience acquired by the CONTRACTING PARTIES to the GATT 1947 -- and acknowledges the continuing relevance of that experience to the new trading system served by the WTO. Adopted panel reports are an important part of the GATT *acquis*. They are often considered by subsequent panels. They create legitimate expectations among WTO Members, and, therefore, should be taken into account where they are relevant to any dispute. However, they are not binding, except with respect to resolving the particular dispute between the parties to that dispute.[30] In short, their character and their legal status have not been changed by the coming into force of the *WTO Agreement*.

[27]By GATT 1947, we refer throughout to the General Agreement on Tariffs and Trade, dated 30 October 1947, annexed to the Final Act Adopted at the Conclusion of the Second Session of the Preparatory Committee of the United Nations Conference on Trade and Employment, as subsequently rectified, amended or modified.

[28]By CONTRACTING PARTIES, we refer throughout to the CONTRACTING PARTIES of GATT 1947.

[29]*European Economic Community - Restrictions on Imports of Dessert Apples*, BISD 36S/93, para. 12.1.

[30]It is worth noting that the Statute of the International Court of Justice has an explicit provision, Article 59, to the same effect. This has not inhibited the development by that Court (and its predecessor) of a body of case law in which considerable reliance on the value of previous decisions is readily discernible.

For these reasons, we do not agree with the Panel's conclusion in paragraph 6.10 of the Panel Report that "panel reports adopted by the GATT CONTRACTING PARTIES and the WTO Dispute Settlement Body constitute subsequent practice in a specific case" as the phrase "subsequent practice" is used in Article 31 of the *Vienna Convention*. Further, we do not agree with the Panel's conclusion in the same paragraph of the Panel Report that adopted panel reports in themselves constitute "other decisions of the CONTRACTING PARTIES to GATT 1947" for the purposes of paragraph 1(b)(iv) of the language of Annex 1A incorporating the GATT 1994 into the *WTO Agreement*.

However, we agree with the Panel's conclusion in that same paragraph of the Panel Report that *unadopted* panel reports "have no legal status in the GATT or WTO system since they have not been endorsed through decisions by the CONTRACTING PARTIES to GATT or WTO Members".[31] Likewise, we agree that "a panel could nevertheless find useful guidance in the reasoning of an unadopted panel report that it considered to be relevant".[32]

F. Interpretation of Article III

The *WTO Agreement* is a treaty – the international equivalent of a contract. It is self-evident that in an exercise of their sovereignty, and in pursuit of their own respective national interests, the Members of the WTO have made a bargain. In exchange for the benefits they expect to derive as Members of the WTO, they have agreed to exercise their sovereignty according to the commitments they have made in the *WTO Agreement*.

One of those commitments is Article III of the GATT 1994, which is entitled "National Treatment on Internal Taxation and Regulation". For the purpose of this appeal, the relevant parts of Article III read as follows:

Article III

National Treatment on Internal Taxation and Regulation

1. The contracting parties recognize that internal taxes and other internal charges, and laws, regulations and requirements affecting the internal sale, offering for sale, purchase, transportation, distribution or use of products, and internal quantitative regulations requiring the mixture, processing or use of products in specified amounts or proportions, should not be applied to imported or domestic products so as to afford protection to domestic production.*

2. The products of the territory of any contracting party imported into the territory of any other contracting party shall not be subject, directly or indirectly, to internal taxes or other internal charges of any kind in excess of those applied, directly or indirectly, to like domestic products. Moreover, no contracting party shall otherwise apply internal taxes or other internal charges to imported or domestic products in a manner contrary to the principles set forth in paragraph 1.*

[31]Panel Report, para. 6.10.

[32]*Ibid.*

Ad Article III

Paragraph 2

A tax conforming to the requirements of the first sentence of paragraph 2 would be considered to be inconsistent with the provisions of the second sentence only in cases where competition was involved between, on the one hand, the taxed product and, on the other hand, a directly competitive or substitutable product which was not similarly taxed.

The broad and fundamental purpose of Article III is to avoid protectionism in the application of internal tax and regulatory measures. More specifically, the purpose of Article III "is to ensure that internal measures 'not be applied to imported or domestic products so as to afford protection to domestic production'".[33] Toward this end, Article III obliges Members of the WTO to provide equality of competitive conditions for imported products in relation to domestic products.[34] "[T]he intention of the drafters of the Agreement was clearly to treat the imported products in the same way as the like domestic products once they had been cleared through customs. Otherwise indirect protection could be given".[35] Moreover, it is irrelevant that "the trade effects" of the tax differential between imported and domestic products, as reflected in the volumes of imports, are insignificant or even non-existent; Article III protects expectations not of any particular trade volume but rather of the equal competitive relationship between imported and domestic products.[36] Members of the WTO are free to pursue their own domestic goals through internal taxation or regulation so long as they do not do so in a way that violates Article III or any of the other commitments they have made in the *WTO Agreement*.

The broad purpose of Article III of avoiding protectionism must be remembered when considering the relationship between Article III and other provisions of the *WTO Agreement*. Although the protection of negotiated tariff concessions is certainly one purpose of Article III,[37] the statement in Paragraph 6.13 of the Panel Report that "one of the main purposes of Article III is to guarantee that WTO Members will not undermine through internal measures their commitments under Article II" should not be overemphasized. The sheltering scope of Article III is not limited to products that are the subject of tariff concessions under Article II. The Article III national treatment obligation is a general prohibition on the use of internal taxes and other internal regulatory measures so as to afford protection to domestic production. This obligation clearly extends also to products not bound under Article II.[38] This is confirmed by the negotiating history of Article III.[39]

[39] At the Second Session of the Preparatory Committee of the United Nations Conference on Trade and Employment, held in 1947, delegates in the Tariff Agreement Committee addressed the issue of whether to include the national treatment clause from the draft Charter for an International Trade Organization ("ITO Charter") in the GATT 1947. One delegate noted:

G. Article III:1

The terms of Article III must be given their ordinary meaning -- in their context and in the light of the overall object and purpose of the *WTO Agreement*. Thus, the words actually used in the Article provide the basis for an interpretation that must give meaning and effect to all its terms. The proper interpretation of the Article is, first of all, a textual interpretation. Consequently, the Panel is correct in seeing a distinction between Article III:1, which "contains general principles", and Article III:2, which "provides for specific obligations regarding internal taxes and internal charges".[40] Article III:1 articulates a general principle that internal measures should not be applied so as to afford protection to domestic production. This general principle informs the rest of Article III. The purpose of Article III:1 is to establish this general principle as a guide to understanding and interpreting the specific obligations contained in Article III:2 and in the other paragraphs of Article III, while respecting, and not diminishing in any way, the meaning of the words actually used in the texts of those other paragraphs. In short, Article III:1 constitutes part of the context of Article III:2, in the same way that it constitutes part of the context of each of the other paragraphs in Article III. Any other reading of Article III would have the effect of rendering the words of Article III:1 meaningless, thereby violating the fundamental principle of effectiveness in treaty interpretation. Consistent with this principle of effectiveness, and with the textual differences in the two sentences, we believe that Article III:1 informs the first sentence and the second sentence of Article III:2 in different ways.

H. Article III:2

1. First Sentence

This Article in the Charter had two purposes, as I understand it. The first purpose was to protect the items in the Schedule or any other Schedule concluded as a result of any subsequent negotiations and agreements - that is, to ensure that a country offering a tariff concession could not nullify that tariff concession by imposing an internal tax on the commodity, which had an equivalent effect. If that were the sole purpose and content of this Article, there could really be no objection to its inclusion in the General Agreement. But the Article in the Charter had an additional purpose. That purpose was to prevent the use of internal taxes as a system of protection. It was part of a series of Articles designed to concentrate national protective measures into the forms permitted under the Charter, i.e. subsidies and tariffs, and since we have taken over this Article from the Charter, we are, by including the Article, doing two things: so far as the countries become parties to the Agreement, we are, first of all, ensuring that the tariff concessions they grant one another cannot be nullified by the imposition of corresponding internal taxes; but we are also ensuring that those countries which become parties to the Agreement undertake not to use internal taxes as a system of protection.

This view is reinforced by the following statement of another delegate:

... [Article III] is necessary to protect not only scheduled items in the Agreement, but, indeed, all items for all our exports and the exports of any country. If that is not done, then every item which does not appear in the Schedule would have to be reconsidered and possibly tariff negotiations re-opened if Article III were changed to permit any action on these non-scheduled items.

See EPCT/TAC/PV.10, pp. 3 and 33.

[40] Panel Report, para. 6.12.

Article III:1 informs Article III:2, first sentence, by establishing that if imported products are taxed in excess of like domestic products, then that tax measure is inconsistent with Article III. Article III:2, first sentence does not refer specifically to Article III:1. There is no specific invocation in this first sentence of the general principle in Article III:1 that admonishes Members of the WTO not to apply measures "so as to afford protection". This omission must have some meaning. We believe the meaning is simply that the presence of a protective application need not be established separately from the specific requirements that are included in the first sentence in order to show that a tax measure is inconsistent with the general principle set out in the first sentence. However, this does not mean that the general principle of Article III:1 does not apply to this sentence. To the contrary, we believe the first sentence of Article III:2 is, in effect, an application of this general principle. The ordinary meaning of the words of Article III:2, first sentence leads inevitably to this conclusion. Read in their context and in the light of the overall object and purpose of the *WTO Agreement*, the words of the first sentence require an examination of the conformity of an internal tax measure with Article III by determining, first, whether the taxed imported and domestic products are "like" and, second, whether the taxes applied to the imported products are "in excess of" those applied to the like domestic products. If the imported and domestic products are "like products", and if the taxes applied to the imported products are "in excess of" those applied to the like domestic products, then the measure is inconsistent with Article III:2, first sentence.[41]

[41]In accordance with Article 3.8 of the *DSU*, such a violation is *prima facie* presumed to nullify or impair benefits under Article XXIII of the GATT 1994. Article 3.8 reads as follows:

> In cases where there is an infringement of the obligations assumed under a covered agreement, the action is considered *prima facie* to constitute a case of nullification or impairment. This means that there is normally a presumption that a breach of the rules has an adverse impact on other Members parties to that covered agreement, and in such cases, it shall be up to the Member against whom the complaint has been brought to rebut the charge.

This approach to an examination of Article III:2, first sentence, is consistent with past practice under the GATT 1947.[42] Moreover, it is consistent with the object and purpose of Article III:2, which the panel in the predecessor to this case dealing with an earlier version of the Liquor Tax Law, *Japan - Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages* ("*1987 Japan - Alcohol*"), rightly stated as "promoting non-discriminatory competition among imported and like domestic products [which] could not be achieved if Article III:2 were construed in a manner allowing discriminatory and protective internal taxation of imported products in excess of like domestic products".[43]

(a) *"Like Products"*

Because the second sentence of Article III:2 provides for a separate and distinctive consideration of the protective aspect of a measure in examining its application to a broader category of products that are not "like products" as contemplated by the first sentence, we agree with the Panel that the first sentence of Article III:2 must be construed narrowly so as not to condemn measures that its strict terms are not meant to condemn. Consequently, we agree with the Panel also that the definition of "like products" in Article III:2, first sentence, should be construed narrowly.[44]

[42]See *Brazilian Internal Taxes*, BISD II/181, para. 14; *Japan - Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages*, BISD 34S/83, para. 5.5(d); *United States - Taxes on Petroleum and Certain Imported Substances*, BISD 34S/136, para. 5.1.1; *United States - Measures Affecting the Importation, Internal Sale and Use of Tobacco*, DS44/R, adopted on 4 October 1994.

[43]*Japan - Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages*, BISD 34S/83, para 5.5(c).

[44]We note the argument on appeal that the Panel suggested in paragraph 6.20 of the Panel Report that the product coverage of Article III:2 is not identical to the coverage of Article III:4. That is not what the Panel said. The Panel said the following:

> *If* the coverage of Article III:2 is identical to that of Article III:4, a different interpretation of the term "like product" would be called for in the two paragraphs. Otherwise, if the term "like product" were to be interpreted in an identical way in both instances, the scope of the two paragraphs would be different. (emphasis added)

This was merely a hypothetical statement.

How narrowly is a matter that should be determined separately for each tax measure in each case. We agree with the practice under the GATT 1947 of determining whether imported and domestic products are "like" on a case-by-case basis. The Report of the Working Party on *Border Tax Adjustments*, adopted by the CONTRACTING PARTIES in 1970, set out the basic approach for interpreting "like or similar products" generally in the various provisions of the GATT 1947:

> ... the interpretation of the term should be examined on a case-by-case basis. This would allow a fair assessment in each case of the different elements that constitute a "similar" product. Some criteria were suggested for determining, on a case-by-case basis, whether a product is "similar": the product's end-uses in a given market; consumers' tastes and habits, which change from country to country; the product's properties, nature and quality.[45]

This approach was followed in almost all adopted panel reports after *Border Tax Adjustments*.[46] This approach should be helpful in identifying on a case-by-case basis the range of "like products" that fall within the narrow limits of Article III:2, first sentence in the GATT 1994. Yet this approach will be most helpful if decision makers keep ever in mind how narrow the range of "like products" in Article III:2, first sentence is meant to be as opposed to the range of "like" products contemplated in some other provisions of the GATT 1994 and other Multilateral Trade Agreements of the *WTO Agreement*. In applying the criteria cited in *Border Tax Adjustments* to the facts of any particular case, and in considering other criteria that may also be relevant in certain cases, panels can only apply their best judgement in determining whether in fact products are "like". This will always involve an unavoidable element of individual, discretionary judgement. We do not agree with the Panel's observation in paragraph 6.22 of the Panel Report that distinguishing between "like products" and "directly competitive or substitutable products" under Article III:2 is "an arbitrary decision". Rather, we think it is a discretionary decision that must be made in considering the various characteristics of products in individual cases.

No one approach to exercising judgement will be appropriate for all cases. The criteria in *Border Tax Adjustments* should be examined, but there can be no one precise and absolute definition of what is "like". The concept of "likeness" is a relative one that evokes the image of an accordion. The accordion of "likeness" stretches and squeezes in different places as different provisions of the *WTO Agreement* are applied. The width of the accordion in any one of those places must be determined by the particular provision in which the term "like" is encountered as well as by the context and the circumstances that prevail in any given case to which that provision may apply. We believe that, in Article III:2, first sentence of the GATT 1994, the accordion of "likeness" is meant to be narrowly squeezed.

The Panel determined in this case that shochu and vodka are "like products" for the purposes of Article III:2, first sentence. We note that the determination of whether vodka is a "like product" to shochu under Article III:2, first sentence, or a "directly competitive or substitutable product" to shochu under Article III:2, second sentence, does not materially affect the outcome of this case.

A uniform tariff classification of products can be relevant in determining what are "like products". If sufficiently detailed, tariff classification can be a helpful sign of product similarity. Tariff classification has

beverages on a "product-by-product basis" by applying the criteria listed in the Working Party Report on *Border Tax Adjustments*,

> ... as well as others recognized in previous GATT practice (see BISD 25S/49, 63), such as the Customs Cooperation Council Nomenclature (CCCN) for the classification of goods in customs tariffs which has been accepted by Japan.[48]

Uniform classification in tariff nomenclatures based on the Harmonized System (the "HS") was recognized in GATT 1947 practice as providing a useful basis for confirming "likeness" in products. However, there is a major difference between tariff classification nomenclature and tariff bindings or concessions made by Members of the WTO under Article II of the GATT 1994. There are risks in using tariff bindings that are too broad as a measure of product "likeness". Many of the least-developed country Members of the WTO submitted schedules of concessions and commitments as annexes to the GATT 1994 for the first time as required by Article XI of the *WTO Agreement*. Many of these least-developed countries, as well as other developing countries, have bindings in their schedules which include broad ranges of products that cut across several different HS tariff headings. For example, many of these countries have very broad uniform bindings on non-agricultural products.[49] This does not necessarily indicate similarity of the products covered by a binding. Rather, it represents the results of trade concessions negotiated among Members of the WTO.

It is true that there are numerous tariff bindings which are in fact extremely precise with regard to product description and which, therefore, can provide significant guidance as to the identification of "like products". Clearly enough, these determinations need to be made on a case-by-case basis. However, tariff bindings that include a wide range of products are not a reliable criterion for determining or confirming product "likeness" under Article III:2.[50]

With these modifications to the legal reasoning in the Panel Report, we affirm the legal conclusions and the findings of the Panel with respect to "like products" in all other respects.

(b) *"In Excess Of"*

The only remaining issue under Article III:2, first sentence, is whether the taxes on imported products are "in excess of" those on like domestic products. If so, then the Member that has imposed the tax is not in compliance with Article III. Even the smallest amount of "excess" is too much. "The prohibition of discriminatory taxes in Article III:2, first sentence, is not conditional on a 'trade effects test' nor is it qualified by a *de minimis* standard."[51] We agree with the Panel's legal reasoning and with its conclusions on this aspect of the interpretation and application of Article III:2, first sentence.

---

[48] *Japan - Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages*, BISD 34S/83, para. 5.6.

[49] For example, Jamaica has bound tariffs on the majority of non-agricultural products at 50%. Trinidad and Tobago have bound tariffs on the majority of products falling within HS Chapters 25-97 at 50%. Peru has bound all non-agricultural products at 30%, and Costa Rica, El Salvador, Guatemala, Morocco, Paraguay, Uruguay and Venezuela have broad uniform bindings on non-agricultural products, with a few listed exceptions.

[50] We believe, therefore, that statements relating to any relationship between tariff bindings and "likeness" must be made cautiously. For example, the Panel stated in paragraph 6.21 of the Panel Report that "... with respect to two products subject to the same tariff binding and therefore to the same maximum border tax, there is no justification, outside of those mentioned in GATT rules, to tax them in a differentiated way through internal taxation". This is incorrect.

[51] *United States - Measures Affecting Alcoholic and Malt Beverages*, BISD 39S/206, para 5.6; see also *Brazilian Internal Taxes*, BISD II/181, para. 16; *United States - Taxes on Petroleum and Certain Imported Substances*, BISD 34S/136, para. 5.1.9; *Japan - Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages*, BISD 34S/83, para. 5.8.

2. Second Sentence

Article III:1 informs Article III:2, second sentence, through specific reference. Article III:2, second sentence, contains a general prohibition against "internal taxes or other internal charges" applied to "imported or domestic products in a manner contrary to the principles set forth in paragraph 1". As mentioned before, Article III:1 states that internal taxes and other internal charges "should not be applied to imported or domestic products so as to afford protection to domestic production". Again, *Ad* Article III:2 states as follows:

> A tax conforming to the requirements of the first sentence of paragraph 2 would be considered to be inconsistent with the provisions of the second sentence only in cases where competition was involved between, on the one hand, the taxed product and, on the other hand, a directly competitive or substitutable product which was not similarly taxed.

Article III:2, second sentence, and the accompanying *Ad* Article have equivalent legal status in that both are treaty language which was negotiated and agreed at the same time.[52] The *Ad* Article does not replace or modify the language contained in Article III:2, second sentence, but, in fact, clarifies its meaning. Accordingly, the language of the second sentence and the *Ad* Article must be read together in order to give them their proper meaning.

Unlike that of Article III:2, first sentence, the language of Article III:2, second sentence, specifically invokes Article III:1. The significance of this distinction lies in the fact that whereas Article III:1 acts implicitly in addressing the two issues that must be considered in applying the first sentence, it acts explicitly as an entirely separate issue that must be addressed along with two other issues that are raised in applying the second sentence. Giving full meaning to the text and to its context, three separate issues must be addressed to determine whether an internal tax measure is inconsistent with Article III:2, second sentence. These three issues are whether:

(1)the imported products and the domestic products *are "directly competitive or substitutable products" which are in competition with each other*;
(2)the directly competitive or substitutable imported and domestic products *are "not similarly taxed*"; and
(3)the dissimilar taxation of the directly competitive or substitutable imported domestic products *is "applied ... so as to afford protection to domestic production*".

Again, these are three separate issues. Each must be established separately by the complainant for a panel to find that a tax measure imposed by a Member of the WTO is inconsistent with Article III:2, second sentence.

(a) *"Directly Competitive or Substitutable Products"*

If imported and domestic products are not "like products" for the narrow purposes of Article III:2, first sentence, then they are not subject to the strictures of that sentence and there is no inconsistency with the requirements of that sentence. However, depending on their nature, and depending on the competitive conditions in the relevant market, those same products may well be among the broader category of "directly competitive or substitutable products" that fall within the domain of Article III:2, second sentence. How much broader that category of "directly competitive or substitutable products" may be in any given case is a matter for the panel to determine based on all the relevant facts in that case. As with "like products" under the first sentence, the determination of the appropriate range of "directly competitive or substitutable products" under the second sentence must be made on a case-by-case basis.

In this case, the Panel emphasized the need to look not only at such matters as physical characteristics, common end-uses, and tariff classifications, but also at the "market place".[53] This seems appropriate. The GATT 1994 is a commercial agreement, and the WTO is concerned, after all, with markets. It does not seem inappropriate to look at competition in the relevant markets as one among a number of means of identifying the broader category of products that might be described as "directly competitive or substitutable".

[52]The negotiating history of Article III:2 confirms that the second sentence and the *Ad* Article were added during the Havana Conference, along with other provisions and interpretative notes concerning Article 18 of the draft ITO Charter. When introducing these amendments to delegates, the relevant Sub-Committee reported that: "The new form of the Article makes clearer than did the Geneva text the intention that internal taxes on goods should not be used as a means of protection. The details have been relegated to interpretative notes so that it would be easier for Members to ascertain the precise scope of their obligations under the Article." E/CONF.2/C.3/59, page 8. Article 18 of the draft ITO Charter subsequently became Article III of the GATT pursuant to the Protocol Modifying Part II and Article XXVI, which entered into force on 14 December 1948.

[53]Panel Report, para. 6.22.

Nor does it seem inappropriate to examine elasticity of substitution as one means of examining those relevant markets. The Panel did not say that cross-price elasticity of demand is "*the* decisive criterion"[54] for determining whether products are "directly competitive or substitutable". The Panel stated the following:

> In the Panel's view, the decisive criterion in order to determine whether two products are directly competitive or substitutable is whether they have common end-uses, *inter alia*, as shown by elasticity of substitution.[55]

We agree. And, we find the Panel's legal analysis of whether the products are "directly competitive or substitutable products" in paragraphs 6.28-6.32 of the Panel Report to be correct.

We note that the Panel's conclusions on "like products" and on "directly competitive or substitutable products" contained in paragraphs 7.1(i) and (ii), respectively, of the Panel Report fail to address the full range of alcoholic beverages included in the Panel's Terms of Reference.[56] More specifically, the Panel's conclusions in paragraph 7.1(ii) on "directly competitive or substitutable products" relate only to "shochu, whisky, brandy, rum, gin, genever, and liqueurs," which is narrower than the range of products referred to the Dispute Settlement Body by one of the complainants, the United States, which included in its request for the establishment of a panel "all other distilled spirits and liqueurs falling within HS heading 2208". We consider this failure to incorporate into its conclusions all the products referred to in the Terms of Reference, consistent with the matters referred to the DSB in WT/DS8/5, WT/DS10/5 and WT/DS11/2, to be an error of law by the Panel.

(b) *"Not Similarly Taxed"*

To give due meaning to the distinctions in the wording of Article III:2, first sentence, and Article III:2, second sentence, the phrase "not similarly taxed" in the *Ad* Article to the second sentence must not be construed so as to mean the same thing as the phrase "in excess of" in the first sentence. On its face, the phrase "in excess of" in the first sentence means *any* amount of tax on imported products "in excess of" the tax on domestic "like products". The phrase "not similarly taxed" in the *Ad* Article to the second sentence must therefore mean something else. It requires a different standard, just as "directly competitive or substitutable products" requires a different standard as compared to "like products" for these same interpretive purposes.

Reinforcing this conclusion is the need to give due meaning to the distinction between "like products" in the first sentence and "directly competitive or substitutable products" in the *Ad* Article to the second sentence. If "in excess of" in the first sentence and "not similarly taxed" in the *Ad* Article to the second sentence were construed to mean one and the same thing, then "like products" in the first sentence and "directly competitive or substitutable products" in the *Ad* Article to the second sentence would also

[54]United States Appellant's Submission, dated 23 August 1996, para. 98, p.63. (emphasis added)

[55]Panel Report, para 6.22.

[56]The Panel's Terms of Reference cite the matters referred to the Dispute Settlement Body by the European Communities, Canada and the United States in WT/DS8/5, WT/DS10/5 and WT/DS11/2, respectively. In WT/DS8/5, the European Communities referred the Dispute Settlement Body to Japan's taxation of shochu, "spirits", "whisky/brandy" and "liqueurs". In WT/DS10/5, Canada referred the Dispute Settlement Body to Japan's taxation of shochu and products falling "within HS 2208.30 (' whiskies'), HS 2208.40 (' rum and tafia'), HS 2208.90 (' other' including fruit brandies, vodka, ouzo, korn, cream liqueurs and ' classic' liqueurs.)" In WT/DS11/2, the United States referred the Dispute Settlement Body to Japan's taxation of shochu and "all other distilled spirits and liqueurs falling within HS heading 2208".

mean one and the same thing. This would eviscerate the distinctive meaning that must be respected in the words of the text.

To interpret "in excess of" and "not similarly taxed" identically would deny any distinction between the first and second sentences of Article III:2. Thus, in any given case, there may be some amount of taxation on imported products that may well be "in excess of" the tax on domestic "like products" but may not be so much as to compel a conclusion that "directly competitive or substitutable" imported and domestic products are "not similarly taxed" for the purposes of the *Ad* Article to Article III:2, second sentence. In other words, there may be an amount of excess taxation that may well be more of a burden on imported products than on domestic "directly competitive or substitutable products" but may nevertheless not be enough to justify a conclusion that such products are "not similarly taxed" for the purposes of Article III:2, second sentence. We agree with the Panel that this amount of differential taxation must be more than *de minimis* to be deemed "not similarly taxed" in any given case.[57] And, like the Panel, we believe that whether any particular differential amount of taxation is *de minimis* or is not *de minimis* must, here too, be determined on a case-by-case basis. Thus, to be "not similarly taxed", the tax burden on imported products must be heavier than on "directly competitive or substitutable" domestic products, and that burden must be more than *de minimis* in any given case.

In this case, the Panel applied the correct legal reasoning in determining whether "directly competitive or substitutable" imported and domestic products were "not similarly taxed". However, the Panel erred in blurring the distinction between that issue and the entirely separate issue of whether the tax measure in question was applied "so as to afford protection". Again, these are separate issues that must be addressed individually. If "directly competitive or substitutable products" are *not* "not similarly taxed", then there is neither need nor justification under Article III:2, second sentence, for inquiring further as to whether the tax has been applied "so as to afford protection". But if such products are "not similarly taxed", a further inquiry must necessarily be made.

(c) *"So As To Afford Protection"*

This third inquiry under Article III:2, second sentence, must determine whether "directly competitive or substitutable products" are "not similarly taxed" in a way that affords protection. This is not an issue of intent. It is not necessary for a panel to sort through the many reasons legislators and regulators often have for what they do and weigh the relative significance of those reasons to establish legislative or regulatory intent. If the measure is applied to imported or domestic products so as to afford protection to domestic production, then it does not matter that there may not have been any desire to engage in protectionism in the minds of the legislators or the regulators who imposed the measure. It is irrelevant that protectionism was not an intended objective if the particular tax measure in question is nevertheless, to echo Article III:1, "*applied* to imported or domestic products so as to afford protection to domestic production".[58] This is an issue of how the measure in question is *applied*.

In the *1987 Japan- Alcohol* case, the panel subsumed its discussion of the issue of "not similarly taxed" within its examination of the separate issue of "so as to afford protection":

> ... whereas under the first sentence of Article III:2 the tax on the imported product and the tax on the like domestic product had to be equal in effect, Article III:1 and 2, second sentence, prohibited only the application of internal taxes to imported or domestic products in a manner "so as to afford protection to domestic production". The Panel was of the view that also small tax differences could influence the competitive relationship between directly competing distilled liquors, but the existence of protective taxation could be established only in the light of the particular circumstances of each case and there could be a *de minimis* level below which a tax difference ceased to have the protective effect prohibited by Article III:2, second sentence.[59]

[57]Panel Report, para. 6.33.

[58]Emphasis added.

To detect whether the taxation was protective, the panel in the 1987 case examined a number of factors that it concluded were "sufficient evidence of fiscal distortions of the competitive relationship between imported distilled liquors and domestic shochu affording protection to the domestic production of shochu". These factors included the considerably lower specific tax rates on shochu than on imported directly competitive or substitutable products; the imposition of high *ad valorem* taxes on imported alcoholic beverages and the absence of *ad valorem* taxes on shochu; the fact that shochu was almost exclusively produced in Japan and that the lower taxation of shochu did "afford protection to domestic production"; and the mutual substitutability of these distilled liquors.[60] The panel in the 1987 case concluded that "the application of considerably lower internal taxes by Japan on shochu than on other directly competitive or substitutable distilled liquors had trade-distorting effects affording protection to domestic production of shochu contrary to Article III:1 and 2, second sentence".[61]

As in that case, we believe that an examination in any case of whether dissimilar taxation has been applied so as to afford protection requires a comprehensive and objective analysis of the structure and application of the measure in question on domestic as compared to imported products. We believe it is possible to examine objectively the underlying criteria used in a particular tax measure, its structure, and its overall application to ascertain whether it is applied in a way that affords protection to domestic products.

Although it is true that the aim of a measure may not be easily ascertained, nevertheless its protective application can most often be discerned from the design, the architecture, and the revealing structure of a measure. The very magnitude of the dissimilar taxation in a particular case may be evidence of such a protective application, as the Panel rightly concluded in this case. Most often, there will be other factors to be considered as well. In conducting this inquiry, panels should give full consideration to all the relevant facts and all the relevant circumstances in any given case.

In this respect, we note and agree with the panel's acknowledgment in the *1987 Japan - Alcohol* Report:

[59]*Japan - Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages,* BISD 34S/83, para. 5.11.

[60]*Ibid.*

[61]*Ibid.*

> ... that Article III:2 does not prescribe the use of any specific method or system of taxation. ... there could be objective reasons proper to the tax in question which could justify or necessitate differences in the system of taxation for imported and for domestic products. The Panel found that it could also be compatible with Article III:2 to allow two different methods of calculation of price for tax purposes. Since Article III:2 prohibited only discriminatory or protective tax burdens on imported products, what mattered was, in the view of the Panel, whether the application of the different taxation methods actually had a discriminatory or protective effect against imported products.[62]

We have reviewed the Panel's reasoning in this case as well as its conclusions on the issue of "so as to afford protection" in paragraphs 6.33 - 6.35 of the Panel Report. We find cause for thorough examination. The Panel began in paragraph 6.33 by describing its approach as follows:

> ... if directly competitive or substitutable products are not "similarly taxed", and if it were found that the tax favours domestic products, then protection would be afforded to such products, and Article III:2, second sentence, is violated.

This statement of the reasoning required under Article III:2, second sentence is correct.

However, the Panel went on to note:

[62] *Japan - Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages,* BISD 34S/83, para. 5.9(c).

> ... for it to conclude that dissimilar taxation afforded protection, it would be sufficient for it to find that the dissimilarity in taxation is not *de minimis*. ... the Panel took the view that "similarly taxed" is the appropriate benchmark in order to determine whether a violation of Article III:2, second sentence, has occurred as opposed to "in excess of" that constitutes the appropriate benchmark to determine whether a violation of Article III:2, first sentence, has occurred.[63]

In paragraph 6.34, the Panel added:

> (i) The benchmark in Article III:2, second sentence, is whether internal taxes operate "so as to afford protection to domestic production", a term which has been further interpreted in the Interpretative Note ad Article III:2, paragraph 2, to mean dissimilar taxation of domestic and foreign directly competitive or substitutable products.

And, furthermore, in its conclusions, in paragraph 7.1(ii), the Panel concluded that:

> (ii) Shochu, whisky, brandy, rum, gin, genever, and liqueurs are "directly competitive or substitutable products" and Japan, by not taxing them similarly, is in violation of its obligation under Article III:2, second sentence, of the General Agreement on Tariffs and Trade 1994.

Thus, having stated the correct legal approach to apply with respect to Article III:2, second sentence, the Panel then equated dissimilar taxation above a *de minimis* level with the separate and distinct requirement of demonstrating that the tax measure "affords protection to domestic production". As previously stated, a finding that "directly competitive or substitutable products" are "not similarly taxed" is necessary to find a violation of Article III:2, second sentence. Yet this is not enough. The dissimilar taxation must be more than *de minimis*. It may be so much more that it will be clear from that very differential that the dissimilar taxation was applied "so as to afford protection". In some cases, that may be enough to show a violation. In this case, the Panel concluded that it was enough. Yet in other cases, there may be other factors that will be just as relevant or more relevant to demonstrating that the dissimilar taxation at issue was applied "so as to afford protection". In any case, the three issues that must be addressed in determining whether there is such a violation must be addressed clearly and separately in each case and on a case-by-case basis. And, in every case, a careful, objective analysis, must be done of each and all relevant facts and all the relevant circumstances in order to determine "the existence of protective taxation".[64] Although the Panel blurred its legal reasoning in this respect, nevertheless we conclude that it reasoned correctly that in this case, the Liquor Tax Law is not in compliance with Article III:2. As the Panel did, we note that:

> ...the combination of customs duties and internal taxation in Japan has the following impact: on the one hand, it makes it difficult for foreign-produced shochu to penetrate the Japanese market and, on the other, it does not guarantee equality of competitive conditions between shochu and the rest of 'white' and 'brown' spirits. Thus, through a combination of high import duties and differentiated internal taxes, Japan manages to "isolate"

[63] Panel Report, para 6.33.

[64] *Japan - Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages*, BISD 34S/83, para. 5.11.

> domestically produced shochu from foreign competition, be it foreign produced shochu or any other of the mentioned white and brown spirits.[65]

Our interpretation of Article III is faithful to the "customary rules of interpretation of public international law".[66] WTO rules are reliable, comprehensible and enforceable. WTO rules are not so rigid or so inflexible as not to leave room for reasoned judgements in confronting the endless and ever-changing ebb and flow of real facts in real cases in the real world. They will serve the multilateral trading system best if they are interpreted with that in mind. In that way, we will achieve the "security and predictability" sought for the multilateral trading system by the Members of the WTO through the establishment of the dispute settlement system.[67]

I. Conclusions and Recommendations

For the reasons set out in the preceding sections of this report, the Appellate Body has reached the following conclusions:

(a) the Panel erred in law in its conclusion that "panel reports adopted by the GATT CONTRACTING PARTIES and the WTO Dispute Settlement Body constitute subsequent practice in a specific case by virtue of the decision to adopt them";

(b) the Panel erred in law in failing to take into account Article III:1 in interpreting Article III:2, first and second sentences;

(c) the Panel erred in law in limiting its conclusions in paragraph 7.1(ii) on "directly competitive or substitutable products" to "shochu, whisky, brandy, rum, gin, genever, and liqueurs", which is not consistent with the Panel's Terms of Reference; and

(d) the Panel erred in law in failing to examine "so as to afford protection" in Article III:1 as a separate inquiry from "not similarly taxed" in the *Ad* Article to Article III:2, second sentence.

With the modifications to the Panel's legal findings and conclusions set out in this report, the Appellate Body affirms the Panel's conclusions that shochu and vodka are like products and that Japan, by taxing imported products in excess of like domestic products, is in violation of its obligations under Article III:2, first sentence, of the General Agreement on Tariffs and Trade 1994. Moreover, the Appellate Body concludes that shochu and other distilled spirits and liqueurs listed in HS 2208, except for vodka, are "directly competitive or substitutable products", and that Japan, in the application of the Liquor Tax Law, does not similarly tax imported and directly competitive or substitutable domestic products and affords protection to domestic production in violation of Article III:2, second sentence, of the General Agreement on Tariffs and Trade 1994.

The Appellate Body *recommends* that the Dispute Settlement Body request Japan to bring the Liquor Tax Law into conformity with its obligations under the General Agreement on Tariffs and Trade 1994.

Ehlermann, Member

I. Introduction

1. Canada appeals certain issues of law and legal interpretations developed in the Panel Report in *European Communities – Measures Affecting Asbestos and Asbestos-Containing Products* (the "Panel Report").[1] The Panel was established to consider claims made by Canada regarding French Decree No. 96-1133 concerning asbestos and products containing asbestos (*décret no. 96-1133 relatif à l'interdiction de l'amiante, pris en application du code de travail et du code de la consommation*) ("the Decree"), which entered into force on 1 January 1997.[2]

2. Articles 1 and 2 of the Decree set forth prohibitions on asbestos and on products containing asbestos fibres, followed by certain limited and temporary exceptions from those prohibitions:

> **Article 1**
>
> I. For the purpose of protecting workers, and pursuant to Article L. 231-7 of the Labour Code, the manufacture, processing, sale, import, placing on the domestic market and transfer under any title whatsoever of all varieties of asbestos fibres shall be prohibited, regardless of whether these substances have been incorporated into materials, products or devices.
>
> II. For the purpose of protecting consumers, and pursuant to Article L. 221.3 of the Consumer Code, the manufacture, import, domestic marketing, exportation, possession for sale, offer, sale and transfer under any title whatsoever of all varieties of asbestos fibres or any product containing asbestos fibres shall be prohibited.
>
> III. The bans instituted under Articles I and II shall not prevent fulfilment of the obligations arising from legislation on the elimination of wastes.

[1] WT/DS135/R, 18 September 2000.

[2] *Journal officiel*, 26 December 1996.

Article 2

I. On an exceptional and temporary basis, the bans instituted under Article 1 shall not apply to certain existing materials, products or devices containing chrysotile fibre when, to perform an equivalent function, no substitute for that fibre is available which:

- On the one hand, in the present state of scientific knowledge, poses a lesser occupational health risk than chrysotile fibre to workers handling those materials, products or devices;
- on the other, provides all technical guarantees of safety corresponding to the ultimate purpose of the use thereof.

II. The scope of application of paragraph I of this Article shall cover only the materials, products or devices falling within the categories shown in an exhaustive list decreed by the Ministers for Labour, Consumption, the Environment, Industry, Agriculture and Transport. To ascertain the justification for maintaining these exceptions, the list shall be re-examined on an annual basis, after which the Senior Council for the Prevention of Occupational Hazards and the National Commission for Occupational Health and Safety in Agriculture shall be consulted.

The remaining operative provisions of the Decree contain additional rules governing the grant of an exception (Articles 3 and 4), the imposition of penalties for violation of the prohibition in Article 1 (Article 5), and the temporary exclusion of certain "vehicles" and "agricultural and forestry machinery" from aspects of the prohibition (Article 7). Further factual aspects of this dispute are set forth in paragraphs 2.1 – 2.7 of the Panel Report, and the Decree is reproduced in its entirety as Annex I in the Addendum to the Panel Report.[3]

3. Canada claimed that the Decree is inconsistent with a number of obligations of the European Communities under Article 2 of the *Agreement on Technical Barriers to Trade* (the "*TBT Agreement*"), Articles III and XI of the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994"), and that, under Article XXIII:1(b) of the GATT 1994, the Decree nullified or impaired advantages accruing to Canada directly or indirectly under the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*"), or impeded the attainment of an objective of that Agreement.[4]

4. In the Panel Report, circulated to WTO Members on 18 September 2000, the Panel concluded that:

(a) … the "prohibition" part of the Decree does not fall within the scope of the TBT Agreement. The part of the Decree relating to "exceptions" does fall within the scope of the TBT Agreement. However, as Canada has not made any claim concerning the compatibility with the TBT Agreement of the part of the Decree relating to exceptions, the Panel refrains from reaching any conclusion with regard to the latter.

(b) … chrysotile asbestos fibres as such and fibres that can be substituted for them as such are like products within the meaning of Article III:4 of the GATT 1994. Similarly, the Panel concludes that the asbestos-cement products and the fibro-cement products for which sufficient information has been submitted to the Panel are like products within the meaning of Article III:4 of the GATT 1994.

(c) With respect to the products found to be like, the Panel concludes that the Decree violates Article III:4 of the GATT 1994.

(d) However, … the Decree, insofar as it introduces a treatment of these products that is discriminatory under Article III:4, is justified as such and in its implementation by the provisions of paragraph (b) and the introductory clause of Article XX of the GATT 1994.

(e) Finally, … Canada has not established that it suffered non-violation nullification or impairment of a benefit within the meaning of Article XXIII:1(b) of the GATT 1994.[5]

5. Having found that the Decree is subject to, and inconsistent with, the obligations set forth in Article III:4 of the GATT 1994, the Panel did not deem it necessary to examine the claims of Canada under Article XI of the GATT 1994.[6]

6. On 23 October 2000, Canada notified the Dispute Settlement Body (the "DSB") of its decision to appeal certain issues of law covered in the Panel Report and certain legal interpretations developed by the Panel, pursuant to Article 16.4 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU"), and filed a Notice of Appeal with the Appellate Body pursuant to Rule 20 of the *Working Procedures for Appellate Review* (the "*Working Procedures*").[7] On 16 November 2000, Canada filed an appellant's submission.[8] On 21 November 2000, the European Communities filed an other appellant's submission.[9] On 1 December 2000, Canada and the European Communities each filed an appellee's submission.[10] On the same day, Brazil and the United States each filed a third participant's submission.[11]

7. On 21 November 2000, the Appellate Body received a letter from Zimbabwe indicating its interest in attending the oral hearing in this appeal. Zimbabwe participated in the proceedings before the Panel as a third party which had notified its interest to the DSB under Article 10.2 of the DSU, but

[3]WT/DS135/R/Add.1, pp. 3-6.

[4]Panel Report, paras. 1.1 and 1.2. In its request for the establishment of a panel (WT/DS/135/3, 9 October 1998), Canada also claimed that the Decree is inconsistent with the obligations of the European Communities under Articles 2 and 5 of the *Agreement on the Application of Sanitary and Phytosanitary Measures* (the "*SPS Agreement*"). However, Canada did not pursue this claim in its written or oral arguments before the Panel.

[10]Pursuant to Rules 22 and 23(3) of the *Working Procedures*.

[11]Pursuant to Rule 24 of the *Working Procedures*.

it did not file a third participant's submission in the appeal. No participant or third participant objected to Zimbabwe's request. On 15 December 2000, the Members of the Division hearing this appeal informed Zimbabwe, the participants and third participants, that Zimbabwe would be allowed to attend the oral hearing as a passive observer.

8. On 20 December 2000, the Appellate Body informed the DSB that, due to the exceptional workload of the Appellate Body, and in light of the agreement of the participants, Canada and the European Communities, the Appellate Body Report in this appeal would be circulated to WTO Members no later than Monday, 12 March 2001.[12]

9. The oral hearing in the appeal was held on 17 and 18 January 2001.[13] The participants and the third participants presented oral arguments and responded to questions put to them by Members of the Division hearing the appeal.

II. Arguments of the Participants and the Third Participants

A. *Claims of Error by Canada – Appellant*

1. *TBT Agreement*

10. Canada requests that the Appellate Body reverse the Panel's findings and conclusions on the definition of the term "technical regulation", hold that the Decree as a whole falls within the scope of the *TBT Agreement*, and find that the Decree is inconsistent with paragraphs 1, 2, 4 and 8 of Article 2 of the *TBT Agreement*.

11. Canada asserts that the Panel erred in law in failing to examine Canada's allegations under the *TBT Agreement*. The Panel wrongly split the Decree into two and considered the prohibitions and exceptions in the Decree to be separate measures for the purposes of determining whether the Decree is a technical regulation within the meaning of the *TBT Agreement*. Canada believes that the Panel's analysis is arbitrary, contrary to the internal coherence of the Decree, and allows the applicability of the *TBT Agreement* to be determined by the way in which a Member drafts its legislation.

12. Canada argues that the Panel also erred in its interpretation of the definition of "technical regulation" in Annex 1 to the *TBT Agreement*, in particular, in articulating two criteria that must be satisfied before a measure can be a "technical regulation": (i) the measure must concern identifiable products; and (ii) the measure must identify the technical characteristics that products must have to be marketed in the territory of the Member taking the measure. This interpretation adds requirements to the definition of "technical regulation" that have no basis in the text of the *TBT Agreement*, and are inconsistent with the object and purpose of that Agreement, namely to restrain non-tariff barriers to trade that may be disguised as technical regulations. In addition, with respect to the first criterion, requiring a measure to relate to identifiable products to constitute a technical regulation could lead to arbitrary results in practice. As for the second criterion, Canada alleges that it is too narrow and would exclude from characterization as "technical regulations", and thereby insulate from the disciplines of the *TBT Agreement*, measures regulating activities other than the marketing of products, such as measures relating to transportation of products, disposal of hazardous waste, and use of special equipment to repair certain products.

13. Canada challenges the Panel's conclusion that the *TBT Agreement* does not apply to a general prohibition like the one in the Decree. The Panel relied on a false distinction between general

[12]WT/DS135/10, 20 December 2000.

[13]Pursuant to Rule 27 of the *Working Procedures*.

prohibitions, which it considered fall exclusively under the GATT 1994, and technical regulations, which are subject to the disciplines of the *TBT Agreement*. In fact, a technical regulation can have the effect on trade of a general prohibition.

14. Canada maintains that, had the Panel viewed the Decree as a unified measure, and correctly interpreted the term "technical regulation", the Panel would have concluded that the Decree is a technical regulation within the meaning of the *TBT Agreement*. However, even if the general prohibition contained in the Decree were not characterized as a technical regulation, the Panel nevertheless erred in failing to examine Canada's claims under the *TBT Agreement*, given that the Panel also found that the *TBT Agreement* applies to the part of the Decree concerning exceptions, and that Canada's claims related to the Decree as a whole. Canada therefore requests the Appellate Body to reverse the Panel's conclusions on the applicability of the *TBT Agreement* to the Decree, and to assess the compatibility of the Decree with that Agreement. Canada argues that, as in *United States – Import Prohibition of Certain Shrimp and Shrimp Products* ("*United States – Shrimp*"), "the facts on the record of the panel proceedings" allow the Appellate Body "to undertake the completion of the analysis required to resolve this dispute."[14]

15. Canada argues that the Decree is inconsistent with Article 2.1 of the *TBT Agreement*. Since the principle of national treatment in Article 2.1 is a specific, particular expression of Article III:4 of the GATT 1994, the interpretation of the words "like products" in Article 2.1 must be identical to the interpretation of the same words in Article III:4. The meaning of "like products" in Article III:4 is relevant context and, in the view of Canada, both Article III:4 of the GATT 1994 and Article 2.1 of the *TBT Agreement* have the same object and purpose, namely to avoid protectionism and to provide equality of competitive conditions for imported products in relation to domestic products. Thus, Canada maintains, the findings of "likeness", and of less favourable treatment, made by the Panel pursuant to Article III:4 of the GATT 1994 must be extended to Article 2.1 of the *TBT Agreement*.

16. In Canada's view, the Decree is inconsistent with Article 2.2 of the *TBT Agreement*. Canada insists, first, that there is no rational connection between the Decree and France's objective of protecting human health since: (i) it is friable materials containing amphiboles which pose a risk to human health; (ii) the manipulation of chrysotile-cement products and other high-density products containing chrysotile asbestos fibres does not pose a danger to human health; and (iii) the Decree exposes the French public to substitute fibres, the health risks of which are still poorly understood. Canada adds, second, that the Decree has effects that are more trade-restrictive than necessary to achieve its objective, in particular, because: (i) the manipulation of chrysotile-cement products and other high-density products containing chrysotile asbestos fibres does not create a risk to human health; and (ii) there is a less trade-restrictive alternative that protects human health, namely the "controlled use" of chrysotile-cement products and other high-density products containing chrysotile asbestos fibres. What must be demonstrated under Article 2.2 of the *TBT Agreement* is the same as what must be demonstrated under Article XX(b) of the GATT 1994. In this regard, according to Canada, the reports of the panel and the Appellate Body in *United States – Standards for Reformulated and Conventional Gasoline* ("*United States – Gasoline*") establish that a less trade-restrictive alternative can only be ruled out if it is shown to be impossible to implement.[15] However, France did not demonstrate, and the Panel did not find, that it is impossible to implement "controlled use". Furthermore, Canada contends, it would be less trade-restrictive to ban products containing chrysotile asbestos fibres on the basis of a product-by-product demonstration of the ineffectiveness and unfeasibility of "controlled use", rather than on the basis of the existence of substitute products.

17. Canada also argues that the Decree is inconsistent with Article 2.4 of the *TBT Agreement*, because there are relevant international standards on the "controlled use" of chrysotile, which

[14]Appellate Body Report, WT/DS58/AB/R, adopted 6 November 1998, para. 124.

[15]Panel Report, WT/DS2/R, adopted 20 May 1996, as modified by the Appellate Body Report, WT/DS2/AB/R, DSR 1996:I, 29.

constitute an effective and appropriate means to achieve France's objective of protecting human health. In any event, the French government acted inconsistently with Article 2.4 because it did not use international standards as a basis for the Decree. Lastly, Canada considers that the Decree is inconsistent with Article 2.8 of the *TBT Agreement* because it institutes a prohibition based on the descriptive characteristics of products, rather than on requirements in terms of performance.

2. Article XX(b) of the GATT 1994 and Article 11 of the DSU

18. Canada requests that the Appellate Body reverse the Panel's findings and conclusions under Article XX(b) of the GATT 1994 and find that the Decree is not justified under that provision. Canada also asks the Appellate Body to find that the Panel did not make an "objective assessment of the matter", as required under Article 11 of the DSU, because it failed to assess the scientific data in accordance with the principle of the balance of probabilities, and failed to assess the facts objectively.

19. Canada argues that the Panel erred in finding that there is a risk to human health associated with the manipulation of chrysotile-cement products. Canada identifies seven factors it claims the Panel mistakenly relied on in reaching this conclusion: (i) a statement by Dr. Henderson that "building workers now count among those most exposed to chrysotile fibres and hence to the risk of mesothelioma"[16]; (ii) an "anecdotal" statement by Dr. Henderson concerning "cases of mesothelioma in patients who had been only incidentally exposed, without any relation to their occupational activity"[17]; (iii) the opinion of experts that it has not been established that there is a threshold below which exposure does not constitute a risk for mesothelioma or lung cancer; (iv) the "Charleston study"[18]; (v) "statistical data" adduced by Dr. Henderson, which, according to the Panel, confirmed "the impact of chrysotile on mechanics exposed to that material in a car brake maintenance context" despite a contrary study on automobile brake maintenance relied on by Canada[19]; (vi) the use of the no-threshold linear relationship model as a basis for concluding that there is a "real risk" and "an undeniable public health risk" associated with exposure to chrysotile asbestos fibres at low or intermittent levels[20]; and (vii) data supplied by the European Communities concerning intermittent manipulation and a reference by Dr. Henderson to a Japanese study as a basis for concluding that the manipulation of chrysotile-cement using inappropriate tools could cause exposure levels above statutory limits.[21] Canada sets forth detailed explanations as to why none of these factors supports the Panel's conclusion.

20. Canada also contends that the Panel erred in its application of the test of "necessity" under Article XX(b) of the GATT 1994. Canada accepts the Panel's view that the extent of the risk to human health is relevant to the assessment of "necessity". However, Canada disputes that there is any risk involved in the manipulation of such products, highlights that the evidence relied on by the Panel certainly could not form the basis for a finding that the health risk was so high that it could justify strict measures, and argues that the Panel failed to comply with its obligation to quantify this type of risk. In Canada's view, these errors distorted the Panel's analysis of the test of necessity and led it to take a much too restrictive approach to its consideration of reasonably available alternatives to the Decree.

21. Canada asserts that, in its examination of whether less restrictive international trade alternatives can achieve the level of protection inherent in the Decree, the Panel erred in accepting that such level of protection is a halt to the spread of the risk associated with chrysotile asbestos fibres. This premise does not take account of the risk associated with the use of substitute fibres, of the absence in France of any regulatory framework for "controlled use" of such fibres, or of the false sense of security created among the French public due to the absence of such a framework. The Panel also erred in law in finding that there was no reasonably available alternative to the Decree that is consistent or less inconsistent with the GATT 1994. In this regard, Canada makes the same arguments that it made above with respect to Article 2.2 of the *TBT Agreement*, and emphasizes that the Panel was overly strict in its examination of the alternatives, considering that France could have adopted a measure establishing bans on specific products containing chrysotile asbestos fibres, based on demonstrations of the ineffectiveness and unfeasibility of the "controlled use" of each product.

[16]Panel Report, para. 8.191.

[17]*Ibid.*, para. 8.191 and footnote 147.

[18]Panel Report, paras. 8.192 and 8.193.

[19]*Ibid.*, para. 8.192 and footnote 154.

[20]*Ibid.*, paras. 8.202 and 8.203.

[21]*Ibid.*, para. 8.191.

22. Canada submits that the Panel failed to discharge its responsibility to make an objective assessment of the matter when it declined to take a position on the opinions expressed by the scientific community. For Canada, the principle of the balance of probabilities, or the preponderance of evidence, requires the trier of fact to take a position as to the respective weight of the evidence. Had the Panel properly applied this principle, it would not have been able to conclude that the Decree was justified under Article XX(b) of the GATT 1994, in view of the multiple studies submitted by Canada showing, for example, that there is no increased risk among garage and brake mechanics, or among construction workers, resulting from the manipulation of chrysotile asbestos. Canada adds that the Panel also failed to make an objective assessment of the matter before it because, in its determinations on the "controlled use" of chrysotile, it relied extensively on the opinions of the experts consulted, who in fact did not possess expertise in the area of "controlled use".

B. *Arguments of the European Communities – Appellee*

1. *TBT Agreement*

23. The European Communities urges the Appellate Body to reject Canada's appeal on the *TBT Agreement*. The Panel correctly concluded that the "prohibition part" of the Decree is not a technical regulation within the meaning of Annex 1.1 to the *TBT Agreement*. Canada's arguments with respect to the "exceptions part" of the Decree are legally irrelevant, since it would be impossible for the Appellate Body to complete the legal analysis due to the lack of sufficient and undisputed facts. The European Communities adds that the claims made by Canada under the *TBT Agreement* should, in any event, be denied.

24. The European Communities sees no error in the Panel's separation of the prohibitions part of the Decree from the exceptions part. The exceptions are ancillary to the prohibitions, and separating the two parts for the purpose of their legal characterization under the *TBT Agreement* in no way affects the internal coherence of the Decree. In this case, the issue before the Panel was whether the prohibitions laid down in the Decree constitute a technical regulation, *not* whether, in the abstract, a general ban may be a technical regulation. The European Communities also considers that the Panel correctly interpreted the term "technical regulation", and that the interpretation suggested by Canada would deprive other GATT 1994 provisions, such as Article XI, of effect.

25. The European Communities agrees with the Panel's treatment of the exceptions part of the Decree, and insists that, having made no specific violation claim regarding the narrowness of the exceptions throughout these proceedings, Canada cannot now argue that the exceptions violate the *TBT Agreement*. The European Communities argues that the Appellate Body is in any case prevented from addressing Canada's claims under the *TBT Agreement* because to do so would require the Appellate Body to make findings of a factual and technical nature which, in the absence of undisputed facts and findings in the record, it cannot do on appeal. The Appellate Body could not simply use the findings of the Panel under Articles III:4 and XX of the GATT 1994 as a basis for an analysis under the *TBT Agreement*. While the two sets of rules are related, they are not "part of a logical

continuum"[22], and are not sufficiently closely related as to allow the Appellate Body to extrapolate the findings of the Panel under Article III:4 and Article XX(b) of the GATT 1994 into the sphere of the *TBT Agreement*. Should the Appellate Body examine Canada's claims under the *TBT Agreement*, the European Communities argues that these claims should be dismissed and refers, in this regard, to its arguments with respect to Article XX(b) of the GATT 1994, and to the arguments it made before the Panel with regard to Articles 2.1, 2.2, 2.4 and 2.8 of the *TBT Agreement*.

2. Article XX(b) of the GATT 1994 and Article 11 of the DSU

26. The European Communities submits that the Panel's finding that the violation of Article III:4 is justified under Article XX(b) of the GATT 1994 is legally sound and correct. Canada's arguments on this issue amount to a request that the Appellate Body make new factual and scientific findings on appeal, contrary to the limits on the scope of appellate review set out in Article 17.6 of the DSU.

27. The European Communities believes that the Panel concluded that the ban on asbestos was "necessary" based on a series of objective and verifiable findings, made after a detailed and careful evaluation of the factual and scientific evidence presented. In assessing whether the ban was "necessary", the Panel was not obliged to undertake a "quantitative" assessment of the identified risk. Neither the ordinary meaning of the terms "necessary to protect" in Article XX(b) nor the concept of risk assessment mandate such an approach. An assessment of risk may be made either in quantitative or qualitative terms. The European Communities adds that the Panel correctly found that, after the European Communities had established a *prima facie* case for the existence of a health risk in connection with the use of chrysotile, Canada bore the burden of refuting that case by showing the absence of such a health risk.

28. On the issue of whether another measure was reasonably available, the European Communities submits that Canada cannot, on appeal, make arguments based on the health risks associated with the substitute products for asbestos, or on the safety of the "controlled use" of asbestos, as both arguments seek to have the Appellate Body revisit factual findings made by the Panel on the basis of the evidence submitted and the opinions advanced by the experts consulted.

29. With respect to the alleged inconsistency with Article 11 of the DSU, the European Communities considers that Canada's claim that the Panel committed a fundamental error in its appreciation of the facts seems to be based solely on the fact that the Panel based itself exclusively on the opinions of the experts consulted in this case. In this regard, the European Communities emphasizes that Canada did not object to the selection of the experts by the Panel, that Canada proposed one of those experts itself, and that the experts themselves answered a question on "controlled use" rather than professing a lack of expertise on the issue. As for Canada's argument that the Panel erred in law in failing to evaluate the scientific evidence in accordance with the principle of preponderance of the evidence, the Panel's approach does not seem inconsistent with such a principle and, in any case, the principle of preponderance of the evidence is inapposite in the context of risk assessment since such an approach would preclude Members from basing their regulatory decisions on diverging scientific opinions. The European Communities refuses to accept that the evidence relied on by the Panel – representing the unanimous views of the four experts consulted and of all international institutions that have evaluated asbestos – reflects, as Canada seems to suggest, a divergent, minority scientific point of view on asbestos.

[22]European Communities' appellee's submission, para. 43.

C. *Claims of Error by the European Communities – Appellant*

1. "Like Products" in Article III:4 of the GATT 1994

30. The European Communities requests the Appellate Body to reverse the Panel's findings that chrysotile asbestos fibres are "like" polyvinyl alcohol ("PVA"), cellulose and glass fibres, and that chrysotile-cement products are "like" fibro-cement products, as well as the Panel's consequent finding that, with respect to the products found to be "like", the Decree violates Article III:4 of the GATT 1994.

31. The Panel's interpretation of the term "like products" in Article III:4, is of serious concern to the European Communities; is contrary to the ordinary meaning of Article III:4, read in context and in light of its object and purpose; and is inconsistent with established case law. As the Appellate Body has previously found, the first paragraph of Article III defines the object and purpose of the whole of Article III, namely, to provide equality of competitive conditions for imported products in relation to domestic products. In the view of the European Communities, the Panel, however, erroneously analyzed the term "like products" in light of the objective of ensuring market access for products, and, in so doing, adopted an exclusively commercial approach to the comparison of "like" products and erroneously expanded the scope of application of Article III:4.

32. The European Communities submits that this erroneous focus on market access led the Panel to exclude from its "like" product analysis the very reason why the Decree singles out asbestos fibres, namely, the fact that asbestos fibres are carcinogenic. While Article III:4 protects expectations concerning the competitive relationship between imported and domestic products, the impact of a measure on such expectations is not relevant in determining "likeness", but only later in the Article III:4 analysis, for the purposes of establishing whether the measure discriminates between imported and domestic products. For the European Communities, the decisive criterion for determining the "likeness" of products must be whether the basis for the regulatory distinction between products denies to imported products the treatment accorded to domestic products that are the subject of the relevant measure.

33. The European Communities contends that, because the Panel ignored the basis for the regulatory treatment set forth in the Decree, it compared the wrong products in its analysis of "likeness". The Decree prohibits *all carcinogenic asbestos fibres*, and it denies competitive opportunities to all such fibres equally. Thus, the prohibited carcinogenic asbestos fibres are not "like" the three substitute fibres because the application of the French regulatory distinction between them does not alter or affect the competitive opportunities of those substitute fibres. The European Communities concludes that, instead of comparing the products claimed by Canada to be "like" products (PVA, cellulose and glass fibres) with the category of products prohibited by the French Decree at issue (all carcinogenic asbestos fibres), the Panel erroneously compared the allegedly "like" products with an arbitrary third category of products, namely "fibres with certain industrial applications".[23]

34. The European Communities challenges the Panel's conclusion that, in view of the relationship between Articles III and XX(b) of the GATT 1994, it is not appropriate to take the "risk" criterion into account either when examining the properties, nature and quality of the product, or when examining other criteria of "likeness".[24] The Panel found that the health, safety or other concerns that lead regulators to apply different treatment to products may *only* be taken into account in the analysis under Article XX, *not* in the analysis under Article III:4 of the GATT 1994. The Panel's approach misconstrues the relationship between Articles III:4 and XX of the GATT 1994, requires the

[23]European Communities' other appellant's submission, para. 29.

[24]Panel Report, para. 8.132.

"likeness" of two products to be determined solely on the basis of commercial factors and, in the view of the European Communities, entails a serious curtailment of national regulatory autonomy. If non-commercial considerations may only be considered at the Article XX stage of the analysis, then the list of policy purposes for which regulators may distinguish between products is unduly limited to the categories listed in Article XX. The application of a "risk" criterion in the analysis of "likeness" under Article III would not, as the Panel suggests, make the other criteria of "likeness" "totally redundant"[25], since all relevant criteria, including the "risk" criterion, must be considered in the assessment of "likeness".

35. The European Communities contends that the Panel committed a number of errors in its application of the four criteria used to assess "likeness", and placed excessive importance on the criterion of end-use. The Panel failed to follow the approach used in previous case law, and ignored the fact that Article III:4 of the GATT 1994, unlike Article III:2 and its accompanying Interpretive Note, does not contain the phrase "directly competitive or substitutable" products. The Panel's analysis of "end-use" is inadequately reasoned, in particular since the Panel failed to identify the small number of identical or similar end-uses for chrysotile asbestos, PVA, cellulose and glass fibres and ignored that, overall, the end-uses for asbestos and its substitutes are very different. The European Communities adds that the Panel relied on its conclusions on end-use in its analysis of the properties, nature and quality of the products, as well as their tariff classification, and, in effect disregarded these other criteria.

2. Article XXIII:1(b) of the GATT 1994

36. The European Communities appeals the Panel's findings on Article XXIII:1(b) of the GATT 1994 in paragraphs 8.262, 8.264, 8.273 and 8.274 of the Panel Report, but not the Panel's conclusion that Canada did not establish nullification or impairment of a benefit within the meaning of Article XXIII:1(b). The Panel's reasoning is inconsistent with the proper interpretation of the GATT 1994, past practice, and relevant case law. Historically, the non-violation remedy was conceived as a legal instrument designed to prevent the circumvention of tariff concessions. Only three non-violation complaints have succeeded. All previous non-violation complaints have related to measures imposed for commercial purposes, and all such complaints would today most likely be resolved as violation complaints under the expanded WTO competence, reflected in the covered agreements. The European Communities urges the Appellate Body to accept that the concept of non-violation nullification and impairment is an exceptional one, as WTO Members have recognized, and should be applied with utmost circumspection.

37. The European Communities challenges, in particular, the Panel's conclusion that "Article XXIII:1(b) applies to a measure whether it is consistent with the GATT because the GATT does not apply to it or is justified by Article XX."[26] In so finding, the Panel wrongly implied that Article XXIII:1(b) of the GATT 1994 protects the expectation that, once a tariff concession has been made for a product, the regulatory framework applicable to that product will not be adapted in response to new scientific knowledge concerning health risks. In the view of the European Communities, the Panel's interpretation wrongly expanded the coverage of Article XXIII:1(b) in a manner that has grave systemic implications.

38. The European Communities urges the Appellate Body to reject, as a matter of legal principle, the possibility of finding nullification or impairment under Article XXIII:1(b) with respect to health and safety regulations, or with respect to measures that fall under any of the other grounds listed in Article XX, or under provisions such as Articles XIX and XXI of the GATT 1994. Article XXIII:1(b) cannot apply in cases involving health measures, since the legitimacy of an exporting Member's expectation that the health measure will not be taken cannot be assessed without examining the health

[25]Panel Report, para. 8.131.

[26]*Ibid*., para. 8.264.

measure itself and the balance of interests underlying that law. The participants in the Uruguay Round knew that the value of the concessions negotiated in that Round could be adversely affected by measures taken to protect, *inter alia*, human, animal or plant life or health, or a national security interest. Therefore, the European Communities concludes, if a Member takes a measure that is consistent with the GATT 1994, it does not disturb the balance of rights and obligations under the GATT 1994, and no redress is available under Article XXIII:1(b).

D. *Arguments of Canada – Appellee*

1. "Like Products" in Article III:4 of the GATT 1994

39. Canada requests the Appellate Body to dismiss the European Communities' appeal relating to Article III:4 of the GATT 1994. Canada is of the view that the Panel correctly separated the analysis of "likeness" from the issue of whether the competitive opportunities afforded to imports on the domestic market have been upset. In its appeal, the European Communities confounds these two distinct questions and attaches undue significance to the Panel's statement regarding the importance of "market access" under Article III:4 of the GATT 1994.

40. Canada considers that the Panel properly applied the criteria set out in the case law for determining whether products are "like". The European Communities appears to confuse the concept of "likeness" under Article III:4 of the GATT 1994 with "likeness" under Article III:2. "Likeness", however, under Article III:4 is different from, and broader than, "likeness" under the first sentence of Article III:2, and the Panel's approach properly reflects this distinction. In assessing the "likeness" of the fibres, the Panel recognized that the criteria of "properties" and "end-use" are interdependent, and analyzed them accordingly. Canada does not accept that the Panel created a hierarchy among the traditional "likeness" criteria, but, even so, this would not be an error of law, since "likeness" must be approached on a case-by-case basis, and it is within a panel's discretion to establish a hierarchy among the criteria in any given case. Finally, Canada notes, the appeal of the European Communities focuses on the Panel's conclusion that chrysotile asbestos fibres are "like" PVA, cellulose and glass fibres, and the criticisms that the European Communities makes of this conclusion cannot be extended to the Panel's separate conclusion that chrysotile-cement products are "like" fibro-cement products.

41. Canada submits that the Panel correctly decided that the "dangerousness" of a product is not a factor to be considered in determining "likeness" and that to introduce a criterion of this nature into the analysis of "likeness" would nullify the effect of Article XX(b) of the GATT 1994. The object and purpose of Article III of the GATT 1994 is to provide equality of competitive conditions for imported and domestic products, and the four traditional criteria of "likeness" all relate to the state of *commercial* competition between such products. The "dangerousness" of products is unrelated to such commercial competition. Furthermore, to introduce such factors into the analysis of "likeness" under Article III:4 would lead to unpredictability as to the scope of that provision, and imply that determining the "likeness" of products requires complex scientific analysis for which panels have no special expertise. Canada adds that even if the "dangerousness" of a product were relevant to the determination of "likeness", it would not necessarily follow that chrysotile asbestos fibres are not "like" the substitute fibres. Since Article XX of the GATT 1994 was specially designed to balance the interest of promoting international trade with legitimate societal interests, it is a more appropriate framework than Article III for taking account of these types of considerations. Canada also stresses that, contrary to the argument of the European Communities, such an approach does not lead to a curtailment of national regulatory autonomy, because the list in Article XX covers a broad range of interests on the basis of which a Member may justify a measure.

42. Canada also submits that, in its appeal, the European Communities errs in asserting that the examination of "likeness" must be done on the basis of the regulatory distinction in question, and in claiming that the Panel should only have compared chrysotile asbestos fibres with carcinogenic fibres, rather than with other fibres that serve similar industrial uses. Such an approach is inconsistent with

the proper interpretation of Article III:4. In seeking to focus the analysis on the reason for any given regulatory distinction, the European Communities would allow national regulatory authorities to predetermine the scope of Article III:4 through the distinctions they choose to make. Such an approach is also inconsistent with the object and purpose of Article III:4, which aims to discipline measures that have trade-restrictive effects, even when those measures are not aimed at restricting trade. Finally, in Canada's view, the Panel correctly compared chrysotile asbestos fibres with the fibres with which they compete in certain industrial applications, since such a comparison is consistent with the aim of providing equality of competitive conditions, and since the Decree itself makes no reference to carcinogenic fibres.

2. Article XXIII:1(b) of the GATT 1994

43. Canada requests the Appellate Body to reject the European Communities' appeal with respect to Article XXIII:1(b) of the GATT 1994. Canada suggests, first, that the Appellate Body should apply the principle of judicial economy and refrain from ruling on these grounds of appeal. Canada argues that a ruling by the Appellate Body in respect of Article XXIII:1(b) of the GATT 1994 would not further the objective of dispute settlement, as set forth in Article 3.7 of the DSU, namely to secure a positive solution to a dispute. There is no dispute concerning Article XXIII:1(b) because neither party has appealed the Panel's conclusions on this issue. Canada also refers to Article 3.2 of the DSU and cautions the Appellate Body against "making law" by clarifying provisions of the *WTO Agreement* outside the context of resolving a particular dispute.[27]

44. Should the Appellate Body address the interpretation of Article XXIII:1(b) of the GATT 1994, Canada invites it to affirm the Panel's reasoning, in particular the Panel's recognition that there may be particularly exceptional cases in which a measure justified under Article XX(b) would nonetheless nullify or impair benefits within the meaning of Article XXIII:1(b). Article XX(b) and XXIII:1(b) may be applied simultaneously, since Article 26.1 of the DSU does not require the withdrawal of a measure that nullifies or impairs benefits within the meaning of Article XXIII:1(b). As regards the concept of legitimate expectations, Canada rejects as artificial, and without any textual basis, the distinction that the European Communities seeks to draw between pure trade measures and measures linked to the protection of health.

E. *Arguments of the Third Participants*

1. Brazil

(a) *TBT Agreement*

45. Brazil believes that the Panel erred in its findings regarding the scope of the *TBT Agreement*. Brazil argues that the Panel erred in dividing the Decree into two separate parts in determining whether the *TBT Agreement* applies to the Decree. This division was arbitrary and inconsistent with the logic and objectives of the Decree, which deals with the same products in both the prohibition and the exception parts. Furthermore, Brazil is particularly concerned by the findings of the Panel in paragraphs 8.38, 8.39, 8.43, 8.49, 8.57, 8.60, 8.61 and 8.71 of the Panel Report, and by the serious systemic implications of the finding that a general prohibition does not constitute a technical regulation within the meaning of Annex 1.1 of the *TBT Agreement*. Contrary to the Panel's interpretation, nothing in the *TBT Agreement* specifies that a product must be "identifiable", or that a measure must relate to one, or more than one product, in order to be a technical regulation. Such a narrow interpretation unduly excludes from the scope of the *TBT Agreement* a wide range of measures affecting products that could potentially represent barriers to trade. Brazil also contests the Panel's finding that a technical regulation must include specifications to be met in order for a product

[27]Appellate Body Report, *United States – Measure Affecting Imports of Woven Wool Shirts and Blouses from India*, WT/DS33/AB/R, adopted 23 May 1997, DSR 1997:I, 323, at 340.

to be authorized for *marketing*. Brazil adds that, in its view, both France and the European Communities conceded, when they notified the Decree under the *TBT Agreement*, that the measure is a technical regulation.

2. United States

(a) *TBT Agreement*

46. The United States argues that the Panel erred in its interpretation of the phrase "technical regulation" in Annex 1 to the *TBT Agreement*, and, in consequence, improperly excluded from the scope of the *TBT Agreement* technical regulations that apply generally to products. Specifically, the United States contends that the Panel erred in finding that the phrase "product characteristics" in the definition of "technical regulation" refers to characteristics of "one or more given products", rather than characteristics of products generally.

47. Should the Appellate Body find that the *TBT Agreement* applies to the Decree and decide to complete the analysis of Canada's claims under that Agreement, the United States submits that the Appellate Body should find that the Decree is consistent with the *TBT Agreement*. Asbestos and asbestos-containing products, on the one hand, and substitute fibres and asbestos-free products, on the other, are not "like products" within the meaning of Article 2.1 of the *TBT Agreement* for the same reasons that they are not "like products" for the purposes of Article III:4 of the GATT 1994. The test to be applied under Article 2.2 of the *TBT Agreement* is very similar to the test to be applied under Article XX(b) and the introductory clause to Article XX. However, unlike Article XX of the GATT 1994, where the burden was on the European Communities to present a *prima facie* case that the Decree was justified, under Article 2.2 of the *TBT Agreement*, it is for Canada to make a *prima facie* case that the Decree creates an unnecessary barrier to trade, and it has not done so. The Decree is also consistent with Article 2.4 of the *TBT Agreement*, since the international standards identified by Canada are neither relevant to, nor an effective or appropriate means of achieving, France's public health objective. Lastly, the United States argues that the Decree is consistent with Article 2.8 of the *TBT Agreement*, since it would be inappropriate to express the technical regulation in any way other than as a prohibition on the use of asbestos.

(b) "Like Products" in Article III:4 of the GATT 1994

48. The United States submits that the Panel erred in concluding that asbestos fibres and substitute fibres are "like products" under Article III:4 of the GATT 1994. The Panel erred in law in concluding that, in examining the properties, nature and quality of asbestos, it could not take into account the fact that asbestos differs from other fibres because it splits longitudinally into narrow, or thin, fibres, and has a high potential to release particles that possess certain characteristics, and in concluding that, in examining consumer tastes and habits, it could not take account of the proven carcinogenic nature of asbestos. In so proceeding, the Panel ignored the single most important distinguishing feature between asbestos and its substitutes. The Panel also wrongly inflated the significance of another factor – the end uses of products concerned. In the view of the United States, the application of a proper "like product" analysis should lead the Appellate Body to find that asbestos is not "like" its substitute fibres, and that asbestos-containing products are not "like" asbestos-free products and, therefore, conclude that the Decree does not violate Article III:4 of the GATT 1994.

(c) Article XX(b) of the GATT 1994 and Article 11 of the DSU

49. Should the Appellate Body resort to Article XX(b) of the GATT 1994, the United States urges the Appellate Body to find that the Decree is permissible under Article XX(b). Canada's appeal on this issue is based on criticism of the Panel's findings with respect to the scientific information before it, and that Canada erroneously asserts that Article 11 of the DSU requires the Panel to decide which scientific view is the correct one. However, the role of a panel, under Article 11 of the DSU, is

to make an objective assessment of the facts before it, and to evaluate whether there is a rational or objective relationship between the measure at issue and the scientific basis asserted for the measure. The United States argues that the Panel acted consistently with this mandate in finding that the Decree is necessary to protect human health, and the Appellate Body should not disturb this finding.

III. Preliminary Procedural Matter

50. On 27 October 2000, we wrote to the parties and the third parties indicating that we were mindful that, in the proceedings before the Panel in this case, the Panel received five written submissions from non-governmental organizations, two of which the Panel decided to take into account.[28] In our letter, we recognized the possibility that we might receive submissions in this appeal from persons other than the parties and the third parties to this dispute, and stated that we were of the view that the fair and orderly conduct of this appeal could be facilitated by the adoption of appropriate procedures, for the purposes of this appeal only, pursuant to Rule 16(1) of the *Working Procedures*, to deal with any possible submissions received from such persons. To this end, we invited the parties and the third parties in this appeal to submit their comments on a number of questions. These related to: whether we should adopt a "request for leave" procedure; what procedures would be needed to ensure that the parties and third parties would have a full and adequate opportunity to respond to submissions that might be received; and whether we should take any other points into consideration if we decided to adopt a "request for leave" procedure. On 3 November 2000, all of the parties and third parties responded in writing to our letter of 27 October. Canada, the European Communities and Brazil considered that issues pertaining to any such procedure should be dealt with by the WTO Members themselves. The United States welcomed adoption of a request for leave procedure, and Zimbabwe indicated that it had no specific reasons to oppose adoption of a request for leave procedure. Without prejudice to their positions, Canada, the European Communities and the United States each made a number of suggestions regarding any such procedure that might be adopted.

51. On 7 November 2000, and after consultations among all seven Members of the Appellate Body, we adopted, pursuant to Rule 16(1) of the *Working Procedures*, an additional procedure, *for the purposes of this appeal only*, to deal with written submissions received from persons other than the parties and third parties to this dispute (the "Additional Procedure"). The Additional Procedure was communicated to the parties and third parties in this appeal on 7 November 2000. On 8 November 2000, the Chairman of the Appellate Body informed the Chairman of the Dispute Settlement Body, in writing, of the Additional Procedure adopted, and this letter was circulated, for information, as a dispute settlement document to the Members of the WTO.[29] In that communication, the Chairman of the Appellate Body stated that:

> … This additional procedure has been adopted by the Division hearing this appeal for the purposes of this appeal only pursuant to Rule 16(1) of the *Working Procedures for Appellate Review*, and is *not* a new working procedure drawn up by the Appellate Body pursuant to paragraph 9 of Article 17 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes*. (original emphasis)

The Additional Procedure was posted on the WTO website on 8 November 2000.

52. The Additional Procedure provided:

[28]Panel Report, paras. 6.1-6.4 and 8.12-8.14.

[29]WT/DS135/9, 8 November 2000.

1. In the interests of fairness and orderly procedure in the conduct of this appeal, the Division hearing this appeal has decided to adopt, pursuant to Rule 16(1) of the *Working Procedures for Appellate Review*, and after consultations with the parties and third parties to this dispute, the following additional procedure for purposes of this appeal only.

2. Any person, whether natural or legal, other than a party or a third party to this dispute, wishing to file a written brief with the Appellate Body, must apply for leave to file such a brief from the Appellate Body *by noon* on *Thursday, 16 November 2000.*

3. An application for leave to file such a written brief shall:

   (a) be made in writing, be dated and signed by the applicant, and include the address and other contact details of the applicant;

   (b) be in no case longer than three typed pages;

   (c) contain a description of the applicant, including a statement of the membership and legal status of the applicant, the general objectives pursued by the applicant, the nature of the activities of the applicant, and the sources of financing of the applicant;

   (d) specify the nature of the interest the applicant has in this appeal;

   (e) identify the specific issues of law covered in the Panel Report and legal interpretations developed by the Panel that are the subject of this appeal, as set forth in the Notice of Appeal (WT/DS135/8) dated 23 October 2000, which the applicant intends to address in its written brief;

   (f) state why it would be desirable, in the interests of achieving a satisfactory settlement of the matter at issue, in accordance with the rights and obligations of WTO Members under the DSU and the other covered agreements, for the Appellate Body to grant the applicant leave to file a written brief in this appeal; and indicate, in particular, in what way the applicant will make a contribution to the resolution of this dispute that is not likely to be repetitive of what has been already submitted by a party or third party to this dispute; and

   (g) contain a statement disclosing whether the applicant has any relationship, direct or indirect, with any party or any third party to this dispute, as well as whether it has, or will, receive any assistance, financial or otherwise, from a party or a third party to this dispute in the preparation of its application for leave or its written brief.

4. The Appellate Body will review and consider each application for leave to file a written brief and will, without delay, render a decision whether to grant or deny such leave.

5. The grant of leave to file a brief by the Appellate Body does not imply that the Appellate Body will address, in its Report, the legal arguments made in such a brief.

6. Any person, other than a party or a third party to this dispute, granted leave to file a written brief with the Appellate Body, must file its brief with the Appellate Body Secretariat *by noon* on *Monday, 27 November 2000*.

7. A written brief filed with the Appellate Body by an applicant granted leave to file such a brief shall:

(a) be dated and signed by the person filing the brief;

(b) be concise and in no case longer than 20 typed pages, including any appendices; and

(c) set out a precise statement, strictly limited to legal arguments, supporting the applicant's legal position on the issues of law or legal interpretations in the Panel Report with respect to which the applicant has been granted leave to file a written brief.

8. An applicant granted leave shall, in addition to filing its written brief with the Appellate Body Secretariat, also serve a copy of its brief on all the parties and third parties to the dispute *by noon* on *Monday, 27 November 2000*.

9. The parties and the third parties to this dispute will be given a full and adequate opportunity by the Appellate Body to comment on and respond to any written brief filed with the Appellate Body by an applicant granted leave under this procedure. (original emphasis)

53. The Appellate Body received 13 written submissions from non-governmental organizations relating to this appeal that were not submitted in accordance with the Additional Procedure.[30] Several of these were received while we were considering the possible adoption of an additional procedure. After the adoption of the Additional Procedure, each of these 13 submissions was returned to its sender, along with a letter informing the sender of the procedure adopted by the Division hearing this appeal and a copy of the Additional Procedure. Only one of these associations, the Korea Asbestos Association, subsequently submitted a request for leave in accordance with the Additional Procedure.

54. By letter dated 15 November 2000, Canada and the European Communities jointly requested that they be provided with copies of all applications filed pursuant to the Additional Procedure, and of

[30]Such submissions were received from: Asbestos Information Association (United States); HVL Asbestos (Swaziland) Limited (Bulembu Mine); South African Asbestos Producers Advisory Committee (South Africa); J & S Bridle Associates (United Kingdom); Associação das Indústrias de Produtos de Amianio Crisótilo (Portugal); Asbestos Cement Industries Limited (Sri Lanka); The Federation of Thai Industries, Roofing and Accessories Club (Thailand); Korea Asbestos Association (Korea); Senac (Senegal); Syndicat des Métallos (Canada); Duralita de Centroamerica, S.A. de C.V. (El Salvador); Asociación Colombiana de Fibras (Colombia); and Japan Asbestos Association (Japan).

the decision taken by the Appellate Body in respect of each such application. All such documents were subsequently provided to the parties and third parties in this dispute.

55. Pursuant to the Additional Procedure, the Appellate Body received 17 applications requesting leave to file a written brief in this appeal. Six of these 17 applications were received after the deadline specified in paragraph 2 of the Additional Procedure and, for this reason, leave to file a written brief was denied to these six applicants.[31] Each such applicant was sent a copy of our decision denying its application for leave because the application was not filed in a timely manner.

56. The Appellate Body received 11 applications for leave to file a written brief in this appeal within the time limits specified in paragraph 2 of the Additional Procedure.[32] We carefully reviewed and considered each of these applications in accordance with the Additional Procedure and, in each case, decided to deny leave to file a written brief. Each applicant was sent a copy of our decision denying its application for leave for failure to comply sufficiently with all the requirements set forth in paragraph 3 of the Additional Procedure.

57. We received a written brief from the Foundation for International Environmental Law and Development, on its behalf and on behalf of Ban Asbestos (International and Virtual) Network, Greenpeace International, International Ban Asbestos Secretariat, and World Wide Fund for Nature, International, dated 6 February 2001. As we had already denied, in accordance with the Additional Procedure, an application from these organizations for leave to file a written brief in this appeal[33], we did not accept this brief.

IV. Issues Raised in this Appeal

58. This appeal raises the following issues:

(a) whether the Panel erred in its interpretation of the term "technical regulation" in Annex 1.1 of the *TBT Agreement* in finding, in paragraph 8.72(a) of the Panel Report, that "the part of the Decree relating to the ban on imports of asbestos and asbestos-containing products" does not constitute a "technical regulation";

[31]Applications from the following persons were received by the Division after the deadline specified in the Additional Procedure for receipt of such applications: Association of Personal Injury Lawyers (United Kingdom); All India A.C. Pressure Pipe Manufacturer's Association (India); International Confederation of Free Trade Unions/European Trade Union Confederation (Belgium); Maharashtra Asbestos Cement Pipe Manufacturers' Association (India); Roofit Industries Ltd. (India); and Society for Occupational and Environmental Health (United States).

[32]Applications from the following persons were received by the Division within the deadline specified in the Additional Procedure for receipt of such applications: Professor Robert Lloyd Howse (United States); Occupational & Environmental Diseases Association (United Kingdom); American Public Health Association (United States); Centro de Estudios Comunitarios de la Universidad Nacional de Rosario (Argentina); Only Nature Endures (India); Korea Asbestos Association (Korea); International Council on Metals and the Environment and American Chemistry Council (United States); European Chemical Industry Council (Belgium); Australian Centre for Environmental Law at the Australian National University (Australia); Associate Professor Jan McDonald and Mr. Don Anton (Australia); and a joint application from Foundation for Environmental Law and Development (United Kingdom), Center for International Environmental Law (Switzerland), International Ban Asbestos Secretariat (United Kingdom), Ban Asbestos International and Virtual Network (France), Greenpeace International (The Netherlands), World Wide Fund for Nature, International (Switzerland), and Lutheran World Federation (Switzerland).

[33]These organizations, together with the Center for International Environmental Law and the Lutheran World Federation, filed a joint application for leave to file a written brief. We decided to deny leave to these applicants to file a written brief. See *supra*, para. 56 and footnote 32.

(b) whether the Panel erred in its interpretation and application of the term "like products" in Article III:4 of the GATT 1994 in finding, in paragraph 8.144 of the Panel Report, that chrysotile asbestos fibres are "like" PVA, cellulose and glass fibres, and in finding, in paragraph 8.150 of the Panel Report, that cement-based products containing chrysotile asbestos fibres are "like" cement-based products containing polyvinyl alcohol, cellulose and glass fibres;

(c) whether the Panel erred in finding that the measure at issue is "necessary to protect human … life or health" under Article XX(b) of the GATT 1994, and whether, in carrying out its examination under Article XX(b) of the GATT 1994, the Panel failed to make an objective assessment of the matter under Article 11 of the DSU; and

(d) whether the Panel erred in its interpretation of Article XXIII:1(b) of the GATT 1994 in finding that that provision applies to a measure which falls within the scope of application of other provisions of the GATT 1994, and in finding that Article XXIII:1(b) applies to measures which pursue health objectives.

V. *TBT Agreement*

59. Before the Panel, Canada claimed that the measure at issue is inconsistent with Articles 2.1, 2.2, 2.4 and 2.8 of the *TBT Agreement*. Each of these provisions applies solely to "technical regulations". Thus, a threshold issue in the examination of Canada's claims under the *TBT Agreement* is whether the measure at issue is a "technical regulation".

60. In addressing this threshold issue, the Panel examined the nature and structure of the measure to assess how the *TBT Agreement* might apply to it. For this examination, the Panel decided that it would be appropriate to examine the measure in two stages. First, the Panel examined "the part of the Decree prohibiting the marketing of asbestos and asbestos-containing products"; next, the Panel analyzed the "exceptions" in the Decree.[34] The Panel concluded that the part of the Decree containing the prohibitions is *not* a "technical regulation", and that, therefore, the *TBT Agreement* does not apply to this part of the Decree.[35] However, the Panel also concluded that the part of the Decree containing the exceptions does constitute a "technical regulation", and that, therefore, the *TBT Agreement* applies to that part of the Decree. On this basis, the Panel decided not to examine Canada's claims under the *TBT Agreement* because, it said, those claims relate solely to the part of the Decree containing the prohibitions, which, in the Panel's view, does not constitute a "technical regulation", and, therefore, the *TBT Agreement* does not apply.[36]

61. In concluding that the part of the Decree containing the prohibitions is not a "technical regulation", the Panel found that:

> a measure constitutes a "technical regulation" if:
>
> (a) the measure affects one or more given products;
>
> (b) the measure specifies the technical characteristics of the product(s) which allow them to be marketed in the Member that took the measure;
>
> (c) compliance is mandatory.[37]

[34]Panel Report, heading (a) on p. 404 and heading (b) on p. 411.

[35]*Ibid.*, para. 8.72(a).

[36]*Ibid.*, para. 8.72.

62. Canada appeals the Panel's finding that the *TBT Agreement* does not apply to the part of the Decree relating to the prohibitions on imports of asbestos and asbestos-containing products. According to Canada, the Panel erred in considering the part of the Decree relating to those prohibitions *separately* from the part of the Decree relating to the exceptions to those prohibitions, and, therefore, the Panel should have examined the Decree as a *single*, unified measure. Furthermore, Canada argues that the Panel erred in its interpretation of a "technical regulation", as defined in Annex 1.1 to the *TBT Agreement,* because, in Canada's view, a general prohibition can be a "technical regulation".

63. We start with the measure at issue. It is clear from Canada's request for the establishment of a panel that Canada's complaint concerns Decree 96-1133 as a whole.[38] The Decree, in essence, consists of prohibitions on asbestos fibres and on products containing asbestos fibres (Article 1), coupled with limited and temporary exceptions from the prohibitions for certain "existing materials, products or devices containing chrysotile fibre" (Article 2). The remaining operative provisions of the Decree contain additional rules governing the grant of an exception (Articles 3 and 4) and the imposition of penalties for violation of the prohibitions in Article 1 (Article 5). Furthermore, certain used "vehicles" and "agricultural and forestry machinery" are entirely excluded, until 31 December 2001, from certain aspects of the prohibitions in Article 1, namely, from the prohibitions on "possession for sale, offering for sale and transfer under any title" (Article 7).[39]

64. In our view, the proper legal character of the measure at issue cannot be determined unless the measure is examined as a whole. Article 1 of the Decree contains broad, general prohibitions on asbestos and products containing asbestos. However, the scope and generality of those prohibitions can only be understood in light of the exceptions to it which, albeit for a limited period, *permit*, *inter alia*, the use of certain products containing asbestos and, principally, products containing chrysotile asbestos fibres. The measure is, therefore, *not* a *total* prohibition on asbestos fibres, because it also includes provisions that *permit*, for a limited duration, the use of asbestos in certain situations. Thus, to characterize the measure simply as a general prohibition, and to examine it as such, overlooks the complexities of the measure, which include both prohibitive and permissive elements. In addition, we observe that the exceptions in the measure would have no autonomous legal significance in the absence of the prohibitions. We, therefore, conclude that the measure at issue is to be examined as an integrated whole, taking into account, as appropriate, the prohibitive and the permissive elements that are part of it.

65. Accordingly, we reverse the Panel's two-stage interpretive approach of examining, first, the application of the *TBT Agreement* to the prohibitions contained in the measure and, second and separately, its application to the exceptions contained in the measure.

[37]*Ibid.*, para. 8.57.

[38]WT/DS135/3. In its request for the establishment of a panel, Canada stated:

> … the Government of Canada requested consultations with the European Communities concerning certain measures taken by France prohibiting asbestos and products containing asbestos, and concerning the general asbestos regulations in force in France. *These measures and regulations include*, but are not limited to, *Decree No. 96-1133* … (emphasis added)

Canada requested that the Panel "find that *Decree No. 96-1133*" is inconsistent with the European Communities' WTO obligations. (emphasis added) See, further, Canada's request for consultations, WT/DS135/1, G/SPS/GEN/72, G/TBT/D/15, which also identifies the measure at issue as Decree No. 96-1133.

[39]The full text of the Decree is reproduced in Annex I in the Addendum to the Panel Report. Articles 1 and 2 of the Decree are reproduced in paragraph 2 of this Report.

66. We turn now to the term "technical regulation" and to the considerations that must go into interpreting the term. Article 1.2 of the *TBT Agreement* provides that, for the purposes of this Agreement, the meanings given in Annex 1 apply. Annex 1.1 of the *TBT Agreement* defines a "technical regulation" as a:

> Document which lays down *product characteristics* or their related processes and production methods, including the *applicable administrative provisions*, with which *compliance is mandatory*. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, process or production method. (emphasis added)

67. The heart of the definition of a "technical regulation" is that a "document" must "lay down" – that is, set forth, stipulate or provide – "product *characteristics*". The word "characteristic" has a number of synonyms that are helpful in understanding the ordinary meaning of that word, in this context. Thus, the "characteristics" of a product include, in our view, any objectively definable "features", "qualities", "attributes", or other "distinguishing mark" of a product. Such "characteristics" might relate, *inter alia*, to a product's composition, size, shape, colour, texture, hardness, tensile strength, flammability, conductivity, density, or viscosity. In the definition of a "technical regulation" in Annex 1.1, the *TBT Agreement* itself gives certain examples of "product characteristics" – "terminology, symbols, packaging, marking or labelling requirements". These examples indicate that "product characteristics" include, not only features and qualities intrinsic to the product itself, but also related "characteristics", such as the means of identification, the presentation and the appearance of a product. In addition, according to the definition in Annex 1.1 of the *TBT Agreement*, a "technical regulation" may set forth the "applicable administrative provisions" for products which have certain "characteristics". Further, we note that the definition of a "technical regulation" provides that such a regulation "may also include or deal *exclusively* with terminology, symbols, packaging, marking *or* labelling requirements". (emphasis added) The use here of the word "exclusively" and the disjunctive word "or" indicates that a "technical regulation" may be confined to laying down only one or a few "product characteristics".

68. The definition of a "technical regulation" in Annex 1.1 of the *TBT Agreement* also states that "*compliance*" with the "product characteristics" laid down in the "document" must be "*mandatory*". A "technical regulation" must, in other words, regulate the "characteristics" of products in a binding or compulsory fashion. It follows that, with respect to products, a "technical regulation" has the effect of *prescribing* or *imposing* one or more "characteristics" – "features", "qualities", "attributes", or other "distinguishing mark".

69. "Product characteristics" may, in our view, be prescribed or imposed with respect to products in either a positive or a negative form. That is, the document may provide, positively, that products *must possess* certain "characteristics", or the document may require, negatively, that products *must not possess* certain "characteristics". In both cases, the legal result is the same: the document "lays down" certain binding "characteristics" for products, in one case affirmatively, and in the other by negative implication.

70. A "technical regulation" must, of course, be applicable to an *identifiable* product, or group of products. Otherwise, enforcement of the regulation will, in practical terms, be impossible. This consideration also underlies the formal obligation, in Article 2.9.2 of the *TBT Agreement*, for Members to notify other Members, through the WTO Secretariat, "of the *products to be covered*" by a proposed "technical regulation". (emphasis added) Clearly, compliance with this obligation requires identification of the product coverage of a technical regulation. However, in contrast to what the Panel suggested, this does not mean that a "technical regulation" must apply to "*given*" products

which are actually *named*, *identified* or *specified* in the regulation.[40] (emphasis added) Although the *TBT Agreement* clearly applies to "products" generally, nothing in the text of that Agreement suggests that those products need be named or otherwise *expressly* identified in a "technical regulation". Moreover, there may be perfectly sound administrative reasons for formulating a "technical regulation" in a way that does *not* expressly identify products by name, but simply makes them identifiable – for instance, through the "characteristic" that is the subject of regulation.

71. With these considerations in mind, we examine whether the measure at issue is a "technical regulation". Decree 96-1133 aims primarily at the regulation of a named product, asbestos. The first and second paragraphs of Article 1 of the Decree impose a prohibition on asbestos *fibres*, as such. This prohibition on these *fibres* does not, *in itself*, prescribe or impose any "characteristics" on asbestos fibres, but simply bans them in their natural state. Accordingly, if this measure consisted *only* of a prohibition on asbestos *fibres*, it might not constitute a "technical regulation".

72. There is, however, more to the measure than this prohibition on asbestos *fibres*. It is not contested that asbestos fibres have no known use in their raw mineral form.[41] Thus, the regulation of asbestos can *only* be achieved through the regulation of *products that contain asbestos fibres*. This, too, is addressed by the Decree before us. An integral and essential aspect of the measure is the regulation of "*products containing asbestos fibres*", which are also prohibited by Article 1, paragraphs I and II of the Decree. It is important to note here that, although formulated *negatively* – products containing asbestos are prohibited – the measure, in this respect, effectively prescribes or imposes certain objective features, qualities or "characteristics" on *all* products. That is, in effect, the measure provides that *all* products must *not* contain asbestos fibres. Although this prohibition against products containing asbestos applies to a large number of products, and although it is, indeed, true that the products to which this prohibition applies cannot be determined from the terms of the measure itself, it seems to us that the products covered by the measure are *identifiable*: all products must be asbestos free; any products containing asbestos are prohibited. We also observe that compliance with the prohibition against products containing asbestos is mandatory and is, indeed, enforceable through criminal sanctions.[42]

73. Articles 2, 3 and 4 of the Decree also contain certain exceptions to the prohibitions found in Article 1 of the Decree. As we have already noted, these exceptions would have no meaning in the absence of the rest of the measure because they define the scope of the prohibitions in the measure. The nature of these exceptions is to *permit* the use of certain products containing chrysotile asbestos fibres, subject to compliance with strict administrative requirements. The scope of the exceptions is determined by an "exhaustive list" of products that are permitted to contain chrysotile asbestos fibres, which is promulgated and reviewed annually by a government Minister.[43] The inclusion of a product in the list of exceptions depends on the absence of an acceptable alternative fibre for incorporation into a particular product, and the demonstrable provision of "all technical guarantees of safety".[44]

---

[40]Panel Report, para. 8.57. We note that the Panel stated that a "technical regulation" must apply to "*identifiable*" products (Panel Report, para. 8.38; emphasis added). However, the Panel went on to state that a "technical regulation" must apply to "*given*" products (Panel Report, para. 8.57; emphasis added). The Panel also noted that the measure does not "identify *by name* nor even by function or category" the products covered by the measure (Panel Report, para. 8.40; emphasis added). Thus, in parts of the Panel Report, the Panel appears to require that a "technical regulation" apply to *given* products rather than *identifiable* products.

[41]Canada asserted that "chrysotile fibre has no use in its raw form; it serves as an input in the production of chrysotile materials" (Panel Report, paras. 3.418 and 3.439). This assertion is not contested by the European Communities.

[42]Article 5 of the Decree characterizes a contravention of any aspect of Articles 1.I or 1.II as a "5th class offence".

[43]Article 2.II of the Decree.

[44]Article 2.I of the Decree.

Any person seeking to avail himself of these limited exceptions must provide a detailed justification to the authorities, complete with necessary supporting documentation concerning "the state of scientific and technological progress".[45] Compliance with these administrative requirements is mandatory.[46]

74. Like the Panel, we consider that, through these exceptions, the measure sets out the "applicable administrative provisions, with which compliance is mandatory" for products with certain objective "characteristics".[47] The exceptions apply to a narrowly defined group of products with particular "characteristics". Although these products are not named, the measure provides criteria which permit their identification, both by reference to the qualities the excepted products must possess and by reference to the list promulgated by the Minister.

75. Viewing the measure as an integrated whole, we see that it lays down "characteristics" for all products that might contain asbestos, and we see also that it lays down the "applicable administrative provisions" for certain products containing chrysotile asbestos fibres which are excluded from the prohibitions in the measure. Accordingly, we find that the measure is a "document" which "lays down product characteristics … including the applicable administrative provisions, with which compliance is mandatory." For these reasons, we conclude that the measure constitutes a "technical regulation" under the *TBT Agreement*.

76. We, therefore, reverse the Panel's finding, in paragraph 8.72(a) of the Panel Report, that the *TBT Agreement* "does not apply to the part of the Decree relating to the ban on imports of asbestos and asbestos-containing products because that part does not constitute a 'technical regulation' within the meaning of Annex 1.1 to the TBT Agreement."

77. We note, however – and we emphasize – that this does not mean that *all* internal measures covered by Article III:4 of the GATT 1994 "affecting" the "sale, offering for sale, purchase, transportation, distribution or use" of a product are, necessarily, "technical regulations" under the *TBT Agreement*. Rather, we rule only that this particular measure, the Decree at stake, falls within the definition of a "technical regulation" given in Annex 1.1 of that Agreement.

78. As we have reached a different conclusion from the Panel's regarding the applicability of the *TBT Agreement* to the measure, we now consider whether it is appropriate for us to rule on the claims made by Canada relating to the *TBT Agreement*. In previous appeals, we have, on occasion, completed the legal analysis with a view to facilitating the prompt settlement of the dispute, pursuant to Article 3.3 of the DSU.[48] However, we have insisted that we can do so only if the factual findings

[45]Article 3.I of the Decree.

[46]Article 3.II of the Decree limits the benefit of the exception to activities that have been the subject of the necessary formalities.

[47]Panel Report, para. 8.69.

[48]See, for instance, Appellate Body Report, *United States – Gasoline*, *supra*, footnote 15, at 18 ff; Appellate Body Report, *Canada – Certain Measures Concerning Periodicals* ("*Canada – Periodicals*"), WT/DS31/AB/R, adopted 30 July 1997, DSR 1997:I, 449, at 469 ff; Appellate Body Report, *EC Measures Concerning Meat and Meat Products (Hormones)* ("*European Communities – Hormones*"), WT/DS26/AB/R, WT/DS48/AB/R, adopted 13 February 1998, paras. 222 ff; Appellate Body Report, *European Communities – Measures Affecting the Importation of Certain Poultry Products*, WT/DS69/AB/R, adopted 23 July 1998, paras. 156 ff; Appellate Body Report, *Australia – Measures Affecting Importation of Salmon* ("*Australia – Salmon*"), WT/DS18/AB/R, adopted 6 November 1998, paras. 117 ff, 193 ff and 227 ff; Appellate Body Report, *United States – Shrimp*, *supra*, footnote 14, paras. 123 ff; Appellate Body Report, *Japan – Measures Affecting Agricultural Products*, WT/DS76/AB/R, adopted 19 March 1999, paras. 112 ff; Appellate Body Report, *United States – Tax Treatment for "Foreign Sales Corporations"*, WT/DS108/AB/R, adopted 20 March 2000, paras. 133 ff; Appellate Body Report, *Canada – Measures Affecting the Export of Civilian Aircraft*, *Recourse by Brazil to Article 21.5 of the DSU*, WT/DS70/AB/RW, adopted 4 August 2000, paras. 43 ff; and Appellate Body Report, *United States – Definitive Safeguard Measures on Imports of Wheat Gluten from the European Communities* ("*United States – Wheat Gluten*"), WT/DS166/AB/R, adopted 19 January 2001, paras. 80 ff and 127 ff.

In addition, after modifying the panel's reasoning, we have, on occasion, applied our interpretation of the legal provisions at issue to the facts of the case (see, for instance, Appellate Body Report, *Argentina – Measures Affecting Imports of Footwear, Textiles, Apparel and Other Items*, WT/DS56/AB/R, adopted 22 April 1998, paras. 48 ff; Appellate Body Report, *Canada – Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, WT/DS103/AB/R, WT/DS113/AB/R, adopted 27 October 1999, paras. 138 ff; Appellate Body Report, *Argentina – Safeguard Measures on Imports of Footwear*, WT/DS121/AB/R, adopted 12 January 2000, paras. 109 ff).

of the panel and the undisputed facts in the panel record provide us with a sufficient basis for our own analysis. If that has not been the case, we have not completed the analysis.[49]

79. The need for sufficient facts is not the only limit on our ability to complete the legal analysis in any given case. In *Canada – Periodicals*, we reversed the panel's conclusion that the measure at issue was inconsistent with Article III:2, first sentence, of the GATT 1994, and we then proceeded to examine the United States' claims under Article III:2, second sentence, which the panel had not examined at all. However, in embarking there on an analysis of a provision that the panel had not considered, we emphasized that "the first and second sentences of Article III:2 are *closely related*" and that those two sentences are "part of a *logical continuum*."[50] (emphasis added)

80. In this appeal, Canada's outstanding claims were made under Articles 2.1, 2.2, 2.4 and 2.8 of the *TBT Agreement*. We observe that, although the *TBT Agreement* is intended to "further the objectives of GATT 1994", it does so through a specialized legal regime that applies solely to a limited class of measures. For these measures, the *TBT Agreement* imposes obligations on Members that seem to be *different* from, and *additional* to, the obligations imposed on Members under the GATT 1994.

81. As the Panel decided not to examine Canada's four claims under the *TBT Agreement*, it made no findings, at all, regarding any of these claims. Moreover, the meaning of the different obligations in the *TBT Agreement* has not previously been the subject of any interpretation or application by either panels or the Appellate Body. Similarly, the provisions of the Tokyo Round *Agreement on Technical Barriers to Trade*, which preceded the *TBT Agreement* and which contained obligations similar to those in the *TBT Agreement*, were also never the subject of even a single ruling by a panel.

82. In light of their novel character, we consider that Canada's claims under the *TBT Agreement* have not been explored before us in depth. As the Panel did not address these claims, there are no "issues of law" or "legal interpretations" regarding them to be analyzed by the parties, and reviewed by us under Article 17.6 of the DSU. We also observe that the sufficiency of the facts on the record depends on the reach of the provisions of the *TBT Agreement* claimed to apply – a reach that has yet to be determined.

83. With this particular collection of circumstances in mind, we consider that we do not have an adequate basis properly to examine Canada's claims under Articles 2.1, 2.2, 2.4 and 2.8 of the *TBT Agreement* and, accordingly, we refrain from so doing.

[49]See Appellate Body Report, *Australia – Salmon*, *supra*, footnote 48, paras. 209 ff, 241 ff and 255; Appellate Body Report, *Korea – Definitive Safeguard Measure on Imports of Certain Dairy Products*, WT/DS98/AB/R, adopted 12 January 2000, paras. 91 ff and 102 ff; Appellate Body Report, *Canada – Certain Measures Affecting the Automotive Industry*, WT/DS139/AB/R, WT/DS142/AB/R, adopted 19 June 2000, paras. 133 ff and 144 ff; Appellate Body Report, *Korea – Measures Affecting Imports of Fresh, Chilled and Frozen Beef* ("*Korea – Beef*"), WT/DS161/AB/R, WT/DS169/AB/R, adopted 10 January 2001, paras. 128 ff.

[50]*Supra*, footnote 48, at 469.

VI. "Like Products" in Article III:4 of the GATT 1994

A. *Background*

84. In addressing Canada's claims under Article III:4 of the GATT 1994, the Panel examined whether two different sets of products are "like".[51] First, the Panel examined whether *chrysotile asbestos fibres* are "like" certain other fibres, namely *polyvinyl alcohol fibres ("PVA"), cellulose and glass fibres* (PVA, cellulose and glass fibres are all collectively referred to, in the remainder of this Report, as "PCG fibres"). The Panel concluded that chrysotile asbestos and PCG fibres are all "like products" under Article III:4.[52] The Panel next examined whether *cement-based products containing chrysotile asbestos fibres* are "like" *cement-based products containing one of the PCG fibres*. The Panel also concluded that all these cement-based products are "like".[53]

85. In examining the "likeness" of these two sets of products, the Panel adopted an approach based on the Report of the Working Party on *Border Tax Adjustments*.[54] Under that approach, the Panel employed four general criteria in analyzing "likeness": (i) the properties, nature and quality of the products; (ii) the end-uses of the products; (iii) consumers' tastes and habits; and, (iv) the tariff classification of the products. The Panel declined to apply "a criterion on the risk of a product", "neither in the criterion relating to the properties, nature and quality of the product, nor in the other likeness criteria …".[55]

86. On appeal, the European Communities requests that we reverse the Panel's findings that the two sets of products examined by the Panel are "like products" under Article III:4 of the GATT 1994, and requests, in consequence, that we reverse the Panel's finding that the measure is inconsistent with Article III:4 of the GATT 1994. The European Communities contends that the Panel erred in its interpretation and application of the concept of "like products", in particular, in excluding from its analysis consideration of the health risks associated with chrysotile asbestos fibres. According to the European Communities, in this case, Article III:4 calls for an analysis of the health objective of the regulatory distinction made in the measure between asbestos fibres, and between products containing asbestos fibres, and all other products. The European Communities argues that, under Article III:4, products should not be regarded as "like" unless the regulatory distinction drawn between them "entails [a] shift in the competitive opportunities" in favour of domestic products.[56]

B. *Meaning of the Term "Like Products" in Article III:4 of the GATT 1994*

87. Article III:4 of the GATT 1994 reads, in relevant part:

> The products of the territory of any Member imported into the territory of any other Member shall be accorded treatment no less favourable than that accorded to *like products* of national origin in respect of all laws, regulations and requirements affecting their internal sale, offering for sale, purchase, transportation, distribution or use. … (emphasis added)

[51]The Panel's approach is set forth in para. 8.111 of the Panel Report.

[52]Panel Report, para. 8.144.

[53]*Ibid.*, para. 8.150.

[54]Working Party Report, *Border Tax Adjustments*, adopted 2 December 1970, BISD 18S/97.

[55]Panel Report, paras. 8.130 and 8.132.

[56]European Communities' other appellant's submission, para. 45.

88. The European Communities' appeal on this point turns on the interpretation of the word "like" in the term "like products" in Article III:4 of the GATT 1994. Thus, this appeal provides us with our first occasion to examine the meaning of the word "like" in *Article III:4* of the GATT 1994.[57] Yet, this appeal is, of course, not the first time that the term "like products" has been addressed in GATT or WTO dispute settlement proceedings.[58] Indeed, the term "like product" appears in many different provisions of the covered agreements, for example, in Articles I:1, II:2, III:2, III:4, VI:1, IX:1, XI:2(c), XIII:1, XVI:4 and XIX:1 of the GATT 1994.[59] The term is also a key concept in the *Agreement on Subsidies and Countervailing Measures*, the *Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994* (the "*Anti-Dumping Agreement*"), the *Agreement on Safeguards* and other covered agreements. In some cases, such as in Article 2.6 of the *Anti-Dumping Agreement*, the term is given a specific meaning to be used "[t]hroughout [the]

[57]We have already had occasion to interpret other aspects of Article III:4 of the GATT 1994 in two other appeals, but in neither appeal were we asked to address the meaning of the term "like products" (see Appellate Body Report, *European Communities – Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/AB/R, adopted 25 September 1997, and Appellate Body Report, *Korea – Beef*, *supra*, footnote 49).

[58]See, for instance, Working Party Report, *Brazilian Internal Taxes*, adopted 30 June 1949, BISD II/181, (Article III:2 of the GATT 1947); Working Party Report, *The Australian Subsidy on Ammonium Sulphate* ("*Australia – Ammonium Sulphate*"), adopted 3 April 1950, BISD II/188 (Articles I and III:4 of the GATT 1947); Panel Report, *Treatment by Germany of Imports of Sardines* ("*Germany – Sardines*"), adopted 31 October 1952, BISD 1S/53 (Articles I and XIII of the GATT 1947); Working Party Report, *Border Tax Adjustments*, *supra*, footnote 54 (Articles II, III and XVI of the GATT 1947); Panel Report, *EEC – Measures on Animal Feed Proteins* ("*EEC – Animal Feed*"), adopted 14 March 1978, BISD 25S/49 (Articles I, III:2 and III:4 of the GATT 1947); Panel Report, *Spain – Tariff Treatment of Unroasted Coffee*, adopted 11 June 1981, BISD 28S/102 (Article I:1 of the GATT 1947); Panel Report, *Spain – Measures Concerning Domestic Sale of Soyabean Oil* ("*Spain – Soyabean*"), L/5142, 17 June 1981, unadopted (Article III:4 of the GATT 1947); Panel Report, *Canada – Measures Affecting the Sale of Gold Coins*, L/5863, 17 September 1985, unadopted (Article III:2 of the GATT 1947); Panel Report, *United States – Taxes on Petroleum and Certain Imported Substances*, adopted 17 June 1987, BISD 34S/136 (Article III:2 of the GATT 1947); Panel Report, *Japan – Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages* ("*1987 Japan – Alcoholic Beverages*"), adopted 10 November 1987, BISD 34S/83 (Article III:2 of the GATT 1947); Panel Report, *Canada/Japan – Tariff on Imports of Spruce, Pine, Fir (SPF) Dimension Lumber*, adopted 19 July 1989, BISD 36S/167 (Article I:1 of the GATT 1947); Panel Report, *United States – Definition of Industry Concerning Wine and Grape Products*, adopted 28 April 1992, BISD 39S/436 (Article VI of the GATT 1947); Panel Report, *United States – Denial of Most-favoured-nation Treatment as to Non-rubber Footwear from Brazil*, adopted 19 June 1992, BISD 39S/128 (Article I:1 of the GATT 1947); Panel Report, *United States – Measures Affecting Alcoholic and Malt Beverages*, adopted 19 June 1992, BISD 39S/206 (Article III:2 and III:4 of the GATT 1947); Panel Report, *United States – Taxes on Automobiles*, DS31/R, 11 October 1994, unadopted (Article III:2 and III:4 of the GATT 1947); Panel Report, *United States – Gasoline*, *supra*, footnote 15 (Article III:4 of the GATT 1994); Panel Report, *Japan – Taxes on Alcoholic Beverages* ("*Japan – Alcoholic Beverages*"), WT/DS8/R, WT/DS10/R, WT/DS11/R, adopted 1 November 1996, as modified by the Appellate Body Report, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, DSR 1996:I, 125 (Article III:2 of the GATT 1994); Appellate Body Report, *Japan – Alcoholic Beverages*, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, adopted 1 November 1996, DSR 1996:I, 97 (Article III:2 of the GATT 1994); Panel Report, *Canada – Periodicals*, WT/DS31/R, adopted 30 July 1997, as modified by the Appellate Body Report, WT/DS31/AB/R, DSR 1997:I, 481 (Articles III:2 and III:4 of the GATT 1994); Appellate Body Report, *Canada – Periodicals*; *supra*, footnote 48 (Article III:2 of the GATT 1994); Panel Report, *Indonesia – Certain Measures Affecting the Automobile Industry,* WT/DS54/R, WT/DS55/R, WT/DS59/R, WTDS64/R, adopted 23 July 1998 (Articles I:1 and III:2 of the GATT 1994); Panel Report, *Korea – Taxes on Alcoholic Beverages* ("*Korea – Alcoholic Beverages*"), WT/DS75/R, WT/DS84/R, adopted 17 February 1999, as modified by the Appellate Body Report, WT/DS75/AB/R, WT/DS84/AB/R (Article III:2 of the GATT 1994); Appellate Body Report, *Korea – Alcoholic Beverages*, WT/DS75/AB/R, WT/DS84/AB/R, adopted 17 February 1999 (Article III:2 of the GATT 1994); Panel Report, *Chile – Taxes on Alcoholic Beverages*, WT/DS87/R, WT/DS110/R, adopted 12 January 2000, as modified by the Appellate Body Report, WT/DS87/AB/R, WT/DS110/AB/R (Article III:2 of the GATT 1994).

[59]In addition, the term "like commodity" appears in Article VI:7 and the term "like merchandise" is used in Article VII:2 of the GATT 1994.

Agreement", while in others, it is not. In each of the provisions where the term "like products" is used, the term must be interpreted in light of the context, and of the object and purpose, of the provision at issue, and of the object and purpose of the covered agreement in which the provision appears. Accordingly, and as we observed in an earlier case concerning Article III:2 of the GATT 1994:

> … there can be *no one precise and absolute definition of what is "like"*. The concept of "likeness" is a relative one that evokes the image of an accordion. The accordion of "likeness" stretches and squeezes in different places as different provisions of the *WTO Agreement* are applied. *The width of the accordion in any one of those places must be determined by the particular provision in which the term "like" is encountered as well as by the context and the circumstances that prevail in any given case to which that provision may apply*. …[60] (emphasis added)

89. It follows that, while the meaning attributed to the term "like products" in other provisions of the GATT 1994, or in other covered agreements, may be relevant context in interpreting Article III:4 of the GATT 1994, the interpretation of "like products" in Article III:4 need not be identical, in all respects, to those other meanings.

90. Bearing these considerations in mind, we turn now to the ordinary meaning of the word "like" in the term "like products" in Article III:4. According to one dictionary, "like" means:

> Having the same characteristics or qualities as some other … thing; of approximately identical shape, size, etc., with something else; similar.[61]

91. This meaning suggests that "like" products are products that share a number of identical or similar characteristics or qualities. The reference to "similar" as a synonym of "like" also echoes the language of the French version of Article III:4, "*produits similaires*", and the Spanish version, "*productos similares*", which, together with the English version, are equally authentic.[62]

92. However, as we have previously observed, "dictionary meanings leave many interpretive questions open."[63] In particular, this definition does not resolve three issues of interpretation. First, this dictionary definition of "like" does not indicate *which characteristics or qualities are important* in assessing the "likeness" of products under Article III:4. For instance, most products will have many qualities and characteristics, ranging from physical properties such as composition, size, shape, texture, and possibly taste and smell, to the end-uses and applications of the product. Second, this dictionary definition provides no guidance in determining the *degree or extent to which products must share qualities or characteristics* in order to be "like products" under Article III:4. Products may share only very few characteristics or qualities, or they may share many. Thus, in the abstract, the term "like" can encompass a spectrum of differing degrees of "likeness" or "similarity". Third,

[60]Appellate Body Report, *Japan – Alcoholic Beverages*, *supra*, footnote 58, at 114. We also cautioned against the automatic transposition of the interpretation of "likeness" under the first sentence of Article III:2 to other provisions where the phrase "like products" is used (p. 113).

[61]*The New Shorter Oxford English Dictionary*, Lesley Brown (ed.) (Clarendon Press, 1993), Vol. I, p. 1588.

[62]*WTO Agreement*, final, authenticating clause. See, also, Article 33(1) of the *Vienna Convention of the Law of the Treaties*, done at Vienna, 23 May 1969, 1155 U.N.T.S. 331; 8 International Legal Materials 679.

[63]Appellate Body Report, *Canada – Measures Affecting the Export of Civilian Aircraft*, WT/DS70/AB/R, adopted 20 August 1999, para. 153.

this dictionary definition of "like" does not indicate *from whose perspective* "likeness" should be judged. For instance, ultimate consumers may have a view about the "likeness" of two products that is very different from that of the inventors or producers of those products.

93. To begin to resolve these issues, we turn to the relevant context of Article III:4 of the GATT 1994. In that respect, we observe that Article III:2 of the GATT 1994, which deals with the internal tax treatment of imported and domestic products, prevents Members, through its first sentence, from imposing internal taxes on imported products "in excess of those applied … to *like* domestic products." (emphasis added) In previous Reports, we have held that the scope of "like" products in this sentence is to be construed "narrowly".[64] This reading of "like" in Article III:2 might be taken to suggest a similarly narrow reading of "like" in Article III:4, since both provisions form part of the same Article. However, both of these paragraphs of Article III constitute specific expressions of the overarching, "general principle", set forth in Article III:1 of the GATT 1994.[65] As we have previously said, the "general principle" set forth in Article III:1 "informs" the rest of Article III and acts "as a guide to understanding and interpreting the specific obligations contained" in the other paragraphs of Article III, including paragraph 4.[66] Thus, in our view, Article III:1 has particular contextual significance in interpreting Article III:4, as it sets forth the "general principle" pursued by that provision. Accordingly, in interpreting the term "like products" in Article III:4, we must turn, first, to the "general principle" in Article III:1, rather than to the term "like products" in Article III:2.

94. In addition, we observe that, although the obligations in Articles III:2 and III:4 both apply to "like products", the text of Article III:2 differs in one important respect from the text of Article III:4. Article III:2 contains *two separate* sentences, each imposing *distinct* obligations: the first lays down obligations in respect of "like products", while the second lays down obligations in respect of "directly competitive or substitutable" products.[67] By contrast, Article III:4 applies only to "like products" and does not include a provision equivalent to the second sentence of Article III:2. We note that, in this dispute, the Panel did not examine, at all, the significance of this textual difference between paragraphs 2 and 4 of Article III.

95. For us, this textual difference between paragraphs 2 and 4 of Article III has considerable implications for the meaning of the term "like products" in these two provisions. In *Japan – Alcoholic Beverages*, we concluded, in construing Article III:2, that the two separate obligations in the two sentences of Article III:2 must be interpreted in a harmonious manner that gives meaning to *both* sentences in that provision. We observed there that the interpretation of one of the sentences necessarily affects the interpretation of the other. Thus, the scope of the term "like products" in the first sentence of Article III:2 affects, and is affected by, the scope of the phrase "directly competitive or substitutable" products in the second sentence of that provision. We said in *Japan – Alcoholic Beverages*:

[64]Appellate Body Report, *Japan – Alcoholic Beverages*, *supra*, footnote 58, at 112 and 113. See, also, Appellate Body Report, *Canada – Periodicals*, *supra*, footnote 48, at 473.

[65]Appellate Body Report, *Japan – Alcoholic Beverages*, *supra*, footnote 58, at 111.

[66]*Ibid.*

[67]The meaning of the second sentence of Article III:2 is elaborated upon in the Interpretative Note to that provision. This note indicates that the second sentence of Article III:2 applies to "directly competitive or substitutable product[s]".

> Because the second sentence of Article III:2 provides for a separate and distinctive consideration of the protective aspect of a measure in examining its application to a broader category of products that are not "like products" as contemplated by the first sentence, we agree with the Panel that the first sentence of Article III:2 must be construed narrowly so as not to condemn measures that its strict terms are not meant to condemn. Consequently, we agree with the Panel also that the definition of "like products" in Article III:2, first sentence, should be construed narrowly.[68]

96. In construing Article III:4, the same interpretive considerations do not arise, because the "general principle" articulated in Article III:1 is expressed in Article III:4, not through two distinct obligations, as in the two sentences in Article III:2, but instead through a single obligation that applies solely to "like products". Therefore, the harmony that we have attributed to the two sentences of Article III:2 need not and, indeed, cannot be replicated in interpreting Article III:4. Thus, we conclude that, given the textual difference between Articles III:2 and III:4, the "accordion" of "likeness" stretches in a different way in Article III:4.

97. We have previously described the "general principle" articulated in Article III:1 as follows:

> The broad and fundamental purpose of Article III is to avoid protectionism in the application of internal tax and regulatory measures. More specifically, the purpose of Article III "is to ensure that internal measures 'not be applied to imported and domestic products so as to afford protection to domestic production'". Toward this end, Article III obliges Members of the WTO to provide *equality of competitive conditions for imported products in relation to domestic products*. … Article III protects expectations not of any particular trade volume but rather of the equal competitive relationship between imported and domestic products. …[69] (emphasis added)

98. As we have said, although this "general principle" is not explicitly invoked in Article III:4, nevertheless, it "informs" that provision.[70] Therefore, the term "like product" in Article III:4 must be interpreted to give proper scope and meaning to this principle. In short, there must be consonance between the objective pursued by Article III, as enunciated in the "general principle" articulated in Article III:1, and the interpretation of the specific expression of this principle in the text of Article III:4. This interpretation must, therefore, reflect that, in endeavouring to ensure "equality of competitive conditions", the "general principle" in Article III seeks to prevent Members from applying internal taxes and regulations in a manner which affects the competitive relationship, in the marketplace, *between the domestic and imported products involved*, "so as to afford protection to domestic production."

99. As products that are in a competitive relationship in the marketplace could be affected through treatment of *imports* "less favourable" than the treatment accorded to *domestic* products, it follows that the word "like" in Article III:4 is to be interpreted to apply to products that are in such a competitive relationship. Thus, a determination of "likeness" under Article III:4 is, fundamentally, a determination about the nature and extent of a competitive relationship between and among products. In saying this, we are mindful that there is a spectrum of degrees of "competitiveness" or

[68] *Supra*, footnote 58, at 112 and 113.

[69] Appellate Body Report, *Japan – Alcoholic Beverages*, *supra*, footnote 58, at 109 and 110.

[70] *Ibid.*, at 111.

"substitutability" of products in the marketplace, and that it is difficult, if not impossible, in the abstract, to indicate precisely where on this spectrum the word "like" in Article III:4 of the GATT 1994 falls. We are not saying that *all* products which are in *some* competitive relationship are "like products" under Article III:4. In ruling on the measure at issue, we also do not attempt to define the precise scope of the word "like" in Article III:4. Nor do we wish to decide if the scope of "like products" in Article III:4 is co-extensive with the combined scope of "like" and "directly competitive or substitutable" products in Article III:2. However, we recognize that the relationship between these two provisions is important, because there is no sharp distinction between fiscal regulation, covered by Article III:2, and non-fiscal regulation, covered by Article III:4. Both forms of regulation can often be used to achieve the same ends. It would be incongruous if, due to a significant difference in the product scope of these two provisions, Members were prevented from using one form of regulation – for instance, fiscal – to protect domestic production of certain products, but were able to use another form of regulation – for instance, non-fiscal – to achieve those ends. This would frustrate a consistent application of the "general principle" in Article III:1. For these reasons, we conclude that the scope of "like" in Article III:4 is broader than the scope of "like" in Article III:2, first sentence. Nonetheless, we note, once more, that Article III:2 extends not only to "like products", but also to products which are "directly competitive or substitutable", and that Article III:4 extends only to "like products". In view of this different language, and although we need not rule, and do not rule, on the precise product scope of Article III:4, we do conclude that the product scope of Article III:4, although broader than the *first* sentence of Article III:2, is certainly *not* broader than the *combined* product scope of the *two* sentences of Article III:2 of the GATT 1994.

100. We recognize that, by interpreting the term "like products" in Article III:4 in this way, we give that provision a relatively broad product scope – although no broader than the product scope of Article III:2. In so doing, we observe that there is a second element that must be established before a measure can be held to be inconsistent with Article III:4. Thus, even if two products are "like", that does not mean that a measure is inconsistent with Article III:4. A complaining Member must still establish that the measure accords to the group of "like" *imported* products "less favourable treatment" than it accords to the group of "like" *domestic* products. The term "less favourable treatment" expresses the general principle, in Article III:1, that internal regulations "should not be applied … so as to afford protection to domestic production". If there is "less favourable treatment" of the group of "like" imported products, there is, conversely, "protection" of the group of "like" domestic products. However, a Member may draw distinctions between products which have been found to be "like", without, for this reason alone, according to the group of "like" *imported* products "less favourable treatment" than that accorded to the group of "like" *domestic* products. In this case, we do not examine further the interpretation of the term "treatment no less favourable" in Article III:4, as the Panel's findings on this issue have not been appealed or, indeed, argued before us.

C. *Examining the "Likeness" of Products under Article III:4 of the GATT 1994*

101. We turn to consideration of how a treaty interpreter should proceed in determining whether products are "like" under Article III:4. As in Article III:2, in this determination, "[n]o one approach … will be appropriate for all cases."[71] Rather, an assessment utilizing "an unavoidable element of individual, discretionary judgement"[72] has to be made on a case-by-case basis. The Report of the Working Party on *Border Tax Adjustments* outlined an approach for analyzing "likeness" that has been followed and developed since by several panels and the Appellate Body.[73] This approach has, in

[71] Appellate Body Report, *Japan – Alcoholic Beverages*, *supra*, footnote 58, at 114.

[72] Appellate Body Report, *Japan – Alcoholic Beverages*, *supra*, footnote 58, at 113.

[73] See, further, Appellate Body Report, *Japan – Alcoholic Beverages*, *supra*, footnote 58, at 113 and, in particular, footnote 46. See, also, Panel Report, *United States – Gasoline*, *supra*, footnote 15, para. 6.8, where the approach set forth in the *Border Tax Adjustment* case was adopted in a dispute concerning Article III:4 of the GATT 1994 by a panel. This point was not appealed in that case.

the main, consisted of employing four general criteria in analyzing "likeness": (i) the properties, nature and quality of the products; (ii) the end-uses of the products; (iii) consumers' tastes and habits – more comprehensively termed consumers' perceptions and behaviour – in respect of the products; and (iv) the tariff classification of the products.[74] We note that these four criteria comprise four categories of "characteristics" that the products involved might share: (i) the physical properties of the products; (ii) the extent to which the products are capable of serving the same or similar end-uses; (iii) the extent to which consumers perceive and treat the products as alternative means of performing particular functions in order to satisfy a particular want or demand; and (iv) the international classification of the products for tariff purposes.

102. These general criteria, or groupings of potentially shared characteristics, provide a framework for analyzing the "likeness" of particular products on a case-by-case basis. These criteria are, it is well to bear in mind, simply tools to assist in the task of sorting and examining the relevant evidence. They are neither a treaty-mandated nor a closed list of criteria that will determine the legal characterization of products. More important, the adoption of a particular framework to aid in the examination of evidence does not dissolve the duty or the need to examine, in each case, *all* of the pertinent evidence. In addition, although each criterion addresses, in principle, a different aspect of the products involved, which should be examined separately, the different criteria are interrelated. For instance, the physical properties of a product shape and limit the end-uses to which the products can be devoted. Consumer perceptions may similarly influence – modify or even render obsolete – traditional uses of the products. Tariff classification clearly reflects the physical properties of a product.

103. The kind of evidence to be examined in assessing the "likeness" of products will, necessarily, depend upon the particular products and the legal provision at issue. When all the relevant evidence has been examined, panels must determine whether that evidence, as a whole, indicates that the products in question are "like" in terms of the legal provision at issue. We have noted that, under Article III:4 of the GATT 1994, the term "like products" is concerned with competitive relationships between and among products. Accordingly, whether the *Border Tax Adjustments* framework is adopted or not, it is important under Article III:4 to take account of evidence which indicates whether, and to what extent, the products involved are – or could be – in a competitive relationship in the marketplace.

D. *The Panel's Findings and Conclusions on "Likeness" under Article III:4 of the GATT 1994*

1. Overview

104. In this case, the European Communities argues that the Panel erred in its consideration of "likeness", in particular, because it adopted an exclusively "commercial or market access approach" to the comparison of allegedly "like products"; placed excessive reliance on a single criterion, namely, end-use; and failed to include consideration of the health "risk" factors relating to asbestos.[75]

105. Before considering these arguments, we think it helpful to summarize the way in which the Panel assessed the "likeness" of *chrysotile asbestos fibres*, on the one hand, and the *PCG fibres* – PVA, cellulose and glass fibres – on the other. It will be recalled that the Panel adopted the approach in the *Border Tax Adjustments* report, using the four general criteria mentioned above.[76] After

[74]The fourth criterion, tariff classification, was not mentioned by the Working Party on *Border Tax Adjustments*, but was included by subsequent panels (see, for instance, *EEC – Animal Feed*, *supra*, footnote 58, para. 4.2, and *1987 Japan – Alcoholic Beverages*, *supra*, footnote 58, para. 5.6).

[75]European Communities' other appellant's submission, para. 33.

[76]Panel Report, paras. 8.114 and 8.115.

reviewing the *first* criterion, "properties, nature and quality of the products", the Panel "conclude[d] that … chrysotile fibres *are like* PVA, cellulose and glass fibres."[77] (emphasis added) In reaching this "conclusion", the Panel found that it was not decisive that the products "do not have the same structure or chemical composition", nor that asbestos is "unique". Instead, the Panel focused on "market access" and whether the products have the "same applications" and can "replace" each other for some industrial uses.[78] The Panel also declined to "[i]ntroduce a criterion on the risk of a product".[79]

106. Under the second criterion, "end-use", the Panel stated that it had already found, under the first criterion, that the products have "certain identical or at least similar end-uses" and that it did not, therefore, consider it necessary to elaborate further on this criterion.[80] The Panel declined to "take a position" on "consumers' tastes and habits", the third criterion, "[b]ecause this criterion would not provide clear results".[81] The Panel observed that consumers' tastes and habits are "very varied".[82] Finally, the Panel did not regard as "decisive" the different "tariff classification" of the fibres.[83]

107. Based on this reasoning, the Panel concluded that *chrysotile asbestos fibres* and *PCG fibres* are "like products" under Article III:4 of the GATT 1994.[84]

108. The Panel next examined whether *cement-based products containing chrysotile asbestos fibres* are "like" *cement-based products containing PCG fibres*.[85] Applying the reasoning from its findings on fibres, and noting that the individual cement-based products have the same tariff classification, irrespective of their fibre content, the Panel concluded that these cement-based products are also "like" under Article III:4.[86]

2. Chrysotile and PCG fibres

109. In our analysis of this issue on appeal, we begin with the Panel's findings on the "likeness" of *chrysotile asbestos and PCG fibres* and, in particular, with the Panel's overall approach to examining the "likeness" of these fibres. It is our view that, having adopted an approach based on the four criteria set forth in *Border Tax Adjustments*, the Panel should have examined the evidence relating to *each* of those four criteria and, then, weighed *all* of that evidence, along with any other relevant evidence, in making an *overall* determination of whether the products at issue could be characterized as "like". Yet, the Panel expressed a "conclusion" that the products were "like" after examining only the *first* of the four criteria. The Panel then repeated that conclusion under the second criterion – without further analysis – before dismissing altogether the relevance of the third criterion and also before rejecting the differing tariff classifications under the fourth criterion. In our view, it was inappropriate for the Panel to express a "conclusion" after examining only one of the four criteria.[87] By reaching a "conclusion" without examining all of the criteria it had decided to examine, the Panel,

[84]*Ibid.*, para. 8.144.

[85]*Ibid.*

[86]*Ibid.*, para. 8.150. The Panel devoted six paragraphs to the "likeness" of the cement-based products, whereas it devoted 27 paragraphs to the "likeness" of chrysotile asbestos and PCG fibres.

[87]*Ibid.*, para. 8.126.

in reality, expressed a conclusion after examining only some of the evidence. Yet, a determination on the "likeness" of products cannot be made on the basis of a partial analysis of the evidence, after examination of just one of the criteria the Panel said it would examine. For this reason, we doubt whether the Panel's overall approach has allowed the Panel to make a proper characterization of the "likeness" of the fibres at issue.

110. We must next examine more closely the Panel's treatment of the four individual criteria. We see the first criterion, "properties, nature and quality", as intended to cover the physical qualities and characteristics of the products. In analyzing the "properties" of the products, the Panel said that, "because of its physical and chemical characteristics, *asbestos is a unique product*."[88] (emphasis added) The Panel expressly acknowledged that, based on physical properties alone, "[i]t could … be concluded that [the fibres] are *not* like products."[89] (emphasis added) However, to overcome that fact, the Panel adopted a "market access" approach to this first criterion.[90] Thus, in the course of its examination of "*properties*", the Panel went on to rely on "*end-uses*" – the second criterion – and on the fact that, in a "small number" of cases, the products have the "same applications" and can "replace" each other.[91] The Panel then stated:

> We therefore conclude that, taking into account the properties criterion, chrysotile fibres are like PVA, cellulose and glass fibres.[92]

111. We believe that physical properties deserve a separate examination that should not be confused with the examination of end-uses. Although not decisive, the extent to which products share common physical properties may be a useful indicator of "likeness". Furthermore, the physical properties of a product may also influence how the product can be used, consumer attitudes about the product, and tariff classification. It is, therefore, important for a panel to examine fully the physical character of a product. We are also concerned that it will be difficult for a panel to draw the appropriate conclusions from the evidence examined under each criterion if a panel's approach does not clearly address each criterion separately, but rather entwines different, and distinct, elements of the analysis along the way.

112. In addition, we do not share the Panel's conviction that when two products can be used for the same end-use, their "*properties* are then *equivalent*, if not identical."[93] (emphasis added) Products with quite different physical properties may, in some situations, be capable of performing similar or identical end-uses. Although the *end-uses* are then "*equivalent*", the physical properties of the products are not thereby altered; they remain different. Thus, the physical "uniqueness" of asbestos that the Panel noted does not change depending on the particular use that is made of asbestos.

113. The European Communities argues that the inquiry into the physical properties of products must include a consideration of the risks posed by the product to human health. In examining the physical properties of the product at issue in this dispute, the Panel found that "it was not appropriate to apply the 'risk' criterion proposed by the EC".[94] The Panel said that to do so "would largely nullify the effect of Article XX(b)" of the GATT 1994.[95] In reviewing this finding by the Panel, we note that neither the text of Article III:4 nor the practice of panels and the Appellate Body suggest that any

evidence should be excluded *a priori* from a panel's examination of "likeness". Moreover, as we have said, in examining the "likeness" of products, panels must evaluate *all* of the relevant evidence. We are very much of the view that evidence relating to the health risks associated with a product may be pertinent in an examination of "likeness" under Article III:4 of the GATT 1994. We do not, however, consider that the evidence relating to the health risks associated with chrysotile asbestos fibres need be examined under a *separate* criterion, because we believe that this evidence can be evaluated under the existing criteria of physical properties, and of consumers' tastes and habits, to which we will come below.

114. Panels must examine fully the physical properties of products. In particular, panels must examine those physical properties of products that are likely to influence the competitive relationship between products in the marketplace. In the case of chrysotile asbestos fibres, their molecular structure, chemical composition, and fibrillation capacity are important because the microscopic particles and filaments of chrysotile asbestos fibres are carcinogenic in humans, following inhalation. In this respect, we observe that, at paragraph 8.188 of its Report, the Panel made the following statements regarding chrysotile asbestos fibres:

> … we note that the carcinogenicity of chrysotile fibres has been acknowledged for some time by international bodies.[135] This carcinogenicity was confirmed by the experts consulted by the Panel, with respect to both lung cancers and mesotheliomas, even though the experts appear to acknowledge that chrysotile is less likely to cause mesotheliomas than amphiboles. We also note that the experts confirmed that the types of cancer concerned had a mortality rate of close to 100 per cent. We therefore consider that we have sufficient evidence that there is in fact a serious carcinogenic risk associated with the inhalation of chrysotile fibres. Moreover, in the light of the comments made by one of the experts, the doubts expressed by Canada with respect to the direct effects of chrysotile on mesotheliomas and lung cancers are not sufficient to conclude that an official responsible for public health policy would find that there was not enough evidence of the existence of a public health risk.

[135]Since 1977 by the IARC (see *List of Agents Carcinogenic to Humans, Overall Evaluations of Carcinogenicity to Humans*, Monographs of the International Agency for Research on Cancer, Volumes 1-63), see also WHO, *IPCS Environmental Health Criteria (203) on Chrysotile*, Geneva (1998), cited in para. 5.584 above. On the development of knowledge of the risks associated with asbestos, see Dr. Henderson, para. 5.595.

This carcinogenicity, or toxicity, constitutes, as we see it, a defining aspect of the physical properties of chrysotile asbestos fibres. The evidence indicates that PCG fibres, in contrast, do not share these properties, at least to the same extent.[96] We do not see how this highly significant physical difference *cannot* be a consideration in examining the physical properties of a product as part of a determination of "likeness" under Article III:4 of the GATT 1994.

115. We do not agree with the Panel that considering evidence relating to the health risks associated with a product, under Article III:4, nullifies the effect of Article XX(b) of the GATT 1994. Article XX(b) allows a Member to "adopt and enforce" a measure, *inter alia*, necessary to protect human life or health, even though that measure is inconsistent with another provision of the GATT 1994. Article III:4 and Article XX(b) are distinct and independent provisions of the GATT 1994 each to be interpreted on its own. The scope and meaning of Article III:4 should not be

[96]Panel Report, para. 8.220.

broadened or restricted beyond what is required by the normal customary international law rules of treaty interpretation, simply because Article XX(b) exists and may be available to justify measures inconsistent with Article III:4. The fact that an interpretation of Article III:4, under those rules, implies a less frequent recourse to Article XX(b) does not deprive the exception in Article XX(b) of *effet utile*. Article XX(b) would only be deprived of *effet utile* if that provision could *not* serve to allow a Member to "adopt and enforce" measures "necessary to protect human … life or health". Evaluating evidence relating to the health risks arising from the physical properties of a product does not prevent a measure which is inconsistent with Article III:4 from being justified under Article XX(b). We note, in this regard, that, different inquiries occur under these two very different Articles. Under Article III:4, evidence relating to health risks may be relevant in assessing the *competitive relationship in the marketplace* between allegedly "like" products. The same, or similar, evidence serves a different purpose under Article XX(b), namely, that of assessing whether a *Member* has a sufficient basis for "adopting or enforcing" a WTO-inconsistent measure on the grounds of human health.

116. We, therefore, find that the Panel erred, in paragraph 8.132 of the Panel Report, in excluding the health risks associated with chrysotile asbestos fibres from its examination of the physical properties of that product.

117. Before examining the Panel's findings under the second and third criteria, we note that these two criteria involve certain of the key elements relating to the competitive relationship between products: first, the extent to which products are capable of performing the same, or similar, functions (end-uses), and, second, the extent to which consumers are willing to use the products to perform these functions (consumers' tastes and habits). Evidence of this type is of particular importance under Article III of the GATT 1994, precisely because that provision is concerned with competitive relationships in the marketplace. If there is – or could be – *no* competitive relationship between products, a Member cannot intervene, through internal taxation or regulation, to protect domestic production. Thus, evidence about the extent to which products can serve the same end-uses, and the extent to which consumers are – or would be – willing to choose one product instead of another to perform those end-uses, is highly relevant evidence in assessing the "likeness" of those products under Article III:4 of the GATT 1994.

118. We consider this to be especially so in cases where the evidence relating to properties establishes that the products at issue are physically quite different. In such cases, in order to overcome this indication that products are *not* "like", a higher burden is placed on complaining Members to establish that, despite the pronounced physical differences, there is a competitive relationship between the products such that *all* of the evidence, taken together, demonstrates that the products are "like" under Article III:4 of the GATT 1994. In this case, where it is clear that the fibres have very different properties, in particular, because chrysotile is a known carcinogen, a very heavy burden is placed on Canada to show, under the second and third criteria, that the chrysotile asbestos and PCG fibres are in such a competitive relationship.

119. With this in mind, we turn to the Panel's evaluation of the second criterion, end-uses. The Panel's evaluation of this criterion is far from comprehensive. First, as we have said, the Panel entwined its analysis of "end-uses" with its analysis of "physical properties" and, in purporting to examine "end-uses" as a distinct criterion, essentially referred to its analysis of "properties".[97] This makes it difficult to assess precisely how the Panel evaluated the end-uses criterion. Second, the Panel's analysis of end-uses is based on a "small number of applications" for which the products are substitutable. Indeed, the Panel stated that "[i]t suffices that, for a *given utilization*, the properties are the same to the extent that one product can replace the other."[98] (emphasis added) Although we agree that it is certainly relevant that products have similar end-uses for a "small number of …

[97]Panel Report, para. 8.136.

[98]*Ibid*., para. 8.124.

applications", or even for a "given utilization", we think that a panel must also examine the other, *different* end-uses for products.[99] It is only by forming a complete picture of the various end-uses of a product that a panel can assess the significance of the fact that products share a limited number of end-uses. In this case, the Panel did not provide such a complete picture of the various end-uses of the different fibres. The Panel did not explain, or elaborate in any way on, the "small number of … applications" for which the various fibres have similar end-uses. Nor did the Panel examine the end-uses for these products which were not similar. In these circumstances, we believe that the Panel did not adequately examine the evidence relating to end-uses.

120. The Panel declined to examine or make any findings relating to the third criterion, consumers' tastes and habits, "[b]ecause this criterion would not provide clear results".[100] There will be few situations where the evidence on the "likeness" of products will lend itself to "clear results". In many cases, the evidence will give conflicting indications, possibly within each of the four criteria. For instance, there may be some evidence of similar physical properties and some evidence of differing physical properties. Or the physical properties may differ completely, yet there may be strong evidence of similar end-uses and a high degree of substitutability of the products from the perspective of the consumer. A panel cannot decline to inquire into relevant evidence simply because it suspects that evidence may not be "clear" or, for that matter, because the parties agree that certain evidence is not relevant.[101] In any event, we have difficulty seeing how the Panel could conclude that an examination of consumers' tastes and habits "would not provide clear results", given that the Panel did not examine *any* evidence relating to this criterion.

121. Furthermore, in a case such as this, where the fibres are physically very different, a panel *cannot* conclude that they are "like products" if it *does not examine* evidence relating to consumers' tastes and habits. In such a situation, if there is *no* inquiry into this aspect of the nature and extent of the competitive relationship between the products, there is no basis for overcoming the inference, drawn from the different physical properties of the products, that the products are not "like".

122. In this case especially, we are also persuaded that evidence relating to consumers' tastes and habits would establish that the health risks associated with chrysotile asbestos fibres influence consumers' behaviour with respect to the different fibres at issue.[102] We observe that, as regards *chrysotile asbestos and PCG fibres*, the consumer of the fibres is a *manufacturer* who incorporates the fibres into another product, such as cement-based products or brake linings. We do not wish to speculate on what the evidence regarding these consumers would have indicated; rather, we wish to highlight that consumers' tastes and habits regarding *fibres*, even in the case of commercial parties, such as manufacturers, are very likely to be shaped by the health risks associated with a product which is known to be highly carcinogenic.[103] A manufacturer cannot, for instance, ignore the preferences of the ultimate consumer of its products. If the risks posed by a particular product are sufficiently great, the ultimate consumer may simply cease to buy that product. This would, undoubtedly, affect a manufacturer's decisions in the marketplace. Moreover, in the case of products posing risks to human health, we think it likely that manufacturers' decisions will be influenced by other factors, such as the

[99]*Ibid*., paras. 8.124 and 8.125.

[100]*Ibid*., para. 8.139.

[101]In that respect, we note that, at the oral hearing before us, Canada stated that it believed that the parties were in agreement that consideration of consumers' tastes and habits "would add nothing" to the determination of "likeness".

[102]We have already noted the health risks associated with chrysotile asbestos fibres in our consideration of properties (*supra*, para. 114).

[103]We recognize that consumers' reactions to products posing a risk to human health vary considerably depending on the product, and on the consumer. Some dangerous products, such as tobacco, are widely used, despite the known health risks. The influence known dangers have on consumers' tastes and habits is, therefore, unlikely to be uniform or entirely predictable.

potential civil liability that might flow from marketing products posing a health risk to the ultimate consumer, or the additional costs associated with safety procedures required to use such products in the manufacturing process.

123. Finally, we note that, although we consider consumers' tastes and habits significant in determining "likeness" in this dispute, at the oral hearing, Canada indicated that it considers this criterion to be *irrelevant*, in this dispute, because the existence of the measure has disturbed normal conditions of competition between the products. In our Report in *Korea – Alcoholic Beverages*, we observed that, "[p]articularly in a market where there are regulatory barriers to trade or to competition, there may well be latent demand" for a product.[104] We noted that, in such situations, "it may be highly relevant to examine latent demand" that is suppressed by regulatory barriers.[105] In addition, we said that "evidence from other markets may be pertinent to the examination of the market at issue, particularly when demand on that market has been influenced by regulatory barriers to trade or to competition."[106] We, therefore, do not accept Canada's contention that, in markets where normal conditions of competition have been disturbed by regulatory or fiscal barriers, consumers' tastes and habits cease to be relevant. In such situations, a Member may submit evidence of latent, or suppressed, consumer demand in that market, or it may submit evidence of substitutability from some relevant third market. In making this point, we do not wish to be taken to suggest that there *is* latent demand for chrysotile asbestos fibres. Our point is simply that the existence of the measure does not render consumers' tastes and habits irrelevant, as Canada contends.

124. We observe also that the Panel did not regard as decisive the different tariff classifications of the chrysotile asbestos, PVA, cellulose and glass fibres, each of which is classified under a different tariff heading.[107] In the absence of a full analysis, by the Panel, of the other three criteria addressed, we cannot determine what importance should be attached to the different tariff classifications of the fibres.

125. In sum, in our view, the Panel reached the conclusion that *chrysotile asbestos and PCG fibres* are "like products" under Article III:4 of the GATT 1994 on the following basis: the Panel disregarded the quite different "properties, nature and quality" of chrysotile asbestos and PCG fibres, as well as the different tariff classification of these fibres; it considered no evidence on consumers' tastes and habits; and it found that, for a "small number" of the many applications of these fibres, they are substitutable, but it did not consider the many other end-uses for the fibres that are different. Thus, the only evidence supporting the Panel's finding of "likeness" is the "small number" of shared end-uses of the fibres.

126. For the reasons we have given, we find this insufficient to justify the conclusion that the chrysotile asbestos and PCG fibres are "like products" and we, therefore, reverse the Panel's conclusion, in paragraph 8.144 of the Panel Report, "that chrysotile fibres, on the one hand, and PVA, cellulose and glass fibres, on the other, are 'like products' within the meaning of Article III:4 of the GATT 1994."

3. Cement-based products containing chrysotile and PCG fibres

127. Having reversed the Panel's finding on the "likeness" of the *fibres*, we now examine the Panel's findings regarding the "likeness" of *cement-based products containing chrysotile asbestos fibres* and *cement-based products containing PCG fibres*. In examining the "likeness" of these

[104] *Supra*, footnote 58, para. 115.

[105] *Ibid.*, para. 120. We added that "studies of cross-price elasticity … involve an assessment of latent demand" (para. 121).

[106] *Supra*, footnote 58, para. 137.

[107] Panel Report, para. 8.143.

cement-based products, the Panel stated that, physically, the only difference between these products is the incorporation of a different fibre.[108] In this respect, the Panel indicated that "many of the arguments put forward in relation to chrysotile asbestos, PVA, cellulose and glass fibres are applicable *mutatis mutandis* to products containing those fibres."[109] The Panel noted that, for any given cement-based product, the tariff classification is the same, irrespective of the fibre incorporated into the product.[110] The Panel declined to examine the "risk" criterion advanced by the European Communities, and also considered it unnecessary to analyze consumers' tastes and habits.[111] On this basis, the Panel concluded that "chrysotile-fibre products and fibro-cement products are like products within the meaning of Article III:4 of the GATT 1994."[112]

128. As the Panel said, the primary physical difference between cement-based products containing chrysotile asbestos fibres and cement-based products containing PCG fibres lies in the particular fibre incorporated into the product. This difference is important because, as we have said in our examination of fibres, we believe that the health risks associated with a product may be relevant to the inquiry into the physical properties of a product when making a determination of "likeness" under Article III:4 of the GATT 1994.[113] This is also true for cement-based products containing the different fibres. In examining the *physical properties* of the two sets of cement-based products, it cannot be ignored that one set of products contains a fibre known to be highly carcinogenic, while the other does not.[114] In this respect, we recall that the Panel concluded that "there is an undeniable public health risk in relation to chrysotile contained in high-density chrysotile-cement products."[115] We, therefore, reverse the Panel's finding, in paragraph 8.149 of the Panel Report, that these health risks are not relevant in examining the "likeness" of the cement-based products.

129. Furthermore, the Panel did not indicate whether or to what extent the incorporation of one type of fibre, instead of another, affects other physical properties of a particular cement-based product and, consequently, affects the suitability of that product for a specific *end-use*. The Panel noted that the fibres give the products their specific function – "mechanical strength, resistance to heat, compression, etc." – but the Panel did not examine the extent to which the presence of a particular fibre affects the ability of a cement-based product to perform one or more of these functions efficiently.[116]

130. In addition, even if the cement-based products were functionally interchangeable, we consider it likely that the presence of a known carcinogen in one of the products would have an influence on *consumers' tastes and habits* regarding that product. We believe this to be true irrespective of whether the consumer of the *cement-based* products is a commercial party, such as a construction company, or is an individual, for instance, a do-it-yourself ("DIY") enthusiast or someone who owns or lives or works in a building. This influence may well vary, but the possibility of such an influence should not be overlooked by a panel when considering the "likeness" of products containing chrysotile asbestos. In the absence of an examination of consumers' tastes and habits, we do not see how the Panel could reach a conclusion on the "likeness" of the cement-based products at issue.[117]

[108] Panel Report, para. 8.145.

[109] *Ibid.*

[110] *Ibid.*, para. 8.148.

[111] *Ibid.*, para. 8.149.

[112] *Ibid.*, para. 8.150.

[113] *Supra*, para. 113.

[114] *Supra*, para. 114.

[115] Panel Report, para. 8.203.

[116] Panel Report, para. 8.145.

[117] See, further, *supra*, paras. 117 and 118. See, also, *supra*, paras. 121 and 122.

131. For all of these reasons, we reverse the Panel's conclusion, in paragraph 8.150 of the Panel Report, "that chrysotile-fibre products and fibro-cement products are like products within the meaning of Article III:4 of the GATT 1994."

132. As we have reversed the Panel's findings that chrysotile asbestos fibres and PCG fibres are "like products" under Article III:4 of the GATT 1994, and also the Panel's findings that cement-based products containing chrysotile asbestos fibres and cement-based products containing PCG fibres are "like products" under that provision, we also reverse, in consequence, the Panel's conclusion, in paragraph 8.158 of the Panel Report, that the measure is inconsistent with Article III:4 of the GATT 1994 as this finding rests, in part, on the Panel's findings that the two sets of products are "like".

E. *Completing the "Like Product" Analysis under Article III:4 of the GATT 1994*

133. As we have reversed both of the Panel's conclusions on "likeness" under Article III:4 of the GATT 1994, we think it appropriate to complete the analysis, on the basis of the factual findings of the Panel and of the undisputed facts in the Panel record. We have already examined the meaning of the term "like products", and we have also approved the approach for inquiring into "likeness" that is based on the Report of the Working Party in *Border Tax Adjustments* and that was also approved, though not entirely followed, by the Panel in this case. Under that approach, the evidence is to be examined under four criteria: physical properties; end-uses; consumers' tastes and habits; and tariff classification.

1. Chrysotile and PCG fibres

134. We address first the "likeness" of *chrysotile asbestos fibres* and *PCG fibres*. As regards the physical properties of these fibres, we recall that the Panel stated that:

> The Panel notes that no party contests that the structure of chrysotile fibres is unique by nature and in comparison with artificial fibres that can replace chrysotile asbestos. The parties agree that none of the substitute fibres mentioned by Canada in connection with Article III:4 has the same structure, either in terms of its form, its diameter, its length or its potential to release particles that possess certain characteristics. Moreover, they do not have the same chemical composition, which means that, in purely physical terms, none of them has the same nature or quality. …[118]

135. We also see it as important to take into account that, since 1977, chrysotile asbestos fibres have been recognized internationally as a known carcinogen because of the particular combination of their molecular structure, chemical composition, and fibrillation capacity.[119] In that respect, the Panel noted that:

[118]Panel Report, para. 8.121.

[119]*Supra*, para. 114.

> … the carcinogenicity of chrysotile fibres has been acknowledged for some time by international bodies. This carcinogenicity was confirmed by the experts consulted by the Panel, with respect to both lung cancers and mesotheliomas, even though the experts appear to acknowledge that chrysotile is less likely to cause mesotheliomas than amphiboles. We also note that the experts confirmed that the types of cancer concerned had a mortality rate of close to 100 per cent. We therefore consider that we have sufficient evidence that there is in fact a serious carcinogenic risk associated with the inhalation of chrysotile fibres. …[120]

In contrast, the Panel found that the PCG fibres "are not classified by the WHO at the same level of risk as chrysotile."[121] The experts also confirmed, as the Panel reported, that current scientific evidence indicates that PCG fibres do "not present the same risk to health as chrysotile" asbestos fibres.[122]

136. It follows that the evidence relating to properties indicates that, physically, chrysotile asbestos and PCG fibres are very different. As we said earlier, in such cases, in order to overcome this indication that products are *not* "like", a high burden is imposed on a complaining Member to establish that, despite the pronounced physical differences, there is a competitive relationship between the products such that, *all* of the evidence, taken together, demonstrates that the products are "like" under Article III:4 of the GATT 1994.

137. The Panel observed that the end-uses of chrysotile asbestos and PCG fibres are the same "for a small number" of applications.[123] The Panel simply adverted to these overlapping end-uses and offered no elaboration on their nature and character. We note that Canada argued before the Panel that there are some 3,000 commercial applications for asbestos fibres.[124] Canada and the European Communities indicated that the most important end-uses for asbestos fibres include, in no particular order, incorporation into: cement-based products; insulation; and various forms of friction lining.[125] Canada noted that 90 percent, by quantity, of French imports of chrysotile asbestos were used in the production of cement-based products.[126] This evidence suggests that chrysotile asbestos and PCG fibres share a small number of similar end-uses and, that, as Canada asserted, for chrysotile asbestos, these overlapping end-uses represent an important proportion of the end-uses made of chrysotile asbestos, measured in terms of quantity.

138. There is, however, no evidence on the record regarding the nature and extent of the many end-uses for chrysotile asbestos and PCG fibres which are *not* overlapping. Thus, we do not know what proportion of all end-uses for chrysotile asbestos and PCG fibres overlap. Where products have a wide range of end-uses, only some of which overlap, we do not believe that it is sufficient to rely solely on evidence regarding the overlapping end-uses, without also examining evidence of the nature and importance of these end-uses in relation to all of the other possible end-uses for the products. In the absence of such evidence, we cannot determine the significance of the fact that chrysotile asbestos and PCG fibres share a small number of similar end-uses.

[120]Panel Report, para. 8.188.

[121]*Ibid.*, para. 8.220.

[122]*Ibid.*

[123]Panel Report, para. 8.125.

[124]*Ibid.*, para. 3.21.

[125]*Ibid.*, paras. 3.21 (Canada) and 3.23 (European Communities). The lists of important uses given by the parties is not identical in all respects and we have distilled from each list the common elements.

[126]Panel Report, para. 3.21, footnote 7.

139. As we have already stated, Canada took the view, both before the Panel and before us, that consumers' tastes and habits have no relevance to the inquiry into the "likeness" of the fibres.[127] We have already addressed, and dismissed, the arguments advanced by Canada in support of this contention.[128] We have also stated that, in a case such as this one, where the physical properties of the fibres are very different, an examination of the evidence relating to consumers' tastes and habits is an indispensable – although not, on its own, sufficient – aspect of any determination that products are "like" under Article III:4 of the GATT 1994.[129] If there is no evidence on this aspect of the nature and extent of the competitive relationship between the fibres, there is no basis for overcoming the inference, drawn from the different physical properties, that the products are not "like". However, in keeping with its argument that this criterion is irrelevant, Canada presented *no* evidence on consumers' tastes and habits regarding chrysotile asbestos and PCG fibres.[130]

140. Finally, we note that chrysotile asbestos fibres and the various PCG fibres all have different tariff classifications. While this element is not, on its own, decisive, it does tend to indicate that chrysotile and PCG fibres are not "like products" under Article III:4 of the GATT 1994.

141. Taken together, in our view, all of this evidence is certainly far from sufficient to satisfy Canada's burden of proving that chrysotile asbestos fibres are "like" PCG fibres under Article III:4 of the GATT 1994. Indeed, this evidence rather tends to suggest that these products are not "like products" for the purposes of Article III:4 of the GATT 1994.

2. Cement-based products containing chrysotile and PCG fibres

142. We turn next to consider whether *cement-based products containing chrysotile asbestos fibres* are "like" *cement-based products containing PCG fibres* under Article III:4 of the GATT 1994. We begin, once again, with physical properties. In terms of composition, the physical properties of the different cement-based products appear to be relatively similar. Yet, there is one principal and significant difference between these products: one set of cement-based products contains a known carcinogenic fibre, while the other does not. The Panel concluded that the presence of chrysotile asbestos fibres in cement-based products poses "an undeniable public health risk".[131]

143. The Panel stated that the fibres give the cement-based products their specific function – "mechanical strength, resistance to heat, compression, etc."[132] These functions are clearly based on the physical properties of the products. There is no evidence of record to indicate whether the presence of chrysotile asbestos fibres, rather than PCG fibres, in a particular cement-based product, affects these particular physical properties of the products. For instance, a tile incorporating chrysotile asbestos fibres may be more heat resistant than a tile incorporating a PCG fibre.

144. In addition, there is no evidence to indicate to what extent the incorporation of one type of fibre, instead of another, affects the suitability of a particular cement-based product for a specific end-use.[133] Once again, it may be that tiles containing chrysotile asbestos fibres perform some end-uses, such as resistance to heat, more efficiently than tiles containing a PCG fibre. Thus, while we accept

[127] *Supra*, paras. 120 and 123.

[128] *Ibid.*

[129] Our reasons for reaching this conclusion are set forth, *supra*, in paras. 117, 118, 121 and 122.

[130] Canada did present evidence that the impact of the Decree was to reduce demand for chrysotile (Panel Report, paras. 3.20 and 3.422). However, as Canada recognized, this is a necessary consequence of the prohibition on chrysotile and is not evidence of consumers' attitudes and choices regarding the products at issue. As we have said, regulatory measures *may* suppress latent consumer demand for a product (*supra*, para. 123).

[131] Panel Report, para. 8.203.

[132] *Ibid.*, para. 8.145.

[133] *Supra*, para. 129.

that the two different types of cement-based products may perform largely similar end-uses, in the absence of evidence, we cannot determine whether each type of cement-based product can perform, with *equal* efficiency, *all* of the functions performed by the other type of cement-based product.

145. As with the fibres, Canada contends that evidence on consumers' tastes and habits concerning cement-based products is irrelevant. Accordingly, Canada submitted no such evidence to the Panel. We have dismissed Canada's arguments in support of this contention.[134] We have also indicated that it is of particular importance, under Article III of the GATT 1994, to examine evidence relating to competitive relationships in the marketplace.[135] We consider it likely that the presence of a known carcinogen in one of the products will have an influence on consumers' tastes and habits regarding that product.[136] It may be, for instance, that, although cement-based products containing chrysotile asbestos fibres are capable of performing the same functions as other cement-based products, consumers are, to a greater or lesser extent, not willing to use products containing chrysotile asbestos fibres because of the health risks associated with them. Yet, this is only speculation; the point is, there is no evidence. We are of the view that a determination on the "likeness" of the cement-based products cannot be made, under Article III:4, in the absence of an examination of evidence on consumers' tastes and habits. And, in this case, no such evidence has been submitted.

146. As regards tariff classification, we observe that, for any given cement-based product, the tariff classification of the product is the same.[137] However, this indication of "likeness" cannot, on its own, be decisive.

147. Thus, we find that, in particular, in the absence of any evidence concerning consumers' tastes and habits, Canada has not satisfied its burden of proving that cement-based products containing chrysotile asbestos fibres are "like" cement-based products containing PCG fibres, under Article III:4 of the GATT 1994.

148. As Canada has not demonstrated either that chrysotile asbestos fibres are "like" PCG fibres, or that cement-based products containing chrysotile asbestos fibres are "like" cement-based products containing PCG fibres, we conclude that Canada has not succeeded in establishing that the measure at issue is inconsistent with Article III:4 of the GATT 1994.

149. One Member of the Division hearing this appeal wishes to make a concurring statement. At the outset, I would like to make it abundantly clear that I agree with the findings and conclusions reached, and the reasoning set out in support thereof, by the Division, in: Section V (*TBT Agreement*); Section VII (Article XX(b) of the GATT 1994 and Article 11 of the DSU); Section VIII (Article XXIII:1(b) of the GATT 1994); and Section IX (Findings and Conclusions) of the Report. This concurring statement, in other words, relates only to Section VI ("Like Products" in Article III:4 of the GATT 1994) of the Report.

150. More particularly, in respect of Section VI of the Report, I join in the findings and conclusions set out in: paragraphs 116, 126, 128, 131, 132, 141, 147 and 148. I am bound to say that, in truth, I agree with a great deal more than just the bare findings and conclusions contained in these eight paragraphs of the Report. It is, however, as a practical matter, not feasible to sort out and identify which part of which paragraph, of the sixty-odd paragraphs comprising Section VI of our Report in which I join. Nor is it feasible to offer a detailed statement with respect to the portions that would then remain. Accordingly, I set out only two related matters below.

[134] *Supra*, paras. 120 and 123.

[135] *Supra*, para. 117.

[136] *Supra*, para. 130.

[137] Panel Report, para. 8.148.

151. In paragraph 113 of the Report, we state that "[w]e are very much of the view that evidence relating to the health risks associated with a product may be pertinent in an examination of 'likeness' under Article III:4 of the GATT 1994." We also point out, in paragraph 114, that "[p]anels must examine fully the physical properties of products. In particular, … those physical properties of products that are likely to influence the competitive relationship between products in the market place. In the cases of chrysotile asbestos fibres, their molecular structure, chemical composition, and fibrillation capacity are important because the microscopic particles and filaments of chrysotile asbestos fibres are carcinogenic in humans, following inhalation." This carcinogenicity we describe as "a defining aspect of the physical properties of chrysotile asbestos fibres"[138], which property is not shared by the PCG fibres, "at least to the same extent."[139] We express our inability to "see how this highly significant physical difference *cannot* be a consideration in examining the physical properties of a product as part of a determination of 'likeness' under Article III:4 of the GATT 1994."[140] (emphasis in the original) We observe also that the Panel, after noting that the carcinogenicity of chrysotile asbestos fibres has been acknowledged by international bodies and confirmed by the experts the Panel consulted, ruled that it "[has] sufficient evidence that *there is in fact a serious carcinogenic risk associated with the inhalation of chrysotile fibres*."[141] (emphasis added) In fact, the scientific evidence of record for this finding of carcinogenicity of chrysotile asbestos fibres is so clear, voluminous, and is confirmed, a number of times, by a variety of international organizations, as to be practically overwhelming.

152. In the present appeal, considering the nature and quantum of the scientific evidence showing that the physical properties and qualities of chrysotile asbestos fibres include or result in carcinogenicity, my submission is that there is ample basis for a definitive characterization, on completion of the legal analysis, of such fibres as *not* "like" PCG fibres. PCG fibres, it may be recalled, have not been shown by Canada to have the same lethal properties as chrysotile asbestos fibres. That definitive characterization, it is further submitted, may and should be made even in the absence of evidence concerning the other two *Border Tax Adjustments* criteria (categories of "potentially shared characteristics") of end-uses and consumers' tastes and habits. It is difficult for me to imagine what evidence relating to economic competitive relationships as reflected in end-uses and consumers' tastes and habits could outweigh and set at naught the undisputed deadly nature of chrysotile asbestos fibres, compared with PCG fibres, when inhaled by humans, and thereby compel a characterization of "likeness" of chrysotile asbestos and PCG fibres.

153. The suggestion I make is not that *any* kind or degree of health risk, associated with a particular product, would *a priori* negate a finding of the "likeness" of that product with another product, under Article III:4 of the GATT 1994. The suggestion is a very narrow one, limited only to the circumstances of this case, and confined to chrysotile asbestos fibres as compared with PCG fibres. To hold that these fibres are not "like" one another in view of the undisputed carcinogenic nature of chrysotile asbestos fibres appears to me to be but a small and modest step forward from mere reversal of the Panel's ruling that chrysotile asbestos and PCG fibres are "like", especially since our holding in completing the analysis is that Canada failed to satisfy a complainant's burden of proving that PCG fibres are "like" chrysotile asbestos fibres under Article III:4. That small step, however, the other Members of the Division feel unable to take because of their conception of the "fundamental", perhaps decisive, role of economic competitive relationships in the determination of the "likeness" of products under Article III:4.

154. My second point is that the necessity or appropriateness of adopting a "fundamentally" economic interpretation of the "likeness" of products under Article III:4 of the GATT 1994 does not

[138] *Supra*, para. 114.

[139] *Ibid.*

[140] *Ibid.*

[141] Panel Report, para. 8.188. See, *supra*, para. 114.

appear to me to be free from substantial doubt. Moreover, in future concrete contexts, the line between a "fundamentally" and "exclusively" economic view of "like products" under Article III:4 may well prove very difficult, as a practical matter, to identify. It seems to me the better part of valour to reserve one's opinion on such an important, indeed, philosophical matter, which may have unforeseeable implications, and to leave that matter for another appeal and another day, or perhaps other appeals and other days. I so reserve my opinion on this matter.

VII. Article XX(b) of the GATT 1994 and Article 11 of the DSU

155. Under Article XX(b) of the GATT 1994, the Panel examined, first, whether the use of chrysotile-cement products poses a risk to human health and, second, whether the measure at issue is "necessary to protect human … life or health". Canada contends that the Panel erred in law in its findings on both these issues. We will examine these two issues in turn before addressing Canada's appeal that the Panel failed to make an "objective assessment", under Article 11 of the DSU, in reaching its conclusions under Article XX(b) of the GATT 1994.

156. We recall that Article XX(b) of the GATT 1994 reads:

> Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any Member of *measures*:
>
> …
>
> (*b*) *necessary to protect human*, animal or plant *life or health*; (emphasis added)
>
> …

A. *"To Protect Human Life or Health"*

157. On the issue of whether the use of chrysotile-cement products poses a risk to human health sufficient to enable the measure to fall within the scope of application of the phrase "to protect human … life or health" in Article XX(b), the Panel stated that it "considers that the evidence before it *tends to show* that handling chrysotile-cement products constitutes a risk to health rather than the opposite."[142] (emphasis added) On the basis of this assessment of the evidence, the Panel concluded that:

[142] Panel Report, para. 8.193.

> … the EC has made a prima facie case for the existence of a health risk in connection with the use of chrysotile, in particular as regards lung cancer and mesothelioma in the occupational sectors downstream of production and processing and for the public in general in relation to chrysotile-cement products. This prima facie case has not been rebutted by Canada. Moreover, the Panel considers that the comments by the experts confirm the health risk associated with exposure to chrysotile in its various uses. *The Panel therefore considers that the EC have shown that the policy of prohibiting chrysotile asbestos implemented by the Decree falls within the range of policies designed to protect human life or health.* … [143] (emphasis added)

Thus, the Panel found that the measure falls within the category of measures embraced by Article XX(b) of the GATT 1994.

158. According to Canada, the Panel deduced that there was a risk to human life or health associated with manipulation of chrysotile-cement products from seven factors.[144] These seven factors all relate to the scientific evidence which was before the Panel, including the opinion of the scientific experts. Canada argues that the Panel erred in law by deducing from these seven factors that chrysotile-cement products pose a risk to human life or health.[145]

159. Although Canada does not base its arguments about these seven factors on Article 11 of the DSU, we bear in mind the discretion that is enjoyed by panels as the trier of facts. In *United States – Wheat Gluten*, we said:

> … in view of the distinction between the respective roles of the Appellate Body and panels, we have taken care to emphasize that a panel's appreciation of the evidence falls, in principle, "within the *scope of the panel's discretion as the trier of facts*". (emphasis added) In assessing the panel's appreciation of the evidence, we cannot base a finding of inconsistency under Article 11 simply on the conclusion that we might have reached a different factual finding from the one the panel reached. Rather, we must be satisfied that the panel has exceeded the bounds of its discretion, as the trier of facts, in its appreciation of the evidence. As is clear from previous appeals, we will not interfere lightly with the panel's exercise of its discretion.[146]

160. In *Korea – Alcoholic Beverages*, we were faced with arguments that sought to cast doubt on certain studies relied on by the panel in that case. We stated:

[143]Panel Report, para. 8.194.

[144]Canada's appellant's submission, para. 170. The seven factors Canada relies upon are identified in para. 19 of this Report.

[145]Canada's appellant's submission, para. 171.

[146]*Supra*, footnote 48, para. 151.

> The Panel's examination and weighing of the evidence submitted fall, in principle, within the scope of the Panel's discretion as the trier of facts and, accordingly, outside the scope of appellate review. This is true, for instance, with respect to the Panel's treatment of the Dodwell Study, the Sofres Report and the Nielsen Study. *We cannot second-guess the Panel in appreciating either the evidentiary value of such studies or the consequences, if any, of alleged defects in those studies.* Similarly, it is not for us to review the relative weight ascribed to evidence on such matters as marketing studies … [147] (emphasis added)

161. The same holds true in this case. The Panel enjoyed a margin of discretion in assessing the value of the evidence, and the weight to be ascribed to that evidence. The Panel was entitled, in the exercise of its discretion, to determine that certain elements of evidence should be accorded more weight than other elements – that is the essence of the task of appreciating the evidence.

162. With this in mind, we have examined the seven factors on which Canada relies in asserting that the Panel erred in concluding that there exists a human health risk associated with the manipulation of chrysotile-cement products. We see Canada's appeal on this point as, in reality, a challenge to the Panel's assessment of the credibility and weight to be ascribed to the scientific evidence before it. Canada contests the conclusions that the Panel drew both from the evidence of the scientific experts and from scientific reports before it. As we have noted, we will interfere with the Panel's appreciation of the evidence only when we are "satisfied that the panel has *exceeded the bounds of its discretion*, as the trier of facts, in its appreciation of the evidence."[148] (emphasis added) In this case, nothing suggests that the Panel exceeded the bounds of its lawful discretion. To the contrary, all four of the scientific experts consulted by the Panel concurred that chrysotile asbestos fibres, and chrysotile-cement products, constitute a risk to human health, and the Panel's conclusions on this point are faithful to the views expressed by the four scientists. In addition, the Panel noted that the carcinogenic nature of chrysotile asbestos fibres has been acknowledged since 1977 by international bodies, such as the International Agency for Research on Cancer and the World Health Organization.[149] In these circumstances, we find that the Panel remained well within the bounds of its discretion in finding that chrysotile-cement products pose a risk to human life or health.

163. Accordingly, we uphold the Panel's finding, in paragraph 8.194 of the Panel Report, that the measure "protect[s] human … life or health", within the meaning of Article XX(b) of the GATT 1994.

B. *"Necessary"*

164. On the issue of whether the measure at issue is "necessary" to protect public health within the meaning of Article XX(b), the Panel stated:

[147]*Supra*, footnote 58, para. 161.

[148]Appellate Body Report, *United States – Wheat Gluten*, *supra*, footnote 48, para. 151.

[149]Panel Report, para. 8.188.

> In the light of France's public health objectives as presented by the European Communities, the Panel concludes that the EC has made a prima facie case for the non-existence of a reasonably available alternative to the banning of chrysotile and chrysotile-cement products and recourse to substitute products. Canada has not rebutted the presumption established by the EC. We also consider that the EC's position is confirmed by the comments of the experts consulted in the course of this proceeding.[150]

165. Canada argues that the Panel erred in applying the "necessity" test under Article XX(b) of the GATT 1994 "by stating that there is a high enough risk associated with the manipulation of chrysotile-cement products that it could in principle justify strict measures such as the Decree."[151] Canada advances four arguments in support of this part of its appeal. First, Canada argues that the Panel erred in finding, on the basis of the scientific evidence before it, that chrysotile-cement products pose a risk to human health.[152] Second, Canada contends that the Panel had an obligation to "quantify" itself the risk associated with chrysotile-cement products and that it could not simply "rely" on the "hypotheses" of the French authorities.[153] Third, Canada asserts that the Panel erred by postulating that the level of protection of health inherent in the Decree is a halt to the spread of asbestos-related health risks. According to Canada, this "premise is false because it does not take into account the risk associated with the use of substitute products without a framework for controlled use."[154] Fourth, and finally, Canada claims that the Panel erred in finding that "controlled use" is not a reasonably available alternative to the Decree.

166. With respect to Canada's first argument, we note simply that we have already dismissed Canada's contention that the evidence before the Panel did not support the Panel's findings.[155] We are satisfied that the Panel had a more than sufficient basis to conclude that chrysotile-cement products do pose a significant risk to human life or health.

167. As for Canada's second argument, relating to "quantification" of the risk, we consider that, as with the *SPS Agreement*, there is no requirement under Article XX(b) of the GATT 1994 to *quantify*, as such, the risk to human life or health.[156] A risk may be evaluated either in quantitative or qualitative terms. In this case, contrary to what is suggested by Canada, the Panel assessed the nature and the character of the risk posed by chrysotile-cement products. The Panel found, on the basis of the scientific evidence, that "no minimum threshold of level of exposure or duration of exposure has been identified with regard to the risk of pathologies associated with chrysotile, except for asbestosis."[157] The pathologies which the Panel identified as being associated with chrysotile are of a very serious nature, namely lung cancer and mesothelioma, which is also a form of cancer.[158] Therefore, we do not agree with Canada that the Panel merely relied on the French authorities' "hypotheses" of the risk.

[150]Panel Report, para. 8.222.

[152]*Ibid.*, paras. 188 and 189.

[153]*Ibid.*, para. 193.

[154]*Ibid.*, para. 195.

[155]*Supra*, paras. 159-163.

[156]Appellate Body Report, *European Communities – Hormones*, *supra*, footnote 48, para. 186.

[157]Panel Report, para. 8.202.

[158]*Ibid.*, para. 8.188. See Panel Report, para. 5.29, for a description of mesothelioma given by Dr. Henderson.

168. As to Canada's third argument, relating to the level of protection, we note that it is undisputed that WTO Members have the right to determine the level of protection of health that they consider appropriate in a given situation. France has determined, and the Panel accepted[159], that the chosen level of health protection by France is a "halt" to the spread of *asbestos*-related health risks. By prohibiting all forms of amphibole asbestos, and by severely restricting the use of chrysotile asbestos, the measure at issue is clearly designed and apt to achieve that level of health protection. Our conclusion is not altered by the fact that PCG fibres might pose a risk to health. The scientific evidence before the Panel indicated that the risk posed by the PCG fibres is, in any case, *less* than the risk posed by chrysotile asbestos fibres[160], although that evidence did *not* indicate that the risk posed by PCG fibres is non-existent. Accordingly, it seems to us perfectly legitimate for a Member to seek to halt the spread of a highly risky product while allowing the use of a less risky product in its place. In short, we do not agree with Canada's third argument.

169. In its fourth argument, Canada asserts that the Panel erred in finding that "controlled use" is not a reasonably available alternative to the Decree. This last argument is based on Canada's assertion that, in *United States – Gasoline*, both we and the panel held that an alternative measure "can only be ruled out if it is shown to be impossible to implement."[161] We understand Canada to mean by this that an alternative measure is only excluded as a "reasonably available" alternative if implementation of that measure is "impossible". We certainly agree with Canada that an alternative measure which is impossible to implement is not "reasonably available". But we do not agree with Canada's reading of either the panel report or our report in *United States – Gasoline*. In *United States – Gasoline*, the panel held, in essence, that an alternative measure did not *cease* to be "reasonably" available simply because the alternative measure involved *administrative difficulties* for a Member.[162] The panel's findings on this point were not appealed, and, thus, we did not address this issue in that case.

170. Looking at this issue now, we believe that, in determining whether a suggested alternative measure is "reasonably available", several factors must be taken into account, besides the difficulty of implementation. In *Thailand – Restrictions on Importation of and Internal Taxes on Cigarettes*, the panel made the following observations on the applicable standard for evaluating whether a measure is "necessary" under Article XX(b):

> The import restrictions imposed by Thailand could be considered to be "necessary" in terms of Article XX(b) only if there were no alternative measure consistent with the General Agreement, or less inconsistent with it, which Thailand could *reasonably be expected to employ to achieve its health policy objectives*.[163] (emphasis added)

171. In our Report in *Korea –Beef*, we addressed the issue of "necessity" under Article XX(d) of the GATT 1994.[164] In that appeal, we found that the panel was correct in following the standard set forth by the panel in *United States – Section 337 of the Tariff Act of 1930*:

> It was clear to the Panel that a contracting party cannot justify a measure inconsistent with another GATT provision as "necessary" in terms of Article XX(d) if an alternative measure which it could reasonably be expected to employ and which is not inconsistent with

[159]*Ibid.*, para. 8.204.

[160]*Ibid.*, para. 8.220.

[161]Canada's appellant's submission, para. 202, referring to, *inter alia*, para. 130 of that submission.

[162]See Panel Report, *United States – Gasoline*, *supra*, footnote 15, paras. 6.26 and 6.28.

[163]Adopted 20 February 1990, BISD 37S/200, para. 75.

[164]*Supra*, footnote 49, paras. 159 ff.

> other GATT provisions is available to it. By the same token, in cases where a measure consistent with other GATT provisions is not reasonably available, a contracting party is bound to use, among the measures reasonably available to it, that which entails the least degree of inconsistency with other GATT provisions.[165]

172. We indicated in *Korea – Beef* that one aspect of the "weighing and balancing process … comprehended in the determination of whether a WTO-consistent alternative measure" is reasonably available is the extent to which the alternative measure "contributes to the realization of the end pursued".[166] In addition, we observed, in that case, that "[t]he more vital or important [the] common interests or values" pursued, the easier it would be to accept as "necessary" measures designed to achieve those ends.[167] In this case, the objective pursued by the measure is the preservation of human life and health through the elimination, or reduction, of the well-known, and life-threatening, health risks posed by asbestos fibres. The value pursued is both vital and important in the highest degree. The remaining question, then, is whether there is an alternative measure that would achieve the same end and that is less restrictive of trade than a prohibition.

173. Canada asserts that "controlled use" represents a "reasonably available" measure that would serve the same end. The issue is, thus, whether France could reasonably be expected to employ "controlled use" practices to achieve its chosen level of health protection – a halt in the spread of asbestos-related health risks.

174. In our view, France could not reasonably be expected to employ *any* alternative measure if that measure would involve a continuation of the very risk that the Decree seeks to "halt". Such an alternative measure would, in effect, prevent France from achieving its chosen level of health protection. On the basis of the scientific evidence before it, the Panel found that, in general, the efficacy of "controlled use" remains to be demonstrated.[168] Moreover, even in cases where "controlled use" practices are applied "with greater certainty", the scientific evidence suggests that the level of exposure can, in some circumstances, still be high enough for there to be a "significant residual risk of developing asbestos-related diseases."[169] The Panel found too that the efficacy of "controlled use" is particularly doubtful for the building industry and for DIY enthusiasts, which are the most important users of cement-based products containing chrysotile asbestos.[170] Given these factual findings by the Panel, we believe that "controlled use" would not allow France to achieve its chosen level of health protection by halting the spread of asbestos-related health risks. "Controlled use" would, thus, not be an alternative measure that would achieve the end sought by France.

175. For these reasons, we uphold the Panel's finding, in paragraph 8.222 of the Panel Report, that the European Communities has demonstrated a *prima facie* case that there was no "reasonably available alternative" to the prohibition inherent in the Decree. As a result, we also uphold the Panel's conclusion, in paragraph 8.223 of the Panel Report, that the Decree is "necessary to protect human … life or health" within the meaning of Article XX(b) of the GATT 1994.

[165] Adopted 7 November 1989, BISD 36S/345, para. 5.26; we expressly affirmed this standard in our Report in *Korea – Beef*, *supra*, footnote 49, para. 166.

[166] Appellate Body Report, *Korea – Beef*, *supra*, footnote 49, paras. 166 and 163.

[167] *Ibid.*, para. 162.

[168] Panel Report, para. 8.209.

[169] *Ibid.*, paras. 8.209 and 8.211.

[170] *Ibid.*, paras. 8.213 and 8.214.

C. *Article 11 of the DSU*

176. As part of its argument that the Panel erred in finding that the measure is justified under Article XX(b) of the GATT 1994, Canada also asserts that the Panel failed to make an objective assessment of the matter, as required by Article 11 of the DSU. According to Canada, the requirement imposed on panels by Article 11 to make an objective assessment of the matter implies "that scientific data must be assessed in accordance with the principle of the balance of probabilities."[171] In particular, Canada asserts that, where the evidence is divergent or contradictory, the "principle of the preponderance of evidence" implies that a panel must take a position as to the respective weight of the evidence.[172] Canada also contends that the Panel failed to assess the facts objectively because the Panel accepted "the opinions of experts on the controlled use of chrysotile, when those experts had no controlled-use expertise."[173]

177. These arguments by Canada on the "balance of probabilities" and the "preponderance of evidence" concern the credibility and weight that the Panel ascribed to different elements of evidence.[174] In essence, Canada argues that the Panel has not taken sufficient account of certain evidence and that the Panel has placed too much weight on certain other evidence. Thus, Canada is challenging the Panel's exercise of discretion in assessing and weighing the evidence. As we have already noted, "[w]e cannot second-guess the Panel in appreciating either the evidentiary value of … studies or the consequences, if any, of alleged defects in [the evidence]".[175] And, as we have already said, in this case, the Panel's appreciation of the evidence remained well within the bounds of its discretion as the trier of facts.

178. In addition, in the context of the *SPS Agreement*, we have said previously, in *European Communities – Hormones*, that "responsible and representative governments may act in good faith on the basis of what, at a given time, may be a *divergent* opinion coming from qualified and respected sources."[176] (emphasis added) In justifying a measure under Article XX(b) of the GATT 1994, a Member may also rely, in good faith, on scientific sources which, at that time, may represent a divergent, but qualified and respected, opinion. A Member is not obliged, in setting health policy, automatically to follow what, at a given time, may constitute a majority scientific opinion. Therefore, a panel need not, necessarily, reach a decision under Article XX(b) of the GATT 1994 on the basis of the "preponderant" weight of the evidence.

179. With regard to Canada's argument that certain of the experts lacked expertise in "controlled use", we note that, from the beginning of the process for the selection of experts, the Panel made clear that it wished to consult experts on the "effectiveness of the controlled use of chrysotile."[177] The selection of the experts was the subject of a rigorous procedure which involved the consultation of five institutions with experience in this field and also of the parties.[178] At no stage did Canada object to the selection of any of the experts, nor indicate that any of them was unqualified to deal with issues relating to "controlled use".[179] We also note that the experts were instructed by the Panel to answer

[171] Canada's appellant's submission, para. 204.

[172] *Ibid.*

[173] *Ibid.*, para. 209.

[174] *Ibid.*, para. 204.

[176] *Supra*, footnote 48, para. 194.

[177] Panel Report, para. 5.1.

[178] *Ibid.*, para. 5.20.

[179] *Ibid.*

only those questions that fell within their area of expertise.[180] As Canada indicates, several experts indicated that particular questions, or parts of questions, posed to them went beyond their area of expertise.[181]

180. In these circumstances, we have serious difficulty accepting that the Panel failed to make an objective assessment by relying on experts who had no expertise. The Panel was entitled to assume that the experts possessed the necessary expertise to answer the questions, or parts of questions, they chose to answer. In other words, it was not incumbent on the Panel expressly to confirm, with respect to every opinion expressed by each expert, that the expert possessed the necessary expertise to give that particular opinion. If Canada thought that one of the experts did not possess the expertise necessary to answer certain questions posed to him, Canada should have raised those concerns, either with the expert, at the meeting the Panel held with the parties and the experts on 17 January 2000, or with the Panel at some other time. We observe, finally, that, where an expert declined to answer a specific question, or part of a question, because of a professed lack of expertise, the Panel had no opinion from that expert on which to rely.

181. For these reasons, we decline Canada's appeal on Article 11 of the DSU.

VIII. Article XXIII:1(b) of the GATT 1994

182. Before the Panel, Canada claimed, under Article XXIII:1(b) of the GATT 1994, that the application of the measure at issue nullified or impaired benefits accruing to Canada. The European Communities raised preliminary objections, arguing on two grounds that the measure falls outside the scope of application of Article XXIII:1(b). First, the European Communities contended that Article XXIII:1(b) only applies to measures which *do not otherwise fall* under other provisions of the GATT 1994.[182] Second, the European Communities argued that, while it may be possible to have "legitimate expectations" in connection with a purely "commercial" measure, it is not possible to claim "legitimate expectations" with respect to a measure taken to protect human life or health, which can be justified under Article XX(b) of the GATT 1994. Such measures are, the European Communities asserted, excluded from the scope of Article XXIII:1(b).[183]

183. Before examining the substance of Canada's claim under Article XXIII:1(b) of the GATT 1994, the Panel first considered, and rejected, both of these preliminary objections raised by the European Communities, and found, as a consequence, that Canada could invoke Article XXIII:1(b) in respect of the measure.[184] The European Communities appeals the Panel's findings and conclusions relating to the two preliminary objections.

184. Before considering this aspect of the appeal, we note that the Panel went on to examine the substance of Canada's claim under Article XXIII:1(b) and concluded that Canada had not established "the existence of nullification or impairment of a benefit within the meaning of Article XXIII:1(b) of the GATT 1994 as a result of the application of the measure".[185] We note also that this ultimate conclusion by the Panel has not been appealed by either party. Accordingly, we address only the two

[184] *Ibid.*, paras. 8.265 and 8.274.

[185] *Ibid.*, para. 8.304.

narrow issues that have been appealed by the European Communities, and we will not address any other aspects of the Panel's findings under Article XXIII:1(b) of the GATT 1994.

185. This appeal is our first occasion to examine Article XXIII:1(b) of the GATT 1994. For this reason, before turning to the appeal by the European Communities, it seems to us useful to make certain preliminary observations about the relationship between Articles XXIII:1(a) and XXIII:1(b) of the GATT 1994. Article XXIII:1(a) sets forth a cause of action for a claim that a Member has failed to carry out one or more of its obligations under the GATT 1994. A claim under Article XXIII:1(a), therefore, lies when a Member is alleged to have acted inconsistently with a provision of the GATT 1994. Article XXIII:1(b) sets forth a separate cause of action for a claim that, through the application of a measure, a Member has "nullified or impaired" "benefits" accruing to another Member, "whether or not that measure conflicts with the provisions" of the GATT 1994. Thus, it is not necessary, under Article XXIII:1(b), to establish that the measure involved is inconsistent with, or violates, a provision of the GATT 1994. Cases under Article XXIII:1(b) are, for this reason, sometimes described as "non-violation" cases; we note, though, that the word "non-violation" does not appear in this provision. The purpose of this rather unusual remedy was described by the panel in *European Economic Community - Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins* ("*EEC – Oilseeds*") in the following terms:

> The idea underlying [the provisions of Article XXIII:1(b)] is that *the improved competitive opportunities that can legitimately be expected from a tariff concession can be frustrated not only by measures proscribed by the General Agreement but also by measures consistent with that Agreement*. In order *to encourage contracting parties to make tariff concessions* they must therefore be given a right of redress when a reciprocal concession is impaired by another contracting party as a result of the application of any measure, whether or not it conflicts with the General Agreement.[186] (emphasis added)

186. Like the panel in *Japan – Measures Affecting Consumer Photographic Film and Paper* ("*Japan – Film*"), we consider that the remedy in Article XXIII:1(b) "should be approached with caution and should remain an exceptional remedy".[187] That panel stated:

[186] Adopted 25 January 1990, BISD 37S/86, para. 144.

[187] Adopted 22 April 1998, WT/DS44/R, para. 10.37.

> Although the non-violation remedy is an important and accepted tool of WTO/GATT dispute settlement and has been "on the books" for almost 50 years, we note that there have only been eight cases in which panels or working parties have substantively considered Article XXIII:1(b) claims. This suggests that both the GATT contracting parties and WTO Members have approached this remedy with caution and, indeed, have treated it as an exceptional instrument of dispute settlement. We note in this regard that both the European Communities and the United States in the *EEC – Oilseeds* case, and the two parties in this case, have confirmed that *the non-violation nullification or impairment remedy should be approached with caution and treated as an exceptional concept.* The reason for this caution is straightforward. *Members negotiate the rules that they agree to follow and only exceptionally would expect to be challenged for actions not in contravention of those rules.*[188] (emphasis added)

187. Against this background, we turn now to the European Communities' argument that Article XXIII:1(b) does not apply to measures that fall within the scope of application of other provisions of the GATT 1994. The text of Article XXIII:1(b) stipulates that a claim under that provision arises when a "benefit" is being "nullified or impaired" through the "application … of any measure, *whether or not it conflicts with the provisions of this Agreement*". (emphasis added) The wording of the provision, therefore, clearly states that a claim may succeed, under Article XXIII:1(b), *even if the measure "conflicts" with some substantive provisions of the GATT 1994*. It follows that a measure may, *at one and the same time*, be inconsistent with, or in breach of, a provision of the GATT 1994 *and*, nonetheless, give rise to a cause of action under Article XXIII:1(b). Of course, if a measure "conflicts" with a provision of the GATT 1994, that measure must actually fall within the scope of application of that provision of the GATT 1994. We agree with the Panel that this reading of Article XXIII:1(b) is consistent with the panel reports in *Japan – Film* and *EEC – Oilseeds*, which both support the view that Article XXIII:1(b) applies to measures which simultaneously fall within

[188]*Supra,* footnote 187, para. 10.36. Claims under Article XXIII:1(b) have been considered in the following reports: Working Party Report, *Australia – Ammonium Sulphate*, *supra*, footnote 58; Panel Report, *Germany – Sardines*, *supra*, footnote 58; Panel Report, *Uruguayan Recourse to Article XXIII*, adopted 16 November 1962, BISD 11S/95; Panel Report, *Spain – Soyabean*, *supra*, footnote 58; Panel Report, *European Community – Tariff Treatment on Imports of Citrus Products from Certain Countries in the Mediterranean Region* ("*EC – Citrus Products*"), L/5776, 7 February 1985, unadopted; Panel Report, *European Economic Community – Production Aids Granted on Canned Peaches, Canned Pears, Canned Fruit Cocktail and Dried Grapes* ("*EEC – Canned Fruit*"), L/5778, 20 February 1985, unadopted; Panel Report, *Japan – Trade in Semi-Conductors*, adopted 4 May 1988, BISD 35S/116; Panel Report, *United States – Trade Measures Affecting Nicaragua*, L/6053, 13 October 1986, unadopted; Panel Report, *EEC – Oilseeds*, *supra*, footnote 186; Panel Report, *United States – Restrictions on the Importation of Sugar and Sugar-Containing Products Applied under the 1955 Waiver and under the Headnote to the Schedule of Tariff Concessions*, adopted 7 November 1990, BISD 37S/228; Panel Report, *Japan – Film*, *supra*, footnote 187; Panel Report, *Korea – Measures Affecting Government Procurement*, WT/DS163/R, adopted 19 June 2000. We note that claims under Article XXIII:1(b) of the GATT 1947 were also examined in the Panel Report, *European Economic Community – Follow-up on the Panel Report, Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins* ("*EEC – Oilseeds II*"), 31 March 1992, BISD 39S/91, unadopted.

Including *EEC – Oilseeds II*, and the present dispute, there have, therefore, been 14 cases in which a claim under Article XXIII:1(b) has been considered by working parties, panels, and, now, the Appellate Body. In six of these cases, the claim under Article XXIII:1(b) was successful and, on three of these occasions, the report was adopted. The successful claims were made in: *Australia – Ammonium Sulphate* (adopted 3 April 1950), *Germany – Sardines* (adopted 31 October 1952), *EC – Citrus Products* (unadopted), *EEC – Canned Fruit* (unadopted), *EEC – Oilseeds* (adopted 25 January 1990) and *EEC – Oilseeds II* (unadopted).

the scope of application of other provisions of the GATT 1994.[189] Accordingly, we decline the European Communities' first ground of appeal under Article XXIII:1(b) of the GATT 1994.

188. The European Communities also contends that the Panel erred in finding that Article XXIII:1(b) applies to measures which pursue health, rather than commercial, objectives and which can, therefore, be justified under Article XX(b) of the GATT 1994. Once again, we look to the text of Article XXIII:1(b), which provides that "the application by another Member of *any measure*" may give rise to a cause of action under that provision. The use of the word "any" suggests that measures of all types may give rise to such a cause of action. The text does not distinguish between, or exclude, certain types of measure. Clearly, therefore, the text of Article XXIII:1(b) contradicts the European Communities' argument that certain types of measure, namely, those with health objectives, are excluded from the scope of application of Article XXIII:1(b).

189. In any event, an attempt to draw the distinction suggested by the European Communities between so-called health and commercial measures would be very difficult in practice. By definition, measures which affect trade in goods, and which are subject to the disciplines of the GATT 1994, have a commercial impact. At the same time, the health objectives of many measures may be attainable only by means of commercial regulation. Thus, in practice, clear distinctions between health and commercial measures may be very difficult to establish. Nor do we see merit in the argument that, previously, only "commercial" measures have been the subject of Article XXIII:1(b) claims, as that does not establish that a claim *cannot* be made under Article XXIII:1(b) regarding a "non-commercial" measure.

190. An important aspect of the European Communities' argument is that a Member cannot have reasonable expectations of continued market access for products which are shown to pose a serious risk to human life or health. However, the paragraphs of the Panel Report appealed by the European Communities involve *exclusively* the Panel's findings on the threshold issues of the scope of application of Article XXIII:1(b). This particular argument of the European Communities, important as it is, simply does not relate to those threshold issues. Rather, the European Communities' argument relates to the substance of a claim that has been determined to fall within the scope of application of Article XXIII:1(b) and, in particular, concerns the issue whether a "benefit" has been "nullified or impaired" by a measure restricting market access for products posing a health risk. Here, we emphasize that the European Communities does *not* appeal the Panel's findings relating to the "nullification or impairment" of a "benefit" through the frustration of reasonable expectations by application of the measure at issue. We do not, therefore, find it necessary to examine the European Communities' argument relating to reasonable expectations.

191. For these reasons, we dismiss the European Communities' appeal under Article XXIII:1(b) of the GATT 1994 and uphold the Panel's finding that Article XXIII:1(b) applies to measures which fall within the scope of application of other provisions of the GATT 1994 and which pursue health objectives.

IX. Findings and Conclusions

192. For the reasons set out in this Report, the Appellate Body:

(a) reverses the Panel's finding, in paragraph 8.72(a) of the Panel Report, that the *TBT Agreement* "does not apply to the part of the Decree relating to the ban on imports of asbestos and asbestos-containing products because that part does not constitute a 'technical regulation' within the meaning of Annex 1.1 to the

[189]See Panel Report, para. 8.263, which refers to the Panel Report in *Japan – Film*, *supra*, footnote 187, para. 10.50, and footnote 1214; and *EEC – Oilseeds*, *supra*, footnote 186, para. 144.

TBT Agreement", and finds that the measure, viewed as an integrated whole, does constitute a "technical regulation" under the *TBT Agreement*;

(b) reverses the Panel's findings, in paragraphs 8.132 and 8.149 of the Panel Report, that "it is not appropriate" to take into consideration the health risks associated with chrysotile asbestos fibres in examining the "likeness", under Article III:4 of the GATT 1994, of those fibres and PCG fibres, and, also, in examining the "likeness", under that provision, of cement-based products containing chrysotile asbestos fibres or PCG fibres;

(c) reverses the Panel's finding, in paragraph 8.144 of the Panel Report, that chrysotile asbestos fibres and PCG fibres are "like products" under Article III:4 of the GATT 1994; and finds that Canada has not satisfied its burden of proving that these fibres are "like products" under that provision;

(d) reverses the Panel's finding, in paragraph 8.150 of the Panel Report, that cement-based products containing chrysotile asbestos fibres and cement-based products containing PCG fibres are "like products" under Article III:4 of the GATT 1994; and finds that Canada has not satisfied its burden of proving that these cement-based products are "like products" under Article III:4 of the GATT 1994;

(e) reverses, in consequence, the Panel's finding, in paragraph 8.158 of the Panel Report, that the measure is inconsistent with Article III:4 of the GATT 1994;

(f) upholds the Panel's finding, in paragraphs 8.194, 8.222 and 8.223 of the Panel Report, that the measure at issue is "necessary to protect human … life or health", within the meaning of Article XX(b) of the GATT 1994; and, finds that the Panel acted consistently with Article 11 of the DSU in reaching this conclusion;

(g) upholds the Panel's finding, in paragraphs 8.265 and 8.274 of the Panel Report, that the measure may give rise to a cause of action under Article XXIII:1(b) of the GATT 1994.

193. It follows from our findings that Canada has not succeeded in establishing that the measure at issue is inconsistent with the obligations of the European Communities under the covered agreements and, accordingly, we do not make any recommendations to the DSB under Article 19.1 of the DSU.

I. Introduction

1. Korea appeals certain issues of law and legal interpretations in the Panel Report, *Korea – Measures Affecting Imports of Fresh, Chilled and Frozen Beef* (the "Panel Report").[1] The Panel was established to consider a complaint by Australia and the United States with respect to Korean measures that affect the importation of certain beef products. The aspects of these measures relevant for this appeal relate to, first, domestic support provided to the beef industry and to the Korean agriculture sector more generally, and, second, the separate retail distribution channels that exist for certain imported and domestic beef products (the so-called "dual retail system") and related measures. The dual retail system is given legal effect by the *Management Guideline for Imported Beef* (the "*Management Guideline*").[2] The factual aspects of this dispute are described in detail in paragraphs 8 through 29 of the Panel Report.

2. The Panel considered claims by Australia that the requirements imposed on the retail sale of imported beef are contrary to Articles III and XI of the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994"); that the tendering process adopted by the Livestock Products Marketing Organization (the "LPMO") results in quantitative restrictions being applied to grass-fed beef, contrary to Articles II:1, III:4, XI:1 and XVII of the GATT 1994; that discharge procedures for LPMO beef are contrary to Articles III, XI and XVII of the GATT 1994 and Article 4.2 of the *Agreement on Agriculture*; that restrictions on sales of beef imported by the LPMO are contrary to Article III:4 of the GATT 1994; that Korea applies a mark-up on beef imported under the "Simultaneous Buy/Sell" ("SBS") system which is inconsistent with Korea's obligations under Articles II or III of the GATT 1994; that the SBS system applies limitations on the import and distribution of imported beef, and imposes labelling, reporting and record-keeping requirements, that

[1]WT/DS161/R, WT/DS169/R, 31 July 2000.

[2]The essential features of the Korean dual retail system for beef are found in the *Guidelines Concerning Registration and Operation of Specialized Imported Beef Stores,* (61550-81) 29 January 1990, modified on 15 March 1994; and the *Regulations Concerning Sales of Imported Beef,* (51550-100), modified on 27 March 1993, 7 April 1994, and 29 June 1998. On 1 October 1999, these two instruments were replaced by the *Management Guideline for Imported Beef*, (Ministry of Agriculture Notice 1999-67), which maintained, however, the basic principles of the dual retail system. The *Management Guideline* is an elaboration of Article 25 of the *Livestock Act (Revised)*, as amended by Act No. 5720 on 29 January 1999.

are contrary to Articles III and XI of the GATT 1994; and that, in 1997, Korea provided domestic support to its beef industry which resulted in Korea's Current Total Aggregate Measurement of Support ("AMS") for 1997 being in excess of its reduction commitments for that year, contrary to Articles 3, 6 and 7 of the *Agreement on Agriculture*.[3]

3. The Panel also considered claims by the United States that Korea's requirement that imported beef be sold only in specialized imported beef stores, and its laws and regulations restricting the resale and distribution of imported beef by SBS super-groups, retailers, customers, and end-users are inconsistent with its obligations under Article III:4 of the GATT 1994; that Korea's discretionary import regime, as well as the LPMO's establishment of minimum import prices and delay of both invitations to tender as well as quota allocations, are inconsistent with its obligations under Article XI:1 of the GATT 1994, Article 4.2 of the *Agreement on Agriculture*, and Articles 1 and 3 of the *Agreement on Import Licensing Procedures*; that Korea's imposition of other duties or charges in the form of a mark-up not provided for in Korea's Schedule LX is inconsistent with its obligations under Article II:1 of the GATT 1994; and that Korea has failed to fulfill its reduction commitment for domestic support for 1997 and 1998, and has, thus, acted inconsistently with its obligations under Articles 3, 6, and 7 of the *Agreement on Agriculture*.[4]

4. The Panel Report was circulated to the Members of the World Trade Organization (the "WTO") on 31 July 2000.

5. The Panel concluded that certain of the measures at issue are included in "the remaining restrictions" within the meaning of Note 6(e) of Korea's Schedule and thus benefit from a transitional period until 1 January 2001, by which date they shall be eliminated or otherwise brought into conformity with the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*"); that the dual retail system for beef (including the obligation for department stores and supermarkets authorized to sell imported beef to hold a separate display, and the obligation for foreign beef shops to bear a sign with the words "Specialized Imported Beef Store") is inconsistent with the provisions of Article III:4 of the GATT 1994 in that it treats imported beef less favourably than domestic beef, and cannot be justified pursuant to Article XX(d) of the GATT 1994; that the requirement that the supply of beef from the LPMO's wholesale market be limited to specialized imported beef stores is inconsistent with Article III:4 of the GATT 1994 and cannot be justified pursuant to Article XX(d) of the GATT 1994; that the imposition of more stringent record-keeping requirements on those who purchase foreign beef imported by the LPMO than on those who purchase domestic beef is inconsistent with Article III:4 of the GATT 1994; that the prohibition against cross-trading between end-users of the SBS system is inconsistent with Article III:4 of the GATT 1994; that any additional labelling requirements imposed on foreign beef imported through the SBS system that are not also imposed on domestic beef, such as the requirement that the end-consumer, the contract number and super-group importer be identified and indicated on the imported beef, are inconsistent with Article III:4 of the GATT 1994; that the LPMO's lack of, and delays in, calling for tenders, and its discharge practices between November 1997 and the end of May 1998, constitute import restrictions on foreign beef, inconsistent with Article XI of the GATT 1994, and the same practices are also inconsistent with Article 4.2 of the *Agreement on Agriculture* and its footnote; that even if the LPMO had not had monopoly rights over the import and distribution of its share of Korea's beef import, the LPMO's lack of, and delays in, calling for tenders during the same period constituted an import restriction inconsistent with Article XI of the GATT 1994 through the application of the Ad Note to Articles XI, XII, XIII, XIV and XVIII of the GATT 1994, and that the LPMO's discharge practices during the same period were inconsistent with Article XVII:1(a) of the GATT 1994; that the LPMO's calls for tenders that are made subject to grass-fed or grain-fed distinctions impose import

[3]Panel Report, para. 49.

[4]*Ibid.*, para. 51.

restrictions inconsistent with Article XI of the GATT 1994, and treat imports of grass-fed beef less favourably than is provided for in Korea's Schedule, contrary to Article II:1(a) of the GATT 1994; that Korea's domestic support for beef for 1997 and 1998 was not correctly calculated and exceeded the *de minimis* level, contrary to Article 6 of the *Agreement on Agriculture*, and was not included in Korea's Current Total AMS, contrary to Article 7.2(a) of the *Agreement on Agriculture*; that Korea's total domestic support (Current Total AMS) for 1997 and 1998 exceeded Korea's commitment levels, as specified in Part IV, Section I of its Schedule, contrary to Article 3.2 of the *Agreement on Agriculture*.[5]

6. The Panel recommended that the Dispute Settlement Body ("DSB") request Korea to bring its measures into conformity with its obligations under the *WTO Agreement*.[6]

7. On 11 September 2000, Korea notified the DSB of its intention to appeal certain issues of law covered in the Panel Report and certain legal interpretations developed by the Panel, pursuant to paragraph 4 of Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU"), and filed a Notice of Appeal pursuant to Rule 20 of the *Working Procedures for Appellate Review* (the "*Working Procedures*"). On 21 September 2000, Korea filed its appellant's submission.[7] On 6 October 2000, Australia and the United States[8] each filed an appellee's submission. On the same day, Canada and New Zealand each filed a third participant's submission.[9]

8. The oral hearing in the appeal was held on 23 and 24 October 2000. The participants and third participants presented oral arguments and responded to questions put to them by the Members of the Division hearing the appeal.

II. Arguments of the Participants and the Third Participants

A. Korea – Appellant

1. Terms of Reference

9. Korea claims that the Panel erred by making two findings that were outside its terms of reference. First, the Panel erred by ruling on Part IV, Section I of Korea's Schedule LX, in particular by considering which set of numbers in Schedule LX constitutes Korea's commitment levels. Neither the United States nor Australia challenged Korea's Schedule LX in their requests for the establishment of a panel. As Schedule LX is not mentioned in these panel requests, the complaining parties have not met the "minimum prerequisite" established by the Appellate Body for panel requests under Article 6.2 of the DSU, that treaty provisions claimed to have been violated must be identified, and, therefore, Korea should be considered *per se* to have suffered prejudice.

10. Second, neither the United States nor Australia, in their panel requests, identified Annex 3 of the *Agreement on Agriculture* as a treaty provision claimed to have been violated in the context of Korea's calculation methodology for domestic support to the cattle industry. Consequently, the Panel acted outside its terms of reference when it ruled that Annex 3 provided the basis for calculating Korea's current domestic support for beef. Further, the complaining parties have not met the

[5]Panel Report, para. 845.

[6]Panel Report, para. 847.

[7]Pursuant to Rule 21(1) of the *Working Procedures*.

[8]Pursuant to Rule 22 of the *Working Procedures*.

[9]Pursuant to Rule 24 of the *Working Procedures*.

"minimum prerequisite" established by the Appellate Body for panel requests under Article 6.2 of the DSU.

2. Domestic Support Under the *Agreement on Agriculture*

11. Korea believes the Panel erred in finding that, by virtue of Articles 1(a)(ii) and 1(h)(ii) of the *Agreement on Agriculture*, Korea is bound by the provisions of Annex 3 of that Agreement in its calculation of Current AMS for beef, since it did not have any "constituent data and methodology" for beef in its Schedule. The Panel's interpretation of Articles 1(a)(ii) and 1(h)(ii) leads to an unfair outcome and ignores the object and purpose of the *Agreement on Agriculture*. WTO Members' Schedules on the reduction of subsidies for agricultural products can be understood as multi-year equations. One side of the equation includes the commitment level for a given year, while the other side of the equation includes the actual AMS provided for the same year. Thus, for the equation to be meaningful, both sides of the equation should be based on the same set of data and methodology. Using one methodology for commitment levels and another methodology for actual AMS undermines comparability between the two, and leads to unfair results. All the commitment levels set out in Korea's Schedule and all the actual AMS provided by Korea are calculated on the basis of a consistent methodology, which relies on the base years of 1989-1991 (with an exception for rice) and an "actual purchase" definition of eligible production. However, according to the Panel's ruling, Korea should calculate its Current AMS for beef according to different base years and a different definition of eligible production than was used for calculating commitment levels. Korea argues that this leads to unfair results.

12. Furthermore, Korea contends the Panel's interpretation would frustrate the object and purpose of the *Agreement on Agriculture*, which is, in part, to provide for substantial progressive reduction in agricultural support and protection over an agreed period of time. The Panel's interpretation would make it impossible correctly to determine whether a Member has abided by its reduction commitments or not.

13. Moreover, the Panel's interpretation of Articles 1(a)(ii) and 1(h)(ii) of the *Agreement on Agriculture* would render inutile important parts of these provisions. If the calculation methods of Annex 3 were mandatory, as the Panel suggests, the reference in Articles 1(a)(ii) and 1(h)(ii) to the constituent data and methodology in the tables of supporting material would be reduced to redundancy and inutility. The Panel found that support to Korea's cattle industry should be calculated solely on the basis of Annex 3, because support to the cattle industry was not included in Korea's Schedule. However, Articles 1(a)(ii) and 1(h)(ii) do not make a distinction between products which are already contained in the Schedule of a Member and those which are not.

14. In addition, in Korea's view, the Panel erred in finding that Korea's annual AMS commitment levels in its Schedule LX were not the figures in brackets, but rather the figures not in brackets. The Panel was fundamentally in error when it found that "Korea did not identify" which of the two sets of figures for annual commitment levels (figures in brackets or figures not in brackets) constitutes Korea's obligation. The Panel failed to apply the general rule of interpretation expressed in Article 31 of the *Vienna Convention on the Law of Treaties*[10] (the "*Vienna Convention*") by not taking into account the context of the terms of Korea's Schedule LX, in particular Note 1 to Korea's Schedule LX, which refers to Note 1 of Supporting Table 6. In addition, the Panel's finding on this point would reduce the figures in brackets, Note 1 to Schedule LX, and Note 1 in Supporting Table 6 to inutility, again contrary to the customary rules of treaty interpretation and previous Appellate Body rulings.

15. Korea also submits that Korea's commitment levels were "public knowledge". Korea's Schedule, including Part IV, Section I, was reviewed by all the negotiating parties during the Uruguay

[10]Done at Vienna, 23 May 1969, 1155 U.N.T.S. 331; 8 International Legal Materials 679.

Round. Also, the amount of Korea's subsidy to agricultural products was notified to the Committee on Agriculture every year since 1996. In each notification, Korea used the figures within brackets as Korea's commitment level for the given year. Korea considers that its consistent and amply documented position on this issue has been a matter of public record since 1996 and the very first meeting of the Committee on Agriculture to review Members' notifications under the *Agreement on Agriculture*. Thus, the "subsequent practice" of the parties following the Uruguay Round sustains Korea's position on this point of interpretation. Korea also believes that its position is supported by the manner in which the United States and Australia treated this issue in their first submissions to the Panel.

3. Dual Retail System

(a) Article III:4 of the GATT 1994

16. To Korea, the Panel fundamentally misinterpreted and misapplied Article III:4 of the GATT 1994 when it concluded that the dual retail system maintained by Korea is inconsistent with that provision. Article III:4 requires that WTO Members provide equal conditions of competition to both domestic and foreign like products. Article III:4 is an "obligation of result": the result that must be achieved is "no less favourable treatment for foreign goods". The particular method of achieving this result is irrelevant. Article III:4 neither imposes nor prohibits any particular means that Members employ to provide equal conditions of competition. According to Korea, its dual retail system does provide "no less favourable treatment to foreign goods", and, therefore, achieves the result required by Article III:4. The Panel erroneously concluded that the dual retail system "constitutes in itself differential treatment."

17. Korea submits that a proper analysis of Korea's obligation under Article III:4 requires review of both *de jure* and *de facto* discrimination. The dual retail system does not amount to either *de jure* or *de facto* discrimination. With regard to *de jure* discrimination, Korea's dual retail system assures perfect regulatory symmetry between imports and domestic products. Imported beef is sold only in stores that choose to sell imported beef, and domestic beef is sold only in stores choosing to sell domestic beef. In addition, there is total freedom on the part of retailers to switch from one category of shops to the other. Thus, the Panel failed to demonstrate that there is any discrimination "demonstrated on the basis of the words of the relevant legislation, regulation or other legal instrument," the standard for a finding of *de jure* discrimination.

18. To demonstrate the presence or absence of *de facto* discrimination, the Panel should have undertaken an analysis of the market as part of an examination of the "total configuration of the facts". Instead, the Panel resorted to "speculation". An examination of the facts of the Korean beef market demonstrates that imported and domestic goods experience equal competitive conditions. The absence of such a factual analysis means that the Panel's finding on the dual retail system under Article III:4 is in error.

19. Korea also argues that the Panel erred in finding the display sign requirement to be inconsistent with Article III:4. The first ground offered by the Panel is that the display sign requirement would necessarily be inconsistent with Article III:4 since the dual retail system had already been found to be inconsistent. However, the Panel itself stated that the display sign requirement is a related measure "which the Panel addresses separately in Section 3 thereinafter." In other words, the Panel did not include the display sign requirement in its review of the dual retail system.

20. The second ground cited by the Panel is that the display sign requirement goes beyond the indication of origin of goods. Quoting from a 1956 Working Party Report, the Panel argues that such requirements are inconsistent with Article III:4 of the GATT. To Korea, the legal status of this report

is unclear. The language of the report suggests that it was not intended to be binding or to provide an authoritative interpretation of the GATT.

(b) Article XX(d) of the GATT 1994

21. Should the Appellate Body disagree with Korea's claim that the dual retail system is consistent with Article III:4, then Korea submits that the Panel erred in ruling that the dual retail system was not justified under Article XX(d) of the GATT 1994.

22. The Panel found that Korea did not apply a dual retail system for other products in respect of which fraudulent sales have occurred. According to the Panel, such failure was evidence that the dual retail system was not "necessary to secure compliance with laws or regulations which are not inconsistent with the provisions of this Agreement" under Article XX(d). Korea submits that to decide whether a particular measure is necessary under Article XX(d), panels must simply examine whether another means exists which is less restrictive than the one used, and which can reach the objective sought. Consistency among regulations applicable to different products is irrelevant for establishing whether the means chosen by a WTO Member is necessary to achieve the objective of the regulation.

23. Furthermore, the Panel, in analyzing alternative, less restrictive means, did not take into account the level of enforcement sought. Korea's goal is not simply the "reduction or limitation" of deceptive practices, but their "elimination". The Panel considered four less trade-restrictive alternatives, which are investigations, fines, record-keeping and policing. In view of the fact that all four alternatives already comprise a package of policy tools used by Korea, along with the dual retail system, the Panel should have examined the facts to see whether, if the dual retail system were withdrawn, Korea's regulatory goal of the *elimination* of deceptive practices would be satisfied. Instead, the Panel narrowly focused its review on whether the less restrictive option is reasonably available. The Panel failed to link the means of implementation used to the objective sought.

24. Korea's dual retail system satisfies the requirements of the introductory clause of Article XX of the GATT 1994 as well. As the Appellate Body has held, the introductory clause of Article XX is concerned with the "even-handedness" underlying the application of national legislation. In other words, national legislation must be applied "even-handedly" between and among trading partners. Korea's dual retail system does not differentiate between Korea's trading partners. In fact, the dual retail system imposes, in practice, a much heavier burden on domestic beef producers.

25. Furthermore, in Korea's view, the display sign requirement is justified under Article XX(d) of the GATT 1994 as it is "necessary to secure compliance with laws or regulations which are not inconsistent with the provisions of this Agreement". To require shop-owners to display a sign that their store engages in selling imported beef imposes a "proportional burden" in view of the objective sought. Korea considered an alternative measure, but it would not have achieved Korea's objective.

26. Finally, Korea argues that the Panel failed to examine whether the display sign requirement was justified under Article XX(d) of the GATT 1994. The Panel did not explain its failure to examine the display sign requirement under Article XX(d), despite the fact that Korea had made clear that its Article XX defense extended to the display sign requirement as well. Korea submits that, were the Appellate Body to complete the analysis left undone by the Panel, the Appellate Body will find that the display sign requirement is fully justified under Article XX.

B. *Australia – Appellee*

1. Terms of Reference

27. Australia considers that Korea's claim that the Panel ruled outside its terms of reference in making findings as to the commitment levels and the AMS calculation methodology used by Korea to calculate the Current AMS, is unfounded. In Australia's view, the Panel correctly ruled that Australia's panel request meets the requirements of Article 6.2 of the DSU because Australia identified the specific measures at issue and provided a brief summary of the legal basis of the complaint sufficient to present the problem clearly.

28. In respect of the commitment levels, Australia argues that as Articles 3, 6 and 7 of the *Agreement on Agriculture* specifically refer to a Member's Schedule, consideration of Korea's commitment levels contained in Part IV, Section I of Korea's Schedule was within the Panel's terms of reference. A determination as to which of Korea's two sets of commitment levels constituted the figures against which its Current Total AMS should be compared was necessary to the Panel's legal examination of claims under Articles 3, 6 and 7 of the *Agreement on Agriculture*.

29. With regard to the AMS calculation methodology, Australia submits that the Panel took into account the linkages between the obligations contained in Articles 3, 6 and 7 of the *Agreement on Agriculture* and the relevant definitions contained in Article 1 of that Agreement, which include specific reference to methodologies contained in Annex 3. The Panel correctly concluded that it could not assess whether Korea had met its obligations under Articles 3, 6 and 7 without examining the calculation prescriptions for AMS contained in Annex 3.

30. Furthermore, Australia contends that Korea has failed to show any prejudice arising from a deficiency in Australia's request for a panel. Korea appears to have been informed sufficiently well of the claims being made to prepare a defence. Korea seems to have understood the nature of the legal claims sufficiently well for the purposes of its first submission, in which it argued at length that its calculation methodology was in fact consistent with the *Agreement on Agriculture*. It was not until the final meeting with the Panel that Korea claimed that its ability to defend itself had been prejudiced. Korea has also not shown that third parties were prejudiced.

2. Domestic Support Under the *Agreement on Agriculture*

31. Australia submits that Korea's argument, that the Panel's interpretation of Articles 1(a)(ii) and 1(h)(ii) of the *Agreement on Agriculture* is unfair, illogical and results in inappropriate comparisons between a WTO Member's reduction commitments and support provided, is without substance. Korea's arguments evidence a misunderstanding of the concepts of Current AMS, Current Total AMS and Annual and Final Bound Reduction Commitments, as defined in the *Agreement on Agriculture*. Australia states that the two figures involved in the comparison will not necessarily be based on the same product mix, as the categories of products that are subsidized may change from year to year.

32. Australia considers that Korea's interpretation that Current AMS should be calculated based on the constituent data and methodology in Korea's Schedule would render the reference to Annex 3 in Articles 1(a)(ii) and 1(h)(ii) inutile. The Panel correctly found that for products where no support was included in the base period, there is no relevant "constituent data or methodology" in the tables of supporting material. Calculations based on Annex 3 are, therefore, mandatory.

33. With regard to the two sets of commitment levels in Korea's Schedule, Australia argues that a treaty interpreter is not required to give effect to treaty terms which are invalid. The Panel noted that Korea is the only WTO Member whose Part IV domestic support Schedule contains two sets of

annual commitment levels, and that no provision of the *Agreement on Agriculture* authorizes such a departure from the norm or practice. For this reason, the Panel was under no obligation to give effect to the commitment level figures in brackets.

34. Australia also contends that the question of whether Korea's commitment levels were "public knowledge" is beyond the Appellate Body's mandate under Article 17.6 of the DSU to address "issues of law covered in the panel report and legal interpretations developed by the panel", as Korea did not present any such evidence to the Panel. In any case, public knowledge of a WTO-inconsistent Schedule commitment does not validate that commitment. Finally, Korea did not meet its burden of demonstrating that "subsequent practice" of WTO Members establishes the agreement of Members regarding the interpretation of Korea's Schedule.

3. Dual Retail System

(a) Article III:4 of the GATT 1994

35. In Australia's view, Korea's claim that proper analysis of its obligation under Article III:4 requires a two-step review of whether *de jure* or *de facto* discrimination is at issue is legally flawed and should be rejected. According to Australia, the legal standard imposed by the phrase "less favourable treatment" has long been settled: a panel must consider whether imported products are being accorded effective equality of competitive opportunities.

36. Australia contends that the Panel was correct when it found that the design and architecture of the dual retail system and related measures clearly provide less favourable treatment for imported beef. Australia states that stores selling imported beef face restrictions on volumes, price and types of beef available for sale, additional record-keeping, recording and signage requirements, and the commercial disadvantage of having to dismantle their current business in domestic beef if they wish to test the market for imported beef. Fundamentally, imported beef is prevented from being sold in the same stores, under the same conditions, as domestic beef. Thus, the claim by Korea that "regulatory symmetry" exists cannot be sustained.

37. In Australia's view, the Panel correctly concluded that the dual retail system constitutes, in and of itself, differential treatment. This differential treatment unavoidably results in imported beef being less favourably treated on the Korean market than like domestic products, and the segregation of imported beef provides the domestic product with a competitive advantage over the imported product.

(b) Article XX(d) of the GATT 1994

38. Australia claims the Panel was correct in finding that, even if the dual retail system had been instituted to prevent the fraudulent misrepresentation of imported beef as domestic beef, the measure was not "necessary" to accomplish that purpose, within the meaning of Article XX(d). The Panel explored the alternatives available to Korea, including alternatives currently applied to situations of alleged country of origin fraud involving other foodstuffs where price differentials prevail. This approach reflects the ordinary meaning of the term "necessary" that no reasonable alternative exists, as well as past GATT and WTO practice.

39. Australia submits that the burden is on Korea to demonstrate a *prima facie* case that the dual retail system falls within one of the exceptions of Article XX, and that it meets the requirements of the introductory clause. Korea has to demonstrate that there was no other alternative measure it could reasonably employ, which was WTO-consistent or less WTO-inconsistent, to secure compliance with the *Unfair Competition Act*. In the particular circumstances of the Korean market for imported beef, where it is otherwise impossible to distinguish between domestic and imported beef, where there is no

dual wholesale system and where no record-keeping by stores selling domestic beef is required, it is impossible to conclude that the dual retail system has any serious impact on the prevention or elimination of fraud.

40. Even if the Panel erred in law in finding that the dual retail system did not qualify for the exception provided by Article XX(d), the Appellate Body has sufficient facts and legal argument to complete the Panel's inquiry. In doing so, the Appellate Body should find that the dual retail system does not meet the requirements of the introductory clause of Article XX. Australia considers relevant the fact that Korea only applies the dual retail system to imported beef, despite the fact that the problem of fraud also exists in relation to different types of beef and to a range of other agricultural products where a price differential exists between imported and domestic products. Furthermore, the dual retail system is not an isolated measure in an otherwise non-discriminatory environment for imported beef. Rather, the dual retail system is part of the regulatory framework for imported beef under which the importation, distribution and sale of imported beef is tightly regulated and heavily restricted by the Korean government, and substantial subsidies are provided to domestic producers, consistent with the government's stabilisation policies for domestic beef. Consideration of the dual retail system in this context reveals its protective purpose.

41. According to Australia, Korea is incorrect when it asserts that the Panel did not consider the display sign requirement in its review of the dual retail system. The Panel agreed with Korea that the sign requirement was "essentially ancillary to the dual retail system", and considered the two requirements together under Article XX(d). Thus, the Panel subsumed its findings related to the display sign requirement within its findings related to the dual retail system as a whole.

C. *United States – Appellee*

1. Terms of Reference

42. According to the United States, its panel request clearly states its claim that Korea has increased the level of domestic support for its cattle industry to the point that the total domestic support provided by Korea exceeds its AMS commitment levels. Based on Articles 3, 6 and 7 of the *Agreement on Agriculture*, Korea's current total domestic support is greater than the AMS commitment levels set out in the *Agreement on Agriculture*. All of the pertinent provisions of the *Agreement on Agriculture*, including Annex 3, had to be examined. The determination of the level of Current Total AMS, requires the application of the provisions of Annex 3, as Annex 3 is "intrinsic" to the calculation of the Current Total AMS.

43. Similarly, the commitment levels in Korea's Schedule also had to be examined. As the Current Total AMS was to be compared to Korea's commitment levels, it was first necessary to determine which set of figures in Korea's Schedule constituted Korea's commitment levels.

44. The United States notes that the Appellate Body has previously stated that a panel is obliged to consider provisions that are "directly linked" to the provisions cited in the panel request. In this case, Annex 3 and the commitment levels in Korea's Schedule are "directly linked" to the claim set out in the panel request, and therefore must be considered.

45. Furthermore, Korea suffered no prejudice on this issue as a result of the complaining parties' panel requests. In fact, Korea, in its first submission, submitted detailed explanations on how it had calculated its AMS for beef. Thus, Korea clearly understood the matter at issue.

2. Domestic Support Under the *Agreement on Agriculture*

46. According to the United States, the Panel was correct in its finding that Korea's Current AMS for beef must be calculated in accordance with the requirements of Annex 3 of the *Agreement on Agriculture*. The specific language of Article 1(a)(ii) makes clear that the Current AMS calculation must be made in accordance with the provisions of Annex 3. While additional guidance is provided in this provision, to the effect that the "constituent data and methodology" in Korea's Schedule must be taken into account, this cannot be construed to nullify the express requirement that the Current AMS calculation be performed in accordance with Annex 3.

47. If Korea's Current AMS for beef is calculated correctly, it is more than *de minimis* under Article 6.4 of the *Agreement on Agriculture*, and must therefore be included in the calculations for Current Total AMS. When Current AMS for beef is included in Current Total AMS, Current Total AMS exceeds Korea's AMS commitment levels set out in its Schedule.

48. The United States contends that Korea, by including an alternative set of commitment levels in its Schedule, is trying to modify unilaterally the terms of the *Agreement on Agriculture* to substitute a domestic support commitment that is not in accordance with Annex 3. In effect, by claiming that the figures in brackets represent its commitment levels, Korea is attempting to inflate the amount of its annual AMS commitment level. The methodology used by Korea is not consistent with the obligations under the *Agreement on Agriculture*. The United States notes that a WTO Member may not, in its Schedule, act inconsistently with its WTO obligations. WTO Members may yield rights and grant benefits in their Schedules, but may not diminish their obligations.

49. Korea has argued that WTO Members knew of the contents of Korea's Schedule, and, therefore, they implicitly accepted the figures in the Schedule. The United States contends that this argument is untenable, for two reasons. First, in making this argument, Korea raises new factual allegations, which may not be addressed by the Appellate Body on appeal. Second, WTO Members did not waive their rights to dispute settlement with regard to other Members' Schedules as a result of the signing of the *WTO Agreement*.

3. Dual Retail System

(a) Article III:4 of the GATT 1994

50. According to the United States, the Panel correctly found that the dual retail system in itself constituted "less favourable treatment" inconsistent with Article III:4. Article III:4 is concerned with preserving the "effective equality of opportunities" for imported products. With regard to the dual retail system, the notion of effective equality of opportunities means that there must be a possibility for imported beef to be physically present with "like" domestic beef at the point of sale to the consumer. By excluding imported beef from the existing retail system for domestic beef, the dual retail system limits the potential market opportunities for imported beef. Since imported beef does not enjoy the same competitive opportunity to be sold in the same manner and in the same stores in which Korean beef is sold, it is treated less favourably than domestic beef.

51. The United States argues that Korea's defense of the dual retail system as providing "regulatory symmetry" between imported and domestic beef must fail. The Panel found that, in fact, the dual retail system, in conjunction with certain restrictions on imports, more onerous record-keeping requirements for imported beef sellers, and the display sign requirement imposed on imported beef sellers, resulted in less favourable treatment for imported beef.

52. Furthermore, the United States contends, the Panel's additional conclusion that the dual retail system involves *de facto* discrimination against imported beef was also correct. The Panel noted the

following factors as relevant: the separate store requirement limits the ability of consumers to make side-by-side comparisons of imported and domestic beef and to make purchasing decisions based on differences in quality, characteristics and prices of the respective products; imported beef is segregated due to the obstacles confronted by a store owner who wishes to sell imported beef; and there are fewer imported than domestic beef stores. The Panel found that the segregation of domestic and imported beef provides domestic beef with a competitive advantage over the imported product. In the view of the United States, this finding of the Panel should be upheld.

53. Article 9 of the *Management Guideline* requires that imported beef stores display a sign indicating that the beef sold in the store is imported. According to the United States, given the undisputed difference in treatment resulting from Article 9 of the Guidelines, Korea bears the burden of demonstrating that the dual retail system does not result in less favourable treatment, and Korea has failed to meet its burden. The Panel's finding that the display sign requirement was "ancillary" to the dual retail system was accurate. The 1956 Working Party Report was simply invoked to "reinforce" the Panel's view, not as a basis for its finding.

(b) Article XX(d) of the GATT 1994

54. The United States argues that the Panel correctly concluded that Korea failed to sustain its burden of justifying its dual retail system under Article XX(d) of the GATT 1994. The Panel determined that in order to benefit from the Article XX(d) exception, Korea had to demonstrate that its dual retail regime: (1) was in place in order to "secure compliance" with laws or regulations that are themselves not inconsistent with the GATT 1994; (2) was "necessary" to secure compliance with those laws or regulations; and (3) was applied in conformity with the requirements of the introductory clause of Article XX. The Panel found that the dual retail system was in place in order to "secure compliance" with laws or regulations that are themselves not inconsistent with the GATT 1994, in particular, the *Unfair Competition Act*. However, the Panel found that Korea did not demonstrate that the dual retail system is "necessary" to secure compliance with Korea's *Unfair Competition Act*.

55. In particular, Korea failed to demonstrate that the WTO-consistent alternatives shown by the complaining parties to be available were inadequate to secure compliance with the *Unfair Competition Act* with regard to imported beef. The Panel found that Korea employed traditional and WTO-consistent means, such as inspections, investigations and prosecutions, to enforce the *Unfair Competition Act* with respect to other imported food products. The Panel regarded this as evidence that Korea could eliminate any fraud involving beef with the same measures.

56. The United States contends that, contrary to Korea's claims, the Panel did not establish a "consistency" standard requiring that uniform measures be used to secure compliance. Rather, the Panel properly examined the enforcement practices used generally by Korea to obtain compliance with the *Unfair Competition Act* to determine whether means other than the dual retail system were reasonably available. Korea's practice with regard to other products was simply one factor to be taken into account as part of this analysis.

57. In addition, the United States argues that if the Appellate Body finds Korea's dual retail system to be "necessary" in terms of Article XX(d), Korea still cannot benefit from the Article XX exception, as Korea has failed to demonstrate that the dual retail system was designed to "secure compliance" with the *Unfair Competition Act*. The dual retail system does not prevent actions that would be illegal under the provisions of the *Unfair Competition Act* relating to fair trade practices. At most, the dual retail system serves the same objectives as the *Unfair Competition Act*.

58. The United States also submits that the dual retail system does not satisfy the requirements of the introductory clause of Article XX. For reasons of judicial economy, the Panel did not consider

this issue. However, if the Appellate Body were to reverse the Panel's finding regarding whether the dual retail system is "necessary" to secure compliance with the *Unfair Competition Act*, the Appellate Body should then complete the legal analysis and find that the dual retail system does not satisfy the requirements of the introductory clause, as that system constitutes "unjustifiable discrimination" within the meaning of the introductory clause.

59. Korea criticizes the Panel for not separately addressing Korea's assertion that the display sign requirement is entitled to an exception under Article XX(d). However, the Panel concluded that the display sign requirement is ancillary to the separate store requirement, and therefore is subject to the same analysis and legal conclusions. Thus, in the view of the United States, the Panel's examination of the dual retail system under Article XX(d) is pertinent to both the separate store requirement and to the display sign requirement.

60. Finally, the United States argues, it was for Korea to demonstrate that the display sign requirement was justified under Article XX(d). However, Korea offered no evidence or reasoning to support a finding that the display sign requirement is independently necessary to secure compliance with the *Unfair Competition Act*.

D. *Arguments of the Third Participants*

1. Canada

(a) Dual Retail System

(i) Article III:4 of the GATT 1994

61. Canada agrees with the Panel's finding that the dual retail system constitutes in itself differential treatment which leads to "less favourable treatment" for imported products under the terms of Article III:4 of the GATT 1994. The dual retail system reduces "direct competition" between imported and domestic beef. In effect, only domestic beef can compete directly against other domestic beef. In these circumstances, imported beef does not benefit from "equal conditions of competition" as compared to domestic beef.

62. Canada supports the Panel's finding that the display sign requirement is "ancillary" to the dual retail system, and thus is also inconsistent with Article III:4 of the GATT 1994. The measure would be inconsistent even if it existed independently of the dual retail system, as it treats imported beef differently than domestic beef, in contravention of Article III:4.

(ii) Article XX(d) of the GATT 1994

63. Canada also agrees with the Panel's finding with regard to Article XX(d).

2. New Zealand

(a) Terms of Reference

64. In New Zealand's view, it is within the Panel's terms of reference to examine the calculation methodology of AMS in order to determine whether Korea's Current Total AMS exceeds its commitment levels, in violation of Articles 3, 6 and 7 of the *Agreement on Agriculture*. Although Annex 3 of the *Agreement on Agriculture* is not specifically referred to in the complaining parties' panel requests in this dispute, Article 6 of the *Agreement on Agriculture*, which is referred to in the panel requests, defines AMS by reference to Article 1. Article 1, in turn, refers to the calculation of

AMS in terms of Annex 3. Thus, the provisions of Annex 3 are necessary to determine whether Korea has met its domestic support commitments under Articles 3, 6 and 7.

65. Furthermore, the complaining parties have not made a separate claim regarding Annex 3. Rather, the claim they have made is under Articles 3, 6 and 7 of the *Agreement on Agriculture*, and the references to Annex 3 are simply arguments in support of this claim. Since the claim under Articles 3, 6 and 7 of the *Agreement on Agriculture* is within the Panel's terms of reference, arguments in support of that claim are within the terms of reference as well.

66. New Zealand also argues that Korea has failed to demonstrate that it has been prejudiced by the omission of a reference to Annex 3 in the panel request. The calculation methods set out in Annex 3 are linked to Articles 3, 6 and 7 of the *Agreement on Agriculture*. New Zealand, as a third party to the dispute, was able to determine the measure and claims at issue and respond accordingly based on the reference in the panel request to "domestic support". Korea has not demonstrated that it could not do the same.

67. Finally, New Zealand contends that Korea failed to bring its procedural objections before the Panel in a timely manner.

(b) Domestic Support Under the *Agreement on Agriculture*

68. New Zealand notes that, according to Article 1(a)(ii) of the *Agreement on Agriculture*, the AMS is to be calculated "in accordance with" Annex 3, but "taking into account" the constituent data and methodology in the supporting tables in a Member's Schedule. Thus, a Member is to calculate the AMS according to Annex 3, but may also use the relevant and applicable constituent data and methodology set out in the supporting tables of its Schedule. However, resort to such data and methodology does not absolve a Member of the obligation of correctly calculating the AMS in a manner consistent with Annex 3.

69. New Zealand further submits that a Member can only take into account the constituent data and methodology where it exists. As there was no data or methodology for beef set out in the supporting tables of Part IV of Korea's Schedule, the Panel was correct to calculate AMS by relying on Annex 3 exclusively.

70. Finally, New Zealand argues that AMS calculations under Annex 3 are based on "eligible" production, as required by that provision. Thus, the argument of Korea that "actual" purchases are properly the basis of its AMS calculation should be rejected.

(c) Dual Retail system

(i) Article III:4 of the GATT 1994

71. New Zealand submits that the term "less favourable treatment" under Article III:4 requires that imported and domestic goods receive "effective equality of opportunities". New Zealand supports the Panel's finding that, in the circumstances of this case, Korea's dual retail system for beef results in competitive disadvantages for imported beef, as imported beef is denied the opportunity to compete in the framework of an integrated market. As the Panel concluded, the existence of a dual retail system, in circumstances where there is an extensive existing retail system, in itself constitutes a violation of Article III:4.

72. Furthermore, New Zealand agrees with the Panel's finding that the display sign requirement, being ancillary to the dual retail system, is also inconsistent with Article III:4. While the Panel chose

to consider this aspect of the dual retail system separately, it is nevertheless one of the components of the dual retail system.

(ii) Article XX(d) of the GATT 1994

73. New Zealand supports the Panel's finding that Korea failed to show that the dual retail system was "necessary" within the meaning of Article XX(d) to accomplish Korea's desired level of fraud prevention. As stated by the Panel, practices used in other sectors to address deceptive practices are relevant for a determination of whether certain practices are "necessary" in the beef sector.

74. New Zealand also contends that the dual retail system is not consistent with the requirements of the introductory clause of Article XX. The dual retail system enables the Korean Government to protect Korea's domestic beef producers from import competition by limiting the terms on which imported products may be sold in the market, and therefore constitutes a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, within the meaning of the introductory clause of Article XX.

III. Issues Raised in this Appeal

75. The issues raised in this appeal are the following:

(a) whether examination of Korea's Schedule LX and Annex 3 of the *Agreement on Agriculture* was within the Panel's terms of reference;

(b) whether the Panel erred in calculating Korea's Current AMS for beef based on Annex 3 of the *Agreement on Agriculture*, and whether the resulting Current Total AMS exceeded Korea's AMS commitment levels for 1997 and 1998;

(c) whether the "dual retail system", which requires the sale of imported beef in specialized stores, was inconsistent with Article III:4 of the GATT 1994; and

(d) whether the "dual retail system", if inconsistent with Article III:4 of the GATT 1994, can nevertheless be justified under Article XX(d).

IV. Terms of Reference

76. Before the Panel, Korea argued that its Schedule LX is not mentioned in the complaining parties' panel requests and, therefore, no violation can be claimed with regard to the Schedule.[11] Korea further contended that the panel requests were insufficiently detailed and specific to encompass the complaining parties' claims based on Annex 3 of the *Agreement on Agriculture*.[12]

77. The Panel held that, when examining claims regarding Articles 3, 6 and 7 of the *Agreement on Agriculture*, "its terms of reference require it to examine Korea's Schedule LX to assess whether its domestic support in 1997 and 1998 exceeded the reduction commitments contained in its Schedule"[13], and that "its assessment of the compatibility of Korea's domestic support with Articles 3, 6 and 7 requires that the Panel compares the effective support provided by Korea as determined using the

[11] Panel Report, para. 787.

[12] *Ibid.*

[13] *Ibid.*, para. 803.

calculation parameters of Annex 3."[14] Therefore, an examination of Korea's Schedule LX and Annex 3 of the *Agreement on Agriculture* for this purpose was not outside the Panel's terms of reference.

78. On appeal, Korea argues that the Panel erred by ruling on two claims that were outside of its terms of reference. In particular, Korea refers to the Panel's finding as to which set of numbers in its Schedule LX constitutes Korea's levels of commitment[15]; and to the Panel's finding that Korea's methodology for calculating Current Aggregate Measurement of Support ("AMS") for beef was not consistent with the methodology provided in Annex 3 of the *Agreement on Agriculture*.[16]

79. In this dispute, the Panel's terms of reference were defined as follows:

> To examine, in the light of the relevant provisions of the covered agreements cited by the United States in document WT/DS/161/5 and by Australia in document WT/DS/169/5, the matter referred to the DSB by the United States and Australia in those documents and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements.[17]

Thus, the Panel's terms of reference required it to examine the "matter" referred to the DSB by the complaining parties in the requests for the establishment of a panel by the United States and Australia, respectively.[18] The "matter" referred to the DSB is the set of claims made in these requests.[19]

80. In its panel request, Australia stated, in respect of Korea's agricultural domestic support, that:

> Korea has also increased the level of domestic support for its cattle industry in amounts which result in the total domestic support provided by Korea exceeding its Aggregate Measurement of Support (AMS) under the Agreement on Agriculture.

Australia went on to state that Korea was acting inconsistently with obligations under, *inter alia*, Articles 3, 6 and 7 of the *Agreement on Agriculture*.

81. The United States, in its panel request, stated, in very similar terms:

> At the same time, Korea has increased the level of domestic support for its cattle industry to the point that the total domestic support provided by Korea exceeds its Aggregate Measurement of Support (AMS) under the Agreement on Agriculture.

[14] *Ibid.*, para. 815.

[15] Korea's appellant's submission, paras. 15-25.

[16] *Ibid.*, paras. 65-70.

[17] WT/DS161/6, WT/DS169/6; see also Article 7.1 of the DSU.

[18] WT/DS161/5, WT/DS169/5.

[19] See Appellate Body Report, *Brazil – Measures Affecting Dessicated Coconut*, WT/DS22/AB/R, adopted 20 March 1997, p. 22; Appellate Body Report, *Guatemala – Anti-Dumping Investigation Regarding Portland Cement from Mexico*, WT/DS60/AB/R, adopted 25 November 1998, para. 72.

The United States also referred to Korea's measures as being inconsistent with, *inter alia*, Articles 3, 6, and 7 of the *Agreement on Agriculture*.

82. Thus, the claim made by both complaining parties was that Korea's domestic support for its cattle industry had increased to the point that Korea exceeded its AMS commitment levels for certain years, in contravention of Articles 3, 6 and 7 of the *Agreement on Agriculture*.

83. With respect to Korea's claim that the Panel acted outside its terms of reference in examining the "commitment levels" in Korea's Schedule, the following paragraphs of Articles 3 and 6 of the *Agreement on Agriculture* are of particular importance. Article 3.2 obligates Members not to exceed the support levels they had specified in their Schedules:

> Subject to the provisions of Article 6, a *Member shall not provide support* in favour of domestic producers in excess of the *commitment levels specified in Section I of Part IV of its Schedule*. (emphasis added)

Article 6.3 in turn states:

> A Member shall be considered to be in compliance with its domestic support reduction commitments in any year in which *its domestic support* in favour of agricultural producers expressed in terms of Current Total AMS *does not exceed* the corresponding *annual or final bound commitment level specified in Part IV of the Member's Schedule*. (emphasis added)

Articles 3.2 and 6.3 both refer explicitly to the "commitment level" specified in Part IV of a Member's Schedule. In order to make a finding on the complaining parties' claim, the Panel had no choice but to determine the appropriate "commitment levels" in Korea's Schedule.

84. With respect to Korea's claim[20] that the Panel acted outside its terms of reference in examining Annex 3 of the *Agreement on Agriculture*, we note that Article 6.4 provides:

> (a) A Member shall not be required to include in the calculation of its Current Total AMS and shall not be required to reduce:
>
> (i) product-specific domestic support which would otherwise be required to be included in a Member's calculation of its Current AMS where such support does not exceed 5 per cent of that Member's total value of production of a basic agricultural product during the relevant year;
>
> …
>
> (b) For developing country Members, the *de minimis* percentage under this paragraph shall be 10 per cent.

Article 7.2(a) states:

[20] *Supra*, para. 78.

> Any domestic support measure in favour of agricultural producers, including any modification to such measure, and any measure that is subsequently introduced that cannot be shown to satisfy the criteria in Annex 2 to this Agreement or to be exempt from reduction by reason of any other provision of this Agreement shall be included in the Member's calculation of its Current Total AMS.

Both Articles 6 and 7, claimed by the complaining parties to have been violated by Korea, refer explicitly to Current AMS and/or Current Total AMS.

85. AMS and Total AMS are defined in Article 1 of the *Agreement on Agriculture*, entitled "Definition of Terms". According to Article 1(a)

> "*Aggregate Measurement of Support*" and "*AMS*" mean the annual level of support, expressed in monetary terms, provided for an agricultural product in favour of the producers of the basic agricultural product … which is:
>
> …
>
> (ii) with respect to support provided during any year of the implementation period and thereafter, *calculated in accordance with the provisions of Annex 3 of this Agreement* and taking into account the constituent data and methodology used in the tables of supporting material incorporated by reference in Part IV of the Member's Schedule; (emphasis added)

According to Article 1(h)

> "*Total Aggregate Measurement of Support*" and "*Total AMS*" mean the sum of all domestic support provided in favour of agricultural producers, calculated as the sum of all aggregate measurements of support for basic agricultural products, … which is:
>
> …
>
> (ii) with respect to the level of support actually provided during any year of the implementation period and thereafter (i.e. the "Current Total AMS"), *calculated in accordance with the provisions of this Agreement*, including Article 6, and with the constituent data and methodology used in the tables of supporting material incorporated by reference in Part IV of the Member's Schedule; (emphasis added)

86. While Article 1(h)(ii) uses the terms "provisions of this Agreement", Article 1(a)(ii) is more specific and refers precisely to "*the provisions of Annex 3 of this Agreement*". Annex 3 is entitled "Domestic Support: Calculation of Aggregate Measurement of Support". Through the definitions set out in Article 1, Annex 3 thus becomes part of Articles 6 and 7. In examining the claims under Articles 3, 6 and 7, the Panel, therefore, had to examine the terms of Annex 3 as well. The Panel had to calculate Current AMS for beef "*in accordance with the provisions of Annex 3* … and taking into account the constituent data and methodology …" to determine whether Current AMS for beef was to

be included in Current Total AMS. Thus, in order to reach a finding on the complaining parties' claim, the Panel in this case had to ascertain the appropriate "commitment levels" in Korea's Schedule, and had to calculate Current AMS for beef "in accordance with the provisions of Annex 3 … " to determine whether Current AMS for beef was to be included in Current Total AMS.

87. It is true that, as Korea states, the panel requests in this dispute do not explicitly refer to the "commitment levels" in Korea's Schedule or to "Annex 3" of the *Agreement on Agriculture*. In *Argentina – Safeguard Measures on Imports of Footwear*, however, we held that the "terms of Article 4.2(c) of the *Agreement on Safeguards* expressly incorporate the provisions of Article 3" of that Agreement.[21] In that case, we stated that "we find it difficult to see how a panel could examine whether a Member had complied with Article 4.2(c) without also referring to the provisions of Article 3 of the *Agreement on Safeguards*."[22] We believe the same approach appropriately applies here. Although the "commitment levels" in Korea's Schedule and "Annex 3" of the *Agreement on Agriculture* were *not explicitly* referred to in the panel requests in this dispute, it is clear that Articles 3 and 6 of the *Agreement on Agriculture*, which *were referred* to in the panel requests, incorporate those terms, either directly through Articles 3.2 and 6.3, in the case of the "commitment levels", or indirectly through Article 1(a)(ii), in the case of "Annex 3". In our view, the commitment levels in Korea's Schedule and the provisions of Annex 3 were in effect referred to in the complaining parties' panel requests, and were, therefore, within the Panel's terms of reference.

88. It is useful to add that, in deciding which set of figures in Korea's Schedule constituted the true and effective commitment levels of Korea and in determining how Current AMS should be calculated under Annex 3, the Panel did not rule on a separate "claim".[23] Rather, it examined specific arguments related to the claim that Korea's domestic support exceeded its AMS commitment levels. In this context, it seems useful to recall our statement in *European Communities – Regime for the Importation, Sale and Distribution of Bananas* that:

> … there is a significant difference between the *claims* identified in the request for the establishment of a panel, which establish the panel's terms of reference under Article 7 of the DSU, and the *arguments* supporting those claims, which are set out and progressively clarified in the first written submissions, the rebuttal submissions and the first and second panel meetings with the parties.[24]

The claim of the complaining parties was that Korea's domestic support for beef had increased to the point that this support exceeded Korea's commitment levels for certain specified years. This claim was made under Articles 3, 6 and 7 of the *Agreement on Agriculture*, as stated in both panel requests, and was clearly within the Panel's terms of reference. The Panel's examination of the commitment levels in Korea's Schedule and the calculation methodology in Annex 3 was carried out in the course of assessing arguments related to the complaining parties' claim.

[21] Appellate Body Report, WT/DS121/AB/R, adopted 12 January 2000, para. 74.

[22] *Ibid.*

[23] We note that in paragraph 800 of its Report, the Panel addressed the United States' "claim" that the Base Total AMS specified in Part IV, Section I of Korea's Schedule was initially miscalculated. The Panel considered that this "claim" was not properly before it. It concluded "that the only measure at issue is Korea's current domestic support for its beef industry in the context of Korea's scheduled commitment levels on domestic support under the *Agreement on Agriculture*". This conclusion of the Panel has not been appealed and is not before us.

[24] WT/DS27/AB/R, adopted 25 September 1997, para. 141.

89. For these reasons, we conclude that the Panel did not err in finding that the issue of which set of figures constituted Korea's commitment levels and the issue of whether Current AMS for beef must be calculated in accordance with Annex 3 were within its terms of reference.

V. Domestic Support under the *Agreement on Agriculture*

90. In the Panel proceedings, the complaining parties claimed that Korea provided domestic support to its beef industry, measured by Current AMS, in amounts which exceeded *de minimis* levels in 1997 and 1998 and which, therefore, were required to be included in Korea's calculation of Current Total AMS for those years. When domestic support for beef was included in Current Total AMS, they contended, Korea's Current Total AMS exceeded its commitment levels set out in Part IV of its Schedule for those years, contrary to Articles 3 and 6 of the *Agreement on Agriculture*.[25]

91. In addressing the above claim, the Panel ascertained both Korea's commitment levels for 1997 and 1998 and Korea's Current Total AMS for those years. With regard to Korea's commitment levels, the Panel noted that there were two sets of figures in Korea's Schedule in the column entitled "Annual and final bound commitments level 1995-2004", with one set in brackets and the other set not in brackets. The Panel concluded that the figures *not* in brackets constituted Korea's commitment levels.[26] With regard to Current Total AMS for 1997 and 1998, the Panel first examined whether Current AMS for beef exceeded the 10 per cent *de minimis* level set out in Article 6.4 of the *Agreement on Agriculture*. The Panel found that Current AMS for beef exceeded the *de minimis* level, and, therefore, was required to be included in Current Total AMS, and that Korea's failure to include Current AMS for beef in Current Total AMS was inconsistent with Article 7.2(a) of the *Agreement on Agriculture*.[27] The Panel then compared Current Total AMS for 1997 and 1998 with Korea's commitment levels for those years, and concluded that Current Total AMS exceeded the commitment levels, contrary to Article 3.2 of the *Agreement on Agriculture*.[28]

92. On appeal, Korea argues that the Panel's conclusion that Korea exceeded its commitment levels for 1997 and 1998 was in error, for two reasons. First, Korea's view is that the Panel's finding that Korea's commitment levels, as set out in its Schedule, comprise the figures not in brackets is wrong. According to Korea, the commitment levels are, in fact, embodied in the figures in brackets, as Note 1 of Supporting Table 6 of Korea's Schedule makes clear.[29] Second, Korea contends that the Panel's conclusion that Current AMS for beef must be included in Current Total AMS was also wrong. According to Korea, the Panel mistakenly looked to Annex 3 of the *Agreement on Agriculture* in order to calculate the Current AMS for beef, failing to rely instead on the "constituent data and methodology" provided in Korea's Schedule, as required by Articles 1(a)(ii) and 1(h)(ii). Korea claims that its Current AMS for beef was properly calculated, on the basis of "constituent data and methodology" in its Schedule, and is less than the *de minimis* level established in Article 6.4 of the *Agreement on Agriculture*. Therefore, Korea argues, Current AMS for beef need not be included in Current Total AMS.[30]

[25]See Panel Report, paras. 49, 51 and 818. Australia argued that Korea exceeded its commitment levels only for 1997, whereas the United States argued that Korea exceeded its commitment levels for both 1997 and 1998.

[26]Panel Report, para. 821.

[27]*Ibid.*, para. 841.

[28]*Ibid.*, para. 843.

[29]Korea's appellant's submission, paras. 26-54.

[30]*Ibid.*, paras. 79-90.

93. The issue before us on appeal has two parts: did the Panel err in finding, firstly, that Korea failed to include Current AMS for beef in Current Total AMS, contrary to Article 7.2(a) of the *Agreement on Agriculture*, and in finding, secondly, that, contrary to Article 3.2 of the *Agreement on Agriculture*, Korea's Current Total AMS exceeds the commitment levels in Part IV of its Schedule for 1997 and 1998? In examining the component parts of this issue, it is necessary for us to ascertain two sets of figures: the figures which constitute Korea's commitment levels for 1997 and 1998, and the figures for Korea's Current Total AMS for 1997 and 1998. We turn first to an examination of Korea's commitment levels for 1997 and 1998.

A. *Korea's Commitment Levels for 1997 and 1998*

94. In Korea's Schedule LX, Part IV, Section I, entitled "Domestic Support: Total AMS Commitments", Korea has provided annual bound commitment levels for domestic support for agriculture for the period 1995-2004. The Schedule contains three columns, as follows:

₩ = Korean Won

Base Total AMS	Annual and final bound commitments level 1995 - 2004			Relevant Supporting Tables and document reference
1	2			3
bil. ₩		bil. ₩		
1,718.6	1995:	1,695.74	(2,182.55) *Note 1	AGST/KOR (Supporting Table 4, 5, 6, 7, 8 and 10)
	1996:	1,672.90	(2,105.60)	
	1997:	1,650.03	(2,028.65)	
	1998:	1,627.17	(1,951.70)	
	1999:	1,604.32	(1,874.75)	
	2000:	1,581.46	(1,797.80)	
	2001:	1,558.60	(1,720.85)	
	2002:	1,535.74	(1,643.90)	
	2003:	1,512.89	(1,566.95)	
	2004:	1,490.00	(1,490.00)	

*Note 1 : Refer to Note 1 of Supporting Table 6 about the numbers in parentheses.

Korea's commitment levels are in Column 2, entitled "Annual and final bound commitments level 1995-2004". This column contains two sets of figures pertaining to the years 1995-2004: one set in brackets, and one set not in brackets.

95. In its findings, the Panel referred to part of Korea's Schedule. In particular, the Panel referred to the figures in Column 1 and Column 2. However, the Panel did not refer to "* Note 1" in Column 2, nor to the explanatory information set out in Note 1, and did not reprint Column 3.[31] The Panel concluded that the set of figures not in brackets constitutes Korea's commitment levels. In support of its conclusion, the Panel noted that "the unbracketed figures in Korea's Schedule are derived from, and directly linked to, the 'Base Total AMS'". By contrast, the figures in the column with brackets "bear no such relationship to the specified 'Base Total AMS' of 1,718.60 billion won."[32] Therefore, Korea's commitment level for 1997 is 1,650.03 billion won, while the commitment level

[31]Panel Report, para. 820.

[32]*Ibid.*, para. 822.

for 1998 is 1,627.17 billion won.[33] On appeal, Korea argues that the Panel's conclusion was in error.[34]

96. Examining this issue requires us to interpret Korea's Schedule. At the outset, we note, as we have previously stated in *European Communities – Customs Classification of Certain Computer Equipment*, that:

> A Schedule is … an integral part of the GATT 1994 … . Therefore, the concessions provided for in that schedule are part of the terms of the treaty. As such, the only rules which may be applied in interpreting the meaning of a concession are the general rules of treaty interpretation set out in the *Vienna Convention.*[35]

Thus, we now examine Korea's Schedule in light of the rules of treaty interpretation. We begin with the ordinary meaning of the terms of the Schedule, in their context and in the light of the object and purpose of the treaty, in accordance with Article 31(1) of the *Vienna Convention*.

97. The Panel examined the two sets of figures provided by Korea, as well as the figure for "Base Total AMS". However, as is clear from the table in Korea's Schedule LX, Part IV, Section I, which has been reprinted in paragraph 94 above, the two sets of figures do not exist in isolation. Rather, to the right of the two sets of figures is the notation "* Note 1". At the bottom of Korea's Schedule, there is "* Note 1" which states: "Refer to Note 1 of Supporting Table 6 about the numbers in parentheses." The Panel, in its reasoning, referred to the set of figures in Column 1 and Column 2, but did *not* refer to "* Note 1", nor did it consider the terms of "* Note 1".[36] An examination of the ordinary meaning of the terms of a treaty must take into account *all* of those terms, and, accordingly, we proceed with an examination of Korea's Schedule, including Note 1 of Supporting Table 6. In our view, the Panel's examination of the "ordinary meaning" of Korea's Schedule was not done in accordance with the rules of interpretation of general international law as codified in the *Vienna Convention*.

98. Supporting Table 6 is entitled "Aggregate Measurements of Support: Market Price Support". This table provides the supporting figures for the commitment levels set out in Part IV, Section I of Korea's Schedule LX, that is, the figures used to calculate the commitment levels. Supporting figures are provided for rice, barley, soybean, maize (corn) and rape seeds. In respect of each product, the AMS for each of the years 1989-1991 is provided, along with an average AMS level for the years 1989-1991. For rice, AMS figures for 1993 are given as well. The figures for each product were combined in order to obtain a Base Total AMS figure which could then be used to determine commitment levels for the years 1995-2004.

99. Note 1 of Supporting Table 6 reads as follows:

> The AMS for rice has been calculated based on 1993 market price support instead of 1989-1991 average. The Final Bound Commitment level in 2004, however, is the level reduced by 13.3% from the 1989-1991 average Base Total AMS.[37]

[33]See Panel Report, para. 843.

[34]Korea's appellant's submission, paras. 26-54.

[35]Appellate Body Report, WT/DS62/AB/R, WT/DS67/AB/R, WT/DS68/AB/R, adopted 22 June 1998, para. 84.

[36]See Panel Report, paras. 820-823.

[37]G/AG/AGST/KOR, p. 8.

As the Panel did not consider Note 1 at the bottom of Korea's Schedule LX, Part IV, Section I, it did not consider Note 1 of Supporting Table 6 either.

100. In interpreting Note 1 of Supporting Table 6, we look again at its ordinary meaning. The first sentence of this Note indicates that the AMS calculations for *rice* are based on 1993 figures, whereas for products other than rice, the AMS figures are based on the 1989-1991 average amounts.

101. The second sentence of Note 1 of Supporting Table 6 makes clear that the final bound commitment level for 2004 has been determined by reducing the 1989-1991 average Base Total AMS by 13.3 per cent.

102. We note that the use of the term "however" ordinarily indicates a contrast between two things, and lends support to Korea's position. The contrast here is the following: whereas the starting AMS amount is calculated using the 1989-1991 figures for products other than rice and the 1993 figures for rice, the Final Bound Commitment level for 2004 is calculated based on the 1989-1991 average Base Total AMS, which relies on 1989-1991 figures for *all* products, including rice. It appears to us that what Korea stated in Note 1 of Supporting Table 6 was this: the starting AMS commitment level for 1995 is determined by using AMS calculations relying on base years of 1989-1991 for all products except rice, and 1993 for rice; "however", the final target commitment level for 2004 is based on the Base Total AMS figure which was derived by using the base years 1989-1991 for *all* products. The starting AMS commitment level figure for 1995 (2182.55 billion won) was reduced in equal annual amounts over the period from 1995 to 2004 in order to reach the final target commitment level for 2004 (1490.00 billion won). The reduced commitment levels for each year over the period 1995-2004, the calculation of which has been described by Korea in Note 1 of Supporting Table 6, are set out in the figures in brackets. It follows from the wording of Korea's Schedule LX, Part IV, Section I, read together with Note 1 of the Supporting Table 6, that Korea's AMS commitment levels for 1995-2004 are not represented, as the Panel concluded, by the figures not in brackets, but, rather, as Korea contends, by the figures in brackets.

103. The above view is reflected in Korea's subsequent statements before the Committee on Agriculture. At a November 1996 Committee on Agriculture meeting, New Zealand asked Korea this question: "Noted that Korea's Schedule contains two sets of figures regarding annual and final bound commitment levels. Which set is accurate?" Korea responded as follows:

> *The figures in brackets correspond to Korea's real annual commitment level, using the 1993 base period for rice and the 1989-1991 base period for other products*, as indicated in the footnote of Korea's Schedule LX. The said calculation and annual commitment level of AMS were already reviewed and agreed upon by Member countries in March 1994. *The other set of figures corresponds to the annual commitment using the base period of 1989-1991 for all the products.*[38] (emphasis added)

104. Furthermore, in its official annual Notifications to the Committee on Agriculture concerning domestic support commitments for 1995 to 1998, Korea made reference to its commitment level for the period in question. In each Notification, the figure Korea provided was the relevant commitment

[38]G/AG/R/9, 17 January 1997.

level from Korea's Schedule set out in the figures in brackets. Next to the AMS figure in each Notification is a note which says "See Note 1 of Supporting Table 6 in G/AG/AGST/KOR".[39]

105. For these reasons, we conclude that Korea's commitment levels in Part IV, Section I of its Schedule LX are denoted by the figures in the Column entitled "Annual and final bound commitments level 1995-2004" which are in brackets. Thus, Korea's commitment level is 2,028.65 billion won for the year 1997, and 1,951.70 billion won for the year 1998.

106. We turn next to an examination of Korea's Current Total AMS for 1997 and 1998, to determine whether Korea's Current Total AMS for these years exceeded its commitment levels for those same years.

B. *Korea's Current Total AMS for 1997 and 1998*

107. In its Notifications to the Committee on Agriculture for 1997 and 1998, Korea provided figures for the Current Total AMS for those years. Korea claimed that for 1997 it provided Current Total AMS of 1,936.95 billion won, and for 1998 it provided 1,562.77 billion won.[40] The complaining parties argue that Korea's Current Total AMS as provided in its Notifications was calculated improperly, as Korea did not include Current AMS for beef in its Current Total AMS. The United States contends that when Current AMS for beef is included in Current Total AMS, as required, Current Total AMS for both 1997 and 1998 exceeded Korea's commitment levels for 1997 and 1998, whereas Australia limits its contention to 1997.[41]

108. The Panel found that Korea's Current AMS for beef did exceed the *de minimis* level for 1997 and 1998, and, therefore, was required to be included in Current Total AMS, under Article 7.2(a) of the *Agreement on Agriculture*.[42] The Panel then compared Korea's Current Total AMS to Korea's commitment levels for 1997 and 1998, and concluded that Current Total AMS exceeded the commitment levels, contrary to Article 3.2 of the *Agreement on Agriculture*.[43]

109. On appeal, Korea contends that the Panel's conclusion that Current AMS for beef must be included in Current Total AMS is incorrect. According to Korea, the Panel mistakenly looked to Annex 3 of the *Agreement on Agriculture* in order to calculate the Current AMS for beef, while failing to take into account the "constituent data and methodology" provided in Korea's Schedule, as required by Articles 1(a)(ii) and 1(h)(ii) of the *Agreement on Agriculture*. Korea claims that its Current AMS for beef was properly calculated in its Notifications to the Committee on Agriculture, based on the "constituent data and methodology" in its Schedule, and that consequently this Current AMS fell below the *de minimis* level established in Article 6.4 of the *Agreement on Agriculture*. Therefore, Korea argues, the Current AMS for beef need not be included in the Current Total AMS, and Current Total AMS was properly calculated in its Notifications.[44]

110. In examining this issue, we need to determine first whether Current AMS for beef for 1997 and 1998 must be included in Korea's Current Total AMS for those years. We recall that Article 6.4 of the *Agreement on Agriculture* states that:

[39]See G/AG/N/KOR/24, 25 August 1999; G/AG/N/KOR/18, 16 September 1998; G/AG/N/KOR/14, 15 September 1997; G/AG/N/KOR/7, 18 November 1996.

[40]See G/AG/N/KOR/24, 25 August 1999; G/AG/N/KOR/18, 16 September 1998.

[41]See *supra*, footnote 25.

[42]Panel Report, para. 841.

[43]*Ibid.*, para. 843.

[44]Korea's appellant's submission, paras. 79-90.

> A Member shall not be required to include in the calculation of its Current Total AMS and shall not be required to reduce:
>
> (i) product-specific domestic support which would otherwise be required to be included in a Member's calculation of its Current AMS where such support does not exceed 5 per cent of that Member's total value of production of a basic agricultural product during the relevant year;
>
> …

For developing country Members the *de minimis* percentage level under this paragraph is 10 per cent.[45] Thus, Korea's Current AMS for beef must be included in Current Total AMS only if the Current AMS for beef exceeds the 10 per cent *de minimis* requirement applicable in respect of developing country Members.

111. To determine whether Korea's Current AMS for beef exceeds 10 per cent of total value of beef production, we refer again to Article 1(a)(ii) of the *Agreement on Agriculture*, which defines Current AMS. Under this provision, Current AMS is to be

> calculated *in accordance with* the provisions of Annex 3 of this Agreement and *taking into account* the constituent data and methodology used in the tables of supporting material incorporated by reference in Part IV of the Member's Schedule; … (emphasis added)

Article 1(a)(ii) contains two express requirements for calculating Current AMS. First, Current AMS is to be "calculated *in accordance with* the provisions of Annex 3 of this Agreement". The ordinary meaning of "accordance" is "agreement, conformity, harmony".[46] Thus, Current AMS must be calculated in "conformity" with the provisions of Annex 3. Second, Article 1(a)(ii) provides that the calculation of Current AMS is to be made while "taking into account the constituent data and methodology used in the tables of supporting material incorporated by reference in Part IV of the Member's Schedule." "Take into account" is defined as "take into consideration, notice".[47] Thus, when Current AMS is calculated, the "constituent data and methodology" in a Member's Schedule must be "taken into account", that is, it must be "considered".[48]

112. Looking at the wording of Article 1(a)(ii) itself, it seems to us that this provision attributes higher priority to "the provisions of Annex 3" than to the "constituent data and methodology". From the viewpoint of ordinary meaning, the term "in accordance with" reflects a more rigorous standard than the term "taking into account".

[45]Article 6.4(b) of the *Agreement on Agriculture*.

[46]*The New Shorter Oxford English Dictionary*, (Clarendon Press, 1993), Vol. I, p. 15.

[47]*Ibid.*

[48]We note that this difference is not reflected in the wording of the definition of Current Total AMS in Article 1(h). Article 1(h)(ii) provides that Current Total AMS is to be calculated "in accordance with the provisions of this Agreement, including Article 6, *and* with the constituent data and methodology used in the tables of supporting material incorporated by reference in Part IV of the Member's Schedule". (emphasis added)

113. We note, however, that the Panel did not base its reasoning on this apparent hierarchy as between "the provisions of Annex 3" and the "constituent data and methodology".[49] Instead, the Panel considered that where no support was included in the base period calculation for a given product, there is no "constituent data or methodology" to refer to, so that the only means available for calculating domestic support is that provided in Annex 3.[50] As beef had not been included in Supporting Table 6 of Korea's Schedule LX, Part IV, Section I, the Panel concluded that Annex 3 alone is applicable for the purposes of calculating current non-exempt support in respect of Korean beef.[51]

114. In the circumstances of the present case, it is not necessary to decide how a conflict between "the provisions of Annex 3" and the "constituent data and methodology used in the tables of supporting material incorporated by reference in Part IV of the Member's Schedule" would have to be resolved in principle. As the Panel has found, in this case, there simply are no constituent data and methodology for beef.[52] Assuming *arguendo* that one would be justified – in spite of the wording of Article 1(a)(ii) – to give priority to constituent data and methodology used in the tables of supporting material over the guidance of Annex 3, for products entering into the calculation of the Base Total AMS, such a step would seem to us to be unwarranted in calculating Current AMS for a product which did *not* enter into the Base Total AMS calculation. We do not believe that the *Agreement on Agriculture* would sustain such an extrapolation. We, therefore, agree with the Panel that, in this case, Current AMS for beef has to be calculated in accordance with the provisions of Annex 3, and with these provisions alone.

115. Korea has argued that:

> National schedules on the reduction of subsidies in favour of agricultural products … can be understood as multi-year equations. One side of the equation includes the commitment level for a given year, while the other side of the equation includes the actual AMS for the same year. Thus, for the equation to be meaningful, both sides of the equation should be based on the same sets of data and methodology. … Using one methodology for commitment levels and another methodology for actual AMS undermines comparability between the two, and leads to unfair results.[53]

We believe that it is not necessary or appropriate to conceive of the pertinent provisions of the *Agreement on Agriculture* as establishing "multi-year equations". The treaty definitions of both AMS and Total AMS, set out in Articles 1(a) and 1(h) respectively, do provide a specific methodology for calculating Current AMS and Current Total AMS in respect of a particular year during the implementation period. However, with respect to the other side of a hypothetical equation, the relevant treaty provisions do *not* provide for any particular mode of calculation of the "Base Total AMS", from which figure the commitment levels for particular years of the implementation period are

[49]On the contrary, the Panel opines that the "constituent data and methodology" has an important role to play in ensuring that the calculation of support to any given product is calculated in subsequent years consistently with support calculated in the base period. Panel Report, para. 811.

[50]*Ibid.*

[51]*Ibid.*, para. 812.

[52]*Ibid.* In other words, there is no *data* (product) in respect of which the *methodology* of Schedule LX of Korea (that is, the use of figures for the years 1989-1991) could be applied, in so far as beef is concerned.

[53]Korea's appellant's submission, para. 63.

arithmetically derived. Article 1(a)(i) of the *Agreement on Agriculture* dealing with AMS states that "with respect to support provided during the base period", a treaty interpreter needs only to go to "the relevant tables of supporting material incorporated by reference *in Part IV of a Member's Schedule* … ". (emphasis added) Similarly, Article 1(h)(i) dealing with Total AMS, states that "with respect to support provided during the base period (i.e., the 'Base Total AMS') and the maximum support permitted to be provided during any year of the implementation period or thereafter (i.e., the 'Annual and Final Bound Commitment Levels')", a treaty interpreter needs only to go to what is "*specified in Part IV of a Member's Schedule* … ". (emphasis added) Thus, for purposes of determining whether a Member has exceeded its commitment levels, Base Total AMS, and the commitment levels resulting or derived therefrom, are not themselves formulae to be worked out, but simply absolute figures set out in the Schedule of the Member concerned. As a result, Current Total AMS which is calculated according to Annex 3, is compared to the commitment level for a given year that is already specified as a given, absolute, figure in the Member's Schedule.

116. We examine next Annex 3, entitled: "Domestic Support: Calculation of Aggregate Measurement of Support". Paragraphs 8 and 9 of Annex 3 provide the following definition of "market price support", the particular form of domestic support at issue here:

> … *market price support* shall be calculated using the gap between a fixed external reference price and the applied administered price multiplied by the *quantity of production eligible to receive* the applied administered price. Budgetary payments made to maintain this gap, such as buying-in or storage costs, shall not be included in the AMS.
>
> The *fixed external reference price shall be based on the years 1986 to 1988* and shall generally be the average f.o.b. unit value for the basic agricultural product concerned in a net exporting country and the average c.i.f. unit value for the basic agricultural product concerned in a net importing country in the base period. The fixed reference price may be adjusted for quality differences as necessary. (emphasis added)

Thus, under Annex 3, "market price support" is calculated by taking the difference between a fixed external reference price and the applied administered price, and multiplying that difference by "the quantity of *production eligible* to receive the applied administered price". (emphasis added) The fixed external reference price "shall be *based on the years 1986 to 1988*". (emphasis added)

117. The Panel found that in both 1997 and 1998 Korea miscalculated its fixed external reference price, contrary to Article 6 and paragraph 9 of Annex 3, by using a fixed external reference price based on data for 1989-1991.[54] Korea justifies this choice by invoking the "constituent data and methodology" used in its Supporting Table 6 for all products other than rice, i.e., for barley, soybean, maize (corn) and rape seeds. In Supporting Table 6, all these products use the period 1989-1991 for the fixed external reference price.[55]

118. We have already explained above that we share the Panel's view with respect to Korea's argument on "constituent data and methodology" used in the table of supporting material. We agree with the Panel that, in this case, Current AMS for beef has to be calculated in accordance with Annex 3. According to Annex 3, "[t]he fixed external reference price shall be based on the years 1986 to 1988". We, therefore, also agree with the Panel that in calculating the product specific AMS

[54]Panel Report, para. 830.

[55]Korea's appellant's submission, paras. 79-80.

for beef for the years 1997 and 1998, Korea should have used an external reference price based on data for 1986-1988, instead of data for 1989-1991.

119. The Panel found that, in calculating the Current AMS for beef for the years 1997 and 1998, Korea made a further mistake. In determining its market price support for beef, Korea used the quantity of Hanwoo cattle actually purchased. The Panel found that "[t]he actual quantity of purchases is not relevant in the calculation of market price support. Korea, by indicating its intent to purchase specified quantities, made them eligible to receive the applied administered price, and consequently affected and supported the price of all such products".[56]

120. We share the Panel's view that the words "production *eligible* to receive the applied administered price" in paragraph 8 of Annex 3 have a different meaning in ordinary usage from "production *actually purchased*". The ordinary meaning of "eligible" is "fit or *entitled* to be chosen".[57] Thus, "production eligible" refers to production that is "fit or entitled" to be purchased rather than production that was actually purchased. In establishing its program for future market price support, a government is able to define and to limit "eligible" production. Production actually purchased may often be less than eligible production.

121. In the present case, Korea, in effect, declared the quantity of "eligible production" when it announced in January, 1997, that it would purchase 500 head per day of Hanwoo cattle above 500 kg within the 27 January to 31 December 1997 period, which would be 170,000 head of cattle for the 1997 calendar year.[58] That figure, under paragraph 8 of Annex 3, accordingly constitutes the quantity of "eligible production". While there may be nothing under the *Agreement on Agriculture* to prevent Korea from changing the quantity of "eligible production", Korea did not do so, so far as the record of this case shows. Korea instead simply purchased a lesser number of cattle by ceasing its purchases.

122. Korea argues that it is entitled to calculate market price support in 1997 and 1998 by using actual purchases, because it used actual purchases in its calculations in the tables of supporting material in its Schedule. We recall that we share the Panel's view that for beef, "constituent data and methodology" do not exist in the Schedule, as beef did not enter into the calculation of Korea's initial Base Total AMS. We, therefore, agree with the Panel's finding that Korea erred in calculating market price support in 1997 and 1998 by using the amount of production actually purchased, instead of production declared eligible to receive the applied administered price, according to the provisions of paragraph 8 of Annex 3.

123. Having reached the conclusion that Korea had miscalculated its market price support in 1997 and 1998, the Panel attempted to evaluate correctly Korea's Current AMS for beef. In doing so, the Panel stated that "[f]or reasons of clarity and simplicity", it would rely on market price support calculations submitted by New Zealand for Korea's Current AMS for beef.[59] Based on these calculations, the Panel found that Korea's AMS for beef had exceeded the 10 per cent *de minimis* threshold referred to in Article 6.4(b) of the *Agreement on Agriculture* in 1997 and 1998.[60]

124. We note that in calculating Korea's Current AMS for beef, New Zealand uses – like Korea – a fixed external reference price based on 1989-1991 data. As we have found above, the use of such an

[56]Panel Report, para. 831.

[57]*The Concise Oxford English Dictionary*, (Clarendon Press, 1995), p. 438.

[58]Panel Report, para. 834.

[59]Panel Report, para. 838.

[60]*Ibid.*, para. 840.

external reference price is incompatible with paragraph 9 of Annex 3, which requires an external reference price based on the years 1986-1988.

125. The Panel was aware of this incompatibility, but seemed to assume that New Zealand's reference to 1989-1991 data benefitted, rather than harmed, Korea.[61] This could be the case if the 1989-1991 data would result in a higher external reference price than the one prescribed by paragraph 9 of Annex 3, i.e., the external reference price based on the years 1986-1988. There is, however, no indication in the Panel Report of the level of the external reference price for the years 1986-1988. Furthermore, neither the Panel Report nor the Panel record contain any elements which might allow us to determine the level of such an external reference price.[62]

126. We, therefore, must reverse the Panel's finding that Korea exceeded the 10 per cent *de minimis* threshold of Current AMS for beef in 1997 and 1998, and the consequent finding that the failure to include Current AMS for beef in Current Total AMS in these years is inconsistent with Articles 6 and 7.2(a) of the *Agreement on Agriculture*.

127. As a consequence, we must also reverse the Panel's finding that, in 1997 and 1998, Korea's Current Total AMS exceeded Korea's commitment levels, as specified in Part IV, Section I of its Schedule, in violation of Article 3.2 of the *Agreement on Agriculture*.

128. We should, however, stress that, as there is insufficient information in the Panel record to allow determination of whether Current AMS for beef exceeded the *de minimis* threshold in 1997 and 1998, and, therefore, had to be included in Current Total AMS, we reach no conclusion as to whether or not Korea acted inconsistently with Articles 6 and 7.2(a) of the *Agreement on Agriculture*.

129. Furthermore, as a determination of Current Total AMS cannot be made without first ascertaining Current AMS for beef, no Current Total AMS can be calculated for 1997 and 1998. As a result, there is no basis on which we can reach a conclusion on the issue of whether or not Korea exceeded its commitment levels in Part IV of its Schedule for 1997 and 1998, contrary to Article 3.2 of the *Agreement on Agriculture*.

VI. Dual Retail System

A. *Article III:4 of the GATT 1994*

130. The Panel found that Korea's dual retail system for beef accords treatment less favourable to imported beef than to like Korean beef, and is, thus, inconsistent with Article III:4 of the GATT 1994. This finding was based on the Panel's view that any measure based exclusively on criteria relating to

[61]This seems to be the meaning of the words "inflating Korea's legitimate level of domestic support" in footnote 442 of the Panel Report which reads as follows:

> The Panel notes that for this recalculation of Korea's FERP, New Zealand even used 1989-1991 data (inflating Korea's legitimate level of domestic support), contrary to the Panel's conclusion that pursuant to Annex 3 a 1986-1988 FERP should have been employed.

[62]In *Australia – Measures Affecting the Importation of Salmon* we stated that where we have reversed a finding of a panel, we should attempt to complete a panel's legal analysis "to the extent possible on the basis of the factual findings of the Panel and/or of undisputed facts in the Panel record". Appellate Body Report, WT/DS18/AB/R, adopted 6 November 1998, para. 118. See also, Appellate Body Report, *Canada – Certain Measures Affecting the Automotive Industry*, WT/DS139/AB/R, WT/DS142/AB/R, adopted 19 June 2000, para. 133.

the origin of a product is inconsistent with Article III:4.[63] The finding was also based on the Panel's assessment of how the dual retail system modifies the conditions of competition between imported and like domestic beef in the Korean market.[64]

131. Korea argues on appeal that the dual retail system does not accord treatment less favourable to imported beef than to like domestic beef. For Korea, the dual retail system does not *on its face* violate Article III:4, since there is "perfect regulatory symmetry" in the separation of imported and domestic beef at the retail level, and there is "no regulatory barrier" which prevents traders from converting from one type of retail store to another.[65] Nor, Korea argues, does the dual retail system violate Article III:4 *de facto*, and the Panel's conclusion to the contrary was not based on a proper empirical analysis of the Korean beef market.[66]

132. Article III:4 of the GATT 1994 reads in relevant part:

> The products of the territory of any Member imported into the territory of any other Member shall be accorded *treatment no less favourable* than that accorded to like products of national origin in respect of all laws, regulations and requirements affecting their internal sale, offering for sale, purchase, transportation, distribution or use. (emphasis added)

133. For a violation of Article III:4 to be established, three elements must be satisfied: that the imported and domestic products at issue are "like products"; that the measure at issue is a "law, regulation, or requirement affecting their internal sale, offering for sale, purchase, transportation, distribution, or use"; and that the imported products are accorded "less favourable" treatment than that accorded to like domestic products. Only the last element – "less favourable" treatment – is disputed by the parties and is at issue in this appeal.

134. The Panel began its analysis of the phrase "treatment no less favourable" by reviewing past GATT and WTO cases. It found that "treatment no less favourable" under Article III:4 requires that a Member accord to imported products "effective equality of opportunities" with like domestic products in respect of the application of laws, regulations and requirements.[67] The Panel concluded its review of the case law by stating:

[63]Panel Report, para. 627.

[64]*Ibid.*, paras. 631-637.

[65]Korea's appellant's submission, paras. 119-126.

[66]*Ibid.*, paras. 127-156.

[67]Panel Report, para. 624.

> Any regulatory distinction that is based exclusively on criteria relating to the nationality or the origin of the products is incompatible with Article III and this conclusion can be reached even in the absence of any imports (as hypothetical imports can be used to reach this conclusion) confirming that there is no need to demonstrate the actual and specific trade effects of a measure for it to be found in violation of Article III. The object of Article III:4 is, thus, to guarantee effective market access to imported products and to ensure that the latter are offered the same market opportunities as domestic products.[68]

135. The Panel stated that "any regulatory distinction that is based exclusively on criteria relating to the nationality or origin" of products is incompatible with Article III:4. We observe, however, that Article III:4 requires only that a measure accord treatment to imported products that is "no less favourable" than that accorded to like domestic products. A measure that provides treatment to imported products that is *different* from that accorded to like domestic products is not necessarily inconsistent with Article III:4, as long as the treatment provided by the measure is "no less favourable". According "treatment no less favourable" means, as we have previously said, according *conditions of competition* no less favourable to the imported product than to the like domestic product. In *Japan – Taxes on Alcoholic Beverages*, we described the legal standard in Article III as follows:

> The broad and fundamental purpose of Article III is to avoid protectionism in the application of internal tax and regulatory measures. More specifically, the purpose of Article III "is to ensure that internal measures 'not be applied to imported or domestic products so as to afford protection to domestic production'". Toward this end, Article III obliges Members of the WTO to provide *equality of competitive conditions* for imported products in relation to domestic products. "[T]he intention of the drafters of the Agreement was clearly to treat the imported products in the same way as the like domestic products once they had been cleared through customs. Otherwise indirect protection could be given".[69] (emphasis added)

136. This interpretation, which focuses on the *conditions of competition* between imported and domestic like products, implies that a measure according formally *different* treatment to imported products does not *per se*, that is, necessarily, violate Article III:4. In *United States – Section 337*, this point was persuasively made. In that case, the panel had to determine whether United States patent enforcement procedures, which were formally different for imported and for domestic products, violated Article III:4. That panel said:

[68]*Ibid.*, para. 627. (footnotes omitted)

[69]Appellate Body Report, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, adopted 1 November 1996, pp. 16-17. The original passage contains footnotes. The second sentence is footnoted to *United States - Section 337 of the Tariff Act of 1930* ("*United States – Section 337*"), BISD 36S/345, para. 5.10. The third sentence is footnoted to *United States – Taxes on Petroleum and Certain Imported Substances*, BISD 34S/136, para. 5.1.9; and *Japan – Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages*, BISD 34S/83, para. 5.5(b). The fifth sentence is footnoted to *Italian Discrimination Against Imported Agricultural Machinery*, BISD 7S/60, para. 11.

> On the one hand, contracting parties may apply to imported products *different* formal legal requirements if doing so would accord imported products more favourable treatment. On the other hand, it also has to be recognised that there may be cases where the application of formally *identical* legal provisions would in practice accord less favourable treatment to imported products and a contracting party might thus have to apply different legal provisions to imported products to ensure that the treatment accorded them is in fact no less favourable. For these reasons, the mere fact that imported products are subject under Section 337 to legal provisions that are different from those applying to products of national origin is in itself not conclusive in establishing inconsistency with Article III:4.[70] (emphasis added)

137. A formal difference in treatment between imported and like domestic products is thus neither necessary, nor sufficient, to show a violation of Article III:4. Whether or not imported products are treated "less favourably" than like domestic products should be assessed instead by examining whether a measure modifies the *conditions of competition* in the relevant market to the detriment of imported products.

138. We conclude that the Panel erred in its general interpretation that "[a]ny regulatory distinction that is based exclusively on criteria relating to the nationality or the origin of the products is incompatible with Article III."[71]

139. The Panel went on, however, to examine the conditions of competition between imported and like domestic beef in the Korean market. The Panel gave several reasons why it believed that the dual retail system alters the conditions of competition in the Korean market in favour of domestic beef. First, it found that the dual retail system would "limit the possibility for consumers to compare imported and domestic products", and thereby "reduce opportunities for imported products to compete directly with domestic products".[72] Second, the Panel found that, under the dual retail system, "the only way an imported product can get on the shelves is if the retailer agrees to substitute it, not only for one but for all existing like domestic products." This disadvantage would be more serious when the market share of imports (as is the case with imported beef) is small.[73] Third, the Panel found that the dual retail system, by excluding imported beef from "the vast majority of sales outlets", limits the potential market opportunities for imported beef. This would apply particularly to products "consumed on a daily basis", like beef, where consumers may not be willing to "shop around".[74] Fourth, the Panel found that the dual retail system imposes more costs on the imported product, since the domestic product will tend to continue to be sold from existing retail stores, whereas imported beef will require new stores to be established.[75] Fifth, the Panel found that the dual retail system "encourages the perception that imported and domestic beef are different, when they are in fact like products belonging to the same market", which gives a competitive advantage to domestic beef,

[70] *United States – Section 337*, *supra*, footnote 69, paragraph 5.11.

[71] Panel Report, para. 627.

[72] *Ibid.*, para. 631.

[73] *Ibid.*, para. 632.

[74] Panel Report, para. 633.

[75] *Ibid.*, para. 634.

"based on criteria not related to the products themselves".[76] Sixth, the Panel found that the dual retail system "facilitates the maintenance of a price differential" to the advantage of domestic beef.[77]

140. On appeal, Korea argues that the Panel's analysis of the conditions of competition in the Korean market is seriously flawed, relying largely on speculation rather than on factual analysis. Korea maintains that the dual retail system does not deny consumers the possibility to make comparisons, and the numbers of outlets selling imported beef, as compared with outlets selling domestic beef, does not support the Panel's findings. Korea argues, furthermore, that the dual retail system neither adds to the costs of, nor shelters high prices for, domestic beef.[78]

141. It will be seen below that we share the ultimate conclusion of the Panel in respect of the consistency of the dual retail system for beef with Article III:4 of the GATT 1994. Portions, however, of the Panel's analysis *en route* to that conclusion appear to us problematic. For instance, while limitation of the ability to compare visually two products, local and imported, at the point of sale may have resulted from the dual retail system, such limitation does not, in our view, necessarily reduce the opportunity for the imported product to compete "directly" or on "an equal footing" with the domestic product.[79] Again, even if we were to accept that the dual retail system "encourages" the perception of consumers that imported and domestic beef are "different", we do not think it has been demonstrated that such encouragement necessarily implies a competitive advantage for domestic beef.[80] Circumstances like limitation of "side-by-side" comparison and "encouragement" of consumer perceptions of "differences" may be simply incidental effects of the dual retail system without decisive implications for the issue of consistency with Article III:4.

142. We believe that a more direct, and perhaps simpler, approach to the dual retail system of Korea may be usefully followed in the present case. In the following paragraphs, we seek to focus on what appears to us to be the fundamental thrust and effect of the measure itself.

143. Korean law in effect requires the existence of two distinct retail distribution systems so far as beef is concerned: one system for the retail sale of domestic beef and another system for the retail sale of imported beef.[81] A small retailer (that is, a non-supermarket or non-department store) which is a "Specialized Imported Beef Store" may sell any meat *except domestic beef*; any other small retailer may sell any meat *except imported beef*.[82] A large retailer (that is, a supermarket or department store) may sell both imported and domestic beef, as long as the imported beef and domestic beef are

[76] *Ibid.*

[77] *Ibid.*

[78] Korea's appellant's submission, paras. 101, 127-156.

[79] See Panel Report, para. 633.

[80] *Ibid.*, para. 634.

[81] The essential features of the Korean dual retail system for beef are found in the *Guidelines Concerning Registration and Operation of Specialized Imported Beef Stores,* (61550-81) 29 January 1990, modified on 15 March 1994; and the *Regulations Concerning Sales of Imported Beef,* (51550-100), modified on 27 March 1993, 7 April 1994, and 29 June 1998. On 1 October 1999, these two instruments were replaced by the *Management Guideline for Imported Beef*, (Ministry of Agriculture Notice 1999-67), which maintained, however, the basic principles of the dual retail system.

[82] *Guidelines Concerning Registration and Operation of Specialized Imported Beef Stores* Art. 5(C); *Regulations Concerning Sales of Imported Beef,* Art. 14(5); *Management Guideline for Imported Beef*, Art. 15.

sold in separate sales areas.[83] A retailer selling imported beef is required to display a sign reading "Specialized Imported Beef Store".[84]

144. Thus, the Korean measure formally separates the selling of imported beef and domestic beef. However, that formal separation, *in and of itself*, does not necessarily compel the conclusion that the treatment thus accorded to imported beef is less favourable than the treatment accorded to domestic beef.[85] To determine whether the treatment given to imported beef is less favourable than that given to domestic beef, we must, as earlier indicated, inquire into whether or not the Korean dual retail system for beef modifies the *conditions of competition* in the Korean beef market to the disadvantage of the imported product.

145. When beef was first imported into Korea in 1988, the new product simply entered into the pre-existing distribution system that had been handling domestic beef. The beef retail system was a unitary one, and the conditions of competition affecting the sale of beef were the same for both the domestic and the imported product. In 1990, Korea promulgated its dual retail system for beef.[86] Accordingly, the existing small retailers had to choose between, on the one hand, continuing to sell domestic beef and renouncing the sale of imported beef or, on the other hand, ceasing to sell domestic beef in order to be allowed to sell the imported product. Apparently, the vast majority of the small meat retailers chose the first option.[87] The result was the virtual exclusion of imported beef from the retail distribution channels through which domestic beef (and until then, imported beef, too) was distributed to Korean households and other consumers throughout the country. Accordingly, a new and separate retail system had to be established and gradually built from the ground up for bringing the imported product to the same households and other consumers if the imported product was to compete at all with the domestic product. Put in slightly different terms, the putting into legal effect of the dual retail system for beef meant, in direct practical effect, so far as imported beef was concerned, the sudden cutting off of access to the normal, that is, the previously existing, distribution outlets through which the domestic product continued to flow to consumers in the urban centers and countryside that make up the Korean national territory. The central consequence of the dual retail system can only be reasonably construed, in our view, as the imposition of a drastic reduction of commercial opportunity to reach, and hence to generate sales to, the same consumers served by the traditional retail channels for domestic beef. In 1998, when this case began, eight years after the dual retail system was first prescribed, the consequent reduction of commercial opportunity was reflected in the much smaller number of specialized imported beef shops (approximately 5,000 shops) as compared with the number of retailers (approximately 45,000 shops) selling domestic beef.[88]

146. We are aware that the dramatic reduction in number of retail outlets for imported beef followed from the decisions of individual retailers who could choose freely to sell the domestic product or the imported product. The legal necessity of making a choice was, however, imposed by the measure itself. The restricted nature of that choice should be noted. The choice given to the meat retailers was *not* an option between remaining with the pre-existing unified distribution set-up or

[83] *Guidelines Concerning Registration and Operation of Specialized Imported Beef Stores,* Art. 3(A); *Management Guideline for Imported Beef*, Art. 9(5).

[85] Apart from the display sign requirement, dealt with in para. 151.

[86] See Panel Report, para. 630.

[87] Panel Report, para. 633.

[88] The number of imported beef shops is noted by the Panel in footnote 347 of the Panel Report; the number of domestic beef shops has been provided by the United States in para. 175 of the Panel Report, and has not been contested by Korea.

going to a dual retail system. The choice was limited to selling domestic beef only or imported beef only. Thus, the reduction of access to normal retail channels is, in legal contemplation, the effect of that measure. In these circumstances, the intervention of some element of private choice does not relieve Korea of responsibility under the GATT 1994 for the resulting establishment of competitive conditions less favourable for the imported product than for the domestic product.

147. We also note that the reduction of competitive opportunity through the restriction of access to consumers results from the imposition of the dual retail system for beef, notwithstanding the "perfect regulatory symmetry" of that system[89], and is not a function of the limited volume of foreign beef actually imported into Korea. The fact that the WTO-consistent quota for beef has, save for two years, been fully utilized does not detract from the lack of equality of competitive conditions entailed by the dual retail system.

148. We believe, and so hold, that the treatment accorded to imported beef, as a consequence of the dual retail system established for beef by Korean law and regulation, is less favourable than the treatment given to like domestic beef and is, accordingly, not consistent with the requirements of Article III:4 of the GATT 1994.

149. It may finally be useful to indicate, however broadly, what we are *not* saying in reaching our above conclusion. We are *not* holding that a dual or parallel distribution system that is *not* imposed directly or indirectly by law or governmental regulation, but is rather solely the result of private entrepreneurs acting on their own calculations of comparative costs and benefits of differentiated distribution systems, is unlawful under Article III:4 of the GATT 1994. What is addressed by Article III:4 is merely the *governmental* intervention that affects the conditions under which like goods, domestic and imported, compete in the market within a Member's territory.

150. Finally, we note that Korea requires that imported beef be sold in a store displaying a sign declaring "Specialized Imported Beef Store". The Panel found that the sign requirement was "essentially ancillary to the dual retail system", and, since the dual retail system was inconsistent with Article III:4, the Panel found that the sign requirement was as well.[90] The Panel found also that, since the sign requirement went beyond an obligation to indicate origin, it was inconsistent with statements contained in a 1956 GATT Working Party Report.[91] On appeal, Korea claims that the Panel used "erroneous logic" in its conclusion based on the ancillary character of the sign requirement, and that the statement in the Working Party Report did not apply to the sign requirement.[92]

151. Without a system of specialized imported beef stores, the sign requirement would have no meaning and would not be required. When considered independently from a dual retail system, a sign requirement might or might not be characterized legally as consistent with Article III:4 of the GATT 1994. On the other hand, when considered simply as a detail of the dual retail system, the sign requirement partakes of the legal characterization given to that system itself. We believe it unnecessary to pass upon separately the consistency of the display sign requirement with Article III:4 of the GATT 1994.

[89] The notion of "perfect regulatory symmetry" is set out in Korea's appellant's submission, para. 95. See also *supra*, para. 17.

[90] Panel Report, para. 641.

[92] Korea's appellant's submission, paras. 206-213.

B. *Article XX(d) of the GATT 1994*

152. The Panel went on to conclude that the dual retail system, which it found to be inconsistent with Article III:4, could *not* be justified pursuant to Article XX(d) of the GATT 1994. The Panel found that the dual retail system is a disproportionate measure not necessary to secure compliance with the Korean law against deceptive practices.[93]

153. The Panel began its examination of Korea's dual retail system under Article XX(d) by finding that the dual retail system was designed to "secure compliance" with the *Unfair Competition Act*, a law consistent on its face with WTO provisions.[94] The Panel then focused on whether the dual retail system is "necessary" to secure compliance with that law. It examined enforcement measures taken by Korea for related products where fraudulent misrepresentation or passing of one product for another has occurred, and found that in these areas a dual retail system was not used. Instead, in respect of such product areas, Korea uses traditional enforcement measures, consistent with WTO rules, which include record-keeping, investigations, policing and fines. The Panel next inquired into whether these alternative, WTO-consistent measures were "reasonably available" to Korea to meet Korea's desired level of enforcement of laws against fraudulent misrepresentation in the retail beef sector. The Panel concluded that these measures are "reasonably available" alternative measures, and that Korea therefore cannot justify the dual retail system as "necessary" under Article XX(d).[95]

154. Korea appeals the Panel's conclusion. Korea argues that the Panel incorrectly interpreted the term "necessary" in Article XX(d) as requiring *consistency* among enforcement measures taken in related product areas.[96] Further, according to Korea, the Panel neglected to take into account the *level of enforcement* that Korea sought with respect to preventing the fraudulent sale of imported beef.[97]

155. Article XX(d), together with the introductory clause of Article XX, reads as follows:

> *Article XX*
>
> *General Exceptions*
>
> Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any Member of measures:
>
> …

[93]Panel Report, para. 675.

[94]*Ibid.*, para. 658.

[95]*Ibid.*, paras. 660-674.

[96]Korea's appellant's submission, paras. 166-180.

[97]*Ibid.*, paras. 181-193.

> (*d*) necessary to secure compliance with laws or regulations which are not inconsistent with the provisions of this Agreement, including those relating to customs enforcement, the enforcement of monopolies operated under paragraph 4 of Article II and Article XVII, the protection of patents, trade marks and copyrights, and the prevention of deceptive practices;

156. We note that in examining the Korean dual retail system under Article XX, the Panel followed the appropriate sequence of steps outlined in *United States – Standards for Reformulated and Conventional Gasoline* ("*United States – Gasoline*"). There we said:

> In order that the justifying protection of Article XX may be extended to it, the measure at issue must not only come under one or another of the particular exceptions -- paragraphs (a) to (j) -- listed under Article XX; it must also satisfy the requirements imposed by the opening clauses of Article XX. *The analysis is, in other words, two-tiered: first, provisional justification by reason of characterization of the measure under XX(g); second, further appraisal of the same measure under the introductory clauses of Article XX.*[98] (emphasis added)

The Panel concentrated its analysis on paragraph (d), that is, the first-tier analysis. Having found that the dual retail system did not fulfill the requirements of paragraph (d), the Panel correctly considered that it did not need to proceed to the second-tier analysis, that is, to examine the application in this case of the requirements of the introductory clause of Article XX.

157. For a measure, otherwise inconsistent with GATT 1994, to be justified provisionally under paragraph (d) of Article XX, two elements must be shown. First, the measure must be one designed to "secure compliance" with laws or regulations that are not themselves inconsistent with some provision of the GATT 1994. Second, the measure must be "necessary" to secure such compliance. A Member who invokes Article XX(d) as a justification has the burden of demonstrating that these two requirements are met.[99]

158. The Panel examined these two aspects one after the other. The Panel found, "despite … troublesome aspects, … that the dual retail system was put in place, at least in part, in order to secure compliance with the Korean legislation against deceptive practices to the extent that it serves to prevent acts inconsistent with the *Unfair Competition Act*."[100] It recognized that the system was established at a time when acts of misrepresentation of origin were widespread in the beef sector. It also acknowledged that the dual retail system "does appear to reduce the opportunities and thus the temptations for butchers to misrepresent [less expensive] foreign beef for [more expensive] domestic beef".[101] The parties did not appeal these findings of the Panel.

[98]Appellate Body Report, WT/DS2/AB/R, adopted 20 May 1996, p. 22. See also, Appellate Body Report, *United States – Import Prohibition of Certain Shrimp and Shrimp Products* ("*United States – Shrimp*"), WT/DS58/AB/R, adopted 6 November 1998, paras. 119-121.

[99]Appellate Body Report, *United States – Gasoline*, *supra*, footnote 98, pp. 22-23; Appellate Body Report, *United States – Measure Affecting Imports of Woven Wool Shirts and Blouses from India*, WT/DS33/AB/R, adopted 23 May 1997, pp. 14-16; Panel report, *United States – Section 337*, *supra*, footnote 69, para. 5.27.

[100]Panel Report, para. 658.

[101]*Ibid.*

159. We turn, therefore, to the question of whether the dual retail system is "necessary" to secure compliance with the *Unfair Competition Act*. Once again, we look first to the ordinary meaning of the word "necessary", in its context and in the light of the object and purpose of Article XX, in accordance with Article 31(1) of the *Vienna Convention*.

160. The word "necessary" normally denotes something "that cannot be dispensed with or done without, requisite, essential, needful".[102] We note, however, that a standard law dictionary cautions that:

> [t]his word must be considered in the connection in which it is used, as it is a word susceptible of various meanings. It may import absolute physical necessity or inevitability, or it may import that which is only convenient, useful, appropriate, suitable, proper, or conducive to the end sought. It is an adjective expressing degrees, and may express mere convenience or that which is indispensable or an absolute physical necessity".[103]

161. We believe that, as used in the context of Article XX(d), the reach of the word "necessary" is not limited to that which is "indispensable" or "of absolute necessity" or "inevitable". Measures which are indispensable or of absolute necessity or inevitable to secure compliance certainly fulfil the requirements of Article XX(d). But other measures, too, may fall within the ambit of this exception. As used in Article XX(d), the term "necessary" refers, in our view, to a range of degrees of necessity. At one end of this continuum lies "necessary" understood as "indispensable"; at the other end, is "necessary" taken to mean as "making a contribution to." We consider that a "necessary" measure is, in this continuum, located significantly closer to the pole of "indispensable" than to the opposite pole of simply "making a contribution to".[104]

162. In appraising the "necessity" of a measure in these terms, it is useful to bear in mind the context in which "necessary" is found in Article XX(d). The measure at stake has to be "necessary to ensure compliance with laws and regulations … , *including* those relating to customs enforcement, the enforcement of [lawful] monopolies … , the protection of patents, trade marks and copyrights, and the prevention of deceptive practices". (emphasis added) Clearly, Article XX(d) is susceptible of application in respect of a wide variety of "laws and regulations" to be enforced. It seems to us that a treaty interpreter assessing a measure claimed to be necessary to secure compliance of a WTO-consistent law or regulation may, in appropriate cases, take into account the relative importance of the common interests or values that the law or regulation to be enforced is intended to protect. The more vital or important those common interests or values are, the easier it would be to accept as "necessary" a measure designed as an enforcement instrument.

163. There are other aspects of the enforcement measure to be considered in evaluating that measure as "necessary". One is the extent to which the measure contributes to the realization of the end pursued, the securing of compliance with the law or regulation at issue. The greater the

[102] *The New Shorter Oxford English Dictionary*, (Clarendon Press, 1993), Vol. II, p. 1895.

[103] *Black's Law Dictionary*, (West Publishing, 1995), p. 1029.

[104] We recall that we have twice interpreted Article XX(g), which requires a measure "*relating* to the conservation of exhaustible natural resources". (emphasis added). This requirement is more flexible textually than the "necessity" requirement found in Article XX(d). We note that, under the more flexible "*relating to*" standard of Article XX(g), we accepted in *United States – Gasoline* a measure because it presented a "*substantial* relationship", (emphasis added) i.e., *a close and genuine* relationship of ends and means, with the conservation of clean air. *Supra*, footnote 98, p.19. In *United States – Shrimp* we accepted a measure because it was "*reasonably related*" to the protection and conservation of sea turtles. *Supra*, footnote 98, at para. 141.

contribution, the more easily a measure might be considered to be "necessary". Another aspect is the extent to which the compliance measure produces restrictive effects on international commerce[105], that is, in respect of a measure inconsistent with Article III:4, restrictive effects *on imported goods*. A measure with a relatively slight impact upon imported products might more easily be considered as "necessary" than a measure with intense or broader restrictive effects.

164. In sum, determination of whether a measure, which is not "indispensable", may nevertheless be "necessary" within the contemplation of Article XX(d), involves in every case a process of weighing and balancing a series of factors which prominently include the contribution made by the compliance measure to the enforcement of the law or regulation at issue, the importance of the common interests or values protected by that law or regulation, and the accompanying impact of the law or regulation on imports or exports.

165. The panel in *United States – Section 337* described the applicable standard for evaluating whether a measure is "necessary" under Article XX(d) in the following terms:

> It was clear to the Panel that a contracting party cannot justify a measure inconsistent with another GATT provision as "necessary" in terms of Article XX(d) if an alternative measure which it could reasonably be expected to employ and which is not inconsistent with other GATT provisions is available to it. By the same token, in cases where a measure consistent with other GATT provisions is not reasonably available, a contracting party is bound to use, among the measures reasonably available to it, that which entails the least degree of inconsistency with other GATT provisions.[106]

166. The standard described by the panel in *United States – Section 337* encapsulates the general considerations we have adverted to above. In our view, the weighing and balancing process we have outlined is comprehended in the determination of whether a WTO-consistent alternative measure which the Member concerned could "reasonably be expected to employ" is available, or whether a less WTO-inconsistent measure is "reasonably available".

167. The Panel followed the standard identified by the panel in *United States – Section 337*. It started scrutinizing whether the dual retail system is "necessary" under paragraph (d) of Article XX by stating:

> Korea has to convince the Panel that, contrary to what was alleged by Australia and the United States, no alternative measure consistent with the WTO Agreement is reasonably available at present in order to deal with misrepresentation in the retail market as to the origin of beef.[107]

168. The Panel first considered a range of possible alternative measures, by examining measures taken by Korea with respect to situations involving, or which could involve, deceptive practices

[105] We recall that the last paragraph of the Preamble of the GATT of 1994 reads as follows: "Being desirous of contributing to these objectives by entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade *and to the elimination of discriminatory treatment in international commerce*". (emphasis added)

[106] Panel report, *United States – Section 337*, *supra*, footnote 69, para. 5.26.

[107] Panel Report, para. 659.

similar to those which in 1989-1990 had affected the retail sale of foreign beef. The Panel found that Korea does not require a dual retail system in *related product areas*, but relies instead on traditional enforcement procedures. There is no requirement, for example, for a dual retail system separating domestic Hanwoo beef from domestic dairy cattle beef.[108] Nor is there a requirement for a dual retail system for any other meat or food product, such as pork or seafood.[109] Finally, there is no requirement for a system of separate restaurants, depending on whether they serve domestic or imported beef, even though approximately 45 per cent of the beef imported into Korea is sold in restaurants.[110] Yet, in all of these cases, the Panel found that there were numerous cases of fraudulent misrepresentation.[111] For the Panel, these examples indicated that misrepresentation of origin could, in principle, be dealt with "on the basis of basic methods … such as normal policing under the Korean *Unfair Competition Act*."[112]

169. Korea argues, on appeal, that the Panel, by drawing conclusions from the absence of any requirement for a dual retail system in related product areas, introduces an illegitimate "consistency test" into Article XX(d). For Korea, the proper test for "necessary" under Article XX(d):

> … is to see whether another means exists which is less restrictive than the one used and which can reach the objective sought. Whether such means will be applied *consistently* to other products or not is not a matter of concern for the necessity requirement under Article XX(d).[113]

170. Examining enforcement measures applicable to the same illegal behaviour relating to like, or at least similar, products does not necessarily imply the introduction of a "consistency" requirement into the "necessary" concept of Article XX(d). Examining such enforcement measures may provide useful input in the course of determining whether an alternative measure which could "reasonably be expected" to be utilized, is available or not.

171. The enforcement measures that the Panel examined were measures taken to enforce the same law, the *Unfair Competition Act*.[114] This law provides for penal and other sanctions[115] against any "unfair competitive act", which includes any:

[108]In 1998, domestic dairy cattle beef amounted to 12 percent of total beef consumption in Korea. Panel Report, para. 661.

[109]*Ibid.*, para. 662.

[110]*Ibid.*, para. 663.

[111]*Ibid.*, paras. 661-663, including footnote 366, in which the Panel noted "that the Livestock Times reported that the deceptive beef marketing practice was widespread in restaurants (where price differential was 58 per cent)".

[112]*Ibid.*, para. 664.

[113]Korea's appellant's submission, para. 167.

[114]In GATT case law, comparisons have been made between enforcement measures taken in different *jurisdictions*. In the *United States – Measures Affecting Alcoholic and Malt Beverages* case, the panel said that "[t]he fact that not all fifty states maintain discriminatory distribution systems indicates to the Panel that alternative measure for enforcement of state excise tax laws do indeed exist." Adopted 19 June 1992, BISD 39S/206, para. 5.43. In the *United States – Section 337* case, the panel "did not consider that a different scheme for imports alleged to infringe process patents is necessary, since many countries grant to their civil courts jurisdiction over imports of products manufactured abroad under processes protected by patents of the importing country". *Supra*, footnote 69, para. 5.28.

[115]*Unfair Competition Prevention and Business Secret Protection Act*, Article 2(1)(c), Article 8.

> *Act misleading the public to understand the place of origin of any goods* either by falsely marking that place on any commercial document or communication, in said goods or any advertisement thereof *or in any manner of misleading the general public*, or by selling, distributing, importing or exporting goods bearing such mark;[116] (emphasis added)

The language used in this law to define an "unfair competitive act" – "any manner of misleading the general public" – is broad. It applies to all the examples raised by the Panel – domestic dairy beef sold as Hanwoo beef, foreign pork or seafood sold as domestic product, as well as to imported beef served as domestic beef in restaurants.

172. The application by a Member of WTO-*compatible* enforcement measures to the same kind of illegal behaviour – the passing off of one product for another – for like or at least similar products, provides a suggestive indication that an alternative measure which could "reasonably be expected" to be employed may well be available. The application of such measures for the control of the same illegal behaviour for like, or at least similar, products raises doubts with respect to the objective *necessity* of a different, much stricter, and WTO-inconsistent enforcement measure. The Panel was, in our opinion, entitled to consider that the "examples taken from outside as well as within the beef sector indicate that misrepresentation of origin can indeed be dealt with on the basis of basic methods, consistent with the *WTO Agreement*, and thus less trade restrictive and less market intrusive, such as normal policing under the Korean *Unfair Competition Act*."[117]

173. Having found that possible alternative enforcement measures, consistent with the *WTO Agreement*, existed in other related product areas, the Panel went on to state that:

> … it is for Korea to demonstrate that such an alternative measure is not reasonably available or is unreasonably burdensome, financially or technically, taking into account a variety of factors including the domestic costs of such alternative measure, to ensure that consumers are not misled as to the origin of beef.[118]

174. The Panel proceeded to examine whether the alternative measures or "basic methods" – investigations, prosecutions, fines, and record-keeping – which were used in related product areas, were "reasonably available" to Korea to secure compliance with the *Unfair Competition Act.* The Panel concluded "that Korea has not demonstrated to the satisfaction of the Panel that alternative measures consistent with the WTO Agreement were not reasonably available".[119] Thus, as noted at the outset, the Panel found that the dual retail system was "a disproportionate measure not necessary to secure compliance with the Korean law against deceptive practices".[120] The dual retail system was, therefore, not justified under Article XX(d).[121]

[116]*Unfair Competition Prevention and Business Secret Protection Act*, Article 2(1)(c) (from translation provided by Korea as Exhibit 28 of its second submission to the Panel.

[117]Panel Report, para. 664.

[118]Panel Report, para. 665.

[119]*Ibid.*, para. 674.

[120]*Ibid.*, para 675.

[121]*Ibid.*

175. Korea also argues on appeal that the Panel erred in applying Article XX(d) because it did not "pay due attention to the level of enforcement sought."[122] For Korea, under Article XX(d), a panel must:

> … examine whether a means reasonably available to the WTO Member could have been used in order to reach the objective sought without putting into question the level of enforcement sought.[123]

For Korea, alternative measures must not only be reasonably available, but must also *guarantee* the level of enforcement sought which, in the case of the dual retail system, is the *elimination* of fraud in the beef retail market.[124] With respect to investigations, Korea argues that this tool can only reveal fraud *ex post*, whereas the dual retail system can combat fraudulent practices *ex ante*.[125] Korea contends that *ex post* investigations do not *guarantee* the level of enforcement that Korea has chosen, and therefore should not be considered. With respect to policing, Korea believes that this option is not "reasonably available", because Korea lacks the resources to police thousands of shops on a round-the-clock basis.

176. It is not open to doubt that Members of the WTO have the right to determine for themselves the level of enforcement of their WTO-consistent laws and regulations. We note that this has also been recognized by the panel in *United States – Section 337*, where it said: "The Panel wished to make it clear that this [the obligation to choose a reasonably available GATT-consistent or less inconsistent measure] does not mean that a contracting party could be asked to change its substantive patent law or its desired *level of enforcement* of that law …. ". (emphasis added) The panel added, however, the caveat that "provided that such law and such *level of enforcement* are the same for imported and domestically-produced products".[126]

177. We recognize that, in establishing the dual retail system, Korea could well have intended to secure a higher level of enforcement of the prohibition, provided by the *Unfair Competition Act*, of acts misleading the public *about the origin of beef* (domestic or imported) *sold by retailers*, than the level of enforcement of the same prohibition of the *Unfair Competition Act* with respect to *beef served in restaurants*, or the sale by *retailers* of *other meat or food products*, such as *pork or seafood*.

178. We think it unlikely that Korea intended to establish a level of protection that *totally eliminates* fraud with respect to the origin of beef (domestic or foreign) sold by retailers. The total elimination of fraud would probably require a total ban of imports. Consequently, we assume that in effect Korea intended to *reduce considerably* the number of cases of fraud occurring with respect to the origin of beef sold by retailers. The Panel did find that the dual retail system "does appear to reduce the opportunities and thus the temptations for butchers to misrepresent foreign beef for domestic beef".[127] And we accept Korea's argument that the dual retail system *facilitates* control and permits combatting fraudulent practices *ex ante*. Nevertheless, it must be noted that the dual retail system is only an *instrument* to achieve a significant reduction of violations of the *Unfair Competition Act*. Therefore, the question remains whether other, conventional and WTO-consistent instruments can not reasonably be expected to be employed to achieve the same result.

[122]Korea's appellant's submission, para. 182.

[123]*Ibid.*, para. 181.

[124]*Ibid.*, paras. 181, 185.

[125]*Ibid.*, para. 192.

[126]Panel report, *United States – Section 337*, *supra*, footnote 69, para. 5.26.

[127]Panel Report, para. 658.

179. Turning to investigations, the Panel found that Korea, in the past, had been able to distinguish imported beef from domestic beef, and had, in fact, published figures on the amount of imported beef fraudulently sold as domestic beef. This meant that Korea was able, in fact, to detect fraud.[128] On fines, the Panel found that these could be an effective deterrent, as long as they outweighed the potential profits from fraud.[129] On record-keeping, the Panel felt that if beef traders at all levels were required to keep records of their transactions, then effective investigations could be carried out.[130] Finally, on policing, the Panel noted that Korea had not demonstrated that the costs would be too high.[131] For all these reasons, the Panel considered "that Korea has not demonstrated to the satisfaction of the Panel that alternative measures consistent with the WTO Agreement were not reasonably available".[132] Thus, as already noted, the Panel found that the dual retail system was "a disproportionate measure not necessary to secure compliance with the Korean law against deceptive practices".[133]

180. We share the Panel's conclusion. We are not persuaded that Korea could not achieve its desired level of enforcement of the *Unfair Competition Act* with respect to the origin of beef sold by retailers by using conventional WTO-consistent enforcement measures, if Korea would devote more resources to its enforcement efforts on the beef sector. It might also be added that Korea's argument about the lack of resources to police thousands of shops on a round-the-clock basis is, in the end, not sufficiently persuasive. Violations of laws and regulations like the Korean *Unfair Competition Act* can be expected to be routinely investigated and detected through selective, but well-targeted, controls of potential wrongdoers. The control of records will assist in selecting the shops to which the police could pay particular attention.

181. There is still another aspect that should be noted relating to both the method actually chosen by Korea – its dual retail system for beef – and alternative traditional enforcement measures. Securing through conventional, WTO-consistent measures a higher level of enforcement of the *Unfair Competition Act* with respect to the retail sale of beef, could well entail higher enforcement costs for the national budget. It is pertinent to observe that, through its dual retail system, Korea has in effect shifted all, or the great bulk, of these potential costs of enforcement (translated into a drastic reduction of competitive access to consumers) to imported goods and retailers of imported goods, instead of evenly distributing such costs between the domestic and imported products. In contrast, the more conventional, WTO-consistent measures of enforcement do not involve such onerous shifting of enforcement costs which ordinarily are borne by the Member's public purse.

182. For these reasons, we uphold the conclusion of the Panel that Korea has not discharged its burden of demonstrating under Article XX(d) that alternative WTO-consistent measures were not "reasonably available" in order to detect and suppress deceptive practices in the beef retail sector[134], and that the dual retail system is therefore not justified by Article XX(d).[135]

183. Korea further argues, on appeal, that the Panel did not make a separate finding on whether the display sign requirement was justified by Article XX(d), and requests that, should the Appellate Body

[128]*Ibid.*, para. 668.

[129]Panel Report, para. 669

[130]*Ibid.*, para. 672.

[131]*Ibid.*, para. 673.

[132]*Ibid.*, para. 674.

[133]*Ibid.*, para. 675.

[134]Panel Report, para. 674.

[135]*Ibid.*, para. 675.

uphold the Panel's finding that the sign requirement was inconsistent with Article III:4, it should proceed to consider the issue of its justification under Article XX(d).[136]

184. We recall that Korean law requires an imported beef retailer to display a sign reading "Specialized Imported Beef Store".[137] Since the Panel correctly regarded the sign requirement as merely ancillary to the dual retail system, we consider that it is unnecessary to examine separately whether the display sign requirement can be justified under Article XX(d).

185. In sum, we uphold the Panel's conclusion that the dual retail system, which is inconsistent with Article III:4, is not justified under Article XX(d) of the GATT 1994.

VII. Findings and Conclusions

186. For the reasons set out in this Report, the Appellate Body:

(a) upholds the Panel's conclusion that, under the Panel's terms of reference, the Panel was required to examine, pursuant to the complaining parties' claims, the commitment levels in Korea's Schedule and Annex 3 of the *Agreement on Agriculture;*

(b) upholds the Panel's conclusion that Korea's domestic support for beef for 1997 and 1998 was not correctly calculated pursuant to Article 1(a)(ii) and Annex 3 of the *Agreement on Agriculture*;

(c) reverses the Panel's finding on recalculated amounts of Korea's domestic support for beef in 1997 and 1998, as the Panel used, for these recalculations, a methodology inconsistent with Article 1(a)(ii) and Annex 3 of the *Agreement on Agriculture*; and reverses, therefore, the Panel's following conclusions, based on these recalculated amounts: (i) that Korea's domestic support for beef in 1997 and 1998 exceeded the *de minimis* level contrary to Article 6 of the *Agreement on Agriculture*; (ii) that Korea's failure to include Current AMS for beef in Korea's Current Total AMS was contrary to Article 7.2(a) of that Agreement; and (iii) that Korea's total domestic support for 1997 and 1998 exceeded Korea's commitment levels contrary to Article 3.2 of the *Agreement on Agriculture*;

(d) is unable, in view of the insufficient factual findings made by the Panel, to complete the legal analysis of: (i) whether Korea's domestic support for beef exceeds the *de minimis* level contrary to Article 6 of the *Agreement on Agriculture*; (ii) whether the failure to include Current AMS for beef in Korea's Current Total AMS was contrary to Article 7.2(a) of that Agreement; and (iii) whether Korea's total domestic support for 1997 and 1998 exceeded Korea's commitment levels contrary to Article 3.2 of the *Agreement on Agriculture*;

(e) upholds the Panel's ultimate conclusion that Korea's dual retail system for beef is inconsistent with Article III:4 of the GATT 1994;

(f) upholds the Panel's conclusion that Korea's dual retail system for beef is not justified under Article XX(d) of the GATT 1994; and

[136]Korea's appellant's submission, paras. 217-223.

[137]Panel Report, paras. 642-643.

(g) finds it unnecessary to pass upon separately whether the ancillary sign requirement is consistent with Article III:4 or justified under Article XX(d) of the GATT 1994.

187. The Appellate Body recommends that the DSB request that Korea bring its measures found in this Report, and in the Panel Report as modified by this Report, to be inconsistent with Korea's obligations under the GATT 1994 and the *Agreement on Agriculture* into conformity with its obligations under those Agreements.

I. Introduction

1. The United States and Brazil each appeals certain issues of law and legal interpretations developed in the Panel Report, *United States – Subsidies on Upland Cotton* (the "Panel Report").[1] The Panel was established on 18 March 2003 to consider claims by Brazil regarding various United States measures[2] that Brazil alleged constituted actionable subsidies within the meaning of Part III of the *Agreement on Subsidies and Countervailing Measures* (the "*SCM Agreement*"), prohibited subsidies within the meaning of Part II of the *SCM Agreement*, export subsidies within the scope of the *Agreement on Agriculture*, and/or subsidies actionable under Article XVI of the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994"). Brazil also alleged that certain of these measures were inconsistent with Article III:4 of the GATT 1994. The United States argued that some of the measures were domestic support measures that were exempt from certain actions by virtue of paragraphs (a) and (b) of Article 13 of the *Agreement on Agriculture*.

2. The Panel Report was circulated to Members of the World Trade Organization (the "WTO") on 8 September 2004. In paragraph 7.194 of its Report, the Panel made the following findings with respect to whether certain measures fell within its terms of reference:

[1]WT/DS267/R, 8 September 2004.

[2]Brazil made claims in respect of marketing loan program payments, user marketing (Step 2) payments, production flexibility contract payments, market loss assistance payments, direct payments, counter-cyclical payments, crop insurance payments, cottonseed payments, export credit guarantees and the FSC Repeal and Extraterritorial Income Exclusion Act of 2000 (Public Law 106-519) (the "ETI Act of 2000"). Brazil also made claims regarding legislation and regulations underlying certain of these programs. All of these measures are described more fully in paragraphs 7.200 to 7.250 of the Panel Report and are discussed further in the relevant sections of this Report.

The Panel rules that the following measures, as addressed in document WT/DS267/7, are within its terms of reference:

(i) export credit guarantees to facilitate the export of United States upland cotton, and other eligible agricultural commodities;

(ii) production flexibility contract payments and market loss assistance payments[.][3]

3. The Panel also ruled, in paragraph 7.196 of its Report, that:

> ... in its request for consultations in document WT/DS267/1, Brazil provided a statement of available evidence with respect to export credit guarantees under the GSM 102, GSM 103 and SCGP programmes relating to upland cotton and eligible agricultural commodities other than upland cotton, as required by Article 4.2 of the *SCM Agreement*.

4. With respect to the substantive issues raised by the parties, the Panel set out the following conclusions in paragraph 8.1 of its Report:

(a) Article 13 of the *Agreement on Agriculture* is not in the nature of an affirmative defence;

(b) PFC payments[4], DP payments[5], and the legislative and regulatory provisions which establish and maintain the DP programme, do not satisfy the condition in paragraph (a) of Article 13 of the *Agreement on Agriculture*;

[3]The Panel also ruled that production flexibility contract payments, market loss assistance payments, direct payments and counter-cyclical payments to upland cotton producers with respect to non-upland cotton base acres; cottonseed payments under both Public Law 106-224 and Public Law 107-25 (for the 2000 crop); storage payments and interest subsidies that implement the marketing loan program; and payments under programs and provisions within the Panel's terms of reference made after the date on which the Panel was established, were all within its terms of reference. (See Panel Report, para. 7.194(iii)-(vi)) The Panel also ruled that certain other measures fell outside of its terms of reference: see Panel Report, para. 7.195

[4]Production flexibility contract payments. Production flexibility contract payments are described by the Panel in paras. 7.212 ff of the Panel Report and are discussed further *infra*, para. 251.

[5]Direct payments. Direct payments are described by the Panel in paras. 7.218 ff of the Panel Report and are discussed further *infra*, para. 312.

(c) United States domestic support measures considered in Section VII:D of this report[6] grant support to a specific commodity in excess of that decided during the 1992 marketing year and, therefore, do not satisfy the conditions in paragraph (b) of Article 13 of the *Agreement on Agriculture* and, therefore, are not exempt from actions based on paragraph 1 of Article XVI of the *GATT 1994* or Articles 5 and 6 of the *SCM Agreement*;

(d) concerning United States export credit guarantees under the GSM 102[7], GSM 103[8] and SCGP[9] export credit guarantee programmes:

(i) in respect of exports of upland cotton and other unscheduled agricultural products supported under the programmes, and in respect of one scheduled product (rice):

- United States export credit guarantees under the GSM 102, GSM 103 and SCGP export credit guarantee programmes are export subsidies applied in a manner which results in circumvention of United States' export subsidy commitments, within the meaning of Article 10.1 of the *Agreement on Agriculture* and they are therefore inconsistent with Article 8 of the *Agreement on Agriculture*;

- as they do not conform fully to the provisions of Part V of the Agreement on Agriculture, they do not satisfy the condition in paragraph (c) of Article 13 of the *Agreement on Agriculture* and, therefore, are not exempt from actions based on Article XVI of the *GATT 1994* or Articles 3, 5 and 6 of the *SCM Agreement*;

[6]In Section VII:D of the Panel Report, the Panel considered the following measures for purposes of calculating support during the implementation period in which Article 13 of the *Agreement on Agriculture* applies: marketing loan program payments, user marketing (Step 2) payments to domestic users (and not to exporters), production flexibility contract payments, market loss assistance payments, direct payments, counter-cyclical payments, crop insurance payments, and cottonseed payments for the 1999, 2000, and 2002 crops of cottonseed. (Panel Report, para. 7.537 and footnote 695 thereto)

[7]General Sales Manager 102 ("GSM 102"). The United States' export credit guarantee programs, including the GSM 102 program, are described by the Panel in paras. 7.236 ff of the Panel Report and are discussed further *infra*, paras. 586-587.

[8]General Sales Manager 103 ("GSM 103"). The United States' export credit guarantee programs, including the GSM 103 program, are described by the Panel in paras. 7.236 ff of the Panel Report and are discussed further *infra*, paras. 586 and 588.

[9]Supplier Credit Guarantee Program ("SCGP"). The United States' export credit guarantee programs, including the SCGP program, are described by the Panel in paras. 7.236 ff of the Panel Report and are discussed further *infra*, paras. 586 and 589.

- United States export credit guarantees under the GSM 102, GSM 103 and SCGP export credit guarantee programmes are provided by the United States government at premium rates which are inadequate to cover long-term operating costs and losses of the programmes within the meaning of item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement*, and therefore constitute *per se* export subsidies prohibited by Articles 3.1(a) and 3.2 of the *SCM Agreement*.

(ii) however, in respect of exports of unscheduled agricultural products not supported under the programmes and other scheduled agricultural products:

- the United States has established that export credit guarantees under the GSM 102, GSM 103 and SCGP export credit guarantee programmes have not been applied in [a] manner which either results in, or which threatens to lead to, circumvention of United States export subsidy commitments within the meaning of Article 10.1 and that they therefore are not inconsistent with Article 8 of the *Agreement on Agriculture*;

- in these circumstances, and as Brazil has also not made a prima facie case before this Panel that the programmes do not conform fully to the provisions of Part V of the *Agreement on Agriculture*, this Panel must treat them as if they are exempt from actions based on Article XVI of the *GATT 1994* and Article 3 of the *SCM Agreement* in this dispute.

(e) concerning section 1207(a) of the FSRI Act of 2002[10] providing for user marketing (Step 2) payments to exporters of upland cotton:

(i) section 1207(a) of the FSRI Act of 2002 providing for user marketing (Step 2) payments to exporters of upland cotton is an export subsidy, listed in Article 9.1(a) of the *Agreement on Agriculture*, provided in respect of upland cotton, an unscheduled product. It is, therefore, inconsistent with the United States' obligations under Articles 3.3 and 8 of the *Agreement on Agriculture;*

[10]Farm Security and Rural Investment Act of 2002 (the "FSRI Act of 2002"); Public Law 107-171.

(ii) as it does not conform fully to the provisions of Part V of the *Agreement on Agriculture*, it does not satisfy the condition in paragraph (c) of Article 13 of the *Agreement on Agriculture* and, therefore, is not exempt from actions based on Article XVI of the *GATT 1994* or Articles 3, 5 and 6 of the *SCM Agreement;*

(iii) section 1207(a) of the FSRI Act of 2002 providing for user marketing (Step 2) payments to exporters of upland cotton is an export subsidy prohibited by Articles 3.1(a) and 3.2 of the *SCM Agreement*.

(f) concerning section 1207(a) of the FSRI Act of 2002 providing for user marketing (Step 2) payments to domestic users of upland cotton: it is an import substitution subsidy prohibited by Articles 3.1(b) and 3.2 of the *SCM Agreement*;

(g) concerning serious prejudice to the interests of Brazil:

(i) the effect of the mandatory price-contingent United States subsidy measures – marketing loan programme payments, user marketing (Step 2) payments, MLA payments[11] and CCP payments[12] -- is significant price suppression in the same world market within the meaning of Article 6.3(c) of the *SCM Agreement* constituting serious prejudice to the interests of Brazil within the meaning of Article 5(c) of the *SCM Agreement*;

(ii) however, Brazil has not established that:

- the effect of PFC payments, DP payments and crop insurance payments is significant price suppression in the same world market within the meaning of Article 6.3(c) of the *SCM Agreement* constituting serious prejudice to the interests of Brazil within the meaning of Article 5(c) of the *SCM Agreement*; or

[11]Market loss assistance payments. Market loss assistance payments are described by the Panel in paras. 7.216 ff of the Panel Report and are discussed further *infra*, para. 251 and footnote 368.

[12]Counter-cyclical payments. Counter-cyclical payments are described by the Panel in paras. 7.223 ff of the Panel Report and are discussed further *infra*, footnote 370.

- the effect of the United States subsidy measures listed in paragraph 7.1107 of Section VII:G of this report[13] is an increase in the United States' world market share within the meaning of Article 6.3(d) of the *SCM Agreement* constituting serious prejudice within the meaning of Article 5(c) of the *SCM Agreement*.

(h) concerning the ETI Act of 2000:

(i) Brazil has not made a prima facie case before this Panel that the ETI Act of 2000 and alleged export subsidies provided thereunder are inconsistent with Articles 10.1 and 8 of the *Agreement on Agriculture* in respect of upland cotton;

(ii) with respect to the condition in Article 13(c)(ii) of the *Agreement on Agriculture*, as Brazil has also not made a prima facie case before this Panel that they do not conform fully to the provisions of Part V of the *Agreement on Agriculture* in respect of upland cotton, this Panel must treat them as if they are exempt from actions based on Article XVI of the *GATT 1994* and Article 3 of the *SCM Agreement* in this dispute. (footnotes omitted)

5. Based on these conclusions, the Panel recommended that the United States bring the measures listed in paragraphs 8.1(d)(i) and 8.1(e) of the Panel Report into conformity with the *Agreement on Agriculture*[14]; and withdraw the prohibited subsidies listed in paragraphs 8.1(d)(i), 8.1(e) and 8.1(f) of the Panel Report without delay and, at the latest, within six months of the date of adoption of the Panel Report by the Dispute Settlement Body (the "DSB") or 1 July 2005 (whichever is earlier).[15] With respect to the "mandatory price-contingent United States subsidy measures" addressed in paragraph 8.1(g)(i) of the Panel Report, the Panel noted that, pursuant to Article 7.8 of the *SCM Agreement*, "upon adoption of [the Panel Report] the United States is under an obligation to 'take appropriate steps to remove the adverse effects or ... withdraw the subsidy'."[16]

6. On 18 October 2004, the United States notified the DSB of its intention to appeal certain issues of law covered in the Panel Report and certain legal interpretations developed by the Panel, pursuant to paragraph 4 of Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU), and filed a Notice of Appeal[17] pursuant to Rule 20 of the

[13]The Panel listed the following measures in paragraph 7.1107 of its Report: "(i) user marketing (Step 2) payments to domestic users and exporters; (ii) marketing loan programme payments; (iii) production flexibility contract payments; (iv) market loss assistance payments; (v) direct payments; (vi) counter-cyclical payments; (vii) crop insurance payments; (viii) cottonseed payments for the 2000 crop; and (ix) legislative and regulatory provisions currently providing for the payment of measures in (i), (ii), (v), (vi) and (vii) above".

[14]Panel Report, para. 8.3(a).

[15]*Ibid.*, paras. 8.3(b) and 8.3(c).

[16]*Ibid.*, para. 8.3(d).

[17]WT/DS267/17, 18 October 2004, attached as Annex 1 to this Report.

Working Procedures for Appellate Review (the "*Working Procedures*").[18] On 28 October 2004, the United States filed its appellant's submission.[19] On 2 November 2004, Brazil filed an other appellant's submission.[20] On 16 November 2004, Brazil and the United States each filed an appellee's submission.[21]

7. On 16 November 2004, Argentina, Australia, Canada, China, the European Communities, and New Zealand each filed a third participant's submission, and Benin and Chad filed a joint third participants' submission.[22] India, Pakistan, Paraguay, Venezuela, and the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu notified the Appellate Body of their intention to appear at the oral hearing.[23]

8. After consultation with the Appellate Body Secretariat, Brazil and the United States noted, in letters filed on 10 December 2004, that it would not be possible for the Appellate Body to circulate its Report in this appeal within the 90-day time limit referred to in Article 17.5 of the DSU. Brazil and the United States agreed that additional time was needed for several reasons: the issues arising in this appeal were particularly numerous and complex compared to prior appeals, which increased the burden on the Appellate Body and WTO translation services; WTO translation services were unavailable during the WTO holiday period; and the Appellate Body was likely to be considering two or three other appeals during the same period. Brazil and the United States accordingly confirmed that they would deem the Appellate Body Report in this proceeding, issued no later than 3 March 2005, to be an Appellate Body Report circulated pursuant to Article 17.5 of the DSU.[24]

9. The oral hearing in this appeal was held on 13-15 December 2004. The participants and third participants presented oral arguments (with the exception of Pakistan, Paraguay, and Venezuela) and responded to questions posed by the Members of the Division hearing the appeal.

[18]WT/AB/WP/4, 1 May 2003. Revised *Working Procedures* were circulated by the Appellate Body during the course of these proceedings (WT/AB/WP/5, 4 January 2005). These revised *Working Procedures*, however, apply only to appeals initiated after 1 January 2005 and therefore did not apply to this appeal.

[19]Pursuant to Rule 21(1) of the *Working Procedures*. In a letter dated 1 November 2004, Brazil, without requesting action by the Appellate Body, drew attention to the failure by the United States to submit its appellant's submission in a timely fashion. Brazil observed that the United States' appellant's submission was submitted on 28 October 2004 after the deadline of 5:00 p.m. that had been established by the Division in the *Working Schedule* issued pursuant to Rule 26 of the *Working Procedures*.

[20]Pursuant to Rule 23(1) of the *Working Procedures*.

[21]Pursuant to Rules 22 and 23(3) of the *Working Procedures*, respectively.

[22]Pursuant to Rule 24(1) of the *Working Procedures*.

[23]Pursuant to Rule 24 of the *Working Procedures*. The notifications were received on the following dates: India, 16 November 2004; Pakistan, 17 November 2004; Paraguay, 17 November 2004; Venezuela, 17 November 2004; and the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu, 18 November 2004.

[24]On 16 December 2004, the Appellate Body notified the Chair of the DSB that the expected date of circulation of its Report was 3 March 2005. (WT/DS267/18, 20 December 2004)

II. Arguments of the Participants and the Third Participants

A. *Claims of Error by the United States – Appellant*

1. Domestic Support

(a) Terms of Reference – Expired Measures

10. The United States contends that the Panel was wrong to reject its argument that payments under the expired production flexibility contract and market loss assistance programs were outside the Panel's terms of reference. The United States asks the Appellate Body to reverse the Panel's finding because these measures had expired before Brazil requested consultations.

11. Article 4.2 of the DSU provides that consultations are to cover "any representations made by another Member *concerning measures affecting the operation of any covered agreement* taken within the territory of the former".[25] The United States submits that measures that have expired before a request for consultations cannot be measures that are "affecting the operation of any covered agreement" at the time the request is made; consequently, they cannot be measures within the scope of the "dispute" referred to in Article 4.7, with respect to which a complaining Member can request the establishment of a panel. It was common ground that the legislation authorizing production flexibility contract payments and market loss assistance payments expired before Brazil's consultation and panel requests. They thus cannot have been within the scope of consultations under Article 4.2.

12. In response to the Panel's concern that the United States' position would mean that subsidy payments made in the past might never be the subject of challenge in WTO dispute settlement, the United States distinguishes between recurring and non-recurring subsidies. A non-recurring subsidy is a type of subsidy the benefits of which are allocated to future production. As such, a non-recurring subsidy can be regarded as continuing in existence beyond the period during which it is granted, and may continue to be actionable even after the authorizing program or legislation has expired. A recurring subsidy, by contrast, is typically provided year after year and is provided for current rather than future production. Once production has occurred and a measure has been replaced or superseded, there would no longer be any measure in existence to challenge. Market loss assistance and production flexibility contract payments were both subsidies paid for particular fiscal or crop years. As such, the benefit of these subsidies should have been attributed only to the particular year of payment and should not have been attributed to subsequent years. Thus, by the time of Brazil's consultation and panel requests[26], the only measure to consult upon and at issue under the DSU was the 2002 marketing year production flexibility contract payments; the other payments were all outside the Panel's terms of reference.

13. According to the United States, the Panel's conclusion is also inconsistent with Article 6.2 of the DSU, which requires that a panel request "identify the specific measures at issue". A measure that has expired cannot be a measure that is "at issue". This is confirmed by the context provided by Article 3.7 of the DSU, which contemplates the withdrawal of measures found to be inconsistent with the covered agreements, and Article 19.1 of the DSU, which contemplates a measure that "is inconsistent" with a covered agreement.

14. In addition to appealing the Panel's finding that payments under the expired production flexibility contract and market loss assistance programs were within its terms of reference, the United States lists this Panel finding as an example of the Panel's failure to meet the requirements of Article 12.7 of the DSU, which requires panels to set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind its findings.

(b) Article 13(a) of the *Agreement on Agriculture* – Planting Flexibility Limitations

15. The United States appeals the Panel's finding that production flexibility contract payments, direct payments, and the legislative and regulatory provisions that establish and maintain the direct payment program[27] are not exempt from actions by virtue of paragraph (a) of Article 13 of the *Agreement on Agriculture* (the "peace clause"). The United States observes that the sole basis for this finding was the Panel's conclusion that these measures do not conform fully to paragraph 6(b) of Annex 2 of the *Agreement on Agriculture* (the "green box")[28], which conditions green box coverage and exemption under the peace clause upon the amount of payments not being related to the type or volume of production. The United States argues that, to make this finding, the Panel had to find that banning a recipient from producing a certain range of products was the same as conditioning the amount of payment on the type of production. The United States submits that paragraph 6(b) of Annex 2 permits such a partial ban.

16. The United States points out that, in order to receive production flexibility contract payments or direct payments, a producer is not required to produce a particular (or, indeed, any) crop. Instead, payments are based on a farm's historical acreage and yields during a base period. Farmers may plant any commodity or crop, subject to limitations concerning the planting of fruits and vegetables (and wild rice in the case of direct payments).[29] Where fruits, vegetables, or wild rice are produced, payments are eliminated or reduced, subject to certain exceptions.

17. Although the ordinary meaning of the term "related to" implies a relation or connection that could be positive or negative, the ordinary meaning does not identify which type of connection is meant under paragraph 6(b) of Annex 2. Turning to the context, the United States notes that this paragraph speaks of the "amount of such payments" not being related to or based on the type or volume of production. The United States argues that "[t]he Panel assumes that the 'amount of such payments' can be related to the current type of production (that is, of fruits or vegetables) because in some circumstances a recipient that produces fruits or vegetables receives less payment than that recipient otherwise would have been entitled to."[30] However, given that the payment relating to fruits, vegetables, or wild rice is zero, the "amount of such payments" is not related to fruit, vegetable, or wild rice production, because for the acres concerned, there is no payment at all. As regards the phrase "production ... undertaken by the producer" in paragraph 6(b), the United States notes that the term "undertaken" means, *inter alia*, to "attempt". In this case, the planting flexibility limitations ban a recipient from producing a certain range of products. This does not relate to the production "attempted"; rather, it relates to the type of production *not* attempted. Taken together, the ordinary meaning of the terms "amount of such payments" and "production ... undertaken" indicate that

[25]United States' appellant's submission, para. 501. (emphasis added by the United States)

[26]Request for Consultations by Brazil, WT/DS267/1, G/L/571, G/SCM/D49/1, G/AG/GEN/54, 3 October 2002; Request for the Establishment of a Panel by Brazil, WT/DS267/7, 7 February 2003.

[27]Panel Report, para. 7.388.

[28]Paragraph 6(b) of Annex 2 to the *Agreement on Agriculture* provides that:

> The amount of such payments in any given year shall not be related to, or based on, the type or volume of production (including livestock units) undertaken by the producer in any year after the base period.

[29]Panel Report, paras. 7.376-7.382.

[30]United States' appellant's submission, para. 26 (referring to Panel Report, para. 7.383).

payments are not "related to" current production within the meaning of paragraph 6(b) when a Member conditions payments on a recipient not producing certain products.

18. According to the United States, this interpretation is consistent with the "fundamental requirement" set out in paragraph 1 of Annex 2 of the *Agreement on Agriculture* that measures exempted from reduction commitments "have no, or at most minimal, trade-distorting effects or effects on production". The United States submits that "a condition that a recipient not produce certain products serves the fundamental requirement of Annex 2".[31] The United States further argues that the effect of the planting flexibility limitations at issue is minimal and does not result in increased production, pointing to evidence on the record showing that 47 per cent of farms receiving production flexibility contract payments or direct payments in the 2002 marketing year planted no upland cotton at all. Indeed, in finding that Brazil had not established that the effect of the United States' decoupled income support payments was significant price suppression, the Panel implicitly found that production flexibility contract payments and direct payments do not have more than minimal effects on production. For the United States, an explicit decision not to support a particular type of production does not relate the amount of payments to the type of production undertaken by the producer. Rather, such a decision serves the fundamental requirement that "green box" measures have no more than minimal trade-distorting effects, because a measure that conditions payment on not producing something does not create production inducements.

19. The United States also submits that the context provided by paragraph 6(e) confirms its reading of paragraph 6(b). Paragraph 6(e) provides: "[n]o production shall be required in order to receive such payments"; it does not preclude a Member from requiring non-production. A proper reading reveals that paragraphs 6(b) and 6(e) serve different purposes. As a Member may, under paragraph 6(e), require a recipient not to produce, it would not make sense to then prohibit a Member, under paragraph 6(b), from making the amount of payment contingent on fulfilling the requirement not to produce.

20. Furthermore, the United States argues that the Panel was incorrect to find contextual support for its interpretation of paragraph 6(b) in paragraphs 11(b) and 11(e) of Annex 2. Paragraphs 6(b) and 11(b) contain similar requirements about not relating payments to the type or volume of production, but paragraph 11(b) refers explicitly to paragraph 11(e), which permits requirements not to produce a particular product. The United States maintains that the context in which paragraphs 6(b) and 11(b) appear is very different. In the context of paragraph 6, an explicit authorization of requirements not to produce is not required as it is already implicit within the provisions. The United States notes that paragraph 11 pertains to payments "to assist the financial or physical restructuring of a producer's operations".[32] Although such aid is for restructuring of operations that will continue to produce, paragraph 11(e) imposes a constraint on the degree to which a government can interfere in the form that restructuring will take, by requiring that payments must not "mandate or in any way designate the agricultural products to be produced". A requirement not to produce certain products could be understood to fall within the prohibition in paragraph 11(e) against "in any way" designating the products to be produced. In order to allow such requirements, paragraph 11(e) clarifies that they are permitted. The United States submits that, in the light of the broad prohibition in paragraph 11(e), the requirement in paragraph 11(b) could be understood to *preclude* conditioning payment on *not* producing certain products, as this could be understood to be designating, in some way, the products to be produced. According to the United States, this would undermine the prohibition in paragraph 11(e). The cross-reference in paragraph 11(b) to the exception in paragraph 11(e) thus simply serves to make clear that conditioning payments on *not* producing does not conflict with the prohibition under paragraph 11(e) on designating in any way the products to be produced.

[31]United States' appellant's submission, para. 22.

[32]United States' appellant's submission, para. 45 (quoting paragraph 11(a) of Annex 2 to the *Agreement on Agriculture*).

21. In addition, the United States submits that the Panel's reading of paragraph 6(b) would require payments even if a recipient's production was illegal. Therefore, a Member would be prohibited from reducing or eliminating payments for prohibited types of production such as narcotic crops, unapproved biotech varieties, or environmentally damaging production.

(c) Article 13(b) of the *Agreement on Agriculture*

22. The United States appeals the Panel's finding that the United States' non-green box domestic support measures are not exempt from actions by virtue of paragraph (b) of Article 13 of the *Agreement on Agriculture*. The Panel found that those measures failed to satisfy, for each marketing year from 1999-2002, the proviso to Article 13(b)(ii), which reads "provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year".

(i) *Interpretation of "support to a specific commodity"*

23. The United States contends that the Panel erred in interpreting the phrase "support to a specific commodity" in Article 13(b)(ii). The ordinary meaning of this phrase encompasses "'assistance' or 'backing' 'specially ... pertaining to a particular' 'agricultural crop' or ... for a 'precise, exact, definite' 'agricultural crop'".[33] The ordinary meaning implies that support to a specific commodity excludes support that is not for a precise, exact, definite agricultural crop.

24. Context for interpreting the phrase "support to a specific commodity" may be found in other provisions of the *Agreement on Agriculture* that contain the terms "support", "specific" and "commodity". Annex 3 deals with "Calculation of the Aggregate Measurement of Support" ("AMS"). Paragraph 1 of that Annex clarifies that two types of support are to be calculated: first, support is calculated "on a product-specific basis", and, second, "[s]upport which is non-product specific shall be totalled into one non-product-specific AMS in total monetary terms". Article 1(a) of the *Agreement on Agriculture* contains this same distinction between "support ... provided for an agricultural product in favour of the producers of the basic agricultural product" and a residual category of "non-product-specific ... support". Article 1(h) also makes this distinction by dividing total support into "non-product-specific support" and "support for basic agricultural products". For the United States, the terms "support for basic agricultural products" in Article 1(h) and "support ... provided for an agricultural product in favour of the producers of the basic agricultural product" in Article 1(a) are virtually synonymous with the phrase "support for a specific commodity" in Article 13(b)(ii). The context of these provisions thus suggests that this phrase also means product-specific support.

25. The Panel relied on the different choice of specific words in Articles 1(a) and 13(b)(ii) in finding that the former was not pertinent to the interpretation of the latter. The United States argues, however, that the concept of product-specific support is expressed in different terms in different places in the *Agreement on Agriculture*. Indeed, nowhere in the Agreement is the precise phrase "product-specific support" used, although the Panel had no difficulty in finding that such a concept exists. Thus, the fact that the phrase "product-specific support" was not used in Article 13 does not prevent an interpretation that the concept nevertheless applies.

26. The United States disagrees with the Panel's reasoning that the categories of product-specific and non-product-specific support are not pertinent to the analysis under Article 13(b) because the

[33]United States' appellant's submission, para. 85 (quoting *The New Shorter Oxford English Dictionary*, L. Brown (ed.) (Clarendon Press, 1993), Vol. 2, pp. 2972 and 3152).

proviso to Article 13(b)(ii) begins with the phrase "such measures", which refers to all the domestic support measures falling under Article 6 identified in the chapeau to Article 13(b), and not just to product-specific and non-product-specific support subject to reduction commitments. The United States notes that the Panel itself recognized that certain domestic support measures falling under Article 6 could be excluded from the comparison of support under Article 13(b)(ii): the Panel's approach "exclud[es] all other support, which either grants support to other specific commodities or does not grant support to any specific commodity".[34] The Panel also noted that "Brazil acknowledges this implicitly in that it does not challenge very widely available support, such as infrastructure or irrigation subsidies, some of which, presumably, deliver support to upland cotton either directly or indirectly".[35] Thus the mere fact that all domestic support measures falling under Article 6 are identified in the chapeau of Article 13(b) does not resolve the issue of whether a particular measure grants "support to a specific commodity".

27. The United States finds relevant context in Articles 3 and 6 of the *Agreement on Agriculture*. Under these provisions, a Member must comply with its domestic support reduction commitments. These commitments, however, are expressed on a total aggregate basis with no product-specific caps on support. Because there are no product-specific caps, a Member can comply with its overall reduction commitments while increasing support to a particular agricultural commodity. Article 13(b) provides shelter from actions for domestic support measures that conform to the reduction commitments. However, Members recognized that an increase in product-specific support, even within overall reduction commitment levels, could present an enhanced risk of production or trade effects. The proviso to Article 13(b)(ii) thus makes the exemption it provides conditional upon a Member not shifting support between commodities such that the level of product-specific support exceeds that decided for any one commodity in the 1992 marketing year.

28. Turning to the measures at issue, the United States observes that the Panel's reasoning means that payments to producers that do not produce cotton at all are deemed to be "support to upland cotton". The United States contends that the Panel erred in finding that payments based on past production during a base period currently grant support to production of that commodity. Production flexibility contract payments, market loss assistance, direct payments, and counter-cyclical payments do not specify upland cotton as a commodity to which they grant support, as the Panel implied. In fact, payments under these programs do not require any production at all. Indeed, uncontested facts show that 47 per cent of the farms receiving these payments did not plant a single acre of upland cotton. The United States asserts that payments cannot be deemed to grant support to a crop the recipient does not produce. Such payments do not grant support to a specific commodity. In the light of the context provided by Articles 1(a), 1(h), and 6.4 and Annex 3 of the *Agreement on Agriculture*, such payments are properly seen as non-product-specific support to agricultural producers in general.

29. The United States observes that the Panel correctly rejected all six of the methodologies proposed by Brazil for allocating decoupled payments as support to upland cotton. However, in the "Attachment to Section VII:D" the Panel included one allocation methodology that reduced payments on base acres to account only for the number of acres planted with upland cotton. The United States argues that, by including this methodology, the Panel endorsed it as an alternative to its own approach, in the event that the Panel's approach was found to be incorrect. The Panel labelled its finding in this regard as factual; however, the finding is patently legal, not sheltered from appellate review. The United States also contends that any methodology that allocates payments under the decoupled programs to upland cotton planted as a result of independent producer decisions beyond government control cannot reflect the support to a specific commodity that a Member has "decided", and thus is not appropriate for Article 13(b)(ii).

[34]United States' appellant's submission, para. 96 (quoting Panel Report, para. 7.502).

[35]*Ibid.*

(ii) *Calculation methodology for price-based measures*

30. The United States submits that the Panel did not compare properly the support current measures "grant" to that "decided" during the 1992 marketing year. The ordinary meaning of "grant" is to "bestow as a favour" or "[g]ive or confer (a possession, a right, etc.) formally".[36] The ordinary meaning of "decide" is to "[d]etermine on as a settlement, pronounce in judgement" and "[c]ome to a determination or resolution *that, to do, whether*".[37] Read in their context, as two halves of a comparison, these terms must allow the relevant "support" to be compared. The phrase "grant support", read in the light of the verb "decided", means the support that Members determine to "bestow" or "give or confer", and thus the focus of the peace clause comparison is on the support a Member decides. The United States submits that the Panel essentially agreed "that the Peace Clause proviso compares the support a Member determines through its measures, not 'support [that] was spent due to reasons beyond the control of the government'."[38]

31. Against this background, the United States contends that a proper application of Article 13(b)(ii) must reflect the way in which the United States "decided" support in the 1992 and 1999-2002 marketing years. In those years, the support "decided" by the United States was a rate of support.

32. The United States submits that it was possible for the Panel to have recourse to the rules for the calculation of the AMS set out in Annex 3 of the *Agreement on Agriculture*, so long as the appropriate calculation method was used. In the case of price-based measures (such as marketing loan program payments in the 1992 marketing year and the implementation period, and deficiency payments in the 1992 marketing year only), paragraph 10 of Annex 3 permits two different approaches: budgetary outlays or using "the gap between the fixed reference price and the applied administered price multiplied by the quantity of production eligible to receive the administered price" ("price gap" methodology). In the context of a comparison under the peace clause, only the price gap methodology reflects the support "decided" by the United States' price-based measures. By focusing on the gap between an external reference price (here, the actual price for determining rates for the years 1986-1988) and the applied administered price, the price gap methodology eliminates movements in market prices as a component of the measurement of support and focuses solely on those elements that a Member can control. By holding the reference price "fixed", support measured using a price gap calculation shows the effect of changes in the level of support decided by a Member, rather than changes in budgetary outlays that result from movements in market prices that Members do not control.

(iii) *Recalculation of the peace clause comparison*

33. On the basis of its arguments regarding calculation methodology and the interpretation of the phrase "support to a specific commodity", the United States recalculates the support to upland cotton in the 1992 marketing year and implementation period support between 1999-2002 using the price gap methodology for marketing loan program payments and deficiency payments, on the one hand, and excluding production flexibility contract payments, market loss assistance, direct payments, and counter-cyclical payments, on the other hand, because they are not "support to a specific commodity". The result is that the United States' support to upland cotton does not exceed that decided in the 1992 marketing year in any year of the implementation period. The United States accordingly requests the

Appellate Body to reverse the Panel's findings regarding Article 13(b) and to find that it is entitled to the protection of the peace clause.

2. Serious Prejudice

(a) Significant Price Suppression under Article 6.3(c) of the *SCM Agreement*

34. The United States appeals the Panel's finding that the effect of the price-contingent subsidies[39] is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement* constituting serious prejudice to the interests of Brazil within the meaning of Article 5(c) of the *SCM Agreement*. The United States asks the Appellate Body to reverse the Panel's finding that the effect of the price-contingent subsidies is significant price suppression. The United States also submits that the Panel failed to set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind several aspects of this finding, as required by Article 12.7 of the DSU.

35. First, the United States submits that the Panel erred in interpreting the term "same market" in Article 6.3(c) of the *SCM Agreement* as including a "world market". Under Article 6.3(c), the price suppression must occur in a market that includes the subsidized product and the like product. Identifying the relevant market as a world market fails to give meaning to the word "same" in Article 6.3(c) because "there is no 'other' world market where the products can be found".[40] The United States relies on Article 6.6 and Annex V of the *SCM Agreement* on "Procedures for Developing Information Concerning Serious Prejudice" to substantiate this view. The United States also indicates that, although the subsidized product and the like product must be found in the same market, the Panel did not make a finding that United States and Brazilian upland cotton compete in the world market that it had identified for upland cotton. In addition, the United States contends that the Panel acknowledged that different conditions of competition would prevail in the markets of different Members and that, therefore, each market in which the two products are found would need to be examined separately.

36. The United States submits that the Panel's reading of "same market" in Article 6.3(c) contradicts its reasoning in relation to Article 6.3(d) of the *SCM Agreement*, which, according to the United States, demonstrates that no "world market" price prevails in any "world market" for upland cotton. Moreover, according to the United States, the Panel should have focused on the effect of the challenged subsidies on the *Brazilian* price of upland cotton, rather than their effect on any "world market" price, because only significant suppression of Brazilian prices could lead to serious prejudice to the interests of Brazil under Article 5(c) of the *SCM Agreement*.

37. Secondly, the United States argues that, in finding significant price suppression, the Panel "prejudged the result of its analysis of 'the effect of the subsidy'".[41] According to the United States, the Panel used circular logic: first, assuming causation in finding price suppression, and then, using its conclusion on price suppression to support its finding of causation. In addition, the Panel failed to take into account the effect of removing the price-contingent subsidies on all participants in the relevant market. Even if removing these subsidies would lead to lower United States production of cotton (which the United States contests), other producers could be expected to enter the market to

[39]The Panel characterized marketing loan program payments, user marketing (Step 2) payments, market loss assistance payments, and counter-cyclical payments as "price-contingent" subsidies. (Panel Report, para. 8.1(g)(i))

[40]United States' appellant's submission, para. 311.

[41]United States' appellant's submission, para. 158.

increase supply. These supply changes would need to be included in assessing the effect on prices of removing the price-contingent subsidies. The United States also claims that, in concluding that the price suppression it had found was "significant", the Panel should have identified the degree of price suppression it had found and should have explained why it regarded this degree as "significant". The United States argues that, in failing to do so, the Panel failed to comply with Article 12.7 of the DSU.

38. Thirdly, the United States contends that the Panel erred in finding that "the effect of" the price-contingent subsidies is significant price suppression under Article 6.3(c) of the *SCM Agreement*. The United States refers to the Panel's conclusion that the price-contingent subsidies are linked to world prices for upland cotton, "thereby numbing the response of United States producers to production adjustment decisions when prices are low".[42] However, according to the United States, the "relevant economic decision"[43] for a farmer is what to plant and, at the time of planting, the relevant price is what the farmer expects to receive when the crop is subsequently harvested, not the current price. Therefore, the Panel should have examined whether the price-contingent subsidies stimulate *planting* of upland cotton, rather than whether they stimulate *production* or harvesting. The United States submits that the Panel failed to set out the basic rationale for its analysis of the "effect of the subsidy" as required by Article 12.7.

39. The United States also suggests that the Panel failed to examine evidence showing that the price-contingent subsidies did not suppress upland cotton prices: United States planting of cotton acreage corresponded with expected market prices of cotton and competing crops; changes in United States cotton acreage corresponded with changes by cotton farmers throughout the world; and the United States' share of world cotton production was stable during the relevant period. In addition, the Panel's identification of the relative shares of world cotton exports cannot demonstrate the effect of the subsidy in the absence of an analysis of competition between United States cotton and cotton from other sources. Moreover, according to the United States, the Panel's finding of a "discernible temporal coincidence"[44] between suppressed market prices and the price-contingent subsidies is flawed and, in any case, could involve only correlation and not causation.

40. The United States further disputes, in relation to the Panel's reasoning in determining the "effect" of the subsidy, the Panel's conclusion that a comparison between the average total cost of production and market revenue in the United States demonstrates that the effect of the price-contingent subsidies is significant price suppression. As reflected in economics literature, farmers make planting decisions based on *variable* rather than *total* costs of production. The Appellate Body's decision in *Canada – Dairy (Article 21.5 – New Zealand and US)* is not relevant to this issue. Had the Panel examined variable costs, it would have seen that United States upland cotton producers more than covered their variable costs from 1997 to 2002, apart from in 2001. In addition, even if average total costs were not covered, the evidence before the Panel demonstrates that farmers had other sources of income to cover the shortfall.

41. Fourthly, the United States argues that the Panel erred in finding that Brazil need not demonstrate, and that the Panel need not find, the amount of the challenged subsidies that benefits upland cotton in establishing serious prejudice under Articles 5(c) and 6.3(c) of the *SCM Agreement*. The United States contends that the Panel "misunderstood"[45] the United States' argument as requiring the transposition of methodologies from Part V to Part III of the *SCM Agreement*. Instead, it is the text of Articles 5(c) and 6.3(c) that requires a quantification of benefit. Articles 5(c) and 6.3(c) of the *SCM Agreement* both use the word "subsidy", which is defined in Article 1 as involving the conferral of a benefit, as confirmed by Article 14 of the *SCM Agreement*. Article 6.3(c) refers to a "subsidized

[42]*Ibid*., para. 162 (quoting Panel Report, para. 7.1308).

[43]*Ibid*., para. 161.

[44]United States' appellant's submission, para. 208 (referring to Panel Report, paras. 7.1351-7.1352).

[45]*Ibid*., para. 258.

product". Therefore, what is at issue is the amount of the subsidy that benefits a particular product. This reading is supported by Article 6.8 of the *SCM Agreement*, which provides for panels to determine serious prejudice on the basis of, *inter alia*, information submitted under Annex V of the *SCM Agreement*. According to the United States, this includes information necessary to establish the amount of subsidization (paragraph 2 of Annex V) and information concerning the amount of the subsidy (paragraph 5 of Annex V).

42. For Brazil's claims to succeed, therefore, the United States maintains that the challenged subsidies would have to subsidize upland cotton and confer a benefit on United States "producers, users, and/or exporters of upland cotton".[46] In addition, any benefit conferred by the challenged subsidies on products other than upland cotton cannot be included in determining the effect of the subsidies. However, the Panel attributed all counter-cyclical and market loss assistance payments to upland cotton. In fact, counter-cyclical and market loss assistance payments to recipients who did not produce upland cotton did not benefit upland cotton at all and therefore could not have caused serious prejudice and, in fact, fell outside the Panel's terms of reference altogether. As for counter-cyclical and market loss assistance payments to recipients who produced both upland cotton and other products, the Panel should have allocated the payments across the different products in assessing the effects of the payments in respect of upland cotton. Annex IV of the *SCM Agreement*[47] provides an "economically neutral" allocation methodology[48], and paragraphs 2 and 5 of Annex V of the *SCM Agreement* provide support for the argument that it may be necessary to allocate subsidies across the total value of the recipient's sales. As the Panel did not identify the amount of counter-cyclical and market loss assistance payments benefiting upland cotton, its serious prejudice finding regarding those payments is invalid. In addition, the United States submits that this amounted to a failure by the Panel to set out the basic rationale behind its findings and recommendations in accordance with Article 12.7 of the DSU.

43. Along similar lines, the United States contends that the Panel should have determined the extent to which subsidies provided with respect to *raw* cotton benefit *processed* cotton. Instead, the Panel "improperly assumed"[49] that subsidies provided to producers of raw cotton flowed to producers of processed cotton. The United States maintains that the Appellate Body's conclusion in *US – Softwood Lumber IV* that a subsidy bestowed on an input cannot be presumed to have passed through to the processed product is based on the definition of a subsidy, which applies to both Part III and Part V of the *SCM Agreement*.[50] Therefore, according to the United States, the Panel erred in finding that "pass-through" principles do not apply to Part III of the *SCM Agreement*.

44. Finally, the United States asserts that the Panel erred in making serious prejudice findings with respect to the price-contingent subsidies for marketing years 1999 to 2001. Even if the Panel was not required to determine the amount of the benefit flowing from the price-contingent subsidies to the subsidized product, the Panel had to determine whether the benefit from these subsidies continued when the Panel was established in 2002. This is because, under Article 11 of the DSU, the Panel could make findings only with respect to subsidies that could "form part of Brazil's claims"[51] and, under Article 19.1 of the DSU, the Panel could make recommendations only with respect to measures

[46]United States' appellant's submission, para. 245 (quoting Brazil's request for establishment of a panel, *supra*, footnote 26, p. 1).

[47]"Calculation of the Total Ad Valorem Subsidization (Paragraph 1(a) of Article 6)".

[48]United States' appellant's submission, para. 269.

[49]*Ibid.*, para. 303.

[50]*Ibid.*, paras. 304 and 305 (referring to Appellate Body Report, *US – Softwood Lumber IV*, paras. 140 and 142).

[51]United States' appellant's submission, para. 296.

that still exist. In addition, the United States maintains that the Panel "failed to adequately set out the legal basis for its examination of subsidies that no longer existed at the time of panel establishment" as required by Article 12.7 of the DSU.[52]

45. According to the United States, an annually recurring subsidy should be "allocated" or "expensed"[53] to the year to which it relates, whereas a non-recurring subsidy, such as an investment subsidy or equity infusion, should be allocated over time. In the United States' view, a payment no longer confers a benefit after the year to which it is allocated, and therefore it is no longer a "subsidy" under Article 1 of the *SCM Agreement*. Price-contingent subsidies for marketing years 1999 to 2001 were annually recurring subsidies that the Panel should have allocated to those years. The United States argues that the Panel did not find that these subsidies had "continuing effects" when the Panel was established and, therefore, that the Panel could not have found that these subsidies were "causing present serious prejudice".[54]

46. For these reasons, the United States requests the Appellate Body to reverse the Panel's finding that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement* constituting serious prejudice to the interests of Brazil within the meaning of Article 5(c) of the *SCM Agreement*.

3. Import Substitution Subsidies and Export Subsidies

(a) Step 2 Payments

(i) *To domestic users*

47. The United States claims that the Panel erred in concluding that user marketing (Step 2) payments ("Step 2 payments") provided to domestic users of United States upland cotton, under Section 1207(a) of the FSRI Act of 2002, constitute import substitution subsidies that are inconsistent with Articles 3.1(b) and 3.2 of the *SCM Agreement*.

48. In the United States' view, the Panel's conclusion fails to give meaning to the introductory phrase "Except as provided in the Agreement on Agriculture" in Article 3 of the *SCM Agreement*. This phrase applies not only to export subsidies covered by Article 3.1(a) of the *SCM Agreement*, but also to import substitution subsidies covered by Article 3.1(b). The United States contends that giving proper meaning to the introductory phrase of Article 3 of the *SCM Agreement* requires treating Step 2 payments to domestic users as domestic support subject to reduction commitments under Article 6 of the *Agreement on Agriculture*.

49. The United States points out that paragraph 7 of Annex 3 of the *Agreement on Agriculture* requires that "[m]easures directed at agricultural processors shall be included [within a WTO Member's AMS] to the extent that such measures benefit the producers of the basic agricultural products". This is consistent with the objective of the *Agreement on Agriculture* of providing for substantial progressive reductions in agricultural support and protection sustained over an agreed period of time. The United States submits that it has regularly reported Step 2 payments among the domestic support measures it provides to agricultural producers and includes them in the calculation of total AMS. Thus, the United States asserts, provided that they are within its domestic support reduction commitments, Step 2 payments to domestic users are not inconsistent with the United States' WTO obligations.

[52]*Ibid.*, para. 327.

[53]*Ibid.*, para. 283.

[54]*Ibid.*, para. 292.

50. The United States explains that the lack of any reference to domestic content subsidies in Article 13(b) of the *Agreement on Agriculture* does not support the Panel's interpretation. Article 13(b) does not refer to Article 3 of the *SCM Agreement* because the substantive obligation of Article 3.1(b) does not apply to domestic content subsidies in favour of agricultural producers.

51. Consequently, the United States requests that the Appellate Body reverse the Panel's finding that Step 2 payments to domestic users of United States upland cotton are import substitution subsidies that are inconsistent with Articles 3.1(b) and 3.2 of the *SCM Agreement*.

(ii) *To exporters*

52. The United States claims that the Panel erred in concluding that Step 2 payments provided to exporters of United States upland cotton, under Section 1207(a) of the FSRI Act of 2002, are export subsidies covered by Article 9.1(a) of the *Agreement on Agriculture* and, therefore, inconsistent with Articles 3.3 and 8 of that Agreement. The United States also asserts that the Panel erroneously concluded that Step 2 payments to exporters are inconsistent with Articles 3.1(a) and 3.2 of the *SCM Agreement*, because they are not exempted from action by Article 13(c) of the *Agreement on Agriculture*.

53. The United States argues that Step 2 payments are not contingent on export performance because upland cotton does not need to be exported to trigger eligibility; domestic users are also eligible. The program under which Step 2 payments are granted is indifferent as to whether the recipient of the payment is an exporter or a domestic user. Step 2 payments to exporters and domestic users are governed by a single legislative provision and a single set of regulations. The form and payment rate to domestic users and exporters are identical, and payments are made from a unified fund. Rather than being an export-contingent subsidy, the United States reports Step 2 payments as product-specific amber box domestic support for cotton within its AMS.

54. The United States submits that the facts in this case are similar to those before the panel in *Canada – Dairy*, where the panel found that payments contingent on use, without regard to the nature of the use, do not involve an export subsidy for purposes of Articles 9 and 10 of the *Agreement on Agriculture*.[55] The distinctions drawn by the Panel between the circumstances in this case and those in *Canada – Dairy* are based on a mischaracterization by the Panel of facts in the latter case.[56] Finally, the United States contends that the Panel's finding in respect of Step 2 payments to *exporters* seems to be based on the Panel's determination to find that Step 2 payments to *domestic users* are a prohibited import substitution subsidy.

55. The United States therefore requests that the Appellate Body reverse the Panel's finding that Step 2 payments to exporters are an export subsidy listed in Article 9.1(a) that is inconsistent with the United States' obligations under Articles 3.3 and 8 of the *Agreement on Agriculture*. The United States also requests that the Appellate Body reverse the Panel's findings that Step 2 payments to exporters are not exempt from action under Article 13(c) of the *Agreement on Agriculture* and are inconsistent with Articles 3.1(a) and 3.2 of the *SCM Agreement*.

(b) Export Credit Guarantees

(i) *Panel's terms of reference*

[55]United States' appellant's submission, paras. 444-445 (referring to Panel Report, *Canada – Dairy*, para. 7.41 and footnote 496 to para. 7.124).

[56]*Ibid.*, paras. 447-452 (referring to Panel Report, paras. 7.718 and 7.725).

56. The United States asserts that the Panel erred in concluding that export credit guarantees[57] to facilitate the export of United States agricultural commodities other than upland cotton were within its terms of reference. According to the United States, there is a clear progression between the measures included in the request for consultations under Article 4 of the DSU and the measures identified in the request for the establishment of a panel, which forms the basis for a panel's terms of reference.[58] The United States contends that a measure that is not included in the request for consultations may not form part of a panel's terms of reference.

57. In this case, the United States argues, the Panel erred in finding that Brazil's request for consultations identified export credit guarantees to agricultural commodities other than upland cotton as challenged measures. A plain reading of Brazil's request for consultations does not support the Panel's conclusion. The request identified the challenged measures as "subsidies provided to US producers, users and/or exporters of upland cotton".[59] Although footnote 1 to this sentence reads "Except with respect to export credit guarantee programs as explained below", none of the subsequent references to export credit guarantees in the request for consultations identified other United States agricultural commodities. Moreover, the statement of evidence attached to Brazil's request for consultations, pursuant to Article 4 of the *SCM Agreement*, did not mention commodities other than upland cotton, providing further proof that the request for consultations did not extend beyond export credit guarantees for upland cotton. That the request for consultations did not include export credit guarantees to other agricultural commodities is confirmed by the fact that Brazil included new language in its request for the establishment of a panel.

58. According to the United States, the Panel also erred in finding that "actual" consultations included export credit guarantees to agricultural commodities other than upland cotton. The fact that Brazil posed written questions to the United States about export credit guarantees for other commodities does not mean that Brazil and the United States held consultations about the topic. Were it otherwise, a complaining party could unilaterally alter the scope of consultations without regard to the requirements of Article 4.4 of the DSU, the time-frames, and the impact on third parties seeking to determine whether to join the consultations. The Panel also ignored the fact that, at the first consultations meeting, the United States expressed the view that Brazil's request with respect to export credit guarantees was clearly limited to upland cotton, and that no discussion of export credit guarantees for any commodity other than upland cotton took place during the consultations. The United States also argues that what is determinative of the scope of consultations is the text of Brazil's request for consultations and not the text of Brazil's written questions.

59. The United States contends that the facts in this case are similar to those in *US – Certain EC Products*. In that case, the Appellate Body found that a particular measure was not part of the panel's terms of reference because it was not the subject of consultations.[60] Similarly, in this case, export credit guarantees to other agricultural commodities may not form part of the Panel's terms of reference because they were not the subject of consultations.

60. The United States therefore requests that the Appellate Body reverse the Panel's conclusion that export credit guarantees to United States agricultural commodities other than upland cotton were within the Panel's terms of reference. The United States adds that, because the Panel had no authority

[57]The export credit guarantees at issue are the General Sales Manager 102 and 103 programs and the Supplier Credit Guarantee Program, which are described *infra*, paras. 586-589. See also Panel Report, paras. 7.236-7.244.

[58]United States' appellant's submission, para. 466 (referring to Appellate Body Report, *Brazil – Aircraft*, para. 131).

[59]*Ibid.*, para. 457 (quoting the Request for Consultations by Brazil, *supra*, footnote 26).

[60]United States' appellant's submission, para. 485 (referring to Appellate Body Report, *US – Certain EC Products*, para. 70).

to make findings with respect to export credit guarantees for agricultural commodities other than upland cotton, all of the Panel's findings with respect to such commodities must also be reversed.

(ii) *Statement of available evidence*

61. The United States submits that the Panel erroneously concluded that Brazil provided a statement of available evidence with respect to export credit guarantee measures relating to United States agricultural commodities other than upland cotton, as required by Article 4.2 of the *SCM Agreement*.

62. The United States explains that the statement of evidence that was annexed to Brazil's request for consultations contains two paragraphs specifically referring to the United States' export credit guarantee programs. The Panel correctly noted that the first paragraph is textually limited to upland cotton.[61] The United States submits, however, that the Panel failed to draw the proper conclusion about the second paragraph. Although the second paragraph does not refer to upland cotton, it contains no suggestion that it expands on the programs described in the preceding paragraph, which refers to export credit guarantee programs that allegedly provide certain benefits to United States upland cotton. In the context of the paragraph that precedes it, the second paragraph must be understood to refer to the same programs—that is, to export credit guarantee programs that allegedly provide certain benefits to upland cotton. In addition, the United States points out that the second paragraph in Brazil's request for consultations does not refer to any commodity. Consequently, even if the second paragraph is construed to refer to programs that provide benefits to products other than cotton, it is difficult to see how that paragraph meets the requirements of Article 4.2 of the *SCM Agreement*, as it does not provide information about the "existence" or "nature" of the subsidies allegedly provided by the export credit guarantee programs to products other than upland cotton.

63. The United States therefore requests that the Appellate Body reverse the Panel's finding and that it find, instead, that Brazil did not provide a statement of available evidence with respect to the United States' export credit guarantee programs as they relate to agricultural commodities other than upland cotton.

(iii) *Article 10.2 of the Agreement on Agriculture*

64. The United States alleges that the Panel erred in finding that the United States' export credit guarantee programs in respect of exports of upland cotton and other unscheduled agricultural products, and in respect of one scheduled product (i.e., rice), are export subsidies applied in a manner that results in circumvention of the United States' export subsidy commitments within the meaning of Article 10 of the *Agreement on Agriculture* and are therefore inconsistent with Article 8 of that Agreement. In addition, the United States submits that, although the Panel did not find that the United States had circumvented such commitments with respect to scheduled commodities other than rice, it nevertheless erred in concluding that the programs as applied to these scheduled agricultural products constitute export subsidies within the meaning of the *Agreement on Agriculture*.

65. The United States contends that the Panel erroneously analyzed whether export credit guarantees are export subsidies subject to the disciplines of Article 10.1 solely by reference to the *SCM Agreement*, ignoring important context in Article 10 of the *Agreement on Agriculture*. According to the United States, the proper context in which to analyze the meaning of Article 10.1 with respect to export credit guarantees is Article 10.2 of the *Agreement on Agriculture*, the only provision that explicitly addresses these specific kinds of measures. Article 10.2 reflects the fact that, during the Uruguay Round, WTO Members did not agree on disciplines applicable to agricultural

[61] *Ibid.*, para. 495 (referring to Panel Report, para. 7.84).

export credits, export credit guarantees, or insurance programs. Unable to reach agreement on such disciplines within the Uruguay Round, WTO Members opted to continue discussions, deferring the imposition of substantive disciplines until a consensus was achieved.

66. According to the United States, this interpretation of Article 10.2 is consistent with Article 10 as a whole. Article 10.2 contributes to the prevention of circumvention of export subsidy commitments by imposing two obligations on Members: first, they must undertake to work toward the development of internationally agreed disciplines on export credit guarantees; and, second, "after agreement on such disciplines", they must provide export credit guarantees "only in conformity therewith".[62] Moreover, excluding export credit guarantees from the application of Article 10.1 is consistent with the treatment of food aid transactions under Article 10. Because Article 10.4 of the *Agreement on Agriculture* does not explicitly exempt food aid transactions from the applicability of Article 10.1, the Panel's interpretative approach would mean that all food aid transactions constitute export subsidies under Article 10.1.

67. The United States submits that the negotiating history confirms its interpretation that Article 10.2 excludes export credit guarantees from the export subsidy disciplines in Article 10.1. The negotiating history reflects that WTO Members initially included export credit guarantees as a subject for negotiation but later specifically elected not to include those practices as exports subsidies in respect of goods covered by the *Agreement on Agriculture*. The Panel's explanation that the negotiators deleted the language on export credits from a 1991 draft of Article 9 because it was "mere surplusage"[63] is inconsistent with the fact that other practices included in the Illustrative List of Export Subsidies of the *SCM Agreement* were also listed in Article 9.1 of the *Agreement on Agriculture*, such as direct subsidies contingent upon export performance, or transport and freight charges provided at more favourable rates.

68. The United States argues that reliance on the negotiating history in this case is appropriate, under Article 32 of the *Vienna Convention on the Law of Treaties* (the "*Vienna Convention*"[64]), because the Panel's interpretation leads to a manifestly unreasonable result. Had export credit guarantees remained in Article 9, then the United States and other providers of export credit guarantees would have been expressly permitted to include such measures in their respective export subsidy reduction commitments. In the absence of a reference in Article 9, the United States was foreclosed from including them. It defies logic, as well as the object and purpose of the *Agreement on Agriculture*, to take the view of the Panel whereby such measures would be treated as already disciplined export subsidies, yet such measures would not be permitted to be included within the applicable reduction commitments expressly contemplated by the text.

69. The United States also requests that the Appellate Body reverse the Panel's finding that export credit guarantees for agricultural commodities are subject to Articles 3.1 and 3.2 of the *SCM Agreement*. The United States explains that export credit guarantees are not listed in Article 9.1 of the *Agreement on Agriculture* and are exempt, through the operation of Article 10.2, from the export subsidy disciplines in Article 10.1. Because export credit guarantees are not subject to export subsidy disciplines under the *Agreement of Agriculture*, the export subsidy disciplines of the *SCM Agreement* are also inapplicable to these measures pursuant to Article 21.1 of the *Agreement on Agriculture* and the introductory language of Article 3.1 of the *SCM Agreement*.

(iv) *Burden of proof*

[62] Quoting from Article 10.2 of the *Agreement on Agriculture*.

[63] United States' appellant's submission, para. 379 (quoting Panel Report, para. 7.940).

[64] Done at Vienna, 23 May 1969, 1155 U.N.T.S. 331; 8 International Legal Materials 679.

70. The United States submits that the Panel erred in three different ways in respect of the application of the burden of proof in assessing the United States' export credit guarantee programs under item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*.

71. First, the United States asserts that the Panel erred by applying the "special rules" on burden of proof provided in Article 10.3 of the *Agreement on Agriculture* in its examination of Brazil's claim under the *SCM Agreement*. The United States argues that the special rules in Article 10.3 of the *Agreement on Agriculture* do not apply in the context of the *SCM Agreement*.

72. In addition, the United States submits that the Panel erred by applying the special rules on burden of proof in Article 10.3 of the *Agreement on Agriculture* in examining whether the United States circumvented its export subsidy commitments with respect to upland cotton and certain other *unscheduled* agricultural products. According to the United States, Article 10.3 does not apply at all in respect of export subsidies to an agricultural good for which the respondent has no reduction commitments.

73. Finally, the United States refers to three specific instances in which the Panel allegedly erred in applying the burden of proof. The first example is the Panel's statement that the premiums charged by the Commodity Credit Corporation (the "CCC") for the export credit guarantees "are not geared toward *ensuring* adequacy to cover long-term operating costs and losses for the purposes of item (j)".[65] The United States asserts that this is a much higher threshold than that provided in the text of item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*. Next, the United States takes issue with the Panel's statements that "[i]n terms of the structure, design and operation of the ... programmes [we] believe that the programmes are not designed to avoid a net cost to government"[66] and that the Panel was entitled to inquire whether revenue "would be likely to cover the total of all operating costs and losses under the programme".[67] According to the United States, "[t]o 'avoid a net cost' prospectively is simply not the requirement of item (j)", and the "'likelihood' standard of performance" imposed by the Panel is higher than that found in item (j).[68] The third example cited by the United States is the Panel's statement that "[w]e have not been persuaded that cohort re-estimates over time, will *necessarily* not give rise to a net cost to the United States government."[69] The United States contends, however, that under the applicable burden of proof it is not for the United States to make such incontrovertible demonstrations to the Panel.

(v) *Necessary findings of fact*

74. The United States asserts that the Panel erred by failing to make certain factual findings that were necessary for the Panel's analysis of whether premiums are adequate to cover the long-term costs and losses of the United States' export credit guarantee programs, under item (j) of the Illustrative List of Export Subsidies. According to the United States, the Panel made no findings "on the basis for and

[65]United States' appellant's submission, para. 406 (quoting Panel Report, para. 7.859). (emphasis added by the United States)

[66]*Ibid.*, para. 407 (quoting Panel Report, para. 7.857).

[67]*Ibid.*, para. 407 (quoting Panel Report, para. 7.805).

[68]United States' appellant's submission, para. 407.

[69]*Ibid.*, para. 408 (quoting Panel Report, para. 7.853). (emphasis added by the United States) In the same paragraph, the United States mentions the following statement by the Panel: "[w]hile there may be a possibility (based on the experience of certain of other cohorts) that this figure may diminish over the lifetime of the cohort concerned, there is no assurance that this figure will *necessarily* evolve towards, and conclude as, zero or a negative figure." (Panel Report, footnote 1028 to para. 7.853) (emphasis added by the United States)

monetary extent to which the United States has allegedly not covered its long-term operating costs and losses for the CCC export credit guarantee programs".[70]

75. In particular, the United States asserts that the Panel should have made a specific finding on the treatment of rescheduled debt. The United States explains that the Panel did not conclude that rescheduled debt was an operating cost or loss. Instead, the Panel "stated only vaguely" that it shared Brazil's concern that the United States' treatment of rescheduled debt understates the net cost to the United States government associated with the export credit guarantee programs.[71]

76. The United States argues that the Panel's failure to make these factual findings compels the reversal of the Panel's determination in respect of item (j) of the Illustrative List of Export Subsidies.

B. *Arguments of Brazil – Appellee*

1. Domestic Support

(a) Terms of Reference – Expired Measures

77. Brazil submits that the Appellate Body should reject the United States' request to reverse the Panel's finding that expired production flexibility contract and market loss assistance payments were outside the Panel's terms of reference. Brazil argues that neither Article 4.2 nor Article 6.2 of the DSU precludes a panel from analyzing payments made in the past in the context of serious prejudice claims. Brazil focuses on the context provided by Article 3.3 of the DSU, which states that a purpose of dispute settlement is the "prompt settlement of situations in which a Member considers that any benefits accruing to it ... are being impaired by measures taken by another Member". For Brazil, as long as the impairment is current, then the status in domestic law of the measure causing impairment is irrelevant.

78. Brazil notes that the current case involves allegations of "adverse effects" and "serious prejudice" under the provisions of the *SCM Agreement* and the GATT 1994. A breach of these provisions does not necessarily arise when an actionable subsidy is granted, but only when adverse effects occur, and the breach continues for the entire period during which the adverse effects continue. The effects of an actionable subsidy, which "affect[] the operation of" the *SCM Agreement* in the sense of Article 4.2 of the DSU, may well linger even after the measure providing for the subsidy expires. There is thus no basis for the United States' claim that the subsidies in question "cannot" be measures affecting the operation of any covered agreement. In particular, there is no justification in this context for the distinction, drawn by the United States, between recurring and non-recurring subsidies. The inquiry as to whether a subsidy continues to cause adverse effects beyond the year in which it was granted is a substantive judgment, and cannot be treated as a "jurisdictional hurdle".[72] Brazil finds support for its position in the view of the panel in *Indonesia – Autos*, which found that past, present, and future subsidies can be the subject of dispute settlement, as the effect of such measures may cause serious prejudice to the interests of a Member.

79. Brazil also disputes the United States' claims regarding Article 12.7 of the DSU. In Brazil's view, the Panel fulfilled the requirements of Article 12.7 in its Report. Many of the United States' claims under Article 12.7 are, in reality, allegations of error concerning the Panel's exercise of its discretion under Article 11 of the DSU and should be dismissed for want of specification of a claim under that provision.

[70]United States' appellant's submission, para. 419.

[71]*Ibid.*, para. 416.

[72]Brazil's appellee's submission, para. 255.

(b) Article 13(a) of the *Agreement on Agriculture* – Planting Flexibility Limitations

80. Brazil considers that production flexibility contract and direct payment programs are not green box measures falling under Annex 2 of the *Agreement on Agriculture* and are thus not exempt from actions pursuant to Article 13(a) of that Agreement. Brazil requests the Appellate Body to uphold the Panel's finding, under paragraph 6(b) of Annex 2, that production flexibility contract payments under the FAIR Act of 1996[73] and direct payments under the FSRI Act of 2002 relate the amount of the payment to the type of production undertaken by recipients because these payments are made solely if a producer grows crops other than fruits and vegetables (and, in the case of direct payments, wild rice as well).

81. Brazil relies upon the Panel's finding that paragraph 6(b) of Annex 2 addresses both positive requirements that certain products be produced and negative requirements that certain products not be produced. Brazil submits that the Panel correctly held that the words "related to," in paragraph 6(b) of Annex 2, preclude the establishment of any kind of relationship between the amount of a payment and the type of production undertaken. Accordingly, the text requires that the amount of a decoupled payment not be affected, influenced, or dependent, in any way, upon the type of crop planted. Brazil contends that the United States inappropriately seeks to read into paragraph 6(b) an exception for planting restrictions. Brazil observes that where the drafters intended to provide such an exception, they did so explicitly, as is evidenced by paragraphs 11(b) and 11(e) of Annex 2. For Brazil, Annex 2 cannot simply be reduced to the proposition that a measure is exempt if it is consistent with the fundamental requirement established in paragraph 1 that such measures have no, or at most minimal, trade-distorting effects or effects on production. Such an interpretation would overlook the policy-specific criteria in the other paragraphs of Annex 2.

82. Brazil nevertheless agrees with the United States that the expression in paragraph 6(b) "related to ... the type ... of production" does not preclude a Member from making decoupled payments conditional upon producers undertaking no production at all. Brazil highlights, however, that a total ban on production is different from a partial ban, because payment is conditional upon the planting of certain crops as opposed to others. The Panel's factual findings support this view: the Panel found that the planting flexibility limitations impose a "significant constraint" on production decisions.[74] Brazil argues that, under the production flexibility contract and direct payment measures, the amount of payment is always "related to" the type of production undertaken. If permitted crop "types" are produced exclusively, a full payment is made. If a small quantity of "prohibited" crops is produced, the amount of payment is reduced. If a larger quantity of prohibited crops is produced, no payment is made.

83. Furthermore, the various findings by the Panel contradict the United States' basic assertion that "a condition that a recipient not produce certain products serves the fundamental requirement of Annex 2, that measures have no more than minimal trade-distorting effects and effects on production."[75] Rather, a partial prohibition creates incentives for the production of certain crops, and disincentives for the production of prohibited crops. In essence, the Panel found that planting flexibility limitations *did* channel production away from fruits, vegetables (and wild rice) and towards other commodities, such as upland cotton. Brazil thus disputes the distinction put forward by the United States between measures that make payment contingent upon the production of "permitted" crops and those that make payment contingent upon the non-production of "prohibited" crops. As the

[73]Federal Agriculture Improvement and Reform Act of 1996 (the "FAIR Act of 1996"); Public Law 104-127.

[74]Brazil's appellee's submission, para. 287 (quoting Panel Report, para. 7.386).

[75]Brazil's appellee's submission, para. 291 (quoting the United States' appellant's submission, para. 22).

Panel found on the facts of this case, their effects are the same. The Panel found that "the planting flexibility limitations provide a monetary incentive for payment recipients not to produce the prohibited crops"[76], and that production flexibility contract payments and direct payments have positive production effects by restricting production choices and keeping land dedicated to the production of the permitted crops. Thus, providing income support, whilst also excluding income support when certain types of crop are produced, relates the amount of the income support to the type of production undertaken within the meaning of paragraph 6(b).

84. Finally, Brazil takes issue with the United States' assertion that the Panel's interpretation would require a Member to make decoupled income support payments even if the recipient produced illegal crops or crops damaging to the environment. There was no basis for the Panel to address this issue because the planting flexibility limitations at issue do not pertain to the production of illegal or environmentally-damaging crops. In any event, nothing in the *Agreement on Agriculture* suggests that the word "production" means anything other than *lawful* production. The Panel properly declined to consider the hypothetical situations not created by the United States' measures at issue in the dispute.

(c) Article 13(b) of the *Agreement on Agriculture*

85. Brazil submits that the United States' non-green box domestic support measures are not exempt from actions by virtue of Article 13(b)(ii) of the *Agreement on Agriculture*, and asks the Appellate Body to uphold the Panel's finding that the United States granted implementation period support to upland cotton in excess of that decided in the 1992 marketing year, within the meaning of that provision. Brazil argues that the Panel's interpretation of Article 13(b)(ii) was consistent with its ordinary meaning, context and object and purpose, and that the methodological choices made by the Panel in undertaking the comparison required by Article 13(b)(ii) were reasonable and within the bounds of its discretion as the trier of fact.

(i) *Interpretation of "support to a specific commodity"*

86. Brazil contends that the Panel correctly interpreted the phrase "support to a specific commodity" in Article 13(b)(ii) of the *Agreement on Agriculture* to mean "all non-green box support measures that clearly or explicitly define a commodity as one to which they bestow or confer support".[77] This includes crop insurance and the three subsidies described by the United States as "product-specific" domestic support (marketing loan program payments, Step 2 payments, and cottonseed payments), as well as the four measures characterized by the United States as "decoupled" payments (production flexibility contract payments, direct payments, market loss assistance, and counter-cyclical payments).

87. Brazil submits that the United States' interpretation of the phrase "support to a specific commodity" in Article 13(b)(ii) of the *Agreement on Agriculture* is that support falling within the proviso to Article 13(b)(ii) must require production of only one specific crop. Brazil observes that this argument was rejected by the Panel, which concluded that nothing in the text of Article 13(b)(ii) suggests that relevant measures must provide support only to a single commodity, and noted that a single measure could provide support to multiple specific commodities. Brazil agrees with the Panel that "[i]f a measure specifies more than one commodity, it would be appropriate to measure the amount of support granted to each of them in accordance with the terms of the measure itself."[78] The practical effect of the extremely narrow United States reading of Article 13(b)(ii) is to erase US $4.2

[76]*Ibid*., para. 320 (quoting Panel Report, para. 7.386).

[77]Brazil's appellee's submission, para. 358 (quoting Panel Report, para. 7.494).

[78]*Ibid*., para. 371 (quoting Panel Report, para. 7.483).

billion in production flexibility contract payments, direct payments, market loss assistance, and counter-cyclical payments to recipients who actually grew upland cotton in the 1999-2002 marketing years, even though these four subsidies covered a significant portion of upland cotton producers' costs of production during this period. Brazil contends that the crucial conclusion drawn by the Panel from this data was a clear linkage between historic upland cotton producers and present upland cotton producers. The Panel found that "the overwhelming majority of farms enrolled in the programmes which plant upland cotton also hold upland cotton base", specifically, 96.1 per cent in the 2002 marketing year.[79] For Brazil, the evidence on record and the Panel's findings contradict the United States' factual assertions that there is no connection between current payments under the production flexibility contract, direct payment, market loss assistance, and counter-cyclical payment programs on the one hand, and current upland cotton production on the other.

88. Brazil agrees with the Panel's conclusion that the deliberate decision of the drafters *not* to use in Article 13(b)(ii) readily available terms, such as "product-specific" and "non-product-specific" (and the definitions in Articles 1(a) and (h) of the *Agreement on Agriculture*) means that the drafters intended the term "support to a specific commodity" to have a unique meaning. The Panel properly found that this unique phrase does not mean "product-specific domestic support" because "the class of measures which is covered by paragraph (b) [of Article 13] is broader than either" that term or the phrase "support … provided for an agricultural product in favour of the producers".[80] The Panel correctly focused on the fact that the term "support to a specific commodity" in Article 13(b)(ii) refers to *all* measures set out in the chapeau to Article 13(b). There was therefore no basis in the text to limit the measures covered by Article 13(b)(ii) solely to measures requiring production of a single commodity. Brazil adds that such an interpretation would be contrary to the object and purpose of the *Agreement on Agriculture*, creating a new category of trade-distorting domestic support that would evade the limits set by the Members for exempting domestic support measures from actions under the *SCM Agreement* and the GATT 1994. Under the United States' interpretation, as long as measures do not require production of a *single* commodity, they would *never* be counted as implementation period support for purposes of the peace clause comparison, effectively insulating such measures from serious prejudice actions.

89. In addressing the manner in which the value of support under the production flexibility contract, market loss assistance, direct payment, and counter-cyclical payment programs should be calculated, Brazil submits that the Appellate Body should be wary of setting the evidentiary bar too high for complaining Members seeking to demonstrate precise amounts of support to a specific commodity for purposes of Article 13(b)(ii). Brazil contends that the Appellate Body should affirm the Panel's use of the total budgetary outlays to upland cotton base acres. Brazil observes, however, that the Panel endorsed in the "Attachment to Section VII:D" two other approaches for allocating implementation period support under these programs to upland cotton: the "cotton-to-cotton" methodology and "Brazil's methodology". Brazil maintains that, under any of these approaches, the United States granted support to upland cotton in the years 1999, 2000, 2001, and 2002 in excess of that decided during the 1992 marketing year.

(ii) *Calculation methodology for price-based measures*

90. In addressing the United States' arguments regarding the appropriate methodology for calculating the value of certain United States price-based measures (the marketing loan program payments and deficiency payments), Brazil agrees with the Panel that "the use of the verb 'decided' stands in contrast to the use of the verb 'grant' in relation to the same noun 'support' in the same

[79] *Ibid.*, para. 383 (quoting Panel Report, para. 7.636).

[80] Brazil's appellee's submission, para. 390 (quoting Panel Report, para. 7.491).

proviso."[81] The Panel found that "despite the contrast, the proviso calls for a comparison which necessarily requires the two halves of the comparison to be expressed in the same units of measurement."[82] The Panel further noted that "[a] difference between the support that a government decides and the support that its measures grant is that one is expressed in terms of prior determinations of levels of support and the other in terms of subsequent support provided."[83] The Panel concluded by stating that "'[d]ecided' refers to what the government determines, but 'grant' refers to what its measures provide."[84] Brazil submits that the Panel's explanation and reasoning for its interpretation are consistent with the ordinary meaning of the term in its context, and are supported by the Appellate Body's decision in *Brazil – Aircraft*.

91. Brazil contends that the United States incorrectly implies that the Panel agreed with the United States that the peace clause proviso "compares the support a Member determines through its measures, not 'support [that] was spent due to reasons beyond the control of the government'".[85] Brazil argues that the Panel explicitly rejected this contention and concluded that "the text indicates that implementation period support must be measured in terms of support that measures 'grant', rather than what was budgeted or *estimated*."[86]

92. Against this background, Brazil argues that the plain text of paragraph 10 of Annex 3 to the *Agreement on Agriculture* permits the use of *either* a budgetary outlay *or* a price gap methodology for calculating the value of price-based payments. There is no textual basis for concluding, for purposes of the peace clause, that only price gap methodology may be used. Brazil also notes the Panel's factual finding that the United States adopted a budgetary outlay methodology in accounting for marketing loan program payments in its AMS notifications. Brazil observes that when the United States agreed with other WTO Members on its base level AMS, the United States chose to calculate marketing loan program payments using a budgetary outlay methodology. Brazil argues that the United States' decision to use budgetary outlays instead of price gap methodology for notifying the value of marketing loan program payments is legally binding on the United States. This conclusion follows from the text of Articles 6.3 and 3.2 of the *Agreement on Agriculture*. Nothing in Article 6 or any other provision of the *Agreement on Agriculture* permits a Member to change the methodology used to calculate the value of price-based measures, once that methodology has been used in AMS notifications.

93. Brazil also notes that, although the Panel primarily relied on a budgetary outlay methodology, it also made alternative factual findings regarding the use of price gap methodology for the calculation of marketing loan program payments in the implementation period and for the 1992 benchmark period, as well as for deficiency payments in the 1992 benchmark period only. Brazil highlights the Panel's finding that under *either* approach the United States grants support to upland cotton in excess of that decided in the 1992 marketing year; the Panel found that "both methodologies lead to the same result."[87] As a result, even if the legal grounds for the United States' appeal were valid, the facts on record would require the Appellate Body to uphold the Panel's conclusions that the United States granted support in each of the 1999-2002 marketing years that exceeded the "support decided during the 1992 marketing year".

[87] Panel Report, para. 7.555.

2. Serious Prejudice

(a) Significant Price Suppression under Article 6.3(c) of the *SCM Agreement*

94. Brazil submits that the Panel properly found that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement* constituting serious prejudice to the interests of Brazil within the meaning of Article 5(c) of the *SCM Agreement*. Brazil asks the Appellate Body to uphold this finding, and to find that the Panel set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind this finding, as required by Article 12.7 of the DSU. Brazil argues that many of the United States' arguments[88], and particularly those concerning serious prejudice, involve allegations that the Panel failed to "make an objective assessment of the matter before it, including an objective assessment of the facts of the case" pursuant to Article 11 of the DSU. Brazil requests the Appellate Body to ignore these arguments because the United States has not made a proper claim of error under Article 11 of the DSU.

95. First, in response to the United States' argument that the market in which a panel assesses significant price suppression under Article 6.3(c) cannot be a "world market", Brazil maintains that the subsidized and like products must be present in the market examined. Brazil submits that the ordinary meaning of the text of Article 6.3(c) of the *SCM Agreement* indicates that this provision "may apply to *any* 'market,' from local to global, and everything in between".[89] This contrasts with paragraphs (a), (b), and (d) of Article 6.3, which expressly qualify the type of market at issue. It is also consistent with the object and purpose of the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*") (which addresses barriers to "world trade") and the *Agreement on Agriculture* (which addresses "world agricultural markets").[90] Brazil maintains that the Panel found, as a matter of fact, that a world market exists for upland cotton.[91] In addition, contrary to the assertion of the United States, Brazil contends that the Panel did find that United States and Brazilian cotton are present in the world market.[92] However, Brazil agrees with the Panel that the existence of a world market does not preclude the possibility of other markets, and that a world market does not necessarily exist for all products. Brazil refutes the United States' suggestion that the Panel did not find that *Brazilian* prices in the world market for upland cotton were significantly suppressed.[93] In Brazil's view, the Panel found that "Brazilian prices, *i.e.*, prices in Brazil and prices received for Brazilian exports, are significantly suppressed".[94]

96. Secondly, in relation to the United States' allegation that the Panel used circular reasoning to find "significant price suppression", Brazil emphasizes that several factors relate to both the "effect of the subsidy" and "significant price suppression", and the Panel gave separate explanations of these factors in terms of the "effect" and the "suppression". Brazil states that the Panel did take into account supply responses from third countries that would flow from removal of the price-contingent subsidies, in taking into account econometric models that incorporated such supply responses.[95] Brazil also states that the Panel examined the ordinary meaning of the word "significant", properly concluded that it is the degree of price suppression that matters rather than the degree of significance, and provided substantial reasons for its conclusion that the degree of price suppression it had found in the present dispute was significant.

97. Thirdly, in relation to the United States' challenge to the Panel's finding of the "effect" of the price-contingent subsidies, Brazil points out that the Panel did examine the United States' arguments regarding the "farmer's planting decision" and the responsiveness of United States producers to price signals.[96] Brazil explains that United States upland cotton farmers base planting decisions on expected net returns, meaning expected market prices together with expected government support. According to Brazil, the record contains ample evidence to support the Panel's view that the United States exercises a significant influence on the world market price for upland cotton. Even if movements in planted upland cotton acreage of United States producers correspond with those of other producers (which Brazil disputes), this would not detract from the Panel's finding that the overall level of upland cotton production by United States producers would be significantly lower in the absence of the price-contingent subsidies. The Panel properly assessed the nature of the price-contingent subsidies and properly found a temporal coincidence between those payments and suppressed upland cotton prices, based not merely on the end points of the 1998-2001 marketing year period, but on more detailed data. Finally, Brazil maintains that the Panel properly found that United States upland cotton producers were able to continue to produce upland cotton by virtue of the price-contingent subsidies. Although variable costs may be most relevant in the short term, the Panel found that upland cotton producers must cover their total costs of production in the mid- to long-term. According to Brazil, the fact that United States producers might have been able to cover the costs of upland cotton production through other agricultural production as well as "off-farm income"[97] is irrelevant to the question of the effect of the price-contingent subsidies on the United States industry producing upland cotton.

98. Fourthly, in response to the United States' arguments regarding the quantification of subsidies, Brazil states that neither the text nor the context of Articles 5(c) and 6.3 of the *SCM Agreement* imposes a "preliminary requirement to quantify exactly the amount of each subsidy prior to examining whether it causes adverse effects".[98] Brazil supports its interpretation by reference to Article 6.1(a) and Annex IV of the *SCM Agreement*, which, unlike Article 6.3, impose quantification methodologies. Brazil also distinguishes the analysis required under Part III of the *SCM Agreement* from that required under Part V of that Agreement. Under Part V, it is necessary to calculate the exact amount of subsidization in order to avoid imposing excess countervailing duties. However, the remedy under Part III focuses on the effects of the subsidy, rather than the imposition of duties, and, according to Brazil, the size of a subsidy does not necessarily determine its effects. Finally, Brazil contests the United States' reliance on Annex V of the *SCM Agreement*. In Brazil's view, Annex V sets out procedures for the collection of information and does not require the Panel to use such information, and the references to an "amount" in paragraphs 2 and 5 of Annex V are directed towards Article 6.1(a) rather than Article 6.3 of the *SCM Agreement*.

99. In response to the United States' arguments regarding the allocation of counter-cyclical payments and market loss assistance payments to upland cotton, Brazil argues that the methodology in Annex IV of the *SCM Agreement* applies only to Article 6.1 and not to Article 6.3(c), and that Annex IV has now expired. In any case, the Panel did find a "strongly positive relationship" between those payments and the production of upland cotton.[99]

[88]Brazil lists the relevant arguments in Annex A of its appellee's submission.

[89]Brazil's appellee's submission, para. 628. (original emphasis)

[90]*Ibid.*, para. 633. (emphasis omitted)

[91]*Ibid.*, paras. 619 and 622 (referring to Panel Report, paras. 7.1274 and 7.1311).

[92]*Ibid.*, paras. 644 and 808 (referring to Panel Report, paras. 7.1266, 7.1282-7.1284 and 7.1313).

[93]*Ibid.*, paras. 799-801 (referring to Panel Report, paras 7.1311 and 7.1313).

[94]*Ibid.*, para. 802.

[95]*Ibid.*, paras. 793-798 (referring to Panel Report, paras. 7.1205, 7.1209, and 7.1215).

[96]Brazil's appellee's submission, para. 168 (referring to the United States' appellant's submission, para. 324).

[97]*Ibid.*, para. 788 (referring to the United States' appellant's submission, para. 224).

[98]*Ibid.*, para. 467.

[99]Brazil's appellee's submission, para. 523 (quoting Panel Report, para. 7.1226).

100. Brazil contends that the United States' arguments distinguishing between "raw" and "processed" cotton improperly raise new factual and legal issues not before the Panel, including a suggestion that raw cotton is a product distinct from processed cotton. Brazil submits that the Panel found, and the parties agreed, that upland cotton lint is the only subsidized product at issue in this dispute. Moreover, according to Brazil, the Panel found that all price-contingent subsidies benefited the subsidized product (upland cotton), regardless of the stage at which they were provided. Brazil rejects the United States' reliance on the Appellate Body Report in *US – Softwood Lumber IV*.

101. Finally, Brazil responds to the United States' arguments as to the allocation of recurring subsidies to a particular year as follows. Articles 5(c) and 6.3 of the *SCM Agreement* do not explicitly exempt consideration of effects of annually recurring subsidies beyond the year in which they are paid. Furthermore, the United States' interpretation would create a new category of non-actionable subsidies. For example, according to Brazil, the United States' argument would exclude all the subsidies challenged by Brazil because they would be deemed to have no effects after 1 August 2003, well before the Panel circulated its Report. The possibility of making an "as such" claim against the subsidy programs as a whole would provide little comfort because these types of claims can be difficult to prove. Brazil also suggests that "WTO Members provide agricultural subsidies largely on a 'recurring' annual basis"[100] and, therefore, one would have expected an explicit exclusion of such subsidies from the disciplines of particularly Part III of the *SCM Agreement* and the *Agreement on Agriculture* if this were the intention of the drafters. The United States' contrary assertion improperly excludes the possibility for Members to seek the removal of adverse effects of any subsidies (whether recurring or otherwise), as reflected in Article 7.8 of the *SCM Agreement*.

102. In relation to the findings that the Panel made regarding the subsidies at issue in this dispute, Brazil challenges the United States' contention that the Panel made no findings regarding the effects in marketing year 2002 of subsidies paid in marketing years 1999 to 2001. The Panel explained its decision to examine serious prejudice over a period including marketing year 2002, and its findings indicate that it regarded the effects of certain subsidies as continuing in that year. In addition, Brazil submits that no "bright lines"[101] can be drawn between upland cotton subsidies paid in different marketing years, because the marketing year runs from 1 August to 31 July, and upland cotton is planted in one marketing year and harvested in the next.

3. Import Substitution Subsidies and Export Subsidies

(a) Step 2 Payments

(i) *To domestic users*

103. Brazil requests that the Appellate Body uphold the Panel's conclusion that Step 2 payments to domestic users of United States upland cotton, provided under Section 1207(a) of the FSRI Act of 2002, are inconsistent with Articles 3.1(b) and 3.2 of the *SCM Agreement*. Brazil submits that the Panel correctly held that the *Agreement on Agriculture* and the *SCM Agreement* apply cumulatively, unless there is an exception or a conflict. Such an exception must be explicitly stated.[102] According to Brazil, in *EC – Bananas III*, the Appellate Body found that the *Agreement on Agriculture* permits inconsistencies with obligations in other covered agreements solely if this is "explicitly" stated in the text.[103] Similarly, an explicit exception would be required for the

[100]*Ibid.*, para. 559.

[101]Brazil's appellee's submission, para. 570.

[102]*Ibid.*, para. 832 (referring to Appellate Body Report, *US – Cotton Yarn*, para. 120).

[103]*Ibid.*, para. 833 (referring to Appellate Body Report, *EC – Bananas III*, para. 157).

Agreement on Agriculture to exempt certain measures from the prohibition in Article 3.1(b) of the *SCM Agreement*.

104. Brazil contends that no such exception is provided in the *Agreement on Agriculture* or in the *SCM Agreement*. The introductory phrase in Article 3.1 of the *SCM Agreement* ("[e]xcept as provided in the Agreement on Agriculture") does not mean that Article 3.1 does not apply to domestic support measures conforming to the *Agreement on Agriculture*; instead, it confirms that Article 3.1 of the *SCM Agreement* applies unless it conflicts with specific provisions of the *Agreement on Agriculture*. This interpretation is confirmed by Article 21.1 of the *Agreement on Agriculture* and by the absence of any exception in Article 13 of the *Agreement on Agriculture* regarding Article 3.1(b).

105. Brazil asserts that, under the *Agreement on Agriculture*, WTO Members are entitled to grant domestic support in favour of agricultural producers. However, this does not create a conflict with Article 3.1(b) of the *SCM Agreement*, because it is perfectly possible for Members to grant domestic support without making payments contingent on domestic content. In other words, Members can fully enjoy their right to grant domestic support and still comply with Article 3.1(b) of the *SCM Agreement*. This interpretation is consistent with a primary objective of the WTO agreements, namely, avoiding discrimination under the national treatment rule. It is also consistent with an adopted GATT panel report regarding a domestic support measure to agricultural producers that was contingent on the purchase of domestic goods. That panel recognized that the GATT contracting parties were entitled to grant support to agricultural producers but found that this could be done without granting domestic content subsidies.[104] The panel held that a domestic content subsidy in favour of agricultural producers was inconsistent with Article III:4 of the GATT 1947. Therefore, Brazil contends that domestic support under the *Agreement on Agriculture* can and must be granted consistently with Article 3.1(b) of the *SCM Agreement*.

(ii) *To exporters*

106. Brazil requests the Appellate Body to uphold the Panel's findings that Step 2 payments to exporters of United States upland cotton are contingent upon export performance and, consequently, are inconsistent with Articles 3.3 and 8 of the *Agreement on Agriculture* and are prohibited under Articles 3.1(a) and 3.2 of the *SCM Agreement*.

107. Brazil agrees with the Panel that the principles set out by the Appellate Body in *US – FSC (Article 21.5 – EC)* apply to Step 2 payments to exporters.[105] In one situation under the Step 2 measure, proof of exportation is required as a condition of payment. This export contingency is not dissolved because the payment can also be made in another situation, on other conditions.

108. Brazil adds that, contrary to the United States' argument on appeal, this is not a measure that establishes a single set of conditions applying to all upland cotton produced in the United States.[106] On its own terms, the measure does not apply to all United States production of upland cotton. Instead, the measure carves out of that overall production two classes of upland cotton that may, on certain conditions, receive subsidies. In so doing, the measure targets two well-defined classes of recipients and does not address either all United States production of upland cotton, or all "uses" of United States upland cotton.

[104]Brazil's appellee's submission, para. 860 (referring to GATT Panel Report, *Italy – Agricultural Machinery*, para. 16).

[105]*Ibid.*, paras. 881-884 (referring to Appellate Body Report, *US – FSC (Article 21.5 – EC)*, paras. 113 and 119 and Appellate Body Report, *Canada – Aircraft*, para. 179).

[106]*Ibid.*, para. 890 (referring to the United States' appellant's submission, para. 444).

109. Brazil also takes issue with the United States' assertion that Step 2 payments are contingent on use and not exportation. According to Brazil, Step 2 payments are not contingent on "use" in any meaningful sense. The measure is indifferent as to whether, how or when the upland cotton is "used." The criterion is not "use", but simply "exportation". Provided that the upland cotton is "shipped" from the United States, it would not matter if the upland cotton were never used, for instance, because its quality deteriorated during shipping or even because the ship carrying it sank. A subsidy would still be paid because of "exportation" from the United States.

110. Finally, Brazil distinguishes the facts in the present dispute from those before the panel in *Canada – Dairy*. In that case, a single regulatory class applied to all Canadian production of milk destined for a particular end-use.[107] In contrast, in the present case, the measure under which Step 2 payments are made explicitly establishes two mutually exclusive regulatory categories that apply to some, but not all, United States production of upland cotton.

111. Brazil requests, therefore, that the Appellate Body reject the United States' appeal and uphold the Panel's finding that Step 2 payments to exporters of United States upland cotton are contingent upon export performance and, consequently, are inconsistent with Articles 3.3 and 8 of the *Agreement on Agriculture* and are prohibited under Articles 3.1(a) and 3.2 of the *SCM Agreement*.

(b) Export Credit Guarantees

(i) *Panel's terms of reference*

112. Brazil asks the Appellate Body to uphold the Panel's conclusion that export credit guarantees to facilitate the export of United States agricultural commodities other than upland cotton were within the Panel's terms of reference.

113. Brazil asserts that the measures included in its request for consultations, as well as in its request for establishment of a panel, were the General Sales Manager 102 ("GSM 102") program, the General Sales Manager 103 ("GSM 103") program, and the Supplier Credit Guarantee Program (the "SCGP"). Under Unites States law, each of these measures applies to all eligible agricultural products. Adding a particular product or products to Brazil's request for establishment would not, therefore, have constituted the addition of *measures*. In any event, Brazil argues that its request for consultations, in fact, identified the United States' export credit guarantee measures in connection with all eligible commodities, without any limitation to upland cotton.

114. Additionally, Brazil asserts that, irrespective of the measures identified in Brazil's request for consultations, the Panel found, as a matter of fact, that "consultations were held" on the export credit guarantee measures in connection with all eligible commodities, as required by Article 6.2 of the DSU.[108] Brazil explains that the Appellate Body has held that as long as consultations were held on a measure included in a request for establishment of a panel, that measure is properly within a panel's terms of reference, irrespective of whether the measure was included in the request for consultations.[109] This is consistent with the purpose of consultations, which is to offer Members the opportunity to engage in good faith discussions with a view to resolving a trade dispute. The process necessarily involves collecting information that will shape the substance and scope of the dispute, should consultations fail.

[107]Brazil's appellee's submission, paras. 894-899 (referring to Panel Report, *Canada – Dairy*, paras. 2.39 and 7.41).

[108]Brazil's appellee's submission, para. 211 (quoting Panel Report, para. 7.61).

[109]*Ibid*., para. 213 (refering to Appellate Body Report, *Brazil – Aircraft*, paras. 132-133).

(ii) *Statement of available evidence*

115. Brazil asks the Appellate Body to deny the United States' claim that the Panel erred in concluding that Brazil provided a statement of available evidence with respect to the United States' export credit guarantee programs as they relate to agricultural commodities other than upland cotton, as required by Article 4.2 of the *SCM Agreement*.

116. According to Brazil, its statement of available evidence not only identified the measures at issue—the export credit guarantee measures—but also indicated the characteristics of those measures that had led Brazil to suspect that they constituted export subsidies. Brazil argues that this is consistent with the Appellate Body's interpretation of the requirements of Article 4.2 of the *SCM Agreement*.[110] Specifically, Brazil's statement describes the failure of the United States' export credit guarantee programs to establish premium rates that cover long-term operating costs and losses, which are central elements in determining whether a program constitutes an export subsidy under item (j) of the Illustrative List of Export Subsidies included as Annex I to the *SCM Agreement*. Further, the Panel found that the documentary evidence cited by Brazil to support its preliminary view was a link to a United States government website with data showing that revenues for the export credit guarantee programs do not cover long-term operating costs and losses.[111] The evidence addressed the failure of the export credit guarantee programs to cover long-term operating costs and losses overall, rather than in connection with upland cotton alone.

117. Thus, Brazil asserts, its statement of available evidence meets the requirements of Article 4.2, by identifying the export credit guarantee programs, and providing and describing available evidence of the character of those measures as export subsidies, across all eligible commodities.

(iii) *Article 10.2 of the Agreement on Agriculture*

118. Brazil requests that the Appellate Body reject the United States' appeal of the Panel's finding that export credit guarantees are subject to the export subsidy disciplines in Article 10.1 of the *Agreement on Agriculture*.

119. Brazil asserts that subsidized export credit guarantees are covered by the general definition of "export subsidies" under Article 1(e) of the *Agreement on Agriculture*. These measures are, therefore, subject to Article 10.1 of the *Agreement on Agriculture*, unless an express exception is provided in Article 10.2. The text of Article 10.2 establishes two obligations, but does not provide an exception. It requires WTO Members to negotiate multilateral rules to regulate agricultural export credit measures specifically, and to apply those rules once they are agreed. The text of Article 10.2 may be contrasted with several other WTO provisions that also require negotiations, but that state explicitly that the existing disciplines do not apply in the meantime.[112] The inclusion of such exceptions in other provisions highlights the lack of an exception in Article 10.2.

120. Brazil argues that the Panel's interpretation is consistent with the context and object and purpose of Article 10.2. Each of the paragraphs in Article 10 pursues the aim of preventing circumvention of export subsidy commitments and, thereby, contributes to the purpose of the *Agreement on Agriculture* of establishing specific binding commitments on export competition. Article 10.1 does so by disciplining export subsidies not listed in Article 9.1, as well as non-

[110]*Ibid*., paras. 228-229 (referring to Appellate Body Report, *US – FSC*, para. 161).

[111]*Ibid*., para. 226 (referring to Panel Report, paras. 7.92-7.93).

[112]Brazil's appellee's submission, paras. 916-917 (referring to footnote 15 to Article 6.1(a) and footnote 24 to Article 8.2(a) of the *SCM Agreement*, and Article XIII of the *General Agreement on Trade in Services*).

commercial transactions. Article 10.3 does so by reversing the usual rules on the burden of proof where Members have exported products in excess of their quantity reduction commitment levels. Article 10.4 does so by providing specific disciplines on food aid that ensure it is used for legitimate purposes and not to circumvent export subsidy commitments. Therefore, Article 10.2 must be interpreted in a manner that ensures that it contributes to the purpose of preventing circumvention of commitments on export competition. The United States' interpretation of Article 10.2 would leave Members free to grant unlimited export subsidies in the form of export credit guarantees and would permit wholesale circumvention of commitments.

121. Brazil takes issue with the United States' assertion that the Panel's interpretation is an "assault" on international food aid.[113] According to Brazil, food aid is subject to the specific disciplines in Article 10.4 of the *Agreement on Agriculture*, as well as the general disciplines in Article 10.1. Article 10.4 pursues the aim of preventing circumvention by ensuring that, consistently with the international regulation of food aid, such transactions do not result in "harmful interference" with trade.[114] Further, Article 10.4(a) adds to the disciplines by prohibiting food aid that is "tied" to or contingent upon "commercial exports" of agricultural products. This is not an "assault" on food aid; rather, it ensures that food aid is used for legitimate humanitarian purposes and not for illegitimate trade-distortion.

122. Brazil, moreover, disagrees with the conclusions drawn by the United States from the negotiating history of the *Agreement on Agriculture*. Brazil explains that the negotiating history confirms that export credit guarantees are, indeed, subject to Article 10.1. Members had known since 1960 that subsidized export credit guarantees were covered by the term "export subsidies". During the negotiations, Members repeatedly expressed the intention to subject these measures to export subsidy disciplines, and they never once expressed the intention to exclude them from such disciplines. In addition, Brazil rejects the United States' contention that the Panel's reading of Article 10.2 gives rise to a result that is "manifestly unreasonable".[115] At the close of the Uruguay Round, Members agreed that they would calculate their respective export subsidy commitment levels exclusively on the basis of the export subsidies listed in Article 9.1. They chose to leave out of that calculation the export subsidies in Article 10.1.[116] This is not an unjust implementation of the Uruguay Round, but the logical consequence of the bargain Members struck. Brazil emphasizes that the Panel's interpretation does not mean that Members cannot grant export credit guarantees. Instead, it means that *subsidized* export credit guarantees are subject to discipline as trade-distorting measures, and cannot be used to override export subsidy commitments.

123. Finally, Brazil asserts that, even if Article 10.2 were to exempt export credit guarantees for agricultural commodities from the disciplines in the *Agreement on Agriculture*, these measures would still be subject to Article 3 of the *SCM Agreement*.[117]

(iv) *Burden of proof*

[113]Brazil's appellee's submission, para. 940 (quoting the United States' appellant's submission, para. 350).

[114]*Ibid.*, para. 940 (quoting paragraph 3, FAO "Principles of Surplus Disposal and Consultative Obligations", and Article IX(d) of the Food Aid Convention).

[115]*Ibid.*, para. 926 (quoting the United States' appellant's submission, para. 384).

[116]*Ibid.*, para. 927.

[117]At the oral hearing, however, Brazil clarified that if Article 10.2 were to exempt export credit guarantees for agricultural commodities from the disciplines in the *Agreement on Agriculture*, Article 3 of the *SCM Agreement* would not be applicable to such measures.

124. Brazil submits that, even if correct, none of the United States' arguments in respect of the Panel's application of the burden of proof would lead to a reversal of the Panel's conclusion that the United States' export credit guarantee programs constitute export subsidies under the *Agreement on Agriculture* and the *SCM Agreement*. Irrespective of which party bore the burden of proof and the role of Article 10.3 of the *Agreement on Agriculture*, the Panel explicitly found that Brazil had established that the premiums charged under the United States' export credit guarantee programs were inadequate to cover long-term operating costs and losses for purposes of item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*.[118] Having concluded that Brazil had successfully demonstrated that the United States' export credit guarantee programs constitute export subsidies under item (j) as context for the interpretation of the term "export subsidies" in Articles 10.1 and 8 of the *Agreement on Agriculture*, the Panel similarly concluded that the export credit guarantee programs constitute prohibited export subsidies under item (j) of the Illustrative List of Export Subsidies and Articles 3.1(a) and 3.2 of the *SCM Agreement*.[119]

125. Brazil also takes issue with the United States' assertion that the Panel required the United States to offer "incontrovertible demonstrations to the Panel" that, under the net present value accounting methodology, data trends indicated profits for the programs.[120] Brazil explains that, as the party asserting that these trends existed, the United States bore the burden of proving their existence. In the statement challenged by the United States, the Panel simply found that the United States had not met this burden. The Panel made this finding based on data submitted by the United States. Given that the United States has not alleged that the Panel failed to make an objective assessment of the facts under Article 11 of the DSU, Brazil argues that the United States' appeal should be denied on these grounds alone.

(v) *Necessary findings of fact*

126. Brazil asserts that the United States' claim that the Panel did not make the necessary findings of fact should have been brought under Article 11 of the DSU and that, having failed to bring such a claim, the United States is precluded from challenging the Panel's appreciation of the facts.

127. In any event, Brazil submits that neither item (j), nor Articles 3.1(a) and 3.2 of the *SCM Agreement*, nor Articles 10.1 and 8 of the *Agreement on Agriculture*, required the Panel to make specific factual findings on the "monetary extent to which" premium rates are inadequate to cover the long-term operating costs and losses of the United States' export credit guarantee programs.[121] It was sufficient for the Panel to have found that, under any and all methodologies that it reviewed and accepted, premium rates are *inadequate* to cover the long-term operating costs and losses of the export credit guarantee programs.

128. In addition, Brazil asserts that the Panel made sufficient factual findings for its conclusion that premium rates are inadequate to cover the long-term operating costs and losses of the export credit guarantee programs. Specifically, the Panel assessed the performance of the export credit guarantee programs under the elements of item (j) in various ways. In its assessment of the *past* performance of the export credit guarantee programs during the period 1992-2002, the Panel used two accounting methodologies—net present value accounting and cash basis accounting—to determine whether premium rates are inadequate to cover the long-term operating costs and losses of the programs.

[118]Brazil's appellee's submission, paras. 1023-1024 (referring to Panel Report, para. 7.867).

[119]*Ibid.*, para. 1024 (referring to Panel Report, paras. 7.946-7.948).

[120]*Ibid.*, para. 1025 (quoting the United States' appellant's submission, para. 408).

[121]Brazil's appellee's submission, para. 1046 (quoting the United States' appellant's submission, para. 419).

129. Brazil therefore requests that the Appellate Body uphold the Panel's finding that the United States' export credit guarantee programs constitute export subsidies within the meaning of item (j) of the Illustrative List of Export Subsidies and Articles 3.1 and 3.2 of the *SCM Agreement*.

C. *Claims of Error by Brazil – Appellant*

1. Domestic Support

(a) Article 13(a) of the *Agreement on Agriculture* – Base Period Update

130. Brazil conditionally appeals the Panel's exercise of judicial economy with respect to Brazil's claim that the "updating" of base acreage for direct payments under the FSRI Act of 2002 renders that program inconsistent with paragraph 6(a) of Annex 2 of the *Agreement on Agriculture*. Brazil's appeal is conditional on the Appellate Body reversing the Panel's finding that production flexibility contract payments and direct payments are not decoupled income support under paragraph 6(b) of Annex 2 and thus not entitled to peace clause protection by virtue of Article 13(a) of the *Agreement on Agriculture*.

131. Brazil argues that the Panel made factual findings to the effect that the FSRI Act of 2002 created a new "base period" of time (marketing years 1998-2001) according to which upland cotton producers' eligibility for direct payments could be calculated. This new base period could replace the base period that had prevailed under the FAIR Act of 1996 (i.e., 1993-1995) for the calculation of production flexibility contract payments. In practical terms, the FSRI Act of 2002 gave producers who planted more upland cotton during 1998-2001 the chance to "update", that is, increase, the quantity of base acres for which they received direct payments.

132. Brazil recalls that paragraph 6(a) of Annex 2 states that "[e]ligibility for such payments shall be determined by clearly-*defined criteria* such as income, status as a producer or landowner, *factor use or production level in a defined and fixed base period*".[122] "Factor use" encompasses quantities of eligible farmland used in a historical period, such as the "base acres" used in the production flexibility contract and direct payment programs. Similarly, "production level" encompasses quantities of production based on historical acreage and yields, such as those used under the production flexibility contract and direct payment programs to calculate payments. If either the historical acreage or yields are updated, the result is a change in one of the "clearly-defined criteria". Yet paragraph 6(a) requires that both the "factor use" and "production level" criteria be set out in "a" single "fixed" base period.

133. Brazil notes that the ordinary meaning of the term "fixed" in relation to a base period is that the defined base period cannot be changed or updated. Accordingly, there can be only one period of time to establish these values; there can be no "updating" of the base period. Brazil contends that the context supports its interpretation. Moreover, the object and purpose of paragraph 6 of Annex 2 is to ensure that decoupled payments "have no, or at most minimal, trade-distorting effects or effects on production".[123] Paragraphs 5 and 6 of Annex 2 make clear that the purpose of "decoupled income support" is to break the link between production decisions and the amount of support. If that link is maintained, then domestic support is not entitled to the exemption from reduction commitments. Brazil submits that the United States' interpretation would effectively allow a Member to re-link last year's production to this year's payment. This would void paragraph 6(a) of any *effet utile*.

[122]Brazil's other appellant's submission, para. 246. (emphasis added by Brazil)

[123]*Ibid.*, para. 251 (quoting para. 1 of Annex 2 of the *Agreement on Agriculture*).

134. Brazil submits that the undisputed facts on the record reveal that production flexibility contract payments and direct payments were made to the same persons, on the same land, based on the same yield and payment formula, under the same conditions, and with the same limitations. Given these similarities, the option for a producer to select a new "fixed base period" other than the original "fixed base period" means that the direct payments are not green box measures under paragraph 6(a) of Annex 2. Brazil requests the Appellate Body to find accordingly.

2. Serious Prejudice

(a) World Market Share under Article 6.3(d) of the *SCM Agreement*

135. Brazil appeals the Panel's finding that Brazil failed to establish a *prima facie* case of inconsistency with Articles 5(c) and 6.3(d) of the *SCM Agreement*. Brazil asks the Appellate Body to reverse the Panel's finding that the words "world market share" in Article 6.3(d) mean "the portion of the world's supply that is satisfied by the subsidizing Member's producers"[124] and to find instead that "world market share" means "world market share of *exports*".[125] In addition, if the Appellate Body reverses the Panel's finding that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*, Brazil calls on the Appellate Body to complete the analysis under Article 6.3(d) and to find that the effect of these subsidies is an increase in the United States' world market share of exports within the meaning of Article 6.3(d), thereby constituting serious prejudice to the interests of Brazil within the meaning of Article 5(c) of the *SCM Agreement*.

136. As regards the interpretation of the term "world market share" in Article 6.3(d) of the *SCM Agreement*, Brazil first draws support from the text of that provision. Article 6.3(d) does not specify whether "world market share" refers to world market share of production or world market share of something else. However, the use of the word "trade" in footnote 17 to Article 6.3(d) suggests that Article 6.3(d) is directed towards a Member's share of world trade in a product, which requires a focus on *exports* rather than *production*.

137. Secondly, Brazil refers to the context of Article 6.3(d). Brazil argues that Article XVI:3 of the GATT 1994 addresses a Member's "share of world export trade" and that similarities between Article XVI:3 and Article 6.3(d) require the phrase "world market share" in the latter provision to be read in the same way. Brazil also points to the context provided by paragraphs (a) and (b) of Article 6.3, as well as Articles 6.4 and 6.7, and argues that the focus of a serious prejudice analysis under Article 6.3 is on the effects of the subsidies on like products from the complaining Member. According to Brazil, "[t]hese effects are either manifest in aggregated volume effects on the exports of a complaining Member under Articles 6.3(a), 6.3(b) and 6.3(d), or in price effects on the like product of the complaining Member in the 'same market' under Article 6.3(c)".[126]

138. Thirdly, Brazil relies on the object and purpose of Articles 5(c) and 6.3 of the *SCM Agreement*, which it characterizes as being to discipline subsidies causing serious prejudice to the interests of another Member. As stated in Article XVI:1 of the GATT 1994 (to which footnote 13 to Article 5(c) of the *SCM Agreement* refers), serious prejudice is reflected in trade effects, namely decreased imports or increased exports. Increased production is taken into account in a serious prejudice analysis, because it may have trade effects. However, by focusing solely on the United States' share of world upland cotton production, the Panel disregarded the significant increase in the United States' share of world upland cotton exports from 1999 to 2002, which caused serious

[124]Brazil's other appellant's submission, para. 269 (quoting Panel Report, para. 7.1434).

[125]*Ibid.*, para. 380(9). (original emphasis)

[126]Brazil's other appellant's submission, para. 287.

prejudice to other Members' producers who were competing against the subsidized exports. The Panel's interpretation means that the subsidizing Member's world market share may be significantly affected by unrelated increases in production in third countries, even if this additional production is consumed domestically. Brazil suggests that this would render Article 6.3(d) "largely inutile"[127] in disciplining the use of subsidies to increase market share.

139. For these reasons, Brazil asks the Appellate Body to reverse the Panel's interpretation of "world market share" under Article 6.3(d) of the *SCM Agreement* and to find instead that "world market share" means world market share of *exports*. Should it do so, and if the Appellate Body reverses the Panel's finding of significant price suppression under Article 6.3(c) of the *SCM Agreement*, Brazil asks the Appellate Body to complete the analysis under Article 6.3(d).

140. According to Brazil, factual findings by the Panel and undisputed facts on the record would allow the Appellate Body to complete the analysis under Article 6.3(d). The Panel's findings show that the United States' world market share of exports in marketing year 2002 was 39.9 percent, representing an increase over the previous three-year average of 28.4 percent.[128] Moreover, the Panel's assessment of the effects of the subsidies in its analysis under Article 6.3(c) confirms that the subsidies in question result in an increase in world market share, stimulate exports, and enhance the competitiveness of United States producers in world trade. Brazil submits that the Panel's causation and non-attribution analyses under Article 6.3(c) are also relevant for the causation analysis under Article 6.3(d). It is appropriate for the Appellate Body to complete the analysis in this way because the Panel did address all the elements of Brazil's claim under Article 6.3(d) and, even if it had not, Articles 6.3(c) and 6.3(d) claims are "closely related" and "part of a logical continuum".[129] According to Brazil, both claims relate to the adverse effects of and serious prejudice caused by actionable subsidies pursuant to Article 5(c) of the *SCM Agreement*, and Articles 6.3(c) and 6.3(d) are "closely-linked steps in determining the consistency of"[130] actionable subsidies under the *SCM Agreement*.

3. Import Substitution Subsidies and Export Subsidies

(a) Share of World Export Trade under Article XVI:3 of the GATT 1994

141. Brazil appeals the Panel's finding that the second sentence of Article XVI:3 of the GATT 1994 applies only to export subsidies as defined in the *Agreement on Agriculture* and the *SCM Agreement*. Brazil asks the Appellate Body to reverse the Panel's finding that this sentence applies only to export subsidies and to find instead that it applies to "*any form of subsidy* which operates to increase the export of any primary product".[131] In addition, if the Appellate Body reverses the Panel's finding that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*, and if the Appellate Body does not find that the effect of these subsidies is an increase in the United States' world market share of exports within the meaning of Article 6.3(d) constituting serious prejudice within the meaning of Article 5(c) of the *SCM Agreement*, Brazil calls on the Appellate Body to complete the analysis and to find that these subsidies are applied in a manner that results in the United States having "more than an equitable share of world export trade in" upland cotton, contrary to the second sentence of Article XVI:3 of the GATT 1994.

142. In relation to the subsidies subject to the second sentence of Article XVI:3 of the GATT 1994, Brazil first refers to the text of this sentence and, in particular, the words "any form of subsidy". The ordinary meaning of these words suggests that Article XVI:3 applies to every subsidy, no matter what kind or how many. In addition, the second sentence specifies that it does not matter whether the subsidy is granted "directly or indirectly". Brazil points out that, in contrast to the first sentence of Article XVI:3, which is concerned with subsidies *on the export* of primary products, the second sentence is concerned with any subsidies that have export-enhancing effects.

143. Secondly, turning to the broader context of Article XVI:3, Brazil contends that Part A of Article XVI disciplines subsidies in general, and Part B of Article XVI disciplines "Export Subsidies" (as specified in the heading to Part B) in particular. The wording of the provisions in Part B shows that "export subsidies" in this context means "subsidies on the export" of a primary product (under the first sentence of Article XVI:3) and subsidies that operate "to increase the export of any primary product" (under the second sentence of Article XVI:3). Brazil argues that, in contrast, the export subsidy disciplines in the *SCM Agreement* and the *Agreement on Agriculture* are concerned with the narrower concept of "subsidies contingent upon export performance".[132]

144. Brazil also refers, for contextual support, to Article 13 of the *Agreement on Agriculture*. Article 13(c)(ii) provides a limited exemption for agricultural export subsidies from Article XVI of the GATT 1994, suggesting that Article XVI:3 could otherwise apply to such subsidies. Similarly, Brazil contends that the conditional exemption in Article 13(a)(ii) suggests that, in principle, green box domestic support is subject to challenge under the second sentence of Article XVI:3.

145. Thirdly, with respect to the object and purpose of Article XVI of the GATT 1994 and Articles 5 and 6 of the *SCM Agreement*, Brazil suggests that these provisions are intended to prevent subsidies granted by Members from having certain adverse outcomes or effects. The purpose of disciplining adverse effects of subsidies in the second sentence of Article XVI:3 of the GATT 1994 would be frustrated if this sentence was interpreted to apply only to subsidies contingent on export performance. This interpretation would deprive the second sentence of Article XVI:3 of *effet utile*, because the disciplines in that sentence would no longer apply to many subsidies having export-enhancing effects.

146. Brazil adds that Article XVI:3 of the GATT 1994 continues to apply despite the disciplines in the *SCM Agreement* and the *Agreement on Agriculture*.[133] In interpreting the covered agreements harmoniously and giving effect to all of them, the second sentence of Article XVI:3 must apply to measures that are also subject to the *SCM Agreement* and the *Agreement on Agriculture*. The rules in Article 21.1 of the *Agreement on Agriculture* and the General Interpretative Note to Annex 1A of the *WTO Agreement* do not apply, because no conflict exists between the second sentence of Article XVI:3 of the GATT 1994 and the disciplines in the *Agreement on Agriculture* and the *SCM Agreement*.

147. For these reasons, Brazil asks the Appellate Body to reverse the Panel's finding that the second sentence of Article XVI:3 of the GATT 1994 applies only to export subsidies as defined in the *Agreement on Agriculture* and the *SCM Agreement* and to find instead that this sentence applies to any form of subsidy that operates to increase the export of any primary product. Should it do so, and

[127] *Ibid.*, para. 295.

[128] *Ibid.*, para. 301.

[129] Brazil's other appellant's submission, paras. 313 and 314 (quoting Appellate Body Report, *Canada – Periodicals*, p. 24, DSR 1997:1, 449 at 469; Appellate Body Report, *EC – Asbestos*, para. 79).

[130] *Ibid.*, para. 314 (quoting Appellate Body Report, *Canada – Periodicals*, p. 24, DSR 1997:1, 449 at 469).

[131] *Ibid.*, para. 317 (quoting the GATT 1994, Article XVI:3). (emphasis added by Brazil)

[132] Brazil's other appellant's submission, para. 333 (quoting Article 1(e) of the *Agreement on Agriculture* and referring to Article 3.1(a) of the *SCM Agreement*).

[133] *Ibid.*, para. 345 (referring to Appellate Body Report, *Korea – Dairy*, para. 75; and Appellate Body Report, *Argentina – Footwear (EC)*, para. 81).

if the Appellate Body reverses the Panel's finding of significant price suppression under Article 6.3(c) of the *SCM Agreement* and does not find serious prejudice pursuant to Articles 5(c) and 6.3(d) of the *SCM Agreement*, Brazil asks the Appellate Body to complete the analysis under Article XVI:3 of the GATT 1994.

148. Brazil contends that the Panel's factual findings and the undisputed facts on the panel record are sufficient for the Appellate Body to find that the price-contingent subsidies caused the United States to have "more than an equitable share of world export trade", contrary to Article XVI:3 of the GATT 1994. The Panel made factual findings, pursuant to Article 6.3(c) of the *SCM Agreement*, regarding the United States' share of world export trade and the effect of the subsidies on that share. Brazil also submits that the Panel's non-attribution analysis would allow the Appellate Body to conclude that it was the subsidies in question that led to the United States' world market share reaching a level that is more than equitable, at the expense of other, more efficient producers.

(b) Export Credit Guarantees

(i) *Threat of circumvention*

149. Brazil asserts that the Panel erred in the interpretation and application of Article 10.1 of the *Agreement on Agriculture* by finding that "threat" of circumvention of export subsidy commitments would arise only if beneficiaries had an "absolute" or "unconditional statutory legal entitlement" to receive the subsidies such that the United States would "necessarily" be required to grant subsidies after the commitment level had been reached.[134] Brazil also takes issue with the Panel's statement that a "threat" could not arise if circumvention was just a *possibility*.[135]

150. According to Brazil, by its very nature, an obligation that covers the "threat" of circumvention deals with a future event whose actual occurrence is merely a possibility that cannot be assured with certainty.[136] Brazil adds that, even though the ordinary meaning of the term "threat" can encompass events that are a possibility or that appear likely, it can also include events whose occurrence is indicated or portended by circumstances. Furthermore, the meaning of the term "threatens" is clarified by its immediate context, particularly the word "[p]revention" in the title of Article 10. Brazil thus contends that, to give proper meaning to the aim of prevention, the threat obligation should be read so as to thwart, forestall, or stop circumvention from occurring by requiring a Member to take appropriate precautionary action. If, on the contrary, the degree of likelihood necessary to trigger the threat obligation were set too high, the threat obligation would fail to prevent circumvention, contrary to the express aim of the provision.

151. Brazil distinguishes the meaning of "threatens" in the context of Article 10.1 of the *Agreement on Agriculture* from the connotation of that term in other covered agreements. It explains that the *Agreement on Safeguards* and the *Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994* (the "*Anti-Dumping Agreement*") require a higher degree of likelihood because, under both Agreements, the demonstration of "threat" triggers the right of a WTO Member to apply trade remedy measures involving suspension or modification of WTO commitments. In contrast, Article 10.1 of the *Agreement on Agriculture* aims at the effective enforcement of a Member's export subsidy obligations. Brazil submits that the Panel's reading of Article 10.1 runs counter to the Appellate Body's decision in *US – FSC*, where the Appellate Body held that Article 10.1 applies if a measure "allows for" circumvention[137], whereas the Panel insisted that circumvention must be required by legal entitlement. Brazil submits that the assessment of whether a threat exists under Article 10.1 must be done on a case-by-case basis and suggests a list of factors that could be considered as part of the assessment.[138]

152. Brazil also contends that the Panel erred by confining its examination of threat of circumvention to scheduled agricultural products other than rice and to unscheduled products "not supported"[139] under the United States' export credit guarantee programs.[140] Brazil explains that, in addition to alleging actual circumvention in respect of rice, it also included this product in its claim of threat of circumvention. Brazil observes, furthermore, that it drew no distinctions between supported and unsupported products. Thus, the Panel's analysis of threat of circumvention should have included rice and all unscheduled products eligible to receive support under the export credit guarantee programs, regardless of whether they were in fact supported by such programs in the past.

153. Brazil argues that the Panel should have made a finding of threat of circumvention notwithstanding its conclusion on actual circumvention in respect of rice and unscheduled products supported under the United States' export credit guarantee programs. The prohibitions on actual and threatened circumvention are two separate obligations under Article 10.1 of the *Agreement on Agriculture*. The concepts of actual and threatened circumvention in Article 10.1 are different from the notions of injury and threat of injury in the trade remedies context. Article 10.1 does not confer rights, but imposes obligations. Accordingly, to hold that a Member has actually circumvented its export subsidy commitments in the past does not make it irrelevant to conclude that the Member continues to threaten circumvention in the future.

154. If the Appellate Body agrees with Brazil and modifies the Panel's interpretation of Article 10.1, Brazil requests that the Appellate Body complete the analysis of its claims. Brazil argues that the United States maintains export credit guarantees for a very wide range of scheduled and unscheduled agricultural products. These measures are subject to special budgetary rules that provide permanent and unlimited budget authority to the CCC to grant export credit guarantees. Therefore, Brazil asserts, no budgetary limits are imposed on the value of the subsidies that can be granted.

155. Brazil states that, even though the United States alleged before the Panel that the export credit guarantee programs are not unlimited because they impose certain conditions on the grant of subsidies, these conditions have no rational relationship whatsoever to ensuring respect for the United States' export subsidy commitments. There is no evidence on the record, according to Brazil, to demonstrate that any of the applicable conditions has ever been applied with a view to ensuring respect for the United States' export subsidy commitments. Moreover, none of these conditions has prevented the United States from consistently granting export credit guarantees for both scheduled and unscheduled products in violation of these commitments. Brazil contends that the authority that the United States enjoys to grant export credit guarantees in violation of its export subsidy commitments, coupled with the consistent pattern of granting behaviour in violation of those commitments, establishes that the United States' export credit guarantees are applied in a manner that

[134]Brazil's other appellant's submission, paras. 85-89 (quoting Panel Report, paras. 7.883 and 7.892).

[135]*Ibid.*, paras. 89 and 114 (referring to Panel Report, para. 7.893).

[136]*Ibid.*, para. 94 (referring to Appellate Body Report, *US – Lamb*, para. 125).

[137]Brazil's other appellant's submission, paras. 126-129 (quoting Appellate Body Report, *US – FSC*, para. 152).

[138]*Ibid.*, para. 105.

[139]When the Panel refers to products supported under the export credit guarantee programs, the Panel is referring to products for which there was evidence in the record showing that they were not only eligible under the programs, but that export credit guarantees were in fact received in connection with exports of those products. (Panel Report, para. 6.32)

[140]Brazil's other appellant's submission, para. 132 (quoting Panel Report, para. 7.882).

threatens to lead to circumvention of the United States' export subsidy commitments for all eligible products, under Article 10.1 of the *Agreement on Agriculture*.

(ii) *Actual circumvention*

156. Brazil claims that the Panel erred in the application of Article 10.1 of the *Agreement on Agriculture*, and did not discharge its duties under Article 11 of the DSU, by finding that the United States' export credit guarantees are applied in a manner that results in circumvention of the United States' export subsidy commitments for only one scheduled product, namely rice.

157. Brazil submits that, according to uncontested evidence on the record, supplied by the United States, actual circumvention also occurred for pig meat and poultry meat in 2001.[141] According to figures supplied by the United States, in fiscal year 2001, the volume of pig meat and poultry meat benefiting from export credit guarantees exceeded the United States' reduction commitment levels for these products. The Panel took explicit cognizance of this information, but nonetheless failed to apply a proper interpretation of Article 10.1 to the admitted facts. Likewise, the Panel failed to make an objective assessment of the matter, including of admitted and uncontested facts supplied by the United States, as required by Article 11 of the DSU.

158. Therefore, Brazil requests that the Appellate Body modify the Panel's finding that the United States' export credit guarantees are applied in a manner that results in actual circumvention with respect to only one scheduled product, namely, rice, and that it find, based on the undisputed facts on the record, that export credit guarantees are applied in a manner that also results in actual circumvention with respect to pig meat and poultry meat.

(iii) *Articles 1.1 and 3.1(a) of the SCM Agreement*

159. Brazil appeals the Panel's finding that, having found that the United States' export credit guarantee programs are export subsidies under item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*, it was unnecessary to address Brazil's claim that these programs constitute export subsidies under the terms of Articles 1.1 and 3.1(a) of the *SCM Agreement*. In declining to make a finding under these two Articles, the Panel erred in the interpretation and application of Article 3.1(a) of the *SCM Agreement*, as well as of Article 3.7 of the DSU.

160. According to Brazil, the Panel failed to recognize that Article 3.1(a) includes multiple and distinct obligations that differ from those deriving from item (j) of the Illustrative List of Export Subsidies. Most importantly, while a measure may no longer constitute an export subsidy under item (j), the same measure can still constitute an export subsidy under Articles 1.1 and 3.1(a) of the *SCM Agreement*. In the present dispute, a claim under item (j) of the Illustrative List of Export Subsides requires a determination whether the programs involved a "net cost" to the United States government. In contrast, a claim under Articles 3.1(a) and 1.1 necessitates a determination of whether the programs constitute "financial contributions" that confer a "benefit" (within the meaning of Article 1.1 of the *SCM Agreement*) on recipients of export credit guarantees[142] and are "contingent … upon export performance" (within the meaning of Article 3.1(a) of the *SCM Agreement*). These are two separate claims regarding two separate obligations imposed upon the United States. The first

[141]In its other appellant's submission, Brazil also claimed that the Panel erred by failing to find actual circumvention of the United States' export subsidy reduction commitments for vegetable oil in 2002. (Brazil's other appellant's submission, paras. 208-209) At the oral hearing, however, Brazil indicated that it was no longer pursuing this claim in respect of vegetable oil.

[142]Brazil's other appellant's submission, paras. 29-30 (referring to Appellate Body Report, *Canada – Aircraft*, paras. 154, 157).

obligation of the United States is to refrain from maintaining export credit guarantee programs that entail financial contributions, confer benefits, and are contingent upon export performance, while its second obligation is to refrain from maintaining export credit guarantee programs that incur a net cost to the United States government.

161. Brazil submits that, by failing to examine these distinct claims, the Panel misapplied the principle of judicial economy[143] and failed to provide for a "prompt settlement" and "positive solution" of the dispute as required by Articles 3.3 and 3.7 of the DSU. The Panel's misapplication of the principle of judicial economy means that the recommendations and rulings of the DSB may not be sufficiently precise to resolve the dispute. The Panel left unresolved the dispute between the parties as to whether the export credit guarantee programs involve a "benefit", and the steps that the United States must take to implement its obligations under the *SCM Agreement* will therefore be unclear.

162. If the Appellate Body were to reverse the Panel's finding, Brazil requests that the Appellate Body complete the analysis and find that the United States' export credit guarantee programs constitute export subsidies under Articles 1.1 and 3.1(a) of the *SCM Agreement*. Brazil submits that it is undisputed that export credit guarantees constitute "financial contributions" and that the programs are "contingent … upon export performance". Regarding the third element, i.e. whether the export credit guarantee programs confer a benefit within the meaning of Article 1.1(b) of the *SCM Agreement*, Brazil notes that the Appellate Body has sufficient factual findings and undisputed facts on the record to complete the analysis. Brazil explains that the record demonstrates that the United States' export credit guarantee programs confer a benefit because they: (i) are not risk-based; (ii) are below relevant benchmarks, including the fees charged by the United States Export-Import Bank for its own guarantees; and (iii) enable non-creditworthy purchasers of United States agricultural exports to secure loans they would otherwise be unable to secure.

(iv) *ETI Act of 2000*

163. Brazil appeals the finding of the Panel that Brazil did not establish a *prima facie* case of inconsistency of the FSC Repeal and Extraterritorial Income Exclusion Act of 2000 (the "ETI Act of 2000"), and export subsidies granted thereunder in respect of upland cotton, with Articles 8 and 10.1 of the *Agreement on Agriculture*. Brazil acknowledges that the United States enacted legislation, on 25 October 2004, that "seems to repeal most of the illegal aspects of the ETI Act of 2000"[144] and, consequently, Brazil does not ask the Appellate Body to complete the analysis and to find that ETI Act export subsidies provided with respect to upland cotton exports are inconsistent with Articles 8 and 10.1 of the *Agreement on Agriculture* and Articles 3.1(a) and 3.2 of the *SCM Agreement*.

164. Brazil contends that it challenged before the Panel exactly the same measure that the panel and the Appellate Body in *US – FSC (Article 21.5 – EC)* held to be inconsistent with the *Agreement on Agriculture* and the *SCM Agreement*. Except for the fact that Brazil challenges only the ETI Act export subsidies to upland cotton (and not with respect to all products), the "measure" and the "claims" in the present case are identical to those in *US – FSC (Article 21.5 – EC)*. According to Brazil, the United States has never challenged this identity.

165. Brazil alleges that the United States "effectively admitted" the inconsistency of the ETI Act of 2000 with Articles 10.1 and 8 of the *Agreement on Agriculture* and Articles 3.1(a) and 3.2 of the *SCM Agreement* and never contested Brazil's claims on their merits.[145] Brazil explains that it presented to the Panel all the evidence and argumentation that had been before the panel and the

[143]*Ibid.*, paras. 33-34 (referring to Appellate Body Report, *Australia – Salmon*, paras. 222-224).

[144]Brazil's other appellant's submission, para. 214.

[145]*Ibid.*, para. 222.

Appellate Body in the earlier dispute relating to the ETI Act of 2000. Brazil incorporated by reference into its submissions (i) the panel report in *US – FSC (Article 21.5 – EC)*, (ii) the Appellate Body Report in *US – FSC (Article 21.5 – EC)*, and (iii) all submissions of the European Communities in that case. Brazil contends that an approach whereby the complaining Member incorporates by reference the reasoning of another panel, as modified by the Appellate Body, is consistent with the Appellate Body's reasoning in *Mexico – Corn Syrup (Article 21.5 – US)*.[146]

166. Brazil asserts that, in addition to referencing the European Communities' claims and arguments in *US – FSC (Article 21.5 – EC)*, it presented arguments and evidence that addressed the specific nature of its claims, in particular with respect to Article 13(c)(ii) of the *Agreement on Agriculture*. Brazil submits that it identified the relevant portions of the *US – FSC (Article 21.5 – EC)* panel report that determined that the ETI Act of 2000 provides export subsidies. Specifically, that panel found that the ETI Act of 2000 (i) provides financial contributions within the meaning of Article 1.1(a)(ii) of the *SCM Agreement*, (ii) confers benefits within the meaning of Article 1.1(b), and thus (iii) bestows subsidies within the meaning of the *SCM Agreement* that (iv) are contingent upon export performance within the meaning of Article 3.1(a) of the *SCM Agreement*. Based on these arguments and findings, the Panel had more than sufficient evidence and arguments before it to conduct an objective examination of the consistency of the measure with the *Agreement on Agriculture* and the *SCM Agreement*. According to Brazil, the distinctions drawn by the Panel between the present dispute and the claims in *US – FSC (Article 21.5 – EC)* have no basis.

167. Brazil adds that, under Article 17.14 of the DSU, the parties to a dispute are unconditionally bound by adopted panel and Appellate Body reports.[147] Therefore, the United States is bound by the decision of the DSB to adopt the panel and Appellate Body Reports in *US – FSC (Article 21.5 – EC)* and the recommendation by the DSB that the United States bring the ETI Act of 2000 into conformity with the *Agreement on Agriculture* and the *SCM Agreement*. Despite the legal impossibility of the United States arguing that an identical measure subject to identical claims is WTO-consistent, the Panel nevertheless refused to take this into account in its assessment of the facts of the case and the matter before it.

168. Brazil states, moreover, that the ETI Act of 2000 is a measure that *all* WTO Members, *including the respondent*, have decided, through the adoption by the DSB of the relevant panel and Appellate Body reports, is inconsistent with the obligations of the United States under a covered agreement. The general rules on the burden of proof under the DSU, in essence, *presume* that a Member is in compliance with its obligations under WTO law and require a complaining Member to make a *prima facie* case that this presumption is misplaced. However, where the Members have decided in the DSB that a measure does not conform to a covered agreement, there is no basis for presuming that the same measure is in compliance with WTO law in another dispute. Any such presumption contradicts a formal DSB decision of the Members of the WTO.

169. Accordingly, Brazil requests the Appellate Body to find that the Panel erred in the interpretation and application of the burden of proof when finding that Brazil had not established *prima facie* that the ETI Act of 2000 violates Articles 8 and 10.1 of the *Agreement on Agriculture* and Article 3.1(a) and 3.2 of the *SCM Agreement*.

[146]*Ibid.*, para. 224 (referring to Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 109).

[147]Brazil's other appellant's submission, para. 234 (referring to Appellate Body Report, *US – Shrimp (Article 21.5 – Malaysia)*, para. 97 and Appellate Body Report, *EC – Bed Linen (Article 21.5 – India)*, paras. 90-96).

D. *Arguments of the United States – Appellee*

1. Domestic Support

(a) Article 13(a) of the *Agreement on Agriculture* – Base Period Update

170. The United States submits that the Appellate Body should reject Brazil's conditional appeal that direct payments under the FSRI Act of 2002 are not in conformity with the green box criteria set forth in paragraph 6(a) of Annex 2 to the *Agreement on Agriculture*, because the program uses a "defined and fixed base period" different from that established for the production flexibility contract program under the FAIR Act of 1996. The United States argues that the direct payment program employs "a defined and fixed base period" within the meaning of paragraph 6(a) and Brazil's appeal relies on an erroneous reading of that paragraph, such that once one type of green box payment to producers is made, *all* subsequent measures providing such support must be made with respect to the same base period.

171. The United States argues that the ordinary meaning of the terms "defined and fixed base period", as used in paragraph 6(a), requires a base period to be "set out precisely" and to be kept "stationary or unchanging in relative position."[148] Direct payments under the FSRI Act of 2002 satisfy this requirement because eligibility is determined by historical production of any of a number of crops (including upland cotton) in a base period that is "definite" (set out in the FSRI Act of 2002) and "stationary or unchanging in a relative position" (that is, does not change for the duration of the FSRI Act of 2002). There is no textual requirement in paragraph 6(a) that new decoupled income support measures must utilize the *same* "defined and fixed base period" as any prior measures. Furthermore, the use of "a" defined and fixed base period contrasts with the use of the phrase "*the* base period" in other provisions of Annexes 2 and 3 of the *Agreement on Agriculture*. The United States emphasizes that the direct payment and production flexibility contract programs are different measures. There is thus no legal requirement that they use the same base period, so long as they each make use of a "defined and fixed" base period.

172. The United States argues that Brazil's interpretation would foreclose reform options to Members with past green-box support programs, contrary to the object and purpose of the *WTO Agreement*. In addition, Brazil's interpretation of paragraph 6(a) would render direct payments under the FSRI Act of 2002 non-green box, even though the Panel implicitly found that such payments had no more than minimal trade-distorting effects or effects on production.

2. Serious Prejudice

(a) World Market Share under Article 6.3(d) of the *SCM Agreement*

173. The United States maintains that the Panel correctly found that Brazil did not establish a *prima facie* case of inconsistency with Articles 5(c) and 6.3(d) of the *SCM Agreement*. The United States requests the Appellate Body to uphold this finding. In particular, the United States requests the Appellate Body to dismiss Brazil's argument that the words "world market share" in Article 6.3(d) refer to "world market share of *exports*".[149] Even if the Appellate Body accepts this argument by Brazil, the United States requests the Appellate Body to dismiss the conditional request of Brazil that

[148]United States' appellee's submission, para. 128 (quoting *The New Shorter Oxford English Dictionary*, L. Brown (ed.) (Clarendon Press, 1993), Vol. 1, pp. 618 and 962).

[149]United States' appellee's submission, para. 145 (quoting Brazil's other appellant's submission, para. 271). (original emphasis)

the Appellate Body complete the analysis and find that the effect of the price-contingent subsidies is an increase in the United States' world market share within the meaning of Article 6.3(d), thereby constituting serious prejudice to the interests of Brazil within the meaning of Article 5(c) of the *SCM Agreement*.

174. According to the United States, Brazil's reading of "world market share" as meaning "world market share of export trade" is erroneous. First, the United States endorses the Panel's finding that, by using the term "market", Members intended a meaning broader than the share of "exports" or "trade". The United States contests Brazil's view that the Panel's interpretation of Article 6.3(d) reduces the provision to inutility. The United States agrees with the Panel that Article 6.3(d) calls for an examination of the portion of the world *market* that is satisfied by the subsidizing Member's producers. Nevertheless, the United States stresses that the Panel erroneously equated this examination with an examination of only that portion of the world's *supply* that is satisfied by the subsidizing Member's producers. The United States contends that the Panel should have looked at the level of world *sales* or *consumption* of cotton, rather than simply the world supply.

175. Secondly, as to the context of Article 6.3(d), the United States submits that the Panel was correct to conclude that the use of the phrase "world market share" (as opposed to the different formulations found in Article XVI:3 of the GATT 1994 and Article 27.6 of the *SCM Agreement*) implies that Members did not want to restrict "world market share" to a Member's share of "world export trade" or "world trade". Similarly, unlike paragraphs (a) and (b) of Article 6.3, paragraph (d) of Article 6.3 is not explicitly restricted to any particular exports or imports or geographical area. The United States contends that the use of the word "trade" in footnote 17 to Article 6.3(d), but not in the text of the Article itself, implies that "world market share" does not include merely shares in world "trade".

176. Even if Brazil's interpretation of the words "world market share" in Article 6.3(d) were correct, the United States submits that the Appellate Body would not have sufficient factual findings and uncontroverted facts before it to complete the analysis under Article 6.3(d). The United States emphasizes that the Panel made no analysis with respect to causation and market share under Article 6.3(d). In the United States' submission, the Panel's "flawed"[150] analysis regarding the effect of the subsidy under Article 6.3(c) is not relevant to Brazil's request that the Appellate Body complete the analysis under Article 6.3(d) of the *SCM Agreement*.

3. Import Substitution Subsidies and Export Subsidies

(a) Share of World Export Trade under Article XVI:3 of the GATT 1994

177. The United States submits that the Panel properly found that Article XVI:3 of the GATT 1994 applies only to export subsidies as defined in the *Agreement on Agriculture* and the *SCM Agreement*. However, if the Appellate Body finds that Article XVI:3 applies to subsidies other than export subsidies, the United States asks the Appellate Body to find that Brazil has not established that the United States acted inconsistently with Article XVI:3 of the GATT 1994.

178. Beginning with the scope of Article XVI of the GATT 1994, the United States emphasizes that the text of Article XVI distinguishes between "Subsidies in General" (Part A) and "Additional Provisions on Export Subsidies" (Part B). By locating Article XVI:3 in Part B, Members agreed that Article XVI:3 is an additional provision on export subsidies. The term "export subsidy" is now defined in the *SCM Agreement* and the *Agreement on Agriculture* as referring to subsidies that are contingent on export performance. Both the context provided by these Agreements, as well as their

[150]United States' appellee's submission, para. 164.

drafting history, confirm that the export subsidies referred to in Article XVI:3 are also subsidies contingent on export performance. According to the United States, the Panel was correct to rely on Article 3.1(a) of the *SCM Agreement*, item (l) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement*, and the drafting history of the *Tokyo Round Subsidies Code* in concluding that Article XVI:3 of the GATT 1994 is concerned with certain export subsidies on primary products.

179. The United States contends that, even if the Appellate Body reverses the Panel's interpretation of the scope of Article XVI:3, there would be insufficient undisputed facts on the record or factual findings by the Panel for the Appellate Body to complete the analysis. The United States observes that the Panel made no findings on causation relative to trade share. As the "causation"[151] requirement under Article XVI:3 of the GATT 1994 differs from that under Article 6.3(c) of the *SCM Agreement*, and as the United States has appealed the Panel's analysis under Article 6.3(c), that analysis cannot support a finding of inconsistency under Article XVI:3. Regarding the standard for determining what is "more than an equitable share" of world export trade under Article XVI:3, the United States understands Brazil to argue that the demonstration of "any causal relationship between an increase in exports and the subsidies provided" would suffice.[152] However, the United States regards this standard as inadequate, because it renders the language "more than an equitable share" inutile, and it would transform Article XVI:3 into an outright prohibition on export-enhancing subsidies.

(b) Export Credit Guarantees

(i) *Threat of circumvention*

180. The United States requests that the Appellate Body uphold the Panel's finding that no threat of circumvention exists under Article 10.1 of the *Agreement on Agriculture* with respect to "unsupported" agricultural products for which no export credit guarantees have been provided.

181. The United States asserts that, contrary to Brazil's argument, the Panel's finding that the export credit guarantee programs do not threaten circumvention of export subsidy commitments is not an articulation of a broad standard that circumvention of export subsidy commitments would be "threatened" only "if beneficiaries had an 'absolute' or 'unconditional ... legal entitlement' to receive the subsidies such that the United States would 'necessarily' be ['']required' to grant subsidies after the commitment level had been reached".[153] Rather, in concluding that the programs did not pose a threat of circumvention, the Panel was simply responding to and declining to adopt Brazil's erroneous factual and legal characterizations of the program.

182. The United States submits, furthermore, that the Panel rightly distinguished these programs from the mandatory subsidies at issue in *US – FSC*, and that the Panel's decision presents no conflict with that Appellate Body Report. Brazil effectively argued that a mere possibility of issuance of export credit guarantees presented a threat of circumvention, and the Panel simply did not adopt this theory in the context of the export credit guarantee programs.

183. In addition, the United States asserts that the Appellate Body need not complete the analysis regarding threat of circumvention as requested by Brazil. First, the Panel did not err in its analysis of threat of circumvention. Secondly, the Panel appropriately exercised judicial economy in declining to examine threat of circumvention with respect to those agricultural products for which it found actual circumvention. Further analysis was not necessary to resolve the matter in dispute as it would not

[151]United States' appellee's submission, para. 182.

[152]*Ibid.*, para. 183 (quoting Brazil's other appellant's submission, para. 373).

[153]*Ibid.*, para. 6 (quoting Brazil's other appellant's submission, para. 3).

affect implementation of the obligation to apply export subsidies only in conformity with applicable WTO commitments.

(ii) *Actual circumvention*

184. The United States asserts that the Appellate Body should reject Brazil's request for additional findings of actual circumvention of export subsidy commitments for pig meat and poultry meat.[154] According to the United States, Brazil has not asserted a proper claim under Article 11 of the DSU. The United States points out that Brazil does not appeal the Panel's findings that the facts did not demonstrate that subsidized exports exceeded the United States' quantitative reduction commitments for poultry meat and pig meat. Therefore, Brazil's appeal pursuant to Article 11 of the DSU is improper as it does not "stand by itself" and is not "substantiated with respect to the challenged findings".[155]

185. The United States submits that, in any event, the data do not support the conclusions that Brazil advances. Brazil's allegation of actual circumvention related to the period July 2001 through June 2002. In contrast, quantitative data on exports under the United States' export credit guarantee programs are maintained on a fiscal year basis, which extends from 1 October to 30 September. Even if this difference between periods can be overcome, the United States argues that the actual data also support the Panel's finding that Brazil did not demonstrate actual circumvention for these products.

(iii) *Articles 1.1 and 3.1(a) of the SCM Agreement*

186. The United States asserts that the Appellate Body should reject Brazil's request for further findings under Article 3.1(a) of the *SCM Agreement* in addition to the finding the Panel made in respect of item (j) of the Illustrative List of Export Subsidies. The United States submits that, in the light of the Panel's finding that the United States' export credit guarantee programs constitute a prohibited export subsidy because the premium rates were inadequate to cover the long-term operating costs and losses of the program, any additional findings by the Panel would have been redundant. Neither item (j) nor the Illustrative List of Export Subsidies imposes obligations *per se*; instead, the obligation regarding export subsidies is found in Articles 3.1(a) and 3.2 of the *SCM Agreement*. Furthermore, Brazil's interpretation would render the Illustrative List of Export Subsidies meaningless. In the United States' view, a practice that does not constitute a prohibited export subsidy under the standard set forth in a particular item of the Illustrative List, such as item (j), cannot constitute a prohibited export subsidy under some other standard. This was the approach advocated by Brazil in the *Brazil – Aircraft* dispute. Moreover, the United States argues that an additional finding by the Panel would have had no effect on implementation. Whether or not a separate finding of "benefit" were made under Article 1.1, the Panel's recommendations would remain precisely the same.

187. The United States also observes that Brazil misconstrues what the Panel decided. The Panel did not decline to address a claim raised by Brazil. Instead, the Panel declined to make additional *factual findings* that Brazil requested. In any event, the United States contends that Brazil misinterprets the concept of judicial economy and that, even if Brazil made a separate claim, the Panel was within the bounds of its discretion in exercising judicial economy with respect to that claim.

[154]The United States also rejected the allegations in respect of vegetable oil made by Brazil in its other appellant's submission.

[155]United States' appellee's submission, para. 50 (referring to Appellate Body Report, *US – Steel Safeguards*, para. 498).

188. Finally, the United States disagrees with Brazil's assertion that there are sufficient undisputed facts in the record that would enable the Appellate Body to complete the analysis. According to the United States, it vigorously contested Brazil's allegations of fact in this regard and affirmatively demonstrated that the export credit guarantee programs do not confer such a benefit. The United States explains that no benefit is conferred because identical financial instruments are available in the marketplace in the form of "forfaiting"[156]; there is no correlation between the issuance of the export credit guarantee and the ability of an importer to secure a loan; and the CCC conducts a risk assessment with respect to the foreign banks to whose risk it is exposed.

(iv) *ETI Act of 2000*

189. The United States submits that the Appellate Body should reject Brazil's request that it find that the Panel erred in concluding that Brazil did not make a *prima facie* case that the ETI Act of 2000 is inconsistent with the United States' WTO obligations.

190. According to the United States, the Appellate Body should not rule on Brazil's appeal because Brazil acknowledges that the appeal is not necessary to resolve the dispute between the parties. Brazil states that it does not ask the Appellate Body to complete the analysis with respect to its claims. Brazil, therefore, is not asking the Appellate Body to make findings that would result in DSB rulings and recommendations with respect to the ETI Act of 2000.[157] For that reason alone, the Appellate Body should decline to decide Brazil's appeal.

191. The United States contends that, in any event, Brazil did not make a *prima facie* case with respect to the ETI Act of 2000. Brazil simply did not present any evidence at all regarding the ETI Act of 2000 itself. In its submission, Brazil gave a brief description of the proceedings in the *US – FSC (Article 21.5 – EC)* dispute and then asked the Panel "to apply the reasoning as developed by the panel and as modified by the Appellate Body in that case *mutatis mutandis*".[158] In essence, therefore, Brazil was not asking the Panel to make an objective assessment of the ETI Act of 2000, but merely to adopt findings from a previous proceeding. The Panel acted properly under the DSU, including Article 11, by declining to find that the "short shrift" that Brazil gave to the ETI Act of 2000 satisfied Brazil's burden to make its *prima facie* case concerning that Act.[159]

192. The United States asserts that the rules of burden of proof in the WTO are well settled. Contrary to Brazil's arguments, a finding of inconsistency in one dispute does not establish a finding of inconsistency in another dispute between different parties. Such an approach would in effect impose the concept of *stare decisis* on the WTO dispute settlement system. The United States also disagrees with Brazil's assumption that it is legally impossible for a party to argue that an identical measure subject to identical claims that were successful in a previous WTO dispute is WTO-consistent. The reasoning of a panel or the Appellate Body in one dispute is not binding on another panel or the Appellate Body in a separate dispute. Furthermore, while the measure may remain the same, the circumstances may change. Thus, irrespective of the ruling in the previous dispute, Brazil had the burden of establishing a *prima facie* case.

193. Finally, the United States argues that the Appellate Body's reasoning in *Mexico – Corn Syrup (Article 21.5 – US)* does not support Brazil's approach. Brazil exaggerates the Appellate Body's

[156]United States' appellee's submission, para. 93.

[157]United States' appellee's submission, paras. 101-104 (referring to Appellate Body Report, *US – Steel Safeguards*, para. 483 and Appellate Body Report, *US – Wool Shirts and Blouses*, p. 19, DSR 1997:I, 323 at 340).

[158]*Ibid.*, para. 106 (quoting Brazil's written submission to the Panel, paras. 315-327).

[159]*Ibid.*, para. 12.

statements in that Report and does not explain why a complainant's obligation to make a *prima facie* case should be interpreted similarly to a panel's obligation to set forth its basic rationale pursuant to Article 12.7 of the DSU.

E. *Arguments of the Third Participants*

1. Argentina

(a) Article 13(a) of the *Agreement on Agriculture*

194. Argentina considers that green box measures must respect the "fundamental requirement" of paragraph 1 of Annex 2 of avoiding trade-distorting or production effects. Argentina submits that this requirement is additional to compliance with the policy-specific criteria of paragraph 6.

(i) *Article 13(a) of the Agreement on Agriculture – Planting Flexibility Limitations*

195. Argentina submits that production flexibility contract payments and direct payments do not comply with paragraph 6(b) of Annex 2 of the *Agreement on Agriculture* because the amount of these payments is related to the type of production after the base period. Argentina disagrees with the United States' view that paragraph 6(b) does not prevent the conditioning of payment upon fulfilling the requirement not to produce certain crops. Argentina considers that the Panel rightly affirmed that "the planting flexibility limitations provide a monetary incentive for payment recipients not to produce the prohibited crops".[160] For Argentina, there is effectively little difference between a "positive" and a "negative" list of permitted crops. The context provided by paragraphs 11(b) and 11(e) of Annex 2 supports this view. Although Argentina agrees with the United States that paragraph 6(b) ensures that the amount of payments must not be used to induce a recipient to produce a particular type of crop, the production flexibility contract and direct payments fail to meet this requirement. Argentina considers that the flexibility enjoyed by producers to plant different crops is illusory. The amount of the payments depends on the type of production. The growing of fruits and vegetables is prohibited under these programs, with the effect of channelling production towards other, permitted crops.

(ii) *Article 13(a) of the Agreement on Agriculture – Base Period Update*

196. Argentina agrees with Brazil that the option under the FSRI Act of 2002 to update base acres is inconsistent with paragraph 6(a) of Annex 2 of the *Agreement on Agriculture*. Argentina submits that the term "defined" in paragraph 6(a) refers to the need for the base period to be clearly determined. Likewise, the term "fixed" refers to the need for the base period to be defined in terms that prevent it from being shifted or modified *a posteriori*. The term "fixed" indicates that payments made in accordance with the criteria stipulated in paragraph 6(a) must always rely on the same base period, and no change is possible. Paragraph 6(a) thus allows Members to identify their own base period; however, once that period is determined, the period must remain fixed. Otherwise, the choice of the word "a" in paragraph 6(a) would be difficult to explain. Argentina thus agrees with Brazil that if the structure, design, and eligibility criteria of an original measure containing a "fixed base period" and the structure, design, and eligibility criteria of its successor have not been significantly modified, then it is not legitimate to update the "fixed base period" under the successor measure. Accordingly,

[160]Argentina's third participant's submission, para. 15 (quoting Panel Report, para. 7.386).

the terms of the direct payment program under the FSRI Act of 2002 are inconsistent with the requirements set forth in paragraph 6(a) of Annex 2.

(b) Significant Price Suppression under Article 6.3(c) of the *SCM Agreement*

197. Argentina agrees with Brazil that the market examined in assessing significant price suppression under Article 6.3(c) of the *SCM Agreement* may be a world market, and that a panel need not quantify precisely the amount of a subsidy in conducting such an assessment.[161]

(c) World Market Share under Article 6.3(d) of the *SCM Agreement*

198. Argentina agrees with Brazil that the words "world market share" in Article 6.3(d) of the *SCM Agreement* refer to the subsidizing Member's share of the world export market.[162]

(d) Step 2 Payments to Domestic Users

199. Argentina agrees with the Panel's conclusion that Step 2 payments to domestic users of upland cotton constitute a subsidy contingent upon the use of domestic over imported goods that is prohibited by Articles 3.1(b) and 3.2 of the *SCM Agreement*, and that WTO Members are not authorized by the *Agreement on Agriculture* to provide such subsidies.

(e) Export Credit Guarantees – Articles 10.1 and 10.2 of the *Agreement on Agriculture*

200. Argentina submits that the United States' export credit guarantee programs constitute export subsidies in breach of the anti-circumvention provision contained in Article 10.1 of the *Agreement on Agriculture* and, consequently, they are inconsistent with Article 8 and are not exempt from action under Article 13(c) of that Agreement. Argentina disagrees with the United States' view that no disciplines apply to export credit guarantee programs. On the contrary, under the terms of Article 10.1 of the *Agreement on Agriculture*, export credit guarantee programs constituting export subsidies should not be applied in a manner that results in, or threatens to lead to, circumvention of export subsidy commitments.

(f) Export Credit Guarantees – Articles 1 and 3.1(a) of the *SCM Agreement*

201. According to Argentina, the Panel's findings in respect of the United States' export credit guarantee programs are not complete. In not finding that such programs are also subsidies in accordance with the definition contained in Article 1 of the *SCM Agreement* and the prohibition in Article 3.1(a) of the same Agreement, the Panel did not bear in mind that different obligations stem from those Articles and that, similarly, the course of implementation adopted by a Member in respect of a finding of inconsistency only on the basis of item (j) of the Illustrative List of Export Subsidies may be different. Accordingly, Argentina contends that a finding of inconsistency in respect of the United States' export credit guarantees programs is also possible and should be made on the basis of Articles 1 and 3.1(a) of the *SCM Agreement*.

[161]Argentina's statement at the oral hearing.

[162]*Ibid.*

2. Australia

(a) Article 13(a) of the *Agreement on Agriculture* – Planting Flexibility Limitations

202. Australia requests that the Appellate Body uphold the Panel's conclusion that production flexibility contract payments, direct payments, and the legislative and regulatory provisions that establish and maintain the direct payment program, do not fully conform to paragraph 6(b) of Annex 2 of the *Agreement on Agriculture*. Australia submits that making a payment conditional upon the non-production of a particular product is one way in which a Member can relate the "amount of ... payment[]" to the current "type or volume of production". Australia contends that the argument advanced by the United States would introduce an exception into paragraph 6(b) of Annex 2 that has no textual basis. Australia submits that the Panel's interpretation does not prevent payments from being disallowed in the case of illegal production because reducing the payment to zero would be based on the illegality of the activity, not "the type or volume of production". In addition, a Member could otherwise justify such a measure pursuant to Article XX of the GATT 1994.

(b) Article 13(a) of the *Agreement on Agriculture* – Base Period Update

203. Australia submits that the updating of base acres by the FSRI Act of 2002 means that the direct payments are not green box measures. Australia argues that the meaning of paragraph 6(b) of Annex 2 of the *Agreement on Agriculture* is that, once a base period has been "defined and fixed" pursuant to paragraph 6(a), decoupled income support payments may not be "connected" to or "[f]ound[ed], buil[t] or construct[ed]" on the type of production or the volume of production undertaken by a producer in a later period.[163] Australia says that the Panel found that the direct payments program is the successor to the production flexibility contract program and that the two programs are identical in a number of important respects. The option under the FSRI Act of 2002 for producers to update their base acres is not consistent with the requirement of paragraph 6(a) that there be one "defined and fixed base period".

(c) Significant Price Suppression under Article 6.3(c) of the *SCM Agreement*

204. Australia refers to the United States' argument that the Panel failed to set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind certain of its findings and recommendations regarding Article 6.3(c) of the *SCM Agreement*, as required by Article 12.7 of the DSU.[164] According to Australia, this argument suggests that the Panel failed to make an objective assessment of the matter before it, as required by Article 11 of the DSU. Australia notes that the Appellate Body has recognized the discretion of a panel in choosing the evidence on which it relies.[165]

[163]Australia's third participant's submission, para. 42 (quoting *The New Shorter Oxford English Dictionary*, L. Brown (ed.) (Clarendon Press, 1993), Vol. 1, p. 187 and Vol. 2, p. 2534 in relation to the words "based on" and, "related to" in paragraph 6(b) of Annex 2 to the *Agreement on Agriculture*).

[164]*Ibid.*, para. 19 (referring to the United States' appellant's submission, paras. 150 and 322-331).

[165]*Ibid.*, para. 21 (referring to Appellate Body Report, *EC – Hormones*, para. 135).

(d) Step 2 Payments to Domestic Users and Exporters

205. Australia requests that the Appellate Body uphold the Panel's conclusions that Step 2 payments to domestic users constitute subsidies that are inconsistent with the requirements of Article 3.1(b) of the *SCM Agreement*.

206. Australia submits that the Appellate Body should also uphold the Panel's conclusions that Step 2 payments to exporters are inconsistent with Articles 3.3 and 8 of the *Agreement on Agriculture* and Articles 3.1(a) and 3.2 of the *SCM Agreement*. In the event that the Appellate Body determines that the Step 2 program is not export-contingent, Australia requests that the Appellate Body find that the Step 2 program *as a whole* is contingent upon the use of domestic over imported goods within the meaning of Article 3.1(b) of the *SCM Agreement*. Furthermore, in that case, the Appellate Body should find that the chapeau to Article 3.1 of the *SCM Agreement* does not serve to exempt such local content subsidies from the application of Article 3.1(b) of that Agreement.

(e) Export Credit Guarantees – Articles 10.1 and 10.2 of the *Agreement on Agriculture*

207. Australia disagrees with the United States' argument that export credit guarantees are excluded from the application of Article 10.1 of the *Agreement on Agriculture* and Article 3.1(a) of the *SCM Agreement*. According to Australia, the United States has incorrectly applied Articles 31 and 32 of the *Vienna Convention* to the interpretation of Article 10.1 of the *Agreement on Agriculture*. Article 10.1 applies to all "[e]xport subsidies not listed in paragraph 1 of Article 9". The meaning of this provision is clearly discernible from its text and it does not provide for any exceptions. The context of Article 10.2 does not support an interpretation that would be contrary to its plain words, particularly because it is not constructed as an exception provision. The object and purpose of Article 10.1 relate to the prevention of circumvention of commitments, in relation to *all* export subsidies other than those listed in Article 9.1 of the *Agreement on Agriculture*. Furthermore, the application of Article 10.1 to export credit guarantees defined as export subsidies does not lead to a result that is manifestly unreasonable because not all export credit guarantees are export subsidies within the meaning of the *Agreement on Agriculture* and the *SCM Agreement*. It is open to the United States, within the existing WTO framework, to design and maintain measures that fall outside the definition of an export subsidy, which is, in fact, what the United States asserts it has done. In contrast, acceptance of the United States' arguments could lead to a result that is manifestly absurd or unreasonable by encouraging other WTO Members to seek to avoid the anti-circumvention obligations of Article 10.1 of the *Agreement on Agriculture*.

208. Australia also rejects the United States' contention that Article 21.1 of the *Agreement on Agriculture* and the chapeau to Article 3.1 of the *SCM Agreement* render Article 3.1(a) of the *SCM Agreement* inapplicable to export credit guarantee programs.

3. Benin and Chad

(a) Significant Price Suppression under Article 6.3(c) of the *SCM Agreement*

209. Benin and Chad agree with Brazil that the Panel correctly found that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*. Benin and Chad contend that many of the United States' arguments regarding Article 6.3(c) relate to factual findings by the Panel that are not subject to appellate review in the absence of a claim by the United States that the Panel failed to comply with Article 11 of the DSU.

210. Benin and Chad agree with the Panel's finding that it was not required to quantify precisely the amount of the subsidy in assessing Brazil's claim under Article 6.3(c) of the *SCM Agreement*, and that the amount of a subsidy is not necessarily determinative in such an assessment. This is consistent with the different purposes of Parts III and V of the *SCM Agreement*.

(b) World Market Share under Article 6.3(d) of the *SCM Agreement*

211. Benin and Chad support the request by Brazil that the Appellate Body reverse the Panel's interpretation of the term "world market share" in Article 6.3(d) of the *SCM Agreement*. Benin and Chad agree with Brazil that "world market share" means world market share of *exports*. If the Appellate Body adopts this interpretation, Benin and Chad request the Appellate Body to complete the analysis under Article 6.3(d) and to find that the effect of the price-contingent subsidies was an increase in the world market share of the United States contrary to Article 6.3(d). In turn, Benin and Chad ask the Appellate Body to find that they have also suffered serious prejudice under Article 6.3(d) as a result of the increase in the United States' world market share of exports.

212. According to Benin and Chad, the Panel's interpretation of "world market share" as world market share of *production* inappropriately shifts the inquiry away from the *effect* of the subsidy towards unrelated factors, such as production levels in third country markets. A subsidy may have the effect of increasing significantly the exports of a Member, even though the Member's world share of production remains stable or diminishes. Therefore, in the submission of Benin and Chad, the Panel's interpretation could lead to a situation where changes in the supply by a third country determine whether a subsidizing Member's world market share increases or decreases.

213. Benin and Chad state that, if the Appellate Body rejects the Panel's interpretation of "world market share" under Article 6.3(d), there are sufficient undisputed facts on the record for the Appellate Body to complete the analysis and to find that the United States acted inconsistently with Article 6.3(d). The evidence before the Panel indicates that those Members that have lost market share as a result of the price-contingent subsidies include, at least, Brazil and the "Francophone African nations of Benin and Chad".[166] Benin and Chad disagree with the Panel's finding that "the serious prejudice under examination by a WTO panel is the serious prejudice experienced by the complaining Member".[167]

214. Benin and Chad argue that the Appellate Body should take into account the impact of United States upland cotton subsidies on the "fragile economies of West and Central Africa"[168], as reflected in the Panel's findings and evidence on the record. Benin and Chad point out that Article 24.1 of the DSU, which requires particular consideration to be given to the special situation of least-developed country Members, would be given meaning if the Appellate Body acknowledged that the increase in the United States' world market share caused serious prejudice to Benin and Chad by reducing their market share. Furthermore, nothing in the text of Article 6.3(d) limits a finding of serious prejudice to the complaining party. Therefore, Benin and Chad urge the Appellate Body to draw conclusions under Article 6.3(d) that would require the United States to withdraw the subsidy or remove the adverse effects, not only with respect to Brazil, but also with respect to Benin and Chad.

[166]Benin and Chad's third participants' submission, para. 85. (emphasis omitted)

[167]*Ibid.*, para. 6 (quoting Panel Report, para. 7.1403).

[168]*Ibid.*, para. 9.

(c) Export Credit Guarantees – Articles 1 and 3.1(a) of the *SCM Agreement*

215. Benin and Chad support Brazil's position that the Panel improperly exercised judicial economy by refusing to address Brazil's claim that the United States violated Articles 1.1 and 3.1(a) of the *SCM Agreement* with respect to export credit guarantees. Benin and Chad also support Brazil's request that the Appellate Body complete the analysis as it has sufficient factual findings before it to do so.

216. Benin and Chad explain that, under item (j) of the Illustrative List of Export Subsidies, Brazil's claim is that the export credit guarantee programs operate at a loss or below the cost to the government. In contrast, under Article 3.1(a), Brazil's claim is that the programs are financial contributions that confer a benefit on recipients within the meaning of Article 1.1 of the *SCM Agreement* and that they are contingent upon export performance. Thus, Brazil's claims under item (j) of the Illustrative List of Export Subsidies and Article 3.1(a) were distinct, and the Panel's refusal to address Brazil's claim under Article 3.1(a) leaves an important and distinct claim unresolved. Accordingly, it was improper for the Panel to have exercised judicial economy.[169]

4. Canada

(a) Article 13(a) of the *Agreement on Agriculture* – Planting Flexibility Limitations

217. Canada considers that the Panel was correct in finding that production flexibility contract payments and direct payments do not meet the requirements of paragraph 6(b) of Annex 2 of the *Agreement on Agriculture*. For Canada, nothing in the text of paragraph 6(b) supports the distinction the United States seeks to draw between "positive" and "negative" effects on production. If payments are conditioned on a recipient not undertaking a type of production, then the payment is related to the type of production. Canada thus agrees with the Panel's interpretation that paragraph 6(b) excludes any "typ[e] of relationship between the amount of such payments and the type of production after the base period".[170] Canada argues that this approach is supported by the object and purpose of Annex 2 and the context provided by the fundamental requirement set out in paragraph 1 of Annex 2.

218. Canada agrees with the United States that the fundamental requirement in paragraph 1 of Annex 2 is relevant context in understanding the criterion in paragraph 6(b) that the measure not be related to the type or volume of production. However, a Member does not have an independent basis for claiming that the measure qualifies as a "green box" measure because it has minimal trade-distorting effects. Canada disagrees with the United States' conclusion, based on its interpretation of paragraph 6(e), that a Member is not prohibited under paragraph 6(b) from conditioning payment on non-production of a particular product. Canada considers that paragraph 6(e) is a prohibition against requiring production as a condition of payment, but does not necessarily authorize a Member to impose a requirement not to produce a particular crop. With regard to the planting flexibility limitations under the production flexibility contract payment and direct payment programs, Canada disagrees with the United States that the amount of payments "does not relate to fruit or vegetable production since for that base acre there would be *no payment at all*".[171] For Canada, this interpretation is contrary to the ordinary meaning of the term "related to" and leads to the

[169]Benin and Chad's third participants' submission, paras. 105-108 (referring to Appellate Body Report, *Australia – Salmon*, para. 223 and Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 133).

[170]Canada's third participant's submission, para. 13 (quoting Panel Report, para. 7.366).

[171]*Ibid.*, para. 20 (quoting the United States' appellant's submission, para. 26). (original emphasis)

unreasonable result that a Member could circumvent the requirement in paragraph 6(b) by encouraging certain types of production as long as it does so through a negative list by excluding certain other types of production.

(b) Article 13(a) of the *Agreement on Agriculture* – Base Period Update

219. Canada argues that the direct payments do not fully conform to paragraph 6(a) of Annex 2 of the *Agreement on Agriculture* because of the base period update in the FSRI Act of 2002. Canada submits that the ordinary meaning of the terms "defined and fixed base period" in paragraph 6(a) indicates that the base period cannot vary or change. This is confirmed by the context provided by paragraphs 6(b) and (d), which refer to "any year after the base period", as well as the object and purpose of paragraph 6, which is to identify the types of payments that are minimally trade-distorting. Canada contends that, as the Panel found that direct payments under the FSRI Act of 2002 are closely related to and a successor to the production flexibility contract payments, the base period for direct payments should not be different from the base period for production flexibility contract payments. The fact that payments are provided under new legislation does not in itself allow a modification to the base period under the predecessor program. Otherwise, the requirement that there be a "fixed base period" would become meaningless. By allowing updating of base acreage, the United States is altering the base period contrary to paragraph 6(a).

(c) Export Credit Guarantees – Articles 10.1 and 10.2 of the *Agreement on Agriculture*

220. Canada submits that the Panel correctly found that, to the extent that export credit guarantees meet the definition of export subsidies, they will be subject to the anti-circumvention disciplines of Article 10.1 of the *Agreement on Agriculture*. The United States' argument that Article 10.2 of the *Agreement on Agriculture* exempts export credit guarantees from the subsidy disciplines under that Agreement has no basis in the text, context, object and purpose, or negotiating history. Canada asserts that the text of Article 10.2 does not explicitly indicate an intention to exclude the application of other, existing disciplines. Indeed, such an interpretation would contradict the stated object and purpose of Article 10 as a whole, which is the "Prevention of Circumvention of Export Subsidy Commitments". Furthermore, the fact that export credit guarantee programs may not be subject to the notification requirement of the *Agreement on Agriculture* does not lead to the conclusion that they are not subject to the other disciplines of that Agreement.

221. Canada also agrees with the Panel's conclusion that the United States violated Articles 3.3 and 8 of the *Agreement on Agriculture* by providing export subsidies otherwise than in conformity with that Agreement with respect to upland cotton and other unscheduled commodities. In addition, Canada states that the Panel's interpretation of Article 10.1 with respect to scheduled products is consistent with the Appellate Body's analysis in *US – FSC*.[172]

(d) Export Credit Guarantees – Articles 1 and 3.1(a) of the *SCM Agreement*

222. Canada asserts that, if the Appellate Body reverses the Panel's finding that the United States' export credit guarantee programs constitute *per se* prohibited export subsidies under item (j) of the Illustrative List of Export Subsidies, it will still be necessary to consider whether the export credit guarantee programs constitute export subsidies under Articles 1 and 3.1(a) of the *SCM Agreement*.

[172]Canada's third participant's submission, para. 40 (referring to Appellate Body Report, *US – FSC*, para. 152).

Even if the United States' export credit programs charge adequate fees under the item (j) standard, they may still confer an export subsidy. If they did, the export credit guarantees would have to be provided in a manner consistent with Article 10.1 of the *Agreement on Agriculture*.

5. China

(a) Terms of Reference – Expired Measures

223. China submits that the Panel was correct to find that expired production flexibility contract and market loss assistance payments were within the Panel's terms of reference. The Panel's interpretation of Articles 4.2 and 6.2 of the DSU is in accordance with the text, context, and object and purpose of the DSU, as well as the intention of the drafters. China recalls that Article 4.2 of the DSU indicates that consultations are to cover "any representations made by another Member concerning measures affecting the operation of any covered agreement taken within the territory of the former". China "agrees with the Panel that based on the analysis of the context and the object of Article 4.2, the term 'affecting' in Article 4.2 is used as a gerund, describing the way in which they relate to a covered agreement, and has no temporal significance".[173] China notes that Brazil's claims in this case relate to serious prejudice under the provisions of the *SCM Agreement* and the GATT 1994. China agrees with the panel in *Indonesia – Autos* that, "[i]f ...past subsidies were not relevant to [a] serious prejudice analysis as they were 'expired measures'..., it is hard to imagine any situation where a panel would be able to determine the existence of actual serious prejudice".[174] China submits that neither the context cited by the United States nor the decisions of the panel and Appellate Body in *US – Certain EC Products* support the view that expired measures may not fall within the terms of reference of a panel.

(b) Article 13(b) of the *Agreement on Agriculture* - Interpretation of "support to a specific commodity"

224. China supports the Panel's finding that the phrase "support to a specific commodity" in Article 13(b) of the *Agreement on Agriculture* does not mean "product-specific domestic support". China submits that the word "specific" in Article 13(b)(ii) is inserted to avoid lump-sum treatment of measures generally applicable to a number of commodities. Unlike the phrase "product-specific support", the phrase "support to a specific commodity" refers to the level of support delivered to a specific commodity, thus combining both product-specific support and the portion of support attributable to upland cotton under a program that is available to a number of products.

(c) Terms of Reference – Export Credit Guarantees

225. China submits that the Appellate Body should uphold the Panel's conclusion that export credit guarantees to facilitate the export of United States agricultural commodities other than upland cotton were within the Panel's terms of reference. According to China, the Panel correctly concluded that Brazil identified export credit guarantees to agricultural commodities other than upland cotton in its request for consultations. During the consultations, Brazil also posed questions to the United States on the export credit guarantees that related to agricultural commodities other than upland cotton. These questions did not expand the scope of the consultations request, but merely clarified its content. In addition, China states that Brazil's recognition that the United States objected to the questions relating to agricultural commodities other than upland cotton does not lead to the conclusion that consultations were not held on the subject. Finally, China asserts that a WTO Member cannot refuse

[173]China's third participant's submission, para. 19.

[174]*Ibid.*, para. 26 (quoting Panel Report, *Indonesia – Autos*, para. 14.206).

to respond to questions during consultations on the basis of its own uncertainty as to the scope of the consultations.

6. European Communities

(a) Article 13(a) of the *Agreement on Agriculture* – Planting Flexibility Limitations

226. The European Communities supports the United States' appeal of the Panel's finding that planting flexibility limitations disqualify a measure from the coverage of paragraph 6 of Annex 2 of the *Agreement on Agriculture*. The European Communities notes that the United States has placed limitations on the crops that may be grown by farmers receiving production flexibility contract payments and direct payments. In doing so, the United States ensures fair competition domestically and limits distortions internationally. If upheld, the Panel's findings would have the perverse effect of increasing subsidization and the likelihood of trade distortions.

227. The European Communities observes that paragraph 6(b) prevents the amount of the payments from being related to the type of production; it does not address eligibility for payments. With this in mind, the European Communities submits that "the fact of making ineligible for payments the land used to produce a certain commodity is not incompatible with paragraph 6(b)".[175] Furthermore, the Panel correctly noted that paragraphs 6(b) and 6(e) lay down distinct requirements and that each of them must be given meaning. The European Communities considers that the Panel's interpretation of paragraph 6(b) would render redundant paragraph 6(e). The Panel's reading is that any payment conditional upon a production requirement (which, as such, is incompatible with paragraph 6(e)) would be deemed to be "related to" the "volume" of production and would therefore be incompatible with paragraph 6(b). The European Communities argues that the Panel should not have relied upon paragraph 11 of Annex 2 because that provision appears in a context very different from that of the provisions of paragraph 6.

(b) Article 13(a) of the *Agreement on Agriculture* – Base Period Update

228. With regard to Brazil's conditional cross-appeal regarding base period updates, the European Communities notes that the Panel made factual findings that there was no evidence to suggest that farmers expected further updates in future years. The European Communities does not consider that paragraph 6(a) of Annex 2 of the *Agreement on Agriculture* precludes adjustments to base periods, although it agrees with Brazil that a "defined and fixed" base period cannot be determined from the perspective of five-yearly subsidization legislation, but rather should be viewed in a longer-term perspective. The European Communities considers that it cannot be open to a Member to resort to wholesale updating of base periods by linking the criteria of "defined and fixed" to specific legislative packages.

(c) Article 13(b) of the *Agreement on Agriculture*

229. The European Communities supports the Unites States' request for the Appellate Body to reverse the Panel's interpretation of Article 13(b) of the *Agreement on Agriculture*, particularly in respect to the methodology for calculating support and the meaning of "support to a specific commodity". With regard to the methodology, the European Communities agrees with the United States that the Panel should not have used budgetary outlays to calculate support "decided" in respect of price-based measures, but rather should have used price gap methodology. The European

[175]European Communities' third participant's submission, para. 15.

Communities contends that this approach is crucial for the interpretation of the specific term "decided", in contrast to the term "granted". The European Communities also agrees with the United States that the Panel was incorrect in finding that support under schemes based on historical production of specific crops could be considered "support to a specific commodity" in the implementation period in the sense of Article 13(b)(ii).

(d) Significant Price Suppression under Article 6.3(c) of the *SCM Agreement*

230. In relation to the United States' arguments regarding the quantification of subsidies, the European Communities agrees with Brazil that, in assessing significant price suppression under Article 6.3(c) of the *SCM Agreement*, it is not necessary to determine the precise amount of the subsidy or the amount of the benefit conferred on the subsidized product. This is consistent with the differences between Parts III and V of the *SCM Agreement*. Paragraph 7 of Annex IV of the *SCM Agreement*, to which the United States refers, is an exception to the general rule that a panel need not quantify or allocate a subsidy (other than a pre-WTO subsidy) to the products concerned.

231. The European Communities contests the United States' arguments regarding past "recurring" subsidies. Article 6.3(c) is drafted in the present tense and therefore should apply to the past, present, and future. The European Communities asserts that a subsidy comprises an act (a financial contribution) and that it may have an effect on the recipient (a benefit) and an effect on the market and other Members (adverse effects). However, the United States erroneously equates the concepts of "benefit" and "adverse effects". The subsidies challenged in the present dispute are programs that continue and that therefore may have adverse effects in the future, even if they confer a benefit in only one particular year. Therefore, the European Communities considers that the Panel correctly included past recurring subsidies in its analysis under Article 6.3(c). However, the European Communities maintains that it would have been "desirable"[176] for the Panel to distinguish between programs that had expired and programs that were still in force when the Panel was established.

(e) Relationship between the *Agreement on Agriculture* and the *SCM Agreement*

232. The European Communities raises an issue concerning the Panel's jurisdiction that it considers the Appellate Body should take up on its own motion. According to the European Communities, the *SCM Agreement* does not apply to domestic support and export subsidies in respect of agricultural products because the *Agreement on Agriculture* contains "provisions dealing specifically with the same matter".[177]

(f) Step 2 Payments to Domestic Users

233. The European Communities agrees with the United States' claim that the Panel erred in finding that Step 2 payments to domestic users are inconsistent with Article 3.1(b) of the *SCM Agreement*. In addition to endorsing the arguments put forward by the United States, the European Communities argues that the Panel incorrectly sought an explicit carve out from Article 6.3 of the *Agreement on Agriculture* for import substitution subsidies, when such a carve out is unnecessary in the light of Article 21.1 of that Agreement and the introductory phrase of Article 3.1 of the *SCM Agreement*. The European Communities submits that paragraph 7 of Annex 3 of the *Agreement on*

[176]European Communities' third participant's submission, para. 61.

[177]European Communities' third participant's submission, para. 6 (quoting Appellate Body Report, *EC – Bananas III*, para. 155).

Agriculture recognizes that WTO Members have a right to provide import substitution subsidies. The Panel's interpretation to the contrary renders the language of paragraph 7 of Annex 3 redundant.

7. India

234. Pursuant to Rule 24 of the *Working Procedures*, India chose not to submit a third participant's submission. In its statement at the oral hearing, India disagreed with the United States that Brazil had to establish the amount of the price-contingent subsidies that benefit upland cotton in making its claim of serious prejudice under Articles 5(c) and 6.3 of the *SCM Agreement*.

8. New Zealand

(a) Article 13(a) of the *Agreement on Agriculture* – Base Period Update

235. New Zealand supports Brazil's contention that the direct payments under the FSRI Act of 2002 do not meet the criteria set out in paragraph 6(a) of Annex 2 of the *Agreement on Agriculture*. According to New Zealand, the factual findings made by the Panel establish that direct payments cannot be green box payments because farmers had an opportunity to update base acreage, contrary to this provision. New Zealand notes that the language and context of paragraph 6(a) contemplate a single base period that is fixed and unchanging to ensure that such support is clearly de-linked from production. To conclude otherwise would create an internal inconsistency in paragraph 6, because a Member could avoid obligations under paragraphs 6(b), 6(c), and 6(d) not to link payments to production, prices, or factors of production employed in subsequent years, by establishing a new base period from time to time. New Zealand observes that the Panel found that the direct payment program is a successor to the production flexibility contract program and that the base period update had the effect of increasing the level of payments under the program.

(b) Article 13(b) of the *Agreement on Agriculture*

236. New Zealand contests the United States' appeal of the Panel's finding that the United States' measures at issue are not exempt from action pursuant to Article 13(b)(ii) of the *Agreement on Agriculture*. New Zealand argues that Members drafting the proviso to Article 13(b) were principally concerned with limiting the effect of domestic support measures on trade. New Zealand argues that the manner in which "support" is identified and calculated in the comparison required by Article 13(b)(ii) must reflect Members' intentions to limit the effects of such measures to those that existed in the 1992 marketing year and to ensure that measures are not exempt from actions when their effect is a significantly higher level of trade distortion in the implementation period than in the 1992 marketing year.

(i) *Calculation methodology for price-based measures*

237. New Zealand considers that the Appellate Body should uphold the Panel's finding that, on the facts of this case, budgetary outlays provide an appropriate measurement of support for the purposes of the comparison required by Article 13(b)(ii). New Zealand argues that a Member may not justify a failure to meet its obligations under the *Agreement on Agriculture* on the ground that it has adopted measures that rely on factors beyond the government's control. If a Member adopts a non-green box domestic support measure that determines the amount of support provided on the basis of factors the government cannot control, then the Member must accept the risk that support granted in the implementation period may be in excess of that decided in the 1992 marketing year. Furthermore, New Zealand disagrees with the argument advanced by the United States that only a price gap calculation can reflect support "decided" by the United States' price-based measures. New Zealand argues that this argument would read the term "grant" out of Article 13(b)(ii) altogether.

(ii) *Interpretation of "support to a specific commodity"*

238. New Zealand argues that the Appellate Body should reject the United States' argument that Article 13(b)(ii) of the *Agreement on Agriculture* requires a comparison of only "product-specific" support. For New Zealand, the chapeau of Article 13(b) makes it clear that the measures subject to the proviso of Article 13(b)(ii) are all "domestic support measures that conform fully to the provisions of Article 6" of the *Agreement on Agriculture* (that is, both product-specific and non-product-specific support to upland cotton). The use of the word "specific" in Article 13(b)(ii) refers only to the fact that the comparison is to be made on a commodity-by-commodity basis. In New Zealand's view, the Panel correctly found that "support to a specific commodity" means all support to a commodity, whether product-specific or not. New Zealand also agrees with the Panel's finding that measures that "identify and allocate support based on an express linkage to specific commodities"[178] provide support to those commodities within the meaning of Article 13(b)(ii). Accordingly, even a measure that provides support to a number of different commodities also provides support to those specific commodities individually. New Zealand adds that not only do the words "product-specific support" not appear in Article 13(b)(ii), but the concept of product-specific support is not relevant to the comparison under this provision because Article 13(b)(ii) requires an analysis that is fundamentally different from that required under those provisions of the *Agreement on Agriculture* that distinguish between product-specific and non-product-specific support.

239. Finally, New Zealand disagrees with the United States' assertion that counter-cyclical payments and market loss assistance payments are "decoupled". As the Panel recognized, the amount of payment under these programs is clearly linked to current prices, which means that they cannot be green box measures in terms of Annex 2 of the *Agreement on Agriculture*.

(c) Significant Price Suppression under Article 6.3(c) of the *SCM Agreement*

240. New Zealand agrees with Brazil that the Panel correctly found that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c), constituting serious prejudice to the interests of Brazil within the meaning of Article 5(c) of the *SCM Agreement*.

241. New Zealand agrees with Brazil that the term "in the same market" in Article 6.3(c) can include a world market, although this does not preclude the possibility of other markets. New Zealand also agrees that, although a world market does not necessarily exist for every product, a world market and a world price do exist for upland cotton.

242. New Zealand submits that the Panel was correct in rejecting the United States' argument that the price-contingent subsidies did not suppress prices because, in the absence of these subsidies, new suppliers would have increased supply and maintained the world price. In response to the United States' arguments regarding the effect of the subsidies on the planting decisions of farmers, New Zealand argues that this effect is a key aspect of the Panel's analysis under Article 6.3(c), which led it to conclude that the subsidies insulated United States cotton producers from declines in world prices. Moreover, the Panel correctly found that the gap between total production costs and market revenue constituted evidence that the price-contingent subsidies enabled United States upland cotton producers to increase supply, leading to price suppression in the world market.

[178]New Zealand's third participant's submission, para. 3.16 (quoting Panel Report, para. 7.484).

243. New Zealand agrees with Brazil that a panel is not required, in assessing significant price suppression under Article 6.3(c), to quantify precisely the amount of the subsidy. As the Panel found, claims under Parts III and V of the *SCM Agreement* differ, and the quantitative and pass-through methodologies applicable under Part V are not necessarily transferable to Part III. Although the magnitude of a subsidy may be relevant in some cases, it is not necessarily determinative of the nature or extent of the effects of the subsidy.

244. New Zealand disagrees with the United States' arguments regarding past recurring subsidies, which would effectively preclude Members from bringing claims of serious prejudice against recurring subsidies, even though payments under subsidy programs over an extended period can have effects in later years.

(d) World Market Share under Article 6.3(d) of the *SCM Agreement*

245. New Zealand supports Brazil's appeal of the Panel's finding that the "world market share" of the subsidizing Member under Article 6.3(d) refers to the share of the world market supplied by the subsidizing Member. Defining "world market share" as including all production, instead of only exports, distracts from the trade focus of the *SCM Agreement* and subverts the underlying rationale of Article 6.3(d). New Zealand supports Brazil's request for the Appellate Body to complete the analysis under Article 6.3(d).

(e) Export Credit Guarantees – Articles 10.1 and 10.2 of the *Agreement on Agriculture*

246. New Zealand asserts that the Panel was correct in finding that export credit guarantee programs are subject to the non-circumvention obligation under Article 10.1 of the *Agreement on Agriculture*, and that the United States' export credit guarantee programs provide export subsidies that breach Article 10.1 and are not exempt from action under the *SCM Agreement*. In New Zealand's view, Article 10.1 clearly applies to export credit guarantee programs that involve the granting of export subsidies. Article 10.2 does not create any exception that may contradict the clear meaning of Article 10.1. The United States' interpretation would create a loophole for WTO Members to circumvent their export subsidy reduction commitments through export credit guarantee programs. In such a case, New Zealand observes that Article 10.2 would, itself, circumvent the anti-circumvention provisions.

(f) Export Credit Guarantees – Articles 1 and 3.1(a) of the *SCM Agreement*

247. New Zealand agrees with Brazil that the Panel erred in exercising judicial economy by refusing to make a finding relating to the United States' export credit guarantee programs under Articles 1.1 and 3.1(a) of the *SCM Agreement*. In New Zealand's view, a measure that no longer constitutes an export subsidy under item (j) of the Illustrative List of Export Subsidies may still constitute an export subsidy under Articles 1.1 and 3.1(a) of the *SCM Agreement*. Therefore, New Zealand requests the Appellate Body to complete the analysis and find that the United States' export credit guarantee programs are export subsidies under Articles 1.1 and 3.1(a) of the *SCM Agreement*.

9. Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu

248. Pursuant to Rule 24 of the *Working Procedures*, the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu chose not to submit a third participant's submission. In its statement at the oral hearing, the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu agreed with the United States that using planting flexibility limitations in association with production flexibility contract payments and direct payments does not render these measures inconsistent with paragraph 6(b) of Annex 2 to the *Agreement on Agriculture*.

III. Issues Raised in this Appeal

249. The following issues are raised in this appeal:

(a) as regards procedural matters:

(i) in relation to production flexibility contract payments and market loss assistance payments:

- whether the Panel erred in finding, in paragraphs 7.118, 7.122, 7.128, and 7.194(ii) of the Panel Report, that Articles 4.2 and 6.2 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU") do not exclude expired measures from the potential scope of consultations or a request for establishment of a panel and, therefore, that production flexibility contract payments and market loss assistance payments fell within the Panel's terms of reference; and

- whether the Panel, contrary to Article 12.7 of the DSU, failed to set out the findings of fact, the applicability of relevant provisions, or the basic rationale behind this finding; and

(ii) in relation to export credit guarantee programs:

- whether the Panel erred in finding, in paragraph 7.69 of the Panel Report, that the United States' export credit guarantees relating to eligible United States agricultural commodities other than upland cotton were within its terms of reference; and

- whether the Panel erred in finding, in paragraph 7.103 of the Panel Report, that Brazil provided a statement of available evidence with respect to export credit guarantees relating to eligible United States agricultural commodities other than upland cotton, as required by Article 4.2 of the *Agreement on Subsidies and Countervailing Measures* (the "*SCM Agreement*");

(b) as regards the application of Article 13 of the *Agreement on Agriculture* to this dispute:

(i) in relation to Article 13(a)(ii):

- whether the Panel erred in finding, in paragraphs 7.388, 7.413, 7.414, and 8.1(b) of the Panel Report, that production flexibility contract payments and direct payments are not green box measures that fully conform to paragraph 6(b) of Annex 2 of the *Agreement on Agriculture* based on its finding, in paragraph 7.385 of the Panel Report, that the amount of production flexibility payments and direct payments is related to the type of production undertaken by a producer after the base period; and, therefore, that these measures

are not exempt from actions based on Article XVI of the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994") and Part III of the *SCM Agreement* by virtue of Article 13(a)(ii) of the *Agreement on Agriculture*; and

- whether the updating of base acres for direct payments under the FSRI Act of 2002 means that direct payments are not green box measures that fully conform to paragraph 6(a) of Annex 2 of the *Agreement on Agriculture* and, therefore, that these measures are not exempt from actions based on Article XVI of the GATT 1994 and Part III of the *SCM Agreement* by virtue of Article 13(a)(ii) of the *Agreement on Agriculture*, because they are not determined by clearly-defined criteria in a *defined and fixed base period*[179]; and

(ii) in relation to Article 13(b)(ii), whether the Panel erred in finding, in paragraphs 7.608 and 8.1(c) of the Panel Report, that user marketing (Step 2) payments ("Step 2 payments") to domestic users, marketing loan program payments, production flexibility contract payments, market loss assistance payments, direct payments, counter-cyclical payments, crop insurance payments, and cottonseed payments (the "challenged domestic support measures") granted, in the years 1999, 2000, 2001, and 2002, support to a specific commodity, namely, upland cotton, in excess of that decided during the 1992 marketing year and, therefore, that these measures are not exempt from actions based on Articles 5 and 6 of the *SCM Agreement* and Article XVI:1 of the GATT 1994 by virtue of Article 13(b)(ii) of *Agreement on Agriculture*, based on its findings:

- in paragraph 7.494 of the Panel Report, that the phrase "grant support to a specific commodity" in Article 13(b)(ii) refers to all non-green box support measures that clearly or explicitly define a commodity as one to which they bestow or confer support and does not mean "product-specific domestic support";

- in paragraphs 7.518 and 7.520 of the Panel Report, that the challenged domestic support measures are non-green box support measures that clearly or explicitly define a commodity, namely, upland cotton, as one to which they bestow or confer support; and

- in paragraphs 7.561 and 7.562 of the Panel Report, that an appropriate comparison between the level at which measures "grant support" in the implementation period and that "decided during the 1992 marketing year" may be achieved, with respect to marketing loan program payments and deficiency payments, through the use of a methodology other than the price gap methodology described in paragraph 10 of Annex 3 of the *Agreement on Agriculture*;

(c) as regards serious prejudice:

[179]Brazil's appeal is conditional on the Appellate Body reversing the finding of the Panel that "direct payments, production flexibility contract payments, and the legislative and regulatory provisions that establish and maintain the direct payment program" do not fully conform to paragraph 6(b) of Annex 2 and, consequently, do not satisfy the condition in paragraph (a) of Article 13 of the *Agreement on Agriculture*.

(i) in relation to Article 6.3(c) of the *SCM Agreement*:

- whether the Panel erred in finding, in paragraphs 7.1416 and 8.1(g)(i) of the Panel Report, that the effect of the marketing loan program payments, Step 2 payments, market loss assistance payments, and counter-cyclical payments (the "price-contingent subsidies") is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*, based on its findings:

  (A) regarding the "market" and "price" in assessing whether "the effect of the subsidy is ... significant price suppression ... in the same market" within the meaning of Article 6.3(c) of the *SCM Agreement*:

  - in paragraphs 7.1238-7.1240 of the Panel Report, that the "same market" may be a "world market";

  - in paragraph 7.1247 of the Panel Report, that a "world market" for upland cotton exists; and

  - in paragraph 7.1274 of the Panel Report, that "the A-Index can be taken to reflect a world price in the world market for upland cotton"; and

  (B) regarding the "effect" of the price-contingent subsidies under Article 6.3(c) of the *SCM Agreement*:

  - in paragraphs 7.1312 and 7.1333 of the Panel Report, that "significant price suppression" occurred within the meaning of Article 6.3(c);

  - in paragraphs 7.1355 and 7.1363 of the Panel Report, that "a causal link exists" between the price-contingent subsidies and the significant price suppression found by the Panel under Article 6.3(c) and that this link is not attenuated by other factors raised by the United States;

  - in paragraphs 7.1173, 7.1186, and 7.1226 of the Panel Report, that it was not required to quantify precisely the benefit conferred on upland cotton by the price-contingent subsidies and, consequently, not identifying the precise amount of counter-cyclical payments and market loss assistance payments that benefited upland cotton; and

  - in paragraph 7.1416 of the Panel Report, that the effect of the price-contingent subsidies for marketing years 1999 to 2002 "is significant price suppression ... in the period MY 1999-2002"; and

- whether the Panel, contrary to Article 12.7 of the DSU, failed to set out the findings of fact, the applicability of relevant provisions, or the basic rationale behind its finding, in paragraphs 7.1416 and 8.1(g)(i)

of the Panel Report, that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*; and

(ii) in relation to Article 6.3(d) of the *SCM Agreement*:

- whether the Panel erred in finding, in paragraph 7.1464 of the Panel Report, that the words "world market share" in Article 6.3(d) of the *SCM Agreement* refer to the "share of the world market supplied by the subsidizing Member of the product concerned"; and

- whether the Appellate Body should complete the analysis of whether the effect of the price-contingent subsidies is an increase in the United States' world market share of exports in upland cotton within the meaning of Article 6.3(d) of the *SCM Agreement*[180];

(d) as regards user marketing (Step 2) payments, whether the Panel erred:

(i) in finding, in paragraphs 7.1088, 7.1097-7.1098, and 8.1(f) of the Panel Report, that Step 2 payments to *domestic users* of United States upland cotton, under Section 1207(a) of the FSRI Act of 2002, are subsidies contingent upon the use of domestic over imported goods that are inconsistent with Articles 3.1(b) and 3.2 of the *SCM Agreement*; and

(ii) in finding, in paragraphs 7.748-7.749, 7.760-7.761, and 8.1(e) of the Panel Report, that Step 2 payments to *exporters* of United States upland cotton, pursuant to Section 1207(a) of the FSRI Act of 2002, are subsidies contingent upon export performance within the meaning of Article 9.1(a) of the *Agreement on Agriculture* that are inconsistent with Articles 3.3 and 8 of that Agreement and Articles 3.1(a) and 3.2 of the *SCM Agreement*;

(e) as regards export credit guarantee programs, whether the Panel erred:

(i) in finding, in paragraphs 7.901, 7.911, and 7.932 of the Panel Report, that Article 10.2 of the *Agreement on Agriculture* does not exempt export credit guarantees from the export subsidy disciplines in Article 10.1 of that Agreement;

(ii) in the manner that it applied the burden of proof in finding that the United States' export credit guarantee programs are prohibited export subsidies under Articles 3.1(a) and 3.2 of the *SCM Agreement*;

(iii) by failing to make the necessary findings of fact in assessing whether the United States' export credit guarantee programs are provided at premium rates that are inadequate to cover long-term operating costs and losses within the meaning of item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*;

[180]Brazil's request for the Appellate Body to complete the analysis of this issue is conditional on the Appellate Body reversing the finding of the Panel that the effect of the price-contingent subsidies was significant price suppression in terms of Article 6.3(c) of the *SCM Agreement*.

(iv) in finding, in paragraphs 7.947 and 7.948 of the Panel Report, that the United States' export credit guarantee programs are prohibited export subsidies under Article 3.1(a) of the *SCM Agreement* and are consequently inconsistent with Article 3.2 of that Agreement; and

(v) by exercising judicial economy, as noted in paragraph 6.31 of the Panel Report, in respect of Brazil's claim that the United States' export credit guarantee programs are export subsidies within the meaning of Articles 1.1 and 3.1(a) of the *SCM Agreement*, having already found that these measures were export subsidies covered by item (j) of the Illustrative List of Export Subsidies and, therefore, were inconsistent with Articles 3.1(a) and 3.2 of the *SCM Agreement*;

(f) as regards circumvention of export subsidy commitments, whether the Panel erred:

(i) in the application of Article 10.1 of the *Agreement on Agriculture* and by failing to meet the requirements of Article 11 of the DSU, in finding, in paragraph 7.881 of the Panel Report, that Brazil did not establish that the United States' export credit guarantees are "applied in a manner that results in … circumvention" of the United States' export subsidy commitments with respect to pig meat and poultry meat in 2001[181];

(ii) in paragraphs 7.882-7.883 and 7.896 of the Panel Report, in interpreting and applying the phrase "threatens to lead to ... circumvention" in Article 10.1 of the *Agreement on Agriculture*; and

(iii) in paragraph 7.882 and footnote 1061 of the Panel Report, by confining its examination of threat of circumvention to scheduled products other than rice and unsupported unscheduled products;

(g) as regards the FSC Repeal and Extraterritorial Income Exclusion Act of 2000 (the "ETI Act of 2000"), whether the Panel erred in finding that Brazil did not establish a *prima facie* case that the ETI Act of 2000 and the subsidies granted thereunder are inconsistent with Articles 8 and 10.1 of the *Agreement on Agriculture* and Articles 3.1 and 3.2 of the *SCM Agreement*, in respect of upland cotton; and

(h) as regards Article XVI:3 of the GATT 1994:

(i) whether the Panel erred in finding, in paragraph 7.1016 of the Panel Report, that Article XVI:3 of the GATT 1994 "applies only to export subsidies as that term is now defined in the *Agreement on Agriculture* and the *SCM Agreement*"; and

(ii) whether the Appellate Body should complete the analysis of whether the price-contingent subsidies caused the United States to have "more than an

[181]At the oral hearing, Brazil indicated that it was not pursuing this claim in respect of vegetable oil.

equitable share of world export trade" in upland cotton, in violation of the second sentence of Article XVI:3 of the GATT 1994.[182]

IV. Preliminary Issues

A. *Terms of Reference – Expired Measures*

1. Introduction

250. The United States appeals the Panel's finding that two subsidy measures, namely, production flexibility contract payments with the exception of those made in the 2002 marketing year and market loss assistance payments, can be the subject of consultations under the DSU and hence fell within the Panel's terms of reference, notwithstanding the fact that the legislative basis for these payments had expired at the time those terms of reference were set.[183]

251. Production flexibility contract payments were a form of income support under the Federal Agriculture Improvement and Reform Act of 1996 (the "FAIR Act of 1996"); they were discontinued with the passage of the Farm Security and Rural Investment Act of 2002 (the "FSRI Act of 2002") in May 2002. The last production flexibility contract payments were scheduled to be made "not later than" 30 September 2002[184], in connection with the 2002 crop. Market loss assistance payments were *ad hoc* annual payments made through legislation enacted by the United States Congress between 1998 and 2001. Each such payment was made through a separate piece of legislation, the last of which was enacted on 13 August 2001, for the marketing year 2001 (1 August 2001 – 31 July 2002) crop.[185]

252. Before the Panel, the United States argued that production flexibility contract payments and market loss assistance payments could not be within the terms of reference because they had expired prior to Brazil's request for consultations. The United States argued that Article 4.2 of the DSU provides that consultations may cover only "measures affecting" the operation of a covered agreement, and that expired measures are not "measures affecting" the operation of a covered agreement.[186] Brazil asked the Panel to reject the United States' request, submitting that a panel is required to examine the effects flowing from expired measures in order to conduct an objective assessment of a serious prejudice claim.[187]

[182]Brazil's request for the Appellate Body to complete the analysis of this issue is conditional on two events: (i) the Appellate Body reversing the finding of the Panel that the effect of the price-contingent subsidies was significant price suppression in terms of Article 6.3(c) of the *SCM Agreement*; and, (ii) the Appellate Body declining Brazil's request for a ruling that the United States' measures at issue resulted in an increase in the United States' world market share in upland cotton in terms of Article 6.3(d) of the *SCM Agreement*.

[183]Notwithstanding paragraph 9 of the United States' Notice of Appeal, the United States explained during the oral hearing that it does not appeal the Panel's finding, in paragraph 7.132 of the Panel Report, that payments with respect to non-upland cotton base acres were within its terms of reference.

[184]See Panel Report, paras. 7.107 and 7.212-7.215. See also "Answers of the United States to the Panel's Questions Posed Following the First Session of the First Substantive Panel Meeting" (11 August 2003), Panel Report, p. I-84, para. 35.

[185]For further discussion of the nature of production flexibility contract payments and market loss assistance payments, insofar as they are relevant to this issue, see Panel Report, paras. 7.107 and 7.212-7.217.

[186]See Panel Report, paras. 7.104 and 7.113.

[187]See Panel Report, para. 7.105.

253. The Panel noted that Brazil had not pursued claims with respect to the legislation underlying the programs; instead, Brazil's claim was limited to the WTO-consistency of the payments made under those programs.[188] In its reasoning, the Panel said it did:

> ... not consider that Article 4.2 [of the DSU] supports an interpretation that a request for consultations cannot concern measures that have expired, or payments made under programmes that are no longer in effect, where the Member requesting consultations represents that benefits accruing to it directly or indirectly under the covered agreements are being impaired by those measures.[189]

254. It added that "the Panel's terms of reference refer to Brazil's request for establishment of a panel, not its request for consultations."[190] The Panel also recalled that "Article 6.2 of the *DSU* provides that a request for establishment of a panel should identify the 'specific measures at issue' and does not address the issue of the status of the measures at all."[191] On this basis, the Panel indicated that it did not believe that:

> Article 4.2, and hence Article 6.2, of the *DSU* excludes expired measures from the potential scope of a request for establishment of a panel.[192]

255. In the light of this finding (and having rejected a further claim by the United States that market loss assistance payments were not identified with adequate specificity in Brazil's request for establishment of a panel[193]), the Panel concluded:

> Therefore, in light of our conclusion at paragraph 7.122, ... the Panel rules that PFC and MLA payments, as addressed in document WT/DS267/7, fall within its terms of reference.[194]

2. Appeal by the United States

256. The United States claims that the Panel erred in reaching this conclusion and requests the Appellate Body to reverse the Panel's finding that Articles 4.2 and 6.2 of the DSU do not exclude expired measures from the potential scope of consultations or a request for establishment of a panel.[195] It also asserts that the Panel failed to set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind this finding, as required by Article 12.7 of the DSU.[196] The

[188]*Ibid.*, para. 7.108.

[189]*Ibid.*, para. 7.118.

[190]*Ibid.*, para. 7.121.

[191]Panel Report, para. 7.121.

[192]*Ibid.*, para. 7.122.

[193]*Ibid.*, para. 7.127. This finding has not been appealed.

[194]*Ibid.*, para. 7.128. This final finding was reiterated in paragraph 7.194(ii) of the Panel Report.

[195]United States' Notice of Appeal, *supra*, footnote 17, para. 14; United States' appellant's submission, para. 515.

[196]United States' appellant's submission, para. 150.

United States submits that it was undisputed that the legislation authorizing both of these types of payments had expired before Brazil submitted its request for consultations.[197]

257. The United States observes that Article 4.2 of the DSU provides that consultations may cover "any representations made by another Member *concerning measures affecting the operation of any covered agreement* taken within the territory of the former".[198] The United States focuses on the present tense of the verb "affecting" in this Article and contends that expired measures cannot be measures "affecting", in the present, the operation of a covered agreement.[199] Thus, according to the United States, production flexibility contract and market loss assistance payments cannot be said to be currently "affecting" the operation of any covered agreement. Consequently, they cannot be measures falling within the scope of "specific measures at issue" in terms of Article 6.2 of the DSU.[200]

258. Brazil responds that neither Article 4.2 nor Article 6.2 of the DSU precludes a panel from analyzing payments made in the past in the context of serious prejudice claims. Brazil focuses on the context provided by Article 3.3 of the DSU, which states that a purpose of dispute settlement is the "prompt settlement of situations in which a Member considers that any benefits accruing to it ... are being impaired by measures taken by another Member". For Brazil, as long as the impairment is *current*, the status in domestic law of the measure causing that impairment is irrelevant. Brazil notes that the present dispute involves allegations of "adverse effects" and "serious prejudice" under the provisions of the *SCM Agreement* and the GATT 1994. A breach of the relevant provisions of these Agreements does not occur when an actionable subsidy is granted, but rather when the adverse effects arise. Brazil finds support for its position in the view of the panel in *Indonesia – Autos*, which found that past, present, and future subsidies can be the subject of dispute settlement, as the effect of such measures may be serious prejudice to the interests of a Member.[201]

3. Scope of Consultations under Article 4.2 of the DSU

259. Article 4.2 of the DSU governs what measures may be the subject of consultations and provides as follows:

> Each Member undertakes to accord sympathetic consideration to and afford adequate opportunity for consultation regarding any representations made by another Member concerning measures affecting the operation of any covered agreement taken within the territory of the former. (footnote omitted)

260. It is clear from Article 4.2 that, although a requested Member is under an obligation to engage in "consultation" on "any" representations made by another Member, such representations must pertain to "measures affecting the operation of any covered agreement". The United States argues that Article 4.2 of the DSU limits the obligation of the requested Member to representations concerning measures that are actually "*affecting*" the operation of any covered agreement. The United States stresses the temporal significance of the present tense of the word "affecting" and asserts that

[197] *Ibid.*, para. 500.

[198] United States' appellant's submission, para. 501 (quoting Article 4.2 of the DSU). (emphasis added by the United States)

[199] *Ibid.*, para. 501.

[200] United States' appellant's submission, paras. 502 and 512.

[201] Brazil's appellee's submission, para. 256 (referring to Panel Report, *Indonesia – Autos*, para. 14.206).

"[m]easures that have expired before a request for consultations *cannot* be measures 'affecting the operation of any covered agreement' at the time the request is made".[202]

261. We agree with the Panel that the word "affecting" refers primarily to "the way in which [measures] relate to a covered agreement".[203] As the Appellate Body stated in *EC – Bananas III*, "[t]he ordinary meaning of the word 'affecting' implies a measure that has 'an effect on'" something else.[204] At the same time, we also concur with the United States that the ordinary meaning of the word "affecting" suggests a temporal connotation. As the United States submits, the present tense of the phrase "affecting the operation of any covered agreement" denotes that the effects of such measures must relate to the present impact of those measures on the operation of a covered agreement. It is not sufficient that a Member alleges that challenged measures affected the operation of a covered agreement in the past; the representations of the Member requesting consultations must indicate that the effects are occurring in the present.[205]

262. Whether or not a measure is still in force is not dispositive of whether that measure is currently affecting the operation of any covered agreement. Therefore, we disagree with the United States' argument that measures whose legislative basis has expired are incapable of affecting the operation of a covered agreement in the present and that, accordingly, expired measures *cannot* be the subject of consultations under the DSU.[206] In our view, the question of whether measures whose legislative basis has expired affect the operation of a covered agreement currently is an issue that must be resolved on the facts of each case. The outcome of such an analysis cannot be prejudged by excluding it from consultations and dispute settlement proceedings altogether.

263. We consider that requesting Members should enjoy a degree of discretion to identify, in their request for consultations under Article 4.2, matters relating to the covered agreements for discussion in consultations. As the Appellate Body observed in *Mexico – Corn Syrup (Article 21.5 – US)*, consultations present an opportunity for clarifying factual and legal issues, and for narrowing the scope of a dispute, and for resolving differences between WTO Members.[207] We do not think it would advance the purpose of consultations if Article 4.2 were interpreted as excluding *a priori* measures whose legislative basis may have expired, but whose effects are alleged to be impairing the benefits accruing to the requesting Member under a covered agreement. Nor, indeed, do we find textual support in the provision itself for doing so. Thus, we do not read Article 4.2 of the DSU as precluding a Member from making representations on measures whose legislative basis has expired, where that Member has reason to believe that such measures are still "affecting" the operation of a covered agreement.

264. We find contextual support for this interpretation in Article 3.3 of the DSU[208], which underscores the importance of the "prompt settlement" of certain situations that, in the absence of settlement, could undermine the effective functioning of the WTO and the maintenance of a proper

[202] United States' appellant's submission, para. 501. (emphasis added)

[203] Panel Report, para. 7.115.

[204] Appellate Body Report, *EC – Bananas III*, para. 220.

[205] This does not exclude the possibility that the effects of a measure may occur in future.

[206] United States appellant's submission, para. 501.

[207] Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 54.

[208] Article 3.3 of the DSU provides:

> The prompt settlement of situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member is essential to the effective functioning of the WTO and the maintenance of a proper balance between the rights and obligations of Members.

balance between the rights and obligations of Members. We note, first, that Article 3.3 focuses not upon "existing" measures, or measures that are "currently in force" but, rather, upon "measures taken" by a Member, which includes measures taken in the past.[209] We also observe that Article 3.3 envisages that disputes arise when a Member "considers" that benefits accruing to it are being impaired by measures taken by another Member. By using the word "considers", Article 3.3 focuses on the perception or understanding of an aggrieved Member. This does not exclude the possibility that a Member requesting consultations may have reason to believe that a measure is still impairing benefits even though its legislative basis has expired.[210]

265. We recall that the Panel observed that:

> Brazil's request for consultations alleges that the use of the measures specified in the request "causes adverse effects, i.e. serious prejudice" to its interests. We note the present tense of this allegation. The request concerns the way in which measures were affecting the operation of a covered agreement at the time of consultations, and it states that Brazil had reason to believe that these subsidies were resulting in serious prejudice at that time.[211]

266. For the Panel, these aspects of the request for consultations were sufficient for Brazil to meet the requirements of Article 4.2 of the DSU. We see no error in the Panel's approach to this question. Whether or not a subsidy program is still in force at the time consultations were requested does not answer the question whether any payments previously made under that program are currently affecting the operation of a covered agreement in the sense of Article 4.2. Brazil, in these proceedings, represented in its request for consultations that payments under the production flexibility contract and market loss assistance programs continued to affect its rights under the *SCM Agreement*. In our view, this was sufficient to meet the requirements of Article 4.2 of the DSU.

4. Measure at Issue under Article 6.2 of the DSU

267. In addition to its arguments under Article 4.2 of the DSU, the United States contends that an expired measure cannot be a measure that is "at issue" in terms of Article 6.2 of the DSU. The United States also argues that a finding to the contrary would be difficult to reconcile with the terms of Articles 3.7 and 19.1 of the DSU, which contemplate the "withdrawal" of a measure found to be inconsistent with the covered agreements, or a recommendation that a measure found to be inconsistent with a covered agreement be brought into conformity. The United States argues that the remedies described in Articles 3.7 and 19.1 are essentially prospective in nature.

268. We understand these arguments by the United States to be largely dependent upon its arguments regarding Article 4.2 of the DSU: if, as the United States contends, a measure may not be the subject of consultations then, *ipso facto*, it may not be a measure "at issue" in the sense of Article 6.2. Having rejected the United States' arguments regarding Article 4.2, we do not find the United States' additional arguments under Article 6.2 compelling.

269. The only temporal connotation contained in the ordinary meaning of the expression "at issue", as used in Article 6.2 of the DSU, is expressed by its present tense: measures must be "at issue"—or, putting it another way, "in dispute"—at the time the request is made. Certainly, nothing inherent in the term "at issue" sheds light on whether measures at issue must be currently in force, or whether they may be measures whose legislative basis has expired.

270. The relevant context for Article 6.2 in this regard includes Articles 3.3 and 4.2 of the DSU. As we have concluded above, those provisions do not preclude a Member from making representations with respect to measures whose legislative basis has expired, if that Member considers, with reason, that benefits accruing to it under the covered agreements are still being impaired by those measures. If the effect of such measures remains in dispute following consultations, the complaining party may, according to Article 4.7 of the DSU, request the establishment of a panel, and the text of Article 6.2 does not suggest that such measures could not be the subject of a panel request as "specific measures at issue".

271. The United States purports to find support for its position in the ruling of the Appellate Body in *US – Certain EC Products*, where the Appellate Body reversed the panel's decision to make a recommendation under Article 19.1 of the DSU that the United States bring the measure at issue in that case (the "3 March Measure") into conformity with the covered agreements, on the grounds that the panel had already found that the measure had expired. However, that case involved a situation different from the present one. There, the 3 March Measure had been the subject of consultations, but had expired. The expiry of the 3 March Measure did not prevent it being a "measure at issue" for purposes of Article 6.2 of the DSU. Indeed, neither the panel nor the Appellate Body found that the 3 March Measure was outside the panel's terms of reference, and both the panel and Appellate Body addressed that measure in their rulings.[212]

272. The question whether an expired measure is susceptible to a recommendation under Article 19.1 of the DSU is a different matter. The Appellate Body in *US – Certain EC Products* confirmed that the 3 March Measure had ceased to exist. It noted that there was an obvious inconsistency between the finding of the panel that "the 3 March Measure is no longer in existence" and the panel's subsequent recommendation that the Dispute Settlement Body (the "DSB") request the United States to bring the 3 March Measure into conformity with its WTO obligations.[213] Thus, the fact that a measure has expired may affect what recommendation a panel may make. It is not, however, dispositive of the preliminary question of whether a panel can address claims in respect of that measure.[214]

[209]Indeed, as the Panel noted, in the sense that "PFC and MLA payments had already been made at the date of the establishment of the Panel", "they had not expired, but had simply occurred in the past". (Panel Report, para. 7.110)

[210]Whether the Member's belief proves to be correct is a substantive matter to be addressed in the consultations, or—if consultations fail—before a panel. We note that Brazil's request for consultations in regard to this matter was based not only on Article 4 of the DSU, but also on Article 7.1 of the *SCM Agreement* (as well as Article XXII of the GATT 1994). (See Request for Consultations by Brazil, WT/DS267/1, 3 October 2002, p. 1) Article 7.1 authorizes a Member to request consultations whenever it "has reason to believe" that any subsidy referred to in Article 1 "results in" certain effects listed in that provision. Article 7.1 thus recognizes that questions regarding the results of subsidization are potentially contentious matters.

[211]Panel Report, para. 7.119.

[212]This contrasts with the treatment of the other measure raised in that proceeding (the "19 April action"). It was in force, but had not been the subject of consultations. The panel and Appellate Body both ruled that the absence of consultations on the 19 April action required its exclusion from the terms of reference. (Appellate Body Report, *US – Certain EC Products*, para. 82; Panel Report, *US – Certain EC Products*, paras. 6.89 and 6.128)

[213]Appellate Body Report, *US – Certain EC Products*, paras. 81-82.

[214]This conclusion is consistent with the approach taken by GATT and WTO panels to questions relating to the expiry of measures after the initiation of dispute settlement proceedings, but before those proceedings have been completed. See, for example, GATT Panel Report, *EEC – Apples I (Chile)*, paras. 2.4 and 4.1 ff; Panel Report, *India – Autos*, para. 7.29. GATT and WTO panels have frequently made findings with respect to measures withdrawn after the establishment of the panel. See, for example, GATT Panel Report, *EEC – Animal Feed Proteins*, para. 2.4; GATT Panel Report, *US – Canadian Tuna*, para. 4.3; Panel Report, *US – Wool Shirts and Blouses*, para. 6.2; and Panel Report, *Indonesia – Autos*, para. 14.9. Even in cases where a

273. It is important to recognize the particular characteristics of *subsidies* and the nature of Brazil's claims against the production flexibility contract and market loss assistance subsidy payments. Article 7.8 of the *SCM Agreement* provides that, where it has been determined that "any subsidy has *resulted* in adverse effects to the interests of another Member", the subsidizing Member must "take appropriate steps *to remove the adverse effects* or ... withdraw the subsidy". (emphasis added) The use of the word "resulted" suggests that there could be a time-lag between the payment of a subsidy and any consequential adverse effects.[215] If expired measures underlying past payments could not be challenged in WTO dispute settlement proceedings, it would be difficult to seek a remedy for such adverse effects. Further—in contrast to Articles 3.7 and 19.1 of the DSU—the remedies under Article 7.8 of the *SCM Agreement* for adverse effects of a subsidy are (i) the withdrawal of the subsidy *or* (ii) the removal of adverse effects. Removal of adverse effects through actions other than the withdrawal of a subsidy could not occur if the expiration of a measure would automatically exclude it from a panel's terms of reference.

274. For these reasons, we find the United States' reliance upon the prospective character of the remedies described in Articles 3.7 and 19.1 of the DSU unconvincing. We therefore *reject* the United States' argument that production flexibility contract payments and market loss assistance payments were outside the Panel's terms of reference by virtue of Article 6.2 of the DSU.

5. Article 12.7 of the DSU

275. The United States also alleges that, contrary to Article 12.7 of the DSU, the Panel failed to set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind its finding that Articles 4.2 and 6.2 of the DSU do not exclude expired measures from the potential scope of a request for the establishment of a panel.

276. The Appellate Body stated in *Mexico – Corn Syrup (Article 21.5 – US)*:

> Article 12.7 establishes a minimum standard for the reasoning that panels must provide in support of their findings and recommendations. Panels must set forth explanations and reasons sufficient to disclose the essential, or fundamental, justification for those findings and recommendations.[216]

panel has chosen not to rule on measures that had been terminated during the course of proceedings, panels have recognized that "[o]n several occasions, panels have considered measures that were no longer in force". (Panel Report, *Argentina – Textiles and Apparel*, para. 6.12. (footnote omitted)) In none of these cases has a panel or the Appellate Body premised its decision on the view that, *a priori*, an expired measure could not be within a panel's terms of reference.

[215]We observe, in this regard, that the United States concedes that at least *some* subsidies can have effects for years after the date on which they are paid. Thus, the United States distinguishes between "non-recurring" subsidies and "recurring" subsidies. Although the United States believes that the effects of recurring subsidies are limited to the year for which they are paid, the United States *accepts* that the effects of non-recurring subsidies may spread out well into the future. (United States' appellant's submission, para. 508)

[216]Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 106. It also noted that:

> ... the duty of panels under Article 12.7 of the DSU to provide a "basic rationale" reflects and conforms with the principles of fundamental fairness and due process that underlie and inform the provisions of the DSU. In particular, in cases where a Member has been found to have acted inconsistently with its obligations under the covered agreements, that Member is entitled to know the reasons for such finding as a matter of due process. In addition, the requirement to set out a "basic rationale" in the panel report assists such Member to understand the nature of its obligations and to make informed decisions about: (i) what must be done in order to implement the eventual rulings and recommendations made by the DSB; and (ii) whether and what to appeal.

(*Ibid.*, para. 107) (footnote omitted)

The Appellate Body clarified:

> [w]hether a panel has articulated adequately the "basic rationale" for its findings and recommendations must be determined on a case-by-case basis, taking into account the facts of the case, the specific legal provisions at issue, and the particular findings and recommendations made by a panel. Panels must identify the relevant facts and the applicable legal norms. In applying those legal norms to the relevant facts, the reasoning of the panel must reveal how and why the law applies to the facts. In this way, panels will, in their reports, disclose the essential or fundamental justification for their findings and recommendations.[217]

The Appellate Body also explained that this "does not, however, necessarily imply that Article 12.7 requires panels to expound at length on the reasons for their findings and recommendations."[218]

277. We note that compliance with Article 12.7 of the DSU is to be determined on a case-by-case basis. With regard to the current proceedings, as discussed above, we see no error in the Panel's conclusion regarding its ability to make findings with respect to subsidies whose legislative basis had expired at the time of panel establishment. Although the Panel's reasoning with respect to this issue may be brief, the Panel set out the necessary findings of fact, the applicability of relevant provisions, and the basic rationale behind its findings. The Panel noted that the parties agreed on the key factual element that was relevant to this part of its analysis, namely, that the legislation under which production flexibility contract and market loss assistance payments were made had expired, and went on to discuss relevant factual aspects.[219] The Panel cited and discussed Article 4.2, in particular the meaning and significance of the term "affecting" in that provision.[220] As we have done, the Panel interpreted Article 4.2 in the light of the context provided by Article 3.3 of the DSU.[221] It addressed Article 6.2 of the DSU[222], and also situated the question of "expired measures" in the context of the actionable subsidies claims made by Brazil in this case.[223] Given these inquiries and considerations by the Panel, we see no reason to find that the Panel failed to meet the requirements of Article 12.7 of the DSU in relation to whether the expired production flexibility contract and market loss assistance payments fell within its terms of reference.

B. *Terms of Reference – Export Credit Guarantees*

1. Introduction

278. We turn now to the United States' claim that the Panel erred in finding that its terms of reference were not limited to export credit guarantees to upland cotton, but also included export credit guarantees to other eligible United States agricultural commodities.[224]

279. The United States requested the Panel to "rule that export credit guarantee measures relating to eligible United States agricultural commodities (other than upland cotton) are not within its terms of reference because this 'measure' was not the subject of Brazil's request for consultations".[225] Brazil responded that "both its request for consultations and the accompanying statement of available evidence, as well as the questions it posed to the United States during consultations, revealed that they covered export credit guarantee measures relating to *all* eligible United States agricultural commodities".[226]

280. The Panel found that "the *actual* consultations did include export credit guarantee measures relating to all eligible agricultural commodities".[227] The Panel then examined the text of Brazil's request for consultations, "[a]ssuming *arguendo* that the scope of the written request for consultations is determinative, rather than the scope of the actual consultations".[228] It found "that export credit guarantee measures relating to all eligible agricultural commodities were included in Brazil's request for consultations, based on its reading of the text of the request itself".[229] Accordingly, the Panel made the following ruling in response to the United States' request:

> [T]he Panel rules that export credit guarantees to facilitate the export of United States upland cotton, and other eligible agricultural commodities as addressed in document WT/DS267/7, are within its terms of reference.[230]

2. Arguments on Appeal

281. On appeal, the United States asserts that the Panel erred in finding that export credit guarantee measures relating to all eligible agricultural commodities were included in Brazil's request for consultations.[231] In addition, the United States takes issue with the Panel's finding that consultations were *actually* held on the export credit guarantee programs relating to agricultural commodities including, but not limited to, upland cotton.[232] The United States argues, in this regard, that the fact that Brazil posed written questions on the export credit guarantees relating to agricultural commodities including, but not limited to, upland cotton does not mean that consultations were *actually* held on all those products, especially considering that the United States objected to discussing them during the consultations on the basis that they were not included in the request for consultations.[233]

282. Brazil requests that we reject the United States' appeal. It contends that its request for consultations identified three United States export credit programs, namely, the General Sales Manager 102 ("GSM 102") and General Sales Manager 103 ("GSM 103") programs and the Supplier Credit Guarantee Program (the "SCGP").[234] By their own terms, each of these measures applies to all eligible products.[235] Therefore, there was no need to specify the product scope of these measures.[236] Brazil submits that, in any event, its request for consultations in fact identified the export credit guarantee programs in connection with all eligible commodities, without any limitation to upland cotton.[237] Finally, Brazil asserts that, irrespective of the measures identified in Brazil's request for consultations, the Panel found, as a matter of fact, that "consultations were held" on the export credit guarantee programs in connection with all eligible commodities, as required by Article 6.2 of the DSU.[238]

3. Did the Panel's Terms of Reference Include Other Eligible Agricultural Commodities?

283. The United States claims on appeal that the Panel's terms of reference were limited to export credit guarantees to upland cotton, and did not include export credit guarantees to other eligible agricultural commodities. This claim is premised on the allegation that, in its request for the establishment of a panel, Brazil expanded the product scope in respect of which it challenges the United States' export credit guarantee programs to include other eligible agricultural products in addition to upland cotton. The United States submits that the request for consultations and the consultations themselves, however, were limited to export credit guarantees to upland cotton. Brazil contends that its request for consultations and the consultations held covered *all* agricultural products eligible for export credit guarantees.[239]

---

[224]We note that, during the interim review, Brazil requested the Panel "to conclude that GSM 102, GSM 103 and SCGP also constitute prohibited export subsidies within the meaning of item (j) and Article 3.1(a) of the *SCM Agreement*, for all products not covered by the *Agreement on Agriculture*". The Panel rejected Brazil's request, explaining that its "terms of reference include[d] export credit guarantees to facilitate the export of United States upland cotton and other eligible *agricultural* commodities as addressed in document WT/DS267/7". (Panel Report, para. 6.37. (original emphasis))

[225]Panel Report, para. 7.55. (footnote omitted)

[226]*Ibid.*, para. 7.57. (footnote omitted; emphasis added)

[227]Panel Report, para. 7.61. (original italics; underlining added)

[228]*Ibid.*, para. 7.62.

[229]*Ibid.*, para. 7.65. The Panel explained that the title of this dispute, "United States – Subsidies on Upland Cotton", "did not appear in the original communication sent from the Permanent Mission of Brazil to the Permanent Mission of the United States", but rather "was added by the [WTO] Secretariat when it circulated a copy of the request for consultations to Members". Consequently, the Panel did not consider the title to be "a legally relevant consideration here". (*Ibid.*, footnote 131 to para. 7.64)

[230]Panel Report, para. 7.69. (footnote omitted)

[231]United States' appellant's submission, para. 474.

[232]*Ibid.*, para. 471.

[233]*Ibid.*, paras. 471-472.

[234]These programs are described *infra*, paras. 586-589.

[235]See Panel Report, footnote 1056 to para. 7.875.

[236]Brazil's appellee's submission, para. 195.

[237]*Ibid.*, para. 202.

[238]Brazil's appellee's submission, paras. 208-209. Brazil reads the Appellate Body Report in *Brazil – Aircraft* as meaning that as long as "consultations were held" on a measure included in a request for establishment of a panel, that measure is properly within a panel's terms of reference, irrespective of whether the measure was included in the request for consultations. (*Ibid.*, para. 213 (referring to Appellate Body Report, *Brazil – Aircraft*, paras. 132-134)) Brazil adds that this is consistent with the purpose of consultations. (*Ibid.*, para. 214)

[239]In addition, Brazil submits that the Panel's terms of reference are determined by the panel request, and that its panel request referred to all agricultural products eligible for the United States' export credit guarantees.

284. Before addressing the question of whether Brazil expanded, in its panel request, the scope of products in respect of which it challenged the United States' export credit guarantee programs, we note that the Appellate Body has explained previously that, "pursuant to Article 7 of the DSU, a panel's terms of reference are governed by the request for establishment of a panel".[240] However, the Appellate Body has also explained that "as a general matter, consultations are a prerequisite to panel proceedings"[241] and has underscored the importance and benefits of consultations:

> We agree ... on the importance of consultations. Through consultations, parties exchange information, assess the strengths and weaknesses of their respective cases, narrow the scope of the differences between them and, in many cases, reach a mutually agreed solution in accordance with the explicit preference expressed in Article 3.7 of the DSU. Moreover, even where no such agreed solution is reached, consultations provide the parties an opportunity to define and delimit the scope of the dispute between them. Clearly, consultations afford many benefits to complaining and responding parties, as well as to third parties and to the dispute settlement system as a whole.[242]

285. The requirements that apply to a request for consultations are set out in Article 4.4 of the DSU, which provides, in relevant part:

> Any request for consultations shall be submitted in writing and shall give the reasons for the request, including identification of the measures at issue and an indication of the legal basis for the complaint.

The Appellate Body has stated that "Articles 4 and 6 of the DSU ... set forth a process by which a complaining party must request consultations, and consultations must be held, before a matter may be referred to the DSB for the establishment of a panel".[243] At the same time, however, the Appellate Body has said that it does not believe that "Articles 4 and 6 of the DSU ... require a *precise and exact identity* between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel".[244] We need not elaborate further on the relationship between a panel's terms of reference and the requirement that "consultations were held", because, as we explain below, we are satisfied that, in this case, the Panel had a reasonable basis to conclude that the request for consultations included export credit guarantees to eligible agricultural commodities including, but not limited to, upland cotton.

286. In reviewing the Panel's analysis, we are faced with the question whether the scope of the consultations is determined by the written request for consultations or by what actually happens in the consultations. The Panel looked first at what actually happened during the consultations. It observed that Brazil submitted in writing to the United States 21 questions regarding export credit guarantee programs, seeking information on, *inter alia*, the total volume and value of exports of United States agricultural goods guaranteed by these programs.[245] According to the Panel, "[t]his shows that the *actual* consultations did include export credit guarantee measures relating to all eligible agricultural commodities".[246] The Panel then examined the text of Brazil's request for consultations, "[a]ssuming *arguendo* that the scope of the written request for consultations is determinative, rather than the scope of the actual consultations".[247]

287. We believe that the Panel should have limited its analysis to the request for consultations because we are inclined to agree with the panel in *Korea – Alcoholic Beverages*, which stated that "[t]he only requirement under the DSU is that consultations were in fact held ... [w]hat takes place in those consultations is not the concern of a panel".[248] Examining what took place in the consultations would seem contrary to Article 4.6 of the DSU, which provides that "[c]onsultations shall be confidential, and without prejudice to the rights of any Member in any further proceedings." Moreover, it would seem at odds with the requirements in Article 4.4 of the DSU that the request for consultations be made in writing and that it be notified to the DSB. In addition, there is no public record of what actually transpires during consultations and parties will often disagree about what, precisely, was discussed. Ultimately, however, it is not necessary for us to inquire into this part of the Panel's analysis because the Panel also found "that export credit guarantee measures relating to all eligible agricultural commodities were included in Brazil's request for consultations, based on its reading of the text of the request itself".[249] We turn, therefore, to examine whether there is a sufficient basis for the Panel's conclusion in this regard.

[240]Appellate Body Report, *US – Carbon Steel*, para. 124. Article 7.1 of the DSU provides:

> Panels shall have the following terms of reference unless the parties to the dispute agree otherwise within 20 days from the establishment of the panel:
>
> > To examine, in the light of the relevant provisions in (name of the covered agreement(s) cited by the parties to the dispute), the matter referred to the DSB by (name of party) in document ... and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in that/those agreement(s).

The United States does not dispute that Brazil's request for the establishment of a panel included export credit guarantees to eligible agricultural commodities including, but not limited to, upland cotton.

[241]Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 58.

[242]*Ibid.*, para. 54.

[243]Appellate Body Report, *Brazil – Aircraft*, para. 131.

[244]Appellate Body Report, *Brazil – Aircraft*, para. 132. (original emphasis) The Appellate Body found, in that case, that certain measures that came into effect after consultations were held were nevertheless within the Panel's terms of reference, emphasizing that the measures did not change the essence of the challenged export subsidies. In *US – Certain EC Products*, the Appellate Body found that one of the measures challenged by the European Communities was not properly before the Panel. The Appellate Body explained that, although the panel request referred to the measure, it was not possible for it to conclude "on this basis *alone*" that the measure was within the Panel's terms of reference. It noted that the European Communities' request for consultations did not refer to the measure and that the European Communities acknowledged that the measure was not the subject of the consultations. In its ruling, the Appellate Body also emphasized that the particular measure was "separate" and "legally distinct" from another measure challenged by the European Communities. (Appellate Body Report, *US – Certain EC Products*, paras. 69-75) (original emphasis)

[245]The United States acknowledged that Brazil posed questions during the consultations that went beyond upland cotton. (Panel Report, para. 7.61) According to the Panel, the United States declined to respond to these questions during the consultations. (Panel Report, 7.67)

[246]Panel Report, para. 7.61. (original emphasis)

[247]*Ibid.*, para. 7.62.

[248]Panel Report, *Korea – Alcoholic Beverages*, para. 10.19.

[249]Panel Report, para. 7.65.

288. Brazil's request for consultations states, in relevant part[250]:

> The measures that are the subject of this request are prohibited and actionable subsidies provided to US producers, users and/or exporters of upland cotton[1], as well as legislation, regulations, statutory instruments and amendments thereto providing such subsidies (including export credits), grants, and any other assistance to the US producers, users and exporters of upland cotton ("US upland cotton industry"). The measures include the following:
>
> ...
>
> - Export subsidies, exporter assistance, export credit guarantees, export and market access enhancement to facilitate the export of US upland cotton provided under the Agricultural Trade Act of 1978, as amended, and other measures such as the GSM-102, GSM-103, and SCGP programs ...
>
> ...
>
> Regarding export credit guarantees, export and market access enhancement provided under the Agricultural Trade Act of 1978, as amended, and other measures such as the GSM-102, GSM-103, and SCGP programs, Brazil is of the view that these programs, as applied and as such, violate Articles 3.3, 8, 9.1, and 10.1 of the Agreement on Agriculture and are prohibited export subsidies under Article 3.1(a) and item (j) of the Illustrative List of Export Subsidies included as Annex I to the SCM Agreement. Subsidies provided under these programs are also actionable subsidies for the purpose of Brazil's claims under Article 6.3 of the SCM Agreement.

[1] Except with respect to export credit guarantee programs as explained below.

289. According to the Panel, footnote 1 to Brazil's request for consultations "should have indicated to the careful reader that the subject of the request for consultations, with respect to export credit guarantee measures only, was different from those 'provided to US producers, users and/or exporters of upland cotton'".[251] The Panel also observed that the second paragraph after the footnote dealing with export credit guarantee programs referred to the programs as applied and as such, and it did not refer specifically to upland cotton. The Panel therefore concluded that "export credit guarantee measures relating to all eligible agricultural commodities were included in Brazil's request for consultations, based on its reading of the text of the request itself."[252]

290. The United States contends that the Panel ignored the first paragraph after the footnote and drew the wrong conclusion from the second paragraph. According to the United States, "it is simply not the case that a 'plain reading' of the [second] paragraph 'includes all eligible agricultural commodities'." Rather, it "shows that the [second] paragraph mentions *no* commodities at all".[253] The United States also asserts that the Panel "overlooked the context that th[e] first paragraph provided for the second".[254] The first paragraph, the United States points out, refers to exports subsidies, exporter assistance, and export credit guarantees to facilitate the export of *upland cotton* under a series of listed measures. A comparison of the first and second paragraphs shows that "the second did not describe measures, but, rather, described the *legal basis* for Brazil's complaint".[255] The United States submits that the Panel should therefore have concluded that "the two paragraphs complemented one another" and, "[t]hat being the case, there is no reason to believe (and certainly the Panel gave none) that the product scope of the second paragraph was broader than the 'upland cotton' mentioned in the first paragraph".[256] Finally, the United States argues that, "[e]ven assuming that the omission of the words 'upland cotton' from the second paragraph had some significance", the Panel gave no explanation as to "why the omission of those words should extend the product scope to 'all eligible agricultural commodities' rather than some other product scope".[257]

291. We have examined carefully Brazil's request for consultations and we find that it provides a sufficient basis for the Panel to have concluded that the request included export credit guarantees to eligible agricultural commodities including, but not limited to, upland cotton. Footnote 1 of the request for consultations, which states "Except with respect to export credit guarantee programs as provided below", alerts the reader that there is something different about Brazil's claims relating to the United States' export credit guarantee programs. Furthermore, the fact that the footnote follows immediately after the term "upland cotton" suggests that this difference relates to the product scope. It was not unreasonable, therefore, for the Panel to conclude that footnote 1 "should have indicated to the careful reader that the subject of consultations, with respect to export credit guarantee measures only, was different from those 'provided to US producer, users and/or exporters of upland cotton'".[258] In addition, in the second paragraph dealing with export credit guarantees after the footnote, Brazil refers to the programs "as such", which suggests a broad challenge, rather than one limited to a specific agricultural commodity. In our view, therefore, the footnote, together with the reference to the programs "as such" in the second paragraph, provide a reasonable basis for the Panel's conclusion "that export credit guarantee measures relating to all eligible agricultural commodities were included in Brazil's request for consultations, based on its reading of the text of the request itself."[259]

292. The United States also cites the lack of any reference to agricultural commodities other than upland cotton in the statement of available evidence that is annexed to Brazil's request for consultations as "further proof that the request did not extend beyond export credit guarantees for upland cotton".[260] The United States raised this point as a separate claim on appeal and, therefore, we deal with this allegation in the next section of this Report. Below we uphold the Panel's finding that Brazil provided a statement of available evidence with respect to the United States' export credit

[250] Request for Consultations by Brazil, *supra*, footnote 26, pp. 1-2 and 4.

[251] Panel Report, para. 7.63.

[252] *Ibid.*, para. 7.65.

[253] United States' appellant's submission, para. 476 (quoting Panel Report, para. 7.64). (original emphasis)

[254] *Ibid.*, para. 477.

[255] *Ibid.*, (original emphasis)

[256] *Ibid.*, para. 477.

[257] *Ibid.*, para. 479.

[258] Panel Report, para. 7.63.

[259] *Ibid.*, para. 7.65. The facts of this case differ from those in *US – Certain EC Products*, on which the United States relies. In that case, the measure was not mentioned in the request for consultations because it was not even in existence at the time. (Appellate Body Report, *US – Certain EC Products*, para. 70)

[260] United States' appellant's submission, para. 461.

guarantee programs as they relate to eligible agricultural products including, but not limited to, upland cotton[261] and, consequently, this argument does not support the United States' position on this issue.

293. We emphasize that consultations are but the first step in the WTO dispute settlement process. They are intended to "provide the parties an opportunity to define and delimit the scope of the dispute between them".[262] We also note that Article 4.2 of the DSU calls on a WTO Member that receives a request for consultations to "accord sympathetic consideration to and afford adequate opportunity for consultation regarding any representations made by another Member". As long as the complaining party does not expand the scope of the dispute, we hesitate to impose too rigid a standard for the "precise and exact identity"[263] between the scope of consultations and the request for the establishment of a panel, as this would substitute the request for consultations for the panel request. According to Article 7 of the DSU, it is the request for the establishment of a panel that governs its terms of reference, unless the parties agree otherwise.[264]

294. For these reasons, we uphold the Panel's ruling, in paragraph 7.69 of the Panel Report, that "export credit guarantees to facilitate the export of United States upland cotton, and other eligible agricultural commodities ... are within its terms of reference".

C. *Statement of Available Evidence – Export Credit Guarantees*

1. Introduction

295. We now examine the United States' claim that the Panel erred in finding that Brazil's statement of available evidence was not limited to the United States' export credit guarantees to upland cotton, but also included export credit guarantee measures relating to other eligible United States agricultural products, as required by Article 4.2 of the *SCM Agreement*.

296. The United States requested the Panel to rule that Brazil "could not advance claims under ... Article 4 ... of the *SCM Agreement* with respect to export credit guarantee measures on eligible agricultural commodities other than upland cotton because it did not include a statement of available evidence with respect to such export credit guarantees in accordance with Articl[e] 4.2 ... of that Agreement".[265]

[261]See *infra*, para. 309.

[262]Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 54.

[263]Appellate Body Report, *Brazil – Aircraft*, para. 132. (emphasis omitted)

[264]Appellate Body Report, *US – Carbon Steel*, para. 124.

[265]Panel Report, para. 7.70. The Panel explained that the United States initially argued that Brazil's statement of available evidence as regards export credit guarantees was limited to upland cotton and did not extend to other eligible agricultural commodities, demonstrating that Brazil's request for consultations was limited to export credit guarantees relating to upland cotton. The request for a specific ruling on the adequacy of the statement of available evidence was made by the United States in its submission of 30 September 2003. (Panel Report, para. 7.71)

297. In examining the United States' request, the Panel noted that Brazil's statement of available evidence contained two paragraphs specifically referring to the United States' export credit guarantee programs[266], and observed that the first paragraph is "textually limited to upland cotton", while the second paragraph "is not so limited".[267] The Panel then rejected the United States' contention that the lack of a reference to upland cotton in the second paragraph could not expand the scope of the statement of available evidence.[268] According to the Panel, when the second "paragraph is read in light of footnote 1 of the request for consultations, a careful reader should have been alerted to the fact that this paragraph referred to alleged subsidies arising from export credit guarantees under the challenged programmes, without any limitation to upland cotton or any other particular product or products".[269] Furthermore, the Panel stated that Brazil's statement of evidence referred to a website of the United States Congressional Budget Office, which includes data pertaining to the spending and offsetting receipts of the Commodity Credit Corporation (the "CCC"). Neither the reference to the website nor the data on the website "contain any indication of limitation of Brazil's allegations concerning the export credit guarantee programmes to any specific product, such as, for example, upland cotton".[270]

In addition, the Panel noted that the United States had made allegations under both Articles 4.2 and 7.2 of the *SCM Agreement*. The Panel observed that Article 4.2 relates to prohibited subsidies and Article 7.2 relates to claims against actionable subsidies. Then, the Panel stated that it was not necessary for it to rule on the United States' claim relating to Article 7.2 because: (i) Brazil challenged only one United States export credit guarantee program—GSM 102—as an actionable subsidy that caused serious prejudice; (ii) this allegation was limited to upland cotton; and (iii) the Panel had exercised judicial economy with respect to the claim. Thus, the Panel limited its examination to "whether Brazil included a statement of available evidence with respect to export credit guarantees on other eligible agricultural products in accordance with the requirement pertaining to its *export* subsidy allegations in Article 4.2 of the *SCM Agreement*". (Panel Report, paras. 7.73-7.74, 7.76, and 7.78-7.79) (original emphasis)

In its Notice of Appeal, the United States asserted that, in the event that Brazil appealed the Panel's exercise of judicial economy with respect to Brazil's claims concerning the compatibility of the United States' export credit guarantee measures with Part III of the *SCM Agreement*, the United States would conditionally request the Appellate Body to find that Brazil also failed to provide a statement of available evidence as required by Article 7.2 of the *SCM Agreement* and, accordingly, Brazil's claims concerning these measures were not within the Panel's terms of reference. (Notice of Appeal, *supra*, footnote 17, para. 13) The United States did not pursue this claim further in its appellant's submission. In any event, the condition on which the United States' appeal was based was not met, as Brazil did not appeal the Panel's exercise of judicial economy concerning the compatibility of the United States' export credit guarantee measures with Part III of the *SCM Agreement*.

[266]Panel Report, para. 7.83.

[267]*Ibid.*, para. 7.84.

[268]*Ibid.*, para. 7.84.

[269]*Ibid.*, para. 7.85. (footnoted omitted) Footnote 1 of Brazil's request for consultations reads: "Except with respect to export credit guarantee programs as explained below". See *supra*, para. 288.

[270]Panel Report, paras. 7.92-7.93.

298. Therefore, the Panel found:

> [A]ssuming *arguendo* that the United States' request was timely[271], the Panel rules that Brazil provided a statement of available evidence with respect to export credit guarantee measures relating to upland cotton and eligible United States agricultural products other than upland cotton, as required by Article 4.2 of the *SCM Agreement*.[272]

299. On appeal, the United States argues that the Panel's ruling is erroneous. The United States submits that Brazil's statement of evidence contains two paragraphs specifically referring to the United States' export credit guarantee programs.[273] The first paragraph is textually limited to upland cotton, as the Panel correctly found. Although the second paragraph does not refer to upland cotton, it contains no suggestion that it expands on the programs described in the preceding paragraph.[274] The United States further submits that, even if the second paragraph were construed to refer to programs that provide benefits to products other than upland cotton, it is "difficult to see" how that paragraph meets the requirements of Article 4.2 of the *SCM Agreement*, as it does not provide information about the "existence" or "nature" of the subsidies allegedly provided by the export credit guarantee programs to products in addition to upland cotton.[275]

300. Brazil submits that its statement of available evidence not only identifies the measures at issue—the United States' export credit guarantee programs—but also indicates the characteristics of those measures that had led Brazil to suspect that they constituted export subsidies, as required by the Appellate Body in *US – FSC*.[276] Specifically, Brazil's statement describes the failure of the export credit guarantee programs to establish premium rates that cover long-term operating costs and losses, which are central elements in a determination of whether a program constitutes an export subsidy under item (j) of the Illustrative List of Export Subsidies included as Annex I to the *SCM Agreement*.[277] Furthermore, the Panel made a factual finding that the documentary evidence cited by Brazil to support its preliminary view included a link to a United States government website with data showing that revenues for the export credit guarantee programs do not cover long-term operating costs and losses, which addressed the programs overall, rather than in connection with only upland cotton.[278] Thus, according to Brazil, its statement of available evidence met the requirements of Article 4.2, by identifying the export credit guarantee measures, and providing and describing available evidence of "the character of" those measures, across all eligible commodities, as export subsidies.[279]

[271]Brazil had argued that the United States' request was untimely. The Panel found it unnecessary to rule on the timeliness of the United States' request, in the light of its ruling on the substantive question. (Panel Report, footnote 160 to para. 7.103)

[279]*Ibid.*, para. 233.

2. Did Brazil's Statement of Available Evidence Include Export Credit Guarantees to Other Eligible Agricultural Commodities?

301. The issue raised on appeal is whether the Panel correctly concluded that Brazil's statement of available evidence was not limited to export credit guarantees to upland cotton and included export credit guarantees to other eligible agricultural commodities.[280] The requirement that a party challenging a prohibited subsidy provide a statement of available evidence is set out in Article 4.2 of the *SCM Agreement*, which provides:

> A request for consultations under paragraph 1 shall include a statement of available evidence with regard to the existence and nature of the subsidy in question.

Article 4.2 is included in Appendix 2 of the DSU as a special or additional rule on dispute settlement.

302. The Appellate Body has stated that Article 4.2 of the *SCM Agreement* must be read and applied together with Article 4.4 of the DSU, which sets out the requirements for the request for consultations, "so that a request for consultations relating to a prohibited subsidy claim under the *SCM Agreement* must satisfy the requirements of both provisions".[281] It has also explained that the "additional requirement of 'a statement of available evidence' under Article 4.2 of the *SCM Agreement* is distinct from—and not satisfied by compliance with—the requirements of Article 4.4 of the DSU".[282]

303. Brazil's statement of available evidence is annexed to its request for consultations. As the Panel noted[283], the statement contains the following two paragraphs referring specifically to the United States' export credit guarantee programs:

> US export credit guarantee programs have caused serious prejudice to Brazilian upland cotton producers by providing below-market financing benefits for the export of competing US upland cotton;
>
> US export credit guarantee programs, since their origin in 1980 and up [to] the present, provide premium rates that are inadequate to cover the long-term operating costs and losses of the programs; in particular there were losses caused by large-scale defaults totalling billions of dollars that have not been reflected in increased premiums to cover such losses[.][284]

304. The United States asserts that Brazil's statement of evidence does not mention any agricultural commodity other than upland cotton when it refers to the United States' export credit guarantee programs. This is correct. At the same time, however, we observe that the second paragraph is not expressly limited to upland cotton. Rather, that paragraph refers to the United States' export credit

[280]The United States does not contest that Brazil submitted a statement of available evidence together with its request for consultations. Nor does the United States contest that Brazil's statement of available evidence referred to the United States' export credit guarantees as they relate to upland cotton.

[281]Appellate Body Report, *US – FSC*, para. 159.

[282]Appellate Body Report, *US – FSC*, para. 161.

[283]Panel Report, para. 7.83.

[284]Statement of available evidence annexed to the Request for Consultations by Brazil, *supra*, footnote 26, para. 3.

guarantee programs in a general way, suggesting that the reference is to the programs as a whole and not just as they relate to one specific agricultural commodity. The allegation in that paragraph that the premium rates are inadequate to cover the long-term operating costs and losses of the programs is equally broad and does not suggest that it is only with respect to upland cotton that premiums are insufficient to offset costs and losses. As the Panel explained, when the second "paragraph is read in light of footnote 1 of the request for consultations, a careful reader should have been alerted to the fact that this paragraph referred to alleged subsidies arising from export credit guarantees under the challenged programmes, without any limitation to upland cotton or any other particular product or products".[285] Thus, we do not find that it was unreasonable for the Panel to have "read Brazil's statement of available evidence, insofar as Brazil's export subsidy claims are concerned, to refer to each of the three challenged United States export subsidy programmes as they relate to upland cotton and other eligible agricultural products".[286]

305. The United States submits that, even if the second paragraph were construed to refer to programs that provide benefits to products in addition to upland cotton, it is "difficult to see"[287] how that paragraph meets the requirements of Article 4.2 of the *SCM Agreement*, as it does not provide information about the "existence" or "nature" of the subsidies allegedly provided by the export credit guarantee programs to products in addition to upland cotton. The Panel rejected the United States' argument because it considered that:

> Brazil's statement of available evidence indicates Brazil's view that the character of the alleged subsidy lay in the provision of export credit guarantees under programmes "at premium rates that are inadequate to cover the long-term operating costs and losses of the programs; in particular there were losses caused by large-scale defaults totalling billions of dollars that have not been reflected in increased premiums to cover such losses."[288]

From this, the Panel concluded that Brazil "had evidence available to it at that time which led it to conclude that the United States was providing a prohibited export subsidy of this nature and character under the three identified export subsidy programmes, without any limitation to a particular product or products".[289]

306. We recall that Article 4.2 requires that the request for consultations "include a statement of available evidence with regard to the existence and nature of the subsidy in question". In *US – FSC*, the Appellate Body explained that this means that "it is available evidence of the character of the measure as a 'subsidy' that must be indicated, and not merely evidence of the existence of the measure".[290] We observe that, in Brazil's statement of available evidence, the second paragraph that deals specifically with the United States' export credit guarantee programs does not simply refer to their existence. In that paragraph, Brazil indicates that the export credit guarantees have the "character" of a subsidy because the premiums charged are insufficient to cover the long-term operating costs and losses. Brazil goes further by stating that this situation is especially due to the fact that the premiums have not increased despite "large-scale defaults totalling billions of dollars".[291]

307. In addition, as the Panel pointed out, Brazil referred to a website of the United States Congressional Budget Office. This website includes projections of the mandatory spending of the United States federal government. One of the tables provided on the website contains a line-item that specifically refers to spending by the CCC, which, according to the title of the table, already takes into account offsetting receipts. Thus, by referring to this website, Brazil's statement of evidence was also indicating that the export credit guarantees have the "character" of a subsidy because the premiums charged are insufficient to cover the long-term operating costs and losses. Therefore, the Panel had a reasonable basis to conclude that Brazil's statement of evidence met the requirements of Article 4.2 of the *SCM Agreement*.

308. We recognize that the statement of available evidence plays an important role in WTO dispute settlement. The adequacy of the statement of available evidence must be determined on a case by case basis. As the Panel stated, moreover, the "statement of available evidence ... is the starting point for consultations, and for the emergence of more evidence concerning the measures by reason of the clarification of the 'situation'".[292] It is, therefore, important to bear in mind that the requirement to submit a statement of available evidence applies in the earliest stages of WTO dispute settlement, and that the requirement is to provide a "statement" of the evidence and not the evidence itself.[293]

309. For these reasons, we *uphold* the Panel's ruling, in paragraph 7.103 of the Panel Report, that "Brazil provided a statement of available evidence with respect to export credit guarantee measures relating to upland cotton and eligible United States agricultural products other than upland cotton, as required by Article 4.2 of the *SCM Agreement*". (footnote omitted)

V. Domestic Support

A. *Article 13(a) of the Agreement on Agriculture – Planting Flexibility Limitations*

1. Introduction

310. We turn now to consider appeals by the United States and Brazil regarding the application of Article 13 of the *Agreement on Agriculture* (often referred to as the "peace clause"). We first

[285]Panel Report, para. 7.85. (footnote omitted) The text of footnote 1 is reproduced, *supra*, footnote 269.

[286]Panel Report, para. 7.86.

[287]United States' appellant's submission, para. 497.

[288]Panel Report, para. 7.89 (quoting statement of available evidence, *supra*, footnote 284, para. 3).

[289]*Ibid.*, para. 7.90.

[290]Appellate Body Report, *US – FSC*, para. 161. In that case, the European Communities did not provide a separate statement of available evidence, but argued that such a statement was contained in the request for consultations itself. The Panel found that the consultations request may have contained a statement of available evidence. The Appellate Body noted that it "would have preferred that the Panel give less relaxed treatment to this important distinction" between the existence and the character of the measure as a subsidy, but it ultimately ruled that the United States' objection to the request for consultations had been untimely and therefore it did not rule on whether the consultations request included a statement of available evidence. (*Ibid.*, paras. 155, 161, and 165)

[291]Statement of available evidence annexed to the Request for Consultations by Brazil, *supra*, footnote 26, para. 3.

[292]Panel Report, para. 7.100.

[293]Panel Report, *Australia – Automotive Leather II*, para. 9.19.

address the issue of whether two types of payment—production flexibility contract payments and direct payments—are entitled to the exemption from action established by paragraph (a) of Article 13.

311. Production flexibility contract payments were introduced by the FAIR Act of 1996 for the 1996-2002 marketing years, and were made to certain historical producers of seven eligible commodities, including upland cotton. Historical producers could enroll acres upon which upland cotton had been grown during a base period and were allocated upland cotton "base acres" (as well as a farm-specific yield per acre), for which payment would be made at a rate specified each year for upland cotton. The production flexibility contract program dispensed with the requirement that producers continue to plant upland cotton in order to receive payments; instead, payments would generally be made regardless of what the producer chose to grow, and whether or not the producer chose to produce anything at all. However, there were limits to this planting flexibility. Specifically, payments were reduced or eliminated if fruits and vegetables (other than lentils, mung beans, and dry peas) were planted on upland cotton base acres, subject to certain other exceptions. [294]

312. Direct payments were introduced by the FSRI Act of 2002 for the 2002-2007 marketing years. They essentially replaced production flexibility contract payments under the FAIR Act of 1996, while also expanding the program to take in historical production of some additional commodities.[295] Both production flexibility contract payments and direct payments were available for the 2002 crop, but production flexibility contract payments made for that crop were deducted from direct payments made for that crop.[296] Like production flexibility contract payments for upland cotton, direct payments for upland cotton were dependent on base acres allocated by reference to the production of upland cotton during certain base periods.[297] The payments were made each year at a rate fixed for the entire 2002-2007 period at 6.67 cents per pound of upland cotton. As was the case under the production flexibility contract program, producers were not required to grow any particular crop in order to receive direct payments, and could choose to grow nothing at all. In addition to fruits and vegetables (other than lentils, mung beans, and dry peas), wild rice was added to the planting flexibility limitations.[298]

313. The Panel found that the amount of payments under the production flexibility contract program and the direct payment program is "related to the type of production undertaken by the producer after the base period."[299] On this basis, the Panel found that these payments and "the legislative and regulatory provisions that provide for the planting flexibility limitations in the DP programme" do not fully conform to paragraph 6(b) of Annex 2 of the *Agreement on Agriculture*.[300]

[294]Panel Report, paras. 7.212-7.215 and 7.376-7.378. The exceptions from planting flexibility limitations related to regions with a history of double cropping or farms with a history of planting fruits or vegetables on contract acreage. (*Ibid.*, para. 7.378)

[295]*Ibid.*, paras. 7.218-7.219 and 7.397. The Panel discusses similarities and differences between the production flexibility contract program and the direct payment program in paragraphs. 7.398-7.399.

[296]*Ibid.*, para. 7.220.

[297]There was a limited opportunity for producers to elect a different base period for the calculation of upland cotton base acres for direct payments under the FSRI Act of 2002 from that prevailing for production flexibility contract payments under the FAIR Act of 1996. (Panel Report, paras. 7.220-7.221) Brazil has conditionally appealed the Panel's exercise of judicial economy in respect of Brazil's claim that this "updating" of base acres contravenes paragraph 6(a) of Annex 2 of the *Agreement on Agriculture*. We address this conditional appeal below at section V.B of this Report.

[298]Panel Report, paras. 7.220, 7.222, and 7.379-7.381. As was the case under the production flexibility contract program, there were limited exceptions to the planting flexibility limitations.

[299]*Ibid.*, para. 7.385.

[300]*Ibid.*, para. 7.388.

The Panel concluded that these measures are thus not green box measures[301], and added that these measures "do not comply with the condition in paragraph (a) of Article 13 of the *Agreement on Agriculture*" and are therefore "non-green box measures covered by paragraph (b) of Article 13."[302]

2. Appeal by the United States

314. The United States appeals the Panel's finding that direct payments, production flexibility contract payments, and the legislative and regulatory provisions that establish and maintain the direct payments program, are not green box measures sheltered from challenge by virtue of Article 13(a) of the *Agreement on Agriculture*. The United States does not dispute that the amount of payments under the production flexibility contract and direct payment programs depended upon a formula that centred on "base acres" tied to the historical production of upland cotton.[303] Nor does the United States dispute that there are limitations on producers' ability to plant any product, if those producers wish to receive production flexibility or direct payments with respect to upland cotton base acres.[304] In the case of production flexibility contract payments, these limitations related to the growing of fruits and vegetables. In the case of direct payments, the limitations extended to wild rice as well.[305] Beyond these limitations, however, the United States stresses that a producer can receive production flexibility contract payments or direct payments regardless of the agricultural products that the producer chooses to grow and irrespective of whether it chooses to produce any product at all.[306]

315. The United States takes issue with the Panel's finding that the planting flexibility limitations mean that the "amount of payments" under the production flexibility contract and direct payment programs is "related to the type of production undertaken by the producer after the base period", within the meaning of paragraph 6(b) of Annex 2 to the *Agreement on Agriculture*.[307] According to the United States, a *negative* direction in respect of production of certain goods—that is, conditioning payment on a producer's *non*-production of certain goods—does not make the amount of payments "related to the type of production". The United States submits that this interpretation serves the "fundamental requirement" found in paragraph 1 of Annex 2 that green box measures "have no, or at most minimal, trade-distorting effects or effects on production".

316. Brazil requests that the Appellate Body uphold the Panel's finding, under paragraph 6(b) of Annex 2 of the *Agreement on Agriculture*, that production flexibility contract and direct payments relate "the amount of" the payment to "the type of production undertaken" by recipients.[308] The grounds for the Panel's finding are that production flexibility contract and direct payments are made solely if production is undertaken of crops other than fruits and vegetables (and, in the case of direct payments, wild rice as well). Brazil agrees with the Panel that this relates the amount of payments to production of the "permitted" crops. As the Panel found, if "permitted" crops alone are produced, a

[301]*Ibid.*, para. 7.413.

[302]*Ibid.*, para. 7.414.

[303]United States' appellant's submission, para. 17.

[304]See, for example, United States' appellant's submission, paras. 17 ff.

[305]United States' appellant's submission, para. 18.

[306]*Ibid.*

[307]Panel Report, para. 7.385; United States' appellant's submission, paras. 22 ff.

[308]Panel Report, para. 7.385; Brazil's appellee's submission, paras. 260 ff.

full payment is made. If a small quantity of "prohibited" crops is produced, the "amount of payment" is reduced. If a larger quantity of "prohibited" crops is produced, no payment is made.[309]

317. Brazil submits that the distinction drawn by the United States between "permitted" (or positive) and "prohibited" (or negative) categories of crops is artificial because the effect of both categories is identical: in both cases, production is channelled *away from* certain "prohibited" crops (for which no payments are made) and *towards* other "permitted" crops (for which payments are made). Thus, the incentives and disincentives are precisely the same. In both cases, "the amount of" the payment is intrinsically "related to" undertaking production of the "permitted" crops, and not undertaking production of the "prohibited" crops. According to Brazil, the Panel's factual findings support this view because it found that the prohibition on fruits and vegetables (and wild rice in respect of direct payments) imposes "significant constraints" on production decisions and creates incentives for the production of eligible crops rather than those crops that are prohibited.[310]

3. Analysis

318. Article 13 of the *Agreement on Agriculture*, entitled "Due Restraint", provides in relevant part that:

> During the implementation period, notwithstanding the provisions of GATT 1994 and the Agreement on Subsidies and Countervailing Measures (referred to in this Article as the "Subsidies Agreement"):
>
> (a) domestic support measures that conform fully to the provisions of Annex 2 to this Agreement shall be: ...
>
> (ii) exempt from actions based on Article XVI of GATT 1994 and Part III of the Subsidies Agreement; ...

319. Accordingly, domestic support that conforms fully to the provisions of Annex 2—that is "green box" support, which is exempt from the domestic support reduction obligations of the *Agreement on Agriculture*—is also exempt, during the implementation period[311], from actions based on Article XVI of GATT 1994 and the actionable subsidies provisions of Part III of the *SCM Agreement*.

320. The United States claims that production flexibility contract payments and direct payments are domestic support that conforms fully to the provisions of Annex 2 because they are "[d]ecoupled income support" within the meaning of paragraph 6 of that Annex. Annex 2 is entitled "Domestic Support: The Basis for Exemption from the Reduction Commitments" and provides, in relevant part, as follows:

> 1. Domestic support measures for which exemption from the reduction commitments is claimed shall meet the *fundamental requirement* that they have *no, or at most minimal, trade-distorting effects or effects on production*. Accordingly, all measures for which exemption is claimed shall conform to the following basic criteria:
>
> (a) the support in question shall be provided through a publicly-funded government programme (including government revenue foregone) not involving transfers from consumers; and,
>
> (b) the support in question shall not have the effect of providing price support to producers;
>
> plus policy-specific criteria and conditions as set out below.
>
> ...
>
> 5. *Direct payments to producers*
>
> Support provided through direct payments (or revenue foregone, including payments in kind) to producers for which exemption from reduction commitments is claimed shall meet the basic criteria set out in paragraph 1 above, plus specific criteria applying to individual types of direct payment as set out in paragraphs 6 through 13 below. ...
>
> 6. *Decoupled income support*
>
> (a) Eligibility for such payments shall be determined by *clearly-defined criteria* such as income, status as a producer or landowner, factor use or production level in a *defined and fixed base period*.
>
> (b) *The amount of such payments in any given year shall not be related to, or based on, the type or volume of production* (including livestock units) undertaken by the producer in any year *after* the base period.
>
> ...
>
> (e) *No production shall be required* in order to receive such payments. (emphasis added)

321. Paragraph 6, entitled, "[d]ecoupled income support" applies to one type of "direct payment" to producers that may benefit from exemption from reduction commitments and protection under the peace clause. Paragraph 6(a) sets forth that eligibility for payments under a decoupled income support program must be determined by reference to certain "clearly-defined criteria" in a "defined and fixed base period". Paragraph 6(b) requires the severing of any link between the *amount of payments* under such a program and the *type or volume of production* undertaken by recipients of payments under that program in any year after the base period. Paragraphs 6(c) and 6(d) serve to

[309]Brazil's appellee's submission, para. 285 (referring to Panel Report, paras. 7.382-7.383). The participants, like the Panel, refer to "permitted" and "prohibited" crops, in the sense that crops not subject to planting flexibility limitations are eligible to receive payments, while fruits and vegetables (and wild rice) are not eligible to receive payments. We generally prefer to refer to these categories as "covered" or "eligible" crops, on the one hand, and "excluded" crops on the other.

[310]Brazil's appellee's submission, paras. 285-286 (quoting Panel Report, para. 7.386).

[311]The "implementation period" during which Article 13 applies is defined in Article 1(f) of the *Agreement on Agriculture* as "the nine-year period commencing in 1995". "Year", for purposes of Article 1(f) "and in relation to the specific commitments of a Member" is defined in Article 1(i) and is "the calendar, financial or marketing year specified in the Schedule relating to that Member".

require that payments are also decoupled from *prices* and *factors of production employed* after the base period. Paragraph 6(e) makes it clear that "[n]o production shall be required in order to receive ... payments" under a decoupled income support program.

322. As we noted above[312], there is no disagreement between the participants that the amount of payments under the production flexibility contract and direct payment programs depended upon a formula that centred on "base acres", which were established on the basis of the historical production of upland cotton. Nor does the United States dispute that there are limitations on producers' ability to produce certain products, while also receiving production flexibility contract payments or direct payments with respect to upland cotton base acres. Therefore, the question before us regarding the consistency of production flexibility contract payments and direct payments with paragraph 6(b) of Annex 2 is a limited one. It does not concern a measure *requiring* producers to grow certain crops in order to receive payments; it also does not concern a measure with complete planting *flexibility* that provides payments without regard whatsoever to the crops that are grown. Indeed, it does not concern a measure that requires the production of any crop at all; nor does it involve a measure that totally *prohibits* the growing of any crops as a condition for payments. The question before us in this appeal thus concerns a measure with a *partial* exclusion combining planting flexibility and payments with the reduction or elimination of the payments when the excluded crops are produced, while providing payments even when no crops are produced at all.

323. In addressing the question of the consistency of such a measure with paragraph 6(b), we note that under this provision, for income support to be *decoupled*, the "amount of such payments ... shall not be related to ... the type or volume of production ... undertaken by the producer in any year after the base period". It is uncontested that the amount of payments under the production flexibility contract and direct payment programs may be affected, depending upon whether a producer plants a crop that is permitted under the production flexibility contract or direct payment programs, or a crop that is covered by the planting flexibility limitations.[313] The United States focuses on the term "related to" and contends that the amount of payments under the production flexibility contract and direct payment programs is not "related to" the type of production as proscribed by paragraph 6(b).

324. The ordinary meaning of the term "related to" in paragraph 6(b) of Annex 2 denotes some degree of *relationship* or *connection* between two things[314], here the amount of payment, on the one hand, and the type or volume of production, on the other. It covers a broader set of connections than "based on", which term is also used to describe the relationship between two things covered by paragraph 6(b).[315] Nothing in the ordinary meaning of the term "related to" suggests that the connections covered by this expression may not encompass connections of either a "positive" nature

[312]*Supra*, para. 314.

[313]United States' appellant's submission, para. 18.

[314]See *Shorter Oxford English Dictionary*, 5th ed., W.R. Trumble, A. Stevenson (eds.), (Oxford University Press, 2002), Vol. 2, p. 2520; see also Panel Report, para. 7.366; United States' appellant's submission, para. 25; and Brazil's appellee's submission, para. 282.

[315]The Panel noted that "base" in this context may be defined as to "found, build, or construct *(up)on* a given base, build up *around* a base (chiefly *fig.*)": Panel Report, para. 7.366 (quoting *The New Shorter Oxford English Dictionary*, L. Brown (ed.) (Clarendon Press, 1993), Vol. 1, p. 187). Like the expression "related to", the expression "based on" also requires a connection between two or more things. However, even though "based on" does not require a strict relationship between two things (see, e.g., Appellate Body Report, *EC – Hormones*, paras. 165-166 and 171), the meaning of "based on" indicates a relatively close connection between the things being linked. By contrast, the meaning of "related to" can apply to connections more general in nature than situations in which one thing is "based on" another (see, e.g., Appellate Body Report, *US – Softwood Lumber IV*, para. 89, where the Appellate Body interpreted broadly the phrase "in relation to" in Article 14(d) of the *SCM Agreement*). Accordingly, the meaning of the term "related to" cannot be entirely subsumed into the meaning of "based on".

(including directions or requirements to do something) or a "negative" nature (including prohibitions or requirements not to do something) or a combination of both. As the Panel indicated, the ordinary meaning of the term "related to" conveys "a very general notion".[316] Indeed, the United States agrees that, as far as its ordinary meaning in the abstract is concerned, the term "related to" may be broad enough to capture both positive and negative connections, but argues that the context of paragraph 6(b) requires a more limited interpretation of the term, namely, only as covering a "positive" connection between the "amount of ... payments" and the "type ... of production".[317] Like the Panel, however, we are of the view that, in the context of paragraph 6(b), the term "related to" covers both positive and negative connections between the amount of payment and the type of production.

325. Paragraph 6 of Annex 2, entitled "[d]ecoupled income support", seeks to decouple or de-link direct payments to producers from various aspects of their production decisions and thus aims at neutrality in this regard. Subparagraph (b) decouples the payments from production; subparagraph (c) decouples payments from prices; and subparagraph (d) decouples payments from factors of production. Subparagraph (e) completes the process by making it clear that no production shall be required in order to receive such payments. Decoupling of payments from production under paragraph 6(b) can only be ensured if the payments are not related to, or based upon, either a positive requirement to produce certain crops or a negative requirement not to produce certain crops or a combination of both positive and negative requirements on production of crops.

326. In contrast to the other subparagraphs of paragraph 6, paragraph 6(e) does explicitly distinguish between positive and negative production requirements, because it prohibits positive requirements to produce. The Panel reasoned that "[i]f paragraph 6(b) could be satisfied by ensuring that no production was required to receive payments, paragraph 6(e) would be redundant".[318] We agree with the Panel that the context provided by paragraph 6(e) indicates that a measure that provided payments, even if a producer undertook no production at all, would not, for that reason alone, necessarily comply with paragraph 6(b). This is because other elements of that measure might still relate the amount of payments to the type or volume of production, contrary to the requirement of paragraph 6(b).

327. The United States seems to argue that the Panel's interpretation of the relationship between paragraphs 6(b) and 6(e) would subsume paragraph 6(e) within the scope of paragraph 6(b), thereby rendering it redundant.[319] In our view, however, paragraph 6(e) continues to serve a purpose distinct from that of paragraph 6(b). It highlights a different aspect of decoupling income support. In prohibiting Members from making green-box measures contingent on production, paragraph 6(e) implies that Members are allowed, in principle, to require no production at all. Accordingly, payments conditioned on a total ban on any production may qualify as decoupled income support under paragraph 6(e). Even assuming that payments contingent on a total production ban could be seen to relate the amount of the payment to the *volume* of production within the meaning of paragraph 6(b)—the volume of production being nil—giving meaning and effect to both paragraphs 6(b) and 6(e) suggests a reading of paragraph 6(b) that would not disallow a total ban on any production.

328. In addressing the United States' argument on this point, we recall that the measures at issue in this appeal do not provide for payments contingent on a *total ban* on production of *any* crops. The measures at issue here combine payments and planting flexibility in respect of certain covered crops with the reduction or elimination of such payments when certain other excluded crops are produced.

[316]Panel Report, para. 7.366.

[317]United States' appellant's submission, para. 25.

[318]Panel Report, para. 7.368.

[319]United States' appellant's submission, paras. 38-42.

The United States argues that, if paragraph 6(e) means that a Member may require a producer not to produce a particular product, "it would not make sense to then prohibit a Member, under paragraph 6(b), from making the amount of payment contingent on fulfilling that requirement".[320] However, in our view, the mere fact that under paragraph 6(e) "[n]o production shall be required in order to receive such payments" does not mean that a partial exclusion of certain crops from payments, coupled with production flexibility regarding other crops, must be consistent with paragraph 6(b).

329. We agree with the Panel that a partial exclusion of some crops from payments has the potential to channel production towards the production of crops that remain eligible for payments.[321] In contrast to a total production ban, the channelling of production that may follow from a partial exclusion of some crops from payments will have *positive* production effects as regards crops eligible for payments. The extent of this will depend on the scope of the exclusion. We note in this regard that the Panel found, as a matter of fact, that planting flexibility limitations at issue in this case "significantly constrain production choices available to PFC and DP payment recipients and effectively eliminate a significant proportion of them".[322] The fact that farmers may continue to receive payments if they produce nothing at all does not detract from this assessment because, according to the Panel, it is not the option preferred by the "overwhelming majority" of farmers, who continue to produce some type of permitted crop.[323] In the light of these findings by the Panel, we are unable to agree with the United States' argument that the planting flexibility limitations only negatively affect the production of crops that are excluded.

330. We are not persuaded otherwise by the United States' reliance upon the terms "amount of such payments" and "undertaken" in the text of paragraph 6(b). According to the United States, the Panel assumes that the "amount of such payments" in paragraph 6(b) can be related to the current type of production because, in some circumstances, a recipient that produces fruits, vegetables or wild rice "receives less payment than that recipient otherwise would have been entitled to".[324] However, for the United States, in that case, the only "amount" of payment that is even arguably "related to" current production is "zero"[325], because those crops are excluded from payment eligibility. The United States further argues, with respect to the phrase "production ... undertaken by the producer", that the ordinary meaning of the term "undertake" includes to "attempt". In this case, the planting flexibility limitations on a certain range of products, with respect to base acreage, would not relate the amount of payments to production "attempted" by the recipient; rather, the amount of payment is related to or based on the type of production *not* "attempted".[326]

331. In our view, the concepts of "type or volume of production ... undertaken by the producer" and the "amount of ... payments" are linked in paragraph 6(b) by the requirement that one "not be related to" the other. This requires a consideration of *the relationship* between the type or volume of production and the amount of payment under a program after the base period. A program that

[320] *Ibid.*, para. 38. (emphasis omitted)

[321] Panel Report, para. 7.367. Indeed, as Brazil submits, this will tend to be the case where the prohibition prevents a producer, intent on maximizing profit, from growing the best alternative crop. In that case, the producer will tend to choose the next best alternative from amongst the permitted crops. (Brazil's appellee's submission, para. 321, citing evidence, referred to in footnote 511 of the Panel Report, from Brazil's expert, Professor Sumner)

[322] Panel Report, para. 7.386.

[323] *Ibid.*, para. 7.386.

[324] United States' appellant's submission, para. 26.

[325] *Ibid.*

[326] United States' appellant's submission, para. 27.

disallows payments when certain crops are produced relates the amount of the payment to the type of production undertaken. The flexibility to produce and receive payment for certain crops covered by a program, combined with the reduction or elimination of such payments when excluded crops are produced, creates a link with the type of production undertaken contrary to paragraph 6(b). This is so because the opportunity for farmers to receive payments for producing covered crops, while less or no such payments are made to farmers who produce excluded crops, provides an incentive to switch from producing excluded crops to producing crops eligible for payments.

332. The United States also contends that its measures, which condition payment on the non-production of certain products, "further the fundamental requirement [in paragraph 1 of Annex 2 to the *Agreement on Agriculture*] that such measures 'have no, or at most minimal, trade-distorting effects or effects on production'"[327], because their only effects are to reduce production of the prohibited crops.[328] It follows, for the United States, that paragraph 6(b) should not address "negative" prohibitions on the production of certain crops, such as the United States' measures, given that they comply, inherently, with the fundamental requirement.[329] Brazil argues that if paragraph 6(b) is violated, this *ipso facto* violates the fundamental requirement of paragraph 1 of Annex 2 and further analysis is not required.[330]

333. We note that the first sentence of paragraph 1 of Annex 2 lays down a "fundamental requirement" for green box measures, such that they must have "no, or at most minimal, trade-distorting effects or effects on production". The second sentence of paragraph 1 provides that, "[a]ccordingly", green box measures must conform to the basic criteria stated in that sentence, "plus" the policy-specific criteria and conditions set out in the remaining paragraphs of Annex 2, including those in paragraph 6.[331]

334. As we have noted, the Panel found that the planting flexibility limitations in this case "significantly constrain" production decisions.[332] However one reads the "fundamental requirement" in paragraph 1 of Annex 2, given the factual findings of the Panel, the facts of this case do not present a situation in which the planting flexibility limitations demonstrably have "no, or at most minimal," trade-distorting effects or effects on production.

335. We find further support for our interpretation of paragraph 6(b) in the context provided by paragraph 11 of Annex 2, entitled "Structural adjustment assistance provided through investment aids". Several of the subparagraphs of paragraph 11 are phrased in similar terms to those of paragraph 6. Indeed, like paragraph 6(b), paragraph 11(b) requires that the "amount of ... payments ... shall not be related to ... the type or volume of production ... undertaken by the producer in any year after the base period." However, unlike paragraph 6(b), paragraph 11(b) ends with the phrase "other than as provided for under criterion (e) below". Criterion 11(e) specifically envisages that "payments shall not mandate or in any way designate the agricultural products to be produced by the recipients except to require them not to produce a particular product".

336. We note that the exception provided by paragraph 11(e) and the link to paragraph 11(e) in paragraph 11(b) explicitly *authorize* the type of "negative" requirements not to produce that the

[327] Paragraph 1 of Annex 2 to the *Agreement on Agriculture*.

[328] United States' appellant's submission, para. 36.

[329] See *ibid.*, paras. 32-35.

[330] Brazil's responses to questioning at the oral hearing.

[331] We note in this regard that the Panel's exercise of judicial economy regarding Brazil's claim that the United States measures at issue fail to conform with the "fundamental requirement" of paragraph 1 of Annex 2 has not been appealed. (See Panel Report, para. 7.412)

[332] *Ibid.*, para. 7.386.

United States argues is implicitly *permitted* by the terms of paragraph 6(b). In the light of the similarity of the language chosen in paragraphs 6(b) and 11(b), like the Panel, we attach significance to the fact that the drafters saw as necessary an explicit authorization of negative requirements not to produce under paragraph 11(b). In our view, this indicates that the ordinary meaning of the terms in paragraph 11(b) would otherwise exclude an interpretation allowing such negative requirements. The use of identical language in paragraphs 6(b) and 11(b), except for the reference in paragraph 11(b) to paragraph 11(e), suggests that the meaning of the terms in paragraph 6(b) must be the same as in paragraph 11(b). Accordingly, a comparison of these provisions confirms that the terms of paragraph 6(b) encompass both positive as well as negative connections between the amount of payments under a program and the type of production undertaken.

337. We note that the United States argues that the context in which paragraphs 11(b) and 6(b) appear is very different. The United States notes that paragraph 11 pertains to payments "to assist the financial or physical restructuring of a producer's operations"[333] and paragraph 6(e) imposes a constraint on the degree to which a government can interfere in the form that restructuring will take. As a requirement not to produce certain products could be understood to fall within the prohibition in paragraph 11(e) against "in any way" designating the products to be produced, it clarifies that negative requirements are permitted. The United States submits that, in the light of the broad prohibition in paragraph 11(e), "the requirement in paragraph 11(b) … could be understood to preclude conditioning payment on not producing certain products since this could be understood as in some way designating the products to be produced".[334] This required the explicit cross-reference to paragraph 11(e). According to the United States, because the same considerations do not apply in the case of paragraph 6(b), no specific authorization of partial prohibitions on production is required, as it remains implicit in the text of the provision.[335]

338. We are not persuaded by this argument. Like Brazil, we believe that a more compelling reason for the specific authorization of negative requirements not to produce a particular crop may be found in the fact that paragraph 11 addresses "structural adjustment", which may be achieved only by providing financial incentives to shift production away from certain products. In our view, the considerations submitted by the United States do not render the meaning of the terms used in paragraph 11(b) different from the meaning of the same terms as used in paragraph 6(b).

339. Finally, we note that the United States has also argued that the Panel's interpretation, with which we agree, would require a Member to continue to make decoupled income support payments, even if a producer's production is *illegal*, for example involving the production of opium poppy, unapproved biotech varieties or environmentally-damaging production.[336] According to the United States, this is a logical consequence of a finding that, to comply with paragraph 6(b) of Annex 2, a measure may not condition payments upon the non-production of certain products, while permitting production of others.

340. In our view, questions regarding the problem of illegal production contrast starkly with the situation addressed in the present case. It remains perfectly *legal* for a holder of upland cotton base acres to grow fruits, vegetables or wild rice in the United States. The consequence of growing such crops is simply the reduction or elimination of production flexibility contract or direct payments to the holders of upland cotton base acres. Our interpretation of paragraph 6(b) would not prevent a WTO Member from making illegal the production of certain crops. Nor would it prevent a Member from providing decoupled income support while at the same time making the production of certain crops

[333]Paragraph 11(a) of Annex 2 to the *Agreement on Agriculture*.

[334]United States' appellant's submission, paras. 45-47.

[335]*Ibid.*, para. 47.

[336]*Ibid.*, paras. 53-55 and footnote 45.

illegal. As Brazil states, there is nothing in the *Agreement on Agriculture* to suggest that the term "production" in paragraph 6 of Annex 2 refers to anything other than *lawful* production.[337] In addition, we observe that specific provisions of the *Agreement on Agriculture* recognize, and exempt from reduction commitments, domestic support programs that address the problem of production of illicit narcotic crops in developing countries[338] or payments under certain environmental programs.[339]

4. Conclusion

341. For all these reasons, we *uphold* the Panel's finding in paragraphs 7.388, 7.413, 7.414 and 8.1(b) of the Panel Report that conditioning production flexibility contract payments and direct payments on a producer's compliance with planting flexibility limitations regarding certain products, coupled with the flexibility to produce certain other products, means that the amount of payments under those measures is related to the type of production undertaken by a producer after the base period, within the meaning of paragraph 6(b) of Annex 2 of the *Agreement on Agriculture*.

342. Accordingly, we also *uphold* the Panel's finding, in paragraphs 7.413 and 7.414 of the Panel Report, that production flexibility contract payments and direct payments are not "decoupled income support" within the meaning of paragraph 6, are not green box measures exempt from the reduction commitments by virtue of Annex 2 of the *Agreement on Agriculture*, and are not, therefore, sheltered from challenge by virtue of paragraph (a) of Article 13 of the *Agreement on Agriculture*. Rather, these measures are support covered by the chapeau to paragraph (b) of Article 13, and are to be taken into account in the analysis of that provision.

B. *Article 13(a) of the Agreement on Agriculture – Base Period Update*

343. The Panel indicated that it had "already found that [direct] payments fail to conform to the provisions of paragraph 6 of Annex 2 due to the planting flexibility limitations". For this reason, it indicated that it was "therefore unnecessary for the purposes of this dispute to make findings on their conformity with paragraph 6 due to the updating" of base acres.[340] Brazil conditionally appeals the Panel's exercise of judicial economy on the issue of whether the base period update under the direct payments program is consistent with paragraph 6(a) of Annex 2.[341] Brazil's appeal is conditional on the Appellate Body reversing the Panel's finding that direct payments, the legislative and regulatory provisions that establish and maintain the direct payments program, as well as payments under the production flexibility contract program, do not fall within the terms of paragraph (a) of Article 13 because they are not consistent with paragraph 6(b) of Annex 2.

344. Having upheld the Panel's finding under paragraph 6(b) of Annex 2 of the *Agreement on Agriculture*, the condition upon which Brazil's appeal regarding the updating of base acres under paragraph 6(a) rests is not fulfilled. It is therefore unnecessary for us to address this issue further.

[337]Brazil's appellee's submission, para. 315.

[338]Article 6.2 of the *Agreement on Agriculture* exempts from domestic support reduction commitments that would otherwise be applicable "domestic support to producers in developing country Members to encourage diversification from growing illicit narcotic crops".

[339]See paragraph 12 of Annex 2 to the *Agreement on Agriculture*.

[340]Panel Report, para. 7.393.

[341]Brazil's other appellant's submission, paras. 237 ff.

C. *Article 13(b) of the Agreement on Agriculture – Non-Green Box Domestic Support*

1. Introduction

345. Having rejected the United States' appeal of the Panel's finding that production flexibility contract payments under the FAIR Act of 1996 and direct payments under the FSRI Act of 2002 are not green box measures sheltered from challenge by the provisions of Article 13(a) of the *Agreement on Agriculture*, we now turn to consider the United States' appeal regarding the application of Article 13(b) of the *Agreement on Agriculture*.

346. Article 13 of the *Agreement on Agriculture* is entitled "Due Restraint" and applies during the implementation period.[342] Article 13(b) of the *Agreement on Agriculture* provides, in relevant part:

> [D]omestic support measures that conform fully to the provisions of Article 6 of this Agreement including direct payments that conform to the requirements of paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within *de minimis* levels and in conformity with paragraph 2 of Article 6, shall be:
>
> ...
>
> (ii) exempt from actions based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement, provided that such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year; ...

347. Subparagraph (ii) to Article 13(b) exempts non-green box domestic support measures described in the chapeau from actions based on Article XVI:1 of GATT 1994 and Articles 5 and 6 of the *SCM Agreement*. This exemption is, however, subject to a proviso and is thus made conditional upon a requirement that "such measures do not grant support to a specific commodity in excess of that decided during the 1992 marketing year". The dispute in the present appeal relates to the interpretation and application of this proviso to certain United States domestic support measures.[343]

348. Before the Panel, the United States claimed that its non-green box domestic support measures did not "grant support to a specific commodity in excess of that decided during the 1992 marketing year" and thus were consistent with the proviso to subparagraph (ii) of Article 13(b) of the *Agreement on Agriculture*. Hence, they were entitled to the exemption from action provided by Article 13(b).[344]

349. The Panel rejected the United States' argument that its measures did not "grant support to a specific commodity in excess of that decided during the 1992 marketing year". The Panel calculated

[342]The "implementation period" during which Article 13 applies is defined in Article 1(f) of the *Agreement on Agriculture* as "the nine-year period commencing in 1995". "Year", for purposes of Article 1(f) "and in relation to the specific commitments of a Member" is defined in Article 1(i) and "refers to the calendar, financial or marketing year specified in the Schedule relating to that Member".

[343]Step 2 payments to domestic users; marketing loan program payments; production flexibility contract payments; market loss assistance payments; direct payments; counter-cyclical payments; crop insurance payments; and, cottonseed payments for the 2000 crop. (Panel Report, para. 7.337)

[344]The Panel noted that Brazil did not claim that the United States' domestic support measures do not comply with the conditions set out in the chapeau of Article 13(b). (Panel Report, paras. 7.415-7.416)

values of support that were "decided during the 1992 marketing year" (the "1992 benchmark") as well as values of support by which the measures at issue "grant[ed] support to a specific commodity"—namely, upland cotton—in each of the years 1999, 2000, 2001, and 2002 ("implementation period support"). The Panel tabulated support attributable to upland cotton under the relevant United States domestic support measures and concluded that the support granted in each relevant year of the implementation period exceeded the 1992 benchmark.[345] Accordingly, the Panel found that:

> Brazil has discharged its burden to show that the United States domestic support measures at issue grant support to a specific commodity in excess of that decided during the 1992 marketing year.[346]

350. After finding that evidence and arguments presented by the United States did not rebut Brazil's case[347], the Panel concluded:

> [i]n light of the above findings, ... that the [relevant] United States domestic support measures ... grant support to a specific commodity in excess of that decided during the 1992 marketing year and that, therefore, they are not exempt from actions based on paragraph 1 of Article XVI of the *GATT 1994* or Articles 5 and 6 of the *SCM Agreement*.[348]

2. Appeal by the United States

351. The United States appeals the Panel's finding that its relevant domestic support measures granted, during the implementation period, "support to a specific commodity in excess of that decided during the 1992 marketing year", and the consequential finding that these measures are therefore susceptible to challenge under the actionable subsidies provisions of Articles 5 and 6 of the *SCM Agreement* and Article XVI:1 of the GATT 1994.

352. The United States challenges, in particular, two elements of the Panel's reasoning. The United States first appeals the Panel's *interpretation* of the phrase "grant support to a specific commodity" in the proviso to Article 13(b)(ii), and, in particular, its finding that four types of payments made with respect to historical production of upland cotton—production flexibility contract payments, market loss assistance payments, direct payments and counter-cyclical payments—grant support to the specific commodity upland cotton, even though producers have flexibility under these programs to grow crops other than upland cotton or not to plant any crop at all. According to the United States, properly construed, the phrase "support to a specific commodity" refers to "product-specific support"[349], which would exclude payments under these "non-product-specific" base acre dependent measures.[350] It adds that, even if the Panel is correct in its interpretation that "support to a specific commodity" refers to all "non-green box support measures that clearly or explicitly define a

[345]*Ibid.*, paras. 7.596-7.597. The Panel indicated that the United States' implementation period support exceeded the 1992 benchmark regardless of whether, for certain price-based support measures, budgetary outlays or price gap methodology was used. (*Ibid.*, para. 7.597)

[346]*Ibid.*, para. 7.598.

[347]Panel Report, para. 7.607.

[348]*Ibid.*, para. 7.608.

[349]United States' appellant's submission, para. 93.

[350]*Ibid.*, para. 105.

commodity as one to which they bestow or confer support"[351], the Panel erred in the application of its test by allocating to upland cotton all payments to historic upland cotton base acres under these four programs, including those that went to planted commodities other than upland cotton.[352]

353. Secondly, the United States contests the Panel's use of budgetary outlay methodology to measure the value of support, for purposes of the comparison envisaged by Article 13(b)(ii), of two types of price-based payments: marketing loan program payments and deficiency payments.[353] In this regard, the United States argues that the Panel erred in reading the word "grant" in Article 13(b)(ii) as meaning something actually provided, and not in harmony with the term "decided".[354] The United States argues that this led the Panel erroneously to conclude that it could use a calculation methodology other than the price-gap methodology described in paragraph 10 of Annex 3 to the *Agreement on Agriculture* to measure the value of these price-based measures. According to the United States, only the price gap methodology can reflect the nature of the support "decided" under these programs because it filters out fluctuations in market prices; indeed, only the price gap methodology can measure those aspects of support that the government of a Member can control.[355]

354. The United States, having "corrected" the Panel's calculations for its alleged errors using its own methodologies, asserts that its domestic support measures at issue did not grant a level of product-specific support in any relevant year of the implementation period in excess of the 1992 benchmark.[356] On this basis, the United States argues that its domestic support measures are consistent with the proviso to Article 13(b)(ii) of the *Agreement on Agriculture* and are, therefore, exempt from challenge under the peace clause.[357]

355. Brazil argues that if the Appellate Body upholds the Panel's finding with respect to the interpretation of the phrase "support to a specific commodity" and thereby finds that production flexibility contract payments, market loss assistance payments, direct payments and counter-cyclical payments cannot be excluded from the calculation of support under Article 13(b)(ii), then, regardless of the methodology used to calculate the value of marketing loan program payments and deficiency payments, the United States measures would still exceed the 1992 benchmark.[358] Brazil contends that the Panel was correct to find that "support to a specific commodity" does not mean "product-specific support", or support that is directed specifically at only one product, but may capture all "non-green box measures, that clearly or explicitly define a commodity as one to which they bestow or confer support".[359]

356. Brazil also contends that the Panel was correct to use budgetary outlays for its analysis of the United States' price-based measures. Brazil observes that paragraph 10 of Annex 3 of the *Agreement on Agriculture* permits, in principle, the use of *either* budgetary outlays or the price gap

[351]Panel Report, para. 7.494(i).

[352]United States' appellant's submission, paras. 101-107.

[353]Marketing loan program payments in respect of both the 1992 benchmark and the implementation period support, and deficiency payments in respect of the 1992 benchmark only. (United States' appellant's submission, para. 72)

[354]*Ibid.*, paras. 64-68. The United States reiterates this argument in the section of its appellant's submission dealing with the interpretation of the phrase "support to a specific commodity": see *ibid.*, paras. 114-116.

[355]*Ibid.*, paras. 69-75.

[356]*Ibid.*, paras. 120-122.

[357]*Ibid.*, paras. 122-124.

[358]Brazil's appellee's submission, para. 330.

[359]Brazil's appellee's submission, paras. 369 and 385 (quoting Panel Report, para. 7.481).

methodology for payments based on price gaps.[360] There is thus no textual basis to say that only price gaps may be used to measure these types of payments. Brazil also submits that the Panel correctly found that the term "grant" refers to what a measure actually provides[361], and therefore contests the United States' claim that factors beyond the control of government, such as market price fluctuations, must be filtered out of the analysis envisaged by the proviso to Article 13(b)(ii) through use of the price gap methodology.[362] Brazil also points out that the United States notified the level of support conferred by the marketing loan program for purposes of its base level Aggregate Measurement of Support ("AMS"), as well as in subsequent AMS notifications, through use of a budgetary outlay methodology.[363] According to Brazil, WTO Members should be able to rely upon AMS notifications to determine whether the notifying Member was entitled, during the implementation period, to the protection conferred by the peace clause.

357. Finally, Brazil illustrates that, even using the price gap methodology to calculate the level of support under the deficiency payment and marketing loan payment programs, total United States support still exceeded the 1992 benchmark in each relevant year of the implementation period.[364]

3. Analysis

358. The United States appeals the Panel's finding that the United States' non-green box domestic support measures granted "support to a specific commodity", namely, upland cotton, during the implementation period, "in excess of that decided during the 1992 marketing year", and the consequential finding that this support was therefore not sheltered from challenge under Article XVI:1 of the GATT 1994 or Articles 5 and 6 of the *SCM Agreement.* The United States' appeal in this regard has two dimensions. First, the United States challenges the Panel's *interpretation* of the phrase "support to a specific commodity" used in the proviso to Article 13(b)(ii) and its *application* to four of the domestic support measures. These measures are production flexibility contract payments, market loss assistance payments, direct payments, and counter-cyclical payments.[365] The question whether or not these four measures grant "support to a specific commodity" is at the heart of the difference between the participants in regard to the comparison contemplated by Article 13(b) of the *Agreement on Agriculture*.[366] Secondly, the United States takes issue with the Panel's adoption of a budgetary outlay *methodology* to measure the value of two price-based support measures for the comparison under the proviso to Article 13(b)(ii).

(a) Interpretation of "Support to Specific Commodity"

359. We address first the meaning of the phrase "support to a specific commodity" in Article 13(b)(ii). We then discuss the application of this interpretation to four domestic support measures: production flexibility contract payments[367], market loss assistance payments[368], direct

[360]*Ibid.*, para. 350.

[361]*Ibid.*, paras. 344 ff.

[362]*Ibid.*, paras. 346 and 351.

[363]*Ibid.*, paras. 352 ff.

[364]*Ibid.*, paras. 442-445.

[365]The United States characterizes these measures as "decoupled" from production. (United States' appellant's submission, para. 104)

[366]On the basis that these four measures are not "support to a specific commodity", the United States has assigned zero values to them in its calculations under the proviso to Article 13(b)(ii). (*Ibid.*, para. 120)

[367]We describe briefly production flexibility contract payments *supra*, para. 311.

payments[369] and counter-cyclical payments[370]. These four measures did not exist in 1992. Therefore, this part of the United States' appeal affects the calculation of *only* the support granted during the implementation period.[371]

360. We note that payments in respect of each of these measures are calculated by reference to "base acres" upon which certain commodities (including upland cotton) were grown in a base period, but upon which a producer currently may or may not grow upland cotton. We refer to these four types of payment in this section as the "base acre dependent payments".

361. We turn to our analysis of the phrase "such measures ... grant[ing] support to a specific commodity" in Article 13(b)(ii). The Panel found and the participants do not dispute that the relevant United States measures grant "support"[372]; similarly, the Panel found[373] and the participants agree[374] that upland cotton is a "commodity" in the sense of that provision.

362. The key element, however, is the significance of the qualifying word "specific" in this phrase. The Panel described the ordinary meaning of the term "specific" as "clearly or explicitly defined; precise; exact; definite"[375] and as "specially or peculiarly pertaining to a particular thing or person, or

[368]Market loss assistance payments were provided to recipients of production flexibility contract payments through *ad hoc* legislation as additional assistance to producers to make up for losses caused by low commodity prices. Market loss assistance payments were proportionate to the production flexibility contract payments made to the recipient, and the amount paid depended on the amount allocated to market loss assistance payments for the relevant crop year. Accordingly, eligibility criteria for the market loss assistance payments were, essentially, the same as for the production flexibility contract payments. (See Panel Report, paras. 7.216-7.217)

[369]We describe briefly direct payments *supra*, para. 312.

[370]Counter-cyclical payments supplement, for covered commodities, direct payments and any payments made under the marketing loan program. The eligibility requirements and planting flexibility requirements are the same as under the direct payment program, and they are also dependent on base acres. Counter-cyclical payments supplement producer incomes by filling the gap between, on the one hand, the market price and payments under the marketing loan program and the direct payments program and, on the other hand, a target price established for upland cotton at 72.4 cents per pound. (See Panel Report, paras. 7.223-7.226)

[371]We observe that the United States does not dispute that other payments, namely those under the marketing loan program (for a description of marketing loan program payments, see Panel Report, paras. 7.204-7.208), Step 2 payments (for a description of Step 2 payments, see Panel Report, paras. 7.209-7.211), deficiency payments (for a description of deficiency payments, see Panel Report, footnote 294 to para. 7.213), and cottonseed payments (for a description of cottonseed payments, see Panel Report, paras. 7.233-7.235), result in "support to a specific commodity". (United States' appellant's submission, para. 120 and Table 2) Nor does the United States appeal the Panel's finding that the crop insurance program (for a description of the crop insurance program, see Panel Report, paras. 7.227-7.232) results in "support to a specific commodity", although it adds that it disagrees with the conclusion of the Panel. (See United States' appellant's submission, footnote 134)

[372]See Panel Report, paras. 7.518-7.520 and, for example, United States' appellant's submission, para 105. We recognize that the United States qualifies this by emphasizing that, in its view, they grant "non-product-specific" support.

[373]Panel Report, paras. 7.480 and 7.518-7.520.

[374]See United States' appellant's submission, paras. 85 and 104; and Brazil's appellee's submission, para. 385.

[375]Panel Report, para. 7.481 (quoting *The New Shorter Oxford English Dictionary*, L. Brown (ed.) (Clarendon Press, 1993), Vol. 2, p. 2972).

a class of these; peculiar (*to*)".[376] In our view, the term "specific" in the phrase "support to a specific commodity" means the "commodity" must be clearly identifiable. The use of term "to" connecting "support" with "a specific commodity" means that support must "specially pertain" to a particular commodity in the sense of being conferred on that commodity. In addition, the terms "such measures ... grant" indicates that a discernible link must exist between "such measures" and the particular commodity to which support is granted. Thus, it is not sufficient that a commodity happens to benefit from support, or that support ends up flowing to that commodity by mere coincidence. Rather, the phrase "such measures" granting "support to a specific commodity" implies a discernible link between the support-conferring measure and the particular commodity to which support is granted.

363. Therefore, we agree with the Panel insofar as it found that the ordinary meaning of the phrase "such measures ... grant[ing] support to a specific commodity" *includes* "non-green box measures that clearly or explicitly define a commodity as one to which they bestow or confer support".[377] This is because the Panel's test requires that a commodity be specified in the measure, and that the support be conferred on that commodity. We believe, however, that the terms of this definition do not exhaust the scope of measures that may grant "support to a specific commodity". We note in this regard that the Panel looked, in applying its test, to factors such as eligibility criteria and payment rates, as well as the relationship between payments and current market prices of the commodity in question.[378] In our view, the Panel was correct to consider such matters, as the requisite link between a measure granting support and a specific commodity may be discerned not just from an explicit specification of the commodity in the text of a measure, as the Panel's test—on its face—seems to imply, but also from an analysis of factors such as the characteristics, structure or design of that measure.[379]

364. Moving to the context of the proviso to Article 13(b)(ii), we note that the United States argues that "support to a specific commodity" should be interpreted as meaning "product-specific support". The United States emphasizes the similarities between the phrase "support to a specific commodity" in Article 13(b)(ii) and two phrases in Article 1 of the *Agreement on Agriculture* that refer to product-specific support: "support for basic agricultural products"[380] and "support ... provided for an agricultural product in favour of the producers of the basic agricultural product".[381] The United States argues that the meaning of all of these phrases must be the same.

365. These phrases do provide important context for the interpretation of Article 13(b)(ii). In our view, "support to a specific commodity" certainly *includes* "product-specific" support. However, like the Panel, we do not believe that the scope of the phrase "support to a specific commodity" in the proviso to Article 13(b)(ii) is exhausted by taking into account the category of product-specific support alone.

[376]*Ibid.*, para. 7.482 (quoting *The New Shorter Oxford English Dictionary*, L. Brown (ed.) (Clarendon Press, 1993), Vol. 2, p. 2972). The Panel found that this second definition was more appropriate in another context, but we believe that both of these definitions shed light upon the meaning of "specific" in "support to a specific commodity".

[377]Panel Report, para. 7.494(i).

[378]*Ibid.*, paras. 7.510-7.517.

[379]Although we observe that the Panel correctly identified the elements that we believe are inherent in the term "support to a specific commodity", the Panel's articulation of the test was not absolutely clear. We also note that the Panel appears to have misapplied the test for "support to a specific commodity" by attributing to upland cotton the total budgetary outlays with respect to upland cotton base acres. See *infra*, para. 375.

[380]This phrase is found in Article 1(h) of the *Agreement on Agriculture*. (United States' appellant's submission, para. 88)

[381]This phrase is found in Article 1(a) of the *Agreement on Agriculture*. (United States' appellant's submission, para. 88)

366. This is for at least two reasons. First, we note that the drafters chose *not* to use phrases such as support "provided for an agricultural product in favour of the producers of the basic agricultural product" or "support for basic agricultural products" in Article 13(b)(ii), but rather chose the distinct phrase "support to a specific commodity". This choice of different words by the drafters gives a preliminary indication that they may have intended to convey different meanings.[382]

367. Secondly, and more importantly, the United States' argument fails to reckon with the fact that the scope of domestic support measures that may grant "support to a specific commodity" under Article 13(b)(ii) is broader than just "product-specific support" in the sense of Article 1 and Annex 3. The proviso to Article 13(b)(ii) mentions only the term "such measures" granting support; but the meaning of this term can be clarified by reference to the chapeau of Article 13(b) because, as the Panel noted, "[t]he chapeau of paragraph (b) and subparagraph (ii) form part of a single sentence."[383] The chapeau identifies the categories of support measures covered by that provision. These are:

> ... domestic support measures that conform fully to the provisions of Article 6 of this Agreement including direct payments that conform to the requirements of paragraph 5 thereof, as reflected in each Member's Schedule, as well as domestic support within *de minimis* levels and in conformity with paragraph 2 of Article 6 ...

368. Measures covered by Article 6 include both product-specific and non-product-specific amber box support subject to reduction commitments. In addition, measures covered by the chapeau *also* include product-specific and non-product-specific support within *de minimis* levels. They further include blue box support provided in accordance with Article 6.5, as well as development box support, provided according to the provisions of Article 6.2, for both of which the distinction between product-specific and non-product specific support for purposes of the AMS calculation has little practical relevance.[384] Like the Panel, we believe that the use of the term "such measures" in the proviso to Article 13(b)(ii) indicates that all such measures identified in the chapeau of Article 13(b) may qualify as granting "support to a specific commodity" and are eligible to be included in the analysis. By contrast, under the United States' argument, domestic support measures listed in the chapeau (with the exception of product-specific amber box support) could not be "support to a specific commodity" even if they confer support on a specific commodity and there is a discernible link between the measure and that commodity.

369. In addition, the United States supports its position by reference to the obligations in Articles 3 and 6 of the *Agreement on Agriculture*, which lay down reduction commitments for total AMS comprising both product-specific and non-product-specific support, but provide no product-specific caps. In the United States' view, because the reduction commitments do not cap product-specific support, the proviso in Article 13(b)(ii) disciplines the degree to which a Member that is in conformity with its reduction commitments can shift support between particular commodities.[385]

370. Indeed, as the United States correctly points out, Article 13(b)(ii) serves to create a discipline upon Members that seek the shelter of the peace clause during the implementation period. We are not

[382]We note in this regard that, for example, Article 6.4(a)(i) of the *Agreement on Agriculture* mentions "product-specific domestic support", whereas Article 13 does not mention or cross-refer to it.

[383]Panel Report, para. 7.470.

[384]The only type of domestic support clearly excluded from support covered by Article 13(b) is green box support, which does not need to conform with the provisions of Article 6, but rather must conform with the provisions of Annex 2. Green box support, however, qualifies for the exemption from actions provided by Article 13(a).

[385]United States' appellant's submission, para. 98.

convinced, however, that this discipline is limited to "product-specific support" as defined in Article 1 of the *Agreement on Agriculture*. Rather, it extends to all measures that grant "support to a specific commodity", in the sense that the support is conferred on a specific commodity, and there is a discernible link between the measure and the specific commodity concerned.

(b) Application of Article 13(b)(ii) to the Measures at Issue

371. The proviso to Article 13(b)(ii) requires an assessment of whether the relevant United States non-green box domestic support measures grant, during the implementation period, "support to a specific commodity in excess of that decided during the 1992 marketing year".

372. As we have explained above, the term "such measures ... grant support to a specific commodity" comprises two elements: first, a non-green box measure actually confers support on the specific commodity in question; and second, there is a discernible link between the measure and the commodity, such that the measure is directed at supporting that commodity. Such a discernible link may be evident where a measure explicitly defines a specific commodity as one to which it bestows support. Such a link might also be ascertained, as a matter of fact, from the characteristics, structure or design of the measure under examination. Conversely, support that does not actually flow to a commodity or support that flows to a commodity by coincidence rather than by the inherent design of the measure cannot be regarded as falling within the ambit of the term "support to a specific commodity".

373. With these considerations in mind, we turn now to the application of this interpretation to four measures that the United States claims do not grant "support to a specific commodity": the *production flexibility contract payments*, *market loss assistance payments*, *direct payments* and *counter-cyclical payments*. We refer to these measures as "base acre dependent payments" because each of these measures provides payments based on a calculation in which a payment rate, specific to upland cotton, is multiplied by an ascertained quantity of upland cotton, which, in turn, is a product of a farm's historical planting of upland cotton (its "upland cotton base acres") and its historical yield of upland cotton per acre.[386] For purposes of the Article 13(b)(ii) comparison, the Panel outlined three alternative methodologies, and therefore three different calculations, in respect of these measures in its Article 13(b)(ii) analysis.[387] We also note that in calculating support granted to upland cotton the United States has ascribed a zero value to the four aforementioned domestic support measures. For purposes of these proceedings, we do not find it necessary to go beyond the Panel record, and thus limit our consideration to these four alternative calculations.

374. The Panel ultimately based its calculations in respect of the base acre dependent payments on the *total* budgetary outlays with respect to upland cotton base acres under each program.[388] The United States contends that this calculation methodology led the Panel to include, as support to upland cotton, payments to producers who did not plant upland cotton.[389] For the United States, there is "[no] question that payments cannot be deemed to grant support to a crop the recipient does not produce".[390] In addition, the United States contends that the Panel erred in finding that the base acre dependent

[386]We note that each of these programs applied not just to upland cotton, but also to other eligible commodities. We also note that market loss assistance payments did not involve a separate calculation involving these criteria. Rather, market loss assistance payments served to supplement production flexibility contract payments and were made proportionate to a producer's production flexibility contract payments. (Panel Report, para. 7.217)

[387]See Panel Report, para. 7.596 and "Attachment to Section VII:D" (Panel Report, paras. 7.634-7.647).

[388]*Ibid.*, paras. 7.580-7.583.

[389]United States' appellant's submission, para. 106.

[390]*Ibid.*

programs "clearly and explicitly specif[y] upland cotton ... as a commodity to which they grant support".[391] In the view of the United States, these measures do no such thing. The United States emphasizes that producers receive payments under the base acre dependent programs irrespective of whether and how much upland cotton they plant, and regardless of whether they plant anything at all.[392] For the United States, the "Panel's error stems largely from its assertion that merely identifying *historical* criteria relating to a commodity according to which payments will be made would render such payments 'support to a specific commodity'."[393]

375. We agree with the United States that payments made with respect to historical upland cotton base acres to commodities other than upland cotton or to producers who produced no commodities at all cannot be deemed to be support granted to upland cotton for purposes of the Article 13(b)(ii) comparison. The Article 13(b)(ii) assessment must be limited to support conferred on planted upland cotton; support flowing to other commodities that were planted, or support that was given where no commodities were produced must of course be removed from the assessment. We reject, therefore, the Panel's calculation methodology to the extent that it failed to limit the Article 13(b)(ii) calculation to payments with respect to upland cotton base acres corresponding to physical acres actually planted with upland cotton.

376. We observe, however, that the Panel acknowledged that a producer with upland cotton base acres may plant any crop other than the excluded fruits, vegetables, and wild rice, but it found that there was "a strongly positive relationship between those recipients who hold upland cotton base acres and those who continue to plant upland cotton, despite their entitlement to plant other crops".[394] The Panel further observed that data provided by the United States showed that "a very large proportion of farms with upland cotton base acres continue to plant upland cotton in the year of payment"[395], and that "the overwhelming majority of farms enrolled in the programmes which plant upland cotton also hold upland cotton base".[396]

377. We note in this regard that the Panel included, in "Attachment to Section VII:D" to its Report, and described as "appropriate"[397], an alternative calculation using certain methodologies submitted by Brazil for allocating support to acres actually planted with upland cotton under the base acre dependent programs. The first part of this calculation, the "cotton to cotton" methodology, allocated, for each *planted* acre of upland cotton, payments associated with one upland cotton base acre. The second part ("Brazil's methodology") took the results of the "cotton to cotton" methodology and then added to it payments made with respect to non-upland cotton base acres corresponding to physical acres that were actually planted with upland cotton.[398] The "cotton to cotton" methodology limits the Article 13(b)(ii) calculation to payments with respect to cotton base acres corresponding to physical acres that were actually planted with upland cotton.

[391] *Ibid.*, para. 103 (quoting Panel Report, para. 7.518).

[392] United States' appellant's submission, para. 104.

[393] *Ibid.*, para. 105. (original emphasis) The United States points out that "base acres" are not "physical acres" but hypothetical acres for calculation of decoupled payments to producers, who are free to produce whatever crop they choose or to produce no crop at all. (United States' responses to questions during the oral hearing)

[394] Panel Report, para. 7.637.

[395] *Ibid.*, para. 7.636. (footnote omitted)

[396] *Ibid.*, para. 7.636.

[397] *Ibid.*, para. 7.646.

[398] See *Ibid.*, paras. 7.640-7.642.

378. We turn next to the United States' contention that the mere fact that a measure is based on *historical* production of upland cotton is not a sufficient basis for a finding that the measure grants at present "support to [the] specific commodity" upland cotton. We agree that none of the base acre dependent programs expressly ties support to continued production of upland cotton. However, the absence of an express reference in the legislation to continued production of upland cotton does not mean that the payments do not grant support to upland cotton. This is because a link between the four measures at issue and the continued production of upland cotton is discernible from the characteristics, structure and operation of those measures.

379. We note in this regard the reasoning of the Panel:

> Where, for example, these measures specify commodities in the eligibility criteria and payment rates, they constitute support to the commodities specified in that way. This applies *a fortiori* where the payments are determined according to, or are related to, current market prices of the specific commodities.[399]

On this basis, the Panel highlighted several factors revealing a close nexus between payments with respect to historic upland cotton base acres under the production flexibility contract, market loss assistance, direct payment and counter-cyclical payment measures, and the continued production of upland cotton on an equivalent number of physical acres at present. The Panel noted that payments under each program were based on "very specific eligibility criteria", primarily the production of upland cotton in a historical base period.[400] The Panel also observed that, in the case of each of the measures, a particular payment rate was specified for upland cotton.[401] Yield calculations were also specific to upland cotton and related to historical upland cotton yields per acre.[402] In the case of market loss assistance payments, payments were specifically designed to compensate for low prices for upland cotton.[403] In the case of counter-cyclical payments, the payment rate for upland cotton is directly linked to the market price of upland cotton in the year of payment.[404] In our view, these characteristics and operational factors of the measures in question demonstrate a link between payments made with respect to historic upland cotton base acres and the continued production of upland cotton.

380. We underline that these Panel findings do not pertain to *all* payments to *current* producers of upland cotton, but rather are limited to payments to producers with respect to historic *upland cotton* base acres.[405] Indeed, we see little in the Panel's finding or on the record that would allow us to discern a link between the support-conferring measures with respect to non-cotton historical base acres and current production of upland cotton. We do not, therefore, accept the methodology submitted by Brazil that included, in the Article 13(b)(ii) calculation, payments with respect to both cotton and non-cotton base acres flowing to current production of upland cotton. We believe that only the "cotton to cotton" methodology, included by the Panel in "Attachment to Section VII:D" to its

[399] Panel Report, para. 7.484.

[400] *Ibid.*, paras. 7.513-7.516.

[401] *Ibid.*, para. 7.635.

[402] See *ibid.*, paras. 7.513-7.516.

[403] *Ibid.*, para. 7.515.

[404] *Ibid.*, para. 7.516.

[405] See *supra*, footnote 184.

Report as an "appropriate"[406] alternative calculation, sufficiently demonstrates a discernible link between payments under base acre dependent measures (related to upland cotton) and upland cotton.

381. Finally, we address the United States' argument that the calculation methodology under Article 13(b)(ii) must be based on only those factors that the government of a Member can control, excluding, for example, producer decisions regarding what crops to grow within the scope of production flexibility allowed by the measures.[407] In advancing this contention, the United States relies upon the following statement of the Panel:

> [If] the proviso [to Article 13(b)(ii)] focused on where support was spent due to reasons beyond the control of the government, such as producer decisions on what to produce within a programme, it would introduce a major element of unpredictability into Article 13, and render it extremely difficult to ensure compliance.[408]

382. The United States finds support for this view in the terms "grant" and "decided" in Article 13(b)(ii), and claims that "the focus of the Peace Clause comparison is on the support a Member decides".[409] We note that the verbs "grant" and "decided" have distinct meanings. We agree with the observation of the Panel that "'[d]ecided' refers to what the government determines, but 'grant' refers to what its measures provide."[410] In Article 13(b)(ii), each of these words has been chosen to govern one side of the comparison required by that proviso. In the light of the distinct meanings of these words, and the distinct roles they play in the context of Article 13(b)(ii), we reject the idea that the word "grant", which is applicable to implementation period support, must be read to mean the same thing as "decided", which is applicable to the 1992 benchmark level of support.

383. Moreover, we do not accept that unpredictability of producer decisions under planting flexibility rules, *per se*, could modify the specific requirements set out in the proviso to Article 13(b)(ii). What is relevant for the comparison is the support that the measure actually grants during the implementation period. Indeed, we agree with Brazil that a certain degree of unpredictability in the volume of the payments flowing to particular commodities is inherent in many of the support measures disciplined by the *Agreement on Agriculture*, including measures granting support to a specific commodity.[411] The existence of such unpredictability cannot be a ground to alter the basis of comparison under the proviso to Article 13(b)(ii) from what is actually "grant[ed]" in the implementation period to what is only "decided".

384. For the reasons stated above, we conclude that payments with respect to upland cotton base acres to producers currently growing upland cotton under the production flexibility contract, market loss assistance, direct payment and counter-cyclical payment measures, calculated in accordance with

[406]Panel Report, para. 7.646.

[407]United States appellant's submission, paras. 64-67 and 114-117.

[408]Panel Report, para. 7.487.

[409]United States appellant's submission, para. 66.

[410]Panel Report, para. 7.476.

[411]Thus, in the case of measures that compensate for price fluctuations, unless a limit is set on total payments, a government has little control over the eventual amount of payments. In addition, we recall that the export subsidies at issue in *US – FSC* took the form of a foregoing of tax revenue, with the precise amount of the revenue foregone, and the nature of the specific products that it went to support, being dependent upon the actions of private corporations claiming the exemption. In that case, therefore, it could also be said that whether the United States would exceed product-specific export subsidy commitments would also depend on private producers' decisions to claim tax exemptions.

the "cotton to cotton" methodology, are support granted to the specific commodity upland cotton in the sense of Article 13(b)(ii) of the *Agreement on Agriculture*.[412]

(c) Methodology for Calculating the Value of Price-Based Payments

385. The United States' appeal regarding the Panel's decision to use the budgetary outlay methodology and not the price gap methodology described in paragraph 10 of Annex 3 to the *Agreement on Agriculture* for certain price-based payments concerns calculation of the amounts of two types of payments: (i) payments under the *marketing loan program*, which are relevant to the calculation of both the 1992 benchmark level of support and support during the implementation period; and (ii) *deficiency payments*, made in accordance with the FACT Act of 1990, which were replaced by production flexibility contract payments under the FAIR Act of 1996, and which are therefore relevant only to the calculation of the 1992 benchmark level of support.[413]

386. Payments to upland cotton under the marketing loan program could take one of several forms. In each case, however, gains to producers under this program accrued on the basis of a gap between a reference price tied to the market price of upland cotton, known as the "adjusted world price", and the "loan rate" fixed, from time to time, for the marketing loan program.[414] Deficiency payments for upland cotton were based on the gap between either the loan rate under the marketing loan program, or the national average market price for upland cotton (whichever was higher) and a target price of 72.9 cents per pound of upland cotton. In the event that the loan rate or market price fell below the target price, deficiency payments filled the deficit.[415]

387. The United States claims that both of these price-based measures represent "non-exempt direct payments ... dependent on a price gap", the value of which should be calculated by reference to the price gap methodology described in paragraph 10 of Annex 3 to the *Agreement on Agriculture*.[416]

388. In addressing this issue, we—like the Panel—note that Article 13(b)(ii) gives no specific guidance regarding *how* the "support" that measures granted in the implementation period or that was decided during the 1992 marketing year should be calculated. The Panel therefore turned to the broader context of the *Agreement on Agriculture* and chose to "apply the principles of AMS methodology" in accordance with Annex 3 of the *Agreement on Agriculture*, with certain modifications.[417] We observe that, on appeal, neither of the participants, nor indeed any of the third participants that addressed this issue, suggested that the Panel erred in seeking guidance for its calculations in the principles set out in Annex 3.

[412]For the Panel's findings on the value of production flexibility contract payments, market loss assistance payments, direct payments and counter-cyclical payments using the "cotton to cotton" methodology see Panel Report, para. 7.641.

[413]United States' appellant's submission, para. 72; Panel Report, para. 7.213. We observe that the United States' arguments relating to the use of the price gap methodology to measure marketing loan program payments and deficiency payments extend only to the analysis required under Article 13(b)(ii) of the *Agreement on Agriculture*; the United States does not argue that a price gap calculation is required in the context of an analysis of significant price suppression under Article 6.3(c) of the *SCM Agreement*.

[414]For a description of payments under the marketing loan program, see Panel Report, paras. 7.204-7.208.

[415]For a description of deficiency payments, see Panel Report, footnote 294 to para. 7.213.

[416]United States' appellant's submission, paras. 71-73 (quoting paragraph 10 of Annex 3 to the *Agreement on Agriculture*).

[417]Panel Report, para. 7.552.

389. Against this background, we observe that paragraph 10 of Annex 3 provides that "non-exempt direct payments ... dependent on a price gap" may be measured using either price gap methodology or budgetary outlay methodology.[418] The Panel chose to rely upon actual budgetary outlays[419], but included in its Report findings regarding the value of support in each relevant year calculated according to price gap methodology as well.[420]

390. As we explain in the next section, our conclusion that the United States granted, during the relevant years of the implementation period, "support to a specific commodity", namely, upland cotton, "in excess of that decided during the 1992 marketing year" holds irrespective of whether the Panel's budgetary outlay calculations or its price gap calculations are used to attribute values to marketing loan program payments and deficiency payments. Therefore, it is unnecessary for us to decide here which methodology must be used for purposes of the comparison envisaged by Article 13(b)(ii) with respect to these two types of payment.[421]

(d) Conclusion Regarding the Application of Article 13(b)(ii)

391. We recall, once again, that the proviso to Article 13(b)(ii) of the *Agreement on Agriculture* sets forth that, during the implementation period in which Article 13 applies, non-green box domestic support measures must not "grant support to a specific commodity in excess of that decided during the 1992 marketing year", if such measures are to enjoy exemption from actions "based on paragraph 1 of Article XVI of GATT 1994 or Articles 5 and 6 of the Subsidies Agreement".[422]

392. In our review above, we have concluded that, for purposes of the comparison envisaged by Article 13(b)(ii), the values of the four measures, namely, production flexibility contract payments, market loss assistance payments, direct payments and counter-cyclical payments in the years 1999, 2000, 2001, and 2002 are properly determined by using the "cotton to cotton" methodology, and we have therefore modified the Panel's findings in this regard. We further note that the United States has not appealed the Panel's findings regarding the values attributable to three further support measures, namely, Step 2 payments to domestic users, crop insurance and cottonseed payments.[423]

393. Adding, to the values of the seven measures mentioned above, the values for deficiency payments and marketing loan program payments calculated using *either* budgetary outlays[424] *or* price gap methodology[425], we conclude that the United States' domestic support measures in question granted "support to a specific commodity", namely, upland cotton, that was "in excess of that decided during the 1992 marketing year" in each relevant year of the implementation period.

394. It follows that the condition set out in the proviso to Article 13(b)(ii) of the *Agreement on Agriculture* has not been met by the United States. We *uphold*, therefore, the Panel finding, in paragraph 7.608 of its Report, that the United States' domestic support measures challenged by Brazil are not entitled to the exemption provided by the peace clause from actions under Article XVI:1 of the GATT 1994 and Articles 5 and 6 of the *SCM Agreement*.

VI. Serious Prejudice

A. *Significant Price Suppression under Article 6.3(c) of the SCM Agreement*

1. Introduction

395. The United States appeals the Panel's finding, in paragraphs 7.1416 and 8.1(g)(i) of the Panel Report, that the effect of marketing loan program payments, Step 2 payments, market loss assistance payments, and counter-cyclical payments (the "price-contingent subsidies") is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement* constituting serious prejudice to the interests of Brazil within the meaning of Article 5(c) of the *SCM Agreement*. The United States raises several objections to the Panel's analysis leading to this finding. The United States also asks us to find that the Panel failed to set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind this finding, as required by Article 12.7 of the DSU. Brazil, for its part, raises a preliminary issue under Article 11 of the DSU.

396. In this section of this Report, we begin our analysis by addressing the preliminary argument of Brazil regarding Article 11 of the DSU. We then turn to the various errors that the United States alleges that the Panel made in making its finding of significant price suppression under Article 6.3(c) of the *SCM Agreement*. In doing so, we examine the United States' objections to the "market" and "price" that the Panel examined in its analysis of the price-contingent subsidies pursuant to Article 6.3(c). We then consider the Panel's order of analysis under Article 6.3(c). Next, we assess the other alleged errors in the Panel's reasoning leading to its finding that the effect of the price-contingent subsidies is significant price suppression. These include the Panel's alleged failure to quantify the amount of the price-contingent subsidies benefiting upland cotton or to allocate the effect of the subsidies to the appropriate period of time. We then consider the implications of this appeal for the Panel's finding regarding serious prejudice under Article 5(c) of the *SCM Agreement*. Finally, we address the United States' claim that the Panel failed to comply with the requirements of Article 12.7 of the DSU.

[418]Paragraph 10 of Annex 3 to the *Agreement on Agriculture* sets forth:

> Non-exempt direct payments: non-exempt direct payments which are dependent on a price gap shall be calculated either using the gap between the fixed reference price and the applied administered price multiplied by the quantity of production eligible to receive the administered price, or using budgetary outlays.

[419]See, for example, Panel Report, para. 7.596. We reproduce the Panel's findings with respect to the values attributable to deficiency payments and payments under the marketing loan program using budgetary outlays in Table 1 of Annex 2.

[420]See Panel Report, para. 7.564 and footnote 727 to para. 7.565. We reproduce the Panel's findings with respect to the values attributable to deficiency payments and payments under the marketing loan program using price gap methodology in each relevant year in Table 2 of Annex 2.

[421]At the oral hearing, the United States confirmed that it may become unnecessary to rule on its appeal regarding calculation methodology, should the Panel's conclusions with respect to the phrase "support to a specific commodity" in Article 13(b)(ii) be upheld by the Appellate Body. (United States' response to questioning at the oral hearing)

[422]We note at this point that we agree with the Panel that:

> There is no requirement to quantify the excess, but the decisive question is whether there is any excess. Thus, it would not be strictly necessary ... to make a precise calculation of the amount of the excess if it is clear that, on the basis of the proper evidentiary standard, there is an excess of some degree.

(Panel Report, para. 7.419)

We also note, however, that fairly detailed calculations regarding the values attributable to United States implementation period support is available to us in these proceedings.

[423]For Panel findings on the value of support under these programs, see Panel Report, para. 7.596. See also Tables 1 and 2 of Annex 2.

[424]See Table 1 of Annex 2.

[425]See Table 2 of Annex 2.

2. Objective Assessment under Article 11 of the DSU

397. Brazil argues that many of the United States' arguments, particularly those concerning serious prejudice, involve allegations that the Panel failed to "make an objective assessment of the matter before it, including an objective assessment of the facts of the case" pursuant to Article 11 of the DSU.[426] Brazil requests us to dismiss the United States' arguments that Brazil lists in Annex A to its appellee's submission, on the basis that the United States has not made a proper claim of error under Article 11 of the DSU.[427]

398. In its opening statement delivered at the oral hearing, the United States confirmed that it has not made an Article 11 claim in this appeal. Rather, the United States claims that the Panel erred in its interpretation of Article 6.3(c) of the *SCM Agreement* and in applying this interpretation to the facts in this dispute. The United States also requests us not to dismiss certain of its arguments as requested by Brazil. Under these circumstances, there is no need for us to rule that the United States makes no Article 11 claim. We also refrain from ruling on whether the Panel complied with Article 11 of the DSU. Moreover, we decline to dismiss the United States' arguments that Brazil lists in Annex A to its appellee's submission on the basis that an Article 11 claim was not properly set out by the United States.

399. We are nevertheless mindful of the scope of appellate review with respect to legal and factual matters. Pursuant to Article 17.6 of the DSU, appeals are "limited to issues of law covered in the panel report and legal interpretations developed by the panel". To the extent that the United States' arguments concern the Panel's appreciation and weighing of the evidence, we note from the outset that the Appellate Body will not interfere lightly with the Panel's discretion "as the trier of facts".[428] At the same time, the Appellate Body has previously pointed out that the "consistency or inconsistency of a given fact or set of facts with the requirements of a given treaty provision is ... a legal characterization issue".[429] Whether the Panel properly interpreted the requirements of Article 6.3(c) of the *SCM Agreement* and properly applied that interpretation to the facts in this case is a legal question. This question is different from whether the Panel made "an objective assessment of the matter before it, including an objective assessment of the facts of the case", in accordance with Article 11 of the DSU.[430] Therefore, the Panel's application of the legal requirements of Article 6.3(c) of the *SCM Agreement* to the facts of this case falls within the scope of our review in this appeal, despite the fact that the United States does not claim that the Panel erred under Article 11 of the DSU.

3. Relevant Market under Article 6.3(c) of the *SCM Agreement*

400. Turning to the question of the relevant "market", we observe that Article 6.3(c) of the *SCM Agreement* addresses the situation where "the effect of the subsidy is ... significant price suppression ... in the same *market*". (emphasis added) As the Panel suggested[431], and the parties agree[432], it is up to the complaining Member to identify the market in which it alleges that the effect of a subsidy is significant price suppression and to demonstrate that the subsidy has that effect within the meaning of Article 6.3(c). Before the Panel, Brazil identified the following as relevant markets for its claim under Article 6.3(c): (a) the world market for upland cotton; (b) the Brazilian market; (c) the United States market; and (d) 40 third country markets where Brazil exports its cotton and where United States and Brazilian upland cotton are found.[433] In contrast, the United States argued before the Panel that the relevant market under Article 6.3(c) must be "a particular domestic market of a Member", and that it cannot be a "world market".[434]

401. The Panel regarded the absence of any geographic limitation or reference to imports or exports in the text of Article 6.3(c), in contrast to Articles 6.3(a) and (b) and 15.2 of the *SCM Agreement*, as indicating that the "same market" under Article 6.3(c) could be a "world market".[435] Applying this interpretation to the facts of the present dispute, the Panel concluded that a "world market" for upland cotton does exist.[436] The Panel further stated that "[w]here price suppression is demonstrated in [the world] market, it may not be necessary to proceed to an examination of each and every other possible market where the products of both the complaining and defending Members are found".[437] In the present dispute, having found that "price suppression has occurred in the same world market"[438], the Panel decided that it was not "necessary to proceed to any further examination of ... alleged price suppression in individual country markets".[439] Thus, the Panel's analysis of the world market for upland cotton formed the basis for its finding that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c).

402. On appeal, the United States submits that the Panel erred in interpreting the words "same market" in Article 6.3(c) of the *SCM Agreement* as including a "world market".[440] It also submits that the Panel's finding that a "world market" exists for upland cotton is inconsistent with certain of its other findings.[441] The United States also argues that, in any case, the Panel did not make a finding that United States and Brazilian upland cotton compete in the world market that it had identified for upland cotton.[442] Brazil contends that significant price suppression under Article 6.3(c) "may apply to *any* 'market,' from local to global, and everything in between".[443]

---

[426]Brazil's appellee's submission, paras. 105 and 146.

[427]*Ibid.*, para. 146.

[428]"Determination of the credibility and weight properly to be ascribed to (that is, the appreciation of) a given piece of evidence is part and parcel of the fact finding process and is, in principle, left to the discretion of a panel as the trier of facts." (Appellate Body Report, *EC – Hormones*, para. 132) See also Appellate Body Report, *US – Wheat Gluten*, para. 151; Appellate Body Report, *EC – Sardines*, para. 299; Appellate Body Report, *US – Carbon Steel*, para. 142; Appellate Body Report, *Japan – Apples*, para. 221.

[429]Appellate Body Report, *EC – Hormones*, para. 132.

[430]On this question, the Appellate Body has made several pronouncements in previous appeals. See, for example, Appellate Body Report, *EC – Hormones*, para. 133; Appellate Body Report, *Korea – Dairy*, para. 137; Appellate Body Report, *Japan – Apples*, para. 222.

[431]Panel Report, para. 7.1246.

[432]The United States and Brazil indicated their agreement on this point in response to questioning during the oral hearing.

[439]*Ibid.*, para. 7.1315.

[440]United States' appellant's submission, para. 307.

[441]*Ibid.*, paras. 318 and 319. The United States submits that the Panel failed to reconcile its interpretation of the "same market" in Article 6.3(c) with its reading of the phrase "world market" under Article 6.3(d).

[442]United States' appellant's submission, para. 321.

[443]Brazil's appellee's submission, para. 628. (original emphasis)

403. We begin our analysis of this issue by identifying the ordinary meaning of the word "market" in the context of Article 6.3(c). Article 6.3(c) of the *SCM Agreement* indicates that:

> Serious prejudice in the sense of paragraph (c) of Article 5 may arise in any case where one or several of the following apply:
>
> ...
>
> (c) the effect of the subsidy is a significant price undercutting by the subsidized product as compared with the price of a like product of another Member in the same market or significant price suppression, price depression or lost sales in the same *market*[.] (emphasis added)

404. The Panel described the ordinary meaning of the word "market" as:[444]

> "a place ... with a demand for a commodity or service"[1355]; "a geographical area of demand for commodities or services"; "the area of economic activity in which buyers and sellers come together and the forces of supply and demand affect prices".[1356]

[1355] *The New Shorter Oxford English Dictionary*, (1993).

[1356] *Merriam-Webster Dictionary online*.

405. We accept that this is an adequate description of the ordinary meaning of the word "market" for the purposes of this dispute, and we do not understand the parties to dispute it.[445] This ordinary meaning does not, of itself, impose any limitation on the "geographical area" that makes up any given market. Nor does it indicate that a "world market" cannot exist for a given product. As the Panel indicated, the "degree to which a market is limited by geography will depend on the product itself and its ability to be traded across distances".[446]

406. The only express qualification on the type of "market" referred to in Article 6.3(c) is that it must be "the same" market. Aside from this qualification (to which we return below), Article 6.3(c) imposes no explicit geographical limitation on the scope of the relevant market. This contrasts with the other paragraphs of Article 6.3: paragraph (a) restricts the relevant market to "the market of the subsidizing Member"; paragraph (b) restricts the relevant market to "a third country market"; and paragraph (d) refers specifically to the "world market share". We agree with the Panel[447] that this difference may indicate that the drafters did not intend to confine, *a priori*, the market examined under Article 6.3(c) to any particular area. Thus, the ordinary meaning of the word "market" in Article 6.3(c), when read in the context of the other paragraphs of Article 6.3, neither requires nor excludes the possibility of a national market or a world market.[448]

[444] Panel Report, para. 7.1236.

[445] As indicated by the United States and Brazil in response to questioning during the oral hearing.

[446] Panel Report, para. 7.1237.

[447] *Ibid.*, paras. 7.1238-7.1240.

[448] This stands to reason, given that the purpose of the "actionable subsidies" provisions in Part III of the *SCM Agreement* is to prevent Members from causing adverse effects to the interests of other Members through the use of specific subsidies, wherever such effects may occur.

407. Turning to the phrase "in the same market", it is clear to us from a plain reading of Article 6.3(c) that this phrase applies to all four situations covered in that provision, namely, "significant price undercutting", "significant price suppression, price depression [and] lost sales". We read the Panel Report and the participants' submissions as endorsing this interpretation.[449] The phrase "in the same market" suggests that the subsidized product in question (United States upland cotton in this case)[450] and the relevant product of the complaining Member must be "in the same market". In this appeal, the Panel and the participants agree that United States upland cotton[451] and Brazilian upland cotton[452] must be "in the same market" for Brazil's claim under Article 6.3(c) to succeed.[453] Furthermore, the participants agree that these are like products.[454]

408. When can two products be considered to be "in the same market" for the purposes of a claim of significant price suppression under Article 6.3(c)? Article 6.3(c) does not provide an explicit answer. However, recalling that one accepted definition of "market" is "the area of economic activity in which buyers and sellers come together and the forces of supply and demand affect prices"[455], it seems reasonable to conclude that two products would be in the same market if they were engaged in actual or potential competition in that market. Thus, two products may be "in the same market" even if they are not necessarily sold at the same time and in the same place or country. As the Panel correctly pointed out, the scope of the "market", for determining the area of competition between two products, may depend on several factors such as the nature of the product, the homogeneity of the conditions of competition, and transport costs.[456] This market for a particular product could well be a "world market". However, we agree with the Panel that the fact that a world market exists for one product does not necessarily mean that such a market exists for every product.[457] Thus the determination of the relevant market under Article 6.3(c) of the *SCM Agreement* depends on the subsidized product in question. If a world market exists for the product in question, Article 6.3(c) does not exclude the possibility of this "world market" being the "same market" for the purposes of a significant price suppression analysis under that Article.

409. According to the United States, if the market examined pursuant to a claim of significant price suppression under Article 6.3(c) is a "world market", then the subsidized product and any like

[449] Panel Report, paras. 7.1248 and 7.1251; United States' appellant's submission, para. 310; Brazil's appellee's submission, paras. 636 and 638.

[450] See *infra*, footnote 451.

[451] Specifically, the subsidized product is United States upland cotton lint. (Panel Report, paras. 7.139, 7.1221-7.1224 and footnote 191 to para. 7.139) The Panel explained that upland cotton, upon harvest, comprises cotton lint and cottonseed. The cotton lint is separated from the cottonseed through "ginning". (Panel Report, footnote 258 to para. 7.197)

[452] Panel Report, footnote 258 to para. 7.197 and paras. 7.1221-7.1224. The United States and Brazil confirmed during the oral hearing that they do not contest this identification of the subsidized product and the other relevant product.

[453] Accordingly, we need not decide whether, in a claim of significant price suppression under Article 6.3(c), the product identified by the complainant must be "like" the relevant subsidized product. We note in this regard that the term "in the same market" appears twice in Article 6.3(c). In the case of *significant price undercutting*, the "subsidized product" must be "compared with the price of a *like product* of another Member in the same market". (emphasis added) This raises the question whether the other three situations mentioned in Article 6.3(c) (namely, "significant price suppression, price depression [and] lost sales") include a requirement that the subsidized product and the relevant product of the complainant be "like".

[454] Panel Report, paras. 7.1248 and 7.1251; United States' appellant's submission, para. 310; Brazil's appellee's submission, paras. 636 and 638.

[455] Panel Report, para. 7.1236 (quoting *Merriam-Webster Dictionary online*).

[456] Panel Report, para. 7.1237 and footnote 1357 to para. 7.1240.

[457] *Ibid.*, footnote 1357 to para. 7.1240.

product will necessarily be in that market and the word "same" in Article 6.3(c) would have no meaning.[458] We do not agree with this argument. As we have explained above, there is no *per se* geographical limitation of a market under Article 6.3(c). It could well be a national market, a world market, or any other market. It is for the complaining party to identify the market where it alleges significant price suppression and to establish that that market exists. In doing so, it is for the complaining party to establish that the subsidized product and its product are in actual or potential competition in that alleged market. If that market is established to be a "world market", it cannot be said, for that reason alone, that the two products are not in the "same market" within the meaning of Article 6.3(c).

410. For these reasons, we agree with the Panel that, depending on the facts of the case, a "world market" may be the "same market" for the purposes of a claim of significant price suppression under Article 6.3(c) of the *SCM Agreement*.[459]

411. We now examine the United States' objection to the Panel's examination of the "world market for upland cotton"[460] in the particular circumstances of this dispute. The United States submits that the Panel's finding that a world market for upland cotton exists is inconsistent with the Panel's suggestion that the United States price for upland cotton is different from the "world price" represented by the A-Index.[461] Essentially, the United States appears to argue that no world market for upland cotton can exist if there is no world price for upland cotton. In our view, whether a world market for upland cotton and a world price for upland cotton exist in the circumstances of this case are factual questions. The Panel Report indicates that the Panel examined the evidence before it and concluded on the basis of that evidence that a world market for upland cotton exists[462] and that a world price in that market also exists and is reflected in the A-Index.[463] We see no reason to disturb the Panel's findings of fact in this regard.[464]

412. The United States also contends that the Panel did not make a finding that United States and Brazilian upland cotton were both in the world market that it had identified for upland cotton.[465] As we explained earlier[466], the words "in the same market" in Article 6.3(c) of the *SCM Agreement* mean that subsidized United States upland cotton and Brazilian upland cotton must be engaged in actual or potential competition in the market in which the effect of the challenged subsidy is alleged to be

[458]"One can speak of a 'same' regional or national market because there are 'other' regional or national markets where the subsidized and like product may (or may not) compete. One cannot speak of a 'same' world market in the same way because there is no 'other' world market where the products can be found." (United States' appellant's submission, para. 311)

[459]Panel Report, paras. 7.1238-7.1244.

[460]*Ibid.*, paras. 7.1247 and 7.1274.

[461]United States' appellant's submission, para. 319 (referring to Panel Report, para. 7.1213).

[462]Panel Report, paras. 7.1245-7.1252.

[463]*Ibid.*, paras. 7.1260-7.1274. The Panel's "four main reasons" for this conclusion regarding the A-Index were: prices of Brazilian and United States upland cotton are "constituent elements" of the A-Index; "key market participants" perceive the A-Index as reflecting the world market price for upland cotton; the International Cotton Advisory Council treats the A-Index in a similar manner; and the Economic Research Service of the United States Department of Agriculture (the "USDA") has itself referred to the A-Index as the world price. In addition, "the United States 'adjusted world price' is *based on* and *derived from* the A-Index". (*Ibid.*, paras. 7.1265-7.1271) (original emphasis)

[464]See Appellate Body Report, *EC – Hormones*, para. 132. See also Appellate Body Report, *US – Wheat Gluten*, para. 151.

[465]United States' appellant's submission, para. 320.

[466]*Supra*, paras. 407-408.

significant price suppression. In this regard, we note that the Panel expressly stated that the market it examined pursuant to Article 6.3(c) had to be a market "in which both Brazilian and United States upland cotton were present and competing for sales"[467] and "where competition exists between Brazilian and United States upland cotton".[468]

413. Whether or not Brazilian and United States upland cotton competed in the "world market for upland cotton"[469] during the period the Panel examined is a factual question. As we stated earlier[470], two products may be "in the same market" even if they are not necessarily sold in the same place and at the same time, as long as they are engaged in actual or potential competition. We recall that, in addition to the "world market", Brazil identified "40 third country markets ... where United States and Brazilian like upland cotton is found".[471] We also note that, based on an assessment of the relevant facts, the Panel concluded, as a matter of fact, that these two products did compete in the world market for upland cotton. In particular, the Panel referred to "the world upland cotton market, and the relative proportion of that market enjoyed by the United States and Brazil".[472]

414. We are therefore not persuaded by the United States' arguments that the Panel erred with respect to whether United States and Brazilian upland cotton were "in the same market" according to Article 6.3(c).

4. Relevant Price under Article 6.3(c) of the *SCM Agreement*

415. We now turn to the United States' arguments on appeal with respect to the relevant "price" under Article 6.3(c). The Panel found that "the A-Index can be taken to reflect a world price in the world market for upland cotton that is sufficient to form the basis for our analysis as to whether there is price suppression in the same world market within the meaning of Article 6.3(c) for the purposes of this dispute".[473] The United States argues that, even if the Panel properly found that the effect of the price-contingent subsidies is significant suppression of the *world price* for upland cotton, this could not constitute significant price suppression for purposes of Brazil's claim under Article 6.3(c) of the *SCM Agreement*. According to the United States, Brazil had to show that the effect of the challenged subsidies is significant suppression of "the price of Brazilian upland cotton in the 'world market.'"[474]

416. We have already found that the "market" referred to in Article 6.3(c), in connection with significant price suppression, can be a "world market"[475], and that the Panel was correct in examining the world market for upland cotton in the present dispute.[476] The question before us is whether it was sufficient for the Panel to analyze the price of upland cotton in general in the world market or whether the Panel was required to analyze the price of Brazilian upland cotton in the world market and find significant price suppression with respect to that price.

[467]Panel Report, para. 7.1248.

[468]*Ibid.*, para. 7.1251.

[469]*Ibid.*, paras. 7.1247 and 7.1274.

[470]*Supra*, para. 408.

[471]Panel Report, para. 7.1230.

[472]*Ibid.*, para. 7.1313. See also *ibid.*, para. 7.1246.

[473]Panel Report, para. 7.1274. According to the Panel, the "A-Index" "is a composite of an average of the five lowest price quotes from a selection of the principal upland cottons traded in the world market obtained by Cotlook, a private UK-based organization". (Panel Report, para. 7.1264)

[474]United States' appellant's submission, para. 239.

[475]*Supra*, para. 410.

[476]*Supra*, para. 414.

417. In our view, it was sufficient for the Panel to analyze the price of upland cotton in general in the world market. The Panel did so by relying on the A-Index. The Panel specifically found, based on its reading of the evidence before it:

> [P]rices for upland cotton transactions throughout the world are ... largely determined by the A-Index price.[477]

Therefore, the Panel found that the A-Index adequately reflected prices in the world market for upland cotton.[478] The Panel also found that "developments in the world upland cotton price would inevitably affect prices" wherever Brazilian and United States upland cotton compete, "due to the nature of the world prices in question and the nature of the world upland cotton market, and the relative proportion of that market enjoyed by the United States and Brazil".[479] It was not necessary, in these circumstances, for the Panel to proceed to a separate analysis of the prices of Brazilian upland cotton in the world market.

418. For these reasons, we reject the United States' contention that the Panel erred in its analysis of significant price suppression under Article 6.3(c) of the *SCM Agreement* "in not examining Brazilian upland cotton prices in the 'world market'".[480]

5. Significant Price Suppression as the Effect of the Price-Contingent Subsidies

(a) Introduction

419. We now address the reasons the Panel provided for its ultimate finding under Article 6.3(c). First, the Panel found that price suppression had occurred within the meaning of Article 6.3(c)[481] after examining three main considerations: "(a) the relative magnitude of the United States' production and exports in the world upland cotton market; (b) general price trends [in the world market as revealed by the A-Index]; and (c) the nature of the subsidies at issue, and in particular, whether or not the nature of these subsidies is such as to have discernible price suppressive effects".[482] Next, the Panel found that the price suppression it had found to exist was "significant" price suppression under Article 6.3(c)[483], "given the relative magnitude of United States production and exports, the overall price trends we identified in the world market, ... the nature of the mandatory United States subsidies in question ... and the readily available evidence of the order of magnitude of the subsidies".[484]

420. The Panel went on to find that "a causal link exists between" the price-contingent subsidies and the significant price suppression it had found[485], for four main reasons:[486]

[477]Panel Report, para. 7.1311.

[478]*Ibid.*, para. 7.1274.

[479]*Ibid.*, para. 7.1313.

[480]United States' appellant's submission, para. 238.

[482]*Ibid.*, para. 7.1280.

[483]*Ibid.*, para. 7.1333.

[484]Panel Report, para. 7.1332. (footnotes omitted) We address the United States' arguments regarding the magnitude or quantification of the subsidies *infra*, paras. 459-472.

[485]Panel Report, para. 7.1355.

[486]*Ibid.*, para. 7.1347.

> [T]he United States exerts a substantial proportionate influence in the world upland cotton market.[487]
>
> [T]he [price-contingent subsidies] are directly linked to world prices for upland cotton, thereby insulating United States producers from low prices.[488]
>
> [T]here is a discern[i]ble temporal coincidence of suppressed world market prices and the price-contingent United States subsidies.[489]
>
> [C]redible evidence on the record concerning the divergence between United States producers' total costs of production and revenue from sales of upland cotton since 1997 ... supports the proposition that United States upland cotton producers would not have been economically capable of remaining in the production of upland cotton had it not been for the United States subsidies at issue and that the effect of the subsidies was to allow United States producers to sell upland cotton at a price lower than would otherwise have been necessary to cover their total costs.[490]

421. Finally, the Panel found that the following "other causal factors alleged by the United States"[491] "do not attenuate the genuine and substantial causal link that we have found between the United States mandatory price-contingent subsidies at issue and the significant price suppression. Nor do they reduce the effect of the mandatory price-contingent subsidies to a level which cannot be considered 'significant'"[492]:

> [W]eakness in world demand for cotton due to competing, low-priced synthetic fibres, and weak world economic growth.[493]
>
> [B]urgeoning United States textile imports, reflecting the strong United States dollar since the mid-1990's and declining United States competitiveness in textile and apparel production[.][494]
>
> [T]he strong United States dollar since the mid-1990's[.][495]
>
> China subsidized the release of millions of bales of government stocks between 1999 and 2001[.][496]

[491]*Ibid.*, para. 7.1357.

[492]*Ibid.*, para. 7.1363.

[493]Panel Report, para. 7.1358.

[494]*Ibid.*, para. 7.1359.

[495]*Ibid.*, para. 7.1360.

[496]*Ibid.*, para. 7.1361.

> [U]pland cotton planting decisions ... are driven by other factors such as (1) the effect of technological factors of upland cotton production ... (2) the relative movement of upland cotton prices *vis-à-vis* prices of competing crops ... (3) the expected prices for the upcoming crop year.[497]

(b) Appeal by the United States

422. In addition to the alleged errors already discussed in connection with the relevant "market" and "price", the United States contends on appeal that the Panel erred in finding that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*.[498] These errors, according to the United States, are:

(a) in relation to the effects of the price-contingent subsidies:

(i) failing to analyze "the relevant production decision faced by farmers – that is, the decision on what to plant"[499];

(ii) ignoring data indicating that United States upland cotton production responded to market signals[500];

(iii) "failing to examine supply response in other countries – that is, to what extent other countries would increase supply in response to any alleged decrease in cotton production resulting from the absence of U.S. payments"[501]; and

(iv) "the four main, cumulative grounds the Panel identified supporting a finding of causation do not withstand scrutiny"[502];

(b) in relation to the quantification of subsidies:

(i) "accepting Brazil's argument that, for purposes of a serious prejudice claim, Brazil need not allege and demonstrate, and the Panel need not find, the amount of the challenged subsidy that benefits upland cotton"[503];

(ii) finding "that subsidies not tied to current production of upland cotton (decoupled payments) need not be allocated over the total sales of the recipients"[504]; and

(iii) failing to determine "the extent to which processed cotton benefits from subsidies provided with respect to raw cotton"[505]; and

[497] *Ibid.*, para. 7.1362.

[498] *Ibid.*, paras. 7.1416 and 8.1(g)(i).

[499] United States' appellant's submission, paras. 136 and 154.

[500] *Ibid.*, para. 155.

[501] United States' appellant's submission, para. 227.

[502] *Ibid.*, para. 180.

[503] *Ibid.*, para. 240.

[504] *Ibid.*, para. 264.

(c) in relation to the effect of subsidies over time:

(i) concluding "that the payments need not be allocated to the marketing year to which they relate"[506]; and

(ii) "making a finding of present serious prejudice related to past recurring subsidy payments", in the absence of a finding "that the past recurring subsidy payments at issue (that is, those from marketing years 1999-2001) had continuing effects at the time of panel establishment".[507]

(c) Meaning of "Significant Price Suppression"

423. A central question before the Panel with regard to Article 6.3(c) of the *SCM Agreement* was whether the effect of the subsidy is "significant price suppression".[508] It is worth setting out the Panel's understanding of the meaning of the term "price suppression". In explaining this term, the Panel stated, in paragraph 7.1277 of the Panel Report:

> Thus, "*price suppression*" refers to the situation where "prices" – in terms of the "amount of money set for sale of upland cotton" or the "value or worth" of upland cotton – either are prevented or inhibited from rising (i.e. they do not increase when they otherwise would have) or they do actually increase, but the increase is less than it otherwise would have been. *Price depression* refers to the situation where "prices" are pressed down, or reduced.[1388]

[1388] In the remainder of our analysis, we use the term "price suppression" to refer both to an actual decline (which otherwise would not have declined, or would have done so to a lesser degree) and an increase in prices (which otherwise would have increased to a greater degree). (emphasis added)

424. Although the Panel first identified "price suppression" and "price depression" as two separate concepts in paragraph 7.1277, footnote 1388 of the Panel Report suggests that, for its analysis, the Panel used the term "price suppression" to refer to both price suppression and price depression. We recognize that "the situation where 'prices' ... are prevented or inhibited from rising" and "the situation where 'prices' are pressed down, or reduced"[509] may overlap. Nevertheless, it would have been preferable, in our view, for the Panel to avoid using the term "price suppression" as short-hand for both price suppression and price depression, given that Article 6.3(c) of the *SCM Agreement* refers to "price suppression" and "price depression" as distinct concepts. We agree, however, that the Panel's description of "price suppression" in paragraph 7.1277 of the Panel Report reflects the ordinary meaning of that term, particularly when read in conjunction with the French and Spanish versions of

[505] *Ibid.*, para. 301.

[506] *Ibid.*, para. 277.

[507] *Ibid.*, para. 278.

[508] According to the Panel, Brazil claimed that certain United States subsidies "significantly suppress[ed] upland cotton prices" within the meaning of Article 6.3(c). (Panel Report, para. 7.1108(i))

[509] Panel Report, para. 7.1277.

Article 6.3(c)[510], as required by Article 33(3) of the *Vienna Convention on the Law of Treaties* (the "*Vienna Convention*").[511]

425. The Panel described its task in assessing "price suppression" under Article 6.3(c) as follows:

> We need to examine whether these prices were suppressed, that is, lower than they would have been without the United States subsidies in respect of upland cotton.[512]

426. As regards the word "significant" in the context of "significant price suppression" in Article 6.3(c), the Panel found that this word means "important, notable or consequential".[513]

427. Article 6.3(c) does not set forth any specific methodology for determining whether the effect of a subsidy is significant price suppression. There may well be different ways to make this determination. However, we find no difficulty with the Panel's approach in the particular circumstances of this dispute. We therefore turn to an examination of how the Panel carried out its assessment.

(d) Panel's Order of Analysis

428. In addressing Brazil's claims of serious prejudice under Articles 5(c) and 6.3(c) of the *SCM Agreement*, the Panel began by examining whether the effect of the challenged subsidies was significant price suppression within the meaning of Article 6.3(c). The Panel explained that it adopted this order of analysis because both parties agreed that the Panel could not make an affirmative finding of serious prejudice under Article 5(c) without making an affirmative finding that the effect of the challenged subsidies is significant price suppression within the meaning of Article 6.3(c).[514] Neither party appeals this decision by the Panel.

429. Having determined the relevant products, market, and price, the Panel continued its analysis with respect to Article 6.3(c) in the following order:

> Is there "price suppression"?[515]
>
> Is it "significant" price suppression?[516]
>
> "The effect of the subsidy"[517]

[510]The French version states, in part, "la subvention ... a pour effet d'*empêcher des hausses de prix* ou de déprimer les prix ... dans une mesure notable"; the Spanish version states, in part, "la subvención ... tenga un efecto significativo de contención de la *subida de los precios*, reducción de los precios". (emphasis added)

[511]Done at Vienna, 23 May 1969, 1155 U.N.T.S. 331; 8 International Legal Materials 679. Article 33(3) provides: "The terms of the treaty are presumed to have the same meaning in each authentic text."

[512]Panel Report, para. 7.1288. See also *ibid.*, para. 7.1279.

[513]*Ibid.*, para. 7.1326.

[514]*Ibid.*, para. 7.1228.

[515]*Ibid.*, heading (ii) to paras. 7.1275-7.1315.

[516]*Ibid.*, heading (iii) to paras. 7.1316-7.1333.

[517]*Ibid.*, heading (k) to paras. 7.1334-7.1363.

430. The United States contests the Panel's decision to address "significant price suppression" before addressing "the effect of the subsidy", arguing that "[a] finding of price suppression *without* any prior finding of 'the effect of the subsidy' would be meaningless; how could one know that prices were lower than they otherwise would have been without knowing what allegedly caused the prices to be lower?".[518] The United States also contends that the Panel used "circular" reasoning by assuming causation in finding price suppression and using its conclusion on price suppression to support its finding on causation (the effect of the subsidy).[519]

431. As noted above, Article 6.3(c) is silent as to the sequence of steps to be followed in assessing whether the effect of a subsidy is significant price suppression. We note that Article 6.8 indicates that the existence of serious prejudice pursuant to Articles 5(c) and 6.3(c) is to be determined on the basis of information submitted to or obtained by the panel, including information submitted in accordance with Annex V of the *SCM Agreement*.[520] Annex V provides some limited guidance about the type of information on which a panel might base its assessment under Article 6.3(c). But we find little other guidance on this issue. The text of Article 6.3(c) does not, however, preclude the approach taken by the Panel to examine first whether significant price suppression exists and then, if it is found to exist, to proceed further to examine whether the significant price suppression is the effect of the subsidy. The Panel evidently considered that, in the absence of significant price suppression, it would not need to proceed to analyze the effect of the subsidy. We see no legal error in this approach.

432. One might contend that, having decided to separate its analysis of significant price suppression from its analysis of the effects of the challenged subsidies, the Panel's price suppression analysis should have addressed prices without reference to the subsidies and their effects. For instance, in its significant price suppression analysis, the Panel could have addressed purely price developments in the world market for upland cotton, such as whether prices fell significantly during the period under examination or whether prices were significantly lower during that period than other periods. Then, in its "effects" analysis, the Panel could have addressed causal factors related to the nature of the subsidies, their relationship to prices, their magnitude, and their impact on production and exports. In this causal analysis, the Panel could also have addressed factors other than the challenged subsidies that may have been suppressing the prices in question.

433. However, the ordinary meaning of the transitive verb "suppress" implies the existence of a subject (the challenged subsidies) and an object (in this case, prices in the world market for upland cotton). This suggests that it would be difficult to make a judgement on significant price *suppression* without taking into account the effect of the subsidies.[521] The Panel's definition of price suppression, explained above[522], reflects this problem; it includes the notion that prices "do not increase when they *otherwise* would have" or "they do actually increase, but the increase is less than it *otherwise* would have been".[523] The word "otherwise" in this context refers to the hypothetical situation in which the challenged subsidies are absent. Therefore, the fact that the Panel may have

[518]United States' appellant's submission, para. 230. (original emphasis)

[519]*Ibid.*, para. 131.

[520]Annex V contains "Procedures for Developing Information Concerning Serious Prejudice".

[521]Similarly, it might be difficult to ascertain whether imports or exports are "displace[d]" or "impede[d]" under paragraphs (a) or (b) of Article 6.3 of the *SCM Agreement* without considering the effect of the challenged subsidy. By way of contrast, it might be possible to determine whether the world market share of a subsidizing Member has increased within the meaning of Article 6.3(d) before assessing whether any increase is the effect of the subsidy.

[522]*Supra*, para. 423.

[523]Panel Report, para. 7.1277. (emphasis added)

addressed some of the same or similar factors in its reasoning as to significant price suppression and its reasoning as to "effects" is not necessarily wrong.[524]

434. The specific factors that the Panel examined in determining whether or not "price suppression" had occurred were: "(a) the relative magnitude of the United States' production and exports in the world upland cotton market; (b) general price trends; and (c) the nature of the subsidies at issue, and in particular, whether or not the nature of these subsidies is such as to have discernible price suppressive effects".[525] In the absence of explicit guidance on assessing significant price suppression in the text of Article 6.3(c), we have no reason to reject the relevance of these factors for the Panel's assessment in the present case. An assessment of "general price trends"[526] is clearly relevant to significant price suppression (although, as the Panel itself recognized, price trends alone are not conclusive).[527] The two other factors—the nature of the subsidies and the relative magnitude of the United States' production and exports of upland cotton—are also relevant for this assessment. We are not persuaded that the fact that these latter factors were also considered in connection with the Panel's analysis of "the effect of the subsidy"[528] amounts to legal error for that reason alone.

435. Turning to the Panel's assessment of the "effect of the subsidy"[529], the Panel addressed the question whether there was a "causal link"[530] between the price-contingent subsidies and the significant price suppression it had found. It then addressed the impact of "[o]ther alleged causal factors".[531] We observe that Article 6.3(c) does not use the word "cause"; rather, it states that "the effect of the subsidy is ... significant price suppression". However, the ordinary meaning of the noun "effect" is "[s]omething ... caused or produced; a result, a consequence".[532] The "something" in this context is significant price suppression, and thus the question is whether significant price suppression is "caused" by or is a "result" or "consequence" of the challenged subsidy. The Panel's conclusion that "[t]he text of the treaty requires the establishment of a causal link between the subsidy and the significant price suppression"[533] is thus consistent with this ordinary meaning of the term "effect". This is also confirmed by the context provided by Article 5(c) of the *SCM Agreement*, which provides:

> No Member should cause, through the use of any subsidy referred to in paragraphs 1 and 2 of Article 1, adverse effects to the interests of other Members, i.e.:
>
> ...
>
> (c) serious prejudice to the interests of another Member.

[524]An analysis under Article 6.3(c) *SCM Agreement* could involve assessing similar facts from different perspectives in order to answer different factual and legal questions when addressing "significant price suppression" and "the effect of" the challenged subsidies.

[531]*Ibid.*, heading (ii) to paras. 7.1357-7.1363.

[532]*Shorter Oxford English Dictionary*, 5th ed., W.R. Trumble, A. Stevenson (eds.) (Oxford University Press, 2002), Vol. 1, p. 793.

[533]Panel Report, para. 7.1341.

436. As the Panel pointed out, "Articles 5 and 6.3 ... do not contain the more elaborate and precise 'causation' and non-attribution language" found in the trade remedy provisions of the *SCM Agreement*.[534] Part V of the *SCM Agreement*, which relates to the imposition of countervailing duties, requires, *inter alia*, an examination of "any known factors other than the subsidized imports which at the same time are injuring the domestic industry".[535] However, such causation requirements have not been expressly prescribed for an examination of *serious prejudice* under Articles 5(c) and Article 6.3(c) in Part III of the *SCM Agreement*. This suggests that a panel has a certain degree of discretion in selecting an appropriate methodology for determining whether the "effect" of a subsidy is significant price suppression under Article 6.3(c).

437. Nevertheless, we agree with the Panel that it is necessary to ensure that the effects of other factors on prices are not improperly attributed to the challenged subsidies.[536] Pursuant to Article 6.3(c) of the *SCM Agreement*, "[s]erious prejudice in the sense of paragraph (c) of Article 5 may arise" when "the effect of *the subsidy* is ... significant price suppression". (emphasis added) If the significant price suppression found in the world market for upland cotton were caused by factors other than the challenged subsidies, then that price suppression would not be "the effect of" the challenged subsidies in the sense of Article 6.3(c). Therefore, we do not find fault with the Panel's approach of "examin[ing] whether or not 'the effect of the subsidy' is the significant price suppression which [it had] found to exist in the same world market"[537] and separately "consider[ing] the role of other alleged causal factors in the record before [it] which may affect [the] analysis of the causal link between the United States subsidies and the significant price suppression."[538]

438. The Panel's approach with respect to causation and non-attribution is similar to that reflected in Appellate Body decisions in the context of other WTO agreements. In connection with the *Agreement on Safeguards*, the Appellate Body has stated that a causal link "between increased imports of the product concerned and serious injury or threat thereof"[539] "involves a genuine and substantial relationship of cause and effect between these two elements"[540], and it has also required non-attribution of effects caused by other factors.[541] In the context of the *Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994* (the "*Anti-Dumping Agreement*"), the Appellate Body has stated: "[i]n order that investigating authorities, applying Article 3.5, are able to ensure that the injurious effects of the other known factors are not 'attributed' to dumped imports, they must appropriately assess the injurious effects of those other factors."[542] It must be borne in mind that these provisions of the *Agreement on Safeguards* and the *Anti-Dumping Agreement*, as well as the provisions of Part V of the *SCM Agreement*, relate to a determination of "injury" rather than "serious prejudice", and they apply in different contexts and with different purposes. Therefore, they must not be automatically transposed into Part III of the *SCM Agreement*. Nevertheless, they may suggest ways of assessing whether the effect of a subsidy is significant price suppression rather than it being the effect of other factors.

[534]*Ibid.*, para. 7.1343.

[535]See Article 15.5 of the *SCM Agreement*. Article 3.5 of the *Anti-Dumping Agreement* and Article 4.2(b) of the *Agreement on Safeguards* are broadly analogous to Article 15.5 of the *SCM Agreement*.

(e) Rationale for the Panel's Finding that the Effect of the Price-Contingent Subsidies is Significant Price Suppression

439. We now address the United States' appeal relating to the specific reasons behind the Panel's conclusion that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*. The United States alleges that the Panel ignored or failed to take into account certain evidence and arguments in analyzing the effect of the price-contingent subsidies, and that the four main grounds on which the Panel based its analysis "do not withstand scrutiny".[543] We begin by addressing the three key elements that the United States alleges the Panel failed to include in its analysis, and then we address the reasons the Panel relied upon for its conclusion that the effect of the price-contingent subsidies is significant price suppression.

440. First, the United States contends that the Panel failed to address the relevant economic decision faced by United States upland cotton farmers at the time of planting, namely, the decision of whether to plant upland cotton or alternative crops (and how much of each). According to the United States, planted acreage of United States upland cotton responds to expected market prices at the time of harvest, rather than current prices at the time of planting.[544] Brazil counters that farmers decide what to plant based on expected market prices as well as expected payments under the challenged subsidy programs, such that planted acreage responds to both these factors.[545] Brazil also points out that farmers sell their upland cotton throughout the course of a year, at whatever prices they can obtain during the year.[546] During the oral hearing, the United States accepted that farmers decide what to plant based on expected market prices as well as expected subsidies.[547] However, according to the United States, for the 1999-2001 and 2003 crop years, when farmers made their planting decisions, the expected upland cotton price (that is, the price the farmers expected to receive upon harvest) was higher than the "income guarantee set by the marketing loan rate, suggesting that the effect of the subsidy on the planting decision was minimal".[548]

441. We note that the United States presented extensive evidence and arguments to the Panel in relation to expected prices and planting decisions.[549] Brazil also points to several questions asked by the Panel and responses to the Panel regarding planting decisions of United States upland cotton producers to demonstrate that the Panel was aware of the United States' arguments in this regard and took them into account.[550] The Panel Report makes it clear that the Panel specifically addressed "upland cotton planting decisions", "expected prices", and "expected market revenue".[551] The way in which United States upland cotton farmers make decisions relating to the production of upland cotton, and the basis on which they make such decisions, are factual matters that fall within the Panel's task of weighing and assessing the relevant evidence, and we will not review these matters. However, in our view, the application of the legal requirements of Article 6.3(c) to the facts determined by the Panel falls within the scope of appellate review.[552]

442. Turning first to Chart 2 at paragraph 7.1293 of the Panel Report, the United States submits that it is defective because it "assumes that cotton production decisions are made continuously throughout the marketing year", it "does not identify the planting decision period", and it "does not identify the expected harvest season prices at the time of that planting decision".[553] The Panel explained that it used this chart to demonstrate "that the per unit payment under the marketing loan programme increases when the gap between the adjusted world price and the loan rate widens"[554] and "that except for a short period in MY 2000, the adjusted world price was *below* the marketing loan rate throughout virtually *the whole period from* MY 1999-2002".[555] The Panel concluded from this graph, in connection with marketing loan program payments, that "[t]he further the adjusted world price drops, the greater the extent to which United States upland cotton producers' revenue is insulated from the decline, numbing United States production decisions from world market signals".[556]

443. The Panel explained how the marketing loan program payments operate and found that these payments accounted for more than half of United States upland cotton producer revenue.[557] This demonstrates that, in assessing the effect of marketing loan program payments under Article 6.3(c), the Panel took into account the magnitude of the payments relative to the revenue of United States upland cotton producers and found that marketing loan program payments made up a significant proportion of producers' revenue.[558]

444. During the oral hearing, the United States presented data to show that, when planting decisions were made for the 1999, 2000, 2001, and 2003 upland cotton crops, the *expected* upland cotton price upon harvest was higher than the marketing loan rate.[559] Accordingly, the United States contends, the marketing loan program payments would have had only a minimal effect on planting decisions, because farmers would have expected to receive a higher price from the sale of their upland cotton and no marketing loan program payments.

445. We note, based on the evidence provided by the United States, that, for four of the five upland cotton crops between 1999 and 2003, the *expected* harvest price at the time of making planting decisions was always substantially higher than the *actual* price realized at the time of harvest of the crop. This suggests that although farmers had expected higher prices in making their planting decisions, they were also aware that if actual prices were ultimately lower, they would be "insulated"[560] by government support, including not only marketing loan program payments but also counter-cyclical payments, which were based on a target upland cotton price of 72.4 cents per pound.[561] We are therefore satisfied that the Panel adopted a plausible view of the facts in connection

[556]*Ibid.*, para. 7.1294.

[557]*Ibid.*, para. 7.1294.

[558]We return to the issue of quantification of the price-contingent subsidies in section VI.A.5(f) below.

[559]This data corresponds with the United States' written argument that "the uncontroverted evidence before the Panel ... showed that U.S. cotton plantings respond to expected prices *at the time planting decisions are taken*". (United States' appellant's submission, para. 137) (original emphasis) The United States presented similar data to the Panel. (See, for example, United States' further rebuttal submission to the Panel, paras. 162-163)

[560]Panel Report, para. 7.1294.

[561]*Ibid.*, para. 7.225.

with expected prices and planting decisions, even though it attributed to these factors a different weight or meaning than did the United States. As the Appellate Body has said, it is not necessary for panels to "accord to factual evidence of the parties the same meaning and weight as do the parties".[562]

446. Turning to the second key element of the United States' submission, the United States argues that the Panel ignored data showing that "U.S. cotton planted acreage did respond to expected market prices of cotton and other competing crops", "U.S. farmers change cotton acreage commensurately with changes made by cotton farmers in the rest of the world", and "the U.S. share of world cotton production has been stable, again demonstrating that U.S. farmers respond to the same market signals as cotton farmers in the rest of the world do".[563] The Panel Report contains several passages suggesting that the Panel did take into account evidence of this kind. For example, the Panel considered the United States' evidence regarding expected upland cotton prices[564] and set out the United States' share of world upland cotton production during the relevant period.[565] It would not amount to an error in the application of Article 6.3(c) to the facts of this case for the Panel not to address specifically in its Report every item of evidence provided and to refer explicitly to every argument made by the parties, if the Panel considered certain items or arguments less significant for its reasoning than others.[566]

447. We now address the third key element of the United States' submission. The United States argues that "the Panel should have considered to what extent other market participants would increase supply or reduce demand in response to any alleged increase in cotton prices resulting from the absence of U.S. payments".[567] Brazil responds that the Panel took this factor into account because it took into account relevant aspects of certain econometric models incorporating this factor: "the models track price effects that would occur as a result of reduced U.S. upland cotton supply *and* increased supply from other countries".[568] The participants agree that these models incorporate the supply response of third countries.[569] The dispute lies in whether the Panel *took into account* supply responses of third countries, as reflected in these models or otherwise.

448. Whether and to what extent other upland cotton producers would have increased supply or reduced demand in the absence of the United States' price-contingent subsidies is ultimately an empirical inquiry. The answer to this inquiry depends on an assessment of various factors bearing on the ability of cotton producers to assess and respond to supply and demand in the world upland cotton market. We note that the Panel indicated expressly that it had taken the models in question into account.[570] It would have been helpful had the Panel revealed how it used these models in examining

[562]Appellate Body Report, *Australia – Salmon*, para. 267.

[563]United States' appellant's submission, para. 155.

[564]Panel Report, para. 7.1362.

[565]*Ibid.*, para. 7.1282. In this paragraph, the Panel stated: "In the marketing years 1999 to 2002, the respective shares of the United States in world production of upland cotton were approximately 19.2, 19.3, 20.6 and 19.6 per cent, respectively".

[566]Appellate Body Report, *EC – Hormones*, paras. 135 and 138.

[567]United States' appellant's submission, para. 237.

[569]In relation to models presented by Brazil, both parties refer to Brazil's further submission to the Panel of 9 September 2003, paras. 9-10 of Annex I (which is entitled "A Quantitative Simulation Analysis of the Impact of U.S. Cotton Subsidies on Cotton Prices and Quantities by Professor Daniel Sumner"). (United States' appellant's submission, para. 235; Brazil's appellee's submission, para. 793) In relation to third party studies, see United States' appellant's submission, para. 236 and Brazil's appellee's submission, paras. 795-796.

[570]Panel Report, paras. 7.1205, 7.1209 and 7.1215.

the question of third country responses. Nevertheless, we are not prepared to second-guess the Panel's appreciation and weighing of the evidence before it, and we do not see any error on the part of the Panel in the application of the law to the facts in addressing this question.

449. We now turn to the four main grounds[571] on which the Panel based its conclusion that "a causal link exists between" the price-contingent subsidies and the significant price suppression it had found[572], which the United States contests.[573] The first reason the Panel provided for finding a "causal link"[574] was the "substantial proportionate influence" of the United States "in the world upland cotton market ... flow[ing] ... from the magnitude of the United States production and export of upland cotton".[575] The United States counters that, "absent some analysis of how U.S. cotton competes with cotton from other sources, relative sizes are meaningless."[576] We agree that, in and of itself, the degree of influence of the United States in the world market for upland cotton may not be conclusive as to the effect of the price-contingent subsidies on prices in that market. However, if the price-contingent subsidies increased United States production and exports or decreased prices for United States upland cotton, then the fact that United States production and exports of upland cotton significantly influenced world market prices would make it more likely that the effect of the price-contingent subsidies is significant price suppression. Accordingly, this fact seems to support the Panel's conclusion, when read in conjunction with its other findings.

450. The second reason the Panel provided for finding a "causal link"[577] was its view that the price-contingent subsidies "are directly linked to world prices for upland cotton".[578] This conclusion flowed from the Panel's earlier assessment—in connection with its analysis of significant price suppression—of the *nature* of the price-contingent subsidies.[579] The nature of a subsidy plays an important role in any analysis of whether the effect of the subsidy is significant price suppression under Article 6.3(c). With respect to marketing loan program payments, the Panel found that "[t]he further the adjusted world price drops, the greater the extent to which United States upland cotton producers' revenue is insulated from the decline".[580] As a result, during the 1999-2002 marketing years, United States production and exports remained stable or increased, even though prices of United States upland cotton decreased.[581] The Panel found that Step 2 payments stimulate domestic and foreign demand for United States upland cotton[582] by "eliminating any positive difference between United States internal prices and international prices of upland cotton".[583] The Panel stated that Step 2 payments "result in lower world market prices than would prevail in their absence".[584] Finally, the Panel found that market loss assistance payments and counter-cyclical payments are made in response to low prices for upland cotton[585] and stimulate United States production of upland cotton

[585]*Ibid.*, para. 7.1301.

by reducing the "total and per unit revenue risk associated with price variability".[586] The United States contends that the Panel's analysis of the price-contingent subsidies was "deficient".[587] However, the Panel found that the price-contingent subsidies stimulated United States production and exports of upland cotton and thereby lowered United States upland cotton prices.[588] This seems to us to support the Panel's conclusion that the effect of the price-contingent subsidies is significant price suppression.[589]

451. The third reason the Panel provided for finding a "causal link"[590] was that "there is a discern[i]ble temporal coincidence of suppressed world market prices" and the price-contingent subsidies.[591] The United States describes this as "an exercise in spurious correlation".[592] However, in our view, one would normally expect a discernible correlation between significantly suppressed prices and the challenged subsidies if the effect of these subsidies is significant price suppression. Accordingly, this is an important factor in any analysis of whether the effect of a subsidy is significant price suppression within the meaning of Article 6.3(c). However, we recognize that mere correlation between payment of subsidies and significantly suppressed prices would be insufficient, without more, to prove that the effect of the subsidies is significant price suppression.

452. The fourth reason the Panel provided for finding a "causal link"[593] was the "divergence between United States producers' total costs of production and revenue from sales of upland cotton since 1997".[594] The United States argues that the Panel should have examined variable rather than total costs[595] in assessing whether "United States upland cotton producers would ... have been economically capable of remaining in the production of upland cotton had it not been for the United States subsidies at issue".[596]

453. We agree with the general proposition of the United States that variable costs may play a role in farmers' decision-making as to whether to plant upland cotton or some alternative crop, and how much of each crop to plant. From a short-term perspective, variable costs may be particularly important. However, from a longer-term perspective, total costs may be relevant. Based on the evidence before it regarding upland cotton production in the United States, the Panel concluded that "the six-year period from 1997-2002 ... lends itself to an assessment of the medium- to longer-term examination of developments in the United States upland cotton industry".[597] The Panel found that "the effect of the subsidies was to allow United States producers to sell upland cotton at a price lower than would otherwise have been necessary to cover their total costs".[598] In the circumstances of this

[586]*Ibid.*, para. 7.1302 and footnote 1410 to para. 7.1302.

[587]United States' appellant's submission, para. 185.

[588]Panel Report, para. 7.1291, 7.1295-7.1296, 7.1299, and 7.1308-7.1311.

[589]We do not exclude the possibility that challenged subsidies that are not "price-contingent" (to use the Panel's term) could have some effect on production and exports and contribute to price suppression.

[590]Panel Report, para. 7.1347.

[597]*Ibid.*, para. 7.1354.

[598]*Ibid.*, para. 7.1353.

dispute, we do not consider that the Panel's reliance on total rather than variable costs of production amounts to an error vitiating the Panel's analysis under Article 6.3(c).

454. Finally, we consider the "other causal factors alleged by the United States"[599] to have had an effect on prices. The United States argues that the Panel erred in addressing upland cotton planting decisions as an "other causal factor", given that the United States maintained that the price-contingent subsidies did not cause price suppression at all.[600] We disagree. We have already addressed the United States' arguments with respect to planting decisions, and we find no fault in the Panel's consideration of the issue of "planting decisions".[601]

455. The United States also argues that United States upland cotton exports increased during 1998-2002[602] because textile imports increased in the same period, leading to a decline in the use of cotton by domestic mills.[603] The Panel regarded this factor as "concerning support, rather than suppression, of world cotton prices".[604] However, even assuming that increasing textile imports led to increased exports of upland cotton, this does not mean that the price-contingent subsidies did not have the effect of significant price suppression. It was not unreasonable for the Panel to conclude that the "effect" of the price-contingent subsidies was significant price suppression, even if some other factor might also have price-suppressive effects.[605]

456. The remaining three "other causal factors" that the Panel examined were weakness in world demand for upland cotton, the strong United States dollar, and the release by China of government upland cotton stocks between 1999 and 2001.[606] The United States does not specifically address these three factors in its appellant's submission. However, the Panel's discussion of these "other factors" was part of the reasoning leading to the Panel's conclusion under Article 6.3(c), which the United States does appeal.[607] The Panel found that the United States' argument that weak demand caused low prices was inconsistent with the increase in United States upland cotton production and the absence of "pronounced declines" in world upland cotton consumption.[608] With regard to the United States dollar, the Panel stated that exchange rates would affect market prices, but that market prices did not guide "United States producer decisions (except to the extent that, when they are lower than the marketing loan rate, they dictate the magnitude of United States government subsidies to producers)".[609] The Panel pointed to evidence on the record confirming that marketing loan program payments and Step 2 payments "offset" declines in market prices.[610] With respect to upland cotton stocks released by China, the Panel agreed with the United States (and Brazil) that "an infusion of a large amount of supply onto the market would exert a downward pressure on prices".[611] However, the

[599]*Ibid.*, para. 7.1357.

[600]United States' appellant's submission, para. 138.

[601]*Supra*, paras. 440-445.

[602]The United States also argues that 1998 was an inappropriate base year for the Panel's examination because of unusually weak world demand and reduced United States production due to drought. (United States' appellant's submission, para. 209)

[603]United States' appellant's submission, para. 211.

[604]Panel Report, para. 7.1359.

[605]In this regard, see *supra*, para. 437 and *infra*, para. 457.

[606]Panel Report, paras. 7.1358, 7.1360, and 7.1361.

[607]In appealing this finding, the United States refers in a footnote to paras. 7.1107-7.1416 and 8.1(g)(i) of the Panel Report. (United States' appellant's submission, footnote 531 to para. 516(8))

[608]Panel Report, para. 7.1358.

[609]*Ibid.*, para. 7.1360.

[610]*Ibid.*, footnote 1477 to para. 7.1360.

[611]*Ibid.*, para. 7.1361.

Panel pointed out that the stock released by the Chinese government "was smaller in magnitude than the United States exports over this period".[612]

457. The Panel concluded:

> Although some of these factors may have contributed to lower, and even suppressed, world upland cotton prices during MY 1999-2002, they do not attenuate the genuine and substantial causal link that we have found between the United States mandatory price-contingent subsidies at issue and the significant price suppression. Nor do they reduce the effect of the mandatory price-contingent subsidies to a level which cannot be considered "significant".[613]

In sum, the Panel Report shows that it examined the other factors raised by the United States. Although the Panel found that some of them had price-suppressive effects, it did not attribute those effects to the United States' price-contingent subsidies.

458. Unlike in certain other instances under the WTO agreements, a panel conducting an analysis under Article 6.3(c) of the *SCM Agreement* is the first trier of facts, rather than a reviewer of factual determinations made by a domestic investigating authority. Bearing this in mind, we underline the responsibility of panels in gathering and analyzing relevant factual data and information in assessing claims under Article 6.3(c) in order to arrive at reasoned conclusions. In this case, the voluminous evidentiary record before the Panel included several economic studies, and substantial data and information. For its part, the Panel posed a large number of questions to which the parties submitted detailed answers. Overall, the Panel evidently conducted an extensive analysis, but we believe that, in its reasoning, the Panel could have provided a more detailed explanation of its analysis of the complex facts and economic arguments arising in this dispute. The Panel could have done so in order to demonstrate precisely how it evaluated the different factors bearing on the relationship between the price-contingent subsidies and significant price suppression. Nevertheless, in the light of the Panel's examination of the relevant evidence, coupled with its legal reasoning, we find no legal error in the Panel's causation analysis.

(f) Amount of the Price-Contingent Subsidies

459. In reaching the conclusion that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*, the Panel made the following statements with respect to the amount of the price-contingent subsidies as a whole:

> We have readily available information on the record showing us that the price-contingent subsidies in question involve very large amounts of United States government money benefiting United States upland cotton.[614]

> [W]hile we do not believe that it is strictly necessar[y] to calculate precisely the amount of the subsidies in question, we observe that we have readily available information on the record showing us that the price-contingent subsidies in question involve very large amounts of United States government money benefiting United States upland cotton production.[615]

In addition, the Panel made statements regarding the amount of individual price-contingent subsidies, namely marketing loan program payments and Step 2 payments.[616]

460. On appeal, the United States raises several points. First, the United States argues that the Panel was required to quantify the amount of the price-contingent subsidies benefiting upland cotton.[617] Secondly, the United States submits that counter-cyclical and market loss assistance payments to recipients who did not produce upland cotton did not benefit upland cotton at all and therefore could not have caused serious prejudice.[618] As for counter-cyclical and market loss assistance payments to recipients who produced both upland cotton and other products, the Panel should have "allocated [the subsidies] over the total sales of the recipients".[619] Thirdly, the United States maintains that the Panel erred, in its Article 6.3(c) analysis, by failing to identify the amount of benefit flowing to processed cotton from price-contingent subsidies paid to producers of raw cotton.[620]

461. Beginning with the text of Article 6.3(c), we note that this provision does not state explicitly that a panel needs to quantify the amount of the challenged subsidy. However, in assessing whether "the effect of the subsidy is ... significant price suppression", and ultimately serious prejudice, a panel will need to consider the effects of the subsidy on prices. The magnitude of the subsidy is an important factor in this analysis.[621] A large subsidy that is closely linked to prices of the relevant product is likely to have a greater impact on prices than a small subsidy that is less closely linked to prices. All other things being equal, the smaller the subsidy for a given product, the smaller the degree to which it will affect the costs or revenue of the recipient, and the smaller its likely impact on the prices charged by the recipient for the product. However, the size of a subsidy is only one of the factors that may be relevant to the determination of the effects of a challenged subsidy. A panel needs to assess the effect of the subsidy taking into account all relevant factors.

462. In order for a panel to find that a subsidy has the effect of significant price suppression, or some other effect mentioned in Article 6.3(c), the panel must determine that the payment is a specific subsidy within the meaning of Articles 1 and 2 of the *SCM Agreement*.[622] The Panel did so in this

[612]Panel Report, para. 7.1361.

[613]*Ibid.*, para. 7.1363.

[614]Panel Report, para. 7.1308.

[615]*Ibid.*, para. 7.1349.

[616]"While we do not believe it is necessary to calculate the precise amount of the subsidies in question, we observe that we have this information readily available on the record. This is a very large amount". (Panel Report, paras. 7.1297 and 7.1300) (footnote omitted)

[617]United States' appellant's submission, para. 240. The United States does not contest the Panel's view that, in assessing the price-contingent subsidies under Article 6.3(c), it was not required to quantify *precisely* the amount of the subsidies benefiting upland cotton. (See United States' appellant's submission, para. 258; Panel Report, paras. 7.1173, 7.1186 and 7.1226) The United States clarified this point in response to questioning during the oral hearing.

[618]United States' appellant's submission, para. 242.

[619]*Ibid.*, para. 264.

[620]*Ibid.*, para. 301 and footnote 314 to para. 301. In response to questioning during the oral hearing, the United States confirmed that its appeal regarding "raw" and "processed" cotton relates to all the price-contingent subsidies.

[621]*Supra*, para. 432.

[622]As the United States points out, the word "subsidy" in Article 6.3(c) is defined in Article 1.1 of the *SCM Agreement*, and the subsidies subject to the disciplines in Part III of the *SCM Agreement* (including Articles 5(c) and 6.3(c)) must be "specific" pursuant to Article 1.2. A "subsidy" as defined in the *SCM Agreement* involves the conferral of a "benefit" under Article 1.1(b). (See United States' appellant's submission, paras. 244 and 245)

dispute[623], and we do not understand the United States to contest this conclusion. Rather, the United States argues that a panel needs to quantify the amount of the "benefit" conferred on the subsidized product by a challenged subsidy.[624] However, the definitions of a specific subsidy in Articles 1 and 2 do not expressly require the quantification of the "benefit" conferred by the subsidy on any particular product.

463. Turning to the context of Article 6.3(c), we note that Article 6.1(a)—which has now expired—contains the only reference in Part III of the *SCM Agreement* to a calculation of *ad valorem* subsidization of a product. Footnote 14 to Article 6.1(a) explains that this calculation is to be performed in accordance with Annex IV on the "Calculation of the Total Ad Valorem Subsidization (Paragraph 1(a) of Article 6)". No similar provisions are found in Article 6.3(c), which suggests that no precise quantification is envisaged in that provision.

464. The United States does not argue, as a general matter, that the methodologies in Part V of the *SCM Agreement* apply directly to a serious prejudice analysis under Part III of the *SCM Agreement*.[625] However, the United States identifies Part V as providing relevant context for the interpretation of Articles 5(c) and 6.3(c) of the *SCM Agreement*.[626] We note that the apparent rationale for Part III differs from that for Part V of the *SCM Agreement*. Under Part V, the amount of the subsidy must be calculated because, under Article 19.4 of the *SCM Agreement* and Article VI:3 of the GATT 1994, countervailing duties cannot be levied in excess of that amount. In contrast, under Part III, the remedy envisaged under Article 7.8 of the *SCM Agreement* is the withdrawal of the subsidy or the removal of the adverse effects. This remedy is not specific to individual companies. Rather, it targets the effects of the subsidy more generally. Article 6.3(c) thus goes in the same vein and does not require a precise quantification of the subsidies at issue.

465. The provisions of the *SCM Agreement* regarding quantification of subsidies reveal that the methodological approaches to quantification may be quite different, depending on the context and purpose of quantification.[627] The absence of any indication in Article 6.3(c) as to whether one of these methods, or any other method, should be used suggests to us that no such precise quantification was envisaged as a necessary prerequisite for a panel's analysis under Article 6.3(c).

466. Pursuant to Article 6.8, "the existence of serious prejudice" under Article 6.3(c) "should be determined on the basis of the information submitted to or obtained by the panel, including information submitted in accordance with the provisions of Annex V" of the *SCM Agreement*. The United States is correct that Annex V refers to "information ... as necessary to establish the existence and amount of subsidization" (in paragraph 2) and "data concerning the amount of the subsidy in question" (in paragraph 5)[628], but Annex V also refers to other information.[629] This demonstrates that the amount of the subsidy, as well as other elements, are relevant for the assessment of whether price suppression exists. But we do not read Annex V as mandating the precise quantification of subsidies in order to determine their effect under Article 6.3(c).

467. In sum, reading Article 6.3(c) in the context of Article 6.8 and Annex V suggests that a panel should have regard to the magnitude of the challenged subsidy and its relationship to prices of the product in the relevant market when analyzing whether the effect of a subsidy is significant price suppression. In many cases, it may be difficult to decide this question in the absence of such an assessment. Nevertheless, this does not mean that Article 6.3(c) imposes an obligation on panels to quantify precisely the amount of a subsidy benefiting the product at issue in every case. A precise, definitive quantification of the subsidy is not required.

468. In the present case, the Panel could have been more explicit and specified what it meant by "very large amounts"[630], beyond including cross-references to its earlier findings regarding certain subsidies. Nevertheless, the information before the Panel clearly supports the Panel's general statements regarding the magnitude of the price-contingent subsidies.[631]

469. In addition to its arguments regarding quantification, the United States contends that the Panel should have used an allocation methodology to determine the amount of "decoupled" market loss assistance payments and counter-cyclical payments that benefits a given product. It argues that Annex IV of the *SCM Agreement* contains an "economically neutral"[632] allocation methodology agreed by WTO Members, pursuant to which "the subsidy would be allocated to the product according to the ratio of sales of that product to the total value of the recipient firm's sales".[633] It is clear that use of the Annex IV methodology is not expressly *required* by Article 6.3(c). We also observe that the Panel described as "appropriate"[634] certain alternative allocation methodologies to the one it relied upon that sought to reduce the amount of payments with respect to upland cotton base acres within the base acre dependent programs to account only for payments corresponding to acres that were actually planted with upland cotton.[635] In our view, even using these alternative allocation methodologies for market loss assistance payments and counter-cyclical payments, the Panel's conclusion regarding the order of magnitude of the price-contingent subsidies stands.[636]

470. Finally, we address the related United States argument that the Panel failed to determine the extent to which the "benefit" of price-contingent subsidies paid to producers of "raw" cotton flowed through to "processed" cotton. We note that the Panel seemed to regard market loss assistance payments and counter-cyclical payments as benefiting the production of upland cotton lint.[637] As for marketing loan program payments and Step 2 payments, the Panel suggested that it is a condition of

[623]Panel Report, paras. 7.1120 and 7.1154.

[625]*Ibid.*, para. 258, as confirmed during the oral hearing.

[626]United States' appellant's submission, para. 260.

[627]In relation to countervailing duties, Article 19.4 of the *SCM Agreement* specifies that the amount of the subsidy is to be "calculated in terms of subsidization per unit of the subsidized and exported product". Article 14 of the *SCM Agreement* adds that this calculation is to be done "in terms of the benefit to the recipient". In contrast, under Article 6.1(a) and paragraph 1 of Annex IV of the *SCM Agreement*, which relate to a claim of serious prejudice as mentioned above, the "total ad valorem subsidization of a product" is to be calculated "in terms of the cost to the granting government". (footnote omitted)

[628]United States' appellant's submission, paras. 247-252.

[629]For example, paragraph 3 of Annex V refers to information such as "customs data concerning imports and declared values of the products concerned". Paragraph 5 of Annex V refers to information such as "prices of the subsidized product, prices of the non-subsidized product, prices of other suppliers to the market, changes in the supply of the subsidized product to the market in question and changes in market shares".

eligibility for these payments that harvested cotton containing cotton lint and cottonseed "be 'baled' and/or 'ginned'".[638]

471. The United States contends that the Appellate Body's reasoning in *US – Softwood Lumber IV* indicates that it cannot be presumed that a "subsidy", as defined in Article 1.1 of the *SCM Agreement*, provided to a producer of an input (such as raw cotton) "passes through" to the producer of the processed product (in this case, upland cotton lint).[639] However, the Appellate Body's reasoning in that dispute focuses not on the requirements for establishing serious prejudice under Articles 5(c) and 6.3(c) of the *SCM Agreement*, but on the conduct of countervailing duty investigations pursuant to Part V of the *SCM Agreement*.[640]

472. As we have already noted[641], the requirement in Article VI:3 of the GATT 1994 and Article 19.4 of the *SCM Agreement* that countervailing duties on a product be limited to the amount of the subsidy accruing to that product finds no parallel in the provisions on actionable subsidies and pertinent remedies under Part III of the *SCM Agreement*. Therefore, the need for a "pass-through" analysis under Part V of the *SCM Agreement* is not critical for an assessment of significant price suppression under Article 6.3(c) in Part III of the *SCM Agreement*. Nevertheless, we acknowledge that the "subsidized product" must be properly identified for purposes of significant price suppression under Article 6.3(c) of the *SCM Agreement*. And if the challenged payments do not, in fact, subsidize that product, this may undermine the conclusion that the effect of the subsidy is significant suppression of prices of that product in the relevant market.

473. For these reasons, we find that the Panel did not err in its assessment of the amount of the subsidies for the purpose of its analysis under Article 6.3(c) of the *SCM Agreement*.

(g) Effect of the Price-Contingent Subsidies Over Time

474. The United States asserts that the Panel erred in making serious prejudice findings with respect to the price-contingent subsidies provided in marketing years 1999 to 2001.[642] According to the United States, a "recurring" subsidy payment does not confer a benefit after the year for which it is paid, and therefore it is no longer a "subsidy" under Article 1 of the *SCM Agreement*. A subsidy that is paid annually must be "allocated" or "expensed"[643] to the year "for which the payment is made"[644], and the effect of such a payment cannot be "significant price suppression" in any other year. The price-contingent subsidies "are made annually with respect to a particular marketing year"[645], and therefore the effect of those subsidies cannot extend to any later marketing year. In any case, the United States argues that the Panel did not find that these subsidy payments had "continuing effects".[646] The Panel was established in marketing year 2002[647] and, therefore, the Panel could not have found that the effect of the price-contingent subsidies for marketing years 1999 to 2001 is significant price suppression.[648]

475. We observe that the United States' contention that the effect of a subsidy must be "allocated" or "expensed" to the year in which it is paid is confined to "recurring" subsidies, that is, subsidies paid on an annual basis. The United States acknowledges that "non-recurring" subsidies could be "allocated" to subsequent years as well. Article 6.3(c) of the *SCM Agreement* applies to a subsidy whether it is "recurring" or "non-recurring". This Article does not suggest that the effect of a subsidy is limited to or continues only for a specified period of time.

476. In this appeal, we are asked to address the limited question of whether the effect of a subsidy may continue beyond the year in which it was paid, in the context of a significant price suppression analysis under Article 6.3(c) of the *SCM Agreement*. Whether the effect of a subsidy begins and expires in the year in which it is paid or begins in one year and continues in any subsequent year, and how long a subsidy can be regarded as having effects, are fact-specific questions. The answers to these questions may depend on the nature of the subsidy and the product in question. We see nothing in the text of Article 6.3(c) that excludes *a priori* the possibility that the effect of a "recurring" subsidy may continue after the year in which it is paid. Article 6.3(c) deals with the "effect" of a subsidy, and not with the financial accounting of the amount of the subsidy.[649]

477. The context of Article 6.3(c) within Part III of the *SCM Agreement* does not support the suggestion that the effect of a subsidy is immediate, short-lived, or limited to one year, regardless of whether or not it is paid every year. Article 6.2 of the *SCM Agreement* refers to the possibility of the subsidizing Member demonstrating that "the subsidy in question *has not resulted* in any of the effects enumerated in paragraph 3".[650] (emphasis added) The word "resulted" in this sentence highlights the temporal relationship between the subsidy and the effect, in that one might expect a time lag between the provision of the subsidy and the resulting effect.[651] In addition, the use of the

[638]Panel Report, footnote 258 to para. 7.197. See also *ibid*., footnotes 1339 and 1340 to para. 7.1225.

[639]United States' appellant's submission, paras. 304 and 305 (quoting Appellate Body Report, *US – Softwood Lumber IV*, para. 142).

[640]Appellate Body Report, *US – Softwood Lumber IV*, paras. 140-142. The Appellate Body there addressed the need for authorities to ensure that the subsidy at issue confers a benefit on the product against which countervailing duties are to be imposed (pursuant to Article 1.1 of the *SCM Agreement*) and that those duties do not exceed the total amount of the subsidy accruing to that product (pursuant to Article VI:3 of the GATT 1994). The facts in that case are also quite different from those in the present dispute. In *US – Softwood Lumber IV*, it was undisputed that lumber is a distinct product from trees or logs, and countervailing duties were imposed on exported lumber and not on trees or logs. (Appellate Body Report, *US – Softwood Lumber IV*, para. 124) In contrast, in the present dispute, no such clear distinction exists between cotton lint and "raw cotton", meaning (presumably) harvested cotton containing cottonseed and cotton lint.

[641]*Supra*, para. 464.

[642]See *supra*, para. 422(c). "Because the recurring subsidies provided in each of marketing years 1999, 2000, and 2001 ceased to exist when the benefit was used up for production in those years, the effect of those subsidies cannot be the subject of subsidies claims in marketing year 2002." (United States' appellant's submission, para. 284)

[643]United States' appellant's submission, para. 284.

[644]The United States argues that "recurring" subsidies should be "allocated ... to the marketing year to which they relate". (United States' appellant's submission, para. 275) In response to questioning during the oral hearing, the United States clarified that when it refers to the year to which a subsidy *relates* it means "the year for which the payment is made".

[645]United States' appellant's submission, para. 291.

[646]*Ibid*., para. 278.

[647]The DSB established the Panel on 18 March 2003. (WT/DS267/15; Panel Report, para. 1.2) "The date on which the Panel was established fell during the 2002 marketing year for upland cotton in the United States, which began on 1 August 2002 and ended on 31 July 2003." (Panel Report, para. 7.185)

[648]United States' appellant's submission, para. 278.

[649]Although the accounting treatment of a subsidy may be relevant, it does not control the assessment of the effect of the subsidy under Article 6.3(c).

[650]The French version of Article 6.2 states that "la subvention ... n'a eu aucun des effets énumérés au paragraphe 3". The Spanish version of Article 6.2 states "la subvención en cuestión no ha producido ninguno de los efectos enumerados en el párrafo 3".

[651]The Spanish version of Article 6.2 uses the word "producido" for "resulted", again suggesting a time lag between the provision of the subsidy and the resulting effect. The French version of Article 6.2 uses a more neutral term, "eu", which includes but perhaps does not emphasize this temporal connotation as strongly. See *supra*, footnote 650.

present perfect tense in this provision implies that some time may have passed between the granting of the subsidy and the demonstration of the absence of its effects.[652]

478. Article 6.4 of the *SCM Agreement* is also relevant context for interpreting Article 6.3(c). Article 6.4 requires that the displacement or impeding of exports be demonstrated "over an appropriately representative period", which "shall be at least one year", so that "clear trends" in changes in market share can be demonstrated.[653] This suggests that the effect of a subsidy under Article 6.4 must be examined over a sufficiently long period of time and is not limited to the year in which it was paid. As the Panel has also pointed out in the context of Article 6.3(c), "[c]onsideration of developments over a period of longer than one year ... provides a more robust basis for a serious prejudice evaluation than merely paying attention to developments in a single recent year".[654]

479. The United States supports its arguments regarding the "allocation" of "recurring" and "non-recurring" subsidies by referring to several sources.[655] The United States submits that "the Appellate Body has acknowledged that 'non-recurring' subsidies may be allocated over time"[656], citing the following statement of the Appellate Body in *US – Lead and Bismuth II*:

> [W]e agree with the Panel that while an investigating authority may presume, in the context of an administrative review under Article 21.2, that a "benefit" continues to flow from an untied, non-recurring "financial contribution", this presumption can never be "irrebuttable".[657]

In our view, this statement does not support the United States' argument. A proper reading of this statement reveals that it was made in the context of Part V of the *SCM Agreement*, and it focuses on the *benefit* flowing from a "non-recurring" financial contribution rather than the *effect* of a subsidy. Indeed, the Appellate Body's conclusion that investigating authorities cannot adopt an irrebuttable presumption that a benefit continues to flow from certain non-recurring financial contributions highlights the importance of examining the particular characteristics of a given subsidy in evaluating its impact.

[652]The French and Spanish versions of Article 6.2 also use the present perfect tense. See *supra*, footnote 650.

[653]Article 6.4 reads in relevant part:

> [T]he displacement or impeding of exports shall include any case in which ... it has been demonstrated that there has been a *change* in relative shares of the market to the disadvantage of the non-subsidized like product (*over an appropriately representative period* sufficient to demonstrate clear *trends* in the development in the market for the product concerned, which, in normal circumstances, shall be *at least one year*). ... (emphasis added)

[654]Panel Report, para. 7.1199.

[655]United States' appellant's submission, paras. 282 and 283, citing: *SCM Agreement*, paragraph 7 of Annex IV; Guidelines on Amortization and Depreciation adopted by the Tokyo Round Committee on Subsidies and Countervailing Measures, SCM/64, BISD 32S/154 (25 April 1985), para. 1; *Anti-Dumping Agreement*, Article 2.2.1.1; Appellate Body Report, *US – Lead and Bismuth II*, para. 62; Report by the Informal Group of Experts to the Committee on Subsidies and Countervailing Measures, G/SCM/W/415/Rev.2 (15 May 1998), Recommendation 1 and paras. 1-12.

[656]United States' appellant's submission, para. 283.

[657]Appellate Body Report, *US – Lead and Bismuth II*, para. 62.

480. In addition, the United States refers to paragraph 7 of Annex IV to the *SCM Agreement*[658], which provides that "[s]ubsidies granted prior to the entry into force of the WTO Agreement, the benefits of which are allocated to future production, shall be included in the overall rate of subsidization." Although this provision recognizes that the benefits of some subsidies may be allocated to future production, it does not specify that this applies exclusively to "non-recurring" subsidies. In any event, as the Panel noted, the "effect" of a subsidy cannot be equated with the "benefit" of a subsidy.[659]

481. The United States also points to Article 2.2.1.1 of the *Anti-Dumping Agreement*, which relates to the calculation of costs in constructing a normal value under Article 2.2, in order to calculate a dumping margin in certain circumstances. Article 2.2.1.1 states, in relevant part, that "costs shall be adjusted appropriately for those non-recurring items of cost which benefit future and/or current production". However, this provision pertains to the method of calculation of producers' costs in constructing the normal value of a product, which is a different inquiry. It does not apply in assessing the effect of a subsidy under Article 6.3(c) of the *SCM Agreement*.

482. For these reasons, we are not persuaded by the United States' contention that the effect of annually paid subsidies must be "allocated" or "expensed" solely to the year in which they are paid and that, therefore, the effect of such subsidies cannot be significant price suppression in any subsequent year. We do not agree with the proposition that, if subsidies are paid annually, their effects are also necessarily extinguished annually.

483. Turning to the effect of the subsidies at issue in this appeal, we note that the Panel found that the effect of the price-contingent subsidies for marketing years 1999 to 2002[660] "is significant price suppression ... in the period MY 1999-2002".[661] The Panel did not specify which subsidies had effects in which years; nor did it specifically state that the effect of the subsidies for marketing years 1999-2001 was significant price suppression in marketing year 2002. This is consistent with the Panel's earlier statement regarding the way in which it would conduct its analysis:

> [I]n our price suppression analysis under Article 6.3(c), we examine one effects-related variable – prices – and one subsidized product – upland cotton. To the extent a sufficient nexus with these exists among the subsidies at issue so that their effects manifest themselves collectively, we believe that we may legitimately treat them as a "subsidy" and group them and their effects together.[662]

484. For this reason, the Panel examined the price-contingent subsidies for marketing years 1999 to 2002 as a group[663], and its finding of significant price suppression in marketing years 1999 to 2002[664] applied to this group of subsidies. As we noted above, the effects of a "recurring" subsidy

[658]The title of Annex IV of the *SCM Agreement* is "Calculation of the Total Ad Valorem Subsidization (Paragraph 1(a) of Article 6)". (footnote omitted)

[659]Panel Report, para. 7.1179.

[660]*Ibid.*, para. 7.1108.

[661]*Ibid.*, para. 7.1416. Before the Panel, Brazil also claimed that United States subsidies to be granted from marketing year 2003 to marketing year 2007 threaten to cause serious prejudice to Brazil's interests. (*Ibid.*, para. 7.1478) However, the payments to be made in marketing years 2003-2007 and the issue of *threat* of serious prejudice under the *SCM Agreement* do not form part of this appeal.

[662]*Ibid.*, para. 7.1192.

[663]Panel Report, para. 7.1290.

[664]*Ibid.*, para. 7.1416.

may continue after the year in which it is paid.[665] Given that the Panel found significant price suppression in the period 1999 to 2002 as a whole, and this period includes the marketing year 2002, we are unable to agree with the United States' assertion that the Panel erred in not making a specific finding that the price-contingent subsidies for marketing years 1999 to 2001 "had continuing effects at the time of panel establishment".[666]

6. Serious Prejudice under Article 5(c) of the *SCM Agreement*

485. Having found that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*[667], the Panel then considered whether the United States had caused adverse effects in the form of serious prejudice to the interests of Brazil through the use of these subsidies, contrary to Article 5(c) of the *SCM Agreement*. The Panel found that the significant price suppression it had found under Article 6.3(c) of the *SCM Agreement* amounted to serious prejudice within the meaning of the Article 5(c) of the *SCM Agreement*[668], based on the following findings:

> [A]n affirmative conclusion that the effects-based situation in Article 6.3(c) exists is a sufficient basis for an affirmative conclusion that "serious prejudice" exists for the purposes of Article 5(c) of the *SCM Agreement*.[669]
>
> [A]ssuming *arguendo* that any sort of additional demonstration is necessary to establish that the "significant price suppression" we have found to exist in the same world market constitutes prejudice amounting to "serious prejudice" within the meaning of Article 5(c), ... Brazil has also fulfilled that burden.[670]

486. Thus, the Panel provided two alternative reasons for finding that the significant price suppression it had found amounted to serious prejudice within the meaning of the Article 5(c) of the *SCM Agreement*.[671] The Panel's primary reason was that if the effect of a subsidy is significant price suppression within the meaning of Article 6.3(c), this is sufficient, without more, to conclude that the subsidizing Member has caused serious prejudice to the interests of another Member within the meaning of Article 5(c).[672] The Panel's alternative reason was that, even if this is not sufficient, Brazil had fulfilled the burden of demonstrating that the United States had caused serious prejudice to the interests of Brazil within the meaning of Article 5(c).[673]

487. In its Notice of Appeal, and in the "Conclusion" section of its Appellant's Submission, the United States challenged the Panel's finding "that 'significant price suppression' is sufficient to establish 'serious prejudice' for purposes of Articles 5(c) and 6.3 of the SCM Agreement".[674] Brazil asks us to dismiss this claim because the United States did "not appear to have advanced arguments in its Appellant's Submission" in relation to it.[675] In response to questioning during the oral hearing, the United States clarified that, in its Notice of Appeal, it intended to challenge only the first of the two findings mentioned above (that is, the Panel's finding in paragraph 7.1390 of the Panel Report). However, the United States indicated that it did not pursue this claim in its appellant's submission.

488. As neither party has appealed the Panel's finding in paragraph 7.1390 of the Panel Report (regarding the sufficiency of a finding of an effect under Article 6.3(c) for a finding of serious prejudice under Article 5(c), in general terms) or the Panel's alternative finding in paragraph 7.1391 of the Panel Report (regarding serious prejudice to the interests of Brazil in the particular circumstances of this dispute), we express no opinion on either of those findings. Nor do we address the Panel's consequential finding that the significant price suppression that it had found to be the effect of the price-contingent subsidies under Article 6.3(c) of the *SCM Agreement* amounted to serious prejudice within the meaning of Article 5(c) of the *SCM Agreement*.[676] Accordingly, upon adoption of the Panel Report by the DSB, the Panel's findings in paragraphs 7.1390 and 7.1391 of the Panel Report as mentioned above[677] would stand, without endorsement or rejection by the Appellate Body.

7. Basic Rationale under Article 12.7 of the DSU

489. The United States contends that, contrary to Article 12.7 of the DSU, the Panel failed to set out the basic rationale behind its finding that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*. Article 12.7 of the DSU requires a panel to set out in its report "the findings of fact, the applicability of relevant provisions and the basic rationale behind any findings and recommendations that it makes".

490. The United States submits that the Panel "provided no explanation of what degree of price suppression it had found to be 'significant.'"[678] In fact, the Panel based its reasoning in this regard on the ordinary meaning of "significant"[679], explaining that the "significance" of price suppression could, depending on the circumstances, have both quantitative and qualitative aspects.[680] We find that the Panel adequately explained the basis for its conclusion that the price suppression it had found was "significant" with the meaning of Article 6.3(c).[681] We therefore see no failure on the part of the Panel to comply with Article 12.7 of the DSU in this regard.

491. The United States also argues that the Panel "failed to set out the basic rationale behind its findings and recommendations ... with respect to the amount of the subsidy".[682] We have already held that the Panel did not err in interpreting or applying Article 6.3(c) of the *SCM Agreement* in relation to the amount of the challenged subsidies.[683] In addition, we note that the Panel articulated a basic

[665] *Supra*, para. 482.

[682] United States' appellant's submission, para. 326.

[683] *Supra*, para. 473.

rationale for its conclusions in this regard.[684] Accordingly, we decline to find an error on the part of the Panel under Article 12.7 of the DSU.

492. In addition, the United States contends that, contrary to Article 12.7 of the DSU, the Panel failed to set out the basic rationale behind several steps in its reasoning leading to the conclusion that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*. The United States contends that the Panel "prejudged ... the outcome of its causation analysis" in making its finding of price suppression[685] and that the Panel "never explained why it did not analyze the farmer's planting decision and the use of expected prices".[686] In the present dispute, the Panel set out the basic rationale for its findings on "significant price suppression" and the "causal link" with the price-contingent subsidies.[687] As we have already explained, the Panel did address the "planting decision" and "expected prices"[688], and the overlap between different sections of the Panel's analysis stemmed in part from the elements that constitute "price suppression" under Article 6.3(c).[689]

493. In its appellant's submission, the United States argues that the Panel failed to comply with Article 12.7 of the DSU, *inter alia*, in making its findings as to: (i) "why the processed cotton was a 'subsidized product' and why [the Panel] could assume that all of the subsidies paid to cotton producers for raw cotton passed through to the processor"[690]; and (ii) "why any price suppression that it found meant that there was serious prejudice to the interests of Brazil".[691]

494. However, paragraph 10 of the United States' Notice of Appeal (which contains the United States' allegations in connection with Article 12.7 of the DSU) does not refer to the "subsidized product", "pass through", or "serious prejudice". Nor does the general statement in paragraph 10 of

[684]Panel Report, paras. 7.1166-7.1190. In assessing the need to quantify the benefit conferred on upland cotton by the subsidies at issue, the Panel compared the specific provisions in Parts III and V of the *SCM Agreement*, as well as certain aspects of Articles VI and XVI of the GATT 1994. It highlighted the different remedies contained in the provisions of Part III and V and the rationale behind these different parts. The Panel identified the specific arguments of the United States that it was addressing as well as the relevant Appellate Body pronouncements. The Panel's basic rationale for deciding that it need not quantify precisely the benefit conferred on upland cotton by the subsidies at issue appears to have been that "the more precise quantitative concepts and methodologies found in Part V of the *SCM Agreement* are not directly applicable in our examination of Brazil's actionable subsidy claims under Part III of the *SCM Agreement*". (Panel Report, para. 7.1167)

[685]United States' appellant's submission, para. 325.

[686]*Ibid.*, para. 324.

[687]Panel Report, paras. 7.1275-7.1363. The Panel referred to and addressed a great deal of factual evidence provided by the parties. The Panel also clearly identified the provisions of the covered agreements that it considered relevant to this issue and gave detailed explanations for its conclusions at each step.

[688]*Supra*, para. 441.

[689]*Supra*, para. 433.

[690]United States' appellant's submission, para. 328.

[691]*Ibid.*, para. 329.

the issues covered in the United States' claim under Article 12.7 of the DSU appear to extend to these two findings.[692]

495. We acknowledge that the wording of paragraph 10 of the United States' Notice of Appeal (and, in particular, the use of the words "for example") suggests that the findings listed in this paragraph are simply *examples* of findings challenged in connection with Article 12.7 of the DSU, and that the United States' claim of error under Article 12.7 extends to other Panel findings. In other words, paragraph 10 purports to provide an illustrative rather than exhaustive list of the findings that the United States intends to challenge under Article 12.7 of the DSU. However, the fact that paragraph 10 purports to provide an illustrative list is not conclusive as to whether the Notice of Appeal contains a sufficient reference to the Panel's findings described in paragraph 493 above for us to conclude that these findings are included in the United States' appeal. The significance of terms such as "for example" is likely to depend on the particular claim in question and the particular context in which the term is used in a given appeal. In our view, the United States' Notice of Appeal did not provide adequate notice to Brazil, as contemplated by Rule 20(2) of the *Working Procedures for Appellate Review* (the "*Working Procedures*")[693], that the United States intended to make a claim of error under Article 12.7 of the DSU with respect to the Panel's findings described in paragraph 493 above. We therefore decline to rule on these findings in connection with Article 12.7 of the DSU.

8. Conclusion

496. For these reasons, the United States has not persuaded us that the Panel committed a legal error in interpreting the relevant legal requirements of Article 6.3(c) or in applying its interpretation to the facts of this case. We therefore *uphold* the Panel's finding, in paragraphs 7.1416 and 8.1(g)(i) of the Panel Report, that the effect of marketing loan program payments, Step 2 payments, market loss assistance payments, and counter-cyclical payments is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*.[694] We also find that the Panel set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind this finding, as required by Article 12.7 of the DSU.

B. *World Market Share under Article 6.3(d) of the SCM Agreement*

1. Introduction

497. In addition to its claim that it had suffered serious prejudice resulting from price suppression under Article 6.3(c) of the *SCM Agreement*, Brazil also made claims before the Panel alleging that the effect of the challenged subsidies was serious prejudice resulting from an increase in the United States' world market share in upland cotton under Article 6.3(d) of that Agreement.[695] The principal

[692]It could be argued that the "pass-through" issue is encompassed in the reference to "the amount of the challenged subsidies" in paragraph 10. However, if the United States wished to include this issue in its claim of error under Article 12.7, as described in paragraph 10 of the Notice of Appeal, one might have expected it to do so more explicitly, given that a substantive claim of error regarding the need for a "pass-through" analysis is raised specifically in paragraph 8(d) of the Notice of Appeal in respect of the issues appealed regarding "serious prejudice".

[693]See *supra*, footnote 18.

[694]See *supra*, para. 488.

[695]The Panel listed the following as subsidies at issue for purposes of Brazil's claim under Article 6.3(d) of the *SCM Agreement*: "user marketing (Step 2) payments to domestic users and exporters; marketing loan programme payments; [production flexibility contract] payments; [market loss assistance] payments; [direct] payments; [counter-cyclical] payments; crop insurance payments; and cottonseed payments". (Panel Report, para. 7.1418) (footnote omitted)

disagreement between the parties regarding the application of Article 6.3(d) related to the meaning of the phrase contained therein, "world market share". Brazil submitted that this phrase meant "a Member's share of the world market for exports"[696], and put forward evidence regarding increases in the United States' share of the world market for exports of upland cotton. The United States contended that the United States' share of the "world market" for upland cotton encompassed all consumption of all upland cotton, including consumption by a country of its own cotton production.[697]

498. The Panel rejected Brazil's contention that the "world market share" referred to in Article 6.3(d) was limited to the world market for exports.[698] The Panel also rejected the United States' argument that "world market share" focuses on a Member's share of consumption, based largely upon an interpretation of the object and purpose of subsidies disciplines[699] and logical inconsistencies in the United States' arguments.[700] Instead, the Panel reached the view that:

> ... the phrase "world market share" of the subsidizing Member in Article 6.3(d) of the *SCM Agreement* refers to share of the world market supplied by the subsidizing Member of the product concerned.[701]

499. In view of the fact that the evidence and argumentation submitted by Brazil "focused exclusively upon a different, and in [the Panel's] view erroneous, legal interpretation of the phrase 'world market share' in Article 6.3(d)", the Panel found that "Brazil has not established a prima facie case of violation of Article 6.3(d) or Article 5(c) of the *SCM Agreement*".[702]

500. Brazil appeals the Panel's finding that it failed to make a *prima facie* case of violation under Article 6.3(d) (and Article 5(c)) of the *SCM Agreement*. Its appeal has two sequential elements. First, Brazil appeals the Panel's legal interpretation of Article 6.3(d). Brazil stresses that its appeal regarding the Panel's legal interpretation of the phrase "world market share" is *not conditional*.[703] Brazil suggests that the text of Article 6.3(d) is silent on the question of whether "world market share" refers to world market share of *exports* or world market share of something else.[704] However, the use of the word "*trade*" in footnote 17 to Article 6.3(d) (in the context of "multilaterally agreed specific rules apply to the trade in the product or commodity") suggests that the focus of the provision is upon a Member's share of world *trade* in a product, which requires a focus on *exports*, not *production*, as the Panel found.[705] Brazil argues that Article XVI:3 of the GATT 1994 addresses a Member's "share of world export trade" and that structural similarities between Article XVI:3 and Article 6.3(d) require the phrase "world market share" in the latter provision to be read in the same way.[706] Brazil also points to the context provided by paragraphs (a) and (b) of Article 6.3, as well as Articles 6.4 and 6.7, and argues that the focus of a serious prejudice analysis under Article 6.3 is on

[703]Brazil's other appellant's submission, para. 264.

[704]*Ibid.*, para. 275.

[705]Brazil's other appellant's submission, paras. 276-277.

[706]*Ibid.*, paras. 275-280.

the effects of the subsidies on like products from the complaining Member.[707] In addition, Brazil argues that the Panel's reasoning subverts the object and purpose of the *SCM Agreement*, which is to reduce trade distortions caused by subsidies. The Panel's reading denies any remedy to countries that lose market share to subsidized products.[708]

501. Secondly, Brazil requests us to complete the analysis of its claim of serious prejudice under Article 6.3(d). Brazil makes this element of its appeal *conditional* upon us reversing the Panel's findings that United States price-contingent subsidies[709] caused significant price suppression in terms of Article 6.3(c) of the *SCM Agreement*. Brazil submits that findings by the Panel and undisputed facts on the record would allow us to complete the analysis and find a violation of Article 6.3(d) by the United States.[710]

502. The United States counters that the Panel was correct to reject the Brazilian interpretation that "world market share" in Article 6.3(d) means "world market share of exports". The Panel correctly reasoned that nothing in the ordinary meaning of "world market share" suggests that it should not include the domestic market of the Member concerned.[711] The United States recalls that the Panel distinguished between Article 6.3(d) (which deals with "world market share") and Article XVI:3 of GATT 1994 (which deals with "share of world export trade") and suggests that the distinct choice of words reflected in these provisions contains important context to suggest that the coverage of Article 6.3(d) is different from that of Article XVI:3.[712] The United States rebuts Brazil's arguments regarding footnote 17 to Article 6.3(d) by stressing that the term "trade" in the footnote does not purport to limit the scope of the otherwise broad term "world market share" in the text of Article 6.3(d) itself.[713] Other elements of the context in which Article 6.3(d) appears, such as paragraphs (a) and (b) of Article 6.3 and Articles 6.4 and 6.7 of the *SCM Agreement*, explicitly limit the aspects of the market that they address. This contrasts with Article 6.3(d), which focuses only upon the general concept "world market share". The United States also contests Brazil's view that the Panel's interpretation of Article 6.3(d) reduces the provision to inutility.[714] With respect to Brazil's conditional request to complete the analysis, the United States submits that, even if the Appellate Body accepts Brazil's arguments with respect to the interpretation of Article 6.3(d), there are insufficient facts available for the Appellate Body to complete the analysis of Brazil's claim on this matter. The United States observes that the Panel did not undertake an analysis regarding a causal link between the subsidies at issue and an increase in the United States' world market share of exports in upland cotton, and that the causation analysis regarding price suppression under 6.3(c) could not be transposed into an analysis of world market share under Article 6.3(d).[715]

[707]*Ibid.*, paras. 281-288.

[708]*Ibid.*, paras. 289-294.

[709]That is, marketing loan program payments, Step 2 payments, market loss assistance payments and counter-cyclical payments.

[710]Brazil's other appellant's submission, paras. 296-315.

[711]Indeed (and although the United States does not appeal this point), the United States stresses that the Panel's interpretation that the focus in the phrase "world market share" is upon production is too narrow, because it focuses only on *supply* in the world "market" and not upon *demand*. A correct interpretation would take into account demand—that is *consumption*—as well. On this basis, the focus in Article 6.3(d) is not upon a share of the world's supply or production, but rather upon total *sales*. (United States' appellee's submission, paras. 148-152)

[712]United States' appellee's submission, para. 153.

[713]*Ibid.*, paras. 154-156.

[714]*Ibid.*, para. 161.

[715]*Ibid.*, paras. 163-165.

503. Benin and Chad, third participants in this appeal, support Brazil's interpretation of the phrase "world market share" in Article 6.3(d) of the *SCM Agreement*.[716] Benin and Chad argue that, in the event we agree with Brazil that "world market share" refers to a Member's share of world exports, then we should complete the analysis. In the view of Benin and Chad, the undisputed evidence on record demonstrates that the effect of the United States' subsidies is serious prejudice to the interests of Benin and Chad as well, within the meaning of Articles 6.3(d) and 5(c) of the *SCM Agreement*. Benin and Chad submit that the "interests of another Member" in Article 5(c) are not limited only to the interests of the complaining Member and ask us to find accordingly.[717]

2. Analysis

504. Article 6.3 of the *SCM Agreement* provides, in relevant part:

> Serious prejudice in the sense of paragraph (c) of Article 5 may arise in any case where one or several of the following apply:
>
> ...
>
> (d) the effect of the subsidy is an increase in the world market share of the subsidizing Member in a particular subsidized primary product or commodity[17] as compared to the average share it had during the previous period of three years and this increase follows a consistent trend over a period when subsidies have been granted.

[17] Unless other multilaterally agreed specific rules apply to the trade in the product or commodity in question.

505. As we have noted above, the four subparagraphs of Article 6.3 describe circumstances in which a subsidy has certain effects, which, in turn, may constitute serious prejudice under Article 5(c).[718] Article 6.3(d) addresses a situation in which subsidies have the effect of increasing the "world market share of the subsidizing Member in a particular subsidized product or commodity". The Panel held that the phrase "world market share" of the subsidizing Member in Article 6.3(d) of the *SCM Agreement* "refers to share of the world market *supplied* by the subsidizing Member of the product concerned".[719] As Brazil had failed to submit evidence pertaining to this legal interpretation, the Panel found that Brazil had failed to make a *prima facie* case of violation of this provision.[720]

506. Brazil's appeal with respect to the application of Article 6.3(d) of the *SCM Agreement* has two elements. First, Brazil appeals the Panel's interpretation of the phrase "world market share" in that provision. Second, Brazil requests us to complete the analysis of this issue and rule that the effect of certain United States subsidies is an increase in the world market share of the United States in upland cotton. This second element of Brazil's appeal is *conditional* upon us reversing the Panel's findings with respect to the interpretation of Article 6.3(c) of the *SCM Agreement*.

[716]Benin and Chad's third participants' submission, paras. 75-79.

[717]*Ibid.*, paras. 80-91.

[718]On the relationship between Articles 5(c) and 6.3 of the *SCM Agreement*, see *supra*, paras. 485-488.

[719]Panel Report, para. 7.1464. (emphasis added)

[720]*Ibid.*, para. 7.1465.

507. We observe with regard to the interpretation of the phrase "world market share" in Article 6.3(d) that, above[721], we upheld the Panel's finding that the effect of the price-contingent subsidies at issue in these proceedings is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*. We observe, therefore, that the condition upon which the second part of Brazil's appeal is contingent is *not* fulfilled, and thus there is no need for us to complete the analysis and to examine whether or not the United States subsidies at issue have the effect of increasing the United States' world market share in upland cotton.

508. Nor do we believe that it is necessary to make a finding on the interpretation of the phrase "world market share" in Article 6.3(d) of the *SCM Agreement*. We recall that Article 17.12 of the DSU requires that the "Appellate Body shall address each of the issues raised in accordance with paragraph 6 [of Article 17] during the appellate proceeding". In addition, we note that Article 3.3 of the DSU explains that:

> The prompt settlement of situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member is essential to the effective functioning of the WTO and the maintenance of a proper balance between the rights and obligations of Members.

For its part, Article 3.4 of the DSU provides that "[r]ecommendations or rulings made by the DSB shall be aimed at achieving a satisfactory settlement of the matter". Similarly, Article 3.7 states that "[t]he aim of the dispute settlement mechanism is to secure a positive solution to a dispute".

509. In *US – Wool Shirts and Blouses*, the Appellate Body cautioned that:

> Given the explicit aim of dispute settlement that permeates the *DSU*, we do not consider that Article 3.2 of the *DSU* is meant to encourage either panels or the Appellate Body to "make law" by clarifying existing provisions of the *WTO Agreement* outside the context of resolving a particular dispute.[722]

510. With this in mind, we observe that although an interpretation by the Appellate Body, in the abstract, of the meaning of the phrase "world market share" in Article 6.3(d) of the *SCM Agreement* might offer at best some degree of "guidance" on that issue, it would not affect the resolution of this particular dispute.[723] Indeed, irrespective of whether we were to uphold or reverse the Panel's finding on this issue, upon adoption of the recommendations and rulings by the DSB, the United States would be under no additional obligation regarding implementation. Thus, although we recognize that there may be cases in which it would be useful for us to review an issue, despite the fact that our ruling would not result in rulings and recommendations by the DSB, we find no compelling reason for doing so in this case.

[721]*Supra*, para. 496.

[722]Appellate Body Report, *US – Wool Shirts and Blouses*, p. 19, DSR 1997:I, 323 at 340.

[723]We note, in this regard, that, in *US – Steel Safeguards*, the Appellate Body noted that "several participants expressed an interest in having [it] rule on causation as it would provide guidance to Members on applying safeguard measures in the future consistently with their WTO obligations". (Appellate Body Report, *US – Steel Safeguards*, para. 484) Despite this request for guidance, the Appellate Body declined to make a ruling on this specific aspect of the case. (Appellate Body Report, *US – Steel Safeguards*, para. 483)

511. Accordingly, we believe that an interpretation of the phrase "world market share" in Article 6.3(d) of the *SCM Agreement* is unnecessary for purposes of resolving this dispute. We emphasize that we neither uphold nor reverse the Panel's findings on the interpretation of the phrase "world market share" in Article 6.3(d) of the *SCM Agreement*.

512. Finally, we recall that Article 24.1 of the DSU requires that "[a]t all stages of the determination of the causes of a dispute and of dispute settlement procedures involving a least-developed country Member, particular consideration shall be given to the special situation of least-developed country Members". We fully recognize the importance of this provision. However, we recall that Benin and Chad request us to find that their interests have suffered serious prejudice in the sense of Article 5(c) of the *SCM Agreement*, if we find Brazil has suffered serious prejudice as a result of an increase in the United States' world market share in upland cotton in the sense of Article 6.3(d) of the *SCM Agreement*. As we do not find it necessary to rule on Brazil's appeal regarding the interpretation of the phrase "world market share" in Article 6.3(d), we therefore are not in a position to accede to Benin and Chad's request to complete the analysis and to find that, in addition to Brazil, Benin and Chad also have suffered serious prejudice to their interests in the sense of Articles 6.3(d) and 5(c) of the *SCM Agreement*. We note that Benin and Chad's request to complete the analysis was predicated upon us reversing the Panel's interpretation of the phrase "world market share" in Article 6.3(d) of the *SCM Agreement*.[724] This condition is not met.

VII. Import Substitution Subsidies and Export Subsidies

A. *Step 2 Payments to Domestic Users*

1. Introduction

513. We examine next the United States' claims against the Panel's findings relating to the Step 2 payments provided to domestic users and exporters of United States upland cotton under Section 1207(a) of the FSRI Act of 2002.

514. According to the Panel[725], the program pursuant to which Step 2 payments are granted has been authorized since 1990 under successive legislation, including the FAIR Act of 1996[726] and the FSRI Act of 2002.[727] Under the program, marketing certificates or cash payments (collectively referred to by the Panel as "user marketing (Step 2) payments")[728] are issued to eligible domestic users and exporters of eligible upland cotton when certain market conditions exist such that United States cotton pricing benchmarks are exceeded. "Eligible upland cotton" is defined as "domestically produced baled upland cotton which bale is opened by an eligible domestic user ... or exported by an eligible exporter".[729] An "eligible domestic user" of upland cotton is defined under the regulations as:

> A person regularly engaged in the business of opening bales of eligible upland cotton for the purpose of manufacturing such cotton into cotton products in the United States (domestic user), who has entered into an agreement with CCC[730] to participate in the upland cotton user marketing certificate program.[731]

515. For its part, an "eligible exporter" of upland cotton is:

> A person, including a producer or a cooperative marketing association ... regularly engaged in selling eligible upland cotton for exportation from the United States (exporter), who has entered into an agreement with CCC to participate in the upland cotton user marketing certificate program.[732]

516. The Panel explained that, under the FAIR Act of 1996, the United States Secretary of Agriculture "issued user marketing (Step 2) payments to domestic users and exporters of upland cotton for documented purchases by domestic users and sales for export by exporters made in a week following a consecutive four-week period when the lowest price quotation for United States cotton delivered to Northern Europe exceeded the Northern Europe price quotation by more than 1.25 cents per pound, and the adjusted world price did not exceed 130 per cent of the marketing loan rate for upland cotton."[733] The payments to domestic users and exporters are calculated "at a rate per pound equal to the difference between the two price quotations during the fourth week of the period, minus the 1.25 cents per pound threshold".[734] Step 2 payments continued to be authorized under the FSRI Act of 2002, although with certain modifications. The Panel pointed out that "[i]n particular, application of the 1.25 cents per pound threshold has been delayed until 1 August 2006 (i.e. for the 2002 through 2005 marketing years)".[735] The consequence of this, the Panel explained, is that "Step 2 payments are issued following a consecutive four-week period when the lowest price quotation for United States cotton delivered to Northern Europe exceeded the Northern Europe price quotation by any amount and the adjusted world price did not exceed 134 per cent (not 130 per cent, as under the FAIR Act of 1996) of the marketing loan rate".[736] Domestic users and exporters receive payments that are calculated "at a rate per pound equal to the difference between the two price quotations during the fourth week of the period, with no reduction for the threshold".[737]

517. We address first the United States' appeal of the Panel findings in respect of Step 2 payments to *domestic users* of United States upland cotton. We examine the United States' appeal of the Panel's finding in respect of Step 2 payments to *exporters* of United States upland cotton in the next Section of this Report.

[724]Benin and Chad's third participants' submission, para. 83.

[725]Panel Report, para. 7.209.

[735]*Ibid.*, para. 7.211.

[736]*Ibid.*

[737]*Ibid.*, para. 7.211 (referring to Section 1207(a) of the FSRI Act of 2002, reproduced in Exhibits BRA-29 and US-1, and 7 CFR 1427.107 (1 January 2003 edition), reproduced in Exhibit BRA-37).

2. Panel Findings

518. Before the Panel, Brazil argued that Step 2 payments to domestic users of upland cotton are *per se* import substitution subsidies that are inconsistent with Articles 3.1(b) and 3.2 of the *SCM Agreement*.[738] Brazil explained that Step 2 payments to domestic users are "contingent on the use of domestic over imported goods within the meaning of Article 3.1(b) of the *SCM Agreement*" because the payments "are 'conditional' on proof of consumption of domestically produced upland cotton".[739]

519. The United States did not dispute that Step 2 payments are "subsidies" and that to receive a Step 2 payment a domestic user must "open a bale of domestically produced baled upland cotton".[740] The United States, however, asserted that Step 2 payments to domestic users of upland cotton are included, and they comply with, the United States' domestic support reduction commitments pursuant to Article 6.3 of the *Agreement on Agriculture*.[741] As Step 2 payments to domestic users are permitted under the *Agreement on Agriculture*, the United States argued that these payments cannot be contrary to Article 3 of the *SCM Agreement*. This is because the introductory language of Article 3.1 of the *SCM Agreement* makes it clear that that provision applies "[e]xcept as provided in the *Agreement on Agriculture*".[742] The United States additionally asserted that "pursuant to Article 21 of the *Agreement on Agriculture*, all of the Annex 1A agreements (including the *SCM Agreement*) apply subject to the provisions of the *Agreement on Agriculture*".[743]

520. The Panel began its examination by observing that "[t]he introductory clause of Article 3.1 of the *SCM Agreement* ('[e]xcept as provided in the Agreement on Agriculture') indicates that any examination of the WTO-consistency of a subsidy for agricultural products under the *SCM Agreement* may depend upon the provisions of the *Agreement on Agriculture*.[744] The Panel then examined Article 21.1 of the *Agreement on Agriculture* and observed that this provision "expressly acknowledges the application of the *GATT 1994* and the *SCM Agreement* to agricultural products, while indicating that the *Agreement on Agriculture* would take precedence in the event, and to the extent, of any conflict".[745] The Panel described the situations in which, in its view, Article 21.1 of the *Agreement on Agriculture* applies[746], and then turned to "the relevant provisions of the *Agreement on Agriculture* in order to discern whether, and/or to what extent, these provisions affect a claim concerning the prohibition on import substitution subsidies in Article 3.1(b) of the *SCM Agreement*."[747] The Panel concluded that "none of the situations" it described arises in this dispute from the relevant provisions in the *Agreement on Agriculture*.[748]

521. The Panel examined Article 13 of the *Agreement on Agriculture*, but concluded that this provision did not affect its analysis of Brazil's claims under Article 3.1(b) of the *SCM Agreement*.[749] The Panel then looked at Article 6.3 and paragraph 7 of Annex 3 of the *Agreement on Agriculture*, rejecting the United States' contention that "user marketing (Step 2) payments to upland cotton domestic users that provide support to domestic producers contingent on the use of domestic goods [are] consistent with the *Agreement on Agriculture*".[750] The Panel reasoned instead that:

> Article 6.3 does *not* provide that compliance with such "domestic support reduction commitments" shall necessarily be considered to be in compliance with other applicable WTO obligations. Nor does it contain an explicit textual indication that otherwise prohibited measures are necessarily justified by virtue of compliance with the domestic support reduction commitments. The obligations are parallel, and the operation of Article 6.3 of the *Agreement on Agriculture* does not pre-empt or exclude the operation of the obligation under Article 3.1(b) of the *SCM Agreement*.[751]

522. From this the Panel concluded that "Article 3.1(b) of the *SCM Agreement* can be read together with the *Agreement on Agriculture* provisions relating to domestic support in a coherent and consistent manner which gives full and effective meaning to all of their terms".[752] Accordingly, the Panel found no conflict between the domestic support provisions of the *Agreement on Agriculture* and Article 3.1(b) of the *SCM Agreement* and, therefore, saw no necessity to apply the rules in Article 21.1 of the *Agreement on Agriculture*.[753]

523. Having examined the relationship between the relevant provisions of the *Agreement on Agriculture* and the *SCM Agreement*, the Panel proceeded to examine whether the Step 2 payments to domestic users are contingent on the use of domestic products contrary to Article 3.1(b) of the *SCM Agreement*. The Panel noted that the United States had acknowledged that "to receive a payment under the user marketing (Step 2) programme, a domestic user must open a bale of domestically produced baled upland cotton" and, therefore, did "not dispute that user marketing (Step 2) payments to domestic users constitute a subsidy conditional or dependent upon the use of domestic over imported goods within the meaning of Article 3.1(b) of the *SCM Agreement*".[754] The Panel also conducted its own examination and found that:

[738]Panel Report, para. 7.1019. Before the Panel, Brazil also claimed that Step 2 payments to *domestic users* are contrary to Article III:4 of the GATT 1994 and that they are not justified under Article III:8(b) because they are not exclusively paid to domestic *producers* of cotton, but rather to domestic *users*.

The Panel exercised judicial economy in respect of this claim, in the light of the fact that it had already found the same measure to be inconsistent with Articles 3.1(b) and 3.2 of the *SCM Agreement*. Brazil has not appealed the Panel's exercise of judicial economy. (*Ibid.*, paras. 7.1099 and 7.1106)

[754]*Ibid.*, para. 7.1082 (referring to the United States' response to Question 144 Posed by the Panel (Panel Report, p. I-249, para. 58) and Appellate Body Report, *Canada – Autos*, para. 126). (footnotes omitted)

> ... user marketing (Step 2) payments to domestic users under section 1207(a) of the FSRI Act of 2002 will not be made except upon proof of consumption of eligible upland cotton – which must be "domestically produced", and "not imported". It is not just that it will invariably be easier for domestic users to meet the conditions for user marketing (Step 2) payments to domestic users by using domestic -- rather than imported -- upland cotton. The text of the measure explicitly *requires* the use of domestically produced upland cotton as a pre-condition for receipt of the payments.
>
> The use of United States domestically produced upland cotton is a condition for obtaining the subsidy. User marketing (Step 2) payments to domestic users under section 1207(a) of the FSRI Act of 2002 are clearly conditional, or dependent upon, such use.[755]

524. The Panel, furthermore, recalled its finding that the "fact that the user marketing (Step 2) payments are also available in another factual situation ... —i.e. exporters—would not have the effect of dissolving such contingency in respect of domestic users, particularly ... where the other factual contingency (upon export performance) also gives rise to a prohibited subsidy".[756]

525. Therefore, the Panel concluded that "section 1207(a) of the FSRI Act of 2002 providing for user marketing (Step 2) payments to domestic users is inconsistent with Article 3.1(b) of the *SCM Agreement*".[757] In addition, the Panel found that "[t]o the extent that section 1207(a) of the FSRI Act of 2002 providing for user marketing (Step 2) payments to domestic users is inconsistent with Article 3.1(b), it is, consequently, also inconsistent with Article 3.2 of the *SCM Agreement*".[758]

3. Arguments on Appeal

526. On appeal, the United States requests us to reverse the Panel's findings. According to the United States, the Panel's conclusion fails to give meaning to the introductory phrase "[e]xcept as provided in the Agreement on Agriculture" of Article 3.1 of the *SCM Agreement*.[759] This phrase not only applies to export subsidies covered by Article 3.1(a) of the *SCM Agreement*, but also to import substitution subsidies covered by Article 3.1(b). The United States contends that Step 2 payments to domestic users are properly classified as domestic support subject to reduction commitments under Article 6 of the *Agreement on Agriculture*.[760] Indeed, paragraph 7 of Annex 3 requires that measures directed at agricultural processors shall be included in the AMS to the extent that such measures benefit the producers of the basic agricultural products. This approach is consistent with the objective of the *Agreement on Agriculture* of providing for substantial progressive reductions in agricultural support and protection sustained over an agreed period of time.[761] Furthermore, the United States argues that the lack of any reference to domestic content subsidies in Article 13(b) of the *Agreement on Agriculture* does not support the Panel's interpretation.[762] Article 13(b) does not refer to Article 3 of the *SCM Agreement* because the substantive obligation of Article 3.1(b) does not apply in the case of domestic content subsidies in favour of agricultural producers.

527. Brazil requests that we uphold the Panel's findings. According to Brazil, "[t]he obligations in the *Agreement on Agriculture* and the *SCM Agreement* apply cumulatively, unless there is an exception or a conflict".[763] In Brazil's view, no conflict arises. Under the *Agreement on Agriculture*, WTO Members enjoy a right to grant domestic support in favour of agricultural producers. However, this does not create a conflict with Article 3.1(b) of the *SCM Agreement*, because it is perfectly possible for Members to grant domestic support without making payments contingent on domestic content. In other words, Members can fully enjoy their right to grant domestic support *and* comply with Article 3.1(b).[764]

528. Brazil asserts that this interpretation is consistent with a primary objective of the covered agreements, namely, avoiding discrimination under the national treatment rule. It is also consistent with an adopted 1958 GATT panel report involving a subsidy to agricultural producers that was contingent on purchase of domestic goods.[765] Thus, Brazil states that domestic content subsidies in favour of agricultural producers have been understood to be impermissible since 1958, so there is nothing novel about Brazil's complaint.[766] The *Agreement on Agriculture* did not mark a step back to allowing discrimination and protection that was prohibited under the GATT 1947. Therefore, domestic support under the *Agreement on Agriculture* can and must be granted consistently with Article 3.1(b) of the *SCM Agreement* and Article III:4 of the GATT 1994.[767]

4. Does Article 3.1(b) of the *SCM Agreement* Apply to Agricultural Products?

529. At the outset, we note that the United States did not dispute before the Panel that, if the *SCM Agreement* were applicable, "user marketing (Step 2) payments to domestic users [would] constitute a subsidy conditional or dependent upon the use of domestic over imported goods within the meaning of Article 3.1(b)" of that Agreement.[768] Instead, before the Panel and on appeal, the United States asserts that Article 3.1(b) of the *SCM Agreement* is inapplicable to Step 2 payments to domestic users because these payments are consistent with the United States' domestic support reduction commitments under the *Agreement on Agriculture*.[769]

530. Article 3.1(b) of the *SCM Agreement* provides:

> *Article 3*
>
> *Prohibition*
>
> Except as provided in the Agreement on Agriculture, the following subsidies, within the meaning of Article 1, shall be prohibited:
>
> ...

> (b) subsidies contingent, whether solely or as one of several other conditions, upon the use of domestic over imported goods.

We note that the introductory language of the chapeau makes it clear that the *Agreement on Agriculture* prevails over Article 3 of the *SCM Agreement*, but only to the extent that the former contains an exception.

531. Article 21.1 of the *Agreement on Agriculture*, which deals more broadly with the relationship between that Agreement and the other covered agreements relating to the trade in goods, provides:

> The provisions of GATT 1994 and of other Multilateral Trade Agreements in Annex 1A to the WTO Agreement shall apply subject to the provisions of this Agreement.[770]

532. We agree that Article 21.1 could apply in the three situations described by the Panel, namely:

> ... where, for example, the domestic support provisions of the *Agreement on Agriculture* would prevail in the event that an explicit carve-out or exemption from the disciplines in Article 3.1(b) of the *SCM Agreement* existed in the *text* of the *Agreement on Agriculture*. Another situation would be where it would be impossible for a Member to comply with its domestic support obligations under the *Agreement on Agriculture* and the Article 3.1(b) prohibition simultaneously. Another situation might be where there is an explicit authorization in the text of the *Agreement on Agriculture* that would authorize a measure that, in the absence of such an express authorization, would be prohibited by Article 3.1(b) of the *SCM Agreement*.[771]

The Appellate Body has interpreted Article 21.1 to mean that the provisions of the GATT 1994 and of other Multilateral Trade Agreements in Annex 1A apply, "except to the extent that the *Agreement on Agriculture* contains specific provisions dealing specifically with the same matter".[772] There could be, therefore, situations other than those identified by the Panel where Article 21.1 of the *Agreement on Agriculture* may be applicable.

533. The key issue before us is whether the *Agreement on Agriculture* contains "specific provisions dealing specifically with the same matter" as Article 3.1(b) of the *SCM Agreement*, that is, subsidies contingent upon the use of domestic over imported goods. We, therefore, turn to the relevant provisions of the *Agreement on Agriculture*.

534. The United States draws our attention to the domestic support provisions in the *Agreement on Agriculture*, particularly to Article 6.3 and to paragraph 7 of Annex 3. Article 6 of the *Agreement on Agriculture* deals with domestic support commitments. Pursuant to Article 6, WTO Members have committed themselves to reduce the domestic support that they provide to their agricultural sector.[773] For this purpose, domestic support is calculated using what is known as the AMS, which is defined in Article 1(a) as:

> ... the annual level of support, expressed in monetary terms, provided for an agricultural product in favour of the producers of the basic agricultural product or non-product-specific support provided in favour of agricultural producers in general, other than support provided under programmes that qualify as exempt from reduction under Annex 2 to this Agreement ...

A WTO Member's domestic support reduction commitments are registered in Part IV of its Schedule.

535. Article 6.3 of the *Agreement on Agriculture*, the particular provision relied on by the United States, reads:

> A Member shall be considered to be in compliance with its domestic support reduction commitments in any year in which its domestic support in favour of agricultural producers expressed in terms of Current Total AMS does not exceed the corresponding annual or final bound commitment level specified in Part IV of the Member's Schedule.

The United States also relies on paragraph 7 of Annex 3 of the *Agreement on Agriculture*. This Annex explains how WTO Members are to calculate AMS. Paragraph 7 of Annex 3 states, in relevant part, that "[m]easures directed at agricultural processors shall be included [in the AMS calculation] to the extent that such measures benefit the producers of the basic agricultural products".

536. Before determining whether Article 6.3 and paragraph 7 of Annex 3 of the *Agreement on Agriculture* deal specifically with the same matter as Article 3.1(b) of the *SCM Agreement*, we must address the question whether the Step 2 payments to domestic users of United States upland cotton fall within paragraph 7 of Annex 3 because the United States claims that they are "[m]easures directed at agricultural processors" and "benefit the producers of the basic agricultural products". The United States argues that Step 2 payments to domestic users fall within paragraph 7 of Annex 3 because, even though the payment is provided to persons opening a bale of cotton, the payment *benefits* producers of United States cotton. The United States explains that this is the case "because [the program] serves to maintain the price competitiveness of U.S. cotton vis-a-vis foreign cotton through a payment to capture some differential between prevailing foreign and domestic cotton prices."[774]

537. We recall that "domestic users" are defined, under the United States' regulations, as "person[s] regularly engaged in the business of opening bales of eligible upland cotton for the purpose of manufacturing such cotton into cotton products in the United States".[775] The United States has acknowledged that the domestic users of United States cotton that receive Step 2 payments include textile mills.[776] There is no dispute between the parties that the producers of United States cotton are "producers of ... basic agricultural products" for purposes of paragraph 7 of Annex 3. Moreover,

[770]The *SCM Agreement* is among the Multilateral Trade Agreements in Annex 1A to the *WTO Agreement*.

[771]Panel Report, para. 7.1038. (original emphasis) The Panel concluded that "none of the situations just mentioned arise[s] in this dispute from the relevant provisions in the *Agreement on Agriculture*". (Panel Report, para. 7.1039)

[772]Appellate Body Report, *EC – Bananas III*, para. 155. (See also Appellate Body Report, *Chile – Price Band System*, para. 186)

[773]Certain domestic measures are exempted from these reduction commitments under Articles 6.4 and 6.5 and Annex 2 of the *Agreement on Agriculture*.

[774]United States' appellant's submission, para. 428.

[775]See *supra*, para. 514.

[776]United States' response to questioning at oral hearing.

Brazil has not disputed the United States' claim that Step 2 payments to domestic users may "benefit" the producers of United States cotton. Therefore, we will proceed with our examination on the *assumption* that Step 2 payments to domestic users of United States cotton are contemplated by paragraph 7 of Annex 3 of the *Agreement on Agriculture*.[777]

538. We thus turn to the issue raised by the United States' appeal, that is, whether Article 6.3 and paragraph 7 of Annex 3 of the *Agreement on Agriculture* are "specific provisions dealing specifically with the same matter" as Article 3.1(b) of the *SCM Agreement*, namely, subsidies contingent upon the use of domestic over imported goods.

539. The United States finds in the second sentence of paragraph 7 of Annex 3 of the *Agreement on Agriculture* an exception to the broad prohibition against subsidies contingent upon the use of domestic over imported goods that is established in Article 3.1(b) of the *SCM Agreement*. We note that Annex 3 sets out instructions on how to calculate WTO Members' AMS. Paragraph 7 is one of 13 paragraphs contained in Annex 3. It reads:

> The AMS shall be calculated as close as practicable to the point of first sale of the basic agricultural product concerned. Measures directed at agricultural processors shall be included to the extent that such measures benefit the producers of the basic agricultural products.

540. Neither of the two sentences in paragraph 7 of Annex 3 refers to import substitution subsidies. Paragraph 7 of Annex 3 reflects a preference for calculating domestic support as near as possible to the stage of production of an agricultural good. Hence, the first sentence of paragraph 7 of Annex 3 provides that "[t]he AMS shall be calculated as close as practicable to the point of first sale of the basic agricultural product concerned". The second sentence of paragraph 7 recognizes situations where subsidies are not provided directly to the agricultural producer, but rather to an agricultural processor, yet the measures may benefit the producers of the basic agricultural good. This sentence also clarifies that only the portion of the subsidy that benefits the producers of the basic agricultural good, and not the entire amount, shall be included in a Member's AMS.

541. It may well be that a measure that is an import substitution subsidy could fall within the second sentence of paragraph 7 as "[m]easures directed at agricultural processors [that] shall be included [in the AMS calculation] to the extent that such measures benefit the producers of the basic agricultural products". There is nothing, however, in the text of paragraph 7 that suggests that such measures, when they are import substitution subsidies, are exempt from the prohibition in Article 3.1(b) of the *SCM Agreement*. We agree with the Panel that there is a clear distinction between a provision that requires a Member to include a certain type of payment (or part thereof) in its AMS calculation and one that would authorize subsidies that are contingent on the use of domestic over imported goods.[778]

542. The United States argues that, if payments to processors that fall within paragraph 7 are not exempted from the prohibition in Article 3.1(b) of the *SCM Agreement*, paragraph 7 would be rendered inutile.[779] According to the United States, if domestic users were allowed to claim Step 2 payments, regardless of the origin of the cotton, this "would cause the benefit to [domestic] cotton

[777]In this dispute we do not decide whether subsidies paid to textile manufacturers on their purchases of cotton could be regarded as measures directed at "agricultural processors" within the meaning of paragraph 7 of Annex 3.

[778]Panel Report, para. 7.1059.

[779]United States' appellant's submission, para. 428.

producers to evaporate" and the "subsidy would be transformed from a subsidy 'in favor of agricultural producers' to a simple input subsidy".[780] Rather than "a cotton subsidy", it would become a "textile subsidy".[781] Like the Panel, we do not believe that the scope of paragraph 7 is limited to measures that have an import substitution component in them. There could be other measures covered by paragraph 7 of Annex 3 that do not necessarily have such a component. Indeed, Brazil submits that if the Step 2 payments were provided to United States processors of cotton, regardless of the origin of the cotton, these processors "would still buy *at least* some U.S. upland cotton, so producers would continue to derive *some* benefit".[782] Thus, paragraph 7 of Annex 3 refers more broadly to measures directed at agricultural processors that benefit producers of a basic agricultural product and, contrary to the United States' assertion, it is not rendered inutile by the Panel's interpretation. WTO Members may still provide subsidies directed at agricultural processors that benefit producers of a basic agricultural commodity in accordance with the *Agreement on Agriculture*, as long as such subsidies do not include an import substitution component.

543. In addition to paragraph 7 of Annex 3, the United States draws our attention to Article 6.3 of the *Agreement on Agriculture*. The United States points out that Article 6.3 explicitly provides that a WTO Member "shall be considered to be *in compliance* with its domestic support reduction commitments in any year in which its domestic support in favour of agricultural producers expressed in terms of Current Total AMS does not exceed the corresponding annual or final bound commitment level". (emphasis added)

544. Like paragraph 7 of Annex 3, Article 6.3 does not explicitly refer to import substitution subsidies. Article 6.3 deals with domestic support. It establishes only a *quantitative* limitation on the amount of domestic support that a WTO Member can provide in a given year. The quantitative limitation in Article 6.3 applies generally to all domestic support measures that are included in a WTO Member's AMS. Article 3.1(b) of the *SCM Agreement* prohibits subsidies that are contingent—that is, "conditional"[783]—on the use of domestic over imported goods.[784]

545. Article 6.3 does not authorize subsidies that are contingent on the use of domestic over imported goods. It only provides that a WTO Member shall be considered to be in compliance with its domestic support *reduction commitments* if its Current Total AMS does not exceed that Member's annual or final bound commitment level specified in its Schedule. It does not say that compliance with Article 6.3 of the *Agreement on Agriculture* insulates the subsidy from the prohibition in Article 3.1(b). We, therefore, agree with the Panel that:

> Article 6.3 does *not* provide that compliance with such "domestic support reduction commitments" shall necessarily be considered to be in compliance with other applicable WTO obligations. Nor does it contain an explicit textual indication that otherwise prohibited measures are necessarily justified by virtue of compliance with the domestic support reduction commitments.[785]

546. For these reasons, we find that paragraph 7 of Annex 3 and Article 6.3 of the *Agreement on Agriculture* do not deal specifically with the same matter as Article 3.1(b) of the *SCM Agreement*, that is, subsidies contingent upon the use of domestic over imported goods.

[780]United States' appellant's submission, para. 428.

[781]*Ibid.* (emphasis omitted)

[782]Brazil's appellee's submission, footnote 1242 to para. 854. (original emphasis)

[783]Appellate Body Report, *Canada – Autos*, para. 123.

[784]See Panel Report, para. 7.1067.

[785]Panel Report, para. 7.1058. (original emphasis)

547. We are mindful that the introductory language of Article 3.1 of the *SCM Agreement* clarifies that this provision applies "[e]xcept as provided in the Agreement on Agriculture". Furthermore, as the United States has pointed out, this introductory language applies to both the export subsidy prohibition in paragraph (a) and to the prohibition on import substitution subsidies in paragraph (b) of Article 3.1. As we explained previously, in our review of the provisions of the *Agreement on Agriculture* relied on by the United States, we did not find a provision that deals specifically with subsidies that have an import substitution component. By contrast, the prohibition on the provision of subsidies contingent upon the use of domestic over imported goods in Article 3.1(b) of the *SCM Agreement* is explicit and clear. Because Article 3.1(b) treats subsidies contingent on the use of domestic over imported products as prohibited subsidies, it would be expected that the drafters would have included an equally explicit and clear provision in the *Agreement on Agriculture* if they had indeed intended to authorize such prohibited subsidies provided in connection with agricultural goods. We find no provision in the *Agreement on Agriculture* dealing specifically with subsidies contingent upon the use of domestic over imported agricultural goods.

548. Our approach in this case is consistent with the Appellate Body's approach in *EC – Bananas III*. In that case, the European Communities relied on Article 4.1 of the *Agreement on Agriculture* in arguing that the market access concessions it made for agricultural products pursuant to the *Agreement on Agriculture* prevailed over Article XIII of the GATT 1994.[786] The Appellate Body, however, found that "[t]here is nothing in Articles 4.1 or 4.2, or in any other article of the *Agreement on Agriculture*, that deals specifically with the allocation of tariff quotas on agricultural products".[787] It further explained that "[i]f the negotiators had intended to permit Members to act inconsistently with Article XIII of the GATT 1994, they would have said so explicitly".[788] The situation before us is similar. We have found nothing in Article 6.3, paragraph 7 of Annex 3 or anywhere else in the *Agreement on Agriculture* that "deals specifically" with subsidies that are contingent on the use of domestic over imported agricultural products.

549. We recall that the *Agreement on Agriculture* and the *SCM Agreement* "are *both* Multilateral Agreements on Trade in Goods contained in Annex 1A of the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*"), and, as such, are *both* 'integral parts' of the same treaty, the *WTO Agreement*, that are 'binding on all Members'".[789] Furthermore, as the Appellate Body has explained, "a treaty interpreter must read all applicable provisions of a treaty in a way that gives meaning to *all* of them, harmoniously".[790] We agree with the Panel that "Article 3.1(b) of the *SCM Agreement* can be read together with the *Agreement on Agriculture* provisions relating to domestic support in a coherent and consistent manner which gives full and effective meaning to all of their terms".[791]

550. In sum, we are not persuaded by the United States' submission that the prohibition in Article 3.1(b) of the *SCM Agreement* is inapplicable to import substitution subsidies provided in connection with products falling under the *Agreement on Agriculture*. WTO Members may still

[786]Appellate Body Report, *EC – Bananas III*, para. 153.

[788]*Ibid.*

[789]Appellate Body Report, *Argentina – Footwear (EC)*, para. 81 (quoting from *WTO Agreement*, Article II:2). (original emphasis) In that case, the Appellate Body was referring to the GATT 1994 and the *Agreement on Safeguards*.

[790]Appellate Body, *Argentina – Footwear (EC)*, para. 81 and footnote 72 thereto (referring to Appellate Body Report, *Korea – Dairy*, para. 81; Appellate Body Report, *US – Gasoline*, p. 23, DSR 1996:I, 3 at 21; Appellate Body Report, *Japan – Alcoholic Beverages II*, p. 12, DSR 1996:I, 97 at 106; and Appellate Body Report, *India – Patents (US)*, para. 45). (original emphasis)

[791]Panel Report, para. 7.1071.

provide domestic support that is consistent with their reduction commitments under the *Agreement on Agriculture*. In providing such domestic support, however, WTO Members must be mindful of their other WTO obligations, including the prohibition in Article 3.1(b) of the *SCM Agreement* on the provision of subsidies that are contingent on the use of domestic over imported goods.

551. Turning to the particular measure before us in this dispute, we recall that the United States acknowledged before the Panel that, if the *SCM Agreement* were applicable, "user marketing (Step 2) payments to domestic users [would] constitute a subsidy conditional or dependent upon the use of domestic over imported goods within the meaning of Article 3.1(b)" of that Agreement.[792] The Panel also conducted its own analysis and concluded that:

> The use of United States domestically produced upland cotton is a condition for obtaining the subsidy. User marketing (Step 2) payments to domestic users under section 1207(a) of the FSRI Act of 2002 are clearly conditional, or dependent upon, such use.[793]

The United States has not appealed this finding and, therefore, we need not review it.

552. Accordingly, we *uphold* the Panel's findings, in paragraphs 7.1088, 7.1097-7.1098 and 8.1(f) of the Panel Report, that Step 2 payments to domestic users of United States upland cotton, under Section 1207(a) of the FSRI Act of 2002, are subsidies contingent on the use of domestic over imported goods that are inconsistent with Articles 3.1(b) and 3.2 of the *SCM Agreement*.

B. *Step 2 Payments to Exporters*

553. We turn to the United States' claim that the Panel erred in finding that Step 2 payments provided to *exporters* of United States upland cotton, under Section 1207(a) of the FSRI Act of 2002, are subsidies contingent on exportation and, therefore, are inconsistent with Articles 3.3 and 8 of the *Agreement on Agriculture* and Articles 3.1(a) and 3.2 of the *SCM Agreement*. We described the Step 2 payments program in the previous Section of this Report, where we examined the Panel's findings relating to Step 2 payments provided to *domestic users* of United States upland cotton.[794]

554. Before the Panel, Brazil argued that Step 2 payments to exporters are *per se* export subsidies listed in Article 9.1(a) of the *Agreement on Agriculture* and are inconsistent with Article 3.3 and/or Article 8 of the *Agreement on Agriculture*, as well as with Articles 3.1 and 3.2 of the *SCM Agreement*.[795] The United States denied that Step 2 payments constitute export subsidies for purposes of the *Agreement on Agriculture* or Articles 3.1(a) and 3.2 of the *SCM Agreement*, arguing that these payments are available not only to exporters, but also to domestic users of upland cotton.[796]

555. Because Brazil challenged the alleged United States export subsidies under the *Agreement on Agriculture* and the *SCM Agreement*, the Panel first examined the relationship between these Agreements. The Panel explained what it considered to be the proper order of analysis as follows:

[792]Panel Report, para. 7.1082.

[793]*Ibid.*, para. 7.1086.

[794]See also *ibid.*, paras. 7.209-7.211.

[795]*Ibid.*, para. 7.649(i). Brazil also made an alternative claim under Article 10.1 of the *Agreement on Agriculture*, but the Panel found it unnecessary to examine this claim because of its findings under Article 9. (*Ibid.*, para. 7.750)

[796]*Ibid.*, para. 7.651(i).

> ... it is appropriate to examine an alleged export subsidy in respect of an agricultural product first under the *Agreement on Agriculture* before, if and as appropriate, turning to any examination of the same measure under the *SCM Agreement*.[797]

556. Accordingly, the Panel began its examination of Brazil's claims against the Step 2 payments to exporters with Article 9.1 of the *Agreement on Agriculture*. In this respect, the Panel observed that the United States did not appear to dispute that Step 2 payments are subsidies provided by a government to producers of agricultural products, or to cooperatives or associations of such producers for purposes of Article 9.1(a) of the *Agreement on Agriculture*.[798] The "key issue" before it, the Panel explained, was whether Step 2 payments to exporters are subsidies "contingent on export performance" within the meaning of Article 9.1(a) of the *Agreement on Agriculture*.[799]

557. The Panel then noted that the *Agreement on Agriculture* does not define the phrase "contingent on export performance". Given that a similar phrase is used in the *SCM Agreement*, the Panel saw no reason to read the phrase differently in the *Agreement on Agriculture*.[800] The Panel also equated Brazil's claim that Step 2 payments to exporters are "*per se*" export subsidies with a claim that the subsidies are *de jure* export contingent under Article 3.1(a) of the *SCM Agreement*.[801] Such a claim of *de jure* export contingency had to be demonstrated, according to the Panel, "on the basis of the words of the relevant legislation, regulation or other legal instrument"[802] or "where the condition to export can be derived by necessary implication from the words actually used in the measure".[803]

558. In assessing whether the Step 2 payments to exporters are contingent on export performance under Article 9.1(a) of the *Agreement on Agriculture*, the Panel found:

> It is undeniable that a condition of the receipt of user marketing (Step 2) payments to exporters under section 1207(a) of the FSRI Act of 2002 will always and inevitably be proof of exportation. The only way to receive such a payment is through exportation. Export performance is, therefore, a condition of receipt for this discrete segment of eligible recipients.
>
> Every user marketing (Step 2) payment to an eligible exporter is contingent upon export.[804]

559. The Panel rejected the United States' contention that Step 2 payments are not contingent on export performance because they are available to both exporters and domestic users. According to the Panel, the program under which Step 2 payments are granted "involves payment to two distinct sets of recipients (exporters or domestic users) in two distinct factual situations (export or domestic use)".[805] In the Panel's view, "[t]he fact that the subsidies granted in the second situation may not be export contingent does not dissolve the export contingency arising in the first situation".[806]

560. Having found that Step 2 payments to exporters are mandatory when certain market conditions exist[807], the Panel concluded:

> We therefore find that section 1207(a) of the FSRI Act of 2002 providing for user marketing (Step 2) payments to exporters constitutes a subsidy "contingent on export performance" within the meaning of Article 9.1(a) of the *Agreement on Agriculture*.[808]

561. Consequently, the Panel also found:

> User marketing (Step 2) payments to exporters under section 1207(a) of the FSRI Act of 2002 are an export subsidy listed in Article 9.1 of the *Agreement on Agriculture*. In providing such subsidies, the United States has acted inconsistently with its obligation under Article 3.3 of the *Agreement on Agriculture* to "not provide subsidies in respect of any agricultural product not specified in ... its Schedule". The United States has furthermore acted inconsistently with its obligation in Article 8 of the *Agreement on Agriculture* "not to provide export subsidies otherwise than in conformity with [the *Agreement on Agriculture*] and with the commitments as specified in [its] Schedule".[809]

562. As for Brazil's claims under the *SCM Agreement*, the Panel found "that section 1207(a) of the FSRI Act of 2002 providing for user marketing (Step 2) payments to exporters is inconsistent with Article 3.1(a) of the *SCM Agreement*".[810] The Panel additionally found that "[t]o the extent that section 1207(a) of the FSRI Act of 2002 providing for user marketing (Step 2) payments to exporters is inconsistent with Article 3.1(a), it is, consequently, also inconsistent with Article 3.2 of the *SCM Agreement*".[811]

563. On appeal, the United States requests us to reverse the Panel's findings that Step 2 payments provided to exporters of United States upland cotton are export subsidies within the meaning of Article 9.1(a) of the *Agreement on Agriculture* and, therefore, are inconsistent with Articles 3.3 and 8 of that Agreement. The United States also requests that we reverse the Panel's finding that Step 2 payments to exporters are inconsistent with Articles 3.1(a) and 3.2 of the *SCM Agreement*, because they are not exempted from action by Article 13(c) of the *Agreement on Agriculture*.[812]

[797] Panel Report, para. 7.673. The order of analysis was not an issue on appeal.

[798] *Ibid.*, para. 7.695. The Panel also conducted it own assessment and concluded that the measure meets the description in Article 9.1(a). (*Ibid.*, para. 7.696)

[799] *Ibid.*, para. 7.697.

[800] *Ibid.*, para. 7.700 and footnote 872 thereto (relying on Appellate Body Report, *US – FSC*, para. 141 and Appellate Body Report, *US – FSC (Article 21.5 – EC)*, para. 192).

[801] *Ibid.*, para. 7.702.

[802] *Ibid.*, (relying on Appellate Body Report, *Canada – Aircraft*, para. 167).

[803] *Ibid.*, para. 7.702 (relying on Appellate Body Report, *Canada – Autos*, para. 100 and Appellate Body Report, *US – FSC (Article 21.5 – EC)*, para. 112).

[804] Panel Report, paras. 7.734 and 7.735.

[805] *Ibid.*, para. 7.732.

[806] *Ibid.*, para. 7.739 and footnote 907 thereto (relying on Appellate Body Report, *US – FSC (Article 21.5 – EC)*, para. 119).

[807] *Ibid.*, paras. 7.7745 and 7.746.

[808] *Ibid.*, para. 7.748.

[809] Panel Report, para. 7.749.

[810] *Ibid.*, para. 7.760.

[811] *Ibid.*, para. 7.761.

[812] United States' appellant's submission, para. 516(6).

564. The United States does not contest that Step 2 payments are subsidies to producers of an agricultural product for purposes of Article 9.1(a) of the *Agreement on Agriculture*; nor does it contest the Panel's finding in this regard. The focus of the United States' appeal is the Panel's finding that Step 2 payments are contingent on export performance under Article 9.1(a).[813] In support of its claim, the United States reiterates on appeal the arguments that it made before the Panel. The United States asserts that Step 2 payments are not contingent on export performance because Step 2 payments are also available to domestic users of United States upland cotton.[814] The United States contends that the payments are contingent on use, not exportation.

565. Brazil requests that we uphold the Panel's finding that Step 2 payments to exporters are contingent upon export performance.[815] According to Brazil, the measure pursuant to which Step 2 payments are granted establishes two mutually exclusive conditions of payment that address two different factual situations where a Step 2 payment can be made.[816] These situations are mutually exclusive because the same bale of cotton cannot be both opened for domestic use and exported.[817] In one situation under the Step 2 measure, proof of exportation is required as a condition of payment. This export contingency is not dissolved because the payment can also made in another situation to domestic users, on other conditions.[818]

566. In addition, Brazil rejects the United States' contention that Step 2 payments are contingent on use and not on exportation. Brazil explains that Step 2 payments do not apply to all United States production of upland cotton because domestic brokers, resellers and other persons not regularly engaged in opening bales of cotton for manufacturing are not eligible to receive the payments.[819] Furthermore, Brazil asserts that, in the case of Step 2 payments to exporters, the payment is not contingent on use because the measure is indifferent to whether, how or when the upland cotton is used so long as it is exported.[820]

567. The issue raised on appeal is whether the Step 2 payments provided to exporters of United States upland cotton, under Section 1207(a) of the FSRI Act of 2002, are contingent on export performance within the meaning of Article 9.1(a) of the *Agreement on Agriculture* and Article 3.1(a) of the *SCM Agreement*.

568. Article 9.1(a) of the *Agreement on Agriculture* reads :

> [T]he provision by governments or their agencies of direct subsidies, including payments-in-kind, to a firm, to an industry, to producers of an agricultural product, to a cooperative or other association of such producers, or to a marketing board, contingent on export performance[.]

[813] *Ibid.*, para. 442.

[814] United States' appellant's submission, para. 443. The United States submits that its position is consistent with the reasoning of the panel in *Canada – Dairy*. (*Ibid.*, para. 444 (relying on Panel Report, *Canada – Dairy*, para. 7.41))

[815] Brazil's appellee's submission, para. 872.

[816] *Ibid.*, para. 888.

[817] *Ibid.*

[818] Brazil finds support for its argument in the Appellate Body's reasoning in *US – FSC (Article 21.5 – EC)*. See *supra*, footnote 806. (Brazil's appellee's submission, paras. 883-884)

[819] Brazil's appellee's submission, para. 886.

[820] *Ibid.*, para. 891.

569. Article 3.1(a) of the *SCM Agreement* provides:

> *Article 3*
>
> *Prohibition*
>
> Except as provided in the Agreement on Agriculture, the following subsidies, within the meaning of Article 1, shall be prohibited:
>
> (a) subsidies contingent, in law or in fact[4], whether solely or as one of several other conditions, upon export performance, including those illustrated in Annex I[5];
>
> [4] This standard is met when the facts demonstrate that the granting of a subsidy, without having been made legally contingent upon export performance, is in fact tied to actual or anticipated exportation or export earnings. The mere fact that a subsidy is granted to enterprises which export shall not for that reason alone be considered to be an export subsidy within the meaning of this provision.
>
> [5] Measures referred to in Annex I as not constituting export subsidies shall not be prohibited under this or any other provision of this Agreement.

570. In previous appeals, the Appellate Body has explained that the WTO-consistency of an export subsidy for agricultural products has to be examined, in the first place, under the *Agreement on Agriculture*[821]; the examination under the *SCM Agreement* would follow if necessary. Turning, then, to the *Agreement on Agriculture*, we note that Article 1(e) of that Agreement defines "export subsidies" as "subsidies contingent upon export performance, including the export subsidies listed in Article 9 of this Agreement".

571. Although an export subsidy granted to agricultural products must be examined, in the first place, under the *Agreement on Agriculture*, we find it appropriate, as has the Appellate Body in previous disputes, to rely on the *SCM Agreement* for guidance in interpreting provisions of the *Agreement on Agriculture*. Thus, we consider the export-contingency requirement in Article 1(e) of the *Agreement on Agriculture* having regard to that same requirement contained in Article 3.1(a) of the *SCM Agreement*.[822]

572. The Appellate Body has indicated, in this regard, that the ordinary meaning of "contingent" is "conditional" or "dependent"[823] and that Article 3.1(a) of the *SCM Agreement* prohibits subsidies that are conditional upon export performance, or are dependent for their existence on export performance.[824] It has also emphasized that "a 'relationship of conditionality or dependence', namely that the granting of a subsidy should be 'tied to' the export performance, lies at the 'very heart' of the legal standard in Article 3.1(a) of the *SCM Agreement*".[825] We are also mindful that in demonstrating

[821] See, for example, Appellate Body Report, *Canada – Dairy (Article 21.5 – New Zealand and US)*, para. 123.

[822] Appellate Body Report, *US – FSC (Article 21.5 – EC)*, para. 192.

[823] Appellate Body Report, *Canada – Aircraft*, para. 166.

[824] Appellate Body Report, *Canada – Aircraft (Article 21.5 – Brazil)*, para. 47. See also Appellate Body Report, *Canada – Aircraft*, para. 166.

[825] Appellate Body Report, *Canada – Aircraft (Article 21.5 – Brazil*), para. 47 (quoting Appellate Body Report, *Canada – Aircraft*, para. 171).

export contingency in the case of subsidies that are contingent in law upon export performance, the "existence of that condition can be demonstrated on the basis of the very words of the relevant legislation, regulation or other legal instrument constituting the measure".[826]

573. It is clear that the legal provisions pursuant to which Step 2 payments are granted to exporters of United States upland cotton, on their face, apply to exporters of United States upland cotton. Section 1207(a) of the FSRI Act of 2002 provides that, when certain market conditions exist, the United States Secretary of Agriculture:

> ... shall issue marketing certificates or cash payments, at the option of the recipient, to domestic users and *exporters* for documented purchases by domestic users and *sales for export by exporters*. (emphasis added)

The regulations define "eligible exporters" as:

> A person, including a producer or a cooperative marketing association ... regularly engaged in selling eligible upland cotton for exportation from the United States (exporter), who has entered into an agreement with CCC[827] to participate in the upland cotton user marketing certificate program.[828]

"Eligible upland cotton" is defined as "domestically produced baled upland cotton which bale is opened by an eligible domestic user ... or *exported* by an eligible *exporter*."[829]

574. Furthermore, in order to claim Step 2 payments, exporters must submit an application and provide supporting documentation to the CCC, including "proof of export of eligible cotton by the exporter".[830] This provision confirms that the payment is "tied to" exportation. As the Panel explained, "a condition of the receipt of user marketing (Step 2) payments to exporters under section 1207(a) of the FSRI Act of 2002 will always and inevitably be proof of exportation".[831] Thus, on the face of the statute and regulations pursuant to which Step 2 payments are granted to exporters, the payments are "conditional upon export performance" or "dependent for their existence on export performance".[832]

575. The United States directed the Panel's attention to the fact that the same statute and regulations also provide for similar payments to domestic users conditioned on the domestic use of United States upland cotton. According to the United States, Step 2 payments to exporters and domestic users are governed by a single legislative provision and a single set of regulations. In addition, the form and payment rate to domestic users and exporters are identical, and the payments are made from a single fund.[833] As Step 2 payments are available to both domestic users and exporters, the United States submits that exportation is not a condition to receive payment and, therefore, the payments are not export-contingent.[834]

576. We are not persuaded by the United States' arguments. Like the Panel, we recognize that Step 2 payments to exporters and domestic users are governed by a single legislative provision and a single set of regulations, that the form and rate of payment to exporters and domestic users are identical, and that the fund from which payments are made is a single fund.[835] Nevertheless, we agree with the Panel that the statute and regulations pursuant to which Step 2 payments are granted do not establish a "single class" of recipients of the payments; rather, the statute and regulations clearly distinguish between two types of eligible recipients, namely, eligible exporters and eligible domestic users.[836] As we have seen, an eligible exporter must be "[a] person, including a producer or a cooperative marketing association ... regularly engaged in selling eligible upland cotton for *exportation* from the United States".[837] In contrast, an "eligible domestic user" is "[a] person regularly engaged in the business of opening bales of eligible upland cotton for the purpose of manufacturing such cotton into cotton products in the United States".[838] Thus, the statute and regulations themselves clearly distinguish between exporters and domestic users.

577. In addition, the statute and regulations establish different conditions that eligible exporters and eligible domestic users must meet to receive Step 2 payments. An eligible domestic user must "open" a bale of cotton to qualify for payment.[839] For its part, an eligible exporter must demonstrate the upland cotton has been exported. These are distinct conditions that the statute and regulations themselves set out for the two distinct recipients of Step 2 payments. Because the conditions to qualify for payment are different, the documentation required from eligible domestic users and eligible exporters is also different. An eligible exporter must submit proof of exportation; an eligible domestic user must provide documentation indicating the number of bales opened.[840] We agree, therefore, with the Panel's view that the statute and regulations pursuant to which Step 2 payments are granted "involve[] payment to two distinct sets of recipients (exporters or domestic users) in two distinct factual situations (export or domestic use)".[841]

578. Furthermore, we agree with the Panel's conclusion that the fact that the subsidy is also available to domestic users of upland cotton does not "dissolve" the export-contingent nature of the Step 2 payments to exporters.[842] The Panel's reasoning is consistent with the approach taken by the Appellate Body in *US – FSC (Article 21.5 – EC)*.[843] In that case, the United States argued that the tax

[826]The legal instrument does not have to provide expressly for the export contingency; the conditionality may be derived by necessary implication from the text of the measure. (Appellate Body Report, *Canada – Autos*, para. 100)

[841]*Ibid.*, para. 7.732.

[842]*Ibid.*, para. 7.739.

[843]The Panel also found support for its reasoning in the Appellate Body's statement, in *Canada – Aircraft*, that:

> ... the fact that some of TPC's contributions, in some industry sectors, are *not* contingent upon export performance, does not necessarily mean that the same is true for all of TPC's contributions. It is enough to show that one or

exclusion at issue was not an export-contingent subsidy because it was available for both (i) property produced within the United States and held for use outside the United States and (ii) property produced outside the United States and held for use outside the United States. The United States asserted that, as the tax exemption was available in both circumstances, it was "export-neutral".[844] According to the United States, the panel's separate examination of each situation in which the tax exemption was available "artificially bifurcat[ed]" the measure.[845]

579. The Appellate Body rejected the United States' contention in *US – FSC (Article 21.5 – EC)* because it considered it necessary, under Article 3.1(a) of the *SCM Agreement*, "to examine separately the conditions pertaining to the grant of the subsidy in the two different situations".[846] It then confirmed the Panel's finding that the tax exemption in the first situation, namely for property produced within the United States and held for use outside the United States, is an export-contingent subsidy.[847] In its reasoning, the Appellate Body explained that whether or not the subsidies were export-contingent in both situations envisaged by the measure would not alter the conclusion that the tax exemption in the first situation was contingent upon export:

> Our conclusion that the ETI measure grants subsidies that are export contingent in the first set of circumstances is not affected by the fact that the subsidy can also be obtained in the second set of circumstances. The fact that the subsidies granted in the second set of circumstances *might* not be export contingent does not dissolve the export contingency arising in the first set of circumstances. Conversely, the export contingency arising in these circumstances has no bearing on whether there is an export contingent subsidy in the second set of circumstances.[848]

580. As in *US – FSC (Article 21.5 – EC)*, the Panel in this case found that Step 2 payments are available in two situations, only one of which involves export contingency.[849] The Panel's conclusion, therefore, is consistent with the Appellate Body's holding in *US – FSC (Article 21.5 – EC)* quoted above that "the fact that the subsidies granted in the second set of circumstances *might* not be export contingent does not dissolve the export contingency arising in the first set of circumstances".

581. The United States submits that the facts in this case are similar to those before the panel in *Canada – Dairy*.[850] In that dispute, the complaining parties argued that the provision of milk to exporters/processors under various mechanisms (described as "special milk classes") constituted export-contingent subsidies. The panel in *Canada – Dairy* found, nevertheless, that certain special milk classes were *not* export-contingent because the "milk under such other classes is also available

---

> some of TPC's contributions do constitute subsidies "contingent ... in fact … upon export performance".

(Appellate Body Report, *Canada – Aircraft*, para. 179) (original emphasis)

[846]*Ibid.*, para. 115.

[847]*Ibid.*, para. 120.

[848]*Ibid.*, para. 119. (original emphasis; footnote omitted)

[849]See, *supra*, para. 577.

[850]United States' appellant's submission, paras. 444-445 (referring to Panel Report, *Canada – Dairy*, para. 7.41 and footnote 496 to para. 7.124).

(often exclusively) to processors which produce for the domestic market".[851] The Panel, in this dispute, did not see any relevance in the Panel Report in *Canada – Dairy* because, in that case, "there was no explicit condition limiting a discrete segment of the payments of the subsidies concerned to exporters".[852] Brazil also seeks to distinguish the factual situation in *Canada – Dairy*, explaining that it involved a single regulatory class of milk instead of two mutually exclusive regulatory categories, as is the case in the present dispute.[853] We agree with the Panel and Brazil that the facts in *Canada – Dairy* differ from those of the present dispute. In this case, we have before us a statute and regulations that clearly distinguish between two sets of recipients—that is, eligible exporters and eligible domestic users—that must meet different conditions to receive payment.[854] In the case of one set of recipients, eligible exporters, exportation is a necessary condition to receive payment.

582. In sum, we agree with the Panel's view that Step 2 payments are export-contingent and, therefore, an export subsidy for purposes of Article 9 of the *Agreement on Agriculture* and Article 3.1(a) of the *SCM Agreement*. The statue and regulations pursuant to which Step 2 payments are granted, on their face, condition payments to exporters on exportation.[855] In order to claim payment, an exporter must show proof of exportation. If an exporter does not provide proof of exportation, the exporter will not receive a payment. This is sufficient to establish that Step 2 payments to exporters of United States upland cotton are "conditional upon export performance" or "dependent for their existence on export performance".[856] That domestic users may also be eligible to receive payments under different conditions does not eliminate the fact that an exporter will receive payment only upon proof of exportation.

583. For these reasons, we *uphold* the Panel's findings, in paragraphs 7.748-7.749 and 8.1(e) of the Panel Report, that Step 2 payments to exporters of United States upland cotton, pursuant to Section 1207(a) of the FSRI Act of 2002, constitute subsidies contingent upon export performance within the meaning of Article 9.1(a) of the *Agreement on Agriculture* and that, therefore, in providing such subsidies the United States has acted inconsistently with its obligations under Articles 3.3 and 8 of the *Agreement on Agriculture*.

584. Having explained that there is no reason to read the export-contingency requirement in the *Agreement on Agriculture* differently from that contained in Article 3.1(a) of the *SCM Agreement*[857], and having found that Step 2 payments to exporters of United States upland cotton are contingent upon export performance within the meaning of Article 9.1 of the *Agreement on Agriculture*, we also find that such payments are export-contingent for purposes of Article 3.1(a) of the *SCM Agreement*.[858] Consequently, we *uphold* the Panel's findings, in paragraphs 7.760-7.761 and 8.1(e) of the Panel Report, that Step 2 payments provided to exporters of United States upland cotton, pursuant to Section 1207(a) of the FSRI Act of 2002, are inconsistent with Articles 3.1(a) and 3.2 of the *SCM Agreement*.

---

[851]Panel Report, *Canada – Dairy*, para. 7.41.

[852]Panel Report, para. 7.718.

[853]Brazil's appellee's submission, paras. 898-899.

[854]See *supra*, para. 577.

[856]See Appellate Body Report, *Canada – Aircraft (Article 21.5 – Brazil)*, para. 47.

[857]See *supra*, para. 571.

[858]As the Panel observed, pursuant to Article 13(c)(ii) of the *Agreement on Agriculture*, "to the extent that the export subsidy at issue does not conform fully to the provisions of Part V of the *Agreement on Agriculture*, it is not exempt from actions based on Articles 3.1(a) and 3.2 of the *SCM Agreement*". (Panel Report, para. 7.751)

C. *Export Credit Guarantees – Article 10.2 of the Agreement on Agriculture*

585. We turn next to the United States' and Brazil' appeals of the Panel's findings relating to the United States' export credit guarantee programs.

1. United States' Export Credit Guarantee Programs

586. Brazil challenges three types of export credit guarantee programs. The first two programs, GSM 102 and GSM 103, provide guarantees to exporters when credit is extended by foreign financial institutions. The third type, the SCGP, applies when credit is extended by the exporter to the purchaser of United States agricultural products.[859]

587. The GSM 102 program is available to cover commercial exports of United States agricultural commodities on credit terms of between 90 days and 3 years. To obtain the credit guarantee under GSM 102, the exporter must have received a letter of credit in its favour from the foreign bank and must apply for the guarantee before making the exportation. The exporter will pay a fee for the guarantee based on a schedule of rates that vary according to the credit period, but are capped by law at one per cent of the guaranteed dollar value of the transaction. In the event that the foreign bank fails to make a payment, the exporter informs the CCC of the default and "[t]he CCC generally covers 98 per cent of the principal and a portion of the interest".[860]

588. The GSM 103 is similar to the GSM 102. The difference between the two programs is that GSM 103 guarantees export credits that have longer terms. Specifically, GSM 103 guarantees credits with terms of between 3 and 10 years. An additional difference is that, contrary to GSM 102, the fee that an exporter must pay to obtain a guarantee under GSM 103 is not capped by law.

589. The SCGP guarantees credits extended by the exporter itself to foreign buyers of United States agricultural commodities. Under the SCGP, the United States exporter is required to submit to the CCC a promissory note signed by the importer prior to exportation. The exporter will pay a fee at a rate that varies according to the term of the loan, and, like GSM 102, is capped by law at one per cent of the guaranteed dollar value of the transaction. If the importer defaults on the promissory note, then the CCC will pay the exporter 65 per cent of the dollar value of the exported product (excluding interest).

2. Panel Findings

590. Before the Panel, Brazil asserted that these three United States export credit guarantee programs—GSM 102, GSM 103 and SCGP—violate Articles 10.1 and 8 of the *Agreement on Agriculture* and are therefore not exempt, under Article 13(c)(ii) of the *Agreement on Agriculture*, from actions based on Articles 3.1(a) and 3.2 of the *SCM Agreement*.[861] Brazil also argued that the three programs violate Articles 3.1(a) and 3.2 of the *SCM Agreement*.[862]

591. The United States responded that Article 10.2 of the *Agreement on Agriculture* makes it clear that the export subsidy disciplines in the *Agreement on Agriculture* and the *SCM Agreement* are not applicable to export credit guarantee programs. According to the United States, Article 10.2 of the *Agreement on Agriculture* "reflects the deferral of disciplines on export credit guarantee programs contemplated by WTO Members".[863] The United States argued that, even if the export subsidy disciplines in the *SCM Agreement* were applicable, its export credit guarantee programs are not prohibited export subsidies under Article 3.1(a) because they do not meet the criteria in item (j) of the Illustrative List of Export Subsidies attached to the *SCM Agreement* as Annex I, namely that the premiums are inadequate to cover the programs' long-term operating costs and losses.[864]

592. At the outset of its analysis, the Panel observed that it would adopt the parties' shared view that "export credit guarantees are not included in the non-exhaustive list of export subsidies in Article 9.1, and that Article 10 of the *Agreement on Agriculture* is the relevant provision".[865] The Panel then stated that Article 10.1 "covers any subsidy contingent on export performance that is not listed in Article 9.1".[866] The Panel observed that, other than the list of export subsidies listed in Article 9.1, the *Agreement on Agriculture* does not specify what is a subsidy contingent upon export performance.[867] Thus, the Panel sought contextual guidance in the *SCM Agreement*, to assist it in its interpretation of the term "export subsidies" in Article 10.1 of the *Agreement on Agriculture*. In particular, the Panel looked at item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*, observing that "there is no disagreement between the parties ... that, if an export credit guarantee programme meets the elements of item (j), it is a *per se* export subsidy".[868]

593. The Panel then examined whether the United States' export credit guarantee programs challenged by Brazil met the criteria set out in item (j) and concluded that:

> On the basis of the totality of the record evidence, including approaches regularly relied upon by the United States government itself, we find that Brazil has established that the United States CCC provides the GSM 102, GSM 103 and SCGP export credit guarantee programmes "at premium rates which are inadequate to cover the long-term operating costs and losses of the programmes" within the meaning of item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement*.[869]

594. Having reached this general conclusion, the Panel next examined Brazil's claims that the United States' export credit guarantees "result[ ] in" or "threaten[ ] to lead to" circumvention of the United States' export subsidy commitments, contrary to Article 10.1 of the *Agreement on Agriculture*. In its analysis, the Panel distinguished between, on the one hand, "supported" and "unsupported"

[859]These export credit guarantee programs are established under Section 5622 of Title 7 of the United States Code and implemented in Part 1493 of Title 7 of the United States Code of Federal Regulations. (See Panel Report, para. 7.250(vi)) Subpart B of Part 1493 relates to the GSM 102 and the GSM 103 programs and Subpart D deals with the SCGP program. GSM 102 and 103 export credit guarantees have been issued since late 1980, while the SCGP program began in 1996. (United States' first written submission to the Panel, paras. 151 and 152 and footnote 133 thereto) Export credit guarantee programs are administered through the CCC, created under the Commodity Credit Corporation Charter Act of 1948. The CCC is a federal corporation established within the USDA. (Panel Report, para. 7.236 and footnote 346 thereto) A further description of the GSM 102, GSM 103 and SGCP is provided in Panel Report, paras. 7.236-7.244.

[869]Panel Report, para. 7.867.

products, and, on the other, "scheduled" and "unscheduled" products. The Panel used the term "supported products" to refer to products for which there was evidence in the record showing that they were not only eligible under the programs, but that export credit guarantees were in fact received in connection with exports of those products.[870] "Scheduled products" are those for which a WTO Member has assumed a commitment to limit the amount of export subsidies in terms of budgetary outlays and quantities exported pursuant to Articles 3, 8, and 9 of the *Agreement on Agriculture*.[871]

595. The Panel found that, "in respect of upland cotton and other such [supported] *unscheduled* agricultural products on record, the United States applies export credit guarantees constituting export subsidies in a manner which results in circumvention of its export subsidy commitments inconsistently with Article 10.1 of the *Agreement on Agriculture*".[872] In addition, the Panel found that "the United States has applied export credit guarantees constituting export subsidies within the meaning of Article 10.1 – and therefore, necessarily, not listed in Article 9.1 – in a manner which results in circumvention of export subsidy commitments in respect of" rice (a scheduled commodity).[873] The Panel, nonetheless, found that "[i]t has not been established, however, that such actual circumvention has resulted in respect of the twelve other United States scheduled commodities".[874] Finally, the Panel "decline[d] to find that the export credit guarantee programmes at issue are generally applied to scheduled agricultural products other than rice and other unscheduled agricultural products (not supported under the programmes) in a manner which threatens to lead to circumvention of United States' export subsidy commitments within the meaning of Article 10.1 of the *Agreement on Agriculture*."[875]

596. After making these findings, the Panel turned to the United States' argument that "the text of Article 10.2 of the *Agreement on Agriculture* reflects the deferral of disciplines on export credit guarantee programmes contemplated by [WTO] Members".[876] This argument was rejected by the Panel, which was of the opposite view, namely, that the text of Article 10.1 "clearly indicat[es] that export credit guarantee programmes constituting export subsidies for the purposes of Article 10.1 must not be applied in a manner which results in, or which threatens to lead to, circumvention of export subsidy commitments".[877] The Panel found support for this interpretation in the provision's context and in its object and purpose, emphasizing in particular that Article 10.2 is a subparagraph of Article 10. According to the Panel, "[t]he title of Article 10, and the text of Article 10.1, indicates an

[870] *Ibid.*, para. 6.32; see also footnote 1056 to para. 7.875. At the oral hearing, the participants confirmed that this is also their understanding of what the Panel meant by the distinction that it drew between "supported" and "unsupported" products. In respect of "supported" products, the Panel stated that "[t]o the extent that it identifies products within the product coverage of the *Agreement on Agriculture* that are within our terms of reference, we consider Exhibit BRA-73 to be the relevant record evidence of such products for the purposes of this dispute". (Panel Report, footnote 1056 to para. 7.875; see also *ibid.*, footnote 1575 to para. 8.1(d)(i))

[871] The Panel noted that "[t]he United States has scheduled export subsidy reduction commitments in respect of the following thirteen commodities: wheat, coarse grains, rice, vegetable oils, butter and butter oil, skim milk powder, cheese, other milk products, bovine meat, pigmeat, poultry meat, live dairy cattle, eggs". (Panel Report, footnote 1057 to para. 7.876 (referring to Schedule XX of the United States of America, Part IV, Section II, entitled "Export Subsidies: Budgetary Outlays and Quantitative Reduction Commitments", reproduced in Exhibit BRA-83 and Exhibit US-13))

[875] *Ibid.*, para. 7.896.

[876] *Ibid.*, para. 7.900.

[877] *Ibid.*, para. 7.901.

intention to prevent Members from circumventing or 'evading' their 'export subsidy commitments'".[878] The Panel also rejected the United States' arguments based on subsequent practice and the drafting history.[879] In respect of the United States' argument on subsequent practice, the Panel stated that "[t]he record ... does not suggest that there is a discernible pattern of acts or pronouncements implying an agreement among WTO Members on the United States' interpretation of Article 10.2".[880] Although the Panel did not see a need to examine the drafting history, it found that "nothing in the drafting history of [Article 10.2] would compel [the Panel] to reach a different conclusion".[881]

597. Finally, the Panel turned to Brazil's claims under Articles 3.1(a) and 3.2 of the *SCM Agreement*, and found:

> To the extent that the United States export credit guarantee programmes at issue – GSM 102, GSM 103 and SCGP – do not conform fully to these provisions in Part V of the *Agreement on Agriculture* and do not benefit from the exemption from actions provided by Article 13(c)(ii) of the *Agreement on Agriculture*, they are also export subsidies prohibited by Article 3.1(a) ...
>
> ...
>
> To the extent that the three United States export credit guarantee programmes at issue are inconsistent with Article 3.1(a), they are, consequently, also inconsistent with Article 3.2 of the *SCM Agreement*.[882]

3. Arguments on Appeal

598. The United States contends that the Panel erred in analyzing whether export credit guarantees are export subsidies subject to the disciplines of Article 10.1 solely by reference to the *SCM Agreement*. According to the United States, the proper context in which to analyze the meaning of Article 10.1 with respect to export credit guarantees is Article 10.2 of the *Agreement on Agriculture*.[883] This provision reflects the fact that, during the Uruguay Round, WTO Members did not agree on disciplines to be applied to agricultural export credits, export credit guarantees, and insurance programs, opting instead to continue discussions, deferring the imposition of substantive disciplines until a consensus was achieved.

599. According to the United States, this interpretation of Article 10.2 is consistent with Article 10 as a whole.[884] Article 10.2 contributes to the prevention of circumvention of export subsidy commitments by imposing two obligations on Members: first, they must undertake to work toward the development of internationally agreed disciplines on export credit guarantees; and second "after

[878] *Ibid.*, para. 7.912. (footnote omitted)

[879] *Ibid.*, paras. 7.928-7.944.

[880] *Ibid.*, para. 7.929. (footnotes omitted)

[881] Panel Report, para. 7.933. The Panel did not see a need to examine the drafting history because it considered that its "examination of the text of Article 10.2 of the *Agreement on Agriculture*, in its context and in light of the object and purpose of that agreement leads to a clear interpretation of the text". (Panel Report, para. 7.933)

[882] *Ibid.*, paras. 7.947 and 7.948. (footnote omitted)

[883] United States' appellant's submission, para. 341.

[884] *Ibid.*, para. 346.

agreement on such disciplines", they must provide export credit guarantees "only in conformity therewith".[885] Moreover, excluding export credit guarantees from the application of Article 10.1 is also consistent with the treatment of food aid transactions under Article 10. Because Article 10.4 of the *Agreement on Agriculture* does not explicitly exempt food aid transactions from the applicability of Article 10.1, the Panel's interpretative approach would mean that all food aid transactions constitute export subsidies under Article 10.1.[886]

600. The United States submits that the negotiating history confirms its interpretation that Article 10.2 makes the export subsidy disciplines in Article 10.1 inapplicable to export credit guarantees.[887] In addition, the United States argues that it defies logic, as well as the object and purpose of the *Agreement on Agriculture*, to take the view of the Panel whereby export credit guarantees, export credits and insurance programs would be treated as already disciplined export subsidies, yet would not be permitted to be included within the applicable reduction commitments expressly contemplated by the text.[888] The United States therefore requests that we reverse the Panel's finding that export credit guarantees are subject to the disciplines of Article 10.1. In addition, the United States requests that we reverse the Panel's findings that export credit guarantees to agricultural commodities are subject to Articles 3.1 and 3.2 of the *SCM Agreement*. The United States asserts that, because export credit guarantees currently are not subject to export subsidy disciplines under the *Agreement on Agriculture*, the export subsidy disciplines of the *SCM Agreement* are also inapplicable to these measures pursuant to Article 21.1 of the *Agreement on Agriculture* and the introductory language of Article 3.1 of the *SCM Agreement*.[889]

601. Brazil requests that we reject the United States' appeal from the Panel's finding that export credit guarantees are subject to the export subsidy disciplines in Article 10.1 of the *Agreement on Agriculture*. Brazil asserts that subsidized export credit guarantees are covered by the general definition of "export subsidies" under Article 1(e) of the *Agreement on Agriculture* and that these measures are, therefore, subject to Article 10.1 of the *Agreement on Agriculture*, unless an exception is provided in Article 10.2.[890] The text of Article 10.2 establishes two obligations, but does not provide an exception.[891]

602. According to Brazil, the Panel's interpretation is consistent with the context and object and purpose of Article 10.2. Each of the paragraphs in Article 10 pursues the aim of "preventing circumvention" of export subsidy commitments and, thereby, contributes to the purpose of the *Agreement on Agriculture* of establishing specific binding commitments on export competition. Therefore, Article 10.2 also must be interpreted in a manner that ensures that it contributes to the purpose of preventing circumvention of commitments on export competition.[892] The United States' interpretation of Article 10.2 would tend in the opposite direction, leaving Members free to grant unlimited export subsidies in the form of export credit guarantees and would permit wholesale circumvention of commitments.[893] Brazil, furthermore, disagrees with the United States' assertion that the Panel's interpretation is an "assault" on international food security.[894] According to Brazil, food aid is subject to the specific disciplines in Article 10.4 of the *Agreement on Agriculture*, as well as to the general disciplines in Article 10.1.[895]

603. In addition, Brazil disagrees with the conclusions drawn by the United States from the negotiating history of the *Agreement on Agriculture*.[896] Brazil also rejects the United States' contention that the Panel's reading of Article 10.2 is "manifestly unreasonable".[897] Brazil explains that, at the close of the Uruguay Round, Members agreed that they would calculate their respective export subsidy commitment levels using exclusively the export subsidies listed in Article 9.1 and thus chose to leave out of the calculation export subsidies referred to in Article 10.1. Finally, Brazil emphasizes that the Panel's interpretation does not mean that Members cannot grant export credit guarantees. Instead, it means that subsidized export credit guarantees are subject to disciplines as trade-distorting measures, and cannot be used to override export subsidy commitments.[898]

604. Argentina, Australia, Canada, and New Zealand are of the view that Article 10.2 of the *Agreement on Agriculture* does not provide an exception from WTO export subsidy disciplines for export credit guarantees, export credits or insurance programs, and assert that the Panel correctly interpreted this provision.[899] Before the Panel, the European Communities submitted that Article 10.2 of the *Agreement on Agriculture* cannot be seen as exempting export credit guarantees granted to agricultural products from WTO disciplines as this provision makes it clear that export credit guarantees are not one of the types of export subsidies listed in Article 9.1 that a Member is given a limited authorization to apply[900]; the European Communities did not express a view on this issue on appeal.

4. Does Article 10.2 Exempt Export Credit Guarantee Programs from Export Subsidy Disciplines?[901]

605. The United States argues that because export credit guarantees are specifically dealt with in Article 10.2, and this provision expressly acknowledges that Uruguay Round negotiators did not reach an agreement on the disciplines that apply to them, they cannot properly be considered to be included within the "export subsidies" covered by Article 10.1.

606. As usual, our analysis begins with the text of the provision in question. Article 10.2 reads:

> Members undertake to work toward the development of internationally agreed disciplines to govern the provision of export credits, export credit guarantees or insurance programmes and, after agreement on such disciplines, to provide export credits, export credit guarantees or insurance programmes only in conformity therewith.

[885]Quoting Article 10.2 of the *Agreement on Agriculture*.

[900]Panel Report, para. 7.781.

[901]A separate opinion on this issue of one of the Members of the Division is set out *infra*, paras. 631-641. The relevant findings and conclusions for purposes of the recommendations and rulings to be adopted by the DSB in this dispute, pursuant to Article 17.14 of the DSU, are those set out in paragraph 763(e) and (f) of this Report.

607. Article 10.2 refers expressly to export credit guarantee programs, along with export credits and insurance programs. Under Article 10.2, WTO Members have taken on two distinct commitments in respect of these three types of measures: (i) to work toward the development of internationally agreed disciplines to govern their provision; and (ii) after agreement on such disciplines, to provide them only in conformity therewith. The text includes no temporal indication with respect to the first commitment. There is no deadline for beginning or ending the negotiations. The second commitment does have a temporal connotation, in the sense that it is triggered only "after agreement on such disciplines". This means that "after" international disciplines have been agreed upon, Members shall provide export credit guarantees, export credits and insurance programs only in conformity with those agreed disciplines. There is no dispute between the parties that, to date, no disciplines have been agreed internationally pursuant to Article 10.2.

608. Article 10.2 does not, however, expressly define the disciplines that *currently* apply to export credits, export credit guarantees and insurance programs under the *Agreement on Agriculture*. The Panel reasoned that "in order to carve out or exempt particular categories of measures from general obligations such as the prevention of circumvention of export subsidy commitments in Article 10.1 of the *Agreement on Agriculture*, it would be reasonable to expect an explicit indication revealing such an intention in the text of the Agreement".[902] The Panel saw "no language in Article 10.2 which would modify the scope of application of the general export subsidy disciplines in Article 10.1 in the *Agreement on Agriculture* so as to carve out or exempt export credit guarantees from the export subsidy disciplines imposed by that Agreement".[903]

609. We agree with the Panel's view that Article 10.2 does not expressly exclude export credit guarantees from the export subsidy disciplines in Article 10.1 of the *Agreement on Agriculture*. As the Panel observes, were such an exemption intended, it could have been easily achieved by, for example, inserting the words "[n]otwithstanding the provisions of Article 10.1", or other similar language at the beginning of Article 10.2.[904] Article 10.2 does not include express language suggesting that it is intended as an exception, nor does it expressly state that the application of any export subsidy disciplines to export credits or export credit guarantees is "deferred", as the United States suggests. Given that the drafters were aware that subsidized export credit guarantees, export credits and insurance programs could fall within the export subsidy disciplines in the *Agreement on Agriculture* and the *SCM Agreement*, it would be expected that an exception would have been clearly provided had this been the drafters' intention.

610. Moreover, as the Panel explained, Article 10.2 "contrasts starkly with the text of other provisions in the covered agreements, which clearly carve out or exempt certain products or measures from certain obligations that would otherwise apply pending the development of further multilateral disciplines".[905] The Panel referred to Article 6.1(a) and the footnote 24 to Article 8.2(a) of the *SCM Agreement* and Article XIII of the *General Agreement on Trade in Services*, which expressly indicate that existing disciplines do not apply pending the negotiation of future disciplines.[906] However, Article 10.2 does not expressly exclude the application of the existing disciplines in the *Agreement on Agriculture* until such time as the specific disciplines on export credits, export credit guarantees and insurance programs are internationally agreed upon.

[902]Panel Report, para. 7.903. (footnote omitted)

[903]*Ibid.*, para. 7.904.

[904]*Ibid.*, para. 7.909.

[905]*Ibid.*, para. 7.906.

[906]*Ibid.*, paras. 7.907-7.908.

611. The Panel rejected the United States' submission[907] that Brazil's approach would render Article 10.2 irrelevant.[908] In the Panel's view, "the purpose of any eventual disciplines could be further to facilitate the determination of when export credit guarantee programmes in respect of agricultural products constitute export subsidies *per se* by developing and refining existing disciplines".[909] Put another way, "the work envisaged in Article 10.2 would presumably elaborate further and more specific disciplines that could facilitate identification of the extent to which such export credit guarantee programmes constitute export subsidies, or to what extent export credit guarantee programmes are not permitted".[910] The use of the term "development" in Article 10.2 is consistent with this view. The definitions of the term "development" include: "[t]he action or process of developing; evolution, growth, maturation; ... a gradual unfolding, a fuller working-out" and "[a] developed form or product ... an addition, an elaboration".[911] This suggests that the disciplines to be internationally agreed will be an elaboration of the export subsidy disciplines that are currently applicable.

612. This interpretation is consistent with the reference in Article 10.2 to internationally agreed disciplines "to govern the provision of" export credits, export credit guarantees or insurance programs; alternatively, Article 10.2 could have referred to internationally agreed disciplines "to govern" export credits, export credit guarantees or insurance programs. The latter formulation ("to govern") would have been broader in scope, whereas the formulation used in Article 10.2 ("to govern the provision") is narrower. If the drafters had intended that currently no disciplines at all would apply to export credit guarantees, export credits and insurance programs, it would have made more sense for them to have chosen the broader formulation "to govern". The drafter's choice of the narrower formulation "to govern the provision of" suggests that export credit guarantees, export credits and insurance programs are not "undisciplined" in all respects, and that the disciplines to be developed have to do *only* with their *provision*. In other words, export credit guarantees, export credits and insurance programs are governed by Article 10.1 of the *Agreement on Agriculture*, but WTO Members will develop specific disciplines on the provision of these instruments.

613. The Panel's interpretation of Article 10.2, which is based on a plain reading of the text, is confirmed when, in accordance with the customary rules of treaty interpretation codified in Article 31 of the *Vienna Convention*, that provision is examined in its context and in the light of the object and purpose of the *Agreement on Agriculture*, and in particular Article 10, which is entitled "Prevention of Circumvention of Export Subsidy Commitments".

614. We note that Article 10.1 of the *Agreement on Agriculture*, the provision that immediately precedes Article 10.2, reads:

> Export subsidies not listed in paragraph 1 of Article 9 shall not be applied in a manner which results in, or which threatens to lead to, circumvention of export subsidy commitments; nor shall non-commercial transactions be used to circumvent such commitments.

615. Although Article 10.2 commits WTO Members to work toward the development of internationally agreed disciplines on export credit guarantees, export credits and insurance programs, it is in Article 10.1 that we find the disciplines that currently apply to export subsidies not listed in

[907]United States' first written submission to the Panel, paras. 163-165.

[908]Panel Report, para. 7.925.

[909]*Ibid.*

[910]*Ibid.*, para. 7.926. (footnote omitted)

[911]*Shorter Oxford English Dictionary*, 5th ed., W.R. Trumble, A. Stevenson (eds.) (Oxford University Press, 2002), Vol. 1, p. 662.

Article 9.1. A plain reading of Article 10.1 indicates that the only export subsidies that are excluded from its scope are those "listed in paragraph 1 of Article 9". The United States and Brazil agreed that export credit guarantees are not listed in Article 9.1.[912] Thus, to the extent that an export credit guarantee meets the definition of an "export subsidy" under the *Agreement on Agriculture*, it would be covered by Article 10.1. Article 1(e) of the *Agreement on Agriculture* defines "export subsides" as "subsidies contingent upon export performance, *including* the export subsidies listed in Article 9 of this Agreement". (emphasis added) The use of the word "including" suggests that the term "export subsidies" should be interpreted broadly and that the list of export subsidies in Article 9 is not exhaustive. Even though an export credit guarantee may not necessarily include a subsidy component, there is nothing inherent about export credit guarantees that precludes such measures from falling within the definition of a subsidy.[913] An export credit guarantee that meets the definition of an export subsidy would be covered by Article 10.1 of the *Agreement on Agriculture* because it is not an export subsidy listed in Article 9.1 of that Agreement.

616. We find it significant that paragraph 2 of Article 10 is included in an Article that is titled the "Prevention of Circumvention of Export Subsidy Commitments". As Brazil correctly points out, each paragraph in Article 10 pursues this aim.[914] Article 10.1 provides that WTO Members shall not apply export subsidies not listed in Article 9.1 of the *Agreement on Agriculture* "in a manner which results in, or which threatens to lead to, circumvention of export subsidy commitments; nor shall non-commercial transactions be used to circumvent such commitments". Article 10.3 pursues the aim of preventing circumvention of export subsidy commitments by providing special rules on the reversal of burden of proof where a Member exports an agricultural product in quantities that exceed its reduction commitment level; in such a situation a WTO Member is treated as if it has granted WTO-*inconsistent* export subsidies for the excess quantities, unless the Member presents adequate evidence to "establish" the contrary.[915] Article 10.4 provides disciplines to prevent WTO Members from circumventing their export subsidy commitments through food aid transactions. Similarly, Article 10.2 must be interpreted in a manner that is consistent with the aim of preventing circumvention of export subsidy commitments that pervades Article 10. Otherwise, it would not have been included in that provision.

617. The United States submits that Article 10.2 contributes to the prevention of circumvention because it commits WTO Members to work toward the development of internationally agreed disciplines and to provide export credit guarantees, export credits and insurance programs only in conformity with these disciplines once an agreement has been reached.[916] We are not persuaded by this argument. The necessary implication of the United States' interpretation of Article 10.2 is that, until WTO Members reach an agreement on international disciplines, export credit guarantees, export credits and insurance programs are subject to no disciplines *at all*. In other words, under the United States' interpretation, WTO Members are free to "circumvent" their export subsidy commitments

[912]Panel Report, para. 7.788.

[913]For discussion of the definitional elements of a subsidy in the context of the *Agreement on Agriculture*, see Appellate Body Report, *US – FSC*, para. 136, and Appellate Body Report, *Canada – Dairy*, para. 87.

[914]Brazil's appellee's submission, para. 951. See Appellate Body Report, *US – FSC*, para. 148 and Appellate Body Report, *Canada – Dairy (Article 21.5 – New Zealand and US II)*, para. 74.

[915]Appellate Body Report, *Canada – Dairy (Article 21.5 – New Zealand and US)*, para. 74. Article 10.3 of the *Agreement on Agriculture* provides:

> Any Member which claims that any quantity exported in excess of a reduction commitment level is not subsidized must establish that no export subsidy, whether listed in Article 9 or not, has been granted in respect of the quantity of exports in question.

[916]United States' appellant's submission, para. 346.

through the use of export credit guarantees, export credits and insurance programs until internationally agreed disciplines are developed, whenever that may be. We find it difficult to believe that the negotiators would not have been aware of and did not seek to address the potential that subsidized export credit guarantees, export credits and insurance programs could be used to circumvent a WTO Member's export subsidy reduction commitments. Indeed, such an interpretation would *undermine* the objective of preventing circumvention of export subsidy commitments, which is central to the *Agreement on Agriculture*.

618. The United States submits that, under the Panel's approach, international food aid transactions would be subject to the "full array of export subsidy disciplines" because they are not expressly excluded from Article 10.1.[917] According to the United States, this would adversely affect food security in the less developed world, which cannot be construed as the intent of the drafters.[918] Furthermore, the United States asserts, the Panel's approach would mean that international food aid transactions are subject to both the specific disciplines in Article 10.4 and those in Article 10.1 of the *Agreement on Agriculture*.[919]

619. We are unable to subscribe to the United States' arguments because we do not see Article 10.4[920] as excluding international food aid from the scope of Article 10.1.[921] International food aid is covered by the second clause of Article 10.1 to the extent that it is a "non-commercial transaction". Article 10.4 provides specific disciplines that may be relied on to determine whether international food aid is being "used to circumvent" a WTO Member's export subsidy commitments. There is no contradiction in the Panel's approach to Article 10.2 and its approach to Article 10.4. The measures in Article 10.2 and the transactions in Article 10.4 are both covered within the scope of Article 10.1. As Brazil submits, "Article 10.4 provides an example of specific disciplines that have been agreed upon for a particular type of measure and that complement the general export subsidy rules" but, like Article 10.2, it does not "establish any exceptions for the measures that [it] covers".[922] WTO Members are free to grant as much food aid as they wish, provided that they do so consistently with Articles 10.1 and 10.4. Thus, Article 10.4 does not support the United States' reading of Article 10.2.

[917]United States' appellant's submission, para. 349.

[918]*Ibid.*, para. 350.

[919]*Ibid.*, para. 358.

[920]Article 10.4 of the *Agreement on Agriculture* provides:

> 4. Members donors of international food aid shall ensure:
>
> (a) that the provision of international food aid is not tied directly or indirectly to commercial exports of agricultural products to recipient countries;
>
> (b) that international food aid transactions, including bilateral food aid which is monetized, shall be carried out in accordance with the FAO "Principles of Surplus Disposal and Consultative Obligations", including, where appropriate, the system of Usual Marketing Requirements (UMRs); and
>
> (c) that such aid shall be provided to the extent possible in fully grant form or on terms no less concessional than those provided for in Article IV of the Food Aid Convention 1986.
>
> A new Food Aid Convention was concluded in 1999.

[921]Brazil's appellee's submission, para. 940.

[922]Brazil's appellee's submission, para. 950.

620. The United States also relies on the negotiating history of the *Agreement on Agriculture* to support its position.[923] The Panel identified the drafting history in the record. It referred to paragraph 22 of the Framework Agreement on Agriculture Reform Programme (known as the "DeZeeuw Text"), circulated in July 1990, which envisaged "concurrent negotiations to govern the use of export assistance, including 'disciplines on export credits'".[924] There was also a "Note on Options in the Agriculture Negotiations" of June 1991, in which the Chairman of the negotiations "requested decisions by the principals on 'whether subsidized export credits and related practices ... would be subject to reduction commitments unless they meet appropriate criteria to be established in terms of the rules that would govern export competition'".[925] An addendum circulated in August of 1991 set out an Illustrative List of Export Subsidy Practices and included, as item (i), "[s]ubsidized export credit guarantees or insurance programs".[926] In December 1991, a "Draft Text on Agriculture" was circulated by the Chairman, Article 9.3 of which stated that "[f]or the purposes of this Article, whether export credits, export credit guarantees or insurance programmes provided by governments or their agencies constitute export subsidies shall be determined on the basis of paragraphs (j) and (k) of Annex 1 to the [*SCM Agreement*]."[927] That paragraph was omitted from the "Draft Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations"[928], which was circulated later that month. Article 10.2 of the Draft Final Act reads as follows:

> Participants undertake not to provide export credits, export credit guarantees or insurance programs otherwise than in conformity with internationally agreed disciplines.

This language was subsequently replaced by the current text of Article 10.2.[929]

621. The Panel did not consider that this negotiating history supported the United States' position that "the drafters intended to defer the application of any and all disciplines on agricultural export credit guarantees".[930] According to the Panel, "[t]he omission of paragraph 3 of Article 9 of the December 1991 Draft Text is consistent with a decision that the words were mere surplusage, because export credits, export credit guarantees and insurance programmes were within the disciplines on export subsidies according to the terms of the agreement captured".[931] "The omission", the Panel added, "is much less consistent with a decision to exclude such programmes from the disciplines altogether, considering the clear textual ability of the disciplines to extend to such programmes and the lack of any attention to an explicit carve-out of such programmes from the disciplines".[932]

622. On appeal, the United States again relies on the drafting history of the *Agreement on Agriculture*, which it considers "reflects that the Members very early specifically included export credits and export credit guarantees as a subject for negotiation and specifically elected *not* to include such practices among export subsidies in the WTO Agreements with respect to those goods within the scope of ... the *Agreement on Agriculture*".[933] The United States adds that "[b]y deleting an explicit reference to export credit guarantees from the illustrative list of export subsidies in Article 9.1, Members demonstrated that they had not agreed in the case of agricultural products that export credit guarantees constitute export subsidies that should be subject to export subsidy disciplines".[934] Finally, the United States takes issue with the Panel's explanation that draft Article 9.3 was omitted because it was mere surplusage.[935]

623. We agree with the Panel that the meaning of Article 10.2 is clear from the provision's text, in its context and in the light of the object and purpose of the *Agreement on Agriculture*, consistent with Article 31 of the *Vienna Convention*.[936] The Panel did not think it necessary to resort to negotiating history for purposes of its interpretation of Article 10.2. Even if the negotiating history were relevant for our inquiry, we do not find that it supports the United States' position. This is because it does not indicate that the negotiators did not intend to discipline export credit guarantees, export credits and insurance programs *at all*. To the contrary, it shows that negotiators were aware of the need to impose disciplines on export credit guarantees, given their potential as a mechanism for subsidization and for circumvention of the export subsidy commitments under Article 9. Although the negotiating history reveals that the negotiators struggled with this issue, it does not indicate that the disagreement among them related to whether export credit guarantees, export credits and insurance programs were to be disciplined at all. In our view, the negotiating history suggests that the disagreement between the negotiators related to which kinds of specific disciplines were to apply to such measures. The fact that negotiators felt that internationally agreed disciplines were necessary for these three measures also suggests that the disciplines that currently exist in the *Agreement on Agriculture* must apply pending new disciplines because, otherwise, it would mean that subsidized export credit guarantees, export credits, and insurance programs could currently be extended without any limit or consequence.

624. The United States contends that the Panel's interpretation leads to a result that is "manifestly absurd or unreasonable".[937] According to the United States, it "defies logic ... to take the view of the Panel in which such practices would be treated as already disciplined export subsidies yet not permitted to be included within the applicable reduction commitments expressly contemplated by the text".[938] The Panel's interpretation thus results in an enormous "windfall" for Brazil because the United States would have been permitted to grant export credit guarantees had such measures been listed in Article 9 of the *Agreement on Agriculture*.[939] The United States also submits that exemption of export credit guarantees from export subsidy disciplines of the *Agreement on Agriculture* is further demonstrated by the fact that "no export credit guarantees are reported in the schedules of the

[923]The United States refers to the negotiating history pursuant to Article 32 of the *Vienna Convention*. (United States' appellant's submission, para. 367; see also Panel Report, footnote 1112 to para. 7.933) Article 32 provides that recourse may be had to supplementary means of interpretation, including negotiating history, to determine the meaning when the interpretation according to Article 31 "leads to a result which is manifestly absurd or unreasonable".

[924]Panel Report, para. 7.934.

[939]*Ibid.*

United States or any other Members ... nor are they currently subject to reporting as export subsidies".[940]

625. We do not agree with the United States' submission in this regard. There could have been several reasons why Members chose not to include export credit guarantees, export credits and insurance programs under Article 9.1 of the *Agreement on Agriculture*. One reason, for instance, may be that they considered that their export credit guarantee, export credit or insurance programs did not include a subsidy component, so that there was no need to subject them to export subsidy reduction commitments. There could have been other reasons. Thus, the fact that export credit guarantees, export credits and insurance programs were not included in Article 9.1 does not support the United States' interpretation of Article 10.2. We also observe that whether WTO Members with export credit guarantee programs have reported them in their export subsidy notifications is not determinative for purposes of our inquiry into the meaning of Article 10.2. In any event, the United States and Brazil disagree about whether such programs are subject to notification requirements.[941]

626. Accordingly, we do not believe that Article 10.2 of the *Agreement on Agriculture* exempts export credit guarantees, export credits and insurance programs from the export subsidy disciplines in the *Agreement on Agriculture*. This does not mean that export credit guarantees, export credits and insurance programs will necessarily constitute export subsidies for purposes of the *Agreement on Agriculture*. Export credit guarantees are subject to the export subsidy disciplines in the *Agreement on Agriculture* only to the extent that such measures include an export subsidy component. If no such export subsidy component exists, then the export credit guarantees are not subject to the Agreement's export subsidy disciplines. Moreover, even when export credit guarantees contain an export subsidy component, such an export credit guarantee would not be inconsistent with Article 10.1 of the *Agreement on Agriculture* unless the complaining party demonstrates that it is "applied in a manner which results in, or which threatens to lead to, circumvention of export subsidy commitments". Thus, under the *Agreement on Agriculture*, the complaining party must first demonstrate that an export credit guarantee program constitutes an export subsidy. If it succeeds, it must then demonstrate that such export credit guarantees are applied in a manner that results in, or threatens to lead to, circumvention of the responding party's export subsidy commitments within the meaning of Article 10.1 of the *Agreement on Agriculture*.

627. For these reasons, we *uphold* the Panel's finding, in paragraphs 7.901, 7.911 and 7.932 of the Panel Report, that Article 10.2 of the *Agreement on Agriculture* does not exempt export credit guarantees from the export subsidy disciplines in Article 10.1.

628. Before proceeding further, we refer to the order followed by the Panel in its analysis of Brazil's claims against the United States' export credit guarantee programs. We do not find that the Panel's order of analysis was wrong or that it constituted legal error. Nor has the United States made such a claim on appeal. Nevertheless, we are struck by the fact that the Panel addressed Article 10.2 only at the end of its analysis, especially given that this provision constituted the core of the United States' defence that the disciplines of the *Agreement on Agriculture* currently do not apply to export credit guarantees at all.

[940] *Ibid.*, para. 385. (footnote omitted) The United States makes this argument within the context of its assertion that the Panel's interpretation leads to a result that is "manifestly absurd or unreasonable".

[941] The notification requirements are set out in *Notification Requirements and Formats under the WTO Agreement on Agricultur*e (PC/IPL/12, 2 December 1994), submitted by the United States to the Panel as Exhibit US-99. The United States argues that the absence of a reporting requirement for export credit guarantees provides further proof that such measures are not subject to export subsidy disciplines under the *Agreement on Agriculture*. (United States' appellant's submission, paras. 384-385) Brazil disagrees and submits that, to the extent export credit guarantees constitute export subsidies, such measures are subject to notification requirements. (Brazil's appellee's submission, para. 934)

5. Articles 3.1 and 3.2 of the *SCM Agreement*

629. We turn to the United States' appeal of the Panel's findings under Articles 3.1 and 3.2 of the *SCM Agreement*. According to the United States, "Article 3 of the *SCM Agreement* ... is subject in its application to Article 21.1 of the *Agreement on Agriculture*".[942] The United States then argues that, because "export credit guarantees are not subject to the disciplines of export subsidies for purposes of the *Agreement on Agriculture*, Article 21.1 of that Agreement renders Article 3.1(a) of the *SCM Agreement* inapplicable to such measures".[943] Furthermore, the United States asserts that "the exemption from action under Article 13(c) is inapplicable, because it only is effective with respect to export subsidies disciplined under the *Agreement on Agriculture*."[944]

630. The United States' argument is premised on the proposition that Article 10.2 of the *Agreement on Agriculture* exempts export credit guarantees from the export subsidy disciplines in that Agreement. The Panel rejected this proposition and we have upheld the Panel's finding in this regard. Therefore, because it is premised on an incorrect interpretation of Article 10.2 of the *Agreement on Agriculture*, we reject the United States' argument. We examine the United States' appeals from other aspects of the Panel's assessment of the export credit guarantee programs under Article 3 of the *SCM Agreement* in the following section of our Report.

6. Separate Opinion

631. One Member of the Division hearing this appeal wishes to set out a brief separate opinion. At the outset, I would like to make it absolutely clear that I agree with the findings and conclusions and reasoning set out in all preceding Sections of this Report, but one, namely, Section C above, which relates to Article 10.2 of the *Agreement on Agriculture*. It is only on the interpretation of Article 10.2 that I must respectfully disagree.

632. First I wish to point out that although Article 10.1 of the *Agreement on Agriculture* covers a range of export subsidies that do not fall within the ambit of Article 9.1 of the Agreement, Members considered that it was necessary to carve out three types of programs, namely export credit guarantees, export credits and insurance programs, and to spell out in Article 10.2 their commitments with respect to those three areas. The fact that they chose to deal with these three types of measures in Article 10.2 shows that this special treatment of the three types of measures must be given meaning and weight. Put differently, Article 10.2 is the only provision in the *Agreement on Agriculture* that speaks directly to export credit guarantees, export credits and insurance programs provided in connection with agricultural goods. I read Article 10.2 as saying that WTO Members have committed to two specific undertakings: (1) "to work *toward* the *development*" of international agreed disciplines and (2) to provide export credit guarantees in conformity with these disciplines "*after* agreement on such disciplines". (emphasis added) Thus, the text of Article 10.2 obliges Members to "work toward the *development*" of internationally agreed disciplines to regulate the provision of export credit guarantees, as well as export credits and insurance programs.

633. A specific provision that calls on Members to "work toward the development" of disciplines strongly suggests to me that disciplines do not yet exist. Certainly reference is not made in Article 10.2 to any other disciplines found in the *Agreement on Agriculture* that apply to export credit guarantees, export credits and insurance programs provided in connection with agricultural goods. Furthermore, the second part of Article 10.2 clearly limits the application of disciplines to *after* such time as the international disciplines have been agreed upon. This is a further indication

[942] United States' appellant's submission, para. 393.

[943] *Ibid.*

[944] *Ibid.*, para. 395.

that there are no current disciplines under the *Agreement on Agriculture* that apply to export credit guarantees, export credit and insurance programs.

634. I recognize that the language of this provision is not free from ambiguity. As noted by my colleagues on the Division, the drafters could have—dare I say, should have—made their intentions even more plain. If there were no Article 10.2, then I might concur with my colleagues that to the extent that an export credit guarantee provided an export subsidy then the *Agreement on Agriculture* envisions that that subsidy portion should be addressed by Article 10.1. However, Article 10.2 does exist and the meaning of the words as I read them is entirely prospective, at least with respect to the existence of applicable disciplines.

635. I do not see my reading of Article 10.2 to be inconsistent with the provision's context and with the object and purpose of the *Agreement on Agriculture*. Article 10 is entitled "Prevention of Circumvention of Export Subsidy Commitments". I see the first part of Article 10.1 as setting out a catch-all provision, designed to potentially cover an export subsidy that is used to circumvent the reduction commitments under Article 9. In contrast, as discussed above, Article 10.2 is designed to *specifically* deal with export credit programs, export credits and insurance programs, and its provisions are controlling with respect to any such programs. Although it speaks to prospective development and application of agreed disciplines, Article 10.2 is also consistent with the objective of prevention of circumvention. Its placement in Article 10 suggests a recognition that export credits, export credit guarantees and insurance programs can have the potential to circumvent export subsidy commitments.[945] Article 10.3 pursues the aim of preventing circumvention of export subsidy commitments by providing special rules on reversal of burden of proof when a Member's exports exceed the quantitative reduction commitments, and Article 10.4 itemizes a series of specific commitments or disciplines that apply in the area of international food aid. It is accurate, as my colleagues reason, that the language of Article 10.2 is quite different from that used in Article 10.4. While Article 10.4 establishes disciplines for food aid transactions, Article 10.2 merely foresees that disciplines will be established, in the future, for export credit guarantees, export credits and insurance programs. The fact that a single Article contains commitments with varying degrees of temporal effect and both specific and general provisions, does not support an interpretation that the general undertaking (Article 10.1) overrides the specific and prospective provision (that is, Article 10.2).

636. I also find support for my view in the negotiating history. Of course, care must be taken in relying on negotiating history and I do not wish to imply that resort to Article 32 of the *Vienna Convention* is strictly necessary in these circumstances.[946] Nevertheless, as I read it this history confirms my view that at the end of the Uruguay Round, negotiators had not agreed to subject export credit guarantees, export credits and insurance programs provided in connection with agricultural goods to the disciplines of the *Agreement on Agriculture* or to any other disciplines that existed at that time. Article 10.2, in my view, was intended to reflect this outcome. At one point in the negotiations, there was a proposal for applying to agricultural products the disciplines in the Illustrative List of Export Subsidies annexed to the *SCM Agreement*.[947] This proposal was dropped in

[945]In this sense, I find the United States' term "deferral" to be more meaningful than "exception" in thinking about the nature of Article 10.2 in that it acknowledges that Members are already under an obligation to develop such disciplines, albeit in the future.

[946]I also recognize that the negotiating materials referred to by the Panel may not formally constitute *travaux préparatoires* for purposes of Article 32 of the *Vienna Convention*.

[947]Panel Report, para. 7.937. Specifically, in December 1991, a "Draft Text on Agriculture" was circulated by the Chairman. Article 9.3 of the draft text stated that "[f]or the purposes of this Article, whether export credits, export credit guarantees or insurance programmes provided by governments or their agencies constitute export subsidies shall be determined on the basis of paragraphs (j) and (k) of Annex 1 to the [SCM Agreement]". (*Ibid.*, para. 7.937) Later, the Draft Final Act was circulated and it omitted paragraph 3 of Article 9 that had appeared in the previous draft. (*Ibid.*, para. 7.938)

the Draft Final Act in favour of an "undertak[ing] not to provide export credits, export credit guarantees or insurance programs otherwise than in conformity with internationally agreed disciplines"[948], which in turn was replaced by the current version of Article 10.2. The previous version of Article 10.2 (in the Draft Final Act) reflected an immediate undertaking "not to provide export credit guarantees, export credits or insurance programs otherwise than in conformity with internationally agreed disciplines", whatever those may have been. In contrast, no immediate commitment is evident from the current version of Article 10.2, which instead calls for continued negotiations and for WTO Members to provide export credits, export credit guarantees or insurance programs only in conformity with internationally agreed disciplines *after* agreement on such disciplines. This suggests to me that the negotiators were aware of the need to impose disciplines on export credit guarantees, given their potential as a mechanism for circumvention, but they were unable to agree upon and identify the disciplines that were to apply to such measures until disciplines were developed in the future. Thus, in my view, the negotiating history supports an interpretation that Article 10.2 was inserted to commit WTO Members to continue negotiating on the disciplines that would apply, in the future, and that no disciplines would apply to such measures until such time as disciplines were internationally agreed upon.

637. As noted by my colleagues on the Division, the United States argues that "it defies logic, as well as the obvious object and purpose of the agreement, to take the view of the Panel in which such practices would be treated as already disciplined export subsidies yet not permitted to be included within the applicable reduction commitments expressly contemplated by the text".[949] Brazil argues that the United States was never willing to accept that its export credit guarantee programs constituted an export subsidy and took a calculated risk by not including them under its Article 9 reduction commitments.[950]

638. I agree with my colleagues on the Division that the decisions of WTO Members regarding how to schedule their export subsidy commitments have limited value for purposes of an interpretation of Article 10. However, it seems anomalous that WTO Members with export credit guarantee programs would not have sought to preserve some flexibility to provide subsidies through such programs, which flexibility would have been available to them had such programs been included under Article 9 of the *Agreement on Agriculture*. My colleagues' reading of Article 10 perceives that WTO Members intended to impose upon themselves the more onerous obligation of immediately subjecting export credit guarantees, export credits and insurance programs to the export subsidy disciplines of the *Agreement on Agriculture* rather than the less demanding obligation of working toward the development of such disciplines. We are bound to rely upon what we have before us in the treaty provisions, and I find the same text and context leads me in the opposite direction. Namely, that the absence of reference in Article 9 to export credit guarantees, export credits and insurance programs suggests that it was believed that such measures would not be subject to any disciplines until such time as disciplines were internationally agreed upon pursuant to Article 10.2.

639. In conclusion, for these reasons and particularly my reading of the text, it is my view that, pursuant to Article 10.2, export credit guarantees, export credits and insurance programs are not currently subject to export subsidy disciplines under the *Agreement on Agriculture*, including the disciplines found in Article 10.1. In the light of Article 21.1 of the *Agreement on Agriculture* and the introductory language to Article 3.1 of the *SCM Agreement*, I am also of the view that export credit guarantees, export credits and insurance programs provided in connection with agricultural goods are not subject to the prohibition in Article 3.1(a) of the *SCM Agreement*.

[948]Panel Report, para. 7.938.

[949]United States' appellant's submission, para. 384.

[950]Brazil's response to questioning at the oral hearing.

640. I recognize that this interpretation of Article 10.2 perceives a significant gap in the *Agreement on Agriculture* with respect to export credit guarantees, export credits and insurance programs that apply to agricultural products. This underscores the importance of working "toward the development of international disciplines" as envisioned by Article 10.2.

641. I also recognize that this interpretation of Article 10.2 has consequential results for some of the other claims on appeal brought by both the United States and Brazil in connection with the United States' export credit guarantee programs. As to the other Sections of this Report dealing with export credit guarantees[951], I agree that the legal interpretation and analyses contained therein follow logically from the view of my colleagues on the Division with respect to Article 10.2, as set forth in paragraphs 605 through 630 of this Report.[952]

D. *Export Credit Guarantees – Burden of Proof*

642. The United States submits that the Panel erred in three different ways in respect of the application of the burden of proof in assessing the United States' export credit guarantee programs under item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*. First, the United States asserts that the Panel erred by applying the special rules on the burden of proof provided in Article 10.3 of the *Agreement on Agriculture* in its examination of Brazil's claim under the *SCM Agreement*. The United States emphasizes that "the burden of proof articulated in ... Article 10.3 has no application to the *SCM Agreement*".[953] Secondly, the United States argues that the Panel erred by applying the special rules on burden of proof in Article 10.3 of the *Agreement on Agriculture* in examining whether the United States circumvented its export subsidy commitments in respect of upland cotton and certain other *unscheduled* agricultural products.[954] According to the United States, Article 10.3 does not apply at all in respect of export subsidies to an agricultural good for which the respondent has no reduction commitments.[955] Finally, the United States refers to three specific instances in which the Panel allegedly applied the wrong burden of proof.[956]

643. Brazil responds by highlighting the Panel's finding that, whichever party bore the burden of proof, Brazil had demonstrated that the export credit guarantee programs constitute export subsidies under the terms of item (j) of the Illustrative List of Export Subsidies.[957]

644. Before examining the specific points raised by the United States on appeal relating to the Panel's application of the burden of proof, we recall the general rule that "the burden of proof rests upon the party, whether complaining or defending, who asserts the affirmative of a particular claim or defence".[958] Article 10.3 of the *Agreement on Agriculture*, however, "provides a special rule for

[951]I am referring to Sections D. *Export Credit Guarantees – Burden of Proof*, E. *Export Credit Guarantees – Necessary Findings of Fact*, F. *Export Credit Guarantees – Circumvention*, G. *Export Credit Guarantees – Articles 1.1 and 3.1(a) of the SCM Agreement* of this Report.

[952]The relevant findings and conclusions for purposes of the recommendations and rulings to be adopted by the DSB in this dispute, pursuant to Article 17.14 of the DSU, are those set out in paragraph 763(e) and (f) of this Report.

[953]United States' appellant's submission, para. 400. (emphasis omitted)

[954]*Ibid.*, para. 403.

[955]*Ibid.*, para. 404.

[956]*Ibid.*, paras. 405-408.

[957]Brazil's appellee's submission, paras. 95 and 1015 (referring to Panel Report, para. 7.793 and footnote 948 thereto and para. 7.867).

[958]Appellate Body Report, *US – Wool Shirts and Blouses*, p. 14, DSR 1997:1, 323 at 335.

proof of export subsidies that applies in certain disputes under Articles 3, 8, 9 and 10 of the *Agreement on Agriculture*".[959] The text of Article 10.3 reads:

> Any Member which claims that any quantity exported in excess of a reduction commitment level is not subsidized must establish that no export subsidy, whether listed in Article 9 or not, has been granted in respect of the quantity of exports in question.

This provision "cleaves the complaining Member's claim" into two parts: a quantitative aspect, and an export subsidization aspect, "allocating to different parties the burden of proof with respect to the two parts".[960]

645. As the Appellate Body has explained in a previous dispute, the burden of proof under Article 10.3 operates in the following manner:

> ... where a Member exports an agricultural product in quantities that exceed its quantity commitment level, that Member will be treated as if it has granted WTO-*inconsistent* export subsidies, for the excess quantities, unless the Member presents adequate evidence to "establish" the contrary. This reversal of the usual rules obliges the responding Member to bear the consequences of any doubts concerning the evidence of export subsidization.[961] (original emphasis)

Pursuant to Article 10.3 "the complaining Member ... is relieved of its burden, under the usual rules, to establish a *prima facie* case of export subsidization, provided that [it] has established the quantitative part of [its] claim".[962]

646. Having briefly set out the applicable rules on the burden of proof, we now turn to the specific points raised by the United States in this appeal. First, the United States alleges that the Panel erred by applying the "special rule" on the burden of proof set out in Article 10.3 of the *Agreement on Agriculture* to its examination of the export credit guarantees under the *SCM Agreement*, where such a rule "has *no* application at all".[963] To support its contention that the Panel applied Article 10.3 in the context of examining Brazil's claim under the *SCM Agreement*, the United States points to the following statement by the Panel:

> Moreover, recalling the burden of proof articulated in Article 10.3 of the *Agreement on Agriculture*, the United States has not established that it does not provide these export credit guarantee programmes at premium rates which are inadequate to cover the long-term operating costs and losses of the programmes.[964]

647. We agree with the United States that Article 10.3 of the *Agreement on Agriculture* does not apply to claims brought under the *SCM Agreement*. However, the Panel did not make the error

[959]Appellate Body Report, *Canada – Dairy (Article 21.5 – New Zealand and US II)*, para. 69.

[960]*Ibid.*, para. 71.

[961]Appellate Body Report, *Canada – Dairy (Article 21.5 – New Zealand and US II)*, para. 74.

[962]*Ibid.*, para. 75.

[963]United States' appellant's submission, para. 399. (emphasis added)

[964]Panel Report, para. 7.868.

attributed to it by the United States. The Panel made the statement relied on by the United States in the context of its assessment of the United States' export credit guarantee program under the *Agreement on Agriculture*. Although the Panel made use of the criteria set out in item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement* (providing these programs at premium rates inadequate to cover long-term operating costs and losses) it did so as contextual guidance for its analysis under the *Agreement on Agriculture*, and both the United States and Brazil appear to have agreed with the appropriateness of this approach.[965] Thus, the Panel's reference to Article 10.3 did not relate to its assessment of the United States' export credit guarantee programs under the *SCM Agreement*.

648. Moreover, we note that in the immediately preceding paragraph, which the United States fails to mention, the Panel stated:

> We have conducted a detailed examination of the relevant evidence and argumentation submitted by the parties. On the basis of the totality of the record evidence, including approaches regularly relied upon by the United States government itself, we find that Brazil has established that the United States CCC provides the GSM 102, GSM 103 and SCGP export credit guarantee programmes "at premium rates which are inadequate to cover the long-term operating costs and losses of the programmes" within the meaning of item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement*. Our view is based on a careful consideration of the evidence, taken as a whole, and no one element, in isolation, is determinative.[966] (underlining added)

It is clear from this paragraph that the Panel placed the burden of proof on Brazil and determined that Brazil met its burden of proving that the United States' export credit guarantees are provided at premium rates that are inadequate to cover long-term operating costs and losses. The Panel's statement on which the United States relies simply makes the point that the United States did not rebut the case that was made out by Brazil. The reference to Article 10.3 does not, by itself, change the fact that the Panel ultimately placed the burden of proof on Brazil.

649. After making its findings under the *Agreement on Agriculture*, the Panel examined the United States' export credit guarantees under the *SCM Agreement*. There is no reference to Article 10.3 of the *Agreement on Agriculture* in this discussion.[967] We are aware that the Panel applied the "'contextual' analysis" that it had conducted "under item (j) of the Illustrative List of Export Subsidies ... for the purposes of determining whether or not an export subsidy exists within the meaning of Article 10.1 of the *Agreement on Agriculture*" to its examination of "Brazil's claims under item (j)/Article 3.1(a) of the *SCM Agreement*".[968] In doing so, it would have been useful for the Panel to have clarified that the special rules on the burden of proof in Article 10.3 of the *Agreement on Agriculture*, to which it had referred previously in its "contextual" analysis of item (j) under the *Agreement on Agriculture*, were not applicable for purposes of its analysis under the *SCM Agreement*.[969] Because we have found that the Panel did not ultimately relieve Brazil of its burden of proof in determining that the United States' export credit guarantee programs constituted export subsides under the *Agreement on Agriculture*, we do not believe that the Panel's failure to clarify that Article 10.3 of the *Agreement on Agriculture* did not apply to its examination of the same measures under the *SCM Agreement* constitutes reversible legal error.

650. Secondly, the United States submits that the Panel erred by applying the special rules on the burden of proof in Article 10.3 of the *Agreement on Agriculture* in examining whether the United States circumvented its export subsidy commitments in respect of upland cotton and certain other *unscheduled* agricultural products.[970] According to the United States, Article 10.3 applies only to agricultural products for which a WTO Member has assumed export subsidy reduction commitments in its schedule, pursuant to Article 9.1 of the *Agreement on Agriculture*.[971]

651. The Panel's view was that Article 10.3 does apply to unscheduled products:

> With respect to upland cotton and other unscheduled products, the Panel considers that the United States' reduction commitment level, for the purposes of Article 10.3, is zero for each unscheduled product. By virtue of the second clause of Article 3.3, that is the level to which a Member must reduce any Article 9.1 export subsidies that were not in fact specifically made subject to "scheduled" reduction commitments. Accordingly, in the case of upland cotton and other unscheduled products the same sequence is to be followed, with Brazil as the complaining party first having to prove that United States' exports of unscheduled products exceed that "zero" level.[972]

652. We disagree with the Panel's view that Article 10.3 applies to *unscheduled* products. Under the Panel's approach, the only thing a complainant would have to do to meet its burden of proof when bringing a claim against an *unscheduled* product is to demonstrate that the respondent has exported that product. Once that has been established, the respondent would have to demonstrate that it has not provided an export subsidy.[973] This seems to us an extreme result. In effect, it would mean that any export of an unscheduled product is *presumed* to be subsidized. In our view, the presumption of subsidization when exported quantities exceed the reduction commitments makes sense in respect of a *scheduled* product because, by including it in its schedule, a WTO Member is reserving for itself the right to apply export subsidies to that product, within the limits in its schedule. In the case of *unscheduled* products, however, such a presumption appears inappropriate. Export subsidies for both unscheduled agricultural products and industrial products are completely prohibited under the *Agreement on Agriculture* and under the *SCM Agreement*, respectively. The Panel's interpretation implies that the burden of proof with regard to the same issue would apply differently, however, under each Agreement: it would be on the respondent under the *Agreement on Agriculture*, while it would be on the complainant under the *SCM Agreement*.

653. Although we disagree with the Panel's interpretation of Article 10.3 of the *Agreement on Agriculture* in respect of unscheduled products, we do not believe that the Panel's ultimate finding is

[965]Panel Report, para. 7.803.

[966]*Ibid.*, para. 7.867.

[967]See *ibid.*, paras. 7.946-7.948.

[968]*Ibid.*, para. 7.946 (footnote omitted)

[969]Panel Report, paras. 7.946-7.948.

[970]United States' appellant's submission, para. 403 (referring to Panel Report, para. 7.875).

[971]*Ibid.*, para. 404.

[972]Panel Report, para. 7.793. (footnote omitted)

[973]As the Appellate Body explained, when the special rule on burden of proof in Article 10.3 applies, then "the complaining party is not required to lead in the presentation of evidence to panels, and it might well succeed in its claim even if it presents no evidence—should the responding Member fail to meet its legal burden to establish that no export subsidy has been granted with respect to the excess quantity". (Appellate Body Report, *Canada – Dairy (Article 21.5 – New Zealand and the US II)*, para. 75)

erroneous. This is because the Panel did not rely on its interpretation of Article 10.3. In a footnote to the paragraph quoted above, the Panel stated:

> In any event, even if there is *no* reduction commitment level in respect of unscheduled products, affecting the rules of burden of proof that apply to Brazil's claims pertaining to unscheduled products so as to remove the burden entirely from Brazil or to place the entire burden on Brazil to prove not only that exports have been made, but even that export subsidies have been provided in respect of such exported products, this would not materially affect our analysis, as we are of the view that Brazil has discharged this burden as well, and the United States has failed to discharge its burden in this respect.[974] (original emphasis)

Thus the Panel placed the burden on Brazil to establish that the United States provided export subsidies, through export credit guarantees, to upland cotton and other unscheduled products. This is confirmed in the following paragraph:

> Recalling our discussion of the applicable burden of proof, we find that Brazil has shown that export credit guarantees – constituting export subsidies within the meaning of Article 10.1 (and therefore, necessarily, not listed in Article 9.1) – have been provided under the programmes in question during the period we have examined in respect of exports of upland cotton and certain other unscheduled agricultural products. The United States has not shown that no export subsidy has been granted in respect of such products. We therefore conclude that, in respect of upland cotton and other such *unscheduled* agricultural products on record, the United States applies export credit guarantees constituting export subsidies in a manner which results in circumvention of its export subsidy commitments inconsistently with Article 10.1 of the *Agreement on Agriculture*.[975] (footnote omitted; original emphasis)

654. It is clear from the first sentence in this paragraph that the Panel imposed on Brazil the burden of demonstrating that export subsidies have been granted to upland cotton and other unscheduled agricultural products supported under the programs. The second sentence, on which the United States relies in its submission, simply indicates that the United States did not rebut the evidence and arguments put forward by Brazil; it does not indicate that the Panel erroneously placed the burden of proof on the United States.

655. Finally, the United States refers to three specific instances in which the Panel allegedly erred by improperly placing the burden of proof on the United States. The first example cited by the United States is the Panel's statement that the premiums charged by the CCC for the export credit guarantees "are not geared toward *ensuring* adequacy to cover long-term operating costs and losses for the purposes of item (j)".[976] The United States assert that this is "a much higher threshold" than that provided in text of item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*.[977] Next, the United States takes issue with the Panel's statements that "[i]n terms of the structure, design, and operation of the export credit guarantee programmes [we] believe that the programmes are not designed to avoid a net cost to government"[978] and that the Panel was entitled to inquire whether revenue "would be likely to cover the total of all operating costs and losses under the programme".[979] According to the United States, "to 'avoid a net cost' prospectively is simply not the requirement of item (j)" and the "'likelihood' standard of performance" imposed by the Panel is "higher than that found in item (j)".[980] The third example cited by the United States is the Panel's statement that "[w]e have not been persuaded that cohort re-estimates over time, will *necessarily* not give rise to a net cost to the United States government."[981] The United States contends that "[u]nder the applicable burden of proof, however, it is not for the United States to make such incontrovertible demonstrations to the Panel, and the Panel erred in requiring it".[982]

[974]Panel Report, footnote 948 to para. 7.793.

[975]Panel Report, para. 7.875.

[976]United States' appellant's submission, para. 406 (referring to Panel Report, para. 7.859). (emphasis added by the United States)

656. In our view, none of these statements demonstrates that the Panel improperly applied the rules on burden of proof. The United States is selecting statements made by the Panel within its broader analysis of how the United States' export credit guarantee programs operate, reading them in isolation, and disregarding the context in which they were made. As indicated earlier[983], it is clear that the Panel imposed on Brazil the overall burden of proving that the premiums charged under the United States' export credit guarantee programs are inadequate to cover long-term operating costs and losses. This approach is consistent with the usual rules on the allocation of the burden of proof whereby the complaining party is responsible for proving its claim.[984] As for the Panel's rejection of the United States' submissions relating to the cohort re-estimates[985], we agree with Brazil that "[a]s the party asserting that the trends existed, the United States bore the burden of proving that they existed".[986] Thus, the Panel cannot be said to have improperly reversed the burden of proof. Accordingly, the isolated statements referred to by the United States do not demonstrate an error by the Panel in the application of the burden of proof.

657. We, therefore, *reject* the United States' allegations that the Panel improperly applied the burden of proof in finding that the United States' export credit guarantee programs are prohibited export subsidies under Article 3.1(a) of the *SCM Agreement* and are consequently inconsistent with Article 3.2 of that Agreement.

[977]*Ibid.*, para. 406.

[978]*Ibid.*, para. 407 (referring to Panel Report, para. 7.857).

[979]*Ibid.*, para. 407 (referring to Panel Report, paras. 7.805 and 7.835).

[980]United States' appellant's submission, para. 407.

[981]*Ibid.*, para. 408 (quoting Panel Report, para. 7.853). (emphasis added by the United States) The United States also mentions the following statement by the Panel: "[w]hile there may be a possibility (based on the experience of certain of other cohorts) that this figure may diminish over the lifetime of the cohort concerned, there is no assurance that this figure will *necessarily* evolve towards, and conclude as, zero or a negative figure." (Panel Report, footnote 1028 to para. 7.853) (emphasis added by the United States)

[982]United States' appellant's submission, para. 408.

[983]See *supra*, para. 648 (quoting Panel Report, para. 7.867).

[984]We emphasize that the United States' argument on this specific point is limited to the Panel's application of the burden of proof. The United States has not argued that the Panel incorrectly *interpreted* item (j) as requiring that export credit guarantee programs be "geared toward ensuring adequacy to cover long-term operating costs and losses" or that such programs "'avoid a net cost' prospectively".

[985]Panel Report, para. 7.853; see *supra*, para. 655.

[986]Brazil's appellee's submission, para. 1027.

E. *Export Credit Guarantees – Necessary Findings of Fact*

658. We turn to the United States' claim that the Panel erred by failing to make factual findings that were allegedly necessary for the Panel's analysis of whether premiums are adequate to cover the long-term operating costs and losses of the United States' export credit guarantee programs under item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*.

659. In the United States' view, "the absence of a specific factual finding on the basis for and monetary extent to which the United States has allegedly not covered its long-term operating costs and losses for the CCC export credit guarantee programs, compels the reversal of the Panel's finding in respect of item (j)".[987] The United States explained that item (j) requires a determination whether premium rates are inadequate to cover long-term costs and losses and that this requires some determination as to what the operating costs and losses are. The United States further argued that the Panel's failure consisted in not making any determination about how to treat the rescheduled debt within operating costs and losses.[988]

660. Brazil responds that the United States has not made a proper claim under Article 11 of the DSU and is thus precluded from challenging the Panel's appreciation of the facts.[989] In any event, Brazil submits that neither item (j), nor Articles 3.1(a) and 3.2 of the *SCM Agreement*, nor Articles 10.1 and 8 of the *Agreement on Agriculture*, required the Panel to make specific factual findings on the "monetary extent to which" premium rates are inadequate to cover the long-term operating costs and losses of the United States' export credit guarantee programs. It was sufficient for the Panel to have found that, under any and all methodologies that it reviewed and accepted, premium rates are *inadequate* to cover the long-term operating costs and losses of the export credit guarantee programs.[990]

661. In addition, Brazil asserts that the Panel made sufficient factual findings "on the basis for"[991] its conclusion that premium rates are inadequate to cover the long-term operating costs and losses of the export credit guarantee programs. Specifically, the Panel assessed the performance of the export credit guarantee programs under the elements of item (j) in various ways. In its assessment of the *past performance* of the ECG programs during the period 1992-2002, the Panel used two accounting methodologies—*net present value accounting*, and *cash basis accounting*—to determine whether premium rates are inadequate to cover the long-term operating costs and losses of the programs.[992]

662. Before proceeding to the merits of the United States' claim, we examine first Brazil's allegation that the United States had to bring its claim, that the Panel did not make the necessary findings of fact, under Article 11 of the DSU. Article 11 of the DSU provides that a "panel should make an objective assessment of the matter before it, including an objective assessment of the facts of

[987]United States' appellant's submission, para. 419.

[988]United States' response to questioning at the oral hearing.

[989]Brazil's appellee's submission, para. 1065.

[990]*Ibid*., para. 99.

[991]*Ibid*., para. 100.

[992]Brazil's appellee's submission, para. 101.

the case".[993] The Appellate Body stated in *Canada – Wheat Exports and Grain Imports* that "an appellant is free to determine how to characterize its claims on appeal"[994], but observed that "due process requires that the legal basis of the claim be sufficiently clear to allow the appellee to respond effectively."[995]

663. The United States has styled its claim as related to the interpretation and application of item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*. According to the United States, the Panel could not have reached a legal conclusion under item (j) without having necessarily determined what were the long-term operating costs and losses of the United States' export credit guarantee programs, and more specifically, made a determination in respect of the treatment of rescheduled debt. We find no difficulty with the United States' approach. Its claim relates to the Panel's application of item (j) to the specific facts of the case. The United States is not asking us to review the Panel's factual findings, nor is it arguing that the Panel's assessment of the matter was not objective. Instead, the United States' claim relates to the application of the legal standard set out in item (j) of the Illustrative List of Export Subsidies to the specific facts of this case.[996] It is an issue of legal characterization.[997] Thus, we do not agree with Brazil's contention that the United States was under an obligation to bring its claim under Article 11 of the DSU. Consequently, our inquiry will be limited to the Panel's application of the law to the facts in this case.

664. Turning to the merits of the United States' allegation, we note that item (j) of the Illustrative List of Export Subsidies, which is attached to the *SCM Agreement* as Annex I, reads:

> The provision by governments (or special institutions controlled by governments) of export credit guarantee or insurance programmes, of insurance or guarantee programmes against increases in the cost of exported products or of exchange risk programmes, at premium rates which are inadequate to cover the long-term operating costs and losses of the programmes.

665. The Panel provided the following explanation of the examination that is required under item (j) of the Illustrative List of Export Subsidies:

[993]The Appellate Body has emphasized that "a claim, by an appellant, that a panel erred under Article 11 of the DSU, and a request for a finding to this effect, must be included in the Notice of Appeal, and clearly articulated and substantiated in an appellant's submission with specific arguments". (Appellate Body Report, *US – Corrosion-Resistant Steel Sunset Review*, footnote 60 to para. 71; see also Appellate Body Report, *Japan – Apples*, para. 127; Appellate Body Report, *US – Steel Safeguards*, para. 498; and Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 177)

[994]Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 177.

[995]The Appellate Body, however, did not need to decide in that appeal whether to reject the appellant's claim on the basis that it was brought under the substantive provision at issue, rather than Article 11 of the DSU. (Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 177)

[996]Appellate Body Report, *Canada – Periodicals*, p. 22, DSR 1997:1, 449 at 468.

[997]Appellate Body Report, *EC – Hormones*, para. 132.

> ... item (j) calls for an examination of whether the premium rates of the export credit guarantee programme at issue are inadequate to cover the long-term operating costs and losses of the programmes. Beyond that, item (j) does not set forth, or require us to use, any one particular methodological approach nor accounting philosophy in conducting our examination. Nor are we required to quantify precisely the amount by which costs and losses exceeded premiums paid.[998]

We agree with the Panel's approach. The text of item (j) does not suggest that this provision requires a Panel to choose one particular basis for the calculation and then to make a precise quantification of the difference between premiums and long-term operating costs and losses on that basis. Indeed, at the oral hearing, the United States acknowledged that the text of item (j) does not, by its own terms, require precise quantification, but asserted that the Panel should have precisely quantified the long-term operating costs and losses "in this particular case".[999]

666. In our view, the focus of item (j) is on the inadequacy of the premiums.[1000] To us, this focus suggests that what is required is a finding on whether the premiums are insufficient and thus whether the specific export credit guarantee program at issue constitutes an export subsidy, and not a finding of the precise difference between premiums and long-term operating costs and losses.[1001]

667. Having said this, we recognize that item (j) sets out a test that is essentially financial, as it requires a panel to look at the financial performance of an export credit guarantee program, that is, its revenues from premiums and its long-term operating costs and losses. Our review of the Panel record confirms that, in this case, the Panel conducted a financial analysis of the United States' export credit guarantee programs using three approaches. First, the Panel looked at the method used by the United States government, which "utilizes a 'net present value' approach to budget accounting for its export credit guarantee programmes".[1002] The Panel explained that "a positive net present value means that the United States government is extending a 'subsidy' to borrowers; a negative present value means that the programme generates a 'profit' (excluding administrative costs) to the United States government".[1003] Having explained the method used by the United States government, the Panel then observed that:

[998]Panel Report, para. 7.804.

[999]United States' response to questioning at the oral hearing.

[1000]The Panel observed that there was no disagreement between the parties in this case about the meaning of the term "premiums" for purposes of item (j). According to the Panel, "[u]nder the GSM 102, GSM 103 and SCGP export credit guarantee programmes, such 'premiums' are the fees paid by the applicant exporter constituting the consideration for the payment guarantee provided by the CCC". (Panel Report, paras. 7.817-7.818)

[1001]"Inadequate" is defined as "Not adequate; insufficient". (*Shorter Oxford English Dictionary*, 5th ed., W.R. Trumble, A. Stevenson (eds.) (Oxford University Press, 2002), Vol. 1, p. 1338)

[1002]Panel Report, para. 7.842. According to the Panel, the United States government adopted the "net present value" approach starting with fiscal year 1992, pursuant to the Federal Credit Reform Act of 1990 (the "FCR Act of 1990"). A specific formula is provided under the FCR Act of 1990 for the "net present value" calculation. (*Ibid.*, footnotes 996 and 997 to para. 7.842)

[1003]*Ibid.*, para. 7.842.

> The annual entries in the "guaranteed loan subsidy" line in the United States budget, 1992-2002 (plus 2003 and 2004 estimates) show us that, according to this formula, there has been a positive "guaranteed loan subsidy" every year. If administrative expenses are added thereto, the annual amount of cost to the United States government increases under this formula by approximately $39 million.[1004]

This shows that the Panel viewed the accounting data provided under this method used by the United States government as evidence that the premiums charged for the export credit guarantees are inadequate to cover long-term operating costs and losses.[1005]

668. Next, the Panel examined data submitted by Brazil based on a constructed "cost" formula.[1006] This formula compares the revenues and costs of the export credit guarantee programs.[1007] The revenue column includes premiums collected, recovered principal and interest, and interest revenue.[1008] The costs column includes administrative expenses, default claims, and interest expense.[1009] The data used in this formula are "taken from the 'prior year' column of the United States government budget".[1010] The formula shows that there was a difference of a little more than US$ 1 billion between premiums and long-term costs and losses for the period 1993-2002.[1011] Accordingly, the data submitted by Brazil showed that the export credit guarantee programs of the United States did not charge premiums that were adequate to cover long-term operating costs and losses.

669. After examining the data submitted by Brazil, the Panel then referred to "fiscal year/cash basis" evidence submitted by the United States. According to the United States, these data reflect "actual performance of the programmes, unlike the data in the US budget to which Brazil alludes ... which ... are based on estimates and re-estimates required under the Federal Credit Reform Act of 1990".[1012] The data submitted by the United States showed that, during the same period, total revenues exceeded total expenses by approximately US$ 630 million.[1013]

[1004]*Ibid.*, para. 7.842. (footnotes omitted)

[1005]The Panel recognized that the "net present value" approach relies on "*initial estimates* of the long-term costs to the United States government". The Panel, however, stated that these were not "random guesses" but rather were based on "[a]ctual historical experience". Furthermore, the Panel reasoned that "[t]he consistently positive numbers in the United States budget guaranteed loan subsidy line indicate to us that the United States government believes, based upon its own assessment, that it may not, even over the long term, be able to operate the export credit guarantee programmes without some net cost to government". (Panel Report, para. 7.843) (original emphasis)

[1006]*Ibid.*, para. 7.844.

[1007]In its appellee's submission, Brazil describes this method as following a "cash basis accounting" approach, in which the programs' receipts are netted against disbursements on a fiscal year basis. The data on receipts and disbursements "reflect actual cash flows". (Brazil's appellee's submission, para. 985)

[1008]Brazil states that this is a "conservative" formula that credits the programs with interest revenue, even though item (j) calls for only an assessment of revenue from premiums. (Brazil's appellee's submission, para. 985)

[1009]See Table 3 in Panel Report, para. 7.845.

[1010]Panel Report, para. 7.846.

[1011]*Ibid.*, paras. 7.845-7.846.

[1012]United States' response to Question 264 Posed by the Panel (Panel Report, p. I-673, para. 21). The data were presented in a spreadsheet and submitted to the Panel as Exhibit US-128. See also Panel Report, para. 7.846.

[1013]Panel Report, para. 7.846.

670. The Panel proceeded to compare the two sets of data.[1014] In contrasting the results under the two methods, the Panel came to the conclusion that the difference between the two was mainly due to treatment of rescheduled debt. This rescheduled debt amounted to approximately US$ 1.6 billion.[1015] The United States asserts that "the Panel did not make any determination about how to treat rescheduled debt".[1016] We disagree. In fact, the Panel rejected the approach suggested by the United States for the treatment of rescheduled debt. Under the United States' approach, rescheduled debt is not treated as an outstanding claim, but rather as a new direct loan.[1017] In the Panel's view, however, this approach "understates the net cost to the United States government associated with the export credit guarantee programmes at issue".[1018] Thus, contrary to the United States' submission, the Panel did make a determination in respect of the treatment of rescheduled debt.[1019] Furthermore, we read this as indicating that the Panel considered that the data submitted by the United States, once rescheduled debt was properly taken into account, also showed that premiums did not offset long-term operating costs and losses.

671. The Panel went further in its analysis and considered the evidence submitted by the United States concerning re-estimates. According to the Panel, this evidence showed a subsidy of approximately US$ 230 million, without including administrative expenses of approximately US$ 39 million.[1020] The Panel was not persuaded by the United States' submission that "over time" the re-estimates would necessarily do away with the subsidy shown by the current figures.[1021] In addition, we note that the Panel looked not only at the past financial performance of the United States' export credit guarantee programs, but also at the structure, design, and operation of the programs. The Panel concluded that the programs "are not designed to avoid a net cost to government"[1022] and "the premiums are not geared toward ensuring adequacy to cover long-term operating costs and losses for the purposes of item (j)".[1023]

[1014]The Panel acknowledged certain limitations inherent in the comparison, including the fact that some of the data "may not directly correlate", that "United States budget data may not always reflect 'actual performance'" and the need to be especially "sensitive" to "the particular time periods covered by the data". Nevertheless, the Panel concluded that "none of these considerations undermine[s] the comparison made". (Panel Report, footnote 1006 to para. 7.846)

[1015]*Ibid.*, para. 7.846.

[1016]United States' response to questioning at the oral hearing.

[1017]Panel Report, para. 7.851. In its appellee's submission, Brazil states that it "accepted that repayments made pursuant to re-scheduled debt agreements should be included as receipts under the [export credit guarantee] programs ... [but] disagreed that the full amount of re-scheduled debt should be treated as received the moment the re-scheduling agreement is completed". Instead, according to Brazil, "the default claim should continue to be treated as a loss unless the United States receives payment from the debtor, and only then should be credited as a receipt in the amount actually received from the debtor". (Brazil's appellee's submission, para. 988)

[1018]Panel Report, para. 7.851. The Panel was struck by the fact that "no amounts have actually been determined uncollectible, written off or forgiven" after 1992. (*Ibid.*, para. 7.848)

[1019]We recall that the United States has not challenged the Panel's assessment of the matter, including the assessment of the facts of the case, pursuant to Article 11 of the DSU. Thus, the United States has not asked us to review the evidentiary basis on which the Panel relied to reject the treatment of rescheduled debt by the United States.

[1020]Panel Report, para. 7.852. The Panel noted that figures submitted by Brazil showed a subsidy of US$ 211 million, without administrative expenses.

[1021]*Ibid.*, para. 7.853.

[1022]*Ibid.*, para. 7.857.

[1023]*Ibid.*, para. 7.859.

672. In the light of the above, it is clear that the Panel undertook a sufficiently detailed examination of the financial performance of the United States' export credit guarantee programs. Its analysis showed that none of the methods proposed by the parties indicated that the premiums charged under the United States' export credit guarantee programs are adequate to cover long-term costs and losses. In these circumstances, we agree with the Panel that, in this particular case, it was not necessary to choose a particular method nor determine the precise amount by which long-term operating costs and losses exceeded premiums. Although it did not provide a final figure for the long-term operating costs and losses of the United States' export credit guarantee programs, as the United States suggests it should have, the Panel found that the various methods put forward by the parties led to the same conclusion, namely, that the premiums for the United States' export credit guarantee programs are inadequate to cover the programs' long-term operating costs and losses. The Panel's decision not to choose between methods or make a finding on the precise difference between premiums and long-term costs and losses does not, in our view, invalidate the Panel's ultimate findings under Articles 3.1(a) and 3.2 of the *SCM Agreement*.

673. For these reasons, we reject the United States' claim that the Panel failed to make the "necessary" findings of fact.

674. Consequently, we *uphold* the Panel's finding in paragraph 7.869 of the Panel Report that "the United States export credit guarantee programmes at issue – GSM 102, GSM 103 and SCGP – constitute a *per se* export subsidy within the meaning of item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement*". In addition, we *uphold* the Panel's findings, in paragraphs 7.947 and 7.948 of the Panel Report, that these export credit guarantee programs are export subsidies for purposes of Article 3.1(a) of the *SCM Agreement* and are inconsistent with Articles 3.1(a) and 3.2 of that Agreement.

F. *Export Credit Guarantees – Circumvention*

1. Introduction

675. We turn to the issues raised by Brazil in relation to the Panel's findings under Article 10.1 of the *Agreement on Agriculture*.

676. The Panel divided its analysis of Brazil's claims under Article 10.1 into different categories, distinguishing between scheduled and unscheduled products, and supported and unsupported products (and rice as a result of its finding in respect of this product). "Scheduled products" are those for which a WTO Member has assumed a commitment to limit the amount of export subsidies in terms of budgetary outlays and quantities exported pursuant to Articles 3, 8, and 9 of the *Agreement on Agriculture*.[1024] The Panel used the term "supported products" to refer to products for which there

[1024]The Panel noted that "[t]he United States has scheduled export subsidy reduction commitments in respect of the following thirteen commodities: wheat, coarse grains, rice, vegetable oils, butter and butter oil, skim milk powder, cheese, other milk products, bovine meat, pigmeat, poultry meat, live dairy cattle, eggs". (Panel Report, footnote 1057 to para. 7.876 (referring to Schedule XX of the United States of America, Part IV, Section II, entitled "Export Subsidies: Budgetary Outlays and Quantitative Reduction Commitments", reproduced in Exhibit BRA-83 and Exhibit US-13))

was evidence in the record showing that they were not only eligible under the programs, but that export credit guarantees were in fact received in connection with exports of those products.[1025]

677. The Panel first examined whether the United States' export credit guarantees to exports of upland cotton and other unscheduled agricultural products supported under the export credit guarantee programs are applied in a manner that "results in" circumvention for purposes of Article 10.1 of the *Agreement on Agriculture*. In other words, the Panel examined whether there is actual circumvention with respect to exports of these products. The Panel found that, "in respect of upland cotton and other such *unscheduled* agricultural products on record, the United States applies export credit guarantees constituting export subsidies in a manner which results in circumvention of its export subsidy commitments inconsistently with Article 10.1 of the *Agreement on Agriculture*".[1026] This finding has not been appealed.

678. The Panel next examined whether the United States' export credit guarantees to scheduled products supported under the export credit guarantee programs are applied in a manner that "results in" circumvention for purposes of Article 10.1 of the *Agreement on Agriculture*. The Panel found that "the United States has applied export credit guarantees constituting export subsidies within the meaning of Article 10.1 – and therefore, necessarily, not listed in Article 9.1 – in a manner which results in circumvention of export subsidy commitments in respect of" rice.[1027] In addition, the Panel found, that "[i]t has not been established, however, that such actual circumvention has resulted in respect of the twelve other United States scheduled commodities".[1028] Brazil appeals the latter finding by the Panel. According to Brazil, the Panel erred in finding that the United States' export credit guarantee programs are not applied in a manner that "results in" circumvention of the United States' export subsidy commitments with respect to pig meat and poultry meat in 2001.[1029] Brazil further submits that "[i]n making this finding, the Panel erred in the interpretation and application of Article 10.1 of the *Agreement on Agriculture*, and also of Article 11 of the DSU".[1030]

679. The Panel also examined whether the United States' export credit guarantees to scheduled products other than rice and unscheduled products not supported under the United States' export credit guarantee programs are applied in a manner that "threatens to lead to" circumvention of the United States' export subsidy commitments for purposes of Article 10.1 of the *Agreement on Agriculture*. The Panel "decline[d] to find that the export credit guarantee programmes at issue are generally applied to scheduled agricultural products other than rice and other unscheduled agricultural products (not supported under the programmes) in a manner which threatens to lead to circumvention of United States' export subsidy commitments within the meaning of Article 10.1 of the *Agreement on Agriculture*."[1031]

[1025]Panel Report, para. 6.32; see also footnote 1056 to para. 7.875. At the oral hearing, the participants confirmed that this is also their understanding of what the Panel meant by the distinction that it drew between "supported" and "unsupported" products. In respect of "supported" products, the Panel stated that "[t]o the extent that it identifies products within the product coverage of the *Agreement on Agriculture* that are within our terms of reference, we consider Exhibit BRA-73 to be the relevant record evidence of such products for the purposes of this dispute". (Panel Report, footnote 1056 to para. 7.875; see also *ibid.*, footnote 1575 to para. 8.1(d)(i))

[1026]*Ibid.*, para. 7.875.

[1027]*Ibid.*, para. 7.881.

[1028]*Ibid.*

[1029]Brazil's other appellant's submission, para. 65. Brazil initially included vegetable oil in this claim. At the oral hearing, however, Brazil indicated that it was no longer pursuing this claim in respect of vegetable oil. See *infra*, para. 683.

[1030]*Ibid.*, para. 76.

680. Brazil makes two claims on appeal in relation to the Panel's examination of threat of circumvention. First, Brazil submits that the Panel erred in the interpretation and application of Article 10.1 in examining Brazil's claims that the United States' export credit guarantee programs "threaten[] to lead to" circumvention of the United States' export subsidy commitments.[1032] If the Appellate Body were to agree with Brazil and modify the Panel's interpretation, Brazil requests that the Appellate Body complete the analysis and determine that, contrary to Article 10.1 of the *Agreement on Agriculture*, export credit guarantees have been applied in a manner that threatens to lead to circumvention of the United States' export subsidy commitments for all agricultural products eligible to receive these subsidies.[1033] Secondly, Brazil argues that the Panel erred "by confining its examination of threatened circumvention to scheduled products other than rice and unsupported unscheduled products", despite the fact that Brazil's claim "extended to all scheduled and unscheduled agricultural products eligible to receive [export credit guarantees] export subsidies".[1034] We examine Brazil's allegations, in turn, below.

2. Actual Circumvention

681. We begin with Brazil's claim that the Panel erred by failing to find that the United States' export credit guarantees are applied in a manner that led to *actual* circumvention of the United States' export subsidy commitments with respect to pig meat and poultry meat in 2001.[1035]

682. The Panel found:

> We note that the United States has not specifically discharged its burden of establishing that it did not grant WTO-inconsistent export subsidies, for the excess quantities of rice exported. Therefore, we find that the United States has applied export credit guarantees constituting export subsidies within the meaning of Article 10.1 – and therefore, necessarily, not listed in Article 9.1 – in a manner which results in circumvention of export subsidy commitments in respect of this particular scheduled commodity. It has not been established, however, that such actual circumvention has resulted in respect of the twelve other United States scheduled commodities.[1036]

683. In its appellant's submission, Brazil states that "according to uncontested evidence of record, supplied by the United States, actual circumvention also occurred for pig meat and poultry meat in 2001, and for vegetable oils in 2002".[1037] Brazil adds that the Panel "failed to properly apply a proper

[1031]Panel Report, para. 7.896.

[1032]Brazil's other appellant's submission, para. 63.

[1033]*Ibid.*, para. 64.

[1034]*Ibid.*, para. 75.

[1035]The United States has scheduled export subsidy reduction commitments for pig meat and poultry meat. Consequently, the special rule on the burden of proof established in Article 10.3 applies to any quantities exported that exceed the United States' reduction commitment levels. In respect of these quantities, the United States would be "treated as if it has granted WTO-*inconsistent* export subsidies ... unless the [United States] presents adequate evidence to 'establish' the contrary". (Appellate Body Report, *Canada – Dairy (Article 21.5 – New Zealand and US II)*, para. 74. (original emphasis))

[1036]Panel Report, para. 7.881.

[1037]Brazil's other appellant's submission, para. 204. (footnote omitted)

interpretation of Article 10.1 to the admitted facts".[1038] "By failing to do so", Brazil submits that the Panel "erred in the application of Article 10.1 to uncontested facts", and also "failed to make an objective assessment of the matter, including of admitted and uncontested facts supplied by the United States, as required by Article 11 of the DSU".[1039] In its statement at the oral hearing, Brazil acknowledged that data submitted by the United States indicated that the United States did not exceed its reduction commitment levels for vegetable oil in 2001-2002. We understand from Brazil's statement that it no longer wished to pursue this claim in respect of vegetable oil.

684. The United States responds that Brazil has not made a proper claim under Article 11 of the DSU. According to the United States, Brazil "is contesting findings of the Panel on matters of disputed fact".[1040] Because "Brazil does *not* appeal the Panel's factual findings that the facts did not demonstrate that subsidized exports exceeded U.S. quantitative reduction commitments for poultry, pig meat, and vegetable oils", the United States submits that Brazil's appeal is improper as it does not "stand by itself" and is not "substantiated with respect to the challenged findings".[1041]

685. In addition, the United States points out that Brazil's allegation of actual circumvention related to the period July 2001 through June 2002.[1042] In contrast, quantitative data on exports under the United States' export credit guarantee program are maintained on a fiscal year basis, which extends from 1 October to 30 September of the following year.[1043] In any event, even if this difference between periods can be overcome, the United States argues that "the actual data also support[ ] the Panel's finding that Brazil had not demonstrated actual circumvention for these products".[1044]

686. We understand Brazil to argue that the Panel erred both in the application of Article 10.1 of the *Agreement on Agriculture* and in its assessment of the matter pursuant to Article 11 of the DSU.[1045] As we explained earlier, the application of a legal rule to the specific facts of a case is an issue of legal characterization.[1046] In this case, we understand that Brazil's claim under Article 11 of the DSU is additional to its claim of legal error in respect of Article 10.1. We thus turn first to Brazil's claim that the Panel erred in it application of Article 10.1 of the *Agreement on Agriculture* to the facts before it.

687. It will be recalled that Article 10.1 provides:

[1038]*Ibid.*, para. 210.

[1039]*Ibid.*, para. 211. (footnote omitted)

[1040]United States' appellee's submission, para. 50 (footnote omitted)

[1041]*Ibid.*, para. 50 (referring to Appellate Body Report, *US – Steel Safeguards*, para. 498). (original emphasis; footnote omitted)

[1042]*Ibid.*, para. 56 (referring to Panel Report, para. 7.878 and Brazil's first written submission to the Panel, para. 265 and Figure 18). We note that the period from July of one year to June of the next year is the period used in the United States' schedule of concessions for its quantitative export subsidy commitments. See Schedule XX of the United States submitted by Brazil to the Panel as Exhibit BRA-83.

[1043]The fiscal year of the United States federal government is designated according to the calendar year in which it ends. Therefore, fiscal year 2001 ran from 1 October 2000 to 30 September 2001.

[1044]United States' appellee's submission, para. 56.

[1045]Brazil's response to questioning at the oral hearing; Brazil's other appellant's submission, para. 211.

[1046]Appellate Body Report, *EC – Hormones*, para. 132.

> Export subsidies not listed in paragraph 1 of Article 9 shall not be applied in a manner which results in, or which threatens to lead to, circumvention of export subsidy commitments; nor shall non-commercial transactions be used to circumvent such commitments.

688. Brazil asserts that "the Panel's legal analysis of the circumstances in which actual circumvention occurs for scheduled products was correct" and draws our attention to the Panel's statement that "where the United States exports an agricultural product in quantities that exceed its quantity commitment level, it will be treated for the purposes of Article 10.1 as if it has granted WTO-inconsistent export subsidies, for the excess quantities, unless it presents adequate evidence to 'establish' the contrary".[1047] Brazil adds that although the Panel correctly applied this interpretation to rice, it failed to do so in respect of pig meat and poultry meat.[1048]

689. We observe that after finding that the United States had circumvented its commitments for rice, the Panel went on to reject Brazil's claim in respect of the other scheduled products supported under the programs without providing an explanation of the basis for its conclusion. Looking at the Panel's analysis, we note that, in paragraph 7.878, the Panel recognized that Brazil's claim of actual circumvention extended to thirteen agricultural products, including pig meat and poultry meat. In the next paragraph, the Panel refers to the United States' submission that it was in compliance with respect to nine of the products mentioned by Brazil", and that, in fiscal year 2002 it would also be true for poultry meat".[1049] Pig meat is not mentioned at all. As for poultry meat, the use of the conditional "would also be true" suggests some question about compliance with respect to that product as well, as the condition is not identified. Oddly, however, these issues are not taken up by the Panel, which does not examine any further whether there was actual circumvention for these products.

690. Instead, from that point on, the Panel focused exclusively on rice, in respect of which the Panel found that the United States failed to establish "that it did not grant WTO-inconsistent export subsidies, for the excess quantities of rice exported."[1050] It would appear that the Panel satisfied itself with what it considered to be an admission by the United States in respect of rice, and declined to examine further Brazil's claim in respect of the other products. In concluding, the Panel merely stated that "[i]t has not been established, however, that such actual circumvention has resulted in respect of the twelve other United States scheduled commodities".[1051] There is no further explanation of the reasons leading to this conclusion.

691. The Panel may have decided to satisfy itself with the United States' admission regarding rice because it allowed it to avoid having to resolve the problem posed by the different time periods used, on the one hand, to track exports under the United States' export credit guarantee programs and, on the other, to determine the export subsidy reduction commitments under the United States' schedule. Exports under the United States' export credit guarantee programs are tracked on a fiscal year basis, extending from 1 October to 30 September of the following year. Meanwhile, the United States' export reduction commitments are based on a year that extends from 1 July to 30 June of the following year. These periods overlap, albeit only in part.

692. We find nothing wrong in the Panel having relied on an admission by the United States relating to rice to conclude that the United States had failed to rebut Brazil's initial allegation of

[1047]Brazil's other appellant's submission, para. 205 (quoting Panel Report, para. 7.877).

[1048]*Ibid.*, paras. 206-207.

[1049]Panel Report, para. 7.879.

[1050]*Ibid.*, para. 7.881.

[1051]*Ibid.*

circumvention.[1052] This did not excuse the Panel, however, from specifically analyzing Brazil's claim in respect of the other products. Consequently, we find no basis to support the Panel's finding that "[i]t has not been established, however, that such actual circumvention has resulted in respect of the twelve other United States scheduled commodities".[1053]

693. We must determine next whether there are sufficient uncontested facts in the record to permit us to complete the analysis with respect to the other commodities.[1054] In our view, there are not. First, the parties disagree about the time period covered by Brazil's claim. The United States asserts that Brazil's claim was limited to the period July 2001 to June 2002, while Brazil contends that its claim was not limited to that period.[1055] Second, as we noted previously[1056], different time periods are used for the sets of data that have to be compared. The data regarding United States exports under the export credit guarantee programs are maintained on a fiscal year basis, which extends from 1 October to 30 September of the following year.[1057] The United States' export subsidy commitments are registered based on a year that extends from 1 July to 30 June of the following year. Both Brazil and the United States have sought to reconcile the data.[1058] In each case, Brazil and the United States assert that the data support their position. Given the differences between the participants in respect of the data that we would have to examine to determine whether the United States applied export credit guarantees in a manner that results in circumvention of its export subsidy commitments for pig meat and poultry meat, we do not believe there are sufficient undisputed facts in the record to enable us to complete the analysis.

694. We recall that Brazil's claim on appeal is limited to the Panel's findings relating to pig meat and poultry meat. For the reasons mentioned above, we *reverse* the Panel's finding, in paragraph 7.881 of the Panel Report, that Brazil did not establish actual circumvention in respect of poultry meat and pig meat. Nevertheless, because there are insufficient uncontested facts in the record to enable us to do so, we do not complete the legal analysis to determine whether the United States' export credit guarantees to poultry meat and pig meat have been applied in a manner that "results in" circumvention of the United States' export subsidy commitments.

695. Brazil has made an additional claim that the Panel failed to make an objective assessment of the matter, as required by Article 11 of the DSU. Having reversed the Panel's ultimate finding, we find that it is not necessary for us to rule on Brazil's additional claim under Article 11 of the DSU. This is because, even if we were to agree with Brazil, it would lead to the same result that we have reached after examining the Panel's application of Article 10.1 of the *Agreement on Agriculture* to the facts before it.

3. Threat of Circumvention

(a) Scheduled Products Other than Rice and Unscheduled Products not Supported under the Export Credit Guarantee Programs

696. We move next to Brazil's two claims on appeal relating to the Panel's examination of *threat* of circumvention. We recall that the Panel examined whether the United States' export credit guarantees are applied in a manner that "threatens to lead to" circumvention of the United States' export subsidy commitments in respect of *scheduled products other than rice* and *unscheduled products not supported* under the export credit programs.

697. For ease of reference, we note again the text of Article 10.1, which reads:

> Export subsidies not listed in paragraph 1 of Article 9 shall not be applied in a manner which results in, or which threatens to lead to, circumvention of export subsidy commitments; nor shall non-commercial transactions be used to circumvent such commitments.

698. The Panel explained that its conclusion on whether the United States' export credit guarantees are applied in a manner that threatens to lead to circumvention would depend on whether the Panel considered that:

> ... the United States export credit guarantee programmes require the provision of an 'unlimited amount' of subsidies, so that scheduled commodities other than rice and unscheduled agricultural products not supported under the programmes, therefore, benefit from those subsidies when the reduction commitment levels specified in the United States' Schedule for those agricultural products have been reached.[1059]

The Panel cautioned, however, that even if it made an affirmative finding, "if these programmes are not such as to necessarily create an *unconditional legal entitlement* to receive them, then there would not necessarily be such a threat".[1060] The Panel therefore proceeded to "examine whether an unconditional statutory legal entitlement to an export credit guarantee exists in respect of such products".[1061]

699. In its examination, the Panel noted that "United States export credit guarantee programmes are classified as 'mandatory' under the United States Budget Enforcement Act of 1990."[1062] It went on to explain, however, that it did "not believe that the 'mandatory/discretionary' distinction is the sole legally determinative one for [its] examination of whether or not 'threat' of circumvention of export subsidy commitments within the meaning of Article 10.1 of the *Agreement on Agriculture* has been proven to the required standard".[1063] The Panel, moreover, stated that, "[i]n order to pose a 'threat' within the meaning of Article 10.1 of the *Agreement on Agriculture*, [it did] not believe that it is

[1059]Panel Report, para. 7.882. (footnote omitted)

[1060]*Ibid*., para. 7.883. (emphasis added)

[1061]*Ibid*., para. 7.883.

[1062]*Ibid*., para. 7.884. (footnote omitted)

[1063]*Ibid*., para. 7.886.

sufficient that an export credit guarantee programme might possibly, or theoretically, be used in a manner which threatens to lead to circumvention of export subsidy commitments".[1064]

700. After examining the statutory and regulatory framework of the United States' programs under which the export credit guarantees are issued, the Panel concluded that this statutory and regulatory framework "is such that the CCC would not necessarily be required to issue guarantees in respect of any other unscheduled agricultural product (not supported under the programmes), or in respect of scheduled agricultural products other than rice, in a manner which 'threatens to lead to' circumvention of export subsidy commitments".[1065] The Panel, therefore, found:

> Keeping the applicable burden of proof in mind, we therefore decline to find that the export credit guarantee programmes at issue are generally applied to scheduled agricultural products other than rice and other unscheduled agricultural products (not supported under the programmes) in a manner which threatens to lead to circumvention of United States export subsidy commitments within the meaning of Article 10.1 of the *Agreement on Agriculture*.[1066]

701. Brazil asserts that the Panel erred in interpreting and applying Article 10.1 of the *Agreement on Agriculture*. According to Brazil, "[by] declaring that a 'possibility' of circumvention was not sufficient for a 'threat' finding under Article 10.1, the Panel mischaracterized the threat obligation, reducing it to situations of near certainty".[1067] Brazil explains that the ordinary meaning of the term "threat" can "encompass events that are a possibility or that appear likely; the word can also include events whose occurrence is indicated or portended by circumstances".[1068] Furthermore, Brazil asserts, that the meaning of the term "threatens" is clarified by its immediate context, particularly by the use of the word "prevent" in the title of Article 10.[1069] Brazil explains that "[t]o give proper meaning to the aim of 'prevention,' the threat obligation should, therefore, be read in a way that it thwarts, forestalls, or stops circumvention from occurring by requiring a Member to take appropriate precautionary action".[1070] If, on the contrary, "the degree of likelihood necessary to trigger the threat obligation were set too high, the threat obligation would fail to 'prevent' circumvention, contrary to the express aim of the provision".[1071]

702. Having set out its views on the meaning of the term "threatens" as used in Article 10.1 of the *Agreement on Agriculture*, Brazil then distinguishes it from the connotation that the same term is given in other covered agreements. Brazil submits that the *Agreement on Safeguards* and the *Anti-Dumping Agreement* require a higher degree of likelihood because, under both Agreements, the demonstration of "threat" triggers the *right* of a WTO Member to apply trade remedy measures involving suspension or modification of WTO commitments.[1072] In contrast, "Article 10.1 of the *Agreement on Agriculture* aims at the effective *enforcement* of a Member's export subsidy *obligations*".[1073] Finally, Brazil submits that the assessment of whether a threat exists under Article 10.1 must be done on a case-by-case basis and suggests a list of factors that could be considered as part of the assessment.[1074]

[1064] *Ibid.*, para. 7.893.

[1065] Panel Report, para. 7.895.

[1066] *Ibid.*, para. 7.896.

[1067] Brazil's other appellant's submission, para. 95. Brazil is referring to the Panel's statement that "[i]n order to pose a 'threat' within the meaning of Article 10.1 of the *Agreement on Agriculture*, we do not believe that it is sufficient that an export credit guarantee programme might possibly, or theoretically, be used in a manner which threatens to lead to circumvention of export subsidy commitments". (Panel Report, para. 7.893)

[1068] Brazil's other appellant's submission, para. 97.

[1069] *Ibid.*, paras. 98-99. The title of Article 10 is "Prevention of Circumvention of Export Subsidy Commitments".

[1070] *Ibid.*, para. 100. According to Brazil, "[t]his reading of Article 10.1 of the *Agreement on Agriculture* is consistent with the Appellate Body's observation, in *US – FSC*, that the FSC measure did not provide a mechanism for "stemming or otherwise controlling" the "flow" of export subsidies. (Appellate Body Report, *US – FSC*, para. 149)

[1071] Brazil's other appellant's submission, para. 101.

703. The United States responds by asserting that Brazil mischaracterizes the Panel's findings. Contrary to Brazil's argument, the Panel's finding that the export credit guarantee programs do not threaten circumvention of export subsidy commitments is not an articulation of a broad standard that circumvention of export subsidy commitments would only be "threatened" if beneficiaries had an "absolute" or "unconditional statutory legal entitlement" to receive the subsidies such that the United States would "necessarily" be required to grant subsidies after the commitment level had been reached.[1075] Rather, in concluding that the programs did not pose a threat of circumvention, the United States argues, the Panel simply was responding to and declining to adopt Brazil's erroneous factual and legal characterizations of the program.[1076] The United States submits, furthermore, that the Panel rightly distinguished these programs from the mandatory subsidies at issue in *US – FSC*, and the Panel's decision presents no conflict with that Appellate Body Report.[1077] According to the United States, Brazil effectively argued that a mere possibility of issuance of export credit guarantees presented a threat of circumvention, and the Panel simply did not adopt this theory in the context of the export credit guarantee programs.[1078]

704. The Appellate Body has explained that "under Article 10.1, it is not necessary to demonstrate *actual* 'circumvention' of 'export subsidy commitments'".[1079] It suffices that "export subsidies" are "applied in a manner which … threatens to lead to circumvention of export subsidy commitments".[1080] We note that the ordinary meaning of the term "threaten" includes "[c]onstitute a threat to", "be likely to injure" or "be a source of harm or danger".[1081] Article 10.1 is concerned not with injury, but rather with "circumvention". Accordingly, based on its ordinary meaning, the phrase "threaten[] to lead to ... circumvention" would imply that the export subsidies are applied in a manner that is "likely to" lead to circumvention of a WTO Member's export subsidy commitments. Furthermore, we observe that the ordinary meaning of the term "threaten" refers to a *likelihood* of something happening; the ordinary meaning of "threaten" does not connote a sense of certainty.[1082]

705. The concept of "threat" has been discussed by the Appellate Body within the context of the *Agreement on Safeguards* and the *Anti-Dumping Agreement*. It has explained that "threat" refers to

[1072] Brazil's other appellant's submission, para. 103.

[1076] *Ibid.*, paras. 6 and 30.

[1077] *Ibid.*, para. 32.

[1078] *Ibid.*, paras. 6 and 35.

[1079] Appellate Body Report, *US – FSC*, para. 148. (original emphasis)

[1080] *Ibid.*, para. 148.

[1081] *Shorter Oxford English Dictionary*, 5th ed., W.R. Trumble, A. Stevenson (eds.) (Oxford University Press, 2002), Vol. 2, p. 3251.

[1082] Both participants agree that the determination of threat of circumvention has to be done on a case-by-case basis. (Brazil's and the United States' responses to questioning at the oral hearing.)

something that "has *not* yet occurred, but remains a future event whose actual materialization cannot, in fact, be assured with certainty".[1083] In *US – Line Pipe*, the Appellate Body stated that there is a continuum that ascends from a "threat of serious injury" up to the "serious injury" itself.[1084] We emphasize that the Appellate Body's discussion of the concept of "threat" in previous appeals related to the interpretation of other covered agreements that contain obligations relating to injury that differ from those relating to circumvention of export subsidy reduction commitments contained in Article 10.1 of the *Agreement on Agriculture*. Our interpretation of "threat" in Article 10.1 of the *Agreement on Agriculture* is consistent with the Appellate Body's interpretation of the term "threat" in these other contexts.

706. The Panel explained that, in its view, "threat" of circumvention under Article 10.1 requires that there be a "an unconditional legal entitlement".[1085] We see no basis for this requirement in Article 10.1. The Panel also stated that "[i]n order to pose a 'threat' within the meaning of Article 10.1 of the *Agreement on Agriculture*, [it did] not believe that it is sufficient that an export credit guarantee programme might possibly, or theoretically, be used in a manner which threatens to lead to circumvention of export subsidy commitments".[1086] In both of these statements, the Panel seems to conflate the phrase "threaten to lead to .... circumvention" with certainty that the circumvention will happen. We find it difficult, moreover, to reconcile the Panel's interpretation with the ordinary meaning of the term "threaten", which, as we indicated earlier, connotes that something is "likely" to happen.[1087] We also find it difficult to reconcile these statements of the Panel with its own view that it did "not believe that the 'mandatory/discretionary' distinction is the sole legally determinative one for our examination of whether or not 'threat' of circumvention of export subsidy commitments within the meaning of Article 10.1 of the *Agreement on Agriculture* has been proven to the required standard".[1088]

707. Nor are we prepared to accept Brazil's suggestion that the concept of "threat" in Article 10.1 should be read in a manner that requires WTO Members to take "anticipatory or precautionary action".[1089] The obligation not to apply export subsidies in a manner that "threatens to lead to" circumvention of their export subsidy commitments does not extend that far. There is no basis in Article 10.1 for requiring WTO Members to take affirmative, precautionary steps to ensure that circumvention of their export subsidy reduction commitments does not occur.[1090]

708. In concluding as it did, the Panel appears to have relied on the Appellate Body Report in *US – FSC* for guidance.[1091] In our view, however, the Panel misapplies that analysis. We recall that, in *US – FSC*, the Appellate Body underscored the importance of considering "the structure and other characteristics of [the] measure" when examining whether the specific measure at issue is "applied in a manner which ... threatens to lead to circumvention of export subsidy commitments".[1092] The Appellate Body then went on to note that the specific measure at issue in that dispute created "a *legal entitlement* for recipients to receive export subsidies, not listed in Article 9.1, with respect to agricultural products, both scheduled and unscheduled".[1093] This meant that there was "no discretionary element in the provision by the government of the FSC export subsidies".[1094] Furthermore, the Appellate Body noted that the "legal entitlement that the FSC measure establishes is unqualified as to the *amount* of export subsidies that may be claimed".[1095] This meant that the measure was "unlimited" because there was "no mechanism in the measure for stemming, or otherwise controlling the flow of ... subsidies that may be claimed with respect to any agricultural products".[1096]

709. A proper reading of the Appellate Body's statement in *US – FSC*, however, reveals that it did not intend to provide an exhaustive interpretation of threat of circumvention under Article 10.1 of the *Agreement on Agriculture*. In noting that the measure at issue in that dispute created a "legal entitlement" and had no "discretionary element", the Appellate Body was merely describing characteristics of the measure at issue in that case that it found relevant for its analysis of "threat". In other words, the Appellate Body did not foreclose, in *US – FSC*, the possibility that a measure that does not create a "legal entitlement" or that has a "discretionary element" could be found to "threaten[] to lead to circumvention" under Article 10.1 of the *Agreement on Agriculture*.

710. We therefore modify the Panel's interpretation, in paragraphs 7.882-7.883 and 7.896 of the Panel Report, of the phrase "threatens to lead to .... circumvention" in Article 10.1 of the *Agreement on Agriculture* to the extent that the Panel's interpretation requires "an unconditional legal entitlement" to receive the relevant export subsidies as a condition for a finding of threat of circumvention.

711. Having interpreted the phrase "threatens to lead to ... circumvention", we turn to Brazil's request that we complete the legal analysis and find that, contrary to Article 10.1 of the *Agreement on Agriculture*, the United States' export credit guarantee programs have been applied in a manner that threatens to lead to circumvention of the United States' export subsidy reduction commitments for all agricultural products eligible to receive these subsidies.[1097] According to Brazil, the alleged discretion retained by the CCC, as found by the Panel, does not operate in a manner that "mitigates the threat of circumvention".[1098] Brazil submits that the initial allocations by country of funds available for export credit guarantees "are repeatedly increased during the year".[1099] "The same is also true", Brazil

[1083]Appellate Body Report, *US – Lamb*, para. 125. (original emphasis) The Appellate Body was interpreting the phrase "threat of serious injury" within the context of Article 4.1(b) of the *Agreement on Safeguards*. Article 4.1(b) defines "threat of serious injury" as "serious injury that is clearly imminent, in accordance with the provisions of paragraph 2. A determination of the existence of a threat of serious injury shall be based on facts and not merely on allegation, conjecture or remote possibility".

[1084]The Appellate Body explained that "[i]n terms of the rising continuum of an injurious condition of a domestic industry that ascends from a 'threat of serious injury' up to 'serious injury', we see 'serious injury'—because it is something *beyond* a 'threat'—as necessarily *including* the concept of a 'threat' and *exceeding* the presence of a 'threat'". (Appellate Body Report, *US – Line Pipe*, para. 170) (original emphasis)

[1085]Panel Report, para. 7.883.

[1086]*Ibid*., para. 7.893.

[1087]Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 85.

[1088]Panel Report, para. 7.886.

[1089]Brazil's other appellant's submission, para. 100.

[1090]We note in this respect that Article 10 is titled "Prevention of Circumvention of Export Subsidy Commitments". Brazil's assertion that Article 10.1 requires WTO Members to take precautionary action would imply that the aim of the provision would also include the prevention of *threat* of circumvention.

[1091]In a footnote, the Panel states that the United States' export credit guarantee programs that it was "examining are of a fundamentally different nature than the mandatory and essentially unlimited subsidy (in the form of revenue forgone that is otherwise due) examined in *US – FSC*". (Panel Report, footnote 1082 to para. 7.894)

[1092]Appellate Body Report, *US – FSC*, para. 149.

[1093]*Ibid*. (original emphasis)

[1094]*Ibid*., para. 149.

[1095]*Ibid*. (original emphasis)

[1096]*Ibid*., para. 149.

[1097]Brazil's other appellant's submission, paras. 63-64 and 140.

[1098]*Ibid*., para. 187.

[1099]*Ibid*., para. 188.

asserts, "of product allocations, although the CCC makes relatively limited use of these".[1100] In addition, Brazil points out that "the record does not contain one single example of a situation where the CCC was unable to provide [export credit guarantees] because a country or product allocation had been exhausted ... [i]nstead, the record discloses that country and product allocations are repeatedly increased, by significant amounts, during the fiscal year as demand for [export credit guarantees] exhausts existing allocations".[1101]

712. Brazil also questions the significance attributed by the Panel to the fact that, under United States law, export credit guarantees may not be provided in relation to exports to a country that the Secretary of Agriculture determines "cannot adequately service the debt associated with such sale".[1102] According to Brazil, this statutory provision does not constrain the overall amount of export credit guarantees because "the possible exclusion of a country does not prevent the CCC from using all the [export credit guarantees] that would have gone to that country to support exports to other, eligible countries".[1103] Moreover, Brazil submits that the record shows that the Secretary of Agriculture has used this authority "other than sparingly" and that the current list of countries that are eligible under the United States' export credit guarantee programs include "the very large majority of the world's highly indebted poor countries".[1104]

713. We are not persuaded that the arguments put forward by Brazil establish that the United States' export credit guarantee programs are applied in a manner that threatens to lead to circumvention of the United States' export subsidy commitments in respect of scheduled products other than rice and unscheduled products not supported under the programs. In our view, the fact alone that exports of certain products are eligible for export credit guarantees is not sufficient to establish a threat of circumvention. This is particularly the case where there is no evidence in the record that exports of such products have been "supported" by export credit guarantees in the past.[1105] As we stated earlier, Article 10.1 of the *Agreement on Agriculture* does not require WTO Members to take affirmative, precautionary steps to ensure that circumvention of their export subsidy reduction commitments never happens. Nor is it sufficient for Brazil to have alleged that the United States has provided export credit guarantees to exports of *other* unscheduled products or to exports of scheduled products in excess of its export subsidy reduction commitments. Therefore, we agree with the Panel that Brazil has not established that the United States applies its export credit guarantee programs to scheduled agricultural products other than rice and other unscheduled agricultural products (not "supported" under the programs) "in a manner ... which threatens to lead to ... circumvention" of the United States' export subsidy commitments.

714. We thus *uphold*, albeit for different reasons, the Panel's finding, in paragraph 7.896, that Brazil has not established that "the export credit guarantee programmes at issue are generally applied to scheduled agricultural products other than rice and other unscheduled agricultural products (not supported under the programmes) in a manner which threatens to lead to circumvention of United States export subsidy commitments within the meaning of Article 10.1 of the *Agreement on Agriculture*".

[1100] *Ibid.*, para. 189. According to Brazil, less than eight percent of allocations were product-specific in 2003.

[1101] Brazil's other appellant's submission, para. 191. (footnote omitted)

[1102] Panel Report, para. 7.888 (quoting 7 USC 5622(f)(1)). The Panel stated that "[w]hile this does not curtail the amount of guarantees that may ultimately be made available, it does indicate to us that there exists a discretion (on the part of the Secretary [of Agriculture]) to determine situations in which guarantees cannot be made available". (*Ibid.*, para. 7.888)

[1103] Brazil's other appellant's submission, para. 195.

[1104] *Ibid.*, para. 196.

[1105] "Supported" products are described, *supra*, para. 676.

(b) Rice and Unscheduled Products Supported by the Export Credit Guarantee Programs

715. We turn to Brazil's claim that the Panel improperly confined its examination of Brazil's threat claim to scheduled products other than rice and unscheduled products not supported under the programs. Put another way, Brazil submits that the Panel's analysis of "threat" of circumvention should have also included rice (a scheduled product) and unscheduled products supported by the programs (including upland cotton).[1106]

716. As Brazil acknowledges, the products that the Panel allegedly excluded from its "threat" analysis had been the subject of the Panel's analysis of "actual" circumvention.[1107] In fact, for these products, the Panel had *already* found that the United States' export credit guarantees are applied in a manner that "results in" circumvention. That is, the Panel found *actual* circumvention.[1108] The Panel, however, explained that it was unnecessary for it to examine whether export credit guarantees for the same products were also applied in a manner that "threatens to lead to" circumvention:

> Article 10.1 of the *Agreement on Agriculture* provides that export subsidies not listed in Article 9.1 "shall not be applied in a manner which results in, *or* which threatens to lead to, circumvention of export subsidy commitments ..." (emphasis added). With respect to rice and to unscheduled agricultural products supported under programmes, we have found, in paragraphs 7.875 and 7.881, that the United States applies export credit guarantee programmes constituting export subsidies in a manner which *results in* circumvention of its export subsidy commitments inconsistently with Article 10.1. We consider that the "or" in Article 10.1 indicates that either one (resulting in circumvention) or the other (threatening to lead to circumvention) or both in combination would be adequate to trigger the remedies associated with this provision. We also see "resulting in circumvention" as including and exceeding the concept of "threatening to lead to circumvention". ... We therefore do not believe that it is necessary to conduct any additional examination here.[1109] (original emphasis)

717. We believe the Panel was within its discretion in declining to examine whether scheduled products other than rice and unscheduled products supported by the programs are applied in a manner that "threatens to lead to" circumvention. The Panel had already found that the United States acted inconsistently with Article 10.1 of the *Agreement on Agriculture* because it applied its export credit guarantee program in a manner that "results in" (actual) circumvention of its export subsidy commitments for these products. We do not see why the Panel had to examine also whether the United States acted inconsistently with the *same* provision in respect of the *same* products, but on the basis of there being a *threat* of circumvention, rather than *actual* circumvention.

718. The Appellate Body has stated that panels may exercise judicial economy and refrain from addressing claims beyond those necessary to resolve the dispute.[1110] In this case, the Panel did not

[1106] Brazil's other appellant's submission, para. 75.

[1107] *Ibid.*, para. 135 (referring to Panel Report, paras. 7.875 and 7.881).

[1108] Panel Report, para. 7.875.

[1109] Panel Report, footnote 1061 to para. 7.882.

[1110] Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 133.

expressly state it was exercising judicial economy.[1111] We agree with the United States, however, that the Panel's approach can be properly characterized as an exercise of judicial economy.[1112] Moreover, we believe that the Panel was within its discretion in refraining from making additional findings and it was not improper for the Panel to have exercised judicial economy given that its finding of *actual* circumvention resolved the matter.[1113]

719. Therefore, we reject Brazil's appeal that the Panel erred in confining its examination of Brazil's threat of circumvention claim to scheduled products other than rice and unscheduled products not supported under the United States' export credit guarantee programs.

G. *Export Credit Guarantees – Articles 1.1 and 3.1(a) of the SCM Agreement*

720. We turn now to Brazil's allegation that the Panel erred by exercising judicial economy in respect of Brazil's claim that the United States' export credit guarantees are export subsidies within the meaning of Articles 1.1 and 3.1(a) of the *SCM Agreement*.

721. The Panel first examined the United States' export credit guarantees under the *Agreement on Agriculture* using the benchmark provided in item (j) of the Illustrative List of Export Subsidies attached to the *SCM Agreement* as Annex 1, albeit as context.[1114] The Panel found:

> On the basis of the totality of the record evidence, including approaches regularly relied upon by the United States government itself, we find that Brazil has established that the United States CCC provides the GSM 102, GSM 103 and SCGP export credit guarantee programmes "at premium rates which are inadequate to cover the long-term operating costs and losses of the programmes" within the meaning of item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement*.
>
> ...
>
> We therefore find that the United States export credit guarantee programmes at issue – GSM 102, GSM 103 and SCGP – constitute a *per se* export subsidy within the meaning of item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement*.[1115]

722. After completing its examination under the *Agreement on Agriculture*, the Panel moved to Brazil's claims under the *SCM Agreement*. The Panel noted that it had "conducted a 'contextual' analysis under item (j) ... for the purposes of determining whether or not an export subsidy exists within the meaning of Article 10.1 of the *Agreement on Agriculture*" and, therefore, saw "no reason

[1111] The Panel stated that it did not believe it "necessary to conduct any additional examination". (Panel Report, footnote 1061 to para. 7.882)

[1112] The United States asserts that "the Panel properly exercised judicial economy in not examining threat of circumvention for agricultural products with respect to which it found actual circumvention". (United States' appellee's submission, para. 42)

[1113] Appellate Body Report, *Australia – Salmon*, para. 223. See also Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 133.

[1114] Panel Report, para. 7.803.

[1115] *Ibid.*, paras. 7.867 and 7.869.

... why this analysis may not also be applied directly in an examination of the merits of Brazil's claims under item (j)/Article 3.1(a) of the *SCM Agreement* in respect of the export credit guarantee programmes in this factual situation".[1116] The Panel found:

> To the extent that the United States export credit guarantee programmes at issue – GSM 102, GSM 103 and SCGP – do not conform fully to these provisions in Part V of the *Agreement on Agriculture* and do not benefit from the exemption from actions provided by Article 13(c)(ii) of the *Agreement on Agriculture*, they are also export subsidies prohibited by Article 3.1(a) for the reasons we have already given.[1125]
>
> Article 3.2 of the *SCM Agreement* provides: "A Member shall neither grant nor maintain subsidies referred to in paragraph 1" of Article 3. To the extent that the three United States export credit guarantee programmes at issue are inconsistent with Article 3.1(a), they are, consequently, also inconsistent with Article 3.2 of the *SCM Agreement*.[1117]

[1125] We recall that Article 3.1(a) of the *SCM Agreement* sets out a prohibition on subsidies contingent upon export performance, "including those illustrated in Annex I". Annex I - the Illustrative List of Export Subsidies - contains item (j). We have found that the challenged United States export credit guarantee programmes meet the definitional elements of a *per se* export subsidy in item (j). As they are among those "illustrated in Annex I" for the purposes of Article 3.1(a), they are included in the subsidies contingent upon export performance prohibited by Article 3.1(a) of the *SCM Agreement*.

723. During the interim review, Brazil requested the Panel "to make certain additional 'factual' findings regarding the parties' evidence and argumentation relating to Brazil's allegation that the CCC export credit guarantee programmes at issue constitute prohibited export subsidies under the elements of Articles 1 and 3.1(a) of the *SCM Agreement*".[1118] Brazil asserted that "in the event one of the parties appeals and the Appellate Body reverses the Panel's conclusion on item (j), it might not have the necessary facts at its disposal to 'complete the analysis' with respect to Brazil's claims under Articles 1 and 3.1(a) of the *SCM Agreement*".[1119]

724. The United States asked the Panel to reject Brazil's request, asserting that "the Panel ha[d] already made findings on the claims cited by Brazil" and, therefore, Brazil was improperly requesting the Panel "to make unnecessary and unsupported additional factual findings with respect to its *SCM Agreement* claims, and to reverse the applicable burden of proof".[1120]

725. The Panel declined Brazil's request because, in its view:

> Brazil's allegation invoking the elements of Articles 1 and 3.1(a) of the *SCM Agreement* is not a separate claim, but merely another

[1116] Panel Report, para. 7.946. (footnote omitted)

[1117] *Ibid.*, paras. 7.947-7.948. (footnote 1124 omitted)

[1118] *Ibid.*, para. 6.31.

[1119] *Ibid.*

[1120] Panel Report, para. 6.31.

> argument, on a different factual basis, as to how the United States export credit guarantee programmes would meet the definition of an export subsidy in Article 3.1(a) of the *SCM Agreement*. Given our finding in paragraphs 7.946-7.948, we do not believe that it is necessary to address Brazil's additional arguments about how the Article 3.1(a) definitional elements would be fulfilled on another factual basis in order to resolve this dispute. For greater clarity, we have inserted footnote 1125.[1121]

726. On appeal, Brazil asserts that the Panel's rejection of Brazil's request constitutes a false exercise of judicial economy. According to Brazil, "[i]n concluding that Brazil's allegations under item (j) and under Articles 1.1 and 3.1(a) of the *SCM Agreement* constitute alternative 'arguments, on a different factual basis,' the Panel failed to recognize the distinct obligations that flow from Article 3.1(a), and the potentially distinct course of implementation triggered by a Member's maintenance of export subsidies within the meaning of Articles 1.1 and 3.1(a)".[1122] Brazil explains that "because of the different benchmarks that apply under item (j), on the one hand, and Articles 1.1 and 3.1(a), on the other, a measure that no longer constitutes an export subsidy under item (j) may still constitute an export subsidy under Articles 1.1 and 3.1(a)".[1123]

727. Brazil asserts that a "panel is obligated to address all claims on which a finding is necessary to enable the Dispute Settlement Body to make sufficiently precise recommendations and rulings to allow for 'prompt settlement' of the dispute, and for prompt compliance by a Member with those recommendations and rulings 'in order to ensure effective resolution of disputes to the benefit of all Members.'"[1124] It then adds that "[b]ecause a measure that no longer constitutes an export subsidy under item (j) may still constitute an export subsidy under Articles 1.1 and 3.1(a), the Panel's exercise of judicial economy in this case was in error".[1125] Brazil further explains that the United States "could comply with its obligations under item (j) but still fail to comply with its obligations under Articles 1.1 and 3.1(a)".[1126] Therefore, in Brazil's view, the Panel's failure "to examine Brazil's claim ... leaves open a dispute and creates uncertainty concerning the scope of the United States' obligations, and the consistency of its existing measures with those obligations".[1127] If the Appellate Body were to agree with Brazil's assertion that the Panel's exercise of judicial economy was improper, then Brazil requests that the Appellate Body complete the analysis, and find that the United States' export credit guarantee programs constitute export subsidies under Articles 1.1 and 3.1(a) of the *SCM Agreement*.[1128]

728. The United States requests us to reject Brazil's claim. According to the United States, any further findings by the Panel would have been redundant as the Panel had already determined that the export credit guarantees "constitute *per se* export subsidies prohibited by Articles 3.1(a) and 3.2 of the *SCM Agreement*."[1129] The United States explains that "[n]either item (j) nor the Illustrative List imposes obligations *per se*".[1130] Rather, the obligations regarding export subsidies are found in Articles 3.1(a) and 3.2.[1131] The United States asserts, furthermore, that an additional finding by the Panel on the issue of whether the export credit guarantees programs confer a "benefit" would not change the United States' compliance obligations.[1132]

729. In addition, the United States submits that Brazil mischaracterizes what the Panel did as a failure to address a claim by Brazil when, in fact, Brazil's request at the interim review stage was for the Panel to make additional factual findings.[1133] Even if Brazil had made a separate claim before the Panel under Articles 1.1 and 3.1 of the *SCM Agreement*, the United States submits that the Panel could have properly exercised judicial economy, as the Appellate Body recognized, in *US – Wool Shirts and Blouses*, that panels "need only address those *claims* which must be addressed to resolve the matter in issue in the dispute".[1134] Finally, the United States rejects the contention that Brazil has demonstrated that the United States' export credit guarantees confer a "benefit".[1135]

730. We observe that Brazil premises its claim on appeal on its submission that item (j) of the Illustrative List of Export Subsides annexed to the *SCM Agreement* is a distinct obligation from that contained in Article 3.1(a), read together with Article 1.1.[1136] In other words, Brazil submits that the requirement in item (j) for an export credit guarantee program to charge premiums that are adequate to cover long-term operating costs and losses is distinct from the requirement, under Articles 1.1 and 3.1(a), not to confer a "benefit". The United States rejects the premise of Brazil's argument, asserting instead that the Illustrative List of Export Subsidies, and more specifically item (j), do not establish a separate obligation from that in Article 3.1(a).[1137] Rather, the Illustrative List provides examples (hence "illustrative") of the types of measures that constitute "export subsidies" within the meaning of Article 3.1(a) and "to the extent that it does address a practice this constitutes the standard to determine whether a particular practice constitutes a prohibited export subsidy".[1138]

731. We need not decide, in this case, whether an export credit guarantee program that meets the standard of item (j) of the Illustrative List of Export Subsidies—because the premiums charged are adequate to cover long-term operating costs and losses—may nevertheless be challenged as a prohibited export subsidy under Article 3.1(a) on the basis that it confers a benefit. This is because, even if we were to assume that such a claim were possible, we would conclude that the Panel was within its discretion in exercising judicial economy in respect of Brazil's claim.[1139]

[1121] *Ibid.* See *supra*, para. 722.

[1130] *Ibid.*, para. 66

[1131] *Ibid.*, para. 66. The United States submits that, under Brazil's reading, the Illustrative List would be deprived of meaning. (*Ibid.*, para. 67)

[1132] *Ibid.*, para. 80.

[1133] *Ibid.*, paras. 81-82 (referring to Panel Report, para. 6.31).

[1134] *Ibid.*, para. 85 (referring to Appellate Body Report, *US – Wool Shirts and Blouses*, p. 19, DSR 1997:1, 323 at 339). (emphasis added)

[1135] *Ibid.*, paras. 92-99.

[1136] Brazil's other appellant's submission, para. 22.

[1137] United States' appellee's submisison, para. 66.

[1138] *Ibid.*, para. 70.

[1139] The Panel did not expressly state that it was exercising judicial economy. Instead, the Panel stated that it did not believe that it was "necessary to address Brazil's additional *arguments*". (Panel Report, para. 6.31) (emphasis added) Brazil initially describes the Panel's failure as an error by the Panel in the "interpretation and application of Article 3.1(a) of the *SCM Agreement*, as well as of Article 3.7 of the DSU". (Brazil's other appellant's submission, para. 22) Later in its submission, however, Brazil describes the Panel's error as a "misapplication of the principle of judicial economy". (*Ibid.*, para. 23; see also *ibid.*, paras. 33 and 39-41)

732. As we explained earlier, panels may refrain from ruling on every claim as long as it does not lead to a "partial resolution of the matter".[1140] The Panel found that the United States' export credit guarantee programs constitute a prohibited export subsidy under Article 3.1(a) because they do not meet the criteria in item (j) of the Illustrative List of Export Subsidies. This finding, in our view, is sufficient to resolve the matter. Therefore, we are not persuaded that the Panel's exercise of judicial economy was improper, as Brazil has not demonstrated that it has led to "a partial resolution of the matter".[1141]

733. For these reasons, we reject Brazil's claim that the Panel erred by exercising judicial economy in respect of Brazil's allegation that the United States' export credit guarantees are prohibited export subsidies, under Article 3.1(a) of the *SCM Agreement*, because they confer a "benefit" within the meaning of Article 1.1.

H. *ETI Act of 2000*

734. We turn to Brazil's claim that the Panel erred in the "interpretation and application of the burden of proof"[1142], in connection with its finding that Brazil did not establish a *prima facie* case that the ETI Act of 2000[1143] and the subsidies granted thereunder are inconsistent with Articles 8 and 10.1 of the *Agreement on Agriculture* and Articles 3.1 and 3.2 of the *SCM Agreement*, in respect of upland cotton.

735. Before the Panel, Brazil argued that the ETI Act of 2000 provides an export subsidy to upland cotton, within the meaning of Article 10.1 of the *Agreement on Agriculture*, because it eliminates tax liabilities for exporters who sell upland cotton in foreign markets. According to Brazil, the ETI Act of 2000 threatens to circumvent the United States' export subsidy commitments by providing an export subsidy to upland cotton, despite the fact that the United States has not scheduled any export subsidy reduction commitments for that commodity, thereby violating Articles 8 and 10.1 of the *Agreement on Agriculture*. In addition, Brazil asserted that the ETI Act of 2000 provides prohibited export subsidies to upland cotton within the meaning of Articles 3.1(a) and 3.2 of the *SCM Agreement*.[1144]

[1140]Appellate Body Report, *Australia – Salmon*, para. 223.

[1141]Appellate Body Report, *Australia – Salmon*, para. 223. As the United States argues, the circumstances of this case are different from those in *Australia – Salmon.* In that case, the panel limited its findings for other Canadian salmon to Article 5.1 of the *SPS Agreement* and "gave no convincing reason why it examined Article 5.5 and 5.6 for only one category of the products in dispute, i.e., ocean-caught Pacific salmon, and did not undertake the same analysis for other categories, i.e., other Canadian salmon". (Appellate Body Report, *Australia – Salmon*, para. 225) The present case does not involve a panel incorrectly limiting its findings under other provisions to certain products. Instead, Brazil is questioning the Panel's refusal to make an additional finding of inconsistency with the same provision for the same products.

[1142]Brazil's other appellant's submission, para. 7.

[1143]Public Law 106-519. The ETI Act of 2000 is a measure that was taken by the United States to comply with the recommendations and rulings of the DSB after the original FSC measure was found to be WTO-inconsistent in *US – FSC*. (Appellate Body Report, *US – FSC*, para. 178) It is the same measure that the European Communities challenged in *US – FSC (Article 21.5 – EC)*, part of which the panel and Appellate Body found, in that dispute, to be inconsistent with the United States' WTO obligations. (Appellate Body Report, *US – FSC (Article 21.5 – EC)*, paras. 1 and 256(d)) Brazil acknowledges that, after the Panel Report was circulated, the "United States enacted legislation ... that seems to repeal most of the illegal aspects of the ETI Act of 2000". (Brazil's other appellant's submission, para. 214) Brazil is referring to the American Jobs Creation Act of 2004, enacted as Public Law 108-357.

[1144]Panel Report, para. 7.950. (footnote omitted) Brazil explained that the subsidies granted to upland cotton under the ETI Act of 2000 do not fully conform to Part V of the *Agreement on Agriculture* and, therefore, are not exempt from action under the *SCM Agreement* pursuant to Article 13(c) of the *Agreement on Agriculture*.

Brazil pointed out that, in *US – FSC (Article 21.5 – EC)*, both the panel and Appellate Body found that the ETI Act of 2000 violates Articles 8 and 10.1 of the *Agreement on Agriculture* and Articles 3.1(a) and 3.2 of the *SCM Agreement*. Brazil requested the Panel to apply the reasoning developed by that panel, as modified by the Appellate Body, *mutatis mutandis*, to this dispute.[1145]

736. The United States responded that the Panel should reject Brazil's claim because Brazil failed to make a *prima facie* case.[1146] According to the United States, "[a]s a result of Brazil's '*mutatis mutandis*' approach, the Panel [was] in no position to exercise its judgment to follow, or decline to follow, prior dispute settlement findings concerning the ETI Act of 2000, nor even in a position to make factual findings concerning the Act".[1147]

737. The Panel began its analysis by noting that, apart from referring the Panel to the European Communities' claims and arguments in *US – FSC (Article 21.5 – EC)*, Brazil had submitted no direct evidence reflecting the nature, function or WTO-inconsistency of the ETI Act of 2000.[1148] It then observed that Brazil appeared to:

> ... seek a Panel process whereby we would simply apply the reasoning, and findings and conclusions of the panel, as modified by the Appellate Body, in the *US – FSC (Article 21.5 – EC)* dispute, without going through the ordinary procedural steps constituting panel proceedings set out in the *DSU*, including the examination of the legal claims against the measures constituting the matter before this Panel on the basis of direct evidence and argumentation submitted by the complaining and defending parties in this dispute. While Brazil has supplemented the evidence and argumentation in that dispute, it has not purported directly to establish the elements comprising the basis of the findings and conclusions in that dispute.[1149]

The Panel saw "no basis in the text of the *DSU* ... for such incorporation by reference of claims and arguments made in a previous dispute nor for a quasi-automatic application of findings, recommendations and rulings from a previous dispute".[1150] In addition, the Panel rejected Brazil's reliance on Article 17.14 of the DSU[1151] to support its claim, reasoning that, because Brazil was not a party in *US – FSC (Article 21.5 – EC)*, the panel and Appellate Body reports in that case "cannot be

[1145]Panel Report, para. 7.949. (footnotes omitted) Brazil incorporated by reference into its submissions (i) the Panel Report in *US – FSC (Article 21.5 – EC)*, (ii) the Appellate Body Report in *US – FSC (Article 21.5 – EC)*, and (iii) all submissions of the European Communities in that case. Brazil contends that an approach whereby the complaining Member incorporates by reference the reasoning of another panel, as modified by the Appellate Body, is consistent with the Appellate Body's reasoning in *Mexico – Corn Syrup (Article 21.5 – US)*. (Brazil's other appellant's submission, para. 224 (referring to Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 109))

[1146]Panel Report, para. 7.951.

[1147]*Ibid*.

[1148]*Ibid*., para. 7.959.

[1149]Panel Report, para. 7.961. (footnotes omitted)

[1150]*Ibid*., para. 7.962.

[1151]Article 17.14 of the DSU provides:

> An Appellate Body report shall be adopted by the DSB and unconditionally accepted by the parties to the dispute unless the DSB decides by consensus not to adopt the Appellate Body report within 30 days following its circulation to the Members. (footnote omitted)

taken as a providing a final resolution to the part of the matter before [it] concerning the ETI Act of 2000".[1152]

738. The Panel then identified other differences between the present dispute and *US – FSC (Article 21.5 – EC)*.[1153] These differences meant, according to the Panel, that the evidence and argumentation relating to the present dispute are distinct from those in *US – FSC (Article 21.5 – EC)*.[1154] The differences in the evidence and argumentation, in turn, led the Panel to decide that "no direct transposition or incorporation of the panel and Appellate Body findings and conclusions would, in any event, be appropriate on the basis of the evidence and argumentation submitted in this dispute".[1155] Moreover, the Panel observed that, in a written communication to the parties after the first meeting, it had "put Brazil on notice that the evidence and arguments submitted up to that point in the Panel proceedings did not provide sufficient basis for [the Panel] to make a finding".[1156]

739. For these reasons, the Panel concluded:

> [O]n the basis of the evidence and arguments submitted, we are not in a position to conclude that Brazil has established a *prima facie* case that the ETI Act of 2000 and subsidies granted thereunder are inconsistent with Articles 8 and 10.1 of the *Agreement on Agriculture* in respect of upland cotton.[1157]

740. On appeal, Brazil asserts that the Panel erred in the "interpretation and application of the burden of proof under Articles 8 and 10.1 of the *Agreement on Agriculture*, and Articles 3.1(a) and 3.2 of the *SCM Agreement*, in light of the goal of the WTO dispute settlement system, under Article 3.3 of the DSU, to provide for the 'prompt settlement' of disputes".[1158] Brazil submits that it challenged before the Panel exactly the same measure that the panel and the Appellate Body in *US – FSC (Article 21.5 – EC)* held violated the *Agreement on Agriculture* and the *SCM Agreement*. This measure had not changed since it was enacted in 2000[1159] and thus the legislation that forms the basis for the United States measure that is subject to Brazil's claims is identical to the legislation at issue in *US – FSC (Article 21.5 – EC)*.[1160] According to Brazil, the United States did not dispute the identity between the measures.[1161]

741. In addition, Brazil asserts that the United States never rebutted Brazil's arguments, or the supporting documents that Brazil referenced, that demonstrate the inconsistency of the ETI Act of 2000 with Articles 8 and 10.1 of the *Agreement on Agriculture* and Articles 3.1(a) and 3.2 of the *SCM Agreement*.[1162] Brazil refers to *Mexico – Corn Syrup (Article 21.5 – US)*, where the Appellate Body held that a panel may incorporate the reasoning of another panel by reference and still meet the requirement in Article 12.7 of the DSU to set out the "basic rationale" for its findings and conclusions.[1163] Brazil sees no reason why this reasoning should not also apply to submissions by a complaining Member that incorporate by reference the reasoning of another panel, as modified by the Appellate Body, addressing the exact same measure.[1164]

742. Brazil acknowledges that the "United States enacted legislation ... that seems to repeal most of the illegal aspects of the ETI Act of 2000".[1165] Consequently, Brazil expressly states that, were we to modify the Panel's "interpretation and application of the burden of proof"[1166], it is not requesting us to complete the legal analysis and find that the export subsidies to upland cotton, provided under the ETI Act of 2000, are inconsistent with Articles 8 and 10.1 of *Agreement on Agriculture* and Articles 3.1(a) and 3.2 of the *SCM Agreement*.[1167]

743. The United States responds that we should not decide Brazil's appeal because Brazil acknowledges that the appeal is not necessary to resolve the dispute between the parties. Brazil explicitly does not ask the Appellate Body to complete the analysis with respect to its claims. The United States argues that the Appellate Body should abstain from deciding this issue because Brazil is not asking "the Appellate Body to make findings that would result in DSB rulings and recommendations with respect to the ETI Act".[1168] For that reason alone, the Appellate Body should decline to decide Brazil's appeal.[1169]

[1152]Panel Report, para. 7.967. (footnote omitted)

[1153]The Panel explained that, in *US – FSC (Article 21.5 – EC)*, the claims under the *SCM Agreement* were examined before those under the *Agreement on Agriculture*, an order contrary to that adopted by the Panel in this case. (Panel Report, para. 7.971) Also, the Panel pointed out that, in *US – FSC (Article 21.5 – EC)*, there was no discussion relating to issues under Article 13 of the *Agreement on Agriculture*. (Panel Report, para. 7.972) Finally, the Panel observed that the findings in *US – FSC (Article 21.5 – EC)* were not specific to upland cotton. (Panel Report, para. 7.973)

[1154]*Ibid*., para. 7.975.

[1155]*Ibid.*

[1156]Panel Report, para. 7.980. The written communication is dated 5 September 2003 and in it the Panel "indicated to the parties that, 'on the basis of the evidence and arguments presented to date, it is unable to form any view on whether the ETI Act of 2000 satisfies the relevant provisions of the *Agreement on Agriculture*'".

The Panel also referred to "its discretionary authority to put questions to the parties to clarify the factual and legal aspects of the matter". (*Ibid*., para. 7.983) In this respect, the Panel explained that its authority to ask questions or seek information is not conditional on a party having established a *prima facie* case. Nevertheless, the Panel observed that it was "not permitted to make Brazil's case for Brazil". (*Ibid*., para. 7.985)

[1157]*Ibid*., para. 7.986. The Panel also concluded that:

> ... in accordance with Article 13(c)(ii) of the *Agreement on Agriculture*, to the extent that Brazil has not demonstrated that the United States ETI Act of 2000 is not in conformity with the United States export subsidy commitments under Part V of the *Agreement on Agriculture* in respect of upland cotton, the United States is "exempt from actions based on" Articles 3.1(a) and 3.2 of the *SCM Agreement*. We therefore decline to examine Brazil's claims based on those provisions.

(*Ibid*., para. 7.987) (footnote omitted)

[1158]Brazil's other appellant's submission, para. 7.

[1159]Brazil notes that legislation "that seems to repeal most of the illegal aspects of the ETI Act of 2000" was enacted in 2004. (Brazil's other appellant's submission, para. 214) See *supra*, footnote 1143.

[1160]Brazil's other appellant's submission, para. 221.

[1161]*Ibid*.

[1162]Brazil's other appellant's submission, para. 222.

[1163]Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 109.

[1164]In addition, Brazil states that it submitted to the Panel arguments and evidence that addressed the specific nature of its claims, in particular with respect to Article 13(c)(ii) of the *Agreement on Agriculture*. (Brazil's other appellant's submission, para. 225)

[1165]*Ibid*., para. 214.

[1166]*Ibid*., para. 7.

[1167]*Ibid*., para. 214.

[1168]United States' appellee's submission, para. 100. The United States relies for support on the Appellate Body Reports in *US – Steel Safeguards* and *US – Wool Shirts and Blouses*.

[1169]United States' appellee's submission, para. 100.

744. In any event, the United States submits that the Panel correctly concluded that Brazil did not make a *prima facie* case with respect to the ETI Act of 2000. Brazil simply did not present any evidence at all regarding the ETI Act of 2000 itself. According to the United States, the Panel acted properly under the text of the DSU, including Article 11, by declining to find that the "short shrift" that Brazil gave to the ETI Act of 2000 satisfied Brazil's burden to make its *prima facie* case concerning that Act.[1170]

745. At the outset, we observe that Article 17.6 of the DSU provides that appeals "shall be limited to issues of law covered in the panel report and legal interpretations developed by the panel". Furthermore, Article 17.12 of the DSU states that "[t]he Appellate Body shall address each of the issues raised in accordance with paragraph 6 during the appellate proceeding". The United States does not argue that Brazil has failed to appeal an issue of law or a legal interpretation. Thus, the United States is not asserting that Brazil could not have brought this claim on appeal or that we are legally precluded from addressing it. The United States' assertion is that it is not *necessary* for us to resolve Brazil's claim because Brazil is not requesting us to make findings that would result in DSB rulings and recommendations.

746. We agree. Article 3.3 of the DSU explains that the aim of the WTO's dispute settlement system is the "prompt settlement of situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member". For its part, Article 3.4 of the DSU provides that "[r]ecommendations or rulings made by the DSB shall be aimed at achieving a satisfactory settlement of the matter". Similarly, Article 3.7 states that "[t]he aim of the dispute settlement mechanism is to secure a positive solution to a dispute". The Appellate Body, moreover, has cautioned that "[g]iven the explicit aim of dispute settlement that permeates the *DSU*, ... Article 3.2 of the *DSU* is [not] meant to encourage either panels or the Appellate Body to 'make law' by clarifying existing provisions of the *WTO Agreement* outside the context of resolving a particular dispute".[1171]

747. In this case, Brazil's claim on appeal is limited to the Panel's application of the burden of proof. Brazil has expressly stated that it is not requesting us to complete the analysis. In view of Brazil's request, our ruling would not result in recommendations or rulings by the DSB in respect of the ETI Act of 2000. In these circumstances, we fail to see how our examination of Brazil's claim would contribute to the "prompt" or "satisfactory settlement" of this matter or would contribute to "secure a positive solution" to this dispute.[1172] Even if we were to disagree with the manner in which the Panel applied the burden of proof, we would not make any findings in respect of the WTO-consistency of the ETI Act of 2000. We recognize that there may be cases in which it would be useful for us to make a finding on an issue, despite the fact that our decision would not result in rulings and recommendations by the DSB. In this case, however, we find no compelling reason for doing so on this particular issue.

[1170]United States' appellee's submission, para. 112.

[1171]Appellate Body Report, *US – Wool Shirts and Blouses*, p. 19, DSR 1997:1, 323 at 340.

[1172]Our approach is consistent with the approach of the Appellate Body in *US – Steel Safeguards*, where it did not find it necessary to examine the Panel's findings on the causation analysis because it had "already found that the measures before [it] are inconsistent with Article XIX:1(a) of the GATT 1994 and with Articles 2.1, 3.1 and 4.2 of the *Agreement on Safeguards*". (Appellate Body Report, *US – Steel Safeguards*, para. 483)

The Appellate Body noted, in that appeal, that "several participants expressed an interest in having [it] rule on causation as it would provide guidance to Member on applying safeguard measures in the future consistently with their WTO obligations". (Appellate Body Report, *US – Steel Safeguards*, para. 484) Despite this request for guidance, the Appellate Body declined to make a ruling on this specific aspect of the case. (Appellate Body Report, *US – Steel Safeguards*, paras. 485-491)

748. For these reasons, we decline Brazil's request that we reverse the Panel's conclusion that Brazil did not make a *prima facie* case that the ETI Act of 2000 is inconsistent with the United States' WTO obligations. In declining to rule on Brazil's request, we neither endorse nor reject the manner in which the Panel applied the burden of proof in the context of examining Brazil's claim against the ETI Act of 2000.

I. *Interpretation of Article XVI:3 of the GATT 1994*

1. Introduction

749. Before the Panel, Brazil claimed that the United States applied its domestic and export subsidies to upland cotton during the 1999-2002 marketing years in a manner that resulted in the United States having more than an equitable share of world export trade within the meaning of Article XVI:3 of the GATT 1994, and thereby caused serious prejudice within the meaning of Article XVI:1 of the GATT 1994.[1173]

750. In addressing this claim, the Panel considered whether paragraphs 1 and 3 of Article XVI could be considered together, to address both the domestic support and export subsidy measures at issue. The Panel said that "we do not believe that these provisions are susceptible to such joint application", on the grounds that "each provision – Article XVI:1 and Article XVI:3 – requires application in accordance with its own terms in respect of measures that fall within its respective scope of application".[1174]

751. The Panel dealt with Brazil's allegation that the subsidies at issue resulted in the United States enjoying "more than an equitable share of world export trade" under Article XVI:3 of the GATT 1994 in the section of the Panel Report dealing with "Export Subsidies".[1175] The Panel examined whether Article XVI:3 applies only to export subsidies, or whether it also applied to all of the types of subsidies covered by Article XVI:1 as well. The Panel found that:

> Article XVI:3 applies only to export subsidies as that term is now defined in the *Agreement on Agriculture* and the *SCM Agreement*.[1176]

752. Because the Panel had concluded that Step 2 payments to exporters and export credit guarantees under the GSM 102, GSM 103 and SCGP programs constituted export subsidies prohibited by the relevant provisions of the *Agreement on Agriculture* and the *SCM Agreement*, the Panel—as it had done in respect of Brazil's claims under Article XVI:1 of the GATT 1994—exercised judicial economy with respect to Brazil's claim under Article XVI:3 of the GATT 1994.[1177]

753. Brazil's appeal regarding the Panel's findings with respect to the application of Article XVI:3 of the GATT 1994 has two elements. First, Brazil appeals the Panel's finding that Article XVI:3

[1173]Brazil's further submission to the Panel, para. 277.

[1174]Panel Report, para. 7.992. The Panel thus addressed elements of Brazil's claim in different parts of its Report. The Panel's response to Brazil's allegation of "serious prejudice" under Article XVI:1 of the GATT 1994 is dealt with in the section of the Panel Report addressing "Actionable Subsidies: Claims of 'Present' Serious Prejudice". (*Ibid.*, Section VII:G) In the light of its findings of present serious prejudice under Articles 5(c) and 6.3(c) of the *SCM Agreement*, the Panel exercised judicial economy with respect to Brazil's claim of serious prejudice under Article XVI:1 of the GATT 1994. (*Ibid.*, para. 7.1476)

[1175]*Ibid.*, Section VII:E.

[1176]*Ibid.*, para. 7.1016.

[1177]*Ibid.*, para. 7.1017.

applies only to export subsidies as that term is now defined in the *Agreement on Agriculture* and the *SCM Agreement*. Brazil stresses that its appeal in this regard, that is, the Panel's legal interpretation of the second sentence of Article XVI:3 of the GATT 1994, is *not conditional*.[1178] Brazil argues that, in reaching the view that Article XVI:3 applies only to export subsidies, as currently defined in the *SCM Agreement* and the *Agreement on Agriculture*, the Panel misinterpreted the second sentence of Article XVI:3, which establishes disciplines upon "any form of subsidy which operates to increase the export of any primary product", that is, all subsidies that have an export-enhancing effect, and not just subsidies that are contingent on export performance. According to Brazil, the focus of Article XVI:3 is upon the effect of subsidies in enhancing exports, and not upon formal distinctions between export contingent and other subsidies.[1179]

754. Secondly, Brazil *conditionally* requests the Appellate Body to complete the analysis of its claim that United States price-contingent subsidies[1180] result in the United States having a "more than equitable share of world export trade" in upland cotton, in violation of Article XVI:3, second sentence.[1181] Brazil's request to complete the analysis is conditional upon two events: (i) a reversal by the Appellate Body of the Panel's finding regarding *significant price suppression* (resulting in serious prejudice in terms of Articles 6.3(c) and 5(c) of the *SCM Agreement*); and, (ii) denial by the Appellate Body of Brazil's request for a ruling that the United States' measures at issue resulted in an increase of the United States' *world market share* in upland cotton (resulting in serious prejudice in terms of Articles 6.3(d) and 5(c) of the *SCM Agreement*).[1182] Brazil submits that there are sufficient factual findings by the Panel or undisputed facts on the record to allow the Appellate Body to complete the analysis of Brazil's claim regarding violation of Article XVI:3 by the United States price-contingent subsidies.[1183]

755. The United States emphasizes that the text of Article XVI distinguishes between "Subsidies in General" (Section A) and "Additional Provisions on Export Subsidies" (Section B). By locating Article XVI:3 in Section B, Members agreed that Article XVI:3 is a provision on export subsidies.[1184] The term "export subsidy" is now defined in the *SCM Agreement* and the *Agreement on Agriculture* as referring to subsidies that are contingent on export performance.[1185] Both the context provided by these Agreements, as well as their negotiating history, confirm that the export subsidies referred to in Article XVI:3 are also subsidies contingent on export performance.[1186]

756. With respect to Brazil's conditional request to complete the analysis, the United States contends that, even if the Appellate Body reverses the Panel's interpretation regarding the scope of Article XVI:3, there would be insufficient undisputed facts on the record or factual findings by the Panel to complete the analysis. The United States observes that the Panel did not make any findings

[1178]Brazil's other appellant's submission, para. 319.

[1179]Brazil's other appellant's submission, paras. 323-327.

[1180]That is, marketing loan payments, Step 2 payments, market loss assistance payments and counter-cyclical payments.

[1181]Brazil's other appellant's submission, para. 318.

[1182]*Ibid.*, para. 319. We observe that Brazil does *not appeal* the Panel's findings with regard to Article XVI:1 and the relationship between Articles XVI:1 and XVI:3 (Panel Report, paras. 7.1470-7.1476), and does not appear to rely to any great extent on Article XVI:1 in its arguments relating to this part of its appeal.

[1183]Brazil's other appellant's submission, paras. 371-379.

[1184]United States' appellee's submission, para. 167.

[1185]*Ibid.*, para. 168.

[1186]*Ibid.*, paras. 169-180.

on causation relative to trade shares. Nor has Brazil put forward a tenable standard for assessing what is more than an "equitable" trade share.[1187]

2. Analysis

757. Article XVI of the GATT 1994 contains two sections. "Section A" lays down certain rules for "Subsidies in General". "Section B", containing paragraphs 2-5 of Article XVI, provides "Additional Provisions on Export Subsidies". In Article XVI:2, the Members "recognize" that the provision of "a subsidy on the export of any product may have harmful effects ...". Article XVI:3, the provision at issue in this part of Brazil's appeal, sets forth that "[a]ccordingly":

> Members should seek to avoid the use of subsidies on the export of primary products. *If, however, a Member grants directly or indirectly any form of subsidy which operates to increase the export of any primary product from its territory*, such subsidy shall not be applied in a manner which results in that Member having more than an equitable share of world export trade in that product, account being taken of the shares of the Members in such trade in the product during a previous representative period, and any special factors which may have affected or may be affecting such trade in the product.* (*ad note* omitted; emphasis added)

758. The Panel found "that Article XVI:3 applies only to export subsidies as that term is now defined in the *Agreement on Agriculture* and the *SCM Agreement*".[1188] In the light of its rulings under the *Agreement on Agriculture* and the *SCM Agreement* with regard to the United States' export subsidies at issue in the proceedings, the Panel exercised judicial economy with respect to Brazil's claims under Article XVI:3 of the GATT 1994.[1189]

759. Brazil's appeal of these findings has two elements. First, Brazil's appeal focuses on the phrase "any form of subsidy which operates to increase the export of any primary product". It argues that the ordinary meaning of this phrase encompasses all subsidies with an export-enhancing effect, not just those that are *contingent* on export performance. Second, Brazil requests the Appellate Body to complete the analysis and find that the United States' price-contingent subsidies violate Article XVI:3, second sentence, *conditional* upon two events: reversal by the Appellate Body of the Panel's finding of significant price suppression and serious prejudice within the meaning of Articles 6.3(c) and 5(c) of the *SCM Agreement*, as well as denial, by the Appellate Body, of Brazil's appeal concerning the interpretation and application of Articles 6.3(d) and 5(c) of the *SCM Agreement*.

760. With respect to the second element of Brazil's appeal, we note that, above, we upheld the Panel's finding that the effect of the price-contingent subsidies at issue in these proceedings is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*.[1190] We observe, therefore, that the initial condition upon which Brazil's request to complete the analysis of this claim rests is *not* made out, and thus there is no need for us to complete the analysis and to examine whether or not the United States subsidies challenged by Brazil resulted in the United States having more than an equitable share of world export trade in upland cotton.

[1187]United States' appellee's submission, paras. 181-187.

[1188]Panel Report, para. 7.1016.

[1189]*Ibid.*, para. 7.1017

[1190]*Supra*, para. 496.

761. Nor do we believe that it is necessary to make a finding on the interpretation of the phrase "any form of subsidy which operates to increase the export of any primary product" in the second sentence of Article XVI:3 of the GATT 1994 in order to resolve this dispute. Given our ruling under Article 6.3(c) of the *SCM Agreement*, we observe that, although any ruling by the Appellate Body on the scope of the subsidies covered by Article XVI:3 of the GATT 1994 in the abstract might at best offer some degree of "guidance", it would not affect the resolution of this dispute.[1191] Indeed, irrespective of whether we were to uphold or reverse the Panel's finding on this issue, upon adoption of the recommendations and rulings by the DSB, the United States would be under no additional obligation regarding implementation. Thus, although we recognize that there may be cases in which it would be useful for us to make a finding on an issue, despite the fact that our finding would not result in recommendations and rulings by the DSB, we find no compelling reason for doing so in this case in respect of this particular issue.

762. We therefore believe that an interpretation of the phrase "any form of subsidy which operates to increase the export" in Article XVI:3 of the GATT 1994 is unnecessary for purposes of resolving this dispute. We emphasize that we neither uphold nor reverse the Panel's interpretation of this phrase in the second sentence of Article XVI:3.

VIII. Findings and Conclusions

763. For the reasons set out in this Report, the Appellate Body:

(a) as regards procedural matters:

(i) in relation to production flexibility contract payments and market loss assistance payments:

- upholds the Panel's finding, in paragraphs 7.118, 7.122, 7.128, and 7.194(ii) of the Panel Report, that Articles 4.2 and 6.2 of the DSU do not exclude expired measures from the potential scope of consultations or a request for establishment of a panel and, therefore, that production flexibility contract payments and market loss assistance payments fell within the Panel's terms of reference; and

- finds that the Panel set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind this finding, as required by Article 12.7 of the DSU; and

(ii) in relation to export credit guarantee programs:

- upholds the Panel's ruling, in paragraph 7.69 of the Panel Report, that "export credit guarantees to facilitate the export of United States upland cotton, and other eligible agricultural commodities ... are within its terms of reference"; and

[1191]We note in this regard that, in *US – Steel Safeguards*, the Appellate Body noted that "several participants expressed an interest in having [it] rule on causation as it would provide guidance to Members on applying safeguard measures in the future consistently with their WTO obligations". (Appellate Body Report, *US – Steel Safeguards*, para. 484) (original emphasis) Despite this request for guidance, the Appellate Body declined to make a ruling on this specific aspect of the case. (Appellate Body Report, *US – Steel Safeguards*, paras. 485-491)

- upholds the Panel's ruling, in paragraph 7.103 of the Panel Report, that "Brazil provided a statement of available evidence with respect to export credit guarantee measures relating to upland cotton and eligible United States agricultural products other than upland cotton, as required by Article 4.2 of the *SCM Agreement*";

(b) as regards the application of Article 13 of the *Agreement on Agriculture* to this dispute:

(i) in relation to Article 13(a)(ii):

- upholds the Panel's finding, in paragraphs 7.388, 7.413, 7.414, and 8.1(b) of the Panel Report, that production flexibility contract payments and direct payments are not green box measures that fully conform to paragraph 6(b) of Annex 2 of the *Agreement on Agriculture*; and, therefore, are not exempt from actions under Article XVI of GATT 1994 and Part III of the *SCM Agreement* by virtue of Article 13(a)(ii) of the *Agreement on Agriculture*; and

- declines to rule on Brazil's conditional request that the Appellate Body find that the updating of base acres for direct payments under the FSRI Act of 2002 means that direct payments are not green box measures that fully conform to paragraph 6(a) of Annex 2 of the *Agreement on Agriculture*; and, therefore, are not exempt from actions under Article XVI of GATT 1994 and Part III of the *SCM Agreement* by virtue of Article 13(a)(ii) of the *Agreement on Agriculture*; and

(ii) in relation to Article 13(b)(ii):

- modifies the Panel's interpretation, set out in paragraph 7.494 of the Panel Report, of the phrase "support to a specific commodity" in Article 13(b)(ii) of the *Agreement on Agriculture*; but upholds the Panel's finding, in paragraphs 7.518 and 7.520 of the Panel Report, that Step 2 payments to domestic users, marketing loan program payments, production flexibility contract payments, market loss assistance payments, direct payments, counter-cyclical payments, crop insurance payments, and cottonseed payments (the "challenged domestic support measures") granted "support to a specific commodity", namely, upland cotton;

- declines to rule on the United States' appeal that only the price gap methodology described in paragraph 10 of Annex 3 of the *Agreement on Agriculture* may be used to measure the value of marketing loan program payments and deficiency payments for the purposes of the comparison required by Article 13(b)(ii) of the *Agreement on Agriculture*; and

- upholds the Panel's finding, in paragraphs 7.608 and 8.1(c) of the Panel Report, that the "challenged domestic support measures" granted, in the years 1999, 2000, 2001 and 2002, support to a specific commodity, namely, upland cotton, in excess of that decided during the 1992 marketing year; and, therefore, that these measures are not exempt from actions based on Articles 5 and 6 of the *SCM*

Agreement and Article XVI:1 of the GATT 1994 by virtue of Article 13(b)(ii) of the *Agreement on Agriculture*;

(c) as regards serious prejudice:

(i) in relation to Article 6.3(c) of the *SCM Agreement*:

- upholds the Panel's finding, in paragraphs 7.1416 and 8.1(g)(i) of the Panel Report, that the effect of the marketing loan program payments, Step 2 payments, market loss assistance payments, and counter-cyclical payments (the "price-contingent subsidies") is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*, by in turn upholding the Panel's findings:

  (A) regarding the "market" and "price" in assessing whether "the effect of the subsidy is ... significant price suppression ... in the same market" within the meaning of Article 6.3(c) of the *SCM Agreement*:

  - in paragraphs 7.1238-7.1240 of the Panel Report, that the "same market" may be a "world market";
  - in paragraph 7.1247 of the Panel Report, that a "world market" for upland cotton exists; and
  - in paragraph 7.1274 of the Panel Report, that "the A-Index can be taken to reflect a world price in the world market for upland cotton"; and

  (B) regarding the "effect" of the price-contingent subsidies under Article 6.3(c) of the *SCM Agreement*:

  - in paragraphs 7.1312 and 7.1333 of the Panel Report, that "significant price suppression" occurred within the meaning of Article 6.3(c);
  - in paragraphs 7.1355 and 7.1363 of the Panel Report, that "a causal link exists" between the price-contingent subsidies and the significant price suppression found by the Panel under Article 6.3(c) and that this link is not attenuated by other factors raised by the United States;
  - in paragraphs 7.1173, 7.1186, and 7.1226 of the Panel Report, that it was not required to quantify precisely the benefit conferred on upland cotton by the price-contingent subsidies and, consequently, not identifying the precise amount of counter-cyclical payments and market loss assistance payments that benefited upland cotton; and
  - in paragraph 7.1416 of the Panel Report, that the effect of the price-contingent subsidies for marketing years 1999 to 2002 "is significant price suppression ... in the period MY 1999-2002"; and

- finds that the Panel, as required by Article 12.7 of the DSU, set out the findings of fact, the applicability of relevant provisions, and the basic rationale behind its finding, in paragraphs 7.1416 and 8.1(g)(i) of the Panel Report, that the effect of the price-contingent subsidies is significant price suppression within the meaning of Article 6.3(c) of the *SCM Agreement*; and

(ii) in relation to Article 6.3(d) of the *SCM Agreement*:

- finds it unnecessary, for the purposes of resolving this dispute, to rule on the interpretation of the phrase "world market share" in Article 6.3(d) of the *SCM Agreement*, and neither upholds nor reverses the Panel's findings in this regard; and
- declines to rule on Brazil's conditional request for the Appellate Body to find that the effect of the price-contingent subsidies is an increase in the United States' world market share in upland cotton within the meaning of Article 6.3(d) of the *SCM Agreement*;

(d) as regards user marketing (Step 2) payments:

(i) upholds the Panel's findings, in paragraphs 7.1088, 7.1097-7.1098, and 8.1(f) of the Panel Report, that Step 2 payments to *domestic users* of United States upland cotton, under Section 1207(a) of the FSRI Act of 2002, are subsidies contingent on the use of domestic over imported goods that are inconsistent with Articles 3.1(b) and 3.2 of the *SCM Agreement*; and

(ii) upholds the Panel's findings, in paragraphs 7.748-7.749, 7.760-7.761, and 8.1(e) of the Panel Report, that Step 2 payments to *exporters* of United States upland cotton, pursuant to Section 1207(a) of the FSRI Act of 2002, are subsidies contingent upon export performance within the meaning of Article 9.1(a) of the *Agreement on Agriculture* that are inconsistent with Articles 3.3 and 8 of that Agreement and Articles 3.1(a) and 3.2 of the *SCM Agreement*;

(e) as regards export credit guarantee programs:

(i) upholds the Panel's finding, in paragraphs 7.901, 7.911, and 7.932 of the Panel Report, that Article 10.2 of the *Agreement on Agriculture* does not exempt export credit guarantees from the export subsidy disciplines in Article 10.1 of that Agreement[1192];

(ii) finds that the Panel did not improperly apply the burden of proof in finding that the United States' export credit guarantee programs are prohibited export subsidies under Article 3.1(a) of the *SCM Agreement* and are consequently inconsistent with Article 3.2 of that Agreement;

(iii) declines to find that the Panel erred by failing to make the necessary findings of fact in assessing whether the export credit guarantee programs are

[1192]See Separate Opinion, *supra*, paras. 631-641.

provided at premium rates that are inadequate to cover long-term operating costs and losses within the meaning of item (j) of the Illustrative List of Export Subsidies annexed to the *SCM Agreement*; and, consequently,

(iv) upholds the Panel's finding, in paragraph 7.869 of the Panel Report, that "the United States export credit guarantee programmes at issue—GSM 102, GSM 103 and SCGP—constitute a *per se* export subsidy within the meaning of item (j) of the Illustrative List of Export Subsidies in Annex I of the *SCM Agreement*", and upholds the Panel's findings, in paragraphs 7.947 and 7.948 of the Panel Report, that these export credit guarantee programs are export subsidies for purposes of Article 3.1(a) of the *SCM Agreement* and are inconsistent with Articles 3.1(a) and 3.2 of that Agreement; and

(v) finds that the Panel did not err in exercising judicial economy in respect of Brazil's allegation that the United States' export credit guarantee programs are prohibited export subsidies, under Article 3.1(a) of the *SCM Agreement*, because they confer a "benefit" within the meaning of Article 1.1 of that Agreement;

(f) as regards circumvention of export subsidy commitments:

(i) reverses the Panel's finding, in paragraph 7.881 of the Panel Report, that Brazil did not establish actual circumvention in respect of poultry meat and pig meat; finds, however, that there are insufficient uncontested facts in the record to complete the legal analysis to determine whether the United States' export credit guarantees to poultry meat and pig meat have been applied in a manner that "results in" circumvention of the United States' export subsidy commitments, within the meaning of Article 10.1 of the *Agreement on Agriculture*;

(ii) modifies the Panel's interpretation, in paragraphs 7.882-7.883 and 7.896 of the Panel Report, of the phrase "threatens to lead to .... circumvention" in Article 10.1 of the *Agreement on Agriculture* to the extent that the Panel's interpretation requires "an unconditional legal entitlement" to receive the relevant export subsidies as a condition for a finding of threat of circumvention, but upholds, for different reasons, the Panel's finding, in paragraph 7.896 of the Panel Report, that Brazil has not established that "the export credit guarantee programmes at issue are generally applied to scheduled agricultural products other than rice and other unscheduled agricultural products (not supported under the programmes) in a manner which threatens to lead to circumvention of United States export subsidy commitments within the meaning of Article 10.1 of the *Agreement on Agriculture*"; and

(iii) finds that the Panel did not err in confining its examination of Brazil's threat of circumvention claim to scheduled products other than rice and unscheduled products not supported under the United States' export credit guarantee programs;

(g) as regards the ETI Act of 2000, declines Brazil's request that the Appellate Body reverse the Panel's conclusion that Brazil did not make a *prima facie* case that the ETI Act of 2000 is inconsistent with the United States' WTO obligations; and

(h) as regards Article XVI:3 of the GATT 1994:

(i) finds it unnecessary, for the purposes of resolving this dispute, to rule on the interpretation of the phrase "any form of subsidy which operates to increase the export" in Article XVI:3 of the GATT 1994, and neither upholds nor reverses the Panel's findings in this regard; and

(ii) declines to rule on Brazil's conditional request for the Appellate Body to find that the price-contingent subsidies cause the United States to have "more than an equitable share of world export trade" in upland cotton, in violation of the second sentence of Article XVI:3 of the GATT 1994.

764. The Appellate Body recommends that the Dispute Settlement Body request the United States to bring its measures, found in this Report and in the Panel Report as modified by this Report to be inconsistent with the *Agreement on Agriculture* and the *SCM Agreement*, into conformity with its obligations under those Agreements.

UNITED STATES – SUBSIDIES ON UPLAND COTTON

Notification of an Appeal by the United States
under paragraph 4 of Article 16 of the Understanding on Rules
and Procedures Governing the Settlement of Disputes ("DSU")

The following notification, dated 18 October 2004, from the Delegation of the United States, is being circulated to Members.

Pursuant to Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU") and Rule 20 of the Working Procedures for Appellate Review, the United States hereby notifies its decision to appeal to the Appellate Body certain issues of law covered in the Report of the Panel on *United States – Subsidies on Upland Cotton* (WT/DS267/R) and certain legal interpretations developed by the Panel in this dispute.

1. The United States seeks review by the Appellate Body of the Panel's legal conclusion that certain U.S. decoupled income support measures – that is, production flexibility contract payments under the Federal Agricultural Improvement and Reform Act of 1996 ("1996 Act"), direct payments under the Farm Security and Rural Investment Act of 2002 ("2002 Act"), and "the legislative and regulatory provisions which establish and maintain the [direct payments] programme" – are not exempt from actions under Article 13(a) of the *Agreement on Agriculture*.[1] This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings include, for example, that these decoupled income support measures do not conform to Annex 2.

2. The United States seeks review by the Appellate Body of the Panel's legal conclusion that certain U.S. domestic support measures[2] are not exempt from actions under Article 13(b) of the *Agreement on Agriculture*.[3] This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings include, for example, the Panel's finding that the challenged U.S. measures granted support to a specific commodity in excess of that decided in marketing year 1992 and therefore breached the proviso of Article 13(b) in each year from marketing year 1999-2002.

3. The United States seeks review by the Appellate Body of the Panel's legal conclusion that U.S. export credit guarantees under the GSM 102, GSM 103, and SCGP export credit guarantee programs in respect of unscheduled agricultural products supported under the programs and one scheduled commodity (rice) are "export subsidies applied in a manner which results in circumvention of United States export subsidy commitments, within the meaning of Article 10.1 of the *Agreement on Agriculture*," are therefore inconsistent with Article 8 of the *Agreement on Agriculture*, and are not exempt from actions under Article 13(c) of the *Agreement on Agriculture*.[4] This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings, include, for example, the Panel's finding that export credit guarantees, notwithstanding Article 10.2 of the *Agreement on Agriculture*, constitute measures subject to Article 10.1 of the *Agreement on Agriculture.*

4. The United States seeks review by the Appellate Body of the Panel's legal conclusion that U.S. export credit guarantees under the GSM 102, GSM 103, and SCGP export credit guarantee programs in respect of other scheduled agricultural products constitute export subsidies within the meaning of Article 10.1 of the *Agreement on Agriculture*.[5] This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings, include, for example, the Panel's finding that export credit guarantees, notwithstanding Article 10.2 of the *Agreement on Agriculture*, constitute measures subject to Article 10.1 of the *Agreement on Agriculture.*

5. The United States seeks review by the Appellate Body of the Panel's legal conclusion that U.S. export credit guarantees under the GSM 102, GSM 103, and SCGP export credit guarantee programs in respect of unscheduled agricultural products supported under the programs and one scheduled commodity (rice) are *per se* export subsidies prohibited by Articles 3.1(a) and 3.2 of the *Agreement on Subsidies and Countervailing Measures* ("SCM Agreement").[6] This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings include, for example, the Panel's finding that the program for each product constitutes an export subsidy for purposes of the WTO Agreements and is provided by the United States at premium rates which are inadequate to cover long-term operating costs and losses of the programs within the meaning of item (j) of the Illustrative List of Export Subsidies in Annex I of the SCM Agreement.

6. The United States seeks review by the Appellate Body of the Panel's legal conclusion that section 1207(a) of the 2002 Act, which provides for user marketing (Step 2) payments to exporters of upland cotton, is an export subsidy that is listed in Article 9.1(a) of the *Agreement on Agriculture* that is inconsistent with U.S. obligations under Articles 3.3 and 8 of the *Agreement on Agriculture*, is not exempt from actions under Article 13(c) of the *Agreement on Agriculture*, and is inconsistent with Articles 3.1(a) and 3.2 of the SCM Agreement.[7] This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings include, for example, the Panel's finding that payments under the user marketing (Step 2) program are contingent on export performance.

7. The United States seeks review by the Appellate Body of the Panel's legal conclusion that section 1207(a) of the 2002 Act providing for user marketing (Step 2) payments to domestic users of upland cotton is an import substitution subsidy prohibited under Articles 3.1(b) and 3.2 of the *Agreement on Subsidies and Countervailing Measures*.[8] This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings

[1] *See, e.g.*, Panel Report, paras. 8.1(b), 7.337-7.414.

[2] *See* Panel Report, para. 7.337.

[3] *See, e.g.,* Panel Report, paras. 8.1(c), 7.415-7.647.

[4] *See, e.g.,* Panel Report, paras. 8.1(d)(1), 7.762-7.945.

[5] *See, e.g.,* Panel Report, paras. 8.1(d)(2), 7.762-7.945.

[6] *See, e.g.,* Panel Report, paras. 8.1(d)(1), 7.787-7.869, 7.946-7.948.

[7] *See, e.g.,* Panel Report, paras. 7.678-7.761, 8.1(e).

[8] *See, e.g.,* Panel Report, paras. 7.1018-7.1098, 8.1(f).

include, for example, the Panel's finding that domestic support payments that are consistent with a Member's domestic support reduction commitments under the *Agreement on Agriculture* may nonetheless be prohibited under the SCM Agreement.

8. The United States seeks review by the Appellate Body of the Panel's legal conclusion that "the effect of the mandatory, price contingent United States subsidies at issue – that is, marketing loan programme payments, user marketing (Step 2) payments and MLA payments and CCP payments – is significant price suppression in the same world market for upland cotton in the period MY 1999-2002 within the meaning of Articles 6.3(c) and 5(c)" of the SCM Agreement.[9] This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings include, for example, the following:

(a) the Panel's finding that Brazil need not demonstrate, and the Panel need not find, the amount of the challenged subsidy that benefits the subsidized product, upland cotton;

(b) the Panel's finding that subsidies not directly tied to current production of upland cotton (decoupled payments) need not be allocated to all products produced and sold by the firms receiving such subsidies;

(c) that the Panel could make findings concerning subsidies that no longer existed at the time of panel establishment and that present serious prejudice could be, and was, caused by such subsidies;

(d) the Panel's finding that the challenged subsidies provided to cotton producers "passed through" to cotton exporters;

(e) the Panel's finding that there was price suppression "in the same market";

(f) the Panel's finding that significant price suppression existed;

(g) the Panel's finding that the price suppression it found under an erroneous legal standard was "significant";

(h) the Panel's finding that "the effect of" the U.S. subsidies "is" significant price suppression;

(i) the Panel's finding that "significant price suppression" is sufficient to establish "serious prejudice" for purposes of Articles 5(c) and 6.3 of the SCM Agreement; and

(j) the Panel's finding that its "'present' serious prejudice findings include findings of inconsistency that deal with the FSRI Act of 2002 and subsidies granted thereunder in MY 2002."[10]

9. The United States seeks review by the Appellate Body of the Panel's finding that decoupled payments made with respect to non-upland cotton base acres were within its terms of reference.[11] This finding is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings include, for example, the Panel's finding that these payments were measures at issue within the meaning of Articles 4.4 and 6.2 of the DSU.

[9]Panel Report, paras. 7.1416, 7.1107-7.1416, 8.1(g)(i).

[10]*See, e.g.*, Panel Report, para. 7.1501.

[11]*See, e.g.*, Panel Report, paras. 7.129-7.136.

10. The United States requests the Appellate Body to find that the Panel failed to set out the findings of fact, the applicability of the relevant provisions, and the basic rationale behind its findings and recommendations, as required by Article 12.7 of the DSU. The Panel's failure to set these out include, for example, the findings or lack of findings concerning the following areas: the amount of the challenged subsidies, including the amount of payments not directly tied to current production of upland cotton (decoupled payments); that significant price suppression existed; the degree of price suppression it deemed "significant"; that "the effect of" the U.S. subsidies "is" significant price suppression; that decoupled payments made with respect to non-upland cotton base acres were within its terms of reference; and the basis for its ability to make findings with respect to subsidies that no longer existed at the time of panel establishment.

11. The United States seeks review by the Appellate Body of the Panel's finding that export credit guarantees to facilitate the export of "other eligible agricultural commodities" besides upland cotton were within its terms of reference.[12] This finding is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings include, for example, the Panel's finding that such export credit guarantees were included in Brazil's consultation request and its finding that, contrary to Articles 4.2, 4.4, and 6.2 of the DSU, it could examine measures that were not included in Brazil's request for consultations.

12. The United States seeks review by the Appellate Body of the Panel's finding that Brazil provided the statement of available evidence required by Article 4.2 of the SCM Agreement with respect to export credit guarantee measures relating to eligible United States agricultural products other than upland cotton, and that accordingly, Brazil's claims concerning these measures were within the terms of reference of this dispute.[13] This finding is in error and is based on erroneous findings on issues of law and related legal interpretations.

13. In the event Brazil appeals the Panel's exercise of judicial economy with respect to Brazil's claims concerning the compatibility of U.S. export credit guarantee measures with Part III of the SCM Agreement,[14] in this U.S. appeal the United States conditionally requests the Appellate Body to find that Brazil also failed to provide a statement of available evidence as required by Article 7.2 of the SCM Agreement, and that accordingly, Brazil's claims concerning these measures would not be within the terms of reference of this dispute.

14. The United States seeks review by the Appellate Body of the Panel's legal conclusion that two types of expired measures, production flexibility contract payments and market loss assistance payments, were within the Panel's terms of reference. This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations. These erroneous findings include, for example, the Panel's finding that measures that are no longer in existence as of the date of establishment of a panel are nonetheless within a panel's terms of reference.[15]

I. Introduction : Statement of the Appeal

1. This is an appeal by the United States from certain issues of law and legal interpretations in the Panel Report, *United States – Import Prohibition of Certain Shrimp and Shrimp Products*.[1] Following a joint request for consultations by India, Malaysia, Pakistan and Thailand on 8 October 1996[2], Malaysia and Thailand requested in a communication dated 9 January 1997[3], and Pakistan asked in a communication dated 30 January 1997[4], that the Dispute Settlement Body (the "DSB") establish a panel to examine their complaint regarding a prohibition imposed by the United States on the importation of certain shrimp and shrimp products by Section 609 of Public Law 101-162[5] ("Section 609") and associated regulations and judicial rulings. On 25 February 1997, the DSB established two panels in accordance with these requests and agreed that these panels would be consolidated into a single Panel, pursuant to Article 9 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU"), with standard terms of reference.[6] On 10 April 1997, the DSB established another panel with standard terms of reference in accordance with a request made by India in a communication dated 25 February 1997[7], and agreed that this third panel, too, would be merged into the earlier Panel established on 25 February 1997.[8] The Report rendered by the consolidated Panel was circulated to the Members of the World Trade Organization (the "WTO") on 15 May 1998.

2. The relevant factual and regulatory aspects of this dispute are set out in the Panel Report, in particular at paragraphs 2.1-2.16. Here, we outline the United States measure at stake before the Panel and in these appellate proceedings. The United States issued regulations in 1987 pursuant to the Endangered Species Act of 1973[9] requiring all United States shrimp trawl vessels to use approved Turtle Excluder Devices ("TEDs") or tow-time restrictions in specified areas where there was a significant mortality of sea turtles in shrimp harvesting.[10] These regulations, which became fully effective in 1990, were modified so as to require the use of approved TEDs at all times and in all areas where there is a likelihood that shrimp trawling will interact with sea turtles, with certain limited exceptions.

3. Section 609 was enacted on 21 November 1989. Section 609(a) calls upon the United States Secretary of State, in consultation with the Secretary of Commerce, *inter alia*, to "initiate negotiations as soon as possible for the development of bilateral or multilateral agreements with other nations for the protection and conservation of … sea turtles" and to "initiate negotiations as soon as possible with all foreign governments which are engaged in, or which have persons or companies engaged in, commercial fishing operations which, as determined by the Secretary of Commerce, may affect adversely such species of sea turtles, for the purpose of entering into bilateral and multilateral treaties with such countries to protect such species of sea turtles; … ." Section 609(b)(1) imposed, not later than 1 May 1991, an import ban on shrimp harvested with commercial fishing technology which may adversely affect sea turtles. Section 609(b)(2) provides that the import ban on shrimp will not apply to harvesting nations that are certified. Two kinds of annual certifications are required for harvesting nations, details of which were further elaborated in regulatory guidelines in 1991, 1993 and 1996[11]: First, certification shall be granted to countries with a fishing environment which does not pose a threat of the incidental taking of sea turtles in the course of shrimp harvesting.[12] According to the 1996 Guidelines, the Department of State "shall certify any harvesting nation meeting the following criteria without the need for action on the part of the government of the harvesting nation: (a) Any harvesting nation without any of the relevant species of sea turtles occurring in waters subject to its jurisdiction; (b) Any harvesting nation that harvests shrimp exclusively by means that do not pose a threat to sea turtles, *e.g.*, any nation that harvests shrimp exclusively by artisanal means; or (c) Any nation whose commercial shrimp trawling operations take place exclusively in waters subject to its jurisdiction in which sea turtles do not occur."[13]

4. Second, certification shall be granted to harvesting nations that provide documentary evidence of the adoption of a regulatory program governing the incidental taking of sea turtles in the course of shrimp trawling that is comparable to the United States program *and* where the average rate of incidental taking of sea turtles by their vessels is comparable to that of United States vessels.[14] According to the 1996 Guidelines, the Department of State assesses the regulatory program of the harvesting nation and certification shall be made if the program includes: (i) the required use of TEDs that are "comparable in effectiveness to those used in the United States. Any exceptions to this requirement must be comparable to those of the United States program … "; and (ii) "a credible enforcement effort that includes monitoring for compliance and appropriate sanctions."[15] The regulatory program may be in the form of regulations, or may, in certain circumstances, take the form of a voluntary arrangement between industry and government.[16] Other measures that the harvesting nation undertakes for the protection of sea turtles will also be taken into account in making the comparability determination.[17] The average incidental take rate "will be deemed comparable if the harvesting nation requires the use of TEDs in a manner comparable to that of the U.S. program … ."[18]

5. The 1996 Guidelines provide that all shrimp imported into the United States must be accompanied by a Shrimp Exporter's Declaration form attesting that the shrimp was harvested either in the waters of a nation currently certified under Section 609 or "under conditions that do not adversely affect sea turtles", that is: (a) "Shrimp harvested in an aquaculture facility in which the shrimp spend at least 30 days in ponds prior to being harvested"; (b) "Shrimp harvested by commercial shrimp trawl vessels using TEDs comparable in effectiveness to those required in the United States"; (c) "Shrimp harvested exclusively by means that do not involve the retrieval of fishing nets by mechanical devices or by vessels using gear that, in accordance with the U.S. program … , would not require TEDs"; and (d) "Species of shrimp, such as the pandalid species, harvested in areas where sea turtles do not occur."[19] On 8 October 1996, the United States Court of International Trade ruled that the 1996 Guidelines were in violation of Section 609 in allowing the import of shrimp from non-certified countries if accompanied by a Shrimp Exporter's Declaration form attesting that they were caught with commercial fishing technology that did not adversely affect sea turtles.[20] A 25 November 1996 ruling of the United States Court of International Trade clarified that shrimp harvested by manual methods which did not harm sea turtles could still be imported from non-certified countries.[21] On 4 June 1998, the United States Court of Appeals for the Federal Circuit vacated the decisions of the United States Court of International Trade of 8 October and 25 November 1996.[22] In practice, however, exemption from the import ban for TED-caught shrimp from non-certified countries remained unavailable while this dispute was before the Panel and before us.[23]

6. The 1991 Guidelines limited the geographical scope of the import ban imposed by Section 609 to countries in the wider Caribbean/western Atlantic region[24], and granted these countries a three-year phase-in period. The 1993 Guidelines maintained this geographical limitation. On 29 December 1995, the United States Court of International Trade held that the 1991 and 1993 Guidelines violated Section 609 by limiting its geographical scope to shrimp harvested in the wider Caribbean/western Atlantic region, and directed the Department of State to extend the ban worldwide not later than 1 May 1996.[25] On 10 April 1996, the United States Court of International Trade refused

a subsequent request by the Department of State to postpone the 1 May 1996 deadline.[26] On 19 April 1996, the United States issued the 1996 Guidelines, extending Section 609 to shrimp harvested in *all* foreign countries effective 1 May 1996.

7. In the Panel Report, the Panel reached the following conclusions:

> In the light of the findings above, we conclude that the import ban on shrimp and shrimp products as applied by the United States on the basis of Section 609 of Public Law 101-162 is not consistent with Article XI:1 of GATT 1994, and cannot be justified under Article XX of GATT 1994.[27]

and made this recommendation:

> The Panel *recommends* that the Dispute Settlement Body request the United States to bring this measure into conformity with its obligations under the WTO Agreement.[28]

8. On 13 July 1998, the United States notified the DSB of its decision to appeal certain issues of law covered in the Panel Report and certain legal interpretations developed by the Panel, pursuant to paragraph 4 of Article 16 of the DSU, and filed a notice of appeal[29] with the Appellate Body pursuant to Rule 20 of the *Working Procedures for Appellate Review*. On 23 July 1998, the United States filed an appellant's submission.[30] On 7 August 1998, India, Pakistan and Thailand ("Joint Appellees") filed a joint appellees' submission and Malaysia filed a separate appellee's submission.[31] On the same day, Australia, Ecuador, the European Communities, Hong Kong, China, and Nigeria each filed separate third participants' submissions.[32] At the invitation of the Appellate Body, the United States, India, Pakistan, Thailand and Malaysia filed additional submissions on certain issues arising under Article XX(b) and Article XX(g) of the GATT 1994 on 17 August 1998. The oral hearing in the appeal was held on 19-20 August 1998. The participants and third participants presented oral arguments and responded to questions put to them by the Members of the Division hearing the appeal.

II. Arguments of the Participants and Third Participants

A. *Claims of Error by the United States – Appellant*

1. Non-requested Information from Non-governmental Organizations

9. The United States claims that the Panel erred in finding that it could not accept non-requested submissions from non-governmental organizations. According to the United States, there is nothing in the DSU that prohibits panels from considering information just because the information was unsolicited. The language of Article 13.2 of the DSU is broadly drafted to provide a panel with discretion in choosing its sources of information. When a non-governmental organization makes a submission to a panel, Article 13.2 of the DSU authorizes the panel to "seek" such information. To find otherwise would unnecessarily limit the discretion that the DSU affords panels in choosing the sources of information to consider.

2. Article XX of the GATT 1994

10. In the view of the United States, the Panel erred in finding that Section 609 was outside the scope of Article XX. The United States stresses that under the Panel's factual findings and undisputed facts on the record, Section 609 is within the scope of the Article XX chapeau and Article XX(g) and, in the alternative, Article XX(b), of the GATT 1994. The Panel was also incorrect in finding that Section 609 constitutes "unjustifiable discrimination between countries where the same conditions prevail". The Panel interprets the chapeau of Article XX as requiring panels to determine whether a measure constitutes a "threat to the multilateral trading system". This interpretation of Article XX has no basis in the text of the GATT 1994, has never been adopted by any previous panel or Appellate Body Report, and would impermissibly diminish the rights that WTO Members reserved under Article XX.

11. The United States contends that the Panel's findings are not based on the ordinary meaning and context of the term "unjustifiable discrimination". That term raises the issue of whether a particular discrimination is "justifiable". During the Panel proceeding, the United States presented the rationale of Section 609 for restricting imports of shrimp from some countries and not from others: sea turtles are threatened with extinction worldwide; most nations, including the appellees, recognize the importance of conserving sea turtles; and shrimp trawling without the use of TEDs contributes greatly to the endangerment of sea turtles. In these circumstances, it is reasonable and justifiable for Section 609 to differentiate between countries whose shrimp industries operate without TEDs, and thereby endanger sea turtles, and those countries whose shrimp industries do employ TEDs in the course of harvesting shrimp.

12. The Panel, the United States believes, did not address the rationale of the United States for differentiating between shrimp harvesting countries. Rather, the Panel asked a different question: would the United States measure and similar measures taken by other countries "undermine the multilateral trading system"? The distinction between "unjustifiable discrimination" -- the actual term used in the GATT 1994 -- and the Panel's "threat to the multilateral trading system" test is crucial, in the view of the United States, and is posed sharply in paragraph 7.61 of the Panel Report, where the Panel states: "even though the situation of turtles is a serious one, we consider that the United States adopted measures which, irrespective of their environmental purpose, were clearly a threat to the multilateral trading system ... ." An environmental purpose is fundamental to the application of Article XX, and such a purpose cannot be ignored, especially since the preamble to the *Marrakesh Agreement Establishing the World Trade Organization*[33] (the "*WTO Agreement*") acknowledges that the rules of trade should be "in accordance with the objective of sustainable development", and should seek to "protect and preserve the environment". Moreover, Article XX neither defines nor mentions the "multilateral trading system", nor conditions a Member's right to adopt a trade-restricting measure on the basis of hypothetical effects on that system.

13. In adopting its "threat to the multilateral trading system" analysis, the Panel fails to apply the ordinary meaning of the text: whether a justification can be presented for applying a measure in a manner which constitutes discrimination. Instead, the Panel expands the ordinary meaning of the text to encompass a much broader and more subjective inquiry. As a result, the Panel would add an entirely new obligation under Article XX of the GATT 1994: namely that Members may not adopt

[26] *Earth Island Institute v. Warren Christopher*, 922 Fed. Supp. 616 (CIT 1996).

[33] Done at Marrakesh, 15 April 1994.

measures that would result in certain effects on the trading system. Under the ordinary meaning of the text, there is sufficient justification for an environmental conservation measure if a conservation purpose justifies a difference in treatment between Members. Further inquiry into effects on the trading system is uncalled for and incorrect.

14. In the view of the United States, the Panel also fails to take account of the context of the term "unjustifiable discrimination". The language of the Article XX chapeau indicates that the chapeau was intended to prevent the abusive application of the exceptions for protectionist or other discriminatory aims. This is consistent with the approach of the Appellate Body in *United States – Standards for Reformulated and Conventional Gasoline*[34] ("*United States – Gasoline*") and with the preparatory work of the GATT 1947. In context, an alleged "discrimination between countries where the same conditions prevail" is not "unjustifiable" where the policy goal of the Article XX exception being applied provides a rationale for the justification.

15. In the context of the GATT/WTO dispute settlement system, measures within the scope of Article XX can be expected to result in reduced market access or discriminatory treatment. To interpret the prohibition of "unjustifiable discrimination" in the Article XX chapeau as excluding measures which result in "reduced market access" or "discriminatory treatment" would, in effect, erase Article XX from the GATT 1994. The Panel's "threat to the multilateral trading system" analysis erroneously confuses the question of whether a measure reduces market access with the further and separate question arising under the chapeau as to whether that measure is nevertheless "justifiable" under one of the general exceptions in Article XX. The proper inquiry under the Article XX chapeau is whether a non-protectionist rationale, such as a rationale based on the policy goal of the applicable Article XX exception, could justify any discrimination resulting from the measure. Here, any "discrimination" resulting from the measure is based on, and in support of, the goal of sea turtle conservation.

16. The United States also argues that the Panel incorrectly applies the object and purpose of the *WTO Agreement* in interpreting Article XX of the GATT 1994. It is legal error to jump from the observation that the GATT 1994 is a trade agreement to the conclusion that trade concerns must prevail over all other concerns in all situations arising under GATT rules. The very language of Article XX indicates that the state interests protected in that article are, in a sense, "pre-eminent" to the GATT's goals of promoting market access.

17. Furthermore, the Panel failed to recognize that most treaties have no single, undiluted object and purpose but rather a variety of different, and possibly conflicting, objects and purposes. This is certainly true of the *WTO Agreement*. Thus, while the first clause of the preamble to the *WTO Agreement* calls for the expansion of trade in goods and services, this same clause also recognizes that international trade and economic relations under the *WTO Agreement* should allow for "optimal use of the world's resources in accordance with the objective of sustainable development", and should seek "to protect and preserve the environment". The Panel in effect took a one-sided view of the object and purpose of the *WTO Agreement* when it fashioned a new test not found in the text of the Agreement.

18. The additional bases, the United States continues, invoked by the Panel to support its "threat to the multilateral trading system" analysis -- i.e. the protection of expectations of Members as to the competitive relationship between their products and the products of other Members; the application of the international law principle according to which international agreements must be applied in good faith; and the *Belgian Family Allowances*[35] panel report -- are without merit.

19. The United States submits that Section 609 does not threaten the multilateral trading system. The Panel did not find Section 609 to be an *actual* threat to the multilateral trading system. Rather, the Panel found that if other countries in other circumstances were to adopt the same type of measure here adopted by the United States *potentially* a threat to the system might arise. The United States urges that in engaging in hypothetical speculations regarding the effects of other measures which might be adopted in differing situations, while ignoring the compelling circumstances of this case, the Panel violated the Appellate Body's prescription in *United States - Gasoline*[36] that Article XX must be applied on a "case-by-case basis", with careful scrutiny of the specific facts of the case at hand. The Panel's "threat to the multilateral trading system" analysis adds a new obligation under Article XX of the GATT 1994 and is inconsistent with the proper role of the Panel under the DSU, in particular Articles 3.2 and 19.2 thereof.

20. To the United States, Section 609 reasonably differentiates between countries on the basis of the risk posed to endangered sea turtles by their shrimp trawling industries. Considering the aim of the Article XX chapeau to prevent abuse of the Article XX exceptions, an evaluation of whether a measure constitutes "unjustifiable discrimination where the same conditions prevail" should take account of whether the differing treatment between countries relates to the policy goal of the applicable Article XX exception. If a measure differentiates between countries on a basis "legitimately connected" with the policy of an Article XX exception, rather than for protectionist reasons, that measure does not amount to an abuse of the applicable Article XX exception.

21. The contention of the United States is that its measure does not treat differently those countries whose shrimp trawling industries pose similar risks to sea turtles. Only nations with shrimp trawling industries that harvest shrimp in waters where there is a likelihood of intercepting sea turtles, and that employ mechanical equipment which harms sea turtles, are subject to the import restrictions. The Panel properly recognized that certain naturally-occurring conditions relating to sea turtle conservation (namely, whether sea turtles and shrimp occur concurrently in a Member's waters) and at least certain conditions relating to how shrimp are caught (namely, whether shrimp nets are retrieved mechanically or by hand) are relevant factors in applying the Article XX chapeau. However, the Panel found that another condition relating to how shrimp are caught -- namely, whether a country requires its shrimp fishermen to use TEDs -- did not provide a basis under the chapeau for treating countries differently. Differing treatment based on whether a country had adopted a TEDs requirement was, in the Panel's view, "unjustifiable".

22. The United States believes that the analysis employed by the Appellate Body in *United States - Gasoline*[37] leads to the conclusion that Section 609 does not constitute "unjustifiable discrimination". Section 609 is applied narrowly and fairly. The United States does not apply sea turtle conservation rules differently to United States and foreign shrimp fishermen. Moreover, the United States has taken steps to assist foreign shrimp fishermen in adopting conservation measures and has undertaken efforts to transfer TED technology to governments and industries in other countries, including the appellees. In addition, Section 609 is limited in coverage and focuses on sea turtle conservation.

23. During the Panel proceeding, the United States presented "compelling evidence", reaffirmed by five independent experts, that Section 609 was a *bona fide* conservation measure under Article XX, imbued with the purpose of conserving a species facing the threat of extinction. To uphold the findings of the Panel would impermissibly change the basic terms of the bargain agreed to by WTO Members in agreeing to the GATT 1994. Further, to condone the Panel's adoption of a vague and subjective "threat to the multilateral trading system" test would fundamentally alter the intended role

[34] Adopted 20 May 1996, WT/DS2/AB/R.

[35] Adopted 7 November 1952, BISD 1S/59.

[36] Adopted 20 May 1996, WT/DS2/AB/R.

[37] Adopted 20 May 1996, WT/DS2/AB/R.

of panels under the DSU, and could call into question the legitimacy of the WTO dispute settlement process.

24. The United States states that neither it nor the appellees have appealed the decisions of the Panel to address first the Article XX chapeau and not to reach the issues regarding Article XX(b) and Article XX(g). Because the Panel made no findings regarding the applicability of Article XX(b) and XX(g), there are no findings in respect thereof that could even be the subject of appeal. Accordingly, issues regarding the applicability of Article XX(b) and Article XX(g) are not initially presented to the Appellate Body. However, the United States concurs with Joint Appellees that the Appellate Body may address Article XX(b) or Article XX(g) if it finds that Section 609 meets the criteria of the Article XX chapeau. In that case, the United States asserts that Article XX(g) should be applied first as it is the "most pertinent" of the Article XX exceptions, and that issues relating to Article XX(b) need be reached only if Article XX(g) were found to be inapplicable. The United States incorporates by reference and briefly summarizes the submissions that it made to the Panel regarding Article XX(b) and Article XX(g).

25. The essential claim of the United States is that Section 609 meets each element required under Article XX(g). Sea turtles are important natural resources. They are also an exhaustible natural resource since all species of sea turtles, including those found in the appellees' waters, face the danger of extinction. All species of sea turtles have been included in Appendix I of the Convention on International Trade in Endangered Species of Wild Flora and Fauna[38] (the "CITES") since 1975, and other international agreements also recognize the endangered status of sea turtles.[39] In paragraph 7.58 of the Panel Report, the Panel noted: "The endangered nature of the species of sea turtles mentioned in [CITES] Annex I as well as the need to protect them are consequently not contested by the parties to the dispute."

26. The United States maintains Section 609 "relates to" the conservation of sea turtles. A "substantial relationship" exists between Section 609 and the conservation of sea turtles. Shrimp trawl nets are a major cause of human-induced sea turtle deaths, and TEDs are highly effective in preventing such mortality. The Panel noted that "TEDs, when properly installed and used and adapted to the local area, would be an effective tool for the preservation of sea turtles."[40] By encouraging the use of TEDs, Section 609 promotes sea turtle conservation.

27. The United States contends that Section 609 is also "made effective in conjunction with restrictions on domestic production or consumption" within the meaning of Article XX(g). The United States requires its shrimp trawl vessels that operate in waters where there is a likelihood of intercepting sea turtles to use TEDs at all times, and Section 609 applies comparable standards to imported shrimp. Section 609 is also "even-handed": it allows any nation to be certified -- and thus avoid any restriction on shrimp exports to the United States -- if it meets criteria for sea turtle conservation in the course of shrimp harvesting that are comparable to criteria applicable in the United States. With respect to nations whose shrimp trawl vessels operate in waters where there is a likelihood of intercepting sea turtles, Section 609 provides for certification where those nations adopt TEDs-use requirements comparable to those in effect in the United States.

[38]Done at Washington, 3 March 1973, 993 U.N.T.S. 243, 12 International Legal Materials 1085.

[39]The United States states that all species of sea turtle except the flatback are listed in Appendices I and II of the Convention on the Conservation of Migratory Species of Wild Animals, done at Bonn, 23 June 1979, 19 International Legal Materials 15; and in Appendix II of the Protocol concerning Specially Protected Areas and Wildlife to the Convention for the Protection and Development of the Marine Environment of the Wider Caribbean Region, 29 March 1983, T.I.A.S. No. 11085.

[40]The United States refers to Panel Report, para. 7.60, footnote 674.

28. The United States submits, moreover, that Section 609 is a measure "necessary to protect human, animal or plant life or health" within the meaning of Article XX(b). Section 609 is intended to protect and conserve the life and health of sea turtles, by requiring that shrimp imported into the United States shall not have been harvested in a manner harmful to sea turtles. Section 609 is "necessary" in two different senses. First, efforts to reduce sea turtle mortality are "necessary" because all species of sea turtles are threatened with extinction. Second, Section 609 relating to the use of TEDs is "necessary" because other measures to protect sea turtles are not sufficient to allow sea turtles to move back from the brink of extinction.

B. *India, Pakistan and Thailand – Joint Appellees*

1. Non-requested Information from Non-governmental Organizations

29. Joint Appellees submit that the Panel's ruling rejecting non-requested information is correct and should be upheld. According to Joint Appellees, the United States misinterprets Article 13 of the DSU in arguing that nothing in the DSU prohibits panels from considering information merely because the information was unsolicited. The Panel correctly noted that, "pursuant to Article 13 of the DSU, the initiative to seek information and to select the source of information rests with the Panel."[41] It is evident from Article 13 that Members have chosen to establish a formalized system for the collection of information, which gives a panel discretion to determine the information it needs to resolve a dispute. Panels have no obligation to consider unsolicited information, and the United States is wrong to argue that they do.

30. According to Joint Appellees, when a panel does seek information from an individual or body within a Member's jurisdiction, that panel has an obligation to inform the authorities of that Member. This demonstrates that a panel retains control over the information sought, and also that the panel is required to keep the Members informed of its activities. The process accepted by the Members necessarily implies three steps: a panel's decision to seek technical advice; the notification to a Member that such advice is being sought within its jurisdiction; and the consideration of the requested advice. In the view of Joint Appellees, the interpretation offered by the United States would eliminate the first two of these three steps, thereby depriving a panel of its right to decide whether it needs supplemental information, and what type of information it should seek; as well as depriving Members of their right to know that information is being sought from within their jurisdiction.

31. Joint Appellees point to Appendix 3 of the DSU, which sets out Working Procedures for panels, and especially paragraphs 4 and 6 thereof, which limit the right to present panels with written submissions to parties and third parties. Thus, Joint Appellees argue, Members that are not parties or third parties cannot avail themselves of the right to present written submissions. It would be unreasonable, in the view of Joint Appellees, to interpret the DSU as granting the right to submit an unsolicited written submission to a non-Member, when many Members do not enjoy a similar right.

32. Joint Appellees maintain that, if carried to its logical conclusion, the appellant's argument could result in panels being deluged with unsolicited information from around the world. Such information might be strongly biased, if nationals from Members involved in a dispute could provide unsolicited information. They argue that this would not improve the dispute settlement mechanism, and would only increase the administrative tasks of the already overburdened Secretariat.

[41]Joint Appellees refer to Panel Report, para. 7.8.

33. Joint Appellees argue as well that parties to a panel proceeding might feel obliged to respond to all unsolicited submissions -- just in case one of the unsolicited submissions catches the attention of a panel member. Due process requires that a party know what submissions a panel intends to consider, and that all parties be given an opportunity to respond to all submissions. Finally, because Article 12.6 of the DSU requires that second written submissions of the parties be submitted simultaneously, if a party is permitted to append *amicus curiae* briefs to its second submission, other parties can be deprived of their right to respond and be heard.

2. Article XX of the GATT 1994

34. Joint Appellees maintain that the Panel's ruling on the chapeau of Article XX is correct and should be upheld by the Appellate Body. They underline that the appellant does not appeal either the Panel's conclusion that Section 609 violated Article XI:1 of the GATT 1994, or the Panel's decision to address the chapeau of Article XX before addressing sub-paragraph (b) or (g) of that Article. Nor does the United States dispute that it bears the burden of proving that its measure is within Article XX. The United States takes issue with the Panel's alleged application of the chapeau to protect against a "threat to the multilateral trading system", submitting that the Panel developed a new chapeau "interpretation", "analysis" or "test" to invalidate Section 609, thus impermissibly diminishing the rights of WTO Members. According to Joint Appellees, the appellant's argument is baseless and results from a mischaracterization of the Panel's decision. The Panel did not invent a new "interpretation", "analysis" or "test", nor did it simply interpret "unjustifiable" to mean "a threat to the multilateral trading system". Instead, the Panel rendered a well-reasoned decision fully supported by the *WTO Agreement*, past GATT/WTO practice, and the accepted rules of interpretation set forth in the Vienna Convention on the Law of Treaties[42] (the "Vienna Convention").

35. Joint Appellees argue that the flaw in Section 609, and in the appellant's argument, is the appellant's failure to accept that conditioning access to markets for a given product upon the adoption of certain policies by exporting Members, can violate the *WTO Agreement*. A Member must seek multilateral solutions to trade-related environmental problems. The threat to the multilateral trade system cited by the Panel is unrelated to the appellant's support for TEDs or turtle conservation. The threat is much simpler: the United States has abused Article XX by unilaterally developing a trade policy, and unilaterally imposing this policy through a trade embargo, as opposed to proceeding down the multilateral path. The multilateral trade system is based on multilateral cooperation. If every WTO Member were free to pursue its own trade policy solutions to what it perceives to be environmental concerns, the multilateral trade system would cease to exist. By preventing the abuse of Article XX, the chapeau protects against threats to the multilateral trading system. The prevention of abuse and the prevention of threats to the multilateral trading system are therefore inextricably linked to the object, purpose and goals of Article XX of the GATT 1994.

36. Joint Appellees submit that on the basis of its interpretation of the term "unjustifiable" in the chapeau and in light of the object and purpose of Article XX of the GATT 1994 and the object and purpose of the *WTO Agreement*, the Panel concluded that the chapeau of Article XX permits Members to derogate from GATT provisions, but prohibits derogations which would constitute abuse of the exceptions contained in Article XX, thereby undermining the WTO multilateral trading system. According to Joint Appellees, what the appellant claims to be a new "test" for justifiability is nothing more than a restatement of the principle that the chapeau's object and purpose is to prevent the abuse of the Article XX exceptions, specifying more clearly what may result from such abuse. In the light of recent and past GATT/WTO practice, in particular the panel report in *United States – Restrictions on Imports of Tuna*[43], the Panel correctly interpreted the chapeau, identifying its object and purpose as the prevention of abuse of the Article XX exceptions, and associating the prevention of such abuse with the preservation of the multilateral trading system.

37. In the view of Joint Appellees, the Panel's decision mirrors the Appellate Body's reasoning in *United States – Gasoline*[44] and is therefore correct. The Appellate Body made three pronouncements in *United States – Gasoline* that influenced the Panel's ruling: first, that the chapeau, by its express terms, addresses, not so much the questioned measure or its specific contents as such, but rather the manner in which the measure is applied[45]; second, that it is, accordingly, important to underscore that the purpose and object of the introductory clauses of Article XX is generally the prevention of abuse of the exceptions of Article XX[46]; and, third, that the Appellate Body cautioned against the application of Article XX exceptions so as to "frustrate or defeat" legal obligations of the holder of rights under the GATT 1994.[47]

38. Joint Appellees state that, in examining Section 609, the Panel paid particular attention to the manner in which the embargo is applied, and the Panel noted that the appellant conditioned market access on the adoption by exporting Members of conservation policies comparable to its own. The Panel also found that the United States did not enter into negotiations before it imposed its import ban. The Panel concluded that Section 609 abused Article XX and posed a threat to the multilateral trading system. The Panel equated the prevention of the abuse of Article XX with the avoidance of measures that would "frustrate or defeat the purposes and objects of the General Agreement and the WTO Agreement or its legal obligations under the substantive rules of GATT by abusing the exception contained in Article XX."[48] The Panel buttressed its conclusion by referring to the related principles of good faith and *pacta sunt servanda*, and by citing the *Belgian Family Allowances*[49] panel report.

39. Should the Appellate Body decide to reverse the Panel's findings with respect to the chapeau of Article XX, Joint Appellees request that the Appellate Body rule that Section 609 is "applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade" in violation of the chapeau of Article XX. Consistently with its decision in *United States - Gasoline*[50], the Appellate Body should examine the manner in which Section 609 has been applied, and decide whether an Article XX exception is being abused so as to frustrate or defeat the substantive rights of the appellees under the GATT 1994.

40. Joint Appellees submit that, even leaving aside the "threat to the multilateral trading system" language of the Panel, there is "compelling evidence" in the record that the appellant abused Article XX and its exceptions. Joint Appellees maintain that this abuse takes several forms, each instance "grave", and, by itself, adequate to support a finding that Section 609 has been applied in an abusive manner so as to frustrate the substantive rights of the appellees under the *WTO Agreement*.

41. First, Section 609 was applied without a serious attempt to reach a cooperative multilateral solution with Joint Appellees. The importance of multilateralism should be clear to the United States

[45]*United States – Gasoline*, adopted 20 May 1996, WT/DS2/AB/R, page 22.

[46]*Ibid.*

[47]*Ibid.*

[48]Joint Appellees refer to Panel Report, para 7.40.

[49]Adopted 7 November 1952, BISD 1S/59.

[50]Adopted 20 May 1996, WT/DS2/AB/R.

because it is an integral provision of Section 609, has been emphasised at numerous GATT and WTO meetings, is reflected in Article 23.1 of the DSU and in Principle 12 of the Rio Declaration on Environment and Development[51], and was underscored by the Appellate Body in *United States - Gasoline*.[52] The chapeau violation that the United States committed in *United States - Gasoline* is, Joint Appellees believe, the same violation committed by the United States in this dispute.

42. Second, the United States discriminated impermissibly among exporting countries, and between exporting countries and the United States in, *inter alia*, the following ways: (a) "[t]he Panel found that the Appellant negotiated an agreement to protect and conserve sea turtles with some WTO Members, but did not propose the negotiation of such an agreement with the … Appellees until after having concluded its negotiations with the other Members. The Panel also found that Section 609 was already in effect against the Appellees by the time such negotiations were proposed"; (b) "[p]hase-in periods for the use of TEDs differed depending on the countries involved. 'Initially affected countries' had a three year phase-in period, while 'newly affected nations' were given four months or less to change shrimp harvesting practices"; and (c) Section 609 "discriminates between products based on non-product-related processes and production methods."

43. Third, Joint Appellees contend that the appellant's argument misconstrues key portions of the chapeau and of the Panel Report. The appellant's starting-point is that the Panel's findings are not based on the ordinary meaning of the phrase "unjustifiable discrimination" in the context in which it appears. The appellant also suggests that the only object and purpose of the chapeau is the prevention of "indirect protection". This interpretation is contradicted by recent WTO practice. The Appellate Body Report in *United States - Gasoline*[53] stands for the proposition that "unjustifiable discrimination" has a meaning larger than "indirect protection". The appellant, in effect, suggests that justifiability should be determined by reference to the specific Article XX exception invoked. If discrimination were to be justified merely on the basis of the policy goals of the particular exception invoked, all trade measures that meet the requirements of an Article XX exception would, *ipso facto,* satisfy the requirements of the chapeau. The chapeau would be rendered meaningless -- in violation of the commonly accepted rule of treaty interpretation which requires that meaning and effect be given to all treaty terms. The principles enunciated in the Appellate Body Report in *United States - Gasoline* would also become null.

44. Joint Appellees argue that both the Appellate Body in *United States – Gasoline*[54] and the Panel in the present case, recognized that the Article XX chapeau must be interpreted in light of the object and purpose of the *WTO Agreement*. This does not mean re-incorporating substantive GATT provisions into the analysis through the chapeau; it means instead examining a proposed Article XX derogation from the perspective of the broader policy goals of the *WTO Agreement*. The Panel identified two such goals: endeavouring to find cooperative solutions to trade problems; and preventing the risk that a multiplicity of conflicting trade requirements, each justified by reference to Article XX, could emerge. Section 609 jeopardizes both goals and poses a threat to the multilateral trading system.

45. Should the Appellate Body decide to reverse the Panel's legal findings with respect to the chapeau of Article XX and rule that Section 609 meets the requirements of the chapeau, Joint Appellees request that the Appellate Body make legal findings on Article XX(b) and Article XX(g) of the GATT 1994. They incorporate by reference their submissions to the Panel with respect to the

[51]UN Doc. A/CONF. 151/5/Rev.1, 13 June 1992, 31 International Legal Materials 874.

[52]Adopted 20 May 1996, WT/DS2/AB/R, pp. 27-28.

[53]Adopted 20 May 1996, WT/DS2/AB/R.

[54]*Ibid.*

interpretation of Article XX(b) and Article XX(g), while noting at the same time that there are persuasive reasons for following the interpretative approach adopted by the Panel in examining the chapeau first. Not only does the concept of judicial economy favour such an analysis, but also none of the participants has questioned the Panel's interpretative approach in their submissions (although, Joint Appellees note, one third participant, Australia, did comment with disapproval on this approach).

C. *Malaysia - Appellee*

1. Non-requested Information from Non-governmental Organizations

46. Malaysia submits that the Panel ruled correctly on this issue and that its ruling should be upheld as there is nothing in the DSU that *permits* the admission of unsolicited briefs from non-governmental organizations. Malaysia does not agree with the United States that there is nothing in the DSU *prohibiting* panels from considering information just because the information was offered unsolicited. Under Article 13 of the DSU, the prerequisite for invocation of that provision is that a panel must "seek" information. In the view of Malaysia, the Panel correctly noted that the initiative to seek information and to select the source of information rests with the Panel. The Panel could not consider unsolicited information. In the alternative, should the Appellate Body accept the United States argument that panels may accept *amicus curia* briefs, it must be left to the complete discretion of panel members whether or not to read them. A panel's decision not to read the briefs cannot constitute a procedural mistake and cannot influence the outcome of a panel report.

2. Article XX of the GATT 1994

47. Malaysia maintains that the Panel's decision concerning Article XX of the GATT 1994 represents a balanced view of the requirements of the provisions of the *WTO Agreement*, rules of treaty interpretation and GATT practice. The appellant misconceives the Panel's findings: the Panel did not in any way allude to the supremacy of trade concerns over non-trade concerns, and did not fail to recognize that most treaties have no single, undiluted object and purpose but a variety of different objects and purposes. The Panel in fact alluded to the first, second and third paragraphs of the preamble to the *WTO Agreement*, which make reference to different objects and purposes. Moreover, in Malaysia's view, the appellant misapplies the principle in *India – Patent Protection for Pharmaceutical and Agricultural Chemical Products*[55] to the facts of this case, and misconstrues the Panel's application of the *Belgian Family Allowances*[56] panel report.

48. To Malaysia, the Panel's "threat to the multilateral trading system" analysis does not constitute a new test, but is in fact a restatement of the approach taken by the Panel that Members are not allowed to resort to measures that would undermine the multilateral trading system and thus abuse the exceptions contained in Article XX. The Panel itself states that its findings are the result of the application of the interpretative methods required by Article 3.2 of the DSU and that its process of interpretation does not add to Members' obligations in contravention of Article 3.2 of the DSU.

49. It was also noted by Malaysia that the Panel found on the facts that the import ban is applied even on TED-caught shrimp, as long as the country has not been certified; certification is only granted if comprehensive requirements regarding the use of TEDs by fishing vessels are applied by the exporting country concerned or if shrimp trawling operations of the exporting country take place exclusively in waters in which sea turtles do not occur. On the basis of these findings, the Panel

[55]Adopted 16 January 1998, WT/DS50/AB/R.

[56]Adopted 7 November 1952, BISD 1S/59.

concluded that the United States measure constitutes unjustifiable discrimination between countries where the same conditions prevail.

50. Malaysia believes that the Panel relied in large measure on the Appellate Body Report in *United States – Gasoline*.[57] Although the requirement of use of TEDs is applied to both United States and foreign shrimp trawlers, Malaysia contends that Section 609 violates the chapeau prohibition of "unjustifiable discrimination between countries where the same conditions prevail": not all species of sea turtles covered by Section 609 and found in Malaysia and the United States are alike -- Kemp's ridley and loggerhead turtles, which occur in the United States, are absent or occur only in negligible numbers in Malaysian waters; the habitats of these turtles do not coincide with areas of shrimp trawling operations in Malaysia; certain countries which have been exempted from TED requirements are harvesting sea turtles commercially and exploiting the eggs; and the time given to countries to comply with the requirements of Section 609 varied.

51. In response to the appellant's statement that it has taken steps to assist foreign shrimp fishermen in adopting turtle conservation measures, Malaysia states that there has been no transfer of TEDs technology to the government and industries in Malaysia, apart from participation by Malaysia in one regional workshop.

52. Malaysia's submissions on legal issues arising under Article XX(b) and Article XX(g) have been addressed by the Panel, at paragraphs 3.213, 3.218-3.221, 3.231, 3.233, 3.236, 3.240, 3.247, 3.257, 3.266, 3.271-3.275, 3.286-3.288 and 3.293 of the Panel Report.

D. *Arguments of Third Participants*

1. Australia

53. Australia states that with respect to unsolicited submissions to the Panel by non-governmental organizations, the United States appears to suggest that the Panel's legal interpretation of the provisions of the DSU would limit the discretion the DSU affords to panels in choosing the sources of information they should consider. However, in the view of Australia, nothing in the Panel Report suggests that the Panel saw any legal obstacles to its requesting information from the non-governmental sources, if it had so wished. The decision of the Panel not to seek such information would appear to reflect the exercise of its discretion as provided by the DSU, and was not the result of any perceived legal obstacles. Australia notes that the United States has not claimed that the Panel's exercise of its discretion in this matter was inappropriate or involved an error in law.

54. Australia believes that the Panel correctly found that Section 609 constitutes "unjustifiable discrimination between countries where the same conditions prevail". However, Australia supports the appeal by the United States of the Panel's finding that Section 609 "is not within the scope of measures permitted under the chapeau of Article XX." Australia submits that the Appellate Body should complete the analysis under Article XX and find that the United States has not demonstrated that its measure is in conformity with Article XX, including the provisions of the chapeau. Australia's concerns are that the United States has sought to impose a unilaterally determined conservation measure through restrictions on trade, and has not explored the scope for working cooperatively with other countries to identify internationally shared concerns about sea turtle conservation issues and consider ways to address these concerns. Therefore, the United States has imposed Section 609 in a manner that constitutes unjustifiable discrimination between countries where the same conditions prevail and also a disguised restriction on international trade.

[57]Adopted 20 May 1996, WT/DS2/AB/R.

55. Australia agrees with the United States that the Panel failed to interpret the terms of the chapeau of Article XX requiring that measures not be applied in a manner which would constitute "a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail" in accordance with customary rules of interpretation of public international law, in particular, with its ordinary meaning and in context.

56. In Australia's view, the Panel's decision to examine first whether Section 609 met the requirements of the chapeau before considering whether it met the requirements of any of the paragraphs of Article XX may not necessarily have been an error in law, but contributed to the Panel's errors in its examination of Section 609 under Article XX. Australia argues that it is preferable to begin examination of the legal issues raised by Article XX by considering the policy objective of the measure, and the connection between the policy objective and the measure, before turning to the chapeau. This approach would enable the examination of all aspects of the case that may be relevant in determining whether a particular measure meets the requirements of the chapeau. There is nothing in the wording of Article XX, read in its context and in the light of the object and purposes of the GATT 1994 and the *WTO Agreement*, to suggest that it is intended to exclude particular classes or types of measures from its coverage. The Panel erred in law in conducting this generalized inquiry. By its terms, Article XX would seem capable of application only on a case-by-case basis.

57. Article XX contains a series of tests designed to ensure that its provisions cannot be abused. There must be a presumption that a measure which meets the requirements of Article XX will not "undermine the WTO multilateral trading system." According to Australia, there is no textual basis for interpreting "unjustifiable discrimination" in such a broad manner that it becomes an independent test of this issue. Under the Panel's interpretation, the chapeau of Article XX could serve to nullify the effects of the paragraphs of that Article, rather than acting as a safeguard against their abuse.

58. Australia agrees with the United States that the Panel's interpretation of "unjustifiable discrimination" is based on an incorrect interpretation and application of the object and purpose of the *WTO Agreement* in construing the GATT 1994. The Panel has projected a view of the relationship between the objectives of the WTO multilateral trading system and environmental considerations which is at odds with the Ministerial Decision on Trade and Environment.[58]

59. At the same time, to Australia, the alternative interpretation of "unjustifiable discrimination" put forward by the United States -- i.e. that discrimination is not "unjustifiable" where the policy goal of the Article XX exemption being applied provides a rationale for the justification -- is in error. This interpretation would weaken the important safeguard represented by the chapeau of Article XX of avoiding the abuse or illegitimate use of the Article XX exceptions. This interpretation confuses the tests applied under the two tiers of Article XX, fails to give effect to all the terms of the treaty and is not based on the ordinary meaning of "unjustifiable discrimination" in its context and in the light of the object and purpose of the *WTO Agreement* and the GATT 1994.

60. Australia maintains that Section 609 is applied by the United States in a manner constituting an unjustifiable discrimination and a disguised restriction on international trade. Australia observes that the only justification the United States appears to offer for Section 609 is that it is required to enforce a unilaterally determined conservation measure. However, Australia argues that the United States has not demonstrated that it has adequately explored means of addressing its concerns about shrimp harvesting practices and turtle conservation in other countries through cooperation with the governments concerned.

[58]Adopted by Ministers at the Meeting of the Trade Negotiations Committee at Marrakesh, 14 April 1994.

61. It is the view of Australia that Section 609 does not reasonably and properly differentiate between countries based on the risks posed to sea turtles in the exporting country's shrimp fishery. The Panel focused on exports of wild shrimp, and it is misleading to suggest that the Panel drew conclusions about whether the same conditions prevailed in certain other circumstances with respect to shrimp not subject to the import prohibition. Furthermore, the United States has provided no evidence that it took into account the views of other countries about sea turtle conservation issues within their jurisdictions, or their respective national programs, in making its determination of "countries where the same conditions prevail". In particular, the United States has provided no evidence that it considered the possibility that other Members may have had sea turtle conservation programs in place which differed from that of the United States but which were comparable and appropriate for their circumstances. Australia argues that the United States refused to certify Australia under Section 609 even though Australia's sea turtle conservation regime "extends well beyond protecting turtles from shrimping nets and … includes cooperative programs with the shrimp industry to limit turtle bycatch."

62. In Australia's view, the legal obligations of the United States under the chapeau of Article XX required the United States to explore adequately means of mitigating the discriminatory and trade restrictive application of its measure. In particular, given the transboundary and global character of the environmental concern involved in this dispute, the United States should have consulted with affected Members to see whether the discrimination imposed by the measure in dispute could have been avoided, whether the restrictions on trade were required, whether alternative approaches were available, and whether the incidence of any trade measures could have been reduced.

2. Ecuador

63. Ecuador endorses the Panel's finding that Section 609 is inconsistent with Article XI:1 of the GATT 1994 and cannot be justified under Article XX of the GATT 1994. Ecuador is participating as a third party in this case in order to defend basic principles, such as the principle reaffirming that relations among states should be established on the basis of international law -- since it is unacceptable that one state impose its domestic policy objectives upon other states -- as well as the observance of more specific principles and aspects set forth in the agreements governing the multilateral trading system. These include non-discrimination in national treatment, the protection of the environment and the implementation of environmental policy.

64. According to Ecuador, this dispute does not concern the desirability of implementing some kind of conservation policy, to which Ecuador attaches the utmost importance, but rather the manner in which such a policy should be implemented. It is unacceptable that internal legislation is applied in an arbitrary manner, creating a high degree of uncertainty, and consequently prejudice, in a sector that is central to Ecuador's national economy. Ecuador endorses the Panel's view that Members are free to establish their own environmental policies in a manner consistent with their WTO obligations.

3. European Communities

65. With respect to unsolicited submissions to a panel by non-governmental organizations, the European Communities asserts that Article 13 of the DSU clearly gives a panel the "pro-active discretion" to "seek" certain information that the panel believes may be relevant to the case at hand. In addition, non-governmental organizations are free to publish their views so that their opinion is heard by the general public, which could include the parties to a dispute, the WTO Secretariat or the members of a panel. However, the European Communities "wonders whether the text of the DSU could be interpreted so widely" as to give non-governmental organizations the right to file submissions directly to a panel.

66. The European Communities contends that Article 13 of the DSU "does not oblige panels to 'accept' non-requested information which was not 'sought' for the purposes of a dispute settlement procedure." Panels should therefore reject submissions from non-governmental organizations when the panel itself had not requested such submissions. However, in the view of the European Communities, if a panel were interested in the information contained in an *amicus curiae* brief from a non-governmental organization, it would have the right to request and receive (to "seek") exactly the same information as had first been sent to it in an unsolicited manner. The European Communities agrees with the Panel that a Member, party to a dispute, is free to put forward as part of its own submission, a submission of a non-governmental organization that it considers relevant. The European Communities notes that its comments are based on the current language of Article 13 of the DSU.

67. The European Communities states further that the issues at stake in this dispute concern principles to which it attaches great importance, such as respect for the environment and the functioning of the multilateral trading system. The European Communities is bound by the text of the Treaty Establishing the European Community[59] to ensure a harmonious and balanced development of economic activities with respect for the environment. The principle of sustainable development, also laid down in the first paragraph of the preamble to the *WTO Agreement*, as well as the precautionary principle, play an important role in the implementation of all EC policies. The EC position is mirrored in public international law by statements of the International Court of Justice, stressing the significance of respect for the environment.[60]

68. The European Communities is convinced that international cooperation is the most effective means to address global and transboundary environmental problems, rather than unilateral measures which may be less environmentally effective and more trade disruptive. Economic performance and environmental performance are not necessarily incompatible. The European Communities asserts that "[w]hile countries have the sovereign right to design and implement their own environmental policies through the measures they consider appropriate to protect their domestic environment -- including the life and health of humans, animals and plants -- all countries have a responsibility to contribute to the solution of international environmental problems." Thus, the European Communities considers that, "in general, the most effective means to attain the shared objectives relating to the conservation of global resources is by proceeding through the process of international co-operation."

69. To the European Communities, the approach to Article XX developed by previous panels and followed by the Appellate Body in *United States - Gasoline*[61] -- that is, first examining whether a measure falls under one of the exceptions set out in paragraphs (a) to (j) of Article XX and, then, making an inquiry under the chapeau -- makes logical sense and could reasonably have been applied by the Panel in this case.

70. The European Communities agrees with the United States that it would be wrong for trade concerns to prevail over all other concerns in all situations under WTO rules. Article XX should not be construed so that trade concerns always prevail over the non-trade concerns reflected in that Article, including environmental concerns and those related to health and other legitimate policy objectives. It is up to panels and the Appellate Body to judge each case on its own merits, taking into account Members' rights and obligations.

[59]Done at Rome, 25 March 1957, as amended.

[60]The European Communities refers to: *Legality of the Threat or Use of Nuclear Weapons*, Advisory Opinion, (1996), I.C.J Rep. pp. 241-242, para. 29; *Case Concerning the Gabcikovo-Nagymoros Project*, (1998) 37 International Legal Materials 162, para. 140.

[61]Adopted 20 May 1996, WT/DS2/AB/R.

71. The European Communities also agrees with the United States that the adoption of the Panel's "test" -- namely, whether a measure is of a type that would threaten the security and predictability of the multilateral trading system -- would make trade concerns paramount to all other concerns and is thus inconsistent with the object and purpose of the *WTO Agreement*.

72. In the view of the European Communities, certain species, in particular migratory species, may require application of protective measures beyond usual territorial boundaries. Sea turtles should be considered a globally shared environmental resource because they are included in Annex I of CITES and are a species protected under the Convention on the Conservation of Migratory Species of Wild Animals.[62] The appropriate way for Members concerned with the preservation of globally shared environmental resources to ensure such preservation is through internationally agreed solutions. Measures taken pursuant to such multilateral agreements would in general be allowed under the chapeau of Article XX.

73. However, the European Communities would not want to exclude the possibility, as a last resort, for a WTO Member, on its own, to take a "reasonable" measure with the aim of protecting and preserving a particular global environmental resource. However, such a measure would only be justified under exceptional circumstances and if consistent with general principles of public international law on "prescriptive jurisdiction". The Member would have to demonstrate that its environmentally protective measure was "reasonable", that is, no more trade restrictive than required to protect the globally shared environmental resource. Such a measure should be directly connected to the environmental objective and not go beyond what was required to limit the environmental damage. Finally, in such a case, the Member should have made genuine efforts to enter into cooperative environmental agreements with other Members. This is consistent with Principle 12 of the Rio Declaration on Environment and Development.

74. Given the Panel's factual finding that the United States did not enter into negotiations with the appellees before it imposed the import ban, the European Communities concludes that the United States has not demonstrated that a negotiated solution in respect of measures to protect sea turtles could not be found.

4. Hong Kong, China

75. Hong Kong, China states that it would be a "serious misunderstanding of the role of the WTO" if the multilateral trading system were viewed as impervious to environmental concerns. The WTO system does not, and should not, impede the adoption of non-arbitrary and justifiable measures to protect the environment. Hong Kong, China fully shares the Panel's concern that the chapeau of Article XX should not be interpreted in a way that will threaten the security and predictability of trade relations under the *WTO Agreement*. With reference to the Appellate Body Report in *United States – Gasoline*[63], Hong Kong, China contends that an examination under the chapeau should focus on the manner in which the measure is applied, and answer the key question of whether the manner of application constitutes an abuse of the exceptions. Questions pertaining to the policy objective of the measure concerned should be set aside in examining the consistency of a measure with the chapeau.

76. Hong Kong, China argues that in line with the views of the Appellate Body in *United States – Gasoline*[64], Article XX should not be read to establish an unqualified deviation from the GATT principle of non-discrimination. Taken together, the three elements of the chapeau of Article XX impose an obligation not to discriminate based on the origin of the product. With respect to "non-discrimination", the standard of obligation imposed by the chapeau is different from that imposed by Articles I and III of the GATT 1994, which is based on a strict interpretation of the concept of "like products". The chapeau of Article XX requires governments that intervene in order to achieve one of the objectives laid down in the sub-paragraphs of Article XX to ensure that the competitive conditions resulting from their intervention do not *de jure* or *de facto* favour their domestic products, nor the products of a certain specific origin. There should be no ambiguity about the exact content of the level of protection and the competitive conditions established as a result of government intervention. In the view of Hong Kong, China, a legal finding of inconsistency of a measure with the chapeau of Article XX is predicated on a factual finding that a particular measure does not respect the principle of non-discrimination. If this requirement is satisfied, a panel then can proceed to examine whether the requirements laid down in a sub-paragraph of Article XX have been satisfied as well.

77. Hong Kong, China contends that Section 609 violates the chapeau of Article XX to the extent that, after the October 1996 ruling of the United States Court of International Trade, shrimp caught by fishermen in uncertified countries are subject to the import ban even if they were caught with nets that are equipped with TEDs. The resulting competitive conditions show that Section 609 does not meet the requirement of no arbitrary or unjustifiable discrimination between countries where the same conditions prevail. In addition, the 1993 Guidelines removed the possibility available to foreign producers to use any form of fishing other than TEDs in shrimp harvesting to avoid the incidental taking of sea turtles. This would be consistent with the Article XX chapeau only if the use of TEDs is proven to be the sole means by which the stated objective can be achieved. Otherwise, it must be acknowledged that other means may exist whose effectiveness can be demonstrated to be comparable to TEDs, and the United States must give the same treatment to shrimp harvested with measures that exporters could demonstrate are comparable in effectiveness to TEDs. Failure to do so renders Section 609 a means of arbitrary and unjustifiable discrimination between countries where the same conditions prevail. If the Appellate Body finds it necessary to examine the measure in question under sub-paragraphs (b) and (g) of Article XX, Hong Kong, China invites the Appellate Body to consider its arguments submitted to the Panel and reflected in the Panel Report, in particular, at paragraphs 4.44 and 4.45.

5. Nigeria

78. Nigeria confirms its views expressed in paragraph 4.53 of the Panel Report and requests the Appellate Body to uphold the Panel's decision. Nigeria shares the concern about the conservation and protection of sea turtles but, however, objects to the methods and measures for doing so. Nigeria's position is defined by paragraphs 169 and 171 of the Report (1996) of the Committee on Trade and Environment.[65]

[62]Done at Bonn, 23 June 1979, 19 International Legal Materials 15.

[63]Adopted 20 May 1996, WT/DS2/AB/R, page 22.

[64]*Ibid.*

[65]Nigeria refers to WT/CTE/1, 12 November 1996. Paragraph 169 of the Report states: "WTO Member governments are committed not to introduce WTO-inconsistent or protectionist trade restrictions or countervailing measures in an attempt to offset any real or perceived adverse domestic economic or competitiveness effects of applying environmental policies; not only would this undermine the open, equitable and non-discriminatory nature of the multilateral trading system, it would also prove counterproductive to meeting environmental objectives and promoting sustainable development. Equally, and bearing in mind the fact that governments have the right to establish their national environmental standards in accordance with their respective environmental and developmental conditions, needs and priorities, WTO Members note that it would be inappropriate for them to relax their existing national environmental standards or their enforcement in order to promote their trade. The CTE notes the statement in the 1995 Report on Trade and Environment to the OECD Council at Ministerial Level that there has been no evidence of a systematic relationship between existing environmental policies and competitiveness impacts, nor of countries deliberately resorting to low environmental standards to gain competitive advantages. The CTE welcomes similar policy statements made in other inter-governmental fora."

III. Procedural Matters and Rulings

A. *Admissibility of the Briefs by Non-governmental Organizations Appended to the United States Appellant's Submission*

79. The United States attached to its appellant's submission, filed on 23 July 1998, three Exhibits, containing comments by, or "*amicus curiae* briefs" submitted by, the following three groups of non-governmental organizations[66]: 1. the Earth Island Institute; the Humane Society of the United States; and the Sierra Club; 2. the Center for International Environmental Law ("CIEL"); the Centre for Marine Conservation; the Environmental Foundation Ltd.; the Mangrove Action Project; the Philippine Ecological Network; Red Nacional de Accion Ecologica; and Sobrevivencia; and 3. the Worldwide Fund for Nature and the Foundation for International Environmental Law and Development. On 3 August 1998, CIEL *et al.* submitted a slightly revised version of their brief.

80. In their joint appellees' submission, filed on 7 August 1998, Joint Appellees object to these briefs appended to the appellant's submission, and request that the Appellate Body not consider these briefs. Joint Appellees argue that the appellant's submission, including its three Exhibits, is not in conformity with the stipulation in Article 17.6 of the DSU that an appeal "shall be limited to issues of law covered in the panel report and legal interpretations developed by the panel", nor with Rule 21(2) of the *Working Procedures for Appellate Review*. They ask the Appellate Body to reject as irrelevant the factual assertions made in certain paragraphs of the appellant's submission, as well as the factual information presented in the Exhibits. In their view, because of the incorporation of unauthorized material through the attachment of the Exhibits, the appellant's submission could no longer be considered a "precise statement" as required by Rule 21(2) of the *Working Procedures for Appellate Review*. Rather, a number of the factual and legal assertions contained in the Exhibits go beyond the position taken by the appellant, resulting in confusion concerning the exact nature and linkage between the appeal and the three Exhibits.

81. Joint Appellees state further that the submission of Exhibits that present the views of non-governmental organizations, as opposed to the views of the appellant Member, is not contemplated in, or authorized by, the DSU or the *Working Procedures for Appellate Review*. Such submissions were not in conformity with Article 17.4 of the DSU, nor with Rule 28(1) of the *Working Procedures for Appellate Review*, which vests the discretion to request additional submissions with the Appellate Body. According to Joint Appellees, the decision of the appellant to attach the Exhibits to its submission gives rise both to contradictions and internal inconsistencies, and raises serious procedural and systemic problems. Joint Appellees maintain that by virtue of their incorporation into the appellant's submission, these pleadings are no longer "*amicus curiae* briefs", but instead have become a portion of the appellant's submission, and thus have also become what would appear to be the official United States position.

82. In its appellee's submission, also filed on 7 August 1998, Malaysia similarly urges the Appellate Body to rule that the three Exhibits appended to the United States appellant's submission are inadmissible in this appeal. Malaysia refers to its argument before the Panel that briefs from non-governmental organizations do not fall within Article 13 of the DSU. In addition, according to Malaysia, admission of the Exhibits would not be consonant with Article 17.6 of the DSU, or with Rule 21(2) of the *Working Procedures for Appellate Review*, as the United States appellant's submission and Exhibit 2 contain statements of facts. Moreover, Article 17.4 of the DSU only grants the right to make written and oral submissions to third parties. Articles 11 and 17.12 of the DSU are significant and serve to safeguard the admissibility of evidence before the Appellate Body. In the alternative, in the event the Appellate Body ruled that Exhibits 1-3 of the appellant's submission should be admitted, Malaysia submits rebuttals to each of the Exhibits.

83. On 11 August 1998, we issued a ruling on this preliminary procedural matter addressed to the participants and third participants, as follows:

> We have decided to accept for consideration, insofar as they may be pertinent, the legal arguments made by the various non-governmental organizations in the three briefs attached as exhibits to the appellant's submission of the United States, as well as the revised version of the brief by the Center for International Environmental Law *et al.*, which was submitted to us on 3 August 1998. The reasons for our ruling will be given in the Appellate Body Report.

84. In the same ruling, we addressed the following questions to the appellant, the United States:

> to what extent do you agree with or adopt any one or more of the legal arguments set out in the three briefs prepared by the non-governmental organizations and appended as exhibits to your appellant's submission? In particular, do you adopt the legal arguments stated therein relating to paragraphs (b) and (g) and the chapeau of Article XX of the GATT 1994?

85. We asked the United States to respond in writing to these questions by 13 August 1998, and offered an opportunity to the appellees and the third participants to respond, by 17 August 1998, to the answer filed by the United States concerning which aspects of these briefs it accepted and endorsed as part of its appeal as well as to the legal arguments made in the briefs by the non-governmental organizations. We noted at the time that Malaysia had already done the latter in Exhibits 1 through 3 attached to its appellee's submission.

86. On 13 August 1998, the United States replied as follows:

> The main U.S. submission reflects the views of the United States on the legal issues in this appeal. As explained in our appellant's submission, the three submissions prepared by non-governmental organizations reflect the independent views of those organizations ….

Paragraph 171 of the Report states: "The CTE notes that governments have endorsed in the results of the 1992 U.N. Conference on Environment and Development their commitment to Principle 12 of the *Rio Declaration* that "Unilateral actions to deal with environmental challenges outside the jurisdiction of the importing country should be avoided. Environmental measures addressing transboundary or global problems should, as far as possible, be based on an international consensus." There is a clear complementarity between this approach and the work of the WTO in seeking cooperative multilateral solutions to trade concerns. The CTE endorses and supports multilateral solutions based on international cooperation and consensus as the best and most effective way for governments to tackle environmental problems of a transboundary or global nature. WTO Agreements and multilateral environmental agreements (MEAs) are representative of efforts of the international community to pursue shared goals, and in the development of a mutually supportive relationship between them due respect must be afforded to both."

[66]In respect of these Exhibits, the United States stated the following: "Encouraging the use of TEDs in order to promote sea turtle conservation is a matter of great importance to a number of nongovernmental environmental organizations. Three groups of these organizations – each with specialized expertise in conservation of sea turtles and other endangered species – have prepared submissions reflecting their respective independent views with respect to the use of TEDs and other issues. The United States is submitting these materials to the Appellate Body for its information attached hereto as U.S. Appellant Exhibits 1-3." United States appellant's submission, para. 2, footnote 1.

> These non-governmental organizations have a great interest, and specialized expertise, in sea turtle conservation and related matters. It is appropriate therefore that the Appellate Body be informed of those organizations' views. The United States is not adopting these views as separate matters to which the Appellate Body must respond.
>
> The United States agrees with the legal arguments in the submissions of the non-governmental organizations to the extent those arguments concur with the U.S. arguments set out in our main submission … .

87. On 17 August 1998, Joint Appellees filed a joint response, and Malaysia filed a separate one, to the matters raised in the reply of the United States, as well as in the Exhibits. Without prejudice to their view that the receipt and consideration by the Appellate Body of the briefs of non-governmental organizations attached to the appellant's submission is not authorized by the DSU or the *Working Procedures for Appellate Review*, Joint Appellees responded to certain legal arguments made in the briefs. Malaysia incorporated by reference its rebuttals to the briefs contained in its appellee's submission of 7 August 1998, and made certain additional comments in respect of each of the briefs. Also, on 17 August 1998, Hong Kong, China and Mexico filed statements in respect of the same matters. Hong Kong, China stated that the reply by the United States was unclear and that it was not possible, at that stage, to comment further on the legal arguments. For its part, Mexico stated that if the Appellate Body were to make use of arguments which are outside the terms of Article 17.6 of the DSU and which are not clearly and explicitly attributable to a Member that is a party to the dispute, the Appellate Body would exceed its powers under the DSU.

88. The admissibility of the briefs by certain non-governmental organizations which have been appended to the appellant's submission of the United States is a legal question raised by the appellees. This is a legal issue which does not relate to a finding of law made, or a legal interpretation developed, by the Panel in the Panel Report. For this reason, it has seemed appropriate to us to deal with this issue separately from the issues raised by the appellant and addressed in the succeeding portions of this Appellate Body Report.

89. We consider that the attaching of a brief or other material to the submission of either appellant or appellee, no matter how or where such material may have originated, renders that material at least *prima facie* an integral part of that participant's submission. On the one hand, it is of course for a participant in an appeal to determine for itself what to include in its submission. On the other hand, a participant filing a submission is properly regarded as assuming responsibility for the contents of that submission, including any annexes or other attachments.

90. In the present appeal, the United States has made it clear that its views "on the legal issues in this appeal" are found in "the main U.S. submission." The United States has confirmed its agreement with the legal arguments in the attached submissions of the non-governmental organizations, to the extent that those arguments "concur with the U.S. arguments set out in [its] main submission."

91. We admit, therefore, the briefs attached to the appellant's submission of the United States as part of that appellant's submission. At the same time, considering that the United States has itself accepted the briefs in a tentative and qualified manner only, we focus in the succeeding sections below on the legal arguments in the main U.S. appellant's submission.

B. Sufficiency of the Notice of Appeal

92. In their joint appellee's submission, filed on 7 August 1998, Joint Appellees contend that the notice of appeal by the United States is defective in form and that the action is, therefore, not properly

before the Appellate Body. They contend that the appellant's notice of appeal is both vague and cursory, and is, accordingly, not in compliance with the procedural requirements set forth in Rule 20(2)(d) of the *Working Procedures for Appellate Review*. It is also not a proper "submission" filed "within the required time periods" pursuant to Rule 29 of the *Working Procedures for Appellate Review*. As a result, it is argued, the United States' appeal should be dismissed by the Appellate Body on this ground alone. The appellant's notice of appeal does not identify any legal errors in a manner sufficient for the appellees to develop a defence, and this, in the appellees' view, made it impossible for them to discern the issues that were going to be the subject of the appeal until the appellant filed its written submission 10 days later. This reduced the time available for all appellees to draft their responsive submissions from 25 days to 15 days.

93. According to Joint Appellees, vague notices of appeal should not be tolerated for at least two reasons. First, considerations of fundamental fairness and good faith mandate that the appellant should not be permitted to gain a tactical advantage through its failure to fulfil the requirements of the *Working Procedures for Appellate Review*. Second, carefully considered and well-drafted submissions benefit the decision-making process of the Appellate Body.

94. The United States in turn submits that the notice of appeal provided just the type of "*brief* statement of the nature of the appeal, including the allegations of error in the issues of law covered in the panel report and legal interpretations developed by the panel" (emphasis in the original) called for in Rule 20(2)(d) of the *Working Procedures for Appellate Review*. First, the notice of appeal explained that the United States was appealing from the findings on issues of law and related legal interpretations leading to the panel's conclusion that the United States measure was outside the scope of the Article XX chapeau. Second, the notice of appeal stated that the United States was appealing the Panel's procedural finding that the Panel lacked discretion to accept materials received from non-governmental sources. The appellees did not explain what additional information they believed should have been included in the notice of appeal. Furthermore, according to the United States, the appellees' allegation of prejudice was unfounded. The appellees well knew the basic argument that the United States would present to support its claim of legal error. Indeed, the appellees themselves had pointed out that the United States appeal rests solely on one leg, that is, that the Panel created a "threat to the multilateral trading system" test, and that the United States already raised this same issue at the interim review stage. In short, the appeal did not result in any unfair surprise to the appellees.

95. Rule 20(2) of the *Working Procedures for Appellate Review* provides, in relevant part:

> (2) A Notice of Appeal shall include the following information:
>
> …
>
> (d) a *brief statement of the nature of the appeal, including the allegations of errors* in the issues of law covered in the panel report and legal interpretations developed by the panel.(emphasis added)

The *Working Procedures for Appellate Review* enjoin the appellant to be *brief* in its notice of appeal in setting out "the nature of the appeal, including the allegations of errors". We believe that, in principle, the "nature of the appeal" and "the allegations of errors" are sufficiently set out where the notice of appeal adequately identifies the findings or legal interpretations of the Panel which are being

appealed as erroneous. The notice of appeal is not expected to contain the reasons why the appellant regards those findings or interpretations as erroneous. The notice of appeal is not designed to be a summary or outline of the arguments to be made by the appellant. The legal arguments in support of the allegations of error are, of course, to be set out and developed in the appellant's submission.

96. In this instance, the notice of appeal does communicate the decision by the United States to appeal certain legal issues covered and certain legal interpretations developed in the Panel Report. The notice then refers to the two allegedly erroneous findings of the Panel being appealed from -- the finding that the United States measure at issue is not within the scope of measures permitted under the chapeau of Article XX; and the finding that accepting non-requested information from non-governmental sources is incompatible with the DSU. The notice did not cite the numbered paragraphs of the Panel Report containing the above findings, but Joint Appellees do not assert that that is necessary. The references in the notice of appeal to these two findings of the Panel are terse[67], but there is no mistaking which findings or interpretations of the Panel the Appellate Body is asked to review. We accordingly hold that the notice of appeal by the United States meets the requirements of Rule 20(2)(d) of the *Working Procedures for Appellate Review*, and deny the request of Joint Appellees to dismiss the entire appeal summarily on the sole ground of insufficiency of the notice of appeal.

97. It remains only to recall that the right of a party to appeal from legal findings and legal interpretations reached by a panel in a dispute settlement proceeding is an important new right established in the DSU resulting from the Uruguay Round. We believe that the provisions of Rule 20(2) and other Rules of the *Working Procedures for Appellate Review* are most appropriately read so as to give full meaning and effect to the right of appeal and to give a party which regards itself aggrieved by some legal finding or interpretation in a panel report a real and effective opportunity to demonstrate the error in such finding or interpretation. It is scarcely necessary to add that an appellee is, of course, always entitled to its full measure of due process. In the present appeal, perhaps the best indication that that full measure of due process was not in any degree impaired by the notice of appeal filed by the United States, is the developed and substantial nature of the appellees' submissions.

IV. Issues Raised in This Appeal

98. The issues raised in this appeal by the appellant, the United States, are the following:

(a) whether the Panel erred in finding that accepting non-requested information from non-governmental sources would be incompatible with the provisions of the DSU as currently applied; and

(b) whether the Panel erred in finding that the measure at issue constitutes unjustifiable discrimination between countries where the same conditions prevail and thus is not within the scope of measures permitted under Article XX of the GATT 1994.

V. Panel Proceedings and Non-requested Information

99. In the course of the proceedings before the Panel, on 28 July 1997, the Panel received a brief from the Center for Marine Conservation ("CMC") and the Center for International Environmental Law ("CIEL"). Both are non-governmental organizations. On 16 September 1997, the Panel received another brief, this time from the World Wide Fund for Nature. The Panel acknowledged receipt of the two briefs, which the non-governmental organizations also sent directly to the parties to this dispute. The complaining parties -- India, Malaysia, Pakistan and Thailand -- requested the Panel not to consider the contents of the briefs in dealing with the dispute. In contrast, the United States urged the Panel to avail itself of any relevant information in the two briefs, as well as in any other similar communications.[68] The Panel disposed of this matter in the following manner:

> *We had not requested such information* as was contained in the above-mentioned documents. We note that, pursuant to Article 13 of the DSU, the initiative to seek information and to select the source of information rests with the Panel. In any other situations, only parties and third parties are allowed to submit information directly to the Panel. *Accepting non-requested information from non-governmental sources would be, in our opinion, incompatible with the provisions of the DSU as currently applied. We therefore informed the parties that we did not intend to take these documents into consideration.* We observed, moreover, that it was usual practice for parties to put forward whatever documents they considered relevant to support their case and that, *if any party in the present dispute wanted to put forward these documents, or parts of them, as part of their own submissions to the Panel, they were free to do so. If this were the case, the other parties would have two weeks to respond to the additional material.* We noted that the United States availed themselves of this opportunity by designating Section III of the document submitted by the Center for Marine Conservation and the Center for International Environmental Law as an annex to its second submission to the Panel.[69](emphasis added)

100. We note that the Panel did two things. First, the Panel declared a legal interpretation of certain provisions of the DSU: i.e., that accepting non-requested information from non-governmental sources would be "incompatible with the provisions of the DSU as currently applied." Evidently as a result of this legal interpretation, the Panel announced that it would not take the briefs submitted by non-governmental organizations into consideration. Second, the Panel nevertheless allowed any party to the dispute to put forward the briefs, or any part thereof, as part of its own submissions to the Panel, giving the other party or parties, in such case, two additional weeks to respond to the additional material. The United States appeals from this legal interpretation of the Panel.

101. It may be well to stress at the outset that access to the dispute settlement process of the WTO is limited to Members of the WTO. This access is not available, under the *WTO Agreement* and the covered agreements as they currently exist, to individuals or international organizations, whether governmental or non-governmental. Only Members may become parties to a dispute of which a panel may be seized, and only Members "having a substantial interest in a matter before a panel" may become third parties in the proceedings before that panel.[70] Thus, under the DSU, only Members who are parties to a dispute, or who have notified their interest in becoming third parties in such a dispute to the DSB, have a *legal right* to make submissions to, and have a *legal right* to have those

[67]The interpretation of the Panel concerning non-requested information, and its finding on the inconsistency of Section 609 with Article XX of the GATT 1994, are themselves cast in fairly terse language; Panel Report, paras. 7.8, fourth sentence, 7.49 and 7.62.

[68]Panel Report, para. 3.129

[69]Panel Report, para. 7.8.

[70]See Articles 4, 6, 9 and 10 of the DSU.

submissions considered by, a panel.[71] Correlatively, a panel is *obliged* in law to accept and give due consideration only to submissions made by the parties and the third parties in a panel proceeding. These are basic legal propositions; they do not, however, dispose of the issue here presented by the appellant's first claim of error. We believe this interpretative issue is most appropriately addressed by examining what a panel is *authorized* to do under the DSU.

102. Article 13 of the DSU reads as follows:

> *Article 13*
> *Right to Seek Information*
>
> 1. *Each panel shall have the right to seek information and technical advice from any individual or body which it deems appropriate.* However, before a panel seeks such information or advice from any individual or body within the jurisdiction of a Member it shall inform the authorities of that Member. *A Member should respond promptly and fully to any request by a panel for such information as the panel considers necessary and appropriate.* Confidential information which is provided shall not be revealed without formal authorization from the individual, body, or authorities of the Member providing the information.
>
> 2. *Panels may seek information from any relevant source* and may consult experts to obtain their opinion on certain aspects of the matter. With respect to a factual issue concerning a scientific or other technical matter raised by a party to a dispute, a panel may request an advisory report in writing from an expert review group. Rules for the establishment of such a group and its procedures are set forth in Appendix 4.(emphasis added)

103. In *EC Measures Affecting Meat and Meat Products (Hormones)*, we observed that Article 13 of the DSU[72] "enable[s] panels to seek information and advice as they deem appropriate in a particular case."[73] Also, in *Argentina – Measures Affecting Imports of Footwear, Textiles, Apparel and Other Items*, we ruled that:

> Pursuant to Article 13.2 of the DSU, a panel may seek information from any relevant source and may consult experts to obtain their opinions on certain aspects of the matter at issue. *This is a grant of discretionary authority: a panel is not duty-bound to seek information in each and every case or to consult particular experts under this provision.* We recall our statement in *EC Measures Concerning Meat and Meat Products (Hormones)* that Article 13 of the DSU enables a panel to seek information and technical advice as it deems appropriate in a particular case, and that the DSU leaves "to the sound discretion of a panel the determination of whether the establishment of an expert review group is necessary or appropriate." *Just as a panel has the discretion to determine how to seek expert advice, so also does a panel have the discretion to determine whether to seek information or expert advice at all.*
>
> …
>
> In this case, we find that the *Panel acted within the bounds of its discretionary authority under Articles 11 and 13 of the DSU in deciding not to seek information from, nor to consult with, the IMF.*[74] (emphasis added)

104. The comprehensive nature of the authority of a panel to "seek" information and technical advice from "any individual or body" it may consider appropriate, or from "any relevant source", should be underscored. This authority embraces more than merely the choice and evaluation of the *source* of the information or advice which it may seek. A panel's authority includes the authority to decide *not to seek* such information or advice at all. We consider that a panel also has the authority to *accept or reject* any information or advice which it may have sought and received, or to *make some other appropriate disposition* thereof. It is particularly within the province and the authority of a panel to determine *the need for information and advice* in a specific case, to ascertain the *acceptability* and *relevancy* of information or advice received, and to decide *what weight to ascribe to that information or advice* or to conclude that no weight at all should be given to what has been received.

105. It is also pertinent to note that Article 12.1 of the DSU authorizes panels to depart from, or to add to, the Working Procedures set forth in Appendix 3 of the DSU, and in effect to develop their own Working Procedures, after consultation with the parties to the dispute. Article 12.2 goes on to direct that "[p]anel procedures should provide *sufficient flexibility* so as to *ensure high-quality panel reports* while *not unduly delaying the panel process.*"(emphasis added)

106. The thrust of Articles 12 and 13, taken together, is that the DSU accords to a panel established by the DSB, and engaged in a dispute settlement proceeding, ample and extensive authority to undertake and to control the process by which it informs itself both of the relevant facts of the dispute and of the legal norms and principles applicable to such facts. That authority, and the breadth thereof, is indispensably necessary to enable a panel to discharge its duty imposed by Article 11 of the DSU to "make an objective assessment of the matter before it, including an *objective assessment of the facts of the case* and the *applicability of and conformity with the relevant covered agreements* … ." (emphasis added)

107. Against this context of broad authority vested in panels by the DSU, and given the object and purpose of the Panel's mandate as revealed in Article 11, we do not believe that the word "seek" must necessarily be read, as apparently the Panel read it, in too literal a manner. That the Panel's reading of the word "seek" is unnecessarily formal and technical in nature becomes clear should an "individual or body" first ask a panel for permission to file a statement or a brief. In such an event, a panel may decline to grant the leave requested. If, in the exercise of its sound discretion in a particular case, a panel concludes *inter alia* that it could do so without "unduly delaying the panel process", it could grant permission to file a statement or a brief, subject to such conditions as it deems appropriate. The exercise of the panel's discretion could, of course, and perhaps should, include consultation with the parties to the dispute. In this kind of situation, for all practical and pertinent purposes, the distinction between "requested" and "non-requested" information vanishes.

[71] Articles 10 and 12, and Appendix 3 of the DSU. We note that Article 17.4 of the DSU limits the right to appeal a panel report to parties to a dispute, and permits third parties which have notified the DSB of their substantial interest in the matter to make written submissions to, and be given an opportunity to be heard by, the Appellate Body.

[72] As well as Article 11.2 of the *Agreement on the Application of Sanitary and Phytosanitary Measures*.

[73] Adopted 13 February 1998, WT/DS26/AB/R, WT/DS48/AB/R, para. 147.

[74] Adopted 22 April 1998, WT/DS56/AB/R, paras. 84-86.

108. In the present context, authority to *seek* information is not properly equated with a *prohibition* on accepting information which has been submitted without having been requested by a panel. A panel has the discretionary authority either to accept and consider or to reject information and advice submitted to it, *whether requested by a panel or not*. The fact that a panel may *motu proprio* have initiated the request for information does not, by itself, bind the panel to accept and consider the information which is actually submitted. The amplitude of the authority vested in panels to shape the processes of fact-finding and legal interpretation makes clear that a panel will *not* be deluged, as it were, with non-requested material, *unless that panel allows itself to be so deluged.*

109. Moreover, acceptance and rejection of the information and advice of the kind here submitted to the Panel need not exhaust the universe of possible appropriate dispositions thereof. In the present case, the Panel did not reject the information outright. The Panel suggested instead, that, if any of the parties wanted "to put forward these documents, or parts of them, as part of their own submissions to the Panel, they were free to do so." [75] In response, the United States then designated Section III of the document submitted by CIEL/CMC as an annex to its second submission to the Panel, and the Panel gave the appellees two weeks to respond. We believe that this practical disposition of the matter by the Panel in this dispute may be detached, as it were, from the legal interpretation adopted by the Panel of the word "seek" in Article 13.1 of the DSU. When so viewed, we conclude that the actual disposition of these briefs by the Panel does not constitute either legal error or abuse of its discretionary authority in respect of this matter. The Panel was, accordingly, entitled to treat and take into consideration the section of the brief that the United States appended to its second submission to the Panel, just like any other part of the United States pleading.

110. We find, and so hold, that the Panel erred in its legal interpretation that accepting non-requested information from non-governmental sources is incompatible with the provisions of the DSU. At the same time, we consider that the Panel acted within the scope of its authority under Articles 12 and 13 of the DSU in allowing any party to the dispute to attach the briefs by non-governmental organizations, or any portion thereof, to its own submissions.

VI. Appraising Section 609 Under Article XX of the GATT 1994

111. We turn to the second issue raised by the appellant, the United States, which is whether the Panel erred in finding that the measure at issue[76] constitutes unjustifiable discrimination between countries where the same conditions prevail and, thus, is not within the scope of measures permitted under Article XX of the GATT 1994.

A. *The Panel's Findings and Interpretative Analysis*

112. The Panel's findings, from which the United States appeals, and the gist of its supporting reasoning, are set forth below *in extenso*:

> … [W]e are of the opinion that the *chapeau* [of] *Article XX*, interpreted within its context and in the light of the object and purpose of GATT and of the WTO Agreement, *only allows Members to derogate from GATT provisions so long as, in doing so, they do not undermine the WTO multilateral trading system*, thus also abusing the exceptions contained in Article XX. Such undermining and abuse would occur when a Member jeopardizes the operation of the WTO Agreement in such a way that guaranteed market access and nondiscriminatory treatment within a multilateral framework would no longer be possible. … We are of the view that a *type of measure adopted by a Member* which, on its own, may appear to have a relatively minor impact on the multilateral trading system, *may* nonetheless *raise a serious threat to that system if similar measures are adopted by the same or other Members*. Thus, by allowing such type of measures even though their individual impact may not appear to be such as to threaten the multilateral trading system, one would affect the security and predictability of the multilateral trading system. We consequently find that when considering a measure under Article XX, we must determine not only whether the measure *on its own* undermines the WTO multilateral trading system, but also whether *such type of measure*, if it were to be adopted by other Members, would threaten the security and predictability of the multilateral trading system.[77]
>
> In our view, if an interpretation of the chapeau of Article XX were to be followed which would allow a Member *to adopt measures conditioning access to its market for a given product upon the adoption by the exporting Members of certain policies, including conservation policies*, GATT 1994 and the WTO Agreement could no longer serve as a multilateral framework for trade among Members as security and predictability of trade relations under those agreements would be threatened. This follows because, if one WTO Member were allowed to adopt such measures, then other Members would also have the right to adopt similar measures on the same subject but with differing, or even conflicting, requirements. … Market access for goods could become subject to an increasing number of conflicting policy requirements for the same product and this would rapidly lead to the end of the WTO multilateral trading system.[78]
>
> … Section 609, as applied, is a measure conditioning access to the US market for a given product on the adoption by exporting Members of conservation policies that the United States considers to be comparable to its own in terms of regulatory programmes and incidental taking.[79]
>
> … it appears to us that, in light of the context of the term "unjustifiable" and the object and purpose of the WTO Agreement, *the US measure at issue constitutes unjustifiable discrimination* between countries where the same conditions prevail and thus is not within the scope of measures permitted under Article XX.[80]

[75]Panel Report, para. 7.8.

[76]The United States measure at issue is referred to in this Report as "Section 609" or "the measure". By these terms, we mean Section 609 and the 1996 Guidelines.

[77]Panel Report, para. 7.44.

[78]Panel Report, para. 7.45.

[79]Panel Report, para. 7.48.

[80]Panel Report, para. 7.49.

...

> We therefore find that *the US measure* at issue is *not within the scope of measures permitted under the chapeau of Article XX*.[81](emphasis added)

113. Article XX of the GATT 1994 reads, in its relevant parts:

> Article XX
> *General Exceptions*
> Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any Member of measures:
>
> ...
>
> (*b*) necessary to protect human, animal or plant life or health;

> (*g*) relating to the conservation of exhaustible natural resources if such measures are made effective in conjunction with restrictions on domestic production or consumption;

114. The Panel did not follow all of the steps of applying the "customary rules of interpretation of public international law" as required by Article 3.2 of the DSU. As we have emphasized numerous times[82], these rules call for an examination of the ordinary meaning of the words of a treaty, read in their context, and in the light of the object and purpose of the treaty involved. A treaty interpreter must begin with, and focus upon, the text of the particular provision to be interpreted. It is in the words constituting that provision, read in their context, that the object and purpose of the states parties to the treaty must first be sought. Where the meaning imparted by the text itself is equivocal or inconclusive, or where confirmation of the correctness of the reading of the text itself is desired, light from the object and purpose of the treaty as a whole may usefully be sought.[83]

115. In the present case, the Panel did not expressly examine the ordinary meaning of the words of Article XX. The Panel disregarded the fact that the introductory clauses of Article XX speak of the "manner" in which measures sought to be justified are "applied". In *United States - Gasoline*, we pointed out that the chapeau of Article XX "by its express terms addresses, not so much the questioned measure or its specific contents as such, *but rather the manner in which that measure is applied*."[84](emphasis added) The Panel did not inquire specifically into how the *application* of Section 609 constitutes "a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade." What the Panel did, in purporting to examine the consistency of the measure with the chapeau of Article XX, was to focus repeatedly on the *design of the measure itself*. For instance, the Panel stressed that it was addressing "a particular situation where a Member has taken unilateral measures which, *by their nature*, could put the multilateral trading system at risk." [85](emphasis added)

116. The general design of a measure, as distinguished from its application, is, however, to be examined in the course of determining whether that measure falls within one or another of the paragraphs of Article XX following the chapeau. The Panel failed to scrutinize the *immediate* context of the chapeau: i.e., paragraphs (a) to (j) of Article XX. Moreover, the Panel did not look into the object and purpose of the *chapeau of Article XX*. Rather, the Panel looked into the object and purpose of the *whole of the GATT 1994 and the WTO Agreement*, which object and purpose it described in an overly broad manner. Thus, the Panel arrived at the very broad formulation that measures which "undermine the WTO multilateral trading system"[86] must be regarded as "not within the scope of measures permitted under the chapeau of Article XX."[87] Maintaining, rather than undermining, the multilateral trading system is necessarily a fundamental and pervasive premise underlying the *WTO Agreement*; but it is not a right or an obligation, nor is it an interpretative rule which can be employed in the appraisal of a given measure under the chapeau of Article XX. In *United States - Gasoline*, we stated that it is "important to underscore that the purpose and object of the introductory clauses of Article XX is generally the prevention of '*abuse of the exceptions of* [*Article XX*]'."[88](emphasis added) The Panel did not attempt to inquire into how the measure at stake was being *applied in such a manner* as to constitute *abuse or misuse of a given kind of exception*.

117. The above flaws in the Panel's analysis and findings flow almost naturally from the fact that the Panel disregarded the sequence of steps essential for carrying out such an analysis. The Panel defined its approach as first "determin[ing] whether the measure at issue satisfies the conditions contained in the chapeau."[89] If the Panel found that to be the case, it said that it "shall then examine whether the US measure is covered by the terms of Article XX(b) or (g)." [90] The Panel attempted to justify its interpretative approach in the following manner:

> As mentioned by the Appellate Body in its report in the *Gasoline* case, in order for the justification of Article XX to be extended to a given measure, it must not only come under one or another of the particular exceptions - paragraphs (a) to (j) - listed under Article XX; it must also satisfy the requirements imposed by the opening clause of Article XX. We note that panels have in the past considered the specific paragraphs

[87]Panel Report, para. 7.62.

[88]Adopted 20 May 1996, WT/DS2/AB/R, p. 22.

[89]Panel Report, para. 7.29.

[90]*Ibid.*

> of Article XX before reviewing the applicability of the conditions contained in the chapeau. However, *as the conditions contained in the introductory provision apply to any of the paragraphs of Article XX, it seems equally appropriate to analyse first the introductory provision of Article XX.*[91](emphasis added)

...

118. In *United States - Gasoline*, we enunciated the appropriate method for applying Article XX of the GATT 1994:

> In order that the justifying protection of Article XX may be extended to it, the measure at issue must not only come under one or another of the particular exceptions -- paragraphs (a) to (j) -- listed under Article XX; it must also satisfy the requirements imposed by the opening clauses of Article XX. *The analysis is,* in other words, *two-tiered: first, provisional justification by reason of characterization of the measure under XX(g); second, further appraisal of the same measure under the introductory clauses of Article XX.*[92](emphasis added)

119. The sequence of steps indicated above in the analysis of a claim of justification under Article XX reflects, not inadvertence or random choice, but rather the fundamental structure and logic of Article XX. The Panel appears to suggest, albeit indirectly, that following the indicated sequence of steps, or the inverse thereof, does not make any difference. To the Panel, reversing the sequence set out in *United States - Gasoline* "seems equally appropriate."[93] We do not agree.

120. The task of interpreting the chapeau so as to prevent the abuse or misuse of the specific exemptions provided for in Article XX is rendered very difficult, if indeed it remains possible at all, where the interpreter (like the Panel in this case) has not first identified and examined the specific exception threatened with abuse. The standards established in the chapeau are, moreover, necessarily broad in scope and reach: the prohibition of the *application* of a measure "in a manner which would constitute a means of *arbitrary* or *unjustifiable discrimination* between countries where the same conditions prevail" or "a *disguised restriction* on international trade."(emphasis added) When applied in a particular case, the actual contours and contents of these standards will vary as the kind of measure under examination varies. What is appropriately characterizable as "arbitrary discrimination" or "unjustifiable discrimination", or as a "disguised restriction on international trade" in respect of one category of measures, need not be so with respect to another group or type of measures. The standard of "arbitrary discrimination", for example, under the chapeau may be different for a measure that purports to be necessary to protect public morals than for one relating to the products of prison labour.

121. The consequences of the interpretative approach adopted by the Panel are apparent in its findings. The Panel formulated a broad standard and a test for appraising measures sought to be justified under the chapeau; it is a standard or a test that finds no basis either in the text of the chapeau or in that of either of the two specific exceptions claimed by the United States. The Panel, in effect, constructed an *a priori* test that purports to define a category of measures which, *ratione materiae*, fall outside the justifying protection of Article XX's chapeau.[94] In the present case, the Panel found that the United States measure at stake fell within that class of excluded measures because Section 609 conditions access to the domestic shrimp market of the United States on the adoption by exporting countries of certain conservation policies prescribed by the United States. It

[91]Panel Report, para. 7.28.

[92]Adopted 20 May 1996, WT/DS2/AB/R, p. 22.

[93]Panel Report, para 7.28.

[94]See, for example, Panel Report, para. 7.50.

appears to us, however, that conditioning access to a Member's domestic market on whether exporting Members comply with, or adopt, a policy or policies unilaterally prescribed by the importing Member may, to some degree, be a common aspect of measures falling within the scope of one or another of the exceptions (a) to (j) of Article XX. Paragraphs (a) to (j) comprise measures that are recognized as *exceptions to substantive obligations* established in the GATT 1994, because the domestic policies embodied in such measures have been recognized as important and legitimate in character. It is not necessary to assume that requiring from exporting countries compliance with, or adoption of, certain policies (although covered in principle by one or another of the exceptions) prescribed by the importing country, renders a measure *a priori* incapable of justification under Article XX. Such an interpretation renders most, if not all, of the specific exceptions of Article XX inutile, a result abhorrent to the principles of interpretation we are bound to apply.

122. We hold that the findings of the Panel quoted in paragraph 112 above, and the interpretative analysis embodied therein, constitute error in legal interpretation and accordingly reverse them.

123. Having reversed the Panel's legal conclusion that the United States measure at issue "is not within the scope of measures permitted under the chapeau of Article XX" [95], we believe that it is our duty and our responsibility to complete the legal analysis in this case in order to determine whether Section 609 qualifies for justification under Article XX. In doing this, we are fully aware of our jurisdiction and mandate under Article 17 of the DSU. We have found ourselves in similar situations on a number of occasions. Most recently, in *European Communities - Measures Affecting the Importation of Certain Poultry Products,* we stated:

> In certain appeals, … the reversal of a panel's finding on a legal issue may require us to make a finding on a legal issue which was not addressed by the panel.[96]

In that case, having reversed the panel's finding on Article 5.1(b) of the *Agreement on Agriculture*, we completed the legal analysis by making a finding on the consistency of the measure at issue with Article 5.5 of the *Agreement on Agriculture.* Similarly, in *Canada - Certain Measures Concerning Periodicals*[97], having reversed the panel's findings on the issue of "like products" under the first sentence of Article III:2 of the GATT 1994, we examined the consistency of the measure with the second sentence of Article III:2. And, in *United States – Gasoline* [98], having reversed the panel's findings on the first part of Article XX(g) of the GATT 1994, we completed the analysis of the terms of Article XX(g), and then examined the application of the measure at issue in that case under the chapeau of Article XX.

124. As in those previous cases, we believe it is our responsibility here to examine the claim by the United States for justification of Section 609 under Article XX in order properly to resolve this dispute between the parties. We do this, in part, recognizing that Article 3.7 of the DSU emphasizes that: "The aim of the dispute settlement mechanism is to secure a positive solution to a dispute." Fortunately, in the present case, as in the mentioned previous cases, we believe that the facts on the record of the panel proceedings permit us to undertake the completion of the analysis required to resolve this dispute.

[95]Panel Report, para. 7.62.

[96]Adopted 23 July 1998, WT/DS69/AB/R, para. 156.

[97]Adopted 30 July 1997, WT/DS31/AB/R, pp. 23 and 24.

[98]Adopted 20 May 1996, WT/DS2/AB/R, pp. 19 ff.

B. *Article XX(g): Provisional Justification of Section 609*

125. In claiming justification for its measure, the United States primarily invokes Article XX(g). Justification under Article XX(b) is claimed only in the alternative; that is, the United States suggests that we should look at Article XX(b) only if we find that Section 609 does not fall within the ambit of Article XX(g).[99] We proceed, therefore, to the first tier of the analysis of Section 609 and to our consideration of whether it may be characterized as provisionally justified under the terms of Article XX(g).

126. Paragraph (g) of Article XX covers measures:

> relating to the conservation of exhaustible natural resources if such measures are made effective in conjunction with restrictions on domestic production or consumption;

1. "Exhaustible Natural Resources"

127. We begin with the threshold question of whether Section 609 is a measure concerned with the conservation of "exhaustible natural resources" within the meaning of Article XX(g). The Panel, of course, with its "chapeau-down" approach, did not make a finding on whether the sea turtles that Section 609 is designed to conserve constitute "exhaustible natural resources" for purposes of Article XX(g). In the proceedings before the Panel, however, the parties to the dispute argued this issue vigorously and extensively. India, Pakistan and Thailand contended that a "reasonable interpretation" of the term "exhaustible" is that the term refers to "finite resources such as minerals, rather than biological or renewable resources."[100] In their view, such finite resources were exhaustible "because there was a limited supply which could and would be depleted unit for unit as the resources were consumed."[101] Moreover, they argued, if "all" natural resources were considered to be exhaustible, the term "exhaustible" would become superfluous.[102] They also referred to the drafting history of Article XX(g), and, in particular, to the mention of minerals, such as manganese, in the context of arguments made by some delegations that "export restrictions" should be permitted for the preservation of scarce natural resources.[103] For its part, Malaysia added that sea turtles, being living creatures, could only be considered under Article XX(b), since Article XX(g) was meant for "nonliving exhaustible natural resources".[104] It followed, according to Malaysia, that the United States cannot invoke both the Article XX(b) and the Article XX(g) exceptions simultaneously.[105]

128. We are not convinced by these arguments. Textually, Article XX(g) is *not* limited to the conservation of "mineral" or "non-living" natural resources. The complainants' principal argument is rooted in the notion that "living" natural resources are "renewable" and therefore cannot be "exhaustible" natural resources. We do not believe that "exhaustible" natural resources and "renewable" natural resources are mutually exclusive. One lesson that modern biological sciences teach us is that living species, though in principle, capable of reproduction and, in that sense, "renewable", are in certain circumstances indeed susceptible of depletion, exhaustion and extinction, frequently because of human activities. Living resources are just as "finite" as petroleum, iron ore and other non-living resources.[106]

129. The words of Article XX(g), "exhaustible natural resources", were actually crafted more than 50 years ago. They must be read by a treaty interpreter in the light of contemporary concerns of the community of nations about the protection and conservation of the environment. While Article XX was not modified in the Uruguay Round, the preamble attached to the *WTO Agreement* shows that the signatories to that Agreement were, in 1994, fully aware of the importance and legitimacy of environmental protection as a goal of national and international policy. The preamble of the *WTO Agreement* -- which informs not only the GATT 1994, but also the other covered agreements -- explicitly acknowledges "the objective of *sustainable development*[107]":

> The *Parties* to this Agreement,
>
> *Recognizing* that their relations in the field of trade and economic endeavour should be conducted *with a view to raising standards of living, ensuring full employment and a large and steadily growing volume of real income and effective demand*, and *expanding the production of and trade in goods and services*, while allowing for the optimal use of the world's resources in accordance with the *objective of sustainable development*, *seeking both to protect and preserve the environment and to enhance the means for doing so* in a manner consistent with their respective needs and concerns at different levels of economic development, …[108](emphasis added)

130. From the perspective embodied in the preamble of the *WTO Agreement*, we note that the generic term "natural resources" in Article XX(g) is not "static" in its content or reference but is rather "by definition, evolutionary".[109] It is, therefore, pertinent to note that modern international conventions and declarations make frequent references to natural resources as embracing both living and non-living resources. For instance, the 1982 United Nations Convention on the Law of the Sea[110] ("UNCLOS"), in defining the jurisdictional rights of coastal states in their exclusive economic zones, provides:

[106]We note, for example, that the World Commission on Environment and Development stated: "The planet's species are under stress. There is growing scientific consensus that species are disappearing at rates never before witnessed on the planet … ." World Commission on Environment and Development, *Our Common Future* (Oxford University Press, 1987), p. 13.

[107]This concept has been generally accepted as integrating economic and social development and environmental protection See e.g., G. Handl, "Sustainable Development: General Rules versus Specific Obligations", in *Sustainable Development and International Law* (ed. W. Lang, 1995), p. 35; World Commission on Environment and Development, *Our Common Future* (Oxford University Press, 1987), p. 43.

[108]Preamble of the *WTO Agreement*.

[109]See *Namibia (Legal Consequences) Advisory Opinion* (1971) I.C.J. Rep., p. 31. The International Court of Justice stated that where concepts embodied in a treaty are "by definition, evolutionary", their "interpretation cannot remain unaffected by the subsequent development of law … . Moreover, an international instrument has to be interpreted and applied within the framework of the entire legal system prevailing at the time of the interpretation." See also *Aegean Sea Continental Shelf Case*, (1978) I.C.J. Rep., p. 3; Jennings and Watts (eds.), *Oppenheim's International Law*, 9th ed., Vol. I (Longman's, 1992), p. 1282 and E. Jimenez de Arechaga, "International Law in the Past Third of a Century", (1978-I) 159 *Recueil des Cours* 1, p. 49.

[110]Done at Montego Bay, 10 December 1982, UN Doc. A/CONF.62/122; 21 International Legal Materials 1261. We note that India, Malaysia and Pakistan have ratified the UNCLOS. Thailand has signed, but not ratified the Convention, and the United States has not signed the Convention. In the oral hearing, the

Article 56
Rights, jurisdiction and duties of the coastal State in the exclusive economic zone

1. In the exclusive economic zone, the coastal State has:

(a) sovereign rights for the purpose of exploring and exploiting, conserving and managing the *natural resources, whether living or non-living*, of the waters superjacent to the sea-bed and of the sea-bed and its subsoil, …(emphasis added)

The UNCLOS also repeatedly refers in Articles 61 and 62 to "living resources" in specifying rights and duties of states in their exclusive economic zones. The Convention on Biological Diversity[111] uses the concept of "biological resources". Agenda 21[112] speaks most broadly of "natural resources" and goes into detailed statements about "marine living resources". In addition, the Resolution on Assistance to Developing Countries, adopted in conjunction with the Convention on the Conservation of Migratory Species of Wild Animals, recites:

> Conscious that an important element of development lies in the conservation and management of *living natural resources* and that migratory species constitute a significant part of these resources; …[113](emphasis added)

131. Given the recent acknowledgement by the international community of the importance of concerted bilateral or multilateral action to protect living natural resources, and recalling the explicit recognition by WTO Members of the objective of sustainable development in the preamble of the *WTO Agreement*, we believe it is too late in the day to suppose that Article XX(g) of the GATT 1994 may be read as referring only to the conservation of exhaustible mineral or other non-living natural resources. [114] Moreover, two adopted GATT 1947 panel reports previously found fish to be an

United States stated: "… we have not ratified this Convention although, with respect to fisheries law, for the most part we do believe that UNCLOS reflects international customary law." Also see, for example, W. Burke, *The New International Law of Fisheries* (Clarendon Press, 1994), p. 40:

> [the] coastal state sovereign rights over fisheries in a 200-mile zone are now considered part of customary international law. The evidence of state practice supporting this derives not only from the large number of coastal states claiming an EEZ [exclusive economic zone] in which such rights are advanced, but also from the fact that many of those states not claiming an EEZ assert rights not appreciably different than those in an EEZ. The provision for sovereign rights of the coastal state in [Article 56.1(a) of] the 1982 Convention is also a part of this evidence, but has particular weight because of the uniformity of state practice outside the Convention.

[111]Done at Rio de Janeiro, 5 June 1992, UNEP/Bio.Div./N7-INC5/4; 31 International Legal Materials 818. We note that India, Malaysia and Pakistan have ratified the Convention on Biological Diversity, and that Thailand and the United States have signed but not ratified the Convention.

[112]Adopted by the United Nations Conference on Environment and Development, 14 June 1992, UN Doc. A/CONF. 151/26/Rev.1. See, for example, para. 17.70, ff.

[113]Final Act of the Conference to Conclude a Convention on the Conservation of Migratory Species of Wild Animals, done at Bonn, 23 June 1979, 19 International Legal Materials 11, p. 15. We note that India and Pakistan have ratified the Convention on the Conservation of Migratory Species of Wild Animals, but that Malaysia, Thailand and the United States are not parties to the Convention.

[114]Furthermore, the drafting history does not demonstrate an intent on the part of the framers of the GATT 1947 *to exclude* "living" natural resources from the scope of application of Article XX(g).

"exhaustible natural resource" within the meaning of Article XX(g).[115] We hold that, in line with the principle of effectiveness in treaty interpretation[116], measures to conserve exhaustible natural resources, whether *living* or *non-living*, may fall within Article XX(g).

132. We turn next to the issue of whether the living natural resources sought to be conserved by the measure are "exhaustible" under Article XX(g). That this element is present in respect of the five species of sea turtles here involved appears to be conceded by all the participants and third participants in this case. The exhaustibility of sea turtles would in fact have been very difficult to controvert since all of the seven recognized species of sea turtles are today listed in Appendix 1 of the Convention on International Trade in Endangered Species of Wild Fauna and Flora ("CITES"). The list in Appendix 1 includes "all species *threatened with extinction* which are or may be affected by trade."[117](emphasis added)

133. Finally, we observe that sea turtles are highly migratory animals, passing in and out of waters subject to the rights of jurisdiction of various coastal states and the high seas. In the Panel Report, the Panel said:

> … Information brought to the attention of the Panel, including documented statements from the experts, tends to *confirm the fact that sea turtles, in certain circumstances of their lives, migrate through the waters of several countries and the high sea.* …[118](emphasis added)

The sea turtle species here at stake, i.e., covered by Section 609, are all known to occur in waters over which the United States exercises jurisdiction.[119] Of course, it is not claimed that *all* populations of these species migrate to, or traverse, at one time or another, waters subject to United States jurisdiction. Neither the appellant nor any of the appellees claims any rights of exclusive ownership over the sea turtles, at least not while they are swimming freely in their natural habitat -- the oceans. We do not pass upon the question of whether there is an implied jurisdictional limitation in

[115]*United States – Prohibition of Imports of Tuna and Tuna Products from Canada*, adopted 22 February 1982, BISD 29S/91, para. 4.9; *Canada – Measures Affecting Exports of Unprocessed Herring and Salmon*, adopted 22 March 1988, BISD 35S/98, para. 4.4.

[117]CITES, Article II.1.

[118]Panel Report, para. 7.53.

[119]See Panel Report, para. 2.6. The 1987 Regulations, 52 Fed. Reg. 24244, 29 June 1987, identified five species of sea turtles as occurring within the areas concerned and thus falling under the regulations: loggerhead (*Caretta caretta*), Kemp's ridley (*Lepidochelys kempi*), green (*Chelonia mydas*), leatherback (*Dermochelys coriacea*) and hawksbill (*Eretmochelys imbricata*). Section 609 refers to "those species of sea turtles the conservation of which is the subject of regulations promulgated by the Secretary of Commerce on 29 June, 1987."

Article XX(g), and if so, the nature or extent of that limitation. We note only that in the specific circumstances of the case before us, there is a sufficient nexus between the migratory and endangered marine populations involved and the United States for purposes of Article XX(g).

134. For all the foregoing reasons, we find that the sea turtles here involved constitute "exhaustible natural resources" for purposes of Article XX(g) of the GATT 1994.

2. "Relating to the Conservation of [Exhaustible Natural Resources]"

135. Article XX(g) requires that the measure sought to be justified be one which "relat[es] to" the conservation of exhaustible natural resources. In making this determination, the treaty interpreter essentially looks into the relationship between the measure at stake and the legitimate policy of conserving exhaustible natural resources. It is well to bear in mind that the policy of protecting and conserving the endangered sea turtles here involved is shared by all participants and third participants in this appeal, indeed, by the vast majority of the nations of the world.[120] None of the parties to this dispute question the genuineness of the commitment of the others to that policy.[121]

136. In *United States - Gasoline*, we inquired into the relationship between the baseline establishment rules of the United States Environmental Protection Agency (the "EPA") and the conservation of natural resources for the purposes of Article XX(g). There, we answered in the affirmative the question posed before the panel of whether the baseline establishment rules were "primarily aimed at" the conservation of clean air.[122] We held that:

> … The baseline establishment rules whether individual or statutory, were designed to permit scrutiny and monitoring of the level of compliance of refiners, importers and blenders with the "non-degradation" requirements. Without baselines of some kind, such scrutiny would not be possible and the Gasoline Rule's objective of stabilizing and preventing further deterioration of the level of air pollution prevailing in 1990, would be substantially frustrated. … We consider that, given that substantial relationship, the baseline establishment rules cannot be regarded as merely incidentally or inadvertently aimed at the conservation of clean air in the United States for the purposes of Article XX(g).[123]

The substantial relationship we found there between the EPA baseline establishment rules and the conservation of clean air in the United States was a close and genuine relationship of ends and means.

137. In the present case, we must examine the relationship between the general structure and design of the measure here at stake, Section 609, and the policy goal it purports to serve, that is, the conservation of sea turtles.

138. Section 609(b)(1) imposes an import ban on shrimp that have been harvested with commercial fishing technology which may adversely affect sea turtles. This provision is designed to influence countries to adopt national regulatory programs requiring the use of TEDs by their shrimp

[120]There are currently 144 states parties to CITES.

[121]We note that all of the participants in this appeal are parties to CITES.

[122]Adopted 20 May 1996, WT/DS2/AB/R, p. 19.

[123]*Ibid.*

fishermen. In this connection, it is important to note that the general structure and design of Section 609 *cum* implementing guidelines is fairly narrowly focused. There are two basic exemptions from the import ban, both of which relate clearly and directly to the policy goal of conserving sea turtles. First, Section 609, as elaborated in the 1996 Guidelines, excludes from the import ban shrimp harvested "under conditions that do not adversely affect sea turtles". Thus, the measure, by its terms, excludes from the import ban: aquaculture shrimp; shrimp species (such as *pandalid* shrimp) harvested in water areas where sea turtles do not normally occur; and shrimp harvested exclusively by artisanal methods, even from non-certified countries.[124] The harvesting of such shrimp clearly does not affect sea turtles. Second, under Section 609(b)(2), the measure exempts from the import ban shrimp caught in waters subject to the jurisdiction of certified countries.

139. There are two types of certification for countries under Section 609(b)(2). First, under Section 609(b)(2)(C), a country may be certified as having a fishing environment that does not pose a threat of incidental taking of sea turtles in the course of commercial shrimp trawl harvesting. There is no risk, or only a negligible risk, that sea turtles will be harmed by shrimp trawling in such an environment.

140. The second type of certification is provided by Section 609(b)(2)(A) and (B). Under these provisions, as further elaborated in the 1996 Guidelines, a country wishing to export shrimp to the United States is required to adopt a regulatory program that is comparable to that of the United States program and to have a rate of incidental take of sea turtles that is comparable to the average rate of United States' vessels. This is, essentially, a requirement that a country adopt a regulatory program requiring the use of TEDs by commercial shrimp trawling vessels in areas where there is a likelihood of intercepting sea turtles.[125] This requirement is, in our view, directly connected with the policy of conservation of sea turtles. It is undisputed among the participants, and recognized by the experts consulted by the Panel[126], that the harvesting of shrimp by commercial shrimp trawling vessels with mechanical retrieval devices in waters where shrimp and sea turtles coincide is a significant cause of sea turtle mortality. Moreover, the Panel did "not question … the fact generally acknowledged by the experts that TEDs, when properly installed and adapted to the local area, would be an effective tool for the preservation of sea turtles."[127]

141. In its general design and structure, therefore, Section 609 is not a simple, blanket prohibition of the importation of shrimp imposed without regard to the consequences (or lack thereof) of the mode of harvesting employed upon the incidental capture and mortality of sea turtles. Focusing on the design of the measure here at stake[128], it appears to us that Section 609, *cum* implementing guidelines, is not disproportionately wide in its scope and reach in relation to the policy objective of protection and conservation of sea turtle species. The means are, in principle, reasonably related to the ends. The means and ends relationship between Section 609 and the legitimate policy of conserving an exhaustible, and, in fact, endangered species, is observably a close and real one, a relationship that is every bit as substantial as that which we found in *United States - Gasoline* between the EPA baseline establishment rules and the conservation of clean air in the United States.

142. In our view, therefore, Section 609 is a measure "relating to" the conservation of an exhaustible natural resource within the meaning of Article XX(g) of the GATT 1994.

[124]See the 1996 Guidelines, p. 17343.

[125]See the 1996 Guidelines, p. 17343.

[126]For example, Panel Report, paras. 5.91-5.118.

[127]Panel Report, para. 7.60, footnote 674.

[128]We focus on the *application* of the measure below, in Section VI.C of this Report.

3. "If Such Measures are Made Effective in conjunction with Restrictions on Domestic Production or Consumption"

143. In *United States – Gasoline*, we held that the above-captioned clause of Article XX(g),

> … is appropriately read as a requirement that the measures concerned impose restrictions, not just in respect of imported gasoline but also with respect to domestic gasoline. The clause is a requirement of *even-handedness* in the imposition of restrictions, in the name of conservation, upon the production or consumption of exhaustible natural resources.[129]

In this case, we need to examine whether the restrictions imposed by Section 609 with respect to imported shrimp are also imposed in respect of shrimp caught by United States shrimp trawl vessels.

144. We earlier noted that Section 609, enacted in 1989, addresses the mode of harvesting of imported shrimp only. However, two years earlier, in 1987, the United States issued regulations pursuant to the Endangered Species Act requiring all United States shrimp trawl vessels to use approved TEDs, or to restrict the duration of tow-times, in specified areas where there was significant incidental mortality of sea turtles in shrimp trawls.[130] These regulations became fully effective in 1990 and were later modified. They now require United States shrimp trawlers to use approved TEDs "in areas and at times when there is a likelihood of intercepting sea turtles" [131], with certain limited exceptions.[132] Penalties for violation of the Endangered Species Act, or the regulations issued thereunder, include civil and criminal sanctions.[133] The United States government currently relies on monetary sanctions and civil penalties for enforcement.[134] The government has the ability to seize shrimp catch from trawl vessels fishing in United States waters and has done so in cases of egregious violations.[135] We believe that, in principle, Section 609 is an even-handed measure.

145. Accordingly, we hold that Section 609 is a measure made effective in conjunction with the restrictions on domestic harvesting of shrimp, as required by Article XX(g).

C. *The Introductory Clauses of Article XX: Characterizing Section 609 under the Chapeau's Standards*

146. As noted earlier, the United States invokes Article XX(b) only if and to the extent that we hold that Section 609 falls outside the scope of Article XX(g). Having found that Section 609 does come within the terms of Article XX(g), it is not, therefore, necessary to analyze the measure in terms of Article XX(b).

[129]Adopted 20 May 1996, WT/DS2/AB/R, pp. 20-21.

[130]52 Fed. Reg. 24244, 29 June 1987.

[131]See the 1996 Guidelines, p. 17343.

[132]According to the 1996 Guidelines, p. 17343, the exceptions are: vessels equipped exclusively with certain special types of gear; vessels whose nets are retrieved exclusively by manual rather than mechanical means; and, in exceptional circumstances, where the National Marine Fisheries Service determines that the use of TEDs would be impracticable because of special environmental conditions, vessels are permitted to restrict tow-times instead of using TEDs.

[133]Endangered Species Act, Section 11.

[134]Statement by the United States at the oral hearing.

[135]Statement by the United States at the oral hearing.

147. Although provisionally justified under Article XX(g), Section 609, if it is ultimately to be justified as an exception under Article XX, must also satisfy the requirements of the introductory clauses -- the "chapeau" -- of Article XX, that is,

> Article XX
>
> *General Exceptions*
>
> Subject to the requirement that such measures are *not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail*, or *a disguised restriction on international trade*, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any Member of measures: (emphasis added)

We turn, hence, to the task of appraising Section 609, and specifically the manner in which it is applied under the chapeau of Article XX; that is, to the second part of the two-tier analysis required under Article XX.

1. General Considerations

148. We begin by noting one of the principal arguments made by the United States in its appellant's submission. The United States argues:

> In context, *an alleged "discrimination between countries where the same conditions prevail" is not "unjustifiable" where the policy goal of the Article XX exception being applied provides a rationale for the justification*. If, for example, a measure is adopted for the purpose of conserving an exhaustible natural resource under Article XX(g), it is relevant whether the conservation goal justifies the discrimination. In this way, the Article XX chapeau guards against the misuse of the Article XX exceptions for the purpose of achieving indirect protection.[136]
>
> …
>
> [A]n evaluation of whether a measure constitutes "unjustifiable discrimination [between countries] where the same conditions prevail" should take account of *whether differing treatment between countries relates to the policy goal of the applicable Article XX exception. If a measure differentiates between countries based on a rationale legitimately connected with the policy of an Article XX exception*, rather than for protectionist reasons, *the measure does not amount to an abuse of the applicable Article XX exception*.[137] (emphasis added)

149. We believe this argument must be rejected. The policy goal of a measure at issue cannot provide its rationale or justification under the standards of the chapeau of Article XX. The legitimacy of the declared policy objective of the measure, and the relationship of that objective with the measure

[136]United States appellant's submission, para. 28.

[137]United States appellant's submission, para. 53.

itself and its general design and structure, are examined under Article XX(g), and the treaty interpreter may then and there declare the measure inconsistent with Article XX(g). If the measure is not held provisionally justified under Article XX(g), it cannot be ultimately justified under the chapeau of Article XX. On the other hand, it does not follow from the fact that a measure falls within the terms of Article XX(g) that that measure also will necessarily comply with the requirements of the chapeau. To accept the argument of the United States would be to disregard the standards established by the chapeau.

150. We commence the second tier of our analysis with an examination of the ordinary meaning of the words of the chapeau. The precise language of the chapeau requires that a measure not be applied in a manner which would constitute a means of "arbitrary or unjustifiable discrimination between countries where the same conditions prevail" or a "disguised restriction on international trade." There are three standards contained in the chapeau: first, arbitrary discrimination between countries where the same conditions prevail; second, unjustifiable discrimination between countries where the same conditions prevail; and third, a disguised restriction on international trade. In order for a measure to be applied in a manner which would constitute "arbitrary or unjustifiable discrimination between countries where the same conditions prevail", three elements must exist. First, the application of the measure must result in *discrimination*. As we stated in *United States – Gasoline*, the nature and quality of this discrimination is different from the discrimination in the treatment of products which was already found to be inconsistent with one of the substantive obligations of the GATT 1994, such as Articles I, III or XI.[138] Second, the discrimination must be *arbitrary* or *unjustifiable* in character. We will examine this element of *arbitrariness* or *unjustifiability* in detail below. Third, this discrimination must occur *between countries where the same conditions prevail*. In *United States – Gasoline*, we accepted the assumption of the participants in that appeal that such discrimination could occur not only between different exporting Members, but also between exporting Members and the importing Member concerned.[139] Thus, the standards embodied in the language of the chapeau are not only different from the requirements of Article XX(g); they are also different from the standard used in determining that Section 609 is violative of the substantive rules of Article XI:1 of the GATT 1994.

151. In *United States – Gasoline*, we stated that "the purpose and object of the introductory clauses of Article XX is generally the prevention of 'abuse of the exceptions of [Article XX]'."[140] We went on to say that:

> … The chapeau is animated by the principle that while the exceptions of Article XX may be invoked as a matter of legal right, they should not be so applied as to frustrate or defeat the legal obligations of the holder of the right under the substantive rules of the *General Agreement*. If those exceptions are not to be abused or misused, in other words, the measures falling within the particular exceptions must be applied reasonably, with due regard both to the legal duties of the party claiming the exception and the legal rights of the other parties concerned.[141]

152. At the end of the Uruguay Round, negotiators fashioned an appropriate preamble for the new *WTO Agreement,* which strengthened the multilateral trading system by establishing an international organization, *inter alia,* to facilitate the implementation, administration and operation, and to further the objectives, of that Agreement and the other agreements resulting from that Round.[142] In recognition of the importance of continuity with the previous GATT system, negotiators used the preamble of the GATT 1947 as the template for the preamble of the new *WTO Agreement*. Those negotiators evidently believed, however, that the objective of "full use of the resources of the world" set forth in the preamble of the GATT 1947 was no longer appropriate to the world trading system of the 1990's. As a result, they decided to qualify the original objectives of the GATT 1947 with the following words:

> … while allowing for the optimal use of the world's resources in accordance with the objective of sustainable development, seeking both to protect and preserve the environment and to enhance the means for doing so in a manner consistent with their respective needs and concerns at different levels of economic development, …[143]

153. We note once more[144] that this language demonstrates a recognition by WTO negotiators that optimal use of the world's resources should be made in accordance with the objective of sustainable development. As this preambular language reflects the intentions of negotiators of the *WTO Agreement*, we believe it must add colour, texture and shading to our interpretation of the agreements annexed to the *WTO Agreement*, in this case, the GATT 1994. We have already observed that Article XX(g) of the GATT 1994 is appropriately read with the perspective embodied in the above preamble.[145]

154. We also note that since this preambular language was negotiated, certain other developments have occurred which help to elucidate the objectives of WTO Members with respect to the relationship between trade and the environment. The most significant, in our view, was the Decision of Ministers at Marrakesh to establish a permanent Committee on Trade and Environment (the "CTE"). In their Decision on Trade and Environment, Ministers expressed their intentions, in part, as follows:

> … *Considering* that there should not be, nor need be, any policy contradiction between upholding and safeguarding an open, non-discriminatory and equitable multilateral trading system on the one hand, and acting for the protection of the environment, and the promotion of sustainable development on the other, …[146]

In this Decision, Ministers took "note" of the Rio Declaration on Environment and Development [147], Agenda 21[148], and "its follow-up in the GATT, as reflected in the statement of the Council of

---

[138]In *United States – Gasoline*, adopted 20 May 1996, WT/DS2/AB/R, p. 23, we stated: "The provisions of the chapeau cannot logically refer to the same standard(s) by which a violation of a substantive rule has been determined to have occurred."

[139]*Ibid.*, pp. 23-24.

[140]*Ibid.*, p. 22.

[141]*Ibid.*

[142]*WTO Agreement*, Article III:1.

[143]Preamble of the *WTO Agreement*, first paragraph.

[144]*Supra*, para. 129.

[145]*Supra*, para. 131.

[146]Preamble of the Decision on Trade and Environment.

[147]We note that Principle 3 of the Rio Declaration on Environment and Development states: "The right to development must be fulfilled so as to equitably meet developmental and environmental needs of present and future generations." Principle 4 of the Rio Declaration on Environment and Development states that: "In order to achieve sustainable development, environmental protection shall constitute an integral part of the development process and cannot be considered in isolation from it."

Representatives to the CONTRACTING PARTIES at their 48th Session in 1992 … ."[149] We further note that this Decision also set out the following terms of reference for the CTE:

> (a) to identify the relationship between trade measures and environmental measures, in order to promote sustainable development;
>
> (b) to make appropriate recommendations on whether any modifications of the provisions of the multilateral trading system are required, compatible with the open, equitable and non-discriminatory nature of the system, as regards, in particular:
>
> - the need for rules to enhance positive interaction between trade and environmental measures, for the promotion of sustainable development, with special consideration to the needs of developing countries, in particular those of the least developed among them; and
>
> - the avoidance of protectionist trade measures, and the adherence to effective multilateral disciplines to ensure responsiveness of the multilateral trading system to environmental objectives set forth in Agenda 21 and the Rio Declaration, in particular Principle 12; and
>
> - surveillance of trade measures used for environmental purposes, of trade-related aspects of environmental measures which have significant trade affects, and of effective implementation of the multilateral disciplines governing those measures.[150]

155. With these instructions, the General Council of the WTO established the CTE in 1995, and the CTE began its important work. Pending any specific recommendations by the CTE to WTO Members on the issues raised in its terms of reference, and in the absence up to now of any agreed amendments or modifications to the substantive provisions of the GATT 1994 and the *WTO Agreement* generally, we must fulfill our responsibility in this specific case, which is to interpret the existing language of the chapeau of Article XX by examining its ordinary meaning, in light of its context and object and purpose in order to determine whether the United States measure at issue qualifies for justification under Article XX. It is proper for us to take into account, as part of the context of the chapeau, the specific language of the preamble to the *WTO Agreement*, which, we have said, gives colour, texture and shading to the rights and obligations of Members under the *WTO Agreement*, generally, and under the GATT 1994, in particular.

156. Turning then to the chapeau of Article XX, we consider that it embodies the recognition on the part of WTO Members of the need to maintain a balance of rights and obligations between the right of a Member to invoke one or another of the exceptions of Article XX, specified in paragraphs (a) to (j), on the one hand, and the substantive rights of the other Members under the GATT 1994, on

[148]Agenda 21 is replete with references to the shared view that economic development and the preservation and protection should be mutually supportive. For example, paragraph 2.3(b) of Agenda 21 states: "The international economy should provide a supportive international climate for achieving environment and development goals by … [m]aking trade and environment mutually supportive … ." Similarly, paragraph 2.9(d) states that an "objective" of governments should be: "To promote and support policies, domestic and international, that make economic growth and environmental protection mutually supportive."

[149]Preamble of the Decision on Trade and Environment.

[150]Decision on Trade and Environment.

the other hand. Exercise by one Member of its right to invoke an exception, such as Article XX(g), if abused or misused, will, to that extent, erode or render naught the substantive treaty rights in, for example, Article XI:1, of other Members. Similarly, because the GATT 1994 itself makes available the exceptions of Article XX, in recognition of the legitimate nature of the policies and interests there embodied, the right to invoke one of those exceptions is not to be rendered illusory. The same concept may be expressed from a slightly different angle of vision, thus, a balance must be struck between the *right* of a Member to invoke an exception under Article XX and the *duty* of that same Member to respect the treaty rights of the other Members. To permit one Member to abuse or misuse its right to invoke an exception would be effectively to allow that Member to degrade its own treaty obligations as well as to devalue the treaty rights of other Members. If the abuse or misuse is sufficiently grave or extensive, the Member, in effect, reduces its treaty obligation to a merely facultative one and dissolves its juridical character, and, in so doing, negates altogether the treaty rights of other Members. The chapeau was installed at the head of the list of "General Exceptions" in Article XX to prevent such far-reaching consequences.

157. In our view, the language of the chapeau makes clear that each of the exceptions in paragraphs (a) to (j) of Article XX is a *limited and conditional* exception from the substantive obligations contained in the other provisions of the GATT 1994, that is to say, the ultimate availability of the exception is subject to the compliance by the invoking Member with the requirements of the chapeau.[151] This interpretation of the chapeau is confirmed by its negotiating history.[152] The language initially proposed by the United States in 1946 for the chapeau of what would later become Article XX was unqualified and unconditional.[153] Several proposals were made during the First Session of the Preparatory Committee of the United Nations Conference on Trade and Employment in 1946 suggesting modifications.[154] In November 1946, the United Kingdom proposed that "in order to prevent abuse of the exceptions of Article 32 [which would subsequently become

[151]This view is consistent with the approach taken by the panel in *United States – Section 337 of the United States Tariff Act of 1930,* which stated:

> Article XX is entitled "General Exceptions" and … the central phrase in the introductory clause reads: "nothing in this Agreement shall be construed to prevent the adoption or enforcement … of measures…". Article XX(d) thus provides *a limited and conditional exception from obligations under other provisions*.[151] (emphasis added) Adopted 7 November 1989, BISD 365/345, para. 5.9.

[152]Article 32 of the Vienna Convention permits recourse to "supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion, in order to confirm the meaning resulting from the application of article 31, or to determine the meaning when interpretation according to article 31: (a) leaves the meaning ambiguous or obscure; or (b) leads to a result which is manifestly absurd or unreasonable." Here, we refer to the negotiating history of Article XX to confirm the interpretation of the chapeau we have reached from applying Article 31 of the Vienna Convention.

[153]The chapeau of Article 32 of the United States Draft Charter for an International Trade Organization, which formed the basis for discussions at the First Session of the Preparatory Committee of the United Nations Conference on Trade and Employment in late 1946, read, in relevant part:

> Nothing in Chapter IV of this Charter shall be construed to prevent the adoption or enforcement by any member of measures: …

[154]For example, the Netherlands, Belgium and Luxembourg stated that the exceptions should be qualified in some way:

> Indirect protection is an undesirable and dangerous phenomenon. … Many times, the stipulations to 'protect animal or plant life or health' are misused for indirect protection. It is recommended to insert a clause which prohibits expressly to direct such measures that they constitute an indirect protection or, in general, to use these measures to attain results, which are irreconsiliable [*sic*] with the aim of chapters IV, V and VI. E/PC/T/C.II/32, 30 October 1946

Article XX]", the chapeau of this provision should be qualified.[155] This proposal was generally accepted, subject to later review of its precise wording. Thus, the negotiating history of Article XX confirms that the paragraphs of Article XX set forth *limited and conditional* exceptions from the obligations of the substantive provisions of the GATT. Any measure, to qualify finally for exception, must also satisfy the requirements of the chapeau. This is a fundamental part of the balance of rights and obligations struck by the original framers of the GATT 1947.

158. The chapeau of Article XX is, in fact, but one expression of the principle of good faith. This principle, at once a general principle of law and a general principle of international law, controls the exercise of rights by states. One application of this general principle, the application widely known as the doctrine of *abus de droit*, prohibits the abusive exercise of a state's rights and enjoins that whenever the assertion of a right "impinges on the field covered by [a] treaty obligation, it must be exercised bona fide, that is to say, reasonably."[156] An abusive exercise by a Member of its own treaty right thus results in a breach of the treaty rights of the other Members and, as well, a violation of the treaty obligation of the Member so acting. Having said this, our task here is to interpret the language of the chapeau, seeking additional interpretative guidance, as appropriate, from the general principles of international law.[157]

159. The task of interpreting and applying the chapeau is, hence, essentially the delicate one of locating and marking out a line of equilibrium between the right of a Member to invoke an exception under Article XX and the rights of the other Members under varying substantive provisions (e.g., Article XI) of the GATT 1994, so that neither of the competing rights will cancel out the other and thereby distort and nullify or impair the balance of rights and obligations constructed by the Members themselves in that Agreement. The location of the line of equilibrium, as expressed in the chapeau, is not fixed and unchanging; the line moves as the kind and the shape of the measures at stake vary and as the facts making up specific cases differ.

[155]The United Kingdom's proposed text for the chapeau read:

> The undertaking in Chapter IV of this Charter relating to import and export restrictions shall not be construed to prevent the adoption or enforcement by any member of measures for the following purposes, provided that they are not applied in such a manner as to constitute a means of arbitrary discrimination between countries where the same conditions prevail, or a disguised restriction on international trade. E/PC/T/C.II/50, pp. 7 and 9; E/PC/T/C.II/54/Rev.1, 28 November 1946, p. 36.

[156]B. Cheng, *General Principles of Law as applied by International Courts and Tribunals* (Stevens and Sons, Ltd., 1953), Chapter 4, in particular, p. 125 elaborates:

> … A reasonable and bona fide exercise of a right in such a case is one which is appropriate and necessary for the purpose of the right (*i.e.*, in furtherance of the interests which the right is intended to protect). It should at the same time be *fair and equitable as between the parties* and not one which is calculated to procure for one of them an unfair advantage in the light of the obligation assumed. A reasonable exercise of the right is regarded as compatible with the obligation. But the exercise of the right in such a manner as to prejudice the interests of the other contracting party arising out of the treaty is unreasonable and is considered as inconsistent with the bona fide execution of the treaty obligation, and a breach of the treaty. …(emphasis added)

Also see, for example, Jennings and Watts (eds.), *Oppenheim's International Law*, 9th ed, Vol. I (Longman's, 1992), pp. 407-410, *Border and Transborder Armed Actions Case*, (1988) I.C.J. Rep. 105; *Rights of Nationals of the United States in Morocco Case*, (1952) I.C.J. Rep. 176; *Anglo-Norwegian Fisheries Case*, (1951) I.C.J. Rep. 142.

[157]Vienna Convention, Article 31(3)(c).

160. With these general considerations in mind, we address now the issue of whether the *application* of the United States measure, although the measure itself falls within the terms of Article XX(g), nevertheless constitutes "a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail" or "a disguised restriction on international trade". We address, in other words, whether the application of this measure constitutes an abuse or misuse of the provisional justification made available by Article XX(g). We note, preliminarily, that the application of a measure may be characterized as amounting to an abuse or misuse of an exception of Article XX not only when the detailed operating provisions of the measure prescribe the arbitrary or unjustifiable activity, but also where a measure, otherwise fair and just on its face, is actually applied in an arbitrary or unjustifiable manner. The standards of the chapeau, in our view, project both substantive and procedural requirements.

2. "Unjustifiable Discrimination"

161. We scrutinize first whether Section 609 has been applied in a manner constituting "unjustifiable discrimination between countries where the same conditions prevail". Perhaps the most conspicuous flaw in this measure's application relates to its intended and actual coercive effect on the specific policy decisions made by foreign governments, Members of the WTO. Section 609, in its application, is, in effect, an economic embargo which requires *all other exporting Members*, if they wish to exercise their GATT rights, to adopt *essentially the same* policy (together with an approved enforcement program) as that applied to, and enforced on, United States domestic shrimp trawlers. As enacted by the Congress of the United States, the *statutory* provisions of Section 609(b)(2)(A) and (B) do not, in themselves, *require* that other WTO Members adopt *essentially the same* policies and enforcement practices as the United States. Viewed alone, the statute appears to permit a degree of discretion or flexibility in how the standards for determining comparability might be applied, in practice, to other countries.[158] However, any flexibility that may have been intended by Congress when it enacted the statutory provision has been effectively eliminated in the implementation of that policy through the 1996 Guidelines promulgated by the Department of State and through the practice of the administrators in making certification determinations.

162. According to the 1996 Guidelines, certification "shall be made" under Section 609(b)(2)(A) and (B) if an exporting country's program includes a requirement that all commercial shrimp trawl vessels operating in waters in which there is a likelihood of intercepting sea turtles use, at all times, TEDs comparable in effectiveness to those used in the United States.[159] Under these Guidelines, any exceptions to the requirement of the use of TEDs must be comparable to those of the United States program.[160] Furthermore, the harvesting country must have in place a "credible enforcement

[158]Pursuant to Section 609(b)(2), a harvesting nation may be certified, and thus exempted from the import ban, if:

> (A) the government of the harvesting nation has provided documentary evidence of the adoption of a program governing the incidental taking of such sea turtles in the course of such harvesting that is comparable to that of the United States; and
>
> (B) the average rate of that incidental taking by vessels of the harvesting nation is comparable to the average rate of incidental taking of sea turtles by United States vessels in the course of such harvesting…

[159]1996 Guidelines, p. 17344.

[160]As already noted, these exceptions are extremely limited and currently include only: vessels equipped exclusively with certain special types of gear; vessels whose nets are retrieved exclusively by manual rather than mechanical means; and, in exceptional circumstances, where the National Marine Fisheries Services determines that the use of TEDs would be impracticable because of special environmental conditions, vessels

effort".[161] The language in the 1996 Guidelines is mandatory: certification "shall be made" if these conditions are fulfilled. However, we understand that these rules are also applied in an *exclusive* manner. That is, the 1996 Guidelines specify the *only* way that a harvesting country's regulatory program can be deemed "comparable" to the United States' program, and, therefore, they define the *only* way that a harvesting nation can be certified under Section 609(b)(2)(A) and (B). Although the 1996 Guidelines state that, in making a comparability determination, the Department of State "shall also take into account other measures the harvesting nation undertakes to protect sea turtles"[162], in practice, the competent government officials only look to see whether there is a regulatory program requiring the use of TEDs or one that comes within one of the extremely limited exceptions available to United States shrimp trawl vessels.[163]

163. The actual *application* of the measure, through the implementation of the 1996 Guidelines and the regulatory practice of administrators, *requires* other WTO Members to adopt a regulatory program that is not merely *comparable*, but rather *essentially the same*, as that applied to the United States shrimp trawl vessels. Thus, the effect of the application of Section 609 is to establish a rigid and unbending standard by which United States officials determine whether or not countries will be certified, thus granting or refusing other countries the right to export shrimp to the United States. Other specific policies and measures that an exporting country may have adopted for the protection and conservation of sea turtles are not taken into account, in practice, by the administrators making the comparability determination.[164]

164. We understand that the United States also applies a uniform standard throughout its territory, regardless of the particular conditions existing in certain parts of the country. The United States requires the use of approved TEDs at all times by domestic, commercial shrimp trawl vessels operating in waters where there is any likelihood that they may interact with sea turtles, regardless of the actual incidence of sea turtles in those waters, the species of those sea turtles, or other differences or disparities that may exist in different parts of the United States. It may be quite acceptable for a government, in adopting and implementing a domestic policy, to adopt a single standard applicable to all its citizens throughout that country. However, it is not acceptable, in international trade relations, for one WTO Member to use an economic embargo to *require* other Members to adopt essentially the same comprehensive regulatory program, to achieve a certain policy goal, as that in force within that Member's territory, *without* taking into consideration different conditions which may occur in the territories of those other Members.

165. Furthermore, when this dispute was before the Panel and before us, the United States did not permit imports of shrimp harvested by commercial shrimp trawl vessels using TEDs comparable in effectiveness to those required in the United States if those shrimp originated in waters of countries not certified under Section 609. In other words, *shrimp caught using methods identical to those employed in the United States* have been excluded from the United States market solely because they have been caught in waters of *countries that have not been certified by the United States*. The resulting situation is difficult to reconcile with the declared policy objective of protecting and conserving sea turtles. This suggests to us that this measure, in its application, is more concerned with effectively influencing WTO Members to adopt essentially the same comprehensive regulatory regime as that applied by the United States to its domestic shrimp trawlers, even though many of those Members may be differently situated. We believe that discrimination results not only when countries in which the same conditions prevail are differently treated, but also when the application of the measure at issue does not allow for any inquiry into the appropriateness of the regulatory program for the conditions prevailing in those exporting countries.

166. Another aspect of the application of Section 609 that bears heavily in any appraisal of justifiable or unjustifiable discrimination is the failure of the United States to engage the appellees, as well as other Members exporting shrimp to the United States, in serious, across-the-board negotiations with the objective of concluding bilateral or multilateral agreements for the protection and conservation of sea turtles, before enforcing the import prohibition against the shrimp exports of those other Members. The relevant factual finding of the Panel reads:

> … However, *we have no evidence that the United States actually undertook negotiations on an agreement on sea turtle conservation techniques which would have included the complainants before the imposition of the import ban as a result of the CIT judgement*. From the replies of the parties to our question on this subject, in particular that of the United States, we understand that the United States did not propose the negotiation of an agreement to any of the complainants until after the conclusion of negotiations on the Inter-American Convention for the Protection and Conservation of Sea Turtles, in September 1996, i.e. well after the deadline for the imposition of the import ban of 1 May 1996. Even then, it seems that the efforts made merely consisted of an exchange of documents. We therefore conclude that, in spite of the possibility offered by its legislation, the United States did not enter into negotiations before it imposed the import ban. As we consider that the measures sought by the United States were of the type that would normally require international cooperation, we do not find it necessary to examine whether parties entered into negotiations in good faith and whether the United States, absent any result, would have been entitled to adopt unilateral measures.[165](emphasis added)

167. *A propos* this failure to have prior consistent recourse to diplomacy as an instrument of environmental protection policy, which produces discriminatory impacts on countries exporting shrimp to the United States with which no international agreements are reached or even seriously attempted, a number of points must be made. First, the Congress of the United States expressly recognized the importance of securing international agreements for the protection and conservation of the sea turtle species in enacting this law. Section 609(a) *directs* the Secretary of State to:

> (1) *initiate negotiations as soon as possible for the development of bilateral or multilateral agreements with other nations* for the protection and conservation of such species of sea turtles;
> (2) *initiate negotiations as soon as possible* with all foreign governments which are engaged in, or which have persons or companies engaged in, commercial fishing operations which, as determined by the Secretary of Commerce, may affect adversely such species of sea turtles, *for the purpose of entering into bilateral and multilateral treaties with such countries to protect such species of sea turtles*;

are permitted to restrict tow-times instead of using TEDs. See the 1996 Guidelines, p. 17343. In the oral hearing, the United States informed us that the exception for restricted tow-times is no longer available.

[161]1996 Guidelines, p. 17344.

[162]*Ibid.*

[163]Statements by the United States at the oral hearing.

[164]Statement by the United States at the oral hearing.

[165]Panel Report, para. 7.56.

> (3) *encourage such other agreements* to promote the purposes of this section *with other nations* for the protection of specific ocean and land regions which are of special significance to the health and stability of such species of sea turtles;
> (4) *initiate the amendment of any existing international treaty* for the protection and conservation of such species of sea turtles to which the United States is a party *in order to make such treaty consistent with the purposes and policies of this section*; and
> (5) provide to the Congress by not later than one year after the date of enactment of this section: …
>
> (C) a full report on:
> (i) the results of his efforts under this section; …
> (emphasis added)

Apart from the negotiation of the Inter-American Convention for the Protection and Conservation of Sea Turtles[166] (the "Inter-American Convention") which concluded in 1996, the record before the Panel does not indicate any serious, substantial efforts to carry out these express directions of Congress.[167]

168. Second, the protection and conservation of highly migratory species of sea turtles, that is, the very policy objective of the measure, demands concerted and cooperative efforts on the part of the many countries whose waters are traversed in the course of recurrent sea turtle migrations. The need for, and the appropriateness of, such efforts have been recognized in the WTO itself as well as in a significant number of other international instruments and declarations. As stated earlier, the Decision on Trade and Environment, which provided for the establishment of the CTE and set out its terms of reference, refers to both the Rio Declaration on Environment and Development and Agenda 21.[168] Of particular relevance is Principle 12 of the Rio Declaration on Environment and Development, which states, in part:

> Unilateral actions to deal with environmental challenges outside the jurisdiction of the importing country should be avoided. *Environmental measures addressing transboundary or global environmental problems should, as far as possible, be based on international consensus.*(emphasis added)

In almost identical language, paragraph 2.22(i) of Agenda 21 provides:

> Governments should encourage GATT, UNCTAD and other relevant international and regional economic institutions to examine, in accordance with their respective mandates and competences, the following propositions and principles: …
>
> (i) Avoid unilateral action to deal with environmental challenges outside the jurisdiction of the importing country. *Environmental measures addressing transborder problems should, as far as possible, be based on an international consensus*.(emphasis added)

Moreover, we note that Article 5 of the Convention on Biological Diversity states:

> … each contracting party shall, as far as possible and as appropriate, cooperate with other contracting parties directly or, where appropriate, through competent international organizations, in respect of areas beyond national jurisdiction and on other matters of mutual interest, for the conservation and sustainable use of biological diversity.

The Convention on the Conservation of Migratory Species of Wild Animals, which classifies the relevant species of sea turtles in its Annex I as "Endangered Migratory Species", states:

> The contracting parties [are] convinced that conservation and effective management of migratory species of wild animals requires the concerted action of all States within the national boundaries of which such species spend any part of their life cycle.

Furthermore, we note that WTO Members in the Report of the CTE, forming part of the Report of the General Council to Ministers on the occasion of the Singapore Ministerial Conference, endorsed and supported:

> … *multilateral solutions based on international cooperation and consensus as the best and most effective way for governments to tackle environmental problems of a transboundary or global nature*. WTO Agreements and multilateral environmental agreements (MEAs) are representative of efforts of the international community to pursue *shared goals*, and in the development of a mutually supportive relationship between them, *due respect must be afforded to both*. [169] (emphasis added)

169. Third, the United States did negotiate and conclude one regional international agreement for the protection and conservation of sea turtles: The Inter-American Convention. This Convention was opened for signature on 1 December 1996 and has been signed by five countries[170], in addition to the United States, and four of these countries are currently certified under Section 609.[171] This Convention has not yet been ratified by any of its signatories. The Inter-American Convention provides that each party shall take "appropriate and necessary measures" for the protection, conservation and recovery of sea turtle populations and their habitats within such party's land territory and in maritime areas with respect to which it exercises sovereign rights or jurisdiction.[172] Such measures include, notably,

> [t]he reduction, to the greatest extent practicable, of the incidental capture, retention, harm or mortality of sea turtles in the course of fishing activities, through the appropriate regulation of such activities, as well as the development, improvement and use of appropriate gear,

[166]First written submission of the United States to the Panel, Exhibit AA.

[167]Panel Report, para. 7.56.

[168]See Decision on Trade and Environment, preamble and para. 2(b). See *Supra*, para. 154.

[169]Report (1996) of the Committee on Trade and Environment, WT/CTE/1, 12 November 1996, para. 171, Section VII of the Report of the General Council to the 1996 Ministerial Conference, WT/MIN(96)/2, 26 November 1996.

[170]Brazil, Costa Rica, Mexico, Nicaragua and Venezuela.

[171]As of 1 January 1998, Brazil was among those countries certified as having adopted programs to reduce the incidental capture of sea turtles in shrimp fisheries comparable to the United States' program. See Panel Report, para. 2.16. However, according to information provided by the United States at the oral hearing, Brazil is not currently certified under Section 609.

[172]Inter-American Convention, Article IV.1.

> devices or techniques, including the use of turtle excluder devices (TEDs) pursuant to the provisions of Annex III [of the Convention].[173]

Article XV of the Inter-American Convention also provides, in part:

> Article XV
> Trade Measures
>
> 1. *In implementing this Convention, the Parties shall act in accordance with the provisions of the Agreement establishing the World Trade Organization* (WTO), as adopted at Marrakesh in 1994, including its annexes.
>
> 2. In particular, and *with respect to the subject-matter of this Convention, the Parties shall act in accordance with the provisions of* the Agreement on Technical Barriers to Trade contained in Annex 1 of the WTO Agreement, as well as *Article XI of the General Agreement on Tariffs and Trade of 1994*. …(emphasis added)

170. The juxtaposition of (a) the *consensual* undertakings to put in place regulations providing for, *inter alia*, use of TEDs *jointly determined* to be suitable for a particular party's maritime areas, with (b) the reaffirmation of the parties' obligations under the *WTO Agreement*, including the *Agreement on Technical Barriers to Trade* and Article XI of the GATT 1994, suggests that the parties to the Inter-American Convention together marked out the equilibrium line to which we referred earlier. The Inter-American Convention demonstrates the conviction of its signatories, including the United States, that consensual and multilateral procedures are available and feasible for the establishment of programs for the conservation of sea turtles. Moreover, the Inter-American Convention emphasizes the continuing validity and significance of Article XI of the GATT 1994, and of the obligations of the *WTO Agreement* generally, in maintaining the balance of rights and obligations under the *WTO Agreement* among the signatories of that Convention.

171. The Inter-American Convention thus provides convincing demonstration that an alternative course of action was reasonably open to the United States for securing the legitimate policy goal of its measure, a course of action other than the unilateral and non-consensual procedures of the import prohibition under Section 609. It is relevant to observe that an import prohibition is, ordinarily, the heaviest "weapon" in a Member's armoury of trade measures. The record does not, however, show that serious efforts were made by the United States to negotiate similar agreements with any other country or group of countries before (and, as far as the record shows, after) Section 609 was enforced on a world-wide basis on 1 May 1996. Finally, the record also does not show that the appellant, the United States, attempted to have recourse to such international mechanisms as exist to achieve cooperative efforts to protect and conserve sea turtles[174] before imposing the import ban.

172. Clearly, the United States negotiated seriously with some, but not with other Members (including the appellees), that export shrimp to the United States. The effect is plainly discriminatory and, in our view, unjustifiable. The unjustifiable nature of this discrimination emerges clearly when

[173]Inter-American Convention, Article IV.2(h).

[174]While the United States is a party to CITES, it did not make any attempt to raise the issue of sea turtle mortality due to shrimp trawling in the CITES Standing Committee as a subject requiring concerted action by states. In this context, we note that the United States, for example, has not signed the Convention on the Conservation of Migratory Species of Wild Animals or UNCLOS, and has not ratified the Convention on Biological Diversity.

we consider the cumulative effects of the failure of the United States to pursue negotiations for establishing consensual means of protection and conservation of the living marine resources here involved, notwithstanding the explicit statutory direction in Section 609 itself to initiate negotiations as soon as possible for the development of bilateral and multilateral agreements.[175] The principal consequence of this failure may be seen in the resulting unilateralism evident in the application of Section 609. As we have emphasized earlier, the policies relating to the necessity for use of particular kinds of TEDs in various maritime areas, and the operating details of these policies, are all shaped by the Department of State, without the participation of the exporting Members. The system and processes of certification are established and administered by the United States agencies alone. The decision-making involved in the grant, denial or withdrawal of certification to the exporting Members, is, accordingly, also unilateral. The unilateral character of the application of Section 609 heightens the disruptive and discriminatory influence of the import prohibition and underscores its unjustifiability.

173. The application of Section 609, through the implementing guidelines together with administrative practice, also resulted in other differential treatment among various countries desiring certification. Under the 1991 and 1993 Guidelines, to be certifiable, fourteen countries in the wider Caribbean/western Atlantic region had to commit themselves to require the use of TEDs on all commercial shrimp trawling vessels by 1 May 1994. These fourteen countries had a "phase-in" period of three years during which their respective shrimp trawling sectors could adjust to the requirement of the use of TEDs. With respect to all other countries exporting shrimp to the United States (including the appellees, India, Malaysia, Pakistan and Thailand), on 29 December 1995, the United States Court of International Trade directed the Department of State to apply the import ban on a world-wide basis not later than 1 May 1996.[176] On 19 April 1996, the 1996 Guidelines were issued by the Department of State bringing shrimp harvested in *all* foreign countries within the scope of Section 609, effective 1 May 1996. Thus, all countries that were not among the fourteen in the wider Caribbean/western Atlantic region had only four months to implement the requirement of compulsory use of TEDs. We acknowledge that the greatly differing periods for putting into operation the requirement for use of TEDs resulted from decisions of the Court of International Trade. Even so, this does not relieve the United States of the legal consequences of the discriminatory impact of the decisions of that Court. The United States, like all other Members of the WTO and of the general community of states, bears responsibility for acts of all its departments of government, including its judiciary.[177]

174. The length of the "phase-in" period is not inconsequential for exporting countries desiring certification. That period relates directly to the onerousness of the burdens of complying with the requisites of certification and the practical feasibility of locating and developing alternative export markets for shrimp. The shorter that period, the heavier the burdens of compliance, particularly where an applicant has a large number of trawler vessels, and the greater the difficulties of re-orienting the harvesting country's shrimp exports. The shorter that period, in net effect, the heavier the influence of the import ban. The United States sought to explain the marked difference between "phase-in" periods granted to the fourteen wider Caribbean/western Atlantic countries and those allowed the rest of the shrimp exporting countries. The United States asserted that the longer time-period was justified by the then undeveloped character of TED technology, while the shorter period was later made possible by the improvements in that technology. This explanation is less than persuasive, for it does not address the administrative and financial costs and the difficulties of

[175]Section 609(a).

[176]*Earth Island Institute* v. *Warren Christopher*, 913 F. Supp. 559 (CIT 1995).

[177]See *United States - Gasoline*, adopted 20 May 1996, WT/DS2/AB/R, p. 28. Also see, for example, Jennings and Watts (eds.), *Oppenheim's International Law*, 9th ed., Vol. I (Longman's 1992), p. 545; and I. Brownlie, *Principles of Public International Law*, 4th ed. (Clarendon Press, 1990), p. 450.

governments in putting together and enacting the necessary regulatory programs and "credible enforcement effort", and in implementing the compulsory use of TEDs on hundreds, if not thousands, of shrimp trawl vessels.[178]

175. Differing treatment of different countries desiring certification is also observable in the differences in the levels of effort made by the United States in transferring the required TED technology to specific countries. Far greater efforts to transfer that technology successfully were made to certain exporting countries -- basically the fourteen wider Caribbean/western Atlantic countries cited earlier -- than to other exporting countries, including the appellees.[179] The level of these efforts is probably related to the length of the "phase-in" periods granted -- the longer the "phase-in" period, the higher the possible level of efforts at technology transfer. Because compliance with the requirements of certification realistically assumes successful TED technology transfer, low or merely nominal efforts at achieving that transfer will, in all probability, result in fewer countries being able to satisfy the certification requirements under Section 609, within the very limited "phase-in" periods allowed them.

176. When the foregoing differences in the means of application of Section 609 to various shrimp exporting countries are considered in their cumulative effect, we find, and so hold, that those differences in treatment constitute "unjustifiable discrimination" between exporting countries desiring certification in order to gain access to the United States shrimp market within the meaning of the chapeau of Article XX.

3. "Arbitrary Discrimination"

177. We next consider whether Section 609 has been applied in a manner constituting "arbitrary discrimination between countries where the same conditions prevail". We have already observed that Section 609, in its application, imposes a single, rigid and unbending requirement that countries applying for certification under Section 609(b)(2)(A) and (B) adopt a comprehensive regulatory program that is essentially the same as the United States' program, without inquiring into the appropriateness of that program for the conditions prevailing in the exporting countries.[180] Furthermore, there is little or no flexibility in how officials make the determination for certification pursuant to these provisions.[181] In our view, this rigidity and inflexibility also constitute "arbitrary discrimination" within the meaning of the chapeau.

178. Moreover, the description of the administration of Section 609 provided by the United States in the course of these proceedings highlights certain problematic aspects of the certification processes applied under Section 609(b). With respect to the first type of certification, under Section 609(b)(2)(A) and (B), the 1996 Guidelines set out certain elements of the procedures for acquiring certification, including the requirement to submit documentary evidence of the regulatory program adopted by the applicant country. This certification process also generally includes a visit by United States officials to the applicant country.[182]

179. With respect to certifications under Section 609(b)(2)(C), the 1996 Guidelines state that the Department of State "shall certify" any harvesting nation under Section 609(b)(2)(C) if it meets the criteria in the 1996 Guidelines "without the need for action on the part of the government of the harvesting nation … ."[183] Nevertheless, the United States informed us that, in all cases where a country has not previously been certified under Section 609, it waits for an application to be made before making a determination on certification.[184] In the case of certifications under Section 609(b)(2)(C), there appear to be certain opportunities for the submission of written evidence, such as scientific documentation, in the course of the certification process.[185]

180. However, with respect to neither type of certification under Section 609(b)(2) is there a transparent, predictable certification process that is followed by the competent United States government officials. The certification processes under Section 609 consist principally of administrative *ex parte* inquiry or verification by staff of the Office of Marine Conservation in the Department of State with staff of the United States National Marine Fisheries Service.[186] With respect to both types of certification, there is no formal opportunity for an applicant country to be heard, or to respond to any arguments that may be made against it, in the course of the certification process before a decision to grant or to deny certification is made. Moreover, no formal written, reasoned decision, whether of acceptance or rejection, is rendered on applications for either type of certification, whether under Section 609(b)(2)(A) and (B) or under Section 609(b)(2)(C).[187] Countries which are granted certification are included in a list of approved applications published in the Federal Register; however, they are not notified specifically. Countries whose applications are denied[188] also do not receive notice of such denial (other than by omission from the list of approved applications) or of the reasons for the denial.[189] No procedure for review of, or appeal from, a denial of an application is provided.[190]

181. The certification processes followed by the United States thus appear to be singularly informal and casual, and to be conducted in a manner such that these processes could result in the negation of rights of Members. There appears to be no way that exporting Members can be certain whether the terms of Section 609, in particular, the 1996 Guidelines, are being applied in a fair and just manner by the appropriate governmental agencies of the United States. It appears to us that, effectively, exporting Members applying for certification whose applications are rejected are denied basic fairness and due process, and are discriminated against, *vis-à-vis* those Members which are granted certification.

[178]For example, at the oral hearing, India stated that its "number of mechanized nets is estimated at about 47,000. Most of these are mechanized vessels … ."

[179]Response by the United States to questioning by the Panel; statements by the United States at the oral hearing.

[180]*Supra*, paras. 161-164.

[181]In the oral hearing, the United States stated that "as a policy matter, the United States government believes that all governments should require the use of turtle excluder devices on all shrimp trawler boats that operate in areas where there is a likelihood of intercepting sea turtles" and that "when it comes to shrimp trawling, we know of only one way of effectively protecting sea turtles, and that is through TEDs."

[182]Statement by the United States at the oral hearing.

[183]1996 Guidelines, p. 17343.

[184]Statement by the United States at the oral hearing.

[185]Statement by the United States at the oral hearing.

[186]Statement by the United States at the oral hearing.

[187]Statement by the United States at the oral hearing.

[188]We were advised at the oral hearing by the United States that these include: Australia, Pakistan and Tunisia.

[189]Statement by the United States at the oral hearing.

[190]Statement by the United States at the oral hearing.

182. The provisions of Article X:3[191] of the GATT 1994 bear upon this matter. In our view, Section 609 falls within the "laws, regulations, judicial decisions and administrative rulings of general application" described in Article X:1. Inasmuch as there are due process requirements generally for measures that are otherwise imposed in compliance with WTO obligations, it is only reasonable that rigorous compliance with the fundamental requirements of due process should be required in the application and administration of a measure which purports to be an exception to the treaty obligations of the Member imposing the measure and which effectively results in a suspension *pro hac vice* of the treaty rights of other Members.

183. It is also clear to us that Article X:3 of the GATT 1994 establishes certain minimum standards for transparency and procedural fairness in the administration of trade regulations which, in our view, are not met here. The non-transparent and *ex parte* nature of the internal governmental procedures applied by the competent officials in the Office of Marine Conservation, the Department of State, and the United States National Marine Fisheries Service throughout the certification processes under Section 609, as well as the fact that countries whose applications are denied do not receive formal notice of such denial, nor of the reasons for the denial, and the fact, too, that there is no formal legal procedure for review of, or appeal from, a denial of an application, are all contrary to the spirit, if not the letter, of Article X:3 of the GATT 1994.

184. We find, accordingly, that the United States measure is applied in a manner which amounts to a means not just of "unjustifiable discrimination", but also of "arbitrary discrimination" between countries where the same conditions prevail, contrary to the requirements of the chapeau of Article XX. The measure, therefore, is not entitled to the justifying protection of Article XX of the GATT 1994. Having made this finding, it is not necessary for us to examine also whether the United States measure is applied in a manner that constitutes a "disguised restriction on international trade" under the chapeau of Article XX.

185. In reaching these conclusions, we wish to underscore what we have *not* decided in this appeal. We have *not* decided that the protection and preservation of the environment is of no significance to the Members of the WTO. Clearly, it is. We have *not* decided that the sovereign nations that are Members of the WTO cannot adopt effective measures to protect endangered species, such as sea turtles. Clearly, they can and should. And we have *not* decided that sovereign states should not act together bilaterally, plurilaterally or multilaterally, either within the WTO or in other international fora, to protect endangered species or to otherwise protect the environment. Clearly, they should and do.

186. What we *have* decided in this appeal is simply this: although the measure of the United States in dispute in this appeal serves an environmental objective that is recognized as legitimate under paragraph (g) of Article XX of the GATT 1994, this measure has been applied by the United States in a manner which constitutes arbitrary and unjustifiable discrimination between Members of the WTO, contrary to the requirements of the chapeau of Article XX. For all of the specific reasons outlined in this Report, this measure does not qualify for the exemption that Article XX of the GATT 1994 affords to measures which serve certain recognized, legitimate environmental purposes but which, at the same time, are not applied in a manner that constitutes a means of arbitrary or unjustifiable

[191]Article X:3 states, in part:

> (a) Each Member shall administer in a uniform, impartial and reasonable manner all its laws, regulations, decisions and rulings of the kind described in paragraph 1 of this Article.
>
> (b) Each Member shall maintain, or institute as soon as practicable, judicial, arbitral or administrative tribunals or procedures for the purpose, inter alia, of the prompt review and correction of administrative action relating to customs matters … .

discrimination between countries where the same conditions prevail or a disguised restriction on international trade. As we emphasized in *United States – Gasoline*, WTO Members are free to adopt their own policies aimed at protecting the environment as long as, in so doing, they fulfill their obligations and respect the rights of other Members under the *WTO Agreement*.[192]

VII. Findings and Conclusions

187. For the reasons set out in this Report, the Appellate Body:

(a) reverses the Panel's finding that accepting non-requested information from non-governmental sources is incompatible with the provisions of the DSU;

(b) reverses the Panel's finding that the United States measure at issue is not within the scope of measures permitted under the chapeau of Article XX of the GATT 1994, and

(c) concludes that the United States measure, while qualifying for provisional justification under Article XX(g), fails to meet the requirements of the chapeau of Article XX, and, therefore, is not justified under Article XX of the GATT 1994.

188. The Appellate Body *recommends* that the DSB request the United States to bring its measure found in the Panel Report to be inconsistent with Article XI of the GATT 1994, and found in this Report to be not justified under Article XX of the GATT 1994, into conformity with the obligations of the United States under that Agreement.

I. Introduction

1. Malaysia appeals from certain issues of law and legal interpretations in the Panel Report, *United States – Import Prohibition of Certain Shrimp and Shrimp Products, Recourse to Article 21.5 of the DSU by Malaysia* (the "Panel Report").[1] In accordance with Article 21.5 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU"), Malaysia requested that the Dispute Settlement Body (the "DSB") refer to a panel its complaint with respect to whether the United States had complied with the recommendations and rulings of the DSB in *United States – Import Prohibition of Certain Shrimp and Shrimp Products* ("*United States – Shrimp*").

2. The background to this dispute is set out in detail in the Panel Report.[2] On 6 November 1998, the DSB adopted the reports of the original panel and the Appellate Body in *United States – Shrimp*.[3] The DSB recommended that the United States bring its import prohibition into conformity with its obligations under the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*"). On 6 December 1999, the period of time for implementation established by the parties under Article 21.3(b) of the DSU expired.[4] At the DSB meeting of 23 October 2000, Malaysia informed the DSB that it was not satisfied that the United States had complied with the

[3]Appellate Body Report, WT/DS58/AB/R, adopted 6 November 1998; original panel report, WT/DS58/R and Corr.1, as modified by the Appellate Body Report, WT/DS58/AB/R, adopted 6 November 1998.

[4]WT/DS58/15, 15 July 1999.

recommendations and rulings of the DSB, and announced that it wished to seek recourse to a panel under Article 21.5 of the DSU.[5] The DSB referred the matter to the original panel.

3. Malaysia's complaint relates to a measure taken by the United States in the form of an import prohibition to protect and conserve certain species of sea turtles, considered to be an endangered species. This original measure, Section 609 of the United States Public Law 101-162 ("Section 609"), and its application are described in detail in the Appellate Body Report in *United States – Shrimp*.[6] The Appellate Body found that Section 609 was provisionally justified under Article XX(g) of the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994"). In implementing the recommendations and rulings of the DSB, the United States did not amend Section 609, with the result that the import prohibition is still in effect. However, the United States Department of State issued the Revised Guidelines for the Implementation of Section 609 of Public Law 101-162 Relating to the Protection of Sea Turtles in Shrimp Trawl Fishing Operations (the "Revised Guidelines").[7] These Revised Guidelines replace the guidelines issued in April 1996 that were part of the original measure. This dispute between Malaysia and the United States arises in relation to the import prohibition of shrimp and shrimp products provided for by Section 609, and its application by the United States.

4. Section 609, the Revised Guidelines, and their application, are described in the Panel Report.[8] In the following paragraphs, we set out those aspects of the Revised Guidelines that are pertinent to the consideration of the issues raised in this appeal.

5. Section 609(b)(2) provides that the import prohibition on shrimp does not apply to harvesting nations that are "certified" according to criteria set by the United States. The Revised Guidelines set forth the criteria for certification. The stated goal of the programme set out in the Revised Guidelines is the same as that set out in the programme of the original guidelines, namely, to protect endangered sea turtle populations from further decline by reducing their incidental mortality in commercial shrimp trawling. A central element of the United States programme is that commercial shrimp trawlers are required to use Turtle Excluder Devices ("TEDs") approved in accordance with standards established by the United States National Marine Fisheries Service. Where the government of a harvesting country seeks certification on the basis of having adopted a programme that is based on TEDs, certification will be granted if this government's programme includes a requirement that commercial shrimp trawlers use TEDs that are "*comparable in effectiveness*" to those used in the United States, and a credible enforcement effort that includes monitoring for compliance.[9]

6. Under the original guidelines, the practice of the Department of State was to certify countries *only after* they had shown that they required the use of TEDs. Under the Revised Guidelines, countries may apply for certification even if they do not require the use of TEDs. In such cases, a harvesting country has to demonstrate that it has implemented, and is enforcing, a "*comparably effective*" regulatory programme to protect sea turtles without the use of TEDs. The Department of State is required "to take fully into account any demonstrated differences between the shrimp fishing

[5]Malaysia's recourse to a panel was also in accordance with a bilateral agreement it had concluded with the United States in respect of the procedures to be followed under Articles 21.5 and 22 of the DSU. *See*, WT/DS58/16, 12 January 2000.

[8]Panel Report, paras. 2.5 – 2.11 and 2.22 – 2.32.

[9]Panel Report, para. 2.25.

conditions in the United States and those in other nations, as well as information available from other sources."[10]

7. An exporting country may also be certified if its shrimp fishing environment does not pose a threat of incidental capture of sea turtles. The Revised Guidelines provide that the Department of State shall certify a harvesting country pursuant to Section 609 if it meets any of the following criteria: the relevant species of sea turtles do not occur in waters subject to that country's jurisdiction; in that country's waters, shrimp is harvested exclusively by means that do not pose a threat to sea turtles, for example, any country that harvests shrimp exclusively by artisanal means; or, commercial shrimp trawling operations take place exclusively in waters in which sea turtles do not occur.[11]

8. Before the Panel, Malaysia argued that the United States had failed to comply with the recommendations and rulings of the DSB, and that, consequently, the United States continued to violate its obligations under the GATT 1994. In its Report circulated on 15 June 2001, the Panel found as follows:

> (a) [t]he measure adopted by the United States in order to comply with the recommendations and rulings of the DSB violates Article XI.1 of the GATT 1994;
>
> (b) in light of the recommendations and rulings of the DSB, Section 609 of Public Law 101-162, as implemented by the Revised Guidelines of 8 July 1999 and as applied so far by the [United States] authorities, is justified under Article XX of the GATT 1994 as long as the conditions stated in the findings of this Report, in particular the ongoing serious good faith efforts to reach a multilateral agreement, remain satisfied.[12]

9. The Panel urged "Malaysia and the United States to cooperate fully in order to conclude as soon as possible an agreement which will permit the protection and conservation of sea turtles to the satisfaction of all interests involved and taking into account the principle that States have common but differentiated responsibilities to conserve and protect the environment."[13] (footnote omitted)

10. On 23 July 2001, Malaysia notified the DSB of its intention to appeal certain issues of law covered in the Panel Report and certain legal interpretations developed by the Panel, pursuant to paragraph 4 of Article 16 of the DSU, and filed a Notice of Appeal pursuant to Rule 20 of the *Working Procedures for Appellate Review* (the "*Working Procedures*"). On 2 August 2001, Malaysia filed its appellant's submission.[14] On 17 August 2001, the United States filed an appellee's submission.[15] On the same day, Australia, the European Communities, Hong Kong, China, India, Japan, Mexico and Thailand each filed a third participant's submission.[16]

11. On 13 August 2001, the United States requested that the Division hearing this appeal change the date of the oral hearing set out in the working schedule for this appeal. After inviting the participants to make their views known with respect to this request, the Division ruled that it would not change the date of the oral hearing. Accordingly, the oral hearing in the appeal was held on 4 September 2001. The participants and third participants presented oral arguments and responded to questions put to them by the Members of the Division.

II. Arguments of the Participants and the Third Participants

A. *Claims of Error by Malaysia – Appellant*

1. Terms of Reference

12. Malaysia submits that the Panel erred in its examination of the new measure taken by the United States to comply with the recommendations and rulings of the DSB in *United States – Shrimp.*

13. Malaysia submits that it is a legal principle that an implementing measure must be examined for conformity with the covered agreements rather than for conformity with the recommendations and rulings of the DSB. This principle is borne out in the case in *Canada – Measures Affecting the Export of Civilian Aircraft – Recourse by Brazil to Article 21.5 of the DSU* ("*Canada – Aircraft (21.5)*")[17], where the Appellate Body held that the scope of Article 21.5 dispute settlement proceedings is not limited to the issue of whether or not a WTO Member has implemented the recommendations and rulings of the DSB. The Appellate Body ruled that the task of the panel was to determine whether the new measure is consistent with the disputed provisions of the *WTO Agreement*.

14. Malaysia submits that, in carrying out its review under Article 21.5 of the DSU, a panel is not confined to examining the "measure taken to comply" only from the perspective of the claims, arguments and factual circumstances that relate to the measure that was the subject of the original proceedings. Although these may have some relevance in proceedings under Article 21.5 of the DSU, Malaysia submits that Article 21.5 proceedings involve, in principle, not the original measure, but rather a new and different measure that was not before the original panel. In Malaysia's view, the utility of the review envisaged under Article 21.5 of the DSU would be seriously undermined if a panel were restricted to examining the new measure from the perspective of the claims, arguments and factual circumstances that related to the original measure.

15. Malaysia argues that the Panel erred in its treatment of the Appellate Body Report in *United States – Shrimp*. First, Malaysia asserts that in relying solely on the reasoning of the Appellate Body, the Panel has in fact relied on the claims and arguments brought by the parties that related to the original measure. Second, Malaysia argues that the Panel erred in treating the Appellate Body

[15] Pursuant to Rule 22 of the *Working Procedures*.

[16] Pursuant to Rule 24 of the *Working Procedures*. Ecuador, a third party in the proceedings before the Panel, did not file a third participant's submission, but requested permission to attend the oral hearing as a "passive observer". After consulting the participants and third participants, the Division hearing this appeal granted Ecuador permission to attend the oral hearing in this capacity.

[17] Appellate Body Report, WT/DS70/AB/RW, adopted 4 August 2000.

Report in *United States – Shrimp* as having proposed alternative courses of conduct or alternative measures as *conditions* which, if fulfilled, would necessarily render the implementing measure consistent with the relevant covered agreement. In Malaysia's view, the alternative courses of conduct or alternative measures referred to by the Appellate Body were *dicta*, and, therefore, the Panel erred in interpreting these *dicta* as positive conditions for determining GATT-consistency.

2. The Chapeau of Article XX of the GATT 1994

16. Malaysia appeals certain of the Panel's conclusions under the chapeau of Article XX of the GATT 1994. In particular, Malaysia submits that the Panel erred in considering the obligation of the United States as an obligation to *negotiate*, as opposed to an obligation to *conclude* an international agreement.

17. Malaysia notes that the Appellate Body made pertinent observations and comments in its analysis of the chapeau of Article XX of the GATT 1994 with respect to "arbitrary or unjustifiable discrimination". In its treatment of "unjustifiable discrimination" the Appellate Body stated "[a]nother aspect of the application of Section 609 that bears heavily in any appraisal of justifiable or unjustifiable discrimination is the failure of the United States to engage the appellees, as well as other Members exporting shrimp to the United States, in serious, across-the-board negotiations with the objective of concluding bilateral or multilateral agreements for the protection and conservation of sea turtles, before enforcing the import prohibition against the shrimp exports of those other Members".[18] In Malaysia's view, these remarks of the Appellate Body emphasize the need for the *conclusion* of an international agreement.

18. Malaysia submits that these remarks of the Appellate Body constitute *dicta*. The Panel misunderstood these remarks to mean that alternative actions, in particular a demonstration of prior good faith negotiation, would "insulate" a unilateral measure from being characterized as "unjustifiable discrimination". It is further submitted that in the context of the new measure, the Panel failed to examine whether, in the circumstances, the United States acted in a manner constituting "unjustifiable discrimination".

19. Malaysia further contends that if the conclusion of the Panel is allowed to stand, it will lead to the "incongruous" result that any WTO Member would be able to offer to negotiate in good faith an agreement incorporating its "unilaterally defined standards" before claiming that its measure is justified under the pertinent exceptions of Article XX of the GATT 1994. According to Malaysia, the conclusion of the Panel will thus lead to the result that if a WTO Member fails to *conclude* an agreement, it could still claim that its application of a unilateral measure does not constitute "unjustifiable discrimination".

20. In addition, Malaysia submits that the Panel erred in concluding that the Inter-American Convention for the Protection and Conservation of Sea Turtles (the "Inter-American Convention") can reasonably be considered as a benchmark of what can be achieved through multilateral negotiations in the field of protection and conservation. The Panel did not provide any reasoning for taking this view. The Appellate Body cited the Inter-American Convention merely as an "example" of efforts made by the United States to reach a multilateral solution in relation to the conservation of sea turtles. In no sense was that convention considered as a "legal standard" by the Appellate Body. Moreover, the Appellate Body stated that one of the obligations which the United States had to fulfill in order to avoid "unjustifiable discrimination" was to engage in serious efforts to negotiate in good faith *before* the enforcement of a "unilateral" import prohibition.

[18]Appellate Body Report, *United States – Shrimp*, *supra*, footnote 3, para. 166.

21. Malaysia submits that the Panel's legal interpretation is erroneous because the United States had not proven that the unilateral and non-consensual procedures of the import prohibition had been eliminated. On the contrary, the ongoing negotiations on the Memorandum of Understanding on the Conservation and Management of Marine Turtles and their Habitats of the Indian Ocean and South-East Asian Region (the "South-East Asian MOU") demonstrated that an alternative and less trade restrictive course of action for securing the legitimate goals of the United States measure, was available. The logical consequence of the above argument is that the negotiations are underway, and, therefore, the import prohibition should be lifted.

22. Malaysia also appeals the Panel's conclusions under the heading "[m]easures comparable in effectiveness to the United States measure". Malaysia submits that the Appellate Body spoke of measures comparable in effectiveness to the United States measures in the context of illustrating the difference between the design and the application of the original measure.[19] The Appellate Body noted that while the design of the measure permitted certification of countries with measures comparable in effectiveness to United States measures, this was not the way in which the measure was applied in fact. The Panel misread this observation of the Appellate Body to mean that a measure requiring that exporting countries adopt regulatory programmes that are comparable in effectiveness to that of an importing country could not constitute "unjustifiable discrimination".

23. Malaysia contends that the Appellate Body did not accept the legitimacy of "comparable measures" – either implicitly or otherwise. Rather, it was merely describing the intended operation of the original measure. This is evident, *inter alia*, from the fact that the term "comparable in effectiveness" is the language of the 1996 Guidelines, which implemented the original measure. The Appellate Body was in no way authorizing importing Members to impose unilateral measures conditioning market access on an exporting Member having measures "comparable in effectiveness" to their own measures. The Panel, therefore, erred in assuming that the new measure, which imposed this requirement of measures "comparable in effectiveness to the United States regulatory programme", could not constitute unjustifiable discrimination.

24. Malaysia also submits that the Panel erred in finding that the Revised Guidelines allowed for *flexibility*, as they take account of situations where sea turtles are not endangered by shrimp trawling. Malaysia submits that the Revised Guidelines address only the incidental capture of sea turtles in the course of shrimp trawl harvesting. Close scrutiny of the Revised Guidelines discloses that they do not address the fact that the same conditions do not prevail in Malaysia. Malaysia does not practise shrimp trawling and the incidental capture of sea turtles in Malaysian waters is due to fish trawling and not shrimp trawling. Thus the Revised Guidelines fail to take into account the specific conditions prevailing in Malaysia and they, therefore, violate the chapeau of Article XX of the GATT 1994.

25. Malaysia appeals the Panel's treatment of the decision of the United States Court of International Trade (the "CIT") in *Turtle Island Restoration Network, et al. v. Robert L. Mallett, et al.*[20] (the "*Turtle Island* case"). Malaysia is of the view that, in declining to consider this decision, the Panel erred in taking the view that municipal law is insulated from scrutiny by panels. Malaysia submits that had the Panel scrutinized the decision in the *Turtle Island* case, and assessed the likelihood and consequences of the Revised Guidelines being modified in the future, it would have found that the "unjustifiable discrimination" under the chapeau of Article XX of the GATT 1994 has not been eliminated.

[19]Appellate Body Report, *United States – Shrimp*, *supra*, footnote 3, para. 163.

[20]110 Fed. Supp. 2d 1005 (CIT, 2000).

26. Finally, Malaysia requests that the Appellate Body recommend that the import prohibition be lifted so as to give effect to the recommendations and rulings of the DSB as per the Appellate Body Report.

B. *Arguments of the United States – Appellee*

1. Terms of Reference

27. The United States submits that Malaysia's argument that the Panel failed to apply the correct scope of review in accordance with Article 21.5 of the DSU is without merit. Malaysia's reliance in this regard on the Appellate Body Report in *Canada – Aircraft (21.5)* is misplaced. The issue in that appeal was whether the Panel's review was limited to issues considered in the original panel and Appellate Body proceedings. The Appellate Body found that the DSU imposed no such limitation. In the present case, however, the Panel's scope of review was fully consistent with the Appellate Body findings in *Canada – Aircraft (21.5)*.

28. The United States observes that the Panel in this case quoted at length from the Appellate Body Report in *Canada – Aircraft (21.5)*. The Panel then concluded that it was fully entitled to address *all* the claims of Malaysia under Article XI and Article XX of the GATT 1994, whether or not these claims, the arguments and the facts supporting them were made before the original panel and the Appellate Body proceedings.

29. The United States argues that Malaysia's argument is based solely on the Panel's use of the phrase "recommendations and rulings of the DSB". In the view of the United States, the Panel's use of the phrase "complied with the recommendations and rulings of the DSB", is entirely appropriate, and indicates no limitation in its scope of review. In the context of this case, the recommendations and rulings of the DSB are that the United States "bring its measure … into conformity with the obligations of the United States under [the GATT 1994]". The GATT 1994 is the only covered agreement at issue in the dispute.

2. The Chapeau of Article XX of the GATT 1994

30. The United States submits that the Panel correctly found that the United States has remedied the aspect of discrimination relating to differences in efforts to negotiate a bilateral or multilateral agreement. In its previous ruling in *United States - Shrimp*, the Appellate Body found that certain aspects of the application of Section 609, in their "cumulative effect", amounted to unjustifiable discrimination between countries where the same conditions prevail. One of those aspects related to efforts to negotiate. The Appellate Body then cited, and relied upon, the factual findings of the original panel concerning the absence of serious efforts of the United States to negotiate a conservation agreement with the complaining WTO Members.

31. The United States contends that it has proceeded to remedy this aspect of unjustifiable discrimination identified by the Appellate Body. In particular, the United States has made substantial efforts to negotiate a sea turtle conservation agreement in the Indian Ocean and South-East Asia region. The Panel found that these efforts did remedy this aspect of unjustifiable discrimination.

32. The United States submits that Malaysia does not contest the core findings of the Panel, namely, that the United States has engaged in serious, good faith efforts to negotiate a sea turtle conservation agreement with the countries in the Indian Ocean and South-East Asia region. The Panel considered whether the United States had addressed the effort-to-negotiate aspect of "unjustifiable discrimination" identified by the Appellate Body, and properly found that the United States had indeed remedied this aspect of discrimination.

33. The United States submits that, instead of addressing the pertinent findings of the Panel, Malaysia makes a number of arguments that are either based on mischaracterization of the Panel

Report, or that amount to a request for a reversal of the key findings of the Appellate Body Report in *United States – Shrimp*. Malaysia argues that the Panel found that "a demonstration of prior good faith negotiation would insulate a unilateral measure from being characterized as unjustifiable discrimination."[21] In the United States view, this argument fails to take into account the context of the Panel's discussions of efforts to negotiate, and thus amounts to a mischaracterization of the findings of the Panel.

34. The United States submits that the discussions by the Appellate Body and the Panel concerning negotiations arise in the context of applying the Article XX chapeau to the specific facts of this case. The language of the chapeau of Article XX requires that the WTO Member imposing the measure demonstrates that a measure is not applied in a manner that constitutes a means of unjustifiable discrimination. In the view of the United States, no single aspect of the application of the measure can, as Malaysia puts it, "insulate" the measure from an examination of other aspects of alleged discrimination.

35. The United States contends that it has addressed the "unjustifiable discrimination" test of the chapeau by making the *prima facie* case that the United States measure does not result in unjustifiable discrimination between countries where the same conditions prevail. In particular, in the original panel and Appellate Body proceedings, the United States showed the absence of any "unjustifiable discrimination between countries where the same conditions prevail" by demonstrating that it applies the import restrictions even-handedly with respect to all countries that engage in shrimp trawl fishing in waters inhabited by endangered sea turtles.

36. The United States notes Malaysia's argument that the Panel "erred" in concluding that the Inter-American Convention on sea turtle conservation "can reasonably be considered as a benchmark of what can be achieved through multilateral negotiations."[22] The United States submits that Malaysia has cited the Panel Report out of context. The Panel properly considered the United States efforts to negotiate for the purpose of determining whether the United States had remedied this aspect of discrimination identified by the Appellate Body. In this context, the Panel examined the efforts to negotiate involved in concluding the Inter-American Convention, and compared them with the efforts made by the United States to negotiate a sea turtle conservation agreement for the Indian Ocean and South-East Asia region. It was only in this sense that the Panel considered the Inter-American Convention to be a "benchmark".

37. Regarding Malaysia's argument that the Panel erred in finding the United States measure to be consistent with the *WTO Agreement* because "the United States had not proven that the unilateral and non-consensual procedures of the import prohibition had been eliminated", the United States submits that this argument runs counter to the finding in the Appellate Body Report reaffirming that nothing in the text of Article XX requires the elimination of a measure simply by virtue of it being "unilateral".

38. The United States refers to Malaysia's argument that the Panel erred in finding the United States measure to be consistent with the *WTO Agreement* because the Indian Ocean and South-East Asia negotiations constitute an "alternative course of action for securing the legitimate goals of the United States measure which was less restrictive." According to the United States, this argument is based on the flawed premise that a WTO Member must exhaust all possibilities for achieving its goals in other ways. The *WTO Agreement* contains no such requirement, and the Appellate Body made no such finding.

[21]Malaysia's appellant's submission, para. 3.11.

[22]Malaysia's appellant's submission, para. 3.13.

39. The United States submits that the Panel was correct in finding that the United States had remedied the aspect of unjustifiable discrimination identified in the Appellate Body Report relating to flexibility and consideration of local conditions.

40. The Appellate Body found that the most conspicuous flaw in the application of Section 609 was an apparent requirement that all other exporting Members adopt essentially the same policy as that applied to domestic shrimp trawlers of the United States. The Appellate Body noted that the statutory provisions of Section 609 do not, in themselves, require that other WTO Members adopt essentially the same policies and enforcement practices as the United States, but that the guidelines then in effect appeared to lack flexibility. The Appellate Body also found that the guidelines did not appear to allow for flexibility in the consideration of different conditions that may exist in different harvesting nations.

41. The United States argues that Malaysia does not take issue with the Panel's analysis of the language in the Revised Guidelines. In addition, Malaysia did not seek to test the flexibility of the guidelines in practice by seeking certification of the Malaysian programme for conserving sea turtles in shrimp trawl fisheries.

42. The United States refers to Malaysia's argument that the Revised Guidelines do not address Malaysia's claim that "Malaysia does not practise shrimp trawling and the incidental catch of sea turtles is due to fish trawling and not shrimp trawling."[23] According to the United States, this "vague, undeveloped argument" does not rebut the *prima facie* case that the revised United States guidelines do in fact allow for flexibility and consideration of local conditions.

43. In the view of the United States, Malaysia's argument that the Panel "erred in taking the view that the issue of municipal law is insulated from scrutiny by panels" mischaracterizes the Panel's findings, and is without merit. The Panel considered the record before it, and properly concluded that under the Revised Guidelines, the importation of shrimp harvested by vessels using TEDs is allowed, even if the exporting nation has not been certified pursuant to Section 609.

44. With respect to the *Turtle Island* case, the United States submits that Malaysia does not present any arguments as to why the Panel was incorrect in its reasoning with respect to the relevant domestic law. As the Panel noted, the domestic court expressly declined to order any change in the Revised Guidelines, and those provisions of the Revised Guidelines that allow the importation of TED-caught shrimp from non-certified countries remain in effect.

C. *Arguments of the Third Participants*

1. Australia

(a) Terms of Reference

45. Australia submits that, in accordance with the provisions of Article 21.5 of the DSU, a panel is required to examine the consistency with a covered agreement of measures taken to comply with the recommendations and rulings of the DSB. This requires the relevant panel to conduct a fresh factual and legal analysis of the revised or new measure.

46. It is Australia's view that the Panel in this case did not examine the measures taken to comply on that basis. Had it done so, Australia submits that the Panel would not have had sufficient grounds

[23]Malaysia's appellant's submission, para. 3.21.

to arrive at the finding that Section 609 of Public Law 101-162, as implemented by the Revised Guidelines of 8 July 1999 and as applied so far by the United States authorities, is justified under Article XX of the GATT 1994.

(b) The Chapeau of Article XX of the GATT 1994

47. Australia argues that the Panel erred in its conclusion that engagement by the United States in good faith negotiations would, in itself, necessarily be sufficient to meet the requirement of the chapeau of Article XX that its measure not be applied in a manner involving unjustifiable discrimination. This approach is inconsistent with the text of the chapeau of Article XX, and misapplies the reasoning of the Appellate Body Report.

48. Australia is of the view that the Panel misconstrued the Appellate Body findings, and the requirements of the chapeau of Article XX, in concluding that the United States would be entitled to maintain the implementing measure if it were demonstrated that it was making serious, good faith efforts to conclude an international agreement on the protection and conservation of sea turtles. This interpretation would seriously impair the delicate balance of rights and obligations embodied in Article XX and open the door for WTO Members to justify unilaterally-imposed trade restrictions simply on the basis of simultaneous entry into international negotiations. Article XX does not proscribe unilateral trade restrictions, but a reasonable degree of limitation must be imposed on their use – in line with the wording of the chapeau – if the balance of rights and obligations is to be preserved.

49. Australia submits that it is for the United States to demonstrate what serious, good faith efforts it had undertaken to obviate or eliminate the unjustifiably discriminatory nature of the ban – including in the design, extent and implementation of the measure. The progress of the Indian Ocean initiative has demonstrated the existence of a viable, non-discriminatory alternative to the unilateral import restriction. Given this progress, the United States has not established why its unilateral import restriction is no longer a form of unjustifiable discrimination.

50. Australia argues that the Panel did not ensure that the United States effectively met its burden of proof in seeking to justify its measure pursuant to Article XX. In particular, the United States did not prove that its measure was consistent with the requirements of the chapeau of Article XX. The fact that the United States did not present sufficient evidence to demonstrate that the measure was not a means of unjustifiable discrimination meant that the Panel could not have found that the United States measure met the requirements of the chapeau.

2. European Communities

(a) Terms of Reference

51. The European Communities submits that, given that measures taken to comply with the recommendations and rulings of the DSB are, by definition, new and different measures that may be inconsistent with provisions of the *WTO Agreement* that were not examined by the original panel, it is correct that a panel acting pursuant to Article 21.5 of the DSU will, as a consequence, have to address a new and different factual and legal situation.

52. However, the European Communities submits that all panels are bound by their terms of reference that are determined, pursuant to Article 7.1 of the DSU, by the "request for the establishment of a panel". The European Communities observes that, in its "request for the establishment of a panel", Malaysia referred only to the GATT 1994, and to the recommendations

and rulings of the DSB. On the basis of Malaysia's "request for the establishment of a panel", and on its subsequent submissions, the Panel found that the claims of Malaysia are exclusively based on the findings of the Appellate Body and on non-compliance with them. Malaysia does not make any new claim under Article XX.

53. Given that the terms of reference of a panel "established" pursuant to Article 21.5 of the DSU are based on the same claims and legal bases as the terms of reference of the original panel, the Panel's treatment of Malaysia's complaint pursuant to Article 21.5 of the DSU does not appear to be in error. The Panel was not at liberty to examine other issues.

(b) The Chapeau of Article XX of the GATT 1994

54. The European Communities believes that international cooperation and negotiation must be preferred over unilateral action, particularly in the area of the protection of the environment, for all the reasons set out in the original Appellate Body Report. The European Communities emphasizes that international cooperation by its own nature is a process and not a result. Such cooperation is necessarily based on reciprocal efforts to resolve a common concern in the mutual interest.

55. Under the circumstances of the present case, it appears to the European Communities that international cooperation requires as a minimum the exchange of data and readily available scientific knowledge between all interested parties. Under the Revised Guidelines, the United States would admit Malaysian shrimp to the United States market provided that Malaysia shows, on the basis of relevant data, that either its turtle conservation programme is "comparable in effectiveness" to the conservation method chosen by the United States or, in the alternative, that such conservation methods are unnecessary under the conditions prevailing in the waters in which Malaysia's trawlers are operating. The United States is thus apparently seeking Malaysia's participation in international cooperation in the form of an exchange of available data.

56. The application of the new measure has become more flexible in comparison with the application of the original measure, and this is the basis for the Panel's finding that the contested United States measure is currently not in conflict with the prohibition of "unjustifiable discrimination" under the chapeau of Article XX of the GATT 1994.

57. With respect to the *Turtle Island* case, the European Communities submits that the Panel correctly concluded that it was not for it to second-guess the outcome of a domestic dispute on the correct interpretation of a United States statute where a certain interpretation had been chosen by a domestic court, and that interpretation was challenged by the United States administration on appeal in the domestic courts.

58. The European Communities contends that it flows from the findings of the Panel that the ruling of the domestic court did not oblige the United States to violate its WTO obligations under the circumstances of the present case, particularly because the ruling was not final and because requests for interim relief were rejected. This appears to be a correct reading of the situation under the domestic law of the United States. In particular, the Revised Guidelines continue to be fully applied and therefore represent the situation that prevails under United States law.

59. In conclusion, the European Communities reiterates its position before the Panel that the complaint by Malaysia in this case is somewhat premature. Malaysia has not yet applied for certification. It is, therefore, not yet clear how the contested legislation would apply to imports of shrimp and shrimp products from Malaysia.

3. Hong Kong, China

(a) Terms of Reference

60. Hong Kong, China recalls that in its submission to the Panel, it expressed the view that the issue before a panel acting pursuant to Article 21.5 of the DSU is whether a new measure is in itself consistent with the *WTO Agreement*, particularly with the specific provisions with which the original panel or Appellate Body found the original measure inconsistent.

61. In the view of Hong Kong, China, panels should limit their review to the new measure, that is the measure adopted after the original panel (or the Appellate Body, as the case may be) has pronounced on the WTO-inconsistency; examine the new measure's consistency with the *WTO Agreement*; and further, examine to what extent the WTO Member has adequately implemented the recommendations and rulings of the original panel or the Appellate Body in adopting the new measure.

62. With respect to the judgment of the CIT in the *Turtle Island* case, Hong Kong, China, notes that in the absence of a clear mandate given to international adjudicating bodies, they commonly interpret only international law and treat domestic law, whenever warranted, as a factual matter. The same approach seemed to have been adopted by the Panel in the present case. Accordingly, Hong Kong, China, is of the view that the Panel was not called upon to speculate on the results of the appeal of the CIT judgment and make a ruling on that basis. Further, Hong Kong, China is mindful that the CIT decision is under appeal and it could be upheld by the highest domestic United States court.

4. India

(a) Terms of Reference

63. India submits that, as the measures taken to comply with the recommendations and rulings of the DSB are, by definition, new and different measures, it is possible that the new implementing measures could be inconsistent with provisions of WTO covered agreements that were not examined by the original panel. Therefore, a panel "established" under Article 21.5 of the DSU would have to address a new and different factual and legal situation. India, therefore, agrees with Malaysia that a correct reading of Article 21.5 of the DSU required the Panel to examine the alleged inconsistency also with regard to WTO provisions that were not relevant for the resolution of the dispute in the original proceedings.

64. With respect to the *Turtle Island* case, India agrees with Malaysia that the Panel erroneously refrained from examining municipal law by treating it as a fact. In order to evaluate the WTO-consistency of municipal law, the interpretation given by a domestic court is of prime importance. India also concurs with Malaysia that the United States bears responsibility for the actions of all branches of its government, including the judiciary. The CIT is a judicial organ of the United States. Its interpretation that Section 609 did not permit the import of TED-caught shrimp from non-certified countries should be treated as an authoritative interpretation of United States law. In the light of the Appellate Body's finding in *United States – Shrimp*, the Panel should have concluded that Section 609 was inconsistent with the chapeau of Article XX of the GATT 1994.

5. Japan

(a) The Chapeau of Article XX of the GATT 1994

65. Japan is of the view that as the provisions in Article XX of the GATT 1994 are "exceptions" to the basic principles of the GATT 1994, they should be applied in a strict manner. This applies especially when a unilateral measure is claimed to be justified under this Article.

66. Although Japan agrees with most of the conclusions reached by the Panel, it is Japan's view that the Panel Report does not describe in detail the reasoning or process by which the Panel reached those conclusions. Considering the importance attached to the requirements of the chapeau of Article XX as a tool for prevention of abuse, the chapeau of Article XX must be applied in a manner that fully accounts for the strict standard required of the "General Exceptions" under Article XX.

67. Malaysia's argument that negotiations are not alternative actions for the United States to rectify and address the problem of "arbitrary and unjustifiable discrimination" is based on an incorrect reading of the original Appellate Body Report. As the lack of serious good faith negotiation was one of the reasons for the Appellate Body finding of "arbitrary or unjustifiable discrimination", it seems logical to assume that by engaging in sufficiently "serious good faith" negotiations and meeting other requirements, the United States has addressed the "arbitrary or unjustifiable discrimination". Thus, Japan agrees with the Panel's finding that the United States was not under the obligation to conclude an agreement for the protection and conservation of sea turtles before taking the measure.

68. Japan submits however, that as the notion of "serious" and "good faith" is subjective in nature, a more objective test, such as a common recognition by other negotiating countries on the necessity of the measure in question, may be needed in addition to the criterion of "serious good faith efforts". Japan considers that the Panel should have included explicitly in its Report such a test of support for, or recognition of, the measure in question by other negotiating countries as a part of the negotiation requirement.

6. Mexico

(a) Terms of Reference

69. Mexico agrees with Malaysia that the terms of reference of a panel "established" pursuant to Article 21.5 of the DSU are to examine whether the measures taken to comply with the recommendations and rulings are consistent with the covered agreements, rather than with its own recommendations and rulings.

70. Mexico submits that the Panel in this case should have paid particular attention to the question whether the United States measure could be justified under Article XX of the GATT 1994 because it was not applied in a manner that would constitute a means of "arbitrary or unjustifiable discrimination" between countries where the same conditions prevail, or a disguised restriction on international trade. Mexico considers that the Panel should also have paid greater attention to the legal provisions themselves rather than to the Report of the Appellate Body which considered the original measure. In Mexico's view, it is not valid to argue that a WTO Member is authorized to adopt measures that would otherwise be inconsistent with Article XX of the GATT 1994, basing itself on an interpretation of Article XX limited to the circumstances and reasoning in a previous dispute settlement case.

7. Thailand

(a) Terms of Reference

71. Thailand is of the view that, in accordance with Article 21.5 of the DSU, the Panel was bound to evaluate the consistency of the "measures taken to comply" with the covered agreement concerned, which in the present case is the GATT 1994. Thailand agrees with the Panel that this was to be done in the light of the evaluation of the consistency of the original measure with a covered agreement undertaken by the original panel and subsequently by the Appellate Body.

72. However, Thailand's view differs from that of the Panel with respect to the scope of the "measures taken to comply" by the United States. Thailand disagrees with the approach of the Panel of examining only the consistency with the GATT 1994 of the Revised Guidelines, and disregarding Section 609.

73. Thailand submits that had the Panel examined the consistency of Section 609 as part of the United States implementing measure, the Panel would have found that, with regard to the import of TED-caught shrimp from non-certified countries, Section 609 is inconsistent with the chapeau of Article XX of GATT 1994, read in the light of the Appellate Body's finding in *United States – Shrimp*. To examine the consistency of Section 609 in this regard, had the Panel decided to do so, it would be necessary for the Panel to "seek a detailed understanding" of the legislation. As it is not for the Panel to interpret Section 609 itself, such understanding must be based on an authoritative interpretation of the legislation under the United States domestic legal system, at least in cases where authoritative interpretation is available.

74. Thailand argues that the fact that the Revised Guidelines have not been modified following the CIT judgment does not remove the current inconsistency of Section 609 with the GATT 1994. A breach of a treaty obligation does not necessarily involve an act of the executive branch. It can also involve an act of the legislature or the judiciary, or, as in this case, both of these branches of government.

III. Preliminary Procedural Matter

75. On 13 August 2001, we received a brief from the American Humane Society and Humane Society International (the "Humane Society brief"). This brief was also attached as an exhibit to the appellee's submission filed by the United States in this appeal.

76. As we have previously stated in our Report in *United States – Import Prohibition of Certain Shrimp and Shrimp Products* ("*United States – Shrimp*"), attaching a brief or other material to the submission of either an appellant or an appellee, no matter how or where such material may have originated, renders that material at least *prima facie* an integral part of that participant's submission.[24] In that Report, we stated further that it is for a participant in an appeal to determine for itself what to include in its submission.[25]

77. At the oral hearing in this appeal, held on 4 September 2001, we asked the United States to clarify the extent to which it adopted the arguments set out in the Humane Society brief. The United States stated: "[t]hose are the independent views of that organization. We adopt them to the

[24]Appellate Body Report, WT/DS58/AB/R, adopted 6 November 1998, para. 89.

[25]*Ibid.*

extent they are the same as ours but otherwise they are their independent views. We submit them for your consideration but not like our arguments where, for example, the panel is expected to address each one." Accordingly, we focus our attention on the legal arguments in the appellee's submission of the United States.

78. On 20 August 2001, we received a brief from Professor Robert Howse, a professor of international trade law at the University of Michigan Law School in Ann Arbor, Michigan, in the United States. In rendering our decision in this appeal, we have not found it necessary to take into account the brief submitted by Professor Howse.

IV. Issues Raised in this Appeal

79. The measure at issue in this dispute consists of three elements: Section 609 of the United States Public Law 101-162 ("Section 609"); the Revised Guidelines for the Implementation of Section 609 of Public Law 101-162 Relating to the Protection of Sea Turtles in Shrimp Trawl Fishing Operations (the "Revised Guidelines")[26]; and the application of both Section 609 and the Revised Guidelines in the practice of the United States. Both the United States and Malaysia agree on this definition of the measure.[27] So does the Panel.[28] So do we.

[26]United States Department of State, Federal Register Vol. 64, No. 130, 8 July 1999, Public Notice 3086, pp. 36946 – 36952. The Revised Guidelines are attached to the Panel Report, *United States – Import Prohibition of Certain Shrimp and Shrimp Products, Recourse to Article 21.5 of the DSU by Malaysia* (the "Panel Report"), WT/DS58/RW, 15 June 2001.

[27]In response to our questions at the oral hearing, the United States submitted that:

> The measure at issue in this appeal would be Section 609 as currently applied through the [United States] guidelines currently in effect.

In response to the same question, Malaysia stated that:

> Malaysia's contention is that the measure at issue is the 1999 revised guidelines which are the guidelines to implement Section 609 and their application.

[28]The Panel stated:

> The "implementing measure" is composed of Section 609 of Public Law 101-162, of the revised guidelines pursuant to Section 609, dated 8 July 1999, Federal Register, Vol. 64, No. 130, Public Notice 3086, p. 36946 (hereafter the "Revised Guidelines"), as well as of any practice under those Revised Guidelines.

(Panel Report, footnote 154 to para. 5.1)

80. With respect to this measure, the following issues are raised in this appeal:

(a) whether the Panel correctly fulfilled its mandate under Article 21.5 of the DSU of examining the consistency with the relevant provisions of the GATT 1994 of the United States measure that was taken to comply with the recommendations and rulings of the DSB in *United States – Shrimp*; and

(b) whether the Panel erred in finding that the measure at issue is now applied in a manner that no longer constitutes a means of "arbitrary or unjustifiable discrimination between countries where the same conditions prevail" and is, therefore, within the scope of measures permitted under Article XX of the GATT 1994.[29]

81. With respect to the measure at issue in this dispute, the United States has not appealed the conclusion of the Panel that the measure violates Article XI:1 of the GATT 1994.[30] Thus, we do not address that issue in this appeal.

82. Malaysia has not appealed the conclusion of the Panel that Section 609 is provisionally justified under subparagraph (g) of Article XX of the GATT 1994.[31] Also, Malaysia confirmed at the oral hearing in this appeal that it has also not appealed the conclusion of the Panel that the measure at issue is not applied in a manner that constitutes "a disguised restriction on international trade" under the chapeau of Article XX of the GATT 1994.[32] Thus, we do not address those issues in this appeal.

V. Terms of Reference

83. The first issue raised by Malaysia in this appeal is whether the Panel properly examined the United States measure taken to comply with the recommendations and rulings of the DSB in *United States – Shrimp*. Malaysia argues that the Panel improperly limited its analysis to the recommendations and rulings of the DSB, and thus failed to fulfill its mandate under Article 21.5 of the DSU because it did not examine the consistency of the United States implementing measure with the relevant provisions of the GATT 1994. Malaysia argues as well that the Panel erroneously based its analysis entirely on our Report in *United States – Shrimp*.

84. Malaysia's appeal on this point goes to the heart of what a panel is required to do in proceedings under Article 21.5 of the DSU, which states, in pertinent part:

> Where there is disagreement as to the existence or consistency with a covered agreement of measures taken to comply with the recommendations and rulings such dispute shall be decided through recourse to these dispute settlement procedures, including wherever possible resort to the original panel.

[29] Panel Report, para. 5.137.

[30] *Ibid.*, para. 5.23.

[31] *Ibid.*, para. 5.42.

[32] The Panel's findings on this issue are set out in paragraph 5.144 of the Panel Report. At the oral hearing, we noted that Malaysia had made no reference in its appellant's submission to the findings of the Panel with respect to whether the United States measure was applied in a manner that constitutes "a disguised restriction on international trade". We asked Malaysia to confirm that it was not appealing those findings. Malaysia did so.

85. In *Canada – Measures Affecting the Export of Civilian Aircraft – Recourse by Brazil to Article 21.5 of the DSU* ("*Canada – Aircraft (21.5)*"), we discussed one aspect of a panel's task under Article 21.5 of the DSU. In that case, the Panel declined to examine an argument by Brazil on the ground that the argument "did not form part" of the reasoning of the original panel and was "not relevant to the present dispute, which concerns the issue of whether or not Canada had implemented the DSB recommendation".[33] We disagreed with that ruling, and stated there that:

> It follows then that the task of the Article 21.5 Panel in this case is, in fact, to determine whether the new measure – the revised TPC programme – is consistent with Article 3.1(a) of the *SCM Agreement*.
>
> Accordingly, in carrying out its review under Article 21.5 of the DSU, a panel is not confined to examining the "measures taken to comply" from the perspective of the claims, arguments and factual circumstances that related to the measure that was the subject of the original proceedings. Although these may have some relevance in proceedings under Article 21.5 of the DSU, Article 21.5 proceedings involve, in principle, not the original measure, but rather a new and different measure which was not before the original panel. . . .[34]

We stated further that:

> Indeed, the utility of the review envisaged under Article 21.5 of the DSU would be seriously undermined if a panel were restricted to examining the new measure from the perspective of the claims, arguments and factual circumstances that related to the original measure, because an Article 21.5 panel would then be unable to examine fully the "consistency with a covered agreement of the measures taken to comply", as required by Article 21.5 of the DSU.[35]

86. As we ruled in our Report in *Canada – Aircraft (21.5)*, panel proceedings pursuant to Article 21.5 of the DSU involve, in principle, not the original measure, but a new and different measure that was not before the original panel. Therefore, "in carrying out its review under Article 21.5 of the DSU, a panel is not confined to examining the 'measure[] taken to comply' from the perspective of the claims, arguments and factual circumstances that related to the measure that was the subject of the original proceedings."[36]

87. When the issue concerns the consistency of a new measure "taken to comply"[37], the task of a panel in a matter referred to it by the DSB for an Article 21.5 proceeding is to consider that new measure in its totality. The fulfilment of this task requires that a panel consider both the measure itself and the measure's application. As the title of Article 21 makes clear, the task of panels under Article 21.5 forms part of the process of the "*Surveillance of Implementation of the Recommendations and Rulings*" of the DSB. Toward that end, the task of a panel under Article 21.5 is to examine the "consistency with a covered agreement of measures taken to comply with the

[33] Appellate Body Report, WT/DS70/AB/RW, adopted 4 August 2000, para. 39.

[34] *Ibid.*, paras. 40-41.

[35] Appellate Body Report, WT/DS70/AB/RW, adopted 4 August 2000, para. 41.

[36] *Ibid.*, para. 41.

[37] As opposed to a debate on the "existence … of measures taken to comply", which is not at issue here.

recommendations and rulings" of the DSB. That task is circumscribed by the specific claims made by the complainant when the matter is referred by the DSB for an Article 21.5 proceeding. It is not part of the task of a panel under Article 21.5 to address a claim that has not been made.

88. Malaysia relies in this appeal on our ruling in *Canada – Aircraft (21.5)*. We understand Malaysia to argue, based in part on our ruling in *Canada – Aircraft (21.5),* that the Panel in this case had a duty to review the *totality* of the United States measure, and to assess it for its consistency with the relevant provisions of the GATT 1994. That is indeed a panel's task under Article 21.5 of the DSU. Yet, as we have said, it is not part of a panel's task to go beyond the particular claims that have been made with respect to the consistency of a new measure with a covered agreement when a matter is referred to it by the DSB for an Article 21.5 proceeding. Thus, it would not have been appropriate in this case for the Panel to address a claim that was *not* made by Malaysia when requesting that this matter be referred by the DSB for an Article 21.5 proceeding.

89. With respect to a claim that *has* been made when a matter is referred by the DSB for an Article 21.5 proceeding, Malaysia seems to suggest as well that a panel must re-examine, for WTO-consistency, even those aspects of a new measure that were part of a previous measure that was the subject of a dispute, and were found by the Appellate Body to be *WTO – consistent* in that dispute, and that remain unchanged as part of the new measure.

90. In considering this argument, we examine what the Panel did in this case in fulfilling its task under the DSU. As we have said, the Panel was required to review the new measure in its totality and in its application when examining the matter referred by the DSB for the Article 21.5 proceeding. In this case, the question whether it did or did not fulfil this requirement arises from the treatment by the Panel of a particular part of the new measure that was also part of the original measure in the original proceedings — Section 609.

91. Section 609 — a United States statute enacted by the United States Congress — is a common aspect of both the original measure at issue in the previous case and appeal, and the new measure at issue in this case and appeal. As Section 609 is part of the new measure, it is not immune from scrutiny under Article 21.5. However, it will be recalled that, in the previous case, we found that Section 609 was entitled to "provisional justification" under subparagraph (g) of Article XX of the GATT 1994. It will be recalled as well that, in the previous case, the deficiencies we found in the *application* of the original measure by the United States that denied that original measure the benefit of the exception provided by Article XX of the GATT 1994 were unrelated to Section 609 itself. Those deficiencies related to the original guidelines that were promulgated by the United States Department of State for the purpose of implementing Section 609, and to the practice of the United States in applying those original guidelines to WTO Members.

92. In its analysis of the consistency of Section 609 in this new case, the Panel stated that:

> The Panel considers that two questions have to be addressed in order to determine whether the implementing measure meets the requirements of paragraph (g) of Article XX. First, the Panel notes that the Appellate Body found that Section 609 was "provisionally justified" under Article XX(g). We understand this to mean that, in the process of determining whether Section 609 was justified under Article XX, the Appellate Body concluded that Section 609 satisfied the first tier of the analysis defined in its report on *United States – Gasoline*, i.e. the *characterization* of the measure under Article XX(g). This implies that, as long as the implementing measure before us is identical to the measure examined by the Appellate Body in relation to paragraph (g), we should not reach a different conclusion from the Appellate Body.[38] (footnote omitted)

The Panel went on to conclude that:

> … the United States did not amend Section 609, whereas it has issued revised implementing guidelines. We therefore conclude that since Section 609 as such has not been modified, the findings of the Appellate Body regarding paragraph (g) remain valid and the consistency of Section 609 as such with the requirements of paragraph (g) also remains valid, to the extent that the Revised Guidelines do not modify the *interpretation* to be given to Section 609 in that respect. We have no evidence that the Revised Guidelines have modified in any way the meaning of Section 609 *vis-à-vis* the requirements of paragraph (g), as interpreted by the Appellate Body.[39]

93. We agree. It is not disputed that the wording of Section 609 has not been changed since the first case. The Congress of the United States has not amended the statute. In addition, the meaning of Section 609 has not been changed by the decision of the United States Court of International Trade (the "CIT") in *Turtle Island Restoration Network, et al. v. Robert L. Mallett, et al.* (the "*Turtle Island* case").[40]

94. The CIT ruling in the *Turtle Island* case addressed the Revised Guidelines: that ruling made no change to the interpretation of Section 609. Moreover, as stated by the Panel, the ruling in the *Turtle Island* case is declaratory: the CIT has not ordered the United States Department of State to modify either the content or the interpretation of the Revised Guidelines; in the legal interpretation of the United States authorities entrusted with enforcing them, the Revised Guidelines remain the same.[41] Rightly, when examining the United States measure, the Panel took into account the status of municipal law at the time. In particular, the Panel took note of the fact that the CIT ruling in the *Turtle Island* case has not altered the content of the Revised Guidelines, and has not prevented the United States government from authorizing the importation of TED-caught shrimp from uncertified countries. In response to our questions at the oral hearing, the United States confirmed that the

[38]Panel Report, para. 5.39.

[39]Panel Report., para. 5.41.

[40]110 Fed. Supp. 2d 1005 (CIT, 2000). *See*, Panel Report, para. 5.109.

[41]Panel Report, para. 5.109.

Department of State has received no order from the CIT to change its practice, and, therefore, the Department of State continues to apply the Revised Guidelines as before.[42] Malaysia has not shown otherwise.

95. There is no way of knowing or predicting when or how that particular legal proceeding will conclude in the United States. The *Turtle Island* case has been appealed and could conceivably go as far as the Supreme Court of the United States.[43] It would have been an exercise in speculation on the part of the Panel to predict either when or how that case may be concluded, or to assume that injunctive relief ultimately would be granted and that the United States Court of Appeals or the Supreme Court of the United States eventually would compel the Department of State to modify the Revised Guidelines. The Panel was correct not to indulge in such speculation, which would have been contrary to the duty of the Panel, under Article 11 of the DSU, to make "an objective assessment of the matter … including an objective assessment of the facts of the case".

96. As we see it, then, the Panel properly examined Section 609 as part of its examination of the totality of the new measure, correctly found that Section 609 had not been changed since the original proceedings, and rightly concluded that our ruling in *United States – Shrimp* with respect to the consistency of Section 609, therefore, still stands.

97. We wish to recall that panel proceedings under Article 21.5 of the DSU are, as the title of Article 21 states, part of the process of the "*Surveillance of Implementation of Recommendations and Rulings*" of the DSB. This includes Appellate Body Reports. To be sure, the right of WTO Members to have recourse to the DSU, including under Article 21.5, must be respected. Even so, it must also be kept in mind that Article 17.14 of the DSU provides not only that Reports of the Appellate Body "shall be" adopted by the DSB, by consensus, but also that such Reports "shall be … unconditionally accepted by the parties to the dispute. …" Thus, Appellate Body Reports that are adopted by the DSB are, as Article 17.14 provides, "… unconditionally accepted by the parties to the dispute", and, therefore, must be treated by the parties to a particular dispute as a final resolution to that dispute. In this regard, we recall, too, that Article 3.3 of the DSU states that the "prompt settlement" of disputes "is essential to the effective functioning of the WTO".

98. Therefore, so far as the examination of the measure at issue in this appeal is concerned, the task of the Panel with respect to Section 609, as part of that new measure, was limited to examining its *application.* More specifically, the task of the Panel as it related to Section 609 was to decide whether Section 609 has been *applied* by the United States in a way that constitutes "arbitrary or unjustifiable discrimination between countries where the same conditions prevail" in violation of the chapeau of Article XX of the GATT 1994. Thus, given the structure of the new measure, the task of the Panel was to determine whether Section 609 has been *applied* by the United States, through the Revised Guidelines, either on their face, or in their application, in a manner that constitutes "arbitrary or unjustifiable discrimination".

[42]The United States submitted that:

> We do not believe that the court decision in the litigation changes the measure. The measure is the statute and the guidelines. There is litigation and controversy in the United States about what those guidelines might look like. However, for today and the foreseeable future, the guidelines stand. They are what governs. That is what happens at the ports.

(United States response to questioning at the oral hearing)

[43]Panel Report, para. 5.109.

99. This is precisely what the Panel did in this case. Therefore, we consider what the Panel did to be an appropriate fulfilment of its task under the DSU.

100. Malaysia argues with respect to the terms of reference that the Panel confined itself inappropriately to an examination of whether the new measure complied with the rulings and recommendations of the DSB, and, more specifically, with the rulings of the Appellate Body that were adopted by the DSB in the previous case relating to the original measure. In support of this argument, Malaysia quotes various selected passages from the Panel Report.[44]

101. In our view, a reading of the Panel Report as a whole does not provide support for Malaysia's contention. Indeed, the Panel appears to have done precisely the opposite of what Malaysia asserts. For example, we note that, in identifying its terms of reference, the Panel explicitly quoted the terms of Article 21.5 of the DSU[45] as well as our Report in *Canada – Aircraft (21.5).*[46]

102. The Panel then stated:

> The terms of reference of this Panel do not differ from the standard terms of reference applied in other Article 21.5 cases. In light of the reasoning of the Appellate Body mentioned above, the Panel considers that it is fully entitled to address all the claims of Malaysia under Article XI and Article XX of the GATT 1994, whether or not these claims, the arguments and the facts supporting them were made before the Original Panel and in the Appellate Body proceedings *provided*, as recalled by the panel on *Australia – Measures Affecting Importation of Salmon – Recourse by Canada to Article 21.5 of the DSU,* that the claims are identified in the request for referring the matter to a panel under Article 21.5 of the DSU.[47] (footnotes omitted)

[44]Malaysia's appellant's submission, para. 3.2. Malaysia refers to footnote 211 of paragraph 5.66 and paragraphs 5.116, 5.120, 5.125 and 5.134 of the Panel Report.

[45]Panel Report, para. 5.7.

[46]*Ibid.*, para. 5.8. After quoting our Report in *Canada – Aircraft (21.5)*, the Panel concluded that:

> In light of the reasoning of the Appellate Body [in *Canada – Aircraft (21.5)]*, the Panel considers that it is fully entitled to address all the claims of Malaysia under Article XI and Article XX of the GATT 1994, whether or not these claims, the arguments and the facts supporting them were made before the Original Panel and in the Appellate Body proceedings . . . .

(*Ibid.*, para. 5.9)

We agree with the Panel. However, we do not agree with Malaysia's reading of our Report in *Canada – Aircraft (21.5)*. As the United States submits: "[t]he issue in *Canada Aircraft* was whether the Article 21.5 Panel's review was limited to issues considered in the original panel and Appellate Body proceedings, and the Appellate Body found that the DSU provides no such limitation". (footnote omitted) (United States appellee's submission, para. 11) With respect to this case, the United States notes: "[t]he Panel's report makes no limitations on its consideration of Malaysia's arguments". (United States appellee's submission, para.13) On this, we agree with the United States. The Panel in this case examined all of Malaysia's arguments, and did not decline to consider an argument on its merits on the ground that such argument had not been raised before the original panel or the Appellate Body.

[47]Panel Report, para. 5.9.

103. Furthermore, in its analysis, the Panel examined Malaysia's claim that the new measure taken by the United States continued to violate Article XI:1 of the GATT 1994, and stated as follows:

> The Panel notes that the elements of the original measure found to be incompatible with Article XI:1 in the Original Panel Report are still part of the implementing measure, i.e. Section 609 as currently applied by the United States. In particular, the United States continues to apply an import prohibition on shrimp and shrimp products harvested in a manner determined to be harmful to sea turtles. We note that the United States does not contest the fact that it applies such a prohibition of import. We consider that the prohibition at issue falls within the "prohibitions or restrictions, other than duties, taxes or other charges" maintained by a Member on the importation of a product from another Member, in contravention of Article XI:1.
>
> The Panel therefore concludes that the measure taken by the United States to comply with the recommendations and rulings of the DSB in this case *violates Article XI:1 of the GATT 1994*.[48] (emphasis added)

104. The Panel then examined the provisional justification under Article XX(g) of the GATT 1994 of Section 609, which it had correctly found to be unchanged, in the following terms:

> As a result, when considering the arguments of the United States, we shall first determine the consistency of the implementing measure under paragraph (g) of Article XX. If we find the implementing measure to be "provisionally justified" under paragraph (g), we shall proceed to determine whether it is applied in *conformity with the chapeau of Article XX*.[49] (emphasis added)
>
> …
>
> We therefore conclude that the implementing measure is provisionally justified *under paragraph (g) of Article XX*. We proceed with the second tier of the method applied by the Appellate Body in this case, i.e. the "further appraisal of the *same measure* under the introductory clause of Article XX."[50] (emphasis added, footnote omitted)

105. This analysis shows clearly that the Panel properly understood the scope of its mandate. Furthermore, the Panel's examination of whether the measure applied by the United States constitutes a "disguised restriction on international trade" under the chapeau of Article XX of the GATT 1994 demonstrates that the Panel understood very well the scope of its mandate. The Panel stated:

[48]Panel Report, paras. 5.22-5.23.

[49]*Ibid.*, para. 5.28.

[50]*Ibid.*, para. 5.42.

> The Panel notes that it is instructed by Article 21.5 of the DSU to review "the existence or consistency with a covered agreement of measures taken to comply with the recommendations and rulings" of the DSB. The fact that the Appellate Body did not have to make a finding that the original measure was a disguised restriction on trade does not mean that the measure adopted to implement the DSB recommendations and rulings is not a disguised restriction on trade. The Panel also recalls that, as the party invoking Article XX, the United States bears the burden of proving that its implementing measure meets *all* the relevant requirements of the chapeau. This implies that the United States make a *prima facie* case that the implementing measure is not a disguised restriction on trade.[51]

106. Thus, the Panel examined the measure in the light of the relevant provisions of the GATT 1994, and, in doing so, made numerous references both to whether a violation of the GATT 1994 had occurred and to whether such a violation was nonetheless justified under Article XX. Accordingly, in reading the Panel Report as a whole, we find no support for Malaysia's argument that the Panel examined the new measure applied by the United States *only* in the light of the recommendations and rulings of the DSB.

107. Malaysia also objects to the frequent references made by the Panel to our reasoning in our Report in *United States – Shrimp*. The reasoning in our Report in *United States – Shrimp* on which the Panel relied was not *dicta*; it was essential to our ruling. The Panel was right to use it, and right to rely on it. Nor are we surprised that the Panel made frequent references to our Report in *United States – Shrimp*. Indeed, we would have expected the Panel to do so. The Panel had, necessarily, to consider our views on this subject, as we had overruled certain aspects of the findings of the original panel on this issue and, more important, had provided interpretative guidance for future panels, such as the Panel in this case.

108. In this respect, we note that in our Report in *Japan – Taxes on Alcoholic Beverages*, we stated that:

> Adopted panel reports are an important part of the GATT *acquis*. They are often considered by subsequent panels. They create legitimate expectations among WTO Members, and, therefore, should be taken into account where they are relevant to any dispute.[52]

109. This reasoning applies to adopted Appellate Body Reports as well. Thus, in taking into account the reasoning in an adopted Appellate Body Report — a Report, moreover, that was directly relevant to the Panel's disposition of the issues before it — the Panel did not err. The Panel was correct in using our findings as a tool for its own reasoning. Further, we see no indication that, in doing so, the Panel limited itself merely to examining the new measure from the perspective of the recommendations and rulings of the DSB.

110. We find, therefore, that the Panel correctly fulfilled its mandate under Article 21.5 of the DSU of examining the consistency, with the relevant provisions of the GATT 1994, of the United States measure taken to comply with the recommendations and rulings of the DSB in *United States – Shrimp*.

[51]Panel Report, para. 5.138.

[52]Appellate Body Report, ("*Japan – Alcoholic Beverages*"), WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, adopted 1 November 1996, DSR 1996:I, 97, at 108.

VI. The Chapeau of Article XX of the GATT 1994

111. The second issue raised in this appeal is whether the Panel erred in finding that the new measure at issue is applied in a manner that no longer constitutes a means of "arbitrary or unjustifiable discrimination between countries where the same conditions prevail" and is, therefore, within the scope of measures permitted under Article XX of the GATT 1994.[53]

112. In its Notice of Appeal, Malaysia appeals the finding of the Panel that "Section 609 of Public Law 101-162, as implemented by the Revised Guidelines of 8 July 1999 and as applied so far by the [United States] authorities, is justified under Article XX of the GATT 1994 as long as the conditions stated in the findings of this Report, in particular the ongoing serious, good faith efforts to reach a multilateral agreement, remain satisfied."[54] In its appellant's submission, Malaysia has put forward six points of disagreement with respect to the reasoning and findings of the Panel that lead Malaysia to conclude that, despite the changes made by the United States to the original measure, elements of "arbitrary or unjustifiable discrimination" still remain in the manner in which the new measure is applied by the United States.

113. Malaysia argues that:

— the Panel erred in interpreting our previous ruling in *United States – Shrimp* as imposing upon the United States an obligation to *negotiate* rather than an obligation to *conclude* an international agreement[55];

— the Panel's finding results in "the absurd situation where any WTO Member would be able to offer to negotiate in good faith on an agreement incorporating its unilaterally defined standards before claiming that its measure is justified under Article XX of the GATT 1994 and in the event of failure to conclude an agreement, claim that the measure applying the unilateral standards could not constitute unjustifiable discrimination"[56];

— the Panel erred in concluding that the Inter-American Convention can reasonably be regarded as a "benchmark" of what can be achieved through multilateral negotiations in the field of protection and conservation[57];

— the Panel misconstrued the usage of the term "measures comparable in effectiveness to United States measures" by the Appellate Body to mean that the Appellate Body accepted the legitimacy of such "comparable measures"[58];

— the Panel erred in concluding that the Revised Guidelines are sufficiently flexible, even though the Revised Guidelines do not provide explicitly for the particular conditions prevailing in Malaysia[59]; and

[53]Panel Report, para. 5.137.

[54]*Ibid.*, para. 6.1.

[55]Malaysia's appellant's submission, para 3.10(b)(i).

[56]Executive summary of Malaysia's appellant's submission, para. 2(b)(ii).

[57]Malaysia's appellant's submission, para 3.13.

[58]*Ibid.*, paras. 3.17-3.18. *See also*, Executive summary of Malaysia's appellant's submission, para. 2(iv);

— the Panel erred in its treatment of the CIT ruling in the *Turtle Island* case and, thus, in its conclusion about the legal validity of those portions of the Revised Guidelines that permit the importation of TED-caught shrimp from non-certified harvesting countries.[60]

114. Malaysia's first three arguments relate to the nature and extent of the duty of the United States to pursue international cooperation in protecting and conserving endangered sea turtles. Malaysia's last three arguments relate to the flexibility of the Revised Guidelines. Our analysis will address each of these arguments made by Malaysia.

A. *The Nature and the Extent of the Duty of the United States to Pursue International Cooperation in the Protection and Conservation of Sea Turtles*

115. Before the Panel, Malaysia asserted that the United States should have negotiated and *concluded* an international agreement on the protection and conservation of sea turtles before imposing an import prohibition. Malaysia argued that "by continuing to apply a unilateral measure after the end of the reasonable period of time pending the conclusion of an international agreement, the United States failed to comply with its obligations under the GATT 1994".[61] The United States replied that it had in fact made serious, good faith efforts to negotiate and *conclude* a multilateral sea turtle conservation agreement that would include both Malaysia and the United States, and that these efforts, as detailed and documented before the Panel, should, in view of our previous ruling, be seen as sufficient to meet the requirements of the chapeau of Article XX. The Panel found as follows:

> … The Panel first recalls that the Appellate Body considered "the *failure of the United States to engage the appellees*, as well as other Members exporting shrimp to the United States, in serious across-the-board negotiations *with the objective of concluding bilateral or multilateral agreements* for the protection and conservation of sea turtles, *before* enforcing the import prohibition against the shrimp exports of those other Members" bears heavily in any appraisal of justifiable or unjustifiable discrimination within the meaning of the chapeau of Article XX. From the terms used, it appears to us that the Appellate Body had in mind a negotiation, not the conclusion of an agreement. If the Appellate Body had considered that an agreement had to be concluded before any measure can be taken by the United States, it would not have used the terms "with the objective"; it would have simply stated that an agreement had to be concluded.
>
> …

[59]Malaysia's appellant's submission, paras. 3.20-3.21.

[60]*Ibid.*, paras. 3.22-3.25.

[61]Panel Report, para. 5.1.

> We are consequently of the view that the Appellate Body could not have meant in its findings that the United States had the obligation to conclude an agreement on the protection and conservation of sea turtles in order to comply with Article XX. However, we reach the conclusion that the United States has an obligation to make serious good faith efforts to reach an agreement before resorting to the type of unilateral measure currently in place. We also consider that those efforts cannot be a "one-off" exercise. There must be a continuous process, including once a unilateral measure has been adopted pending the conclusion of an agreement. Indeed, we consider the reference of the Appellate Body to a number of international agreements promoting a multilateral solution to the conservation concerns subject to Section 609 to be evidence that a multilateral, ideally non-trade restrictive, solution is generally to be preferred when dealing with those concerns, in particular if it is established that it constitutes "an alternative course of action reasonably open".
>
> …
>
> We understand the Appellate Body findings as meaning that the United States has an obligation to make serious good faith efforts to address the question of the protection and conservation of sea turtles at the international level. We are mindful of the potentially subjective nature of the notion of serious good faith efforts and of how difficult such a test may be to apply in reality.[62] (footnotes omitted)

116. Malaysia appeals these findings of the Panel. According to Malaysia, demonstrating serious, good faith efforts to *negotiate* an international agreement for the protection and conservation of sea turtles is not sufficient to meet the requirements of the chapeau of Article XX.[63] Malaysia maintains that the chapeau requires instead the *conclusion* of such an international agreement. As Malaysia sees it, the "pertinent observations and comments" that we made in *United States – Shrimp* that could be construed to suggest otherwise "constitute dicta" in our previous Report.[64] On this basis, Malaysia argues that the Panel used that Report improperly in attempting to justify its reasoning that serious, good faith efforts alone would be enough to meet the requirements of the chapeau.[65] Further, Malaysia submits that the Panel misread our Report with respect to the Inter-American Convention, and, consequently, did not use that Convention properly in its analysis.[66]

[62]Panel Report, paras. 5.63, 5.67 and 5.76.

[63]Malaysia's appellant's submission, para. 3.11.

[64]*Ibid.,* paras. 3.10-3.11.

[65]*Ibid*., para. 3.11.

[66]*Ibid*., para. 3.13.

117. The chapeau of Article XX states:

> Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any contracting party of measures: …

118. The chapeau of Article XX establishes three standards regarding the *application* of measures for which justification under Article XX may be sought: first, there must be no "arbitrary" discrimination between countries where the same conditions prevail; second, there must be no "unjustifiable" discrimination between countries where the same conditions prevail; and, third, there must be no "disguised restriction on international trade".[67] The Panel's findings appealed by Malaysia concern the first and second of these three standards.[68]

119. It is clear from the language of the chapeau that these two standards operate to prevent a Member from applying a measure provisionally justified under a sub-paragraph of Article XX in a manner that would result in "arbitrary or unjustifiable discrimination".[69] In *United States – Shrimp*, we stated that the measure at issue there resulted in "unjustifiable discrimination", in part because, as applied, the United States treated WTO Members differently. The United States had adopted a cooperative approach with WTO Members from the Caribbean/Western Atlantic region, with whom it had concluded a multilateral agreement on the protection and conservation of sea turtles, namely the Inter-American Convention. Yet the United States had not, we found, pursued the negotiation of such a multilateral agreement with other exporting Members, including Malaysia and the other complaining WTO Members in that case.

[67]Appellate Body Report, *United States – Shrimp*, *supra*, footnote 24, para. 150; Appellate Body Report, *United States – Standards for Reformulated and Conventional Gasoline* ("*United States – Gasoline*"), WT/DS2/AB/R, adopted 20 May 1996, DSR 1996:I, 3, at 21-22.

[68]The Panel also made findings regarding disguised restriction on trade but these are not appealed. Panel Report, paras. 5.138-5.144.

[69]Appellate Body Report, *United States – Shrimp*, *supra*, footnote 24, paras. 156 and 160; Appellate Body Report, *United States – Gasoline*, *supra*, footnote 67 at 21-22.

120. Moreover, we observed there that Section 609, which was part of that original measure and remains part of the new measure at issue here, calls upon the United States Secretary of State to "initiate negotiations as soon as possible for the development of bilateral or multilateral agreements with other nations for the protection and conservation of … sea turtles" and to "initiate negotiations as soon as possible with all foreign governments which are engaged in commercial fishing operations … for the purpose of entering into bilateral and multilateral treaties with such countries to protect such species of sea turtles."[70] We concluded in that appeal that the United States had failed to comply with this statutory requirement in Section 609.

121. As we pointed out there:

> Apart from the negotiation of the Inter-American Convention for the Protection and Conservation of Sea Turtles … which concluded in 1996, the record before the Panel does not indicate any serious, substantial efforts to carry out these express directions of Congress.[71] (footnotes omitted)

We also stated:

> Clearly, the United States negotiated seriously with some, but not with other Members (including the appellees), that export shrimp to the United States. The effect is plainly discriminatory and, in our view, unjustifiable.[72]

122. We concluded in *United States – Shrimp* that, to avoid "arbitrary or unjustifiable discrimination", the United States had to provide all exporting countries "similar opportunities to negotiate" an international agreement. Given the specific mandate contained in Section 609, and given the decided preference for multilateral approaches voiced by WTO Members and others in the international community in various international agreements for the protection and conservation of endangered sea turtles that were cited in our previous Report, the United States, in our view, would be expected to make good faith efforts to reach international agreements that are comparable from one forum of negotiation to the other. The negotiations need not be identical. Indeed, no two negotiations can ever be identical, or lead to identical results. Yet the negotiations must be *comparable* in the sense that comparable efforts are made, comparable resources are invested, and comparable energies are devoted to securing an international agreement. So long as such comparable efforts are made, it is more likely that "arbitrary or unjustifiable discrimination" will be avoided between countries where an importing Member concludes an agreement with one group of countries, but fails to do so with another group of countries.

123. Under the chapeau of Article XX, an importing Member may not treat its trading partners in a manner that would constitute "arbitrary or unjustifiable discrimination". With respect to this measure, the United States could conceivably respect this obligation, and the conclusion of an international agreement might nevertheless not be possible despite the serious, good faith efforts of the United States. Requiring that a multilateral agreement be *concluded* by the United States in order to avoid "arbitrary or unjustifiable discrimination" in applying its measure would mean that any country party to the negotiations with the United States, whether a WTO Member or not, would have, in effect, a veto over whether the United States could fulfill its WTO obligations. Such a requirement

[70]Section 609(a). *See also*, Appellate Body Report, *United States – Shrimp*, *supra*, footnote 24, para. 167.

[71]Appellate Body Report, *supra*, footnote 24, para. 167.

[72]*Ibid.*, para. 172.

would not be reasonable. For a variety of reasons, it may be possible to conclude an agreement with one group of countries but not another. The conclusion of a multilateral agreement requires the cooperation and commitment of many countries. In our view, the United States cannot be held to have engaged in "arbitrary or unjustifiable discrimination" under Article XX solely because one international negotiation resulted in an agreement while another did not.

124. As we stated in *United States – Shrimp*, "the protection and conservation of highly migratory species of sea turtles … demands concerted and cooperative efforts on the part of the many countries whose waters are traversed in the course of recurrent sea turtle migrations".[73] Further, the "need for, and the appropriateness of, such efforts have been recognized in the WTO itself as well as in a significant number of other international instruments and declarations".[74] For example, Principle 12 of the Rio Declaration on Environment and Development states, in part, that "[e]nvironmental measures addressing transboundary or global environmental problems should, as far as possible, be based on international consensus".[75] Clearly, and "as far as possible", a multilateral approach is strongly preferred. Yet it is one thing to *prefer* a multilateral approach in the application of a measure that is provisionally justified under one of the subparagraphs of Article XX of the GATT 1994; it is another to require the *conclusion* of a multilateral agreement as a condition of avoiding "arbitrary or unjustifiable discrimination" under the chapeau of Article XX. We see, in this case, no such requirement.

125. Malaysia also disagrees with certain statements made by the Panel with respect to the Inter-American Convention. The Panel found that:

> With respect to the absence of or insufficient negotiation with some Members compared with others, the reference of the Appellate Body to the Inter-American Convention is evidence that the efforts made by the United States to negotiate with the complainants before imposing the original measure were largely insufficient. The Inter-American Convention was negotiated as a binding agreement and has entered into force on 2 May 2001. We conclude that the Inter-American Convention can reasonably be considered as a benchmark of what can be achieved through multilateral negotiations in the field of protection and conservation. While we agree that factual circumstances may influence the duration of the process or the end result, we consider that any effort alleged to be a "serious good faith effort" must be assessed against the efforts made in relation to the conclusion of the Inter-American Convention.[76]

126. Malaysia maintains that the word "benchmark", as used by the Panel, has the connotation of a "legal standard", and asserts that nothing in the Appellate Body Report in *United States – Shrimp* suggests that the Inter-American Convention has the status of a legal standard.[77] Malaysia sees a distinction between a "benchmark", which would have the value of a "legal standard", and an "example", which would not have such a value.[78]

[73]Appellate Body Report, *supra*, footnote 24, para. 168.

[74]*Ibid.*

[75]*Ibid.*

[76]Panel Report, para. 5.71.

[77]Malaysia's appellant's submission, para. 3.13.

[78]*Ibid.*

127. It should be recalled how we viewed the Inter-American Convention in *United States – Shrimp*. We stated there:

> The Inter-American Convention thus provides convincing demonstration that an alternative course of action was reasonably open to the United States for securing the legitimate policy goal of its measure, a course of action other than the unilateral and non-consensual procedures of the import prohibition under Section 609. It is relevant to observe that an import prohibition is, ordinarily, the heaviest "weapon" in a Member's armoury of trade measures. The record does not, however, show that serious efforts were made by the United States to negotiate similar agreements with any other country or group of countries before (and, as far as the record shows, after) Section 609 was enforced on a world-wide basis on 1 May 1996. Finally, the record also does not show that the appellant, the United States, attempted to have recourse to such international mechanisms as exist to achieve cooperative efforts to protect and conserve sea turtles before imposing the import ban.[79]

128. Thus, in the previous case, in examining the original measure, we relied on the Inter-American Convention in two ways. First, we used the Inter-American Convention to show that "consensual and multilateral procedures are available and feasible for the establishment of programmes for the conservation of sea turtles."[80] In other words, we saw the Inter-American Convention as evidence that an alternative course of action based on cooperation and consensus was reasonably open to the United States. Second, we used the Inter-American Convention to show the existence of "unjustifiable discrimination". The Inter-American Convention was the result of serious, good faith efforts to negotiate a regional agreement on the protection and conservation of turtles, including efforts made by the United States. In the original proceedings, we saw a clear contrast between the efforts made by the United States to conclude the Inter-American Convention and the absence of serious efforts on the part of the United States to negotiate other similar agreements with other WTO Members. We concluded there that such a disparity in efforts to negotiate an international agreement amounted to "unjustifiable discrimination".[81]

129. With this in mind, we examine what the Panel did here. In its analysis of the Inter-American Convention in the context of Malaysia's argument on "unjustifiable discrimination", the Panel relied on our original Report to state that "the Inter-American Convention is evidence that the efforts made by the United States to negotiate with the complainants before imposing the original measure were largely insufficient".[82] The Panel went on to say that "the Inter-American Convention can reasonably be considered as a benchmark of what can be achieved through multilateral negotiations in the field of protection and conservation."[83]

130. At no time in *United States – Shrimp* did we refer to the Inter-American Convention as a "benchmark". The Panel might have chosen another and better word — perhaps, as suggested by

[79]Appellate Body Report, *supra*, footnote 24, para. 171.

[80]*Ibid.*, para. 170.

[81]*Ibid.*, para. 172.

[82]Panel Report, para. 5.71.

[83]Panel Report, para. 5.71.

Malaysia, "example".[84] Yet it seems to us that the Panel did all that it should have done with respect to the Inter-American Convention, and did so consistently with our approach in *United States – Shrimp*. The Panel compared the efforts of the United States to negotiate the Inter-American Convention with one group of exporting WTO Members with the efforts made by the United States to negotiate a similar agreement with another group of exporting WTO Members. The Panel rightly used the Inter-American Convention as a factual reference in this exercise of comparison. It was all the more relevant to do so given that the Inter-American Convention was the only international agreement that the Panel could have used in such a comparison. As we read the Panel Report, it is clear to us that the Panel attached a relative value to the Inter-American Convention in making this comparison, but did not view the Inter-American Convention in any way as an absolute standard. Thus, we disagree with Malaysia's submission that the Panel raised the Inter-American Convention to the rank of a "legal standard". The mere use by the Panel of the Inter-American Convention *as a basis for a comparison* did not transform the Inter-American Convention into a "legal standard". Furthermore, although the Panel could have chosen a more appropriate word than "benchmark" to express its views, Malaysia is mistaken in equating the mere use of the word "benchmark", as it was used by the Panel, with the establishment of a legal standard.

131. The Panel noted that while "factual circumstances may influence the duration of the process or the end result, … any effort alleged to be a 'serious good faith effort' must be assessed against the efforts made in relation to the conclusion of the Inter-American Convention."[85] Such a comparison is a central element of the exercise to determine whether there is "unjustifiable discrimination". The Panel then analyzed the negotiation process in the Indian Ocean and South-East Asia region to determine whether the efforts made by the United States in those negotiations were serious, good faith efforts comparable to those made in relation with the Inter-American Convention. In conducting this analysis, the Panel referred to the following elements:

— A document communicated on 14 October 1998 by the United States Department of State to a number of countries of the Indian Ocean and the South-East Asia region. This document contained possible elements of a regional convention on sea turtles in this region.[86]

— The contribution of the United States to a symposium held in Sabah on 15-17 July 1999. The Sabah Symposium led to the adoption of a Declaration calling for the negotiation and implementation of a regional agreement throughout the Indian Ocean and South-East Asia region.[87]

— The Perth Conference in October 1999, where participating governments, including the United States, committed themselves to developing an international agreement on sea turtles for the Indian Ocean and South-East Asia region.[88]

— The contribution of the United States to the Kuantan round of negotiations, 11-14 July 2000. This first round of negotiations towards the conclusion of a regional agreement resulted in the adoption of the Memorandum of Understanding on the Conservation and Management of Marine Turtles and their Habitats of the Indian Ocean and South-East Asia (the "South-East Asian MOU"). The Final Act of the

[84]Malaysia's appellant's submission, para. 3.13.

[85]Panel Report, para. 5.71.

[86]Panel Report, para. 5.79.

[87]*Ibid.*

[88]*Ibid.*

> Kuantan meeting provided that before the South-East Asian MOU can be finalized, a Conservation and Management Plan must be negotiated and annexed to the South-East Asian MOU.[89] At the time of the Panel proceedings, the Conservation and Management Plan was still being drafted.[90]

132. On this basis and, in particular, on the basis of the "contribution of the United States to the steps that led to the Kuantan meeting and its contribution to the Kuantan meeting itself"[91], the Panel concluded that the United States had made serious, good faith efforts that met the "standard set by the Inter-American Convention."[92] In the view of the Panel, whether or not the South-East Asian MOU is a legally binding document does not affect this comparative assessment because differences in "factual circumstances have to be kept in mind".[93] Furthermore, the Panel did not consider as decisive the fact that the final agreement in the Indian Ocean and South-East Asia region, unlike the Inter-American Convention, had not been concluded at the time of the Panel proceedings. According to the Panel, "at least until the Conservation and Management Plan to be attached to the MOU is completed, the United States efforts should be judged on the basis of its active participation and its financial support to the negotiations, as well as on the basis of its previous efforts since 1998, having regard to the likelihood of a conclusion of the negotiations in the course of 2001." [94]

133. We note that the Panel stated that "any effort alleged to be a 'serious good faith effort' must be assessed against the efforts made in relation to the conclusion of the Inter-American Convention."[95] In our view, in assessing the serious, good faith efforts made by the United States, the Panel did not err in using the Inter-American Convention as an *example*. In our view, also, the Panel was correct in proceeding then to an analysis broadly in line with this principle and, ultimately, was correct as well in concluding that the efforts made by the United States in the Indian Ocean and South-East Asia region constitute serious, good faith efforts comparable to those that led to the conclusion of the Inter-American Convention. We find no fault with this analysis. [96]

134. In sum, Malaysia is incorrect in its contention that avoiding "arbitrary and unjustifiable discrimination" under the chapeau of Article XX requires the *conclusion* of an international

[89] *Ibid.*, para. 5.81.

[90] *Ibid.*, para. 5.84.

[91] *Ibid.*, para. 5.82.

[92] *Ibid.*

[93] Panel Report. It appears that the United States was in favour of a legally binding agreement for the Indian Ocean and South-East Asia region, but a number of other parties were not, and the latter view prevailed. *See,* Panel Report, para. 5.83.

[94] Panel Report, para. 5.84.

[95] *Ibid.*, para. 5.71.

[96] We note that a multilateral conference on sea turtles was held in Manila and resulted in the adoption of the Conservation and Management Plan to be annexed to the South-East Asian MOU. We also note that the South-East Asian MOU came into effect on 1 September 2001. To our mind, these events only reinforce the finding of the Panel that the efforts made by the United States to negotiate an international agreement in the Indian Ocean and South-East Asia region constitute serious, good faith efforts comparable to those made in relation to the Inter-American Convention. The Inter-American Convention, in Article IV.2(h), provides for the use of TEDs to reduce the incidental capture and mortality of sea turtles in the course of fishing activities. Objective 1.4 of the Conservation and Management Plan attached to the South-East Asian MOU requires signatory states to "[r]educe to the greatest extent practicable the incidental capture and mortality of marine turtles in the course of fishing activities". In this respect, signatory states are directed to "[d]evelop and use gear, devices and techniques to minimise incidental capture of marine turtles in fisheries, such as devices that effectively allow the escape of marine turtles, and spatial and seasonal closures".

agreement on the protection and conservation of sea turtles. Therefore, we uphold the Panel's finding that, in view of the serious, good faith efforts made by the United States to negotiate an international agreement, "Section 609 is now applied in a manner that no longer constitutes a means of unjustifiable or arbitrary discrimination, as identified by the Appellate Body in its Report".[97]

B. The Flexibility of the Revised Guidelines

135. We now turn to Malaysia's arguments relating to the flexibility of the Revised Guidelines. Malaysia argued before the Panel that the measure at issue results in "arbitrary or unjustifiable discrimination" because it conditions the importation of shrimp into the United States on compliance by the exporting Members with policies and standards "unilaterally" prescribed by the United States.[98] Malaysia asserted that the United States "unilaterally" imposed its domestic standards on exporters.[99] With respect to this argument, the Panel found:

> It seems that whereas the Appellate Body found that requiring the adoption of essentially the same regime constituted arbitrary discrimination, it accepted - at least implicitly - that a requirement that the US and foreign programmes be "comparable in effectiveness" would be compatible with the obligations of the United States under the chapeau of Article XX. This is because it would "permit a degree of discretion or flexibility in how the standards for determining comparability might be applied, in practice, to other countries." We therefore conclude that if, *in practice*, the implementing measure provides for "comparable effectiveness", the finding of the Appellate Body in terms of lack of flexibility will have been addressed.[100] (footnote omitted)

136. Malaysia disagrees with the Panel that a measure can meet the requirements of the chapeau of Article XX if it is flexible enough, both in design and application, to permit certification of an exporting country with a sea turtle protection and conservation programme "comparable" to that of the United States. According to Malaysia, even if the measure at issue allows certification of countries having regulatory programs "comparable" to that of the United States, and even if the measure is applied in such a manner, it results in "arbitrary or unjustifiable discrimination" because it conditions access to the United States market on compliance with policies and standards "unilaterally" prescribed by the United States. Thus, Malaysia puts considerable emphasis on the "unilateral" nature of the

[97] Panel Report, para. 5.137. We do wish to note, though, that there is one observation by the Panel with which we do not agree. In assessing the good faith efforts made by the United States, the Panel stated that:

> The United States is a *demandeur* in this field and given its scientific, diplomatic and financial means, it is reasonable to expect rather more than less from that Member in terms of serious good faith efforts. Indeed, the capacity of persuasion of the United States is illustrated by the successful negotiation of the Inter-American Convention.

(Panel Report, para. 5.76)

We are not persuaded by this line of reasoning. As we stated in our previous Report, the chapeau of Article XX is "but one expression of the principle of good faith". (Appellate Body Report, *United States – Shrimp, supra*, footnote 24, para. 158) This good faith notion applies to all WTO Members equally.

[98] Panel Report, para. 3.131.

[99] *Ibid.*, paras. 3.125 and 3.127.

[100] *Ibid.*, para. 5.93.

measure, and Malaysia maintains that our previous Report does not support the conclusion of the Panel on this point.[101]

137. We recall that, in *United States – Shrimp*, we stated:

> It appears to us … that *conditioning access to a Member's domestic market on whether exporting Members comply with, or adopt, a policy or policies unilaterally prescribed by the importing Member may, to some degree, be a common aspect of measures falling within the scope of one or another of the exceptions (a) to (j) of Article XX.* Paragraphs (a) to (j) comprise measures that are recognized as *exceptions to substantive obligations* established in the GATT 1994, because the domestic policies embodied in such measures have been recognized as important and legitimate in character. It is not necessary to assume that requiring from exporting countries compliance with, or adoption of, certain policies (although covered in principle by one or another of the exceptions) prescribed by the importing country, renders a measure *a priori* incapable of justification under Article XX. Such an interpretation renders most, if not all, of the specific exceptions of Article XX inutile, a result abhorrent to the principles of interpretation we are bound to apply.[102] (emphasis added)

138. In our view, Malaysia overlooks the significance of this statement. Contrary to what Malaysia suggests, this statement is not "*dicta*". As we said before, it appears to us "that conditioning access to a Member's domestic market on whether exporting Members comply with, or adopt, a policy or policies unilaterally prescribed by the importing Member may, to some degree, be a common aspect of measures falling within the scope of one or another of the exceptions (a) to (j) of Article XX." This statement expresses a principle that was central to our ruling in *United States – Shrimp*.

139. A separate question arises, however, when examining, under the chapeau of Article XX, a measure that provides for access to the market of one WTO Member for a product of other WTO Members *conditionally*. Both Malaysia and the United States agree that this is a common aspect of the measure at issue in the original proceedings and the new measure at issue in this dispute.

140. In *United States - Shrimp*, we concluded that the measure at issue there did not meet the requirements of the chapeau of Article XX relating to "arbitrary or unjustifiable discrimination" because, through the application of the measure, the exporting members were faced with "a single, rigid and unbending requirement"[103] to adopt *essentially the same* policies and enforcement practices as those applied to, and enforced on, domestic shrimp trawlers in the United States. In contrast, in this dispute, the Panel found that this new measure is more flexible than the original measure and has been applied more flexibly than was the original measure. In the light of the evidence brought by the United States, the Panel satisfied itself that this new measure, in design and application, does *not* condition access to the United States market on the adoption by an exporting Member of a regulatory programme aimed at the protection and the conservation of sea turtles that is *essentially the same* as that of the United States.

[101]Malaysia's appellant's submission, paras. 3.17-3.19.

[102]Appellate Body Report, *supra*, footnote 24, para. 121.

[103]Appellate Body Report, *supra*, footnote 24, para. 177.

141. As the Panel's analysis suggests, an approach based on whether a measure requires "essentially the same" regulatory programme of an exporting Member as that adopted by the importing Member applying the measure is a useful tool in identifying measures that result in "arbitrary or unjustifiable discrimination" and, thus, do *not* meet the requirements of the chapeau of Article XX. However, this approach is not sufficient for purposes of judging whether a measure *does* meet the requirements of the chapeau of Article XX. Therefore, in construing our previous Report, the Panel inferred from our reasoning there that a measure requiring United States and foreign regulatory programmes to be "comparable in effectiveness", as opposed to being "essentially the same", would, absent some other shortcoming, comply with the chapeau of Article XX. On this, the Panel stated:

> It seems that whereas the Appellate Body found that requiring the adoption of essentially the same regime constituted arbitrary discrimination, it accepted - at least implicitly - that a requirement that the US and foreign programmes be "comparable in effectiveness" would be compatible with the obligations of the United States under the chapeau of Article XX. This is because it would "permit a degree of discretion or flexibility in how the standards for determining comparability might be applied, in practice, to other countries." We therefore conclude that if, *in practice*, the implementing measure provides for "comparable effectiveness", the finding of the Appellate Body in terms of lack of flexibility will have been addressed.[104] (footnote omitted)

142. The Panel reads our previous Report to state that a major deficiency of the original measure was its lack of flexibility, in both design and application. The Panel sees our previous Report as suggesting that the original measure was applied in a manner which constituted "unjustifiable discrimination" essentially "because the application of the measure at issue did not allow for any inquiry into the appropriateness of the regulatory program for the conditions prevailing in the exporting countries."[105] The Panel reasons that a measure that, in its design and application, allows certification of exporting Members having regulatory programmes "comparable in effectiveness" to that of the United States does take into account the specific conditions prevailing in the exporting WTO Members and is, therefore, flexible enough to meet the requirements of the chapeau of Article XX.

143. Given that the original measure in that dispute required "essentially the same" practices and procedures as those required in the United States, we found it necessary in that appeal to rule only that Article XX did not allow such inflexibility. Given the Panel's findings with respect to the flexibility of the new measure in this dispute, we find it necessary in this appeal to add to what we ruled in our original Report. The question raised by Malaysia in this appeal is whether the Panel erred in inferring from our previous Report, and thereby finding, that the chapeau of Article XX permits a measure which requires only "comparable effectiveness".

144. In our view, there is an important difference between conditioning market access on the adoption of essentially the same programme, and conditioning market access on the adoption of a programme *comparable in effectiveness*. Authorizing an importing Member to condition market access on exporting Members putting in place regulatory programmes *comparable in effectiveness* to that of the importing Member gives sufficient latitude to the exporting Member with respect to the programme it may adopt to achieve the level of effectiveness required. It allows the exporting

[104]Panel Report, para. 5.93.

[105]Panel Report, para. 5.92.

Member to adopt a regulatory programme that is suitable to the specific conditions prevailing in its territory. As we see it, the Panel correctly reasoned and concluded that conditioning market access on the adoption of a programme *comparable in effectiveness*, allows for sufficient flexibility in the application of the measure so as to avoid "arbitrary or unjustifiable discrimination". We, therefore, agree with the conclusion of the Panel on "comparable effectiveness".

145. Malaysia also argues that the measure at issue is not flexible enough to meet the requirement of the chapeau of Article XX relating to "unjustifiable or arbitrary discrimination" because the Revised Guidelines do not provide explicitly for the specific conditions prevailing in Malaysia.[106]

146. We note that the Revised Guidelines contain provisions that permit the United States authorities to take into account the specific conditions of Malaysian shrimp production, and of the Malaysian sea turtle conservation programme, should Malaysia decide to apply for certification. The Revised Guidelines explicitly state that "[if] the government of a harvesting nation demonstrates that it has implemented and is enforcing a comparably effective regulatory program to protect sea turtles in the course of shrimp trawl fishing without the use of TEDs, that nation will also be eligible for certification."[107] Likewise, the Revised Guidelines provide that the "Department of State will take fully into account any demonstrated differences between the shrimp fishing conditions in the United States and those in other nations as well as information available from other sources." [108]

147. Further, the Revised Guidelines provide that the import prohibitions that can be imposed under Section 609 do not apply to shrimp or products of shrimp "harvested in any other manner or under any other circumstances that the Department of State may determine, following consultations with the [United States National Marine Fisheries Services], does not pose a threat of the incidental taking of sea turtles."[109] Under Section II.B(c)(iii) of the Revised Guidelines (*Additional Sea Turtle Protection Measures*), the "Department of State recognizes that sea turtles require protection throughout their life-cycle, not only when they are threatened during the course of commercial shrimp

[106]According to Malaysia, the specificity of its case rests on the fact that shrimp trawling is not practised in Malaysia; shrimp is a by-catch from fish trawling and therefore, the incidental catch of sea turtles is due to fish trawling, not shrimp trawling. *See*, Malaysia's appellant's submission, para. 3.21 and Panel Report, para. 3.128. In addition, Malaysia stated:

> Malaysia is a nesting ground but it is not known to be a feeding ground for sea turtles and the nesting season in Malaysia does not overlap with the shrimp season. The Loggerheads and the Kemps released rarely nested on Malaysian beaches and did not occur in Malaysian waters respectively and the high mortality of sea turtles that is reported in the shrimp trawls in the United States relate to both these sea turtles. The Green Turtle, the Hawksbill, Leatherback and Olive Ridley are the major sea turtle species in Malaysia. Green turtles were resident in sea grass beds which were found in shallow coastal waters, whilst the Hawksbills were found in coral reef. Trawling was prohibited in these areas. During the nesting season, the Green turtles remain close to the shore in areas where trawling was also prohibited. During long distance migrations between feeding and nesting grounds, turtles were actively swimming close to the surface of the water which made them more vulnerable to drift nets and long lines rather than trawl nets. In Malaysia, trawling targeted fish for the most part of the year and thus the incidental capture of sea turtles was due to fish trawls and not shrimp trawls.
>
> (Malaysia's response to questioning at the oral hearing)

[107]Revised Guidelines, Section II.B; *see*, Panel Report, p. 105.

[108]*Ibid*.

[109]Revised Guidelines, Section I.B; *see*, Panel Report, p. 103.

trawl harvesting."[110] Additionally, Section II.B(c)(iii) states that "[i]n making certification determinations, the Department shall also take fully into account other measures the harvesting nation undertakes to protect sea turtles, including national programmes to protect nesting beaches and other habitat, prohibitions on the direct take of sea turtles, national enforcement and compliance programmes, and participation in any international agreement for the protection and conservation of sea turtles."[111] With respect to the certification process, the Revised Guidelines specify that a country that does not appear to qualify for certification will receive a notification that "will explain the reasons for this preliminary assessment, suggest steps that the government of the harvesting nation can take in order to receive a certification, and invite the government of the harvesting nation to provide … any further information." Moreover, the Department of State commits itself to "actively consider any additional information that the government of the harvesting nation believes should be considered by the Department in making its determination concerning certification."[112]

148. These provisions of the Revised Guidelines, on their face, permit a degree of flexibility that, in our view, will enable the United States to consider the particular conditions prevailing in Malaysia if, and when, Malaysia applies for certification. As Malaysia has not applied for certification, any consideration of whether Malaysia would be certified would be speculation. [113]

149. We need only say here that, in our view, a measure should be designed in such a manner that there is sufficient flexibility to take into account the specific conditions prevailing in *any* exporting Member, including, of course, Malaysia.[114] Yet this is not the same as saying that there must be specific provisions in the measure aimed at addressing specifically the particular conditions prevailing in *every individual* exporting Member. Article XX of the GATT 1994 does not require a Member to anticipate and provide explicitly for the specific conditions prevailing and evolving in *every individual* Member.

150. We are, therefore, not persuaded by Malaysia's argument that the measure at issue is not flexible enough because the Revised Guidelines do not explicitly address the specific conditions prevailing in Malaysia.

151. Malaysia argues, finally, that the Panel should have scrutinized the decision of the CIT in the *Turtle Island* case and assessed, in the light of that decision, the likelihood and consequences of the Revised Guidelines being modified in the future. According to Malaysia, the Panel should have come to the conclusion that the Revised Guidelines are not flexible enough because the CIT ruled that the part of the Revised Guidelines allowing TED-caught shrimp from non-certified harvesting countries to be imported into the United States is contrary to Section 609.[115] As we have already ruled[116], we

[110]Revised Guidelines, Section II.B(c)(iii); *see*, Panel Report, p. 106.

[111]*Ibid.*

[112]Revised Guidelines, Section II.C, Panel Report, p. 107. *See also*, Revised Guidelines, Section II.D, Panel Report, p. 108.

[113]In this respect, we note that the European Communities stated that:

> … the complaint by Malaysia in this case is somewhat premature. As it appears Malaysia has not yet applied for certification and it is therefore not yet clear how the contested legislation would apply to imports of shrimp and shrimp products from Malaysia.
>
> (European Communities' third participant's submission, para. 27)

[114]Appellate Body Report, *United States – Shrimp*, *supra*, footnote 24, para. 164.

[115]Malaysia's appellant's submission, para. 3.25.

[116]*See*, *supra*, para. 95.

are of the view that, when examining the United States measures, the Panel took into account the status of municipal law at the time, and reached the correct conclusion. The CIT decision in the *Turtle Island* case has not modified the legal effect or the application of the Revised Guidelines; hence, we are not persuaded by this argument of Malaysia.

152. For all these reasons, we uphold the finding of the Panel, in paragraph 6.1 of the Panel Report, that "Section 609 of Public Law 101-162, as implemented by the Revised Guidelines of 8 July 1999 and as applied so far by the [United States] authorities, is justified under Article XX of the GATT 1994 as long as the conditions stated in the findings of this Report, in particular the ongoing serious, good faith efforts to reach a multilateral agreement, remain satisfied".[117]

VII. Findings and Conclusions

153. For the reasons set out in this Report, the Appellate Body:

(a) *finds* that the Panel correctly fulfilled its mandate under Article 21.5 of the DSU of examining the consistency, with the relevant provisions of the GATT 1994, of the United States measure taken to comply with the recommendations and rulings of the DSB in *United States - Shrimp*; and

(b) *upholds* the finding of the Panel, in paragraph 6.1 of its Report, that "Section 609 of Public Law 101-162, as implemented by the Revised Guidelines of 8 July 1999 and as applied so far by the [United States] authorities, is justified under Article XX of the GATT 1994 as long as the conditions stated in the findings of this Report, in particular the ongoing serious good faith efforts to reach a multilateral agreement, remain satisfied".

154. As we have upheld the Panel's finding that the United States measure is now applied in a manner that meets the requirements of Article XX of the GATT 1994, we do not make any recommendation to the DSB pursuant to Article 19.1 of the DSU.

---

[117]Panel Report, para. 6.1. The Panel stated that its findings of justification stand, "*as long as*" certain conditions it set out in its Report, in particular, the good faith efforts to reach a multilateral agreement, continue to be met. In this respect, we note that the United States negotiated and concluded a Memorandum of Understanding with certain countries in the Indian Ocean and South-East Asia region, the South-East Asian MOU. *See*, *supra,* footnote 96. This agreement took effect on 1 September 2001, almost two and a half months after the circulation of the Panel Report. The participants have not disputed the existence of this agreement. There was some dispute at the oral hearing as to the legally binding nature of this agreement. Basic Principle 4 of that agreement states:

> This Memorandum of Understanding, including the Conservation and Management Plan, may be amended by consensus of the signatory States. When appropriate, the signatory States will consider amending this Memorandum of Understanding to make it legally binding.

At the oral hearing, the United States stated that "[The South-East Asian MOU] is considered a political undertaking that does not have binding consequences under international law". Malaysia stated that "The [South-East Asian] MOU … would have the status of a treaty under the Vienna Convention of the law of treaties, because "treaty" has been defined as an international agreement that is concluded between States in written form and governed by international law, whether embodied in a single instrument or in two or more related instruments, whatever its particular designation." We need not judge this issue, and we do not. Even so, we note that, whether legally binding or not, the Memorandum of Understanding reinforces the Panel's finding that the United States had indeed made serious good faith efforts to negotiate a multilateral agreement.

I. Introduction

1. The European Communities appeals certain issues of law and legal interpretations developed in the Panel Report, *Brazil – Measures Affecting Imports of Retreaded Tyres* (the "Panel Report").[1] The Panel was established to consider a complaint by the European Communities concerning the consistency of certain measures imposed by Brazil on the importation and marketing of retreaded tyres[2] with the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994").

2. Before the Panel, the European Communities claimed that Brazil imposed a prohibition on the importation of retreaded tyres, notably by virtue of Article 40 of Portaria No. 14 of the Secretaria de Comércio Exterior ("SECEX") (Secretariat of Foreign Trade of the Brazilian Ministry of Development, Industry, and Foreign Trade), dated 17 November 2004 ("Portaria SECEX 14/2004")[3], and that this prohibition was inconsistent with Article XI:1 of the GATT 1994.[4] The European Communities also contended that certain Brazilian measures providing for the imposition of fines on the importation of retreaded tyres, and on the marketing, transportation, storage, keeping, or warehousing of imported retreaded tyres[5], were similarly inconsistent with Article XI:1 or, alternatively, Article III:4 of the GATT 1994.[6] In addition, the European Communities made claims under Article III:4 of the GATT 1994 in respect of certain state measures prohibiting the marketing of, and/or imposing disposal obligations on the importers of, imported retreaded tyres.[7] Finally, the European Communities challenged the exemption from the import prohibition on retreaded tyres and associated fines provided by Brazil to retreaded tyres originating in countries of the Mercado Común del Sur ("MERCOSUR") (Southern Common Market).[8] The European Communities contended that these exemptions were inconsistent with Articles I:1 and XIII:1 of the GATT 1994.[9]

[1]WT/DS332/R, 12 June 2007.

[2]Retreaded tyres are used tyres that are reconditioned for further use by stripping the worn tread from the skeleton (casing) and replacing it with new material in the form of a new tread, and sometimes with new material also covering parts or all of the sidewalls. (See Panel Report, para. 2.1) Retreaded tyres can be produced through different methods, all indistinctively referred to as "retreading". These methods are: (i) top-capping, which consists of replacing only the tread; (ii) re-capping, which entails replacing the tread and part of the sidewall; and (iii) remoulding, which consists of replacing the tread and the sidewall including all or part of the lower area of the tyre. (See *ibid.*, para. 2.2) The retreaded tyres covered in this dispute are classified under subheadings 4012.11 (motor cars), 4012.12 (buses and lorries), 4012.13 (aircraft), and 4012.19 (other types) of the *International Convention on the Harmonized Commodity Description and Coding System*, done at Brussels, 14 June 1983. In contrast, used tyres are classified under subheading 4012.20. New tyres are classified under heading 4011. (See *ibid.*, para. 2.4)

[3]Exhibits BRA-84 and EC-29 submitted by Brazil and the European Communities, respectively, to the Panel. Article 40 of Portaria SECEX 14/2004 reads as follows:

> Article 40 – An import license will not be granted for retreaded and used tires, whether as a consumer product or feedstock, classified under NCM code 4012, except for remoulded tires, classified under NCM codes 4012.11.00, 4012.12.00, 4012.13.00 and 4012.19.00, originating and proceeding from the MERCOSUR Member States under the Economic Complementation Agreement No. 18.

(See Panel Report, para. 2.7)

[4]*Ibid.*, paras. 3.1 and 7.1.

[5]Article 47-A of Presidential Decree 3.179 of 21 September 1999, as amended by Article 1 of Presidential Decree 3.919 of 14 September 2001, provides:

> Importing used or recycled tires:
>
> Fine of R$ 400.00 (four hundred reais) per unit.
>
> Sole paragraph: The same penalty shall apply to whosoever trades, transports, stores, keeps or maintains in a depot a used or recycled tire imported under such conditions.

(*Ibid.*, para. 2.10 (referring to Exhibit BRA-72 submitted by Brazil to the Panel); see also Exhibit EC-34 submitted by the European Communities to the Panel)

[6]Panel Report, paras. 3.1 and 7.358.

[7]*Ibid.*, para. 7.391. The measures of the State of Rio Grande do Sul are identified in paragraphs 2.11 and 2.12 of the Panel Report.

[8]The exemption from the import prohibition afforded to MERCOSUR countries is provided in Article 40 of Portaria SECEX 14/2004 (see *supra*, footnote 3) and applies exclusively to remoulded tyres, a subcategory of retreaded tyres. (See Panel Report, footnote 1440 to para. 7.265) The exemption from the fines associated with the import prohibition on retreaded tyres is provided in Article 1 of Presidential Decree 4.592 of 11 February 2003 (Exhibit BRA-79 submitted by Brazil to the Panel), and exempts imports of all categories of retreaded tyres originating in MERCOSUR countries from the fines provided in Article 47-A of Presidential Decree 3.179, as amended, in the following terms:

> Article 1: Article 47-A of Decree 3.179 of 21 September 1999 shall apply with the addition of the following paragraph, and the current sole paragraph shall be renumbered as (1):
>
> paragraph (2) – Imports of retreaded tyres classified under heading MCN 4012.1100, 4012.1200, 4012.1300 and 4012.1900, originating in the MERCOSUR member countries under Economic Complementation Agreement No. 18 shall be exempt from payment of the fine referred to in this Article.

(See *supra*, footnote 5; see also Panel Report, para. 2.16)

[9]Panel Report, para. 7.448.

3. Brazil did not contest that the prohibition on the importation of retreaded tyres and associated fines were *prima facie* inconsistent with Article XI:1[10]; or that state measures prohibiting the marketing of, and/or imposing disposal obligations on the importers of, imported retreaded tyres were *prima facie* inconsistent with Article III:4[11]; or that the exemptions from both the import prohibition and associated fines afforded to retreaded tyres imported from MERCOSUR countries were *prima facie* inconsistent with Articles I:1 and XIII:1 of the GATT 1994.[12] Instead, Brazil submitted that the prohibition on the importation of retreaded tyres and associated fines, and state measures restricting the marketing of imported retreaded tyres, were all justified under Article XX(b) of the GATT 1994.[13] Brazil contended that the fines associated with the import prohibition on retreaded tyres were justified also under Article XX(d) of the GATT 1994.[14] Brazil further maintained that the exemption from the import prohibition and associated fines afforded to imports of *remoulded* tyres from MERCOSUR countries was justified under Articles XX(d) and XXIV of the GATT 1994.[15]

4. The Panel Report was circulated to Members of the World Trade Organization (the "WTO") on 12 June 2007. The Panel found that the import prohibition on retreaded tyres was inconsistent with Article XI:1 and not justified under Article XX of the GATT 1994.[16] In its analysis, the Panel found that the import prohibition on retreaded tyres was provisionally justified as "necessary to protect human, animal or plant life or health" under Article XX(b).[17] However, the Panel also found that the importation of used tyres under court injunctions resulted in the import prohibition on retreaded tyres being applied by Brazil in a manner that constituted both "a means of unjustifiable discrimination [between countries] where the same conditions prevail"[18] and "a disguised restriction on international trade"[19], within the meaning of the chapeau of Article XX of the GATT 1994.

5. The Panel found further that the fines associated with the import prohibition on retreaded tyres were inconsistent with Article XI:1 and not justified under either paragraph (b) or (d) of Article XX of the GATT 1994.[20] The Panel also determined that state law restrictions on the marketing of imported retreaded tyres and associated disposal obligations were inconsistent with Article III:4 and not justified under Article XX(b) of the GATT 1994.[21] The Panel exercised judicial economy with respect to the European Communities' claims that the exemption from the import prohibition and associated fines afforded to retreaded tyres imported from MERCOSUR countries was inconsistent with Articles I:1 and XIII:1 of the GATT 1994, and with respect to Brazil's related defence under Articles XX(d) and XXIV of the GATT 1994.[22] The Panel accordingly recommended

[10]*Ibid.*, paras. 7.2 and 7.359. Brazil did not acknowledge any inconsistency of the fines with Article III:4 of the GATT 1994. (See *ibid.*, para. 7.359)

[11]*Ibid.*, para. 7.392.

[12]*Ibid.*, para. 7.449.

[13]*Ibid.*, paras. 7.2, 7.217, 7.359, and 7.392.

[14]*Ibid.*, para. 7.359.

[15]*Ibid.*, para. 7.449.

[16]Panel Report, paras. 7.357 and 8.1(a)(i) and (ii).

[17]*Ibid.*, para. 7.215.

[18]*Ibid.*, para. 7.310; see also para. 7.306.

[19]*Ibid.*, para. 7.349.

[20]*Ibid.*, para. 8.1(b). The Panel did not rule on the European Communities' alternative claim that the fines associated with the prohibition on the importation of retreaded tyres were inconsistent with Article III:4 of the GATT 1994. (See *ibid.*, para. 7.364)

[21]*Ibid.*, para. 8.1(c).

[22]*Ibid.*, paras. 7.456 and 8.2.

that the Dispute Settlement Body (the "DSB") request Brazil to bring those measures found to be inconsistent into conformity with its obligations under the GATT 1994.[23]

6. At its meeting on 10 August 2007, the DSB agreed to a joint request by Brazil and the European Communities to extend the time period for adoption of the Panel Report until no later than 20 September 2007.[24] On 3 September 2007, the European Communities notified the DSB of its intention to appeal certain issues of law covered in the Panel Report and certain legal interpretations developed by the Panel, pursuant to Article 16.4 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU"), and filed a Notice of Appeal[25] pursuant to Rule 20 of the *Working Procedures for Appellate Review* (the "*Working Procedures*").[26] On 10 September 2007, the European Communities filed an appellant's submission.[27] On 28 September 2007, Brazil filed an appellee's submission.[28] On the same day, Argentina, Australia, Japan, Korea, the Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu, and the United States each filed a third participant's submission.[29] Also on 28 September 2007, China, Cuba, Guatemala, Mexico, and Thailand each notified its intention to appear at the oral hearing as a third participant.[30] On 5 October 2007, Paraguay notified its intention to appear at the oral hearing as a third participant.[31]

7. On 28 September 2007, the Appellate Body received an *amicus curiae* brief from the Humane Society International. On 11 October 2007, the Appellate Body further received an *amicus curiae* brief submitted jointly by a group of nine non-governmental organizations.[32] The Appellate Body Division hearing the appeal did not find it necessary to take these *amicus curiae* briefs into account in rendering its decision.

8. The oral hearing in this appeal was held on 15 and 16 October 2007. The participants and the third participants, with the exception of Argentina, China, Guatemala, Mexico, Paraguay, and Thailand, made oral statements. The participants and the third participants responded to questions posed by the Members of the Division hearing the appeal.

II. Arguments of the Participants and the Third Participants

A. *Claims of Error by the European Communities – Appellant*

1. The Necessity Analysis

9. The European Communities claims that the Panel erred in finding that the import prohibition on retreaded tyres imposed by Brazil (the "Import Ban") was necessary to protect human, animal, or plant life or health, within the meaning of Article XX(b) of the GATT 1994. The European Communities requests the Appellate Body to reverse this finding and to find, instead, that the Import Ban is not "necessary" within the meaning of Article XX(b).

10. The European Communities' claims of error are directed at three distinct aspects of the Panel's necessity analysis: first, the Panel's finding that the Import Ban contributed to the realization of its stated objective; secondly, the Panel's finding that there were no reasonably available alternatives to the Import Ban; and thirdly, the Panel's alleged failure to conduct the process of weighing and balancing the relevant factors and the alternatives that was required to determine whether the Import Ban was "necessary" under Article XX(b). The arguments advanced by the European Communities in relation to each of these claims of error are addressed in turn.

(a) The Contribution Analysis

11. The European Communities argues that the Panel erred in finding that the Import Ban contributed to the protection of human, animal, or plant life or health. The European Communities maintains that the Panel "applied an erroneous legal standard"[33] by examining whether the Import Ban could make, or *could have* made, a contribution to the protection of human life or health, rather than establishing the *actual* contribution of the measure to its objective. By applying a standard of potential contribution, rather than one of actual contribution, the Panel acted inconsistently with the case law of the Appellate Body[34], which requires the Panel to have assessed the extent of the contribution made by the Import Ban to the reduction of waste tyres arising in Brazil. The European Communities reasons that "no meaningful weighing and balancing is possible"[35] absent a proper determination of the extent of the contribution made by the measure, and that, for necessity to be demonstrated, the contribution required is "more than mere suitability", it must be "verifiable and significant".[36] In this case, assessing the contribution of the measure to the achievement of its stated goals involved assessing whether the Import Ban reduced the number of waste tyres in Brazil. The European Communities does not see how this could have been done in any way *other than* through quantification, and stresses that this is *not* a case involving scientific uncertainty about the existence of risks. Rather, that "[t]he very indirect nature of the alleged risks attributed to imported retreaded tyres should have called for a particularly diligent examination of the contribution made by the ban to the reduction of the number of waste tyres arising in Brazil."[37]

[33]European Communities' appellant's submission, para. 166.

[34]*Ibid.*, para. 169 (referring to Appellate Body Report, *Korea – Various Measures on Beef*, para. 164).

[35]*Ibid.*, para. 171.

[36]*Ibid.*, para. 172.

[37]European Communities' appellant's submission, para. 177. For the European Communities, the indirect nature of the alleged risk distinguishes this case from *EC – Asbestos*, as the factual context of this case does not concern the evaluation of risk in quantitative or qualitative terms. Rather, it concerns the quantification of the contribution of the measure to achieving its stated objective. (See *ibid.*, para. 175)

12. In addition, the European Communities claims that the Panel did not make an objective assessment of the facts of the case, as required by Article 11 of the DSU, in determining the contribution of the Import Ban to the realization of the ends pursued by it. The European Communities asserts that the Panel ignored significant facts and arguments in its analysis, and failed to conduct an overall assessment of the evidence, instead, referring to the evidence before it in a selective and distorted manner.

13. According to the European Communities, in concluding that it had "no reason to believe that new tyres sold in Brazil are low-quality tyres"[38] that were not capable of being retreaded, the Panel ignored evidence that demonstrated "the existence ... of low-quality non-retreadable tyres"[39] in Brazil. The Panel's finding that "at least some domestic used tyres are being retreaded in Brazil"[40] is based exclusively on a statement contained in a report by the Associação Brasileira do Segmento de Reforma de Pneus (the "ABR") (Brazilian Association of the Retreading Industry) (the "ABR Report")[41] and on Technical Note 001/2006 of the Instituto Nacional de Metrologia, Normalização e Qualidade Industrial ("INMETRO") (National Institute for Metrology, Standardization and Industrial Quality).[42] The European Communities submits that the Panel failed to consider that the former is directly contradicted by a second report by the ABR[43], or to discount the evidentiary value of the latter given that it was issued during the course of the Panel proceedings and contradicts the earlier INMETRO Technical Note 83/2000.[44]

14. Moreover, the European Communities contends that the Panel ignored evidence that contradicted its findings regarding the retreadability of used tyres in Brazil, namely, a study by the consultancy LAFIS [45], and the fact that domestic retreaders have sought court injunctions to obtain the right to import used tyres for further retreading in Brazil. The European Communities also denounces the Panel's references to measures that Brazil might adopt in the future (such as more frequent automotive inspections), emphasizing that the question of whether the Import Ban contributed to the achievement of its stated objective had to be determined at the time of the establishment of the Panel, and speculation about future events is not a sufficient basis for an objective assessment of the facts.

(b) Alternatives to the Import Ban

15. The European Communities argues that the Panel committed multiple errors in holding that there were no reasonably available alternatives to the Import Ban that would ensure the same level of protection of human life and health. The European Communities points out that it presented two categories of alternative measures: measures to reduce the *accumulation* of waste tyres; and measures to improve the *management* of waste tyres.

[38]*Ibid.*, para. 183 (quoting Panel Report, para. 7.137).

[39]*Ibid.* (referring to Exhibits EC-15 and EC-67 to EC-71 submitted by the European Communities to the Panel; European Communities' oral statement at the first Panel meeting, para. 28; and European Communities' response to Question 11 posed by the Panel, Panel Report, pp. 254-255).

[40]Panel Report, para. 7.136.

[41]European Communities' appellant's submission, para. 186 (referring to the report of the ABR on tyre retreading activities in Brazil, 26 May 2006 (Exhibit BRA-95 submitted by Brazil to the Panel), para. 6)).

[42]Exhibit BRA-163 submitted by Brazil to the Panel.

[43]European Communities' appellant's submission, para. 187 (referring to the report of the ABR on the reformed tyres sector in Brazil, 23 June 2006 (Exhibit BRA-157 submitted by Brazil to the Panel), para. 6)).

[44]European Communities' appellant's submission, paras. 188 and 189; Exhibit EC-45 submitted by the European Communities to the Panel.

[45]*Ibid.*, para. 190 (referring to the report by LAFIS, "Auto Parts and Vehicles: Tyres", 20 April 2006 (Exhibit EC-92 submitted by the European Communities to the Panel), p. 11). This study indicates that, in Brazil, the overall rate of retreading for all types of vehicles is 9.9 per cent.

16. In the view of the European Communities, the Panel improperly excluded measures to ensure a better implementation and enforcement of the import ban on *used* tyres from its analysis of possible alternatives to the Import Ban on *retreaded* tyres. The most relevant and obvious alternative that would allow Brazil to prevent the risks associated with the accumulation of waste tyres would be to put an end to the importation of used tyres. Thus, the European Communities insists, the Panel should have analyzed this alternative irrespective of whether it also considered the implementation of the import ban on used tyres as part of its analysis under the chapeau of Article XX.

17. The European Communities adds that the Panel incorrectly defined as "alternatives" to the Import Ban only measures that avoid the generation of waste tyres specifically from imported retreaded tyres. Such a narrow definition of "alternatives" wrongly links the notion of alternative measures to the *means* (avoidance or non-generation of waste tyres) employed by the measure at issue to achieve its objective, rather than to the objective itself. Available alternatives to the Import Ban are not, therefore, as the Panel found, limited to non-generation measures, but include any alternatives that would allow Brazil to attain the stated objective of the Import Ban, namely, the protection of life and health from mosquito-borne diseases and from tyre fire emissions. In the European Communities' view, the Panel's narrow conception of "alternative" resulted in the erroneous rejection of several alternatives that were capable of achieving this objective, such as measures to improve the domestic retreading and retreadability of tyres, the collection and disposal scheme imposed by the Conselho Nacional do Meio Ambiente ("CONAMA") (National Council for the Environment of the Ministry of the Environment), and measures relating to the management of waste tyres, such as co-incineration.

18. The European Communities points to two additional errors in the Panel's conception of alternative measures. First, the Panel refused to consider as alternatives measures that could be "cumulative rather than substitutable"[46] with the Import Ban. For the European Communities, a measure that is cumulative or complementary to the Import Ban is capable of achieving the same objective as the ban and, therefore, is an alternative that must be taken into account. Secondly, in examining the CONAMA scheme and co-incineration of waste tyres, the Panel did not inquire whether the proposed options exist and are reasonably available, but, instead, examined whether those options are actually being employed.

19. Moreover, the European Communities argues that the Panel erred by excluding as alternatives a correct and complete implementation of certain state measures merely on the basis that these measures have already been implemented in Brazil. Specifically, the European Communities submits that evidence before the Panel demonstrated that Brazil neither implements correctly the obligations under the CONAMA scheme, nor enforces properly its collection and disposal system. Therefore, a better enforcement of the CONAMA scheme is an alternative that would be more effective than the Import Ban in reducing risks associated with tyre waste. The Panel also erroneously ignored the European Communities' contention that collection and disposal programmes, such as Paraná Rodando Limpo[47] should be adopted by all states in Brazil.

20. The European Communities also challenges the Panel's findings that most of the material recycling alternatives it proposed could not constitute reasonably available alternatives to the Import Ban because they "are only capable of disposing [of] a small ... number of waste tyres".[48] The case law of the Appellate Body regarding Article XX(b) does not require that one single alternative measure achieve the same objective as the challenged measure. Therefore, the Panel erred in rejecting several alternative measures on the grounds that, taken individually, each measure did not fully attain

[46]European Communities' appellant's submission, para. 225 (quoting Panel Report, para. 7.169).

[47]See Exhibit EC-49 submitted by the European Communities to the Panel.

[48]European Communities' appellant's submission, para. 238 (referring to Panel Report, paras. 7.201, 7.205, and 7.206). (underlining omitted)

the objective of the challenged measure. The European Communities also considers that the Panel erred in its analysis by requiring alternatives to be capable of dealing with the management of *all* waste tyres in Brazil, rather than with the number of waste tyres attributable to imported *retreaded* tyres.

21. Finally, the European Communities submits that the Panel's factual findings regarding reasonably available alternatives were not based on an objective assessment of the facts, as required by Article 11 of the DSU. More specifically, the Panel's rejection of landfilling of waste tyres as an alternative to the Import Ban was based on evidence related exclusively to landfilling of *whole* tyres, when the only alternative proposed was the landfilling of *shredded* tyres, and the Panel did not take into account legislation that permits the landfilling of shredded tyres in Brazil. As regards controlled stockpiling, the Panel erred in rejecting this alternative on the grounds that stockpiling does not dispose of waste tyres, and that it entails some risk to human health and the environment. As recognized in the *Basel Convention on the Control of Transboundary Movements of Hazardous Waste and Their Disposal*[49], controlled stockpiling is a disposal operation that is used for temporary storage. It is a crucial element in managing waste tyres, and the mere fact that it does not avoid *all* the risks that the Import Ban seeks to eliminate does not mean that it could not be an alternative. Regarding co-incineration, the European Communities argues that the Panel relied on evidence on co-incineration activities in countries other than Brazil[50], and failed to require Brazil to explain why unused capacity in its existing incineration facilities could not be used to burn more waste tyres as an available alternative to the Import Ban. The European Communities adds that the Panel's finding that co-incineration "may potentially pose health risks to humans"[51] is based on outdated evidence that does not represent the current state of the art on energy recovery.

22. The European Communities contends further that the Panel's rejection of material recycling as an alternative to the Import Ban is also not based on an objective assessment of the facts. The Panel disregarded evidence presented by the European Communities and, instead, relied on a brief paper by an unidentified organization, which related to a single material recycling application—civil engineering—to conclude that "it is not clear that these [material recycling] applications are entirely safe".[52] The European Communities adds that the Panel's conclusion that material recycling alternatives, such as civil engineering and rubber asphalt, would not be "reasonably" available due to their prohibitive costs was based on evidence adduced exclusively in relation to a single material recycling application—devulcanization.

23. Finally, the European Communities claims that the Panel failed to analyze one of the possible alternative measures identified by the European Communities, and which has already been adopted by Brazil—the National Dengue Control Programme[53]—and that this failure constitutes a violation of Article 11 of the DSU.

[49]Adopted 1989; entry into force 1992 (Exhibit EC-24 submitted by the European Communities to the Panel).

[50]European countries and the United States. See also Panel Report, footnote 1339 to para. 7.192.

[51]European Communities' appellant's submission, para. 262 (quoting Panel Report, para. 7.192).

[52]European Communities' appellant's submission, para. 274 (referring to Panel Report, para. 7.208). The European Communities also criticizes the Panel for reaching its finding on high costs of rubber asphalt applications on the basis of a piece of evidence describing this application as a "promising outlet for recycled rubber because rubberised asphalt lasts longer than conventional asphalt". (*Ibid.*, para. 279 (quoting Panel Report, footnote 1367 to para. 7.205, in turn quoting the report of the Organisation for Economic Co-operation and Development ("OECD"), Working Group on Waste Prevention and Recycling, ENV/EPOC/WGWPR(2005)3/FINAL, 26 September 2005 (Exhibit EC-16 submitted by the European Communities to the Panel)))

[53]Brazil's Ministry of Health National Dengue Control Programme (NDCP), adopted 24 July 2002 (Exhibit EC-93 submitted by the European Communities to the Panel).

(c) The Weighing and Balancing Process

24. The European Communities claims that the Panel failed to conduct the process of weighing and balancing the relevant factors and the alternatives that was required in order to determine whether the Import Ban was "necessary" under Article XX(b) of the GATT 1994. For the European Communities, weighing and balancing involves, first, an individual assessment of each element (importance of the objective pursued; trade restrictiveness of the measure; contribution of the measure to the achievement of the objective) and, then, a consideration of the role and relative importance of each element together with the other elements, for the purposes of deciding whether the challenged measure is necessary to achieve the relevant objective. The Panel, however, failed to weigh properly the trade restrictiveness of the Import Ban. Because the Panel incorrectly analyzed the extent of the contribution of the Import Ban to the reduction in the number of waste tyres and, indirectly, to the protection of human life and health, the Panel was also incapable of properly weighing and balancing this contribution against any of the other elements. The Panel failed to consider that the risks addressed by the Import Ban were not directly linked to retreaded tyres but to the waste they eventually turn into, and that the level of such risks depends on how waste tyres are managed and disposed of. Thus, the Panel failed to acknowledge the indirect, uncertain, and relative contribution of the Import Ban to its stated objective and, in turn, failed to limit the weight afforded to this element in the weighing and balancing process.

25. The European Communities contends that the Panel based its weighing and balancing exercise on its flawed analysis of reasonably available alternatives. The Panel also failed to take proper account of the trade restrictiveness of the Import Ban in the weighing and balancing exercise. The Panel focused on non-generation measures, and overlooked the considerable advantages of sound waste tyre collection and disposal schemes, including the fact that the implementation of the CONAMA scheme is less trade restrictive than the Import Ban. The Panel conducted an individual analysis of possible alternatives, did not really carry out a global assessment, and discarded measures that have already been implemented without verifying the extent of implementation. In sum, asserts the European Communities, the Panel did not conduct a proper weighing and balancing of the relevant elements and alternatives, but, rather, a superficial analysis that repeated all of the errors it had already made in its assessment of the necessity of the Import Ban.

26. For all of the above reasons, the European Communities requests the Appellate Body to reverse the Panel's finding that the Import Ban was "necessary" to protect human, animal, or plant life or health, within the meaning of Article XX(b) of the GATT 1994. Should the Appellate Body accept this request, the European Communities further requests the Appellate Body to find that the Import Ban is not "necessary" within the meaning of Article XX(b) of the GATT 1994.

2. The Chapeau of Article XX of the GATT 1994

(a) The MERCOSUR Exemption

27. The European Communities claims that the Panel erred in finding that the exemption from the Import Ban on imports of retreaded tyres from MERCOSUR countries (the "MERCOSUR exemption") did not constitute arbitrary or unjustifiable discrimination or a disguised restriction on international trade and was not, therefore, contrary to the chapeau of Article XX of the GATT 1994. These findings were based on a "confused" analysis "marred by serious errors of law".[54] In particular, the European Communities emphasizes that the fact that Brazil introduced the MERCOSUR exemption in order to comply with its obligations under MERCOSUR does not preclude a finding of "arbitrary" discrimination. The European Communities argues further that the volume of imports

[54]European Communities' appellant's submission, para. 304.

from MERCOSUR countries is irrelevant to the analysis of whether that exemption constitutes arbitrary or unjustifiable discrimination. The European Communities requests the Appellate Body to reverse this finding and to find, instead, that the MERCOSUR exemption results in the Import Ban being applied inconsistently with the chapeau of Article XX.

28. For the European Communities, the "arbitrary" discrimination and the "unjustifiable" discrimination mentioned in the chapeau of Article XX are closely related. Both require discrimination to be explained through convincing, reasonable, and rational arguments. What is arbitrary and unjustifiable discrimination must, in the view of the European Communities, be established in relation to the objective of the measure at issue and the conditions prevailing in the countries concerned. At the same time, the notions of "arbitrary" and "unjustifiable" are not identical: "the term 'arbitrary' has its 'centre of gravity' in the lack of consistency and predictability in the application of the measure, while the term 'unjustifiable' refers more to the lack of motivation and capacity to convince."[55]

29. The European Communities submits that, in its analysis, the Panel wrongly defined "arbitrary" discrimination as being limited to "capricious", "unpredictable", or "random" discrimination.[56] This definition failed to take into account the object and purpose of Article XX, as well as the context provided by the close link between "arbitrary discrimination" and "unjustifiable discrimination". The European Communities adds that this definition would deprive arbitrary discrimination of its useful value, because "few actions of governments are ever entirely 'random' or 'capricious'."[57] The chapeau of Article XX expresses "requirements of good faith, and requires a delicate balancing of the interests of the Member invoking an exception ... and the rights of other Members".[58] The European Communities contends that the Panel's approach, however, was not consistent with the required balancing of interests, because it would allow discrimination "on the basis of purely extraneous factors which have nothing to do with the objectives of the measure"[59], as long as the discrimination is not random or capricious.

30. According to the European Communities, whether a measure involves arbitrary discrimination can only be determined by taking into account the objective of the measure in respect of which Article XX is invoked. A measure will not be arbitrary if it "appears as reasonable, predictable and foreseeable"[60] in the light of that objective.

31. It follows, according to the European Communities, that the Panel erred in finding that the MERCOSUR exemption did not constitute arbitrary discrimination because it had been introduced in response to a ruling of a MERCOSUR arbitral tribunal. The MERCOSUR exemption does not further, and has the potential of undermining, the stated objective of the measure (the protection of life and health from risks arising from mosquito-borne diseases and tyre fires), and for this reason must be regarded as unreasonable, contradictory, and thus arbitrary. For the European Communities, allowing a Member's obligations under other international agreements to render discrimination consistent with the chapeau of Article XX would seriously undermine the effectiveness of the chapeau. The fact that the chapeau of Article XX prohibits discrimination "between countries where

[55]European Communities' appellant's submission, para. 310 (referring to European Communities' first written submission to the Panel, para. 152).

[56]Panel Report, paras. 7.272, 7.280, and 7.281.

[57]European Communities' appellant's submission, para. 316.

[58]*Ibid.*, para. 319 (referring to Appellate Body Report, *US – Shrimp*, paras. 158 and 159, where the Appellate Body also found that the "rigidity" and "inflexibility" of certain certification requirements introduced by the United States constituted "arbitrary discrimination").

[59]*Ibid.*, para. 319.

[60]*Ibid.*, para. 321.

the same conditions prevail" provides further support for the European Communities' interpretation, because whether the same conditions prevail in different countries is an objective question, not a question of legal obligations *vis-à-vis* another country. It is thus "inconceivable that the mere compliance with an international agreement would suffice to render discrimination between countries where the same conditions prevail compatible with the chapeau of Article XX".[61]

32. As regards the Panel's attempt to buttress its reasoning by referring to Article XXIV of the GATT 1994 and the "'nature' of Mercosur as an agreement"[62] within the meaning of that provision, the European Communities submits that agreements justified under Article XXIV would not entitle Members to discriminate in the application of Article XX measures, because Article XXIV:8(a)(i) and (b) explicitly excludes measures that are justified under Article XX from the requirement to eliminate restrictive regulations of commerce with respect to substantially all the trade within a customs union or free trade area. The European Communities further criticizes the Panel for not verifying whether MERCOSUR is a customs union that complies with the requirements of Article XXIV of the GATT 1994.

33. The European Communities points to two additional flaws in the Panel's reasoning: its statement that it took into account "the nature of the ruling on the basis of which Brazil has acted"[63]; and the Panel's reliance on Brazil's statement that the MERCOSUR exemption was "the only course of action available to it"[64] to implement the ruling. The nature of the ruling on the basis of which Brazil has acted is irrelevant for the determination of whether the MERCOSUR exemption constitutes arbitrary discrimination. Moreover, before the MERCOSUR tribunal, Brazil chose not to defend the Import Ban by invoking an exception clause related to the protection of human life and health, and thus the fact that it invoked such grounds in this dispute must be regarded as arbitrary. The European Communities further submits that the MERCOSUR tribunal did not oblige Brazil to discriminate between its MERCOSUR partners and other WTO Members, because Brazil could have implemented the arbitral ruling by lifting the Import Ban with respect to all third countries.

34. The European Communities argues further that the Panel erred in finding that unjustifiable discrimination could arise only if imports under the MERCOSUR exemption were to take place in such amounts that the achievement of the objective of the Import Ban would be significantly undermined. By assessing the existence of unjustifiable discrimination on the basis of import volumes, the Panel applied a test that has no basis in the text of Article XX and finds no support in WTO case law. The European Communities adds that, if adopted by the DSB, this finding would diminish its rights under the covered agreements, contrary to Article 3.2 of the DSU.

35. The European Communities submits that import volumes under the MERCOSUR exemption are irrelevant for determining whether this exemption constitutes arbitrary or unjustifiable discrimination. The specific volume of imports from MERCOSUR countries in a given year is not related to the manner in which the Import Ban is applied, but rather dependent upon economic factors relating to supply and demand. Moreover, this volume can fluctuate significantly from year to year, and may be more likely to do so if the Panel's finding stands, given that it creates an incentive to shift retreaded tyre production to MERCOSUR countries, especially to those that do not restrict the importation of used tyres. Thus, reasons the European Communities, in addition to being incorrect, the Panel's findings increase the likelihood of future litigation on whether increases in imports from MERCOSUR countries have rendered the exemption inconsistent with the chapeau. This is not

[61]European Communities' appellant's submission, para. 325.

[62]*Ibid.*, para. 329.

[63]*Ibid.*, para. 330 (referring to Panel Report, para. 7.283).

[64]*Ibid.*, para. 332 (referring to Panel Report, para. 7.280).

consistent with Article 3.3 of the DSU, which provides that the prompt settlement of disputes "is essential for the effective functioning of the WTO".[65]

36. According to the European Communities, the Panel's approach is also inconsistent with the Appellate Body Report in *US – Gambling*, where "the Appellate Body did not attach importance to the 'volume' of services traded under [that] exemption, and to how that volume compared with the volume of online gambling services offered by Antigua and Barbuda or, in fact, all other WTO Members cumulatively."[66] The Panel's approach also goes against Appellate Body reports confirming the right of Members to challenge measures, *as such*, and the need to protect the security and predictability of the multilateral trading system that underpins that right.[67] Yet, under the Panel's approach, the question of which volumes of imports would be regarded as "significant" for purposes of the chapeau of Article XX would ultimately depend on market factors, and could be assessed only *ex post* based on data relating to trade flows.

37. The European Communities also contests the Panel's conclusions that the MERCOSUR exemption did not constitute "a disguised restriction on international trade" within the meaning of the chapeau of Article XX. Like its finding on unjustifiable discrimination, the Panel's finding was based on the rationale that MERCOSUR imports have not been significant in volume. Thus, submits the European Communities, the Panel's finding on a disguised restriction on international trade is equally erroneous. The European Communities fails to understand how the Panel could characterize the imports under the MERCOSUR exemption, increasing tenfold since 2002 from 200 to 2,000 tons of tyres per year by 2004, as "insignificant".[68]

38. For these reasons, the European Communities requests the Appellate Body to reverse the Panel's finding that the MERCOSUR exemption did not constitute arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, within the meaning of the chapeau of Article XX, and to find, instead, that the MERCOSUR exemption results in the Import Ban being applied inconsistently with the requirements of that provision.

(b) Imports of Used Tyres

39. With respect to the Panel's analysis of imports of used tyres under the chapeau of Article XX, the European Communities supports the Panel's conclusion that such imports constituted unjustifiable discrimination between countries where the same conditions prevail, but challenges several other findings made by the Panel in this part of its analysis. Specifically, the European Communities contends that the Panel erred, first, in finding that the imports of used tyres through court injunctions did not result in arbitrary discrimination and, secondly, in finding that such imports constituted unjustifiable discrimination and a disguised restriction on international trade only to the extent that they occurred in such amounts as to significantly undermine the objective of the Import Ban.

40. For the European Communities, the Panel adopted an overly restrictive approach to the notion of "arbitrary discrimination", in considering that action is not arbitrary as long as there is some cause or reason to explain it. What is arbitrary must be decided in the light of the stated objective of the measure. The European Communities reasons that, because, from the perspective of the protection of human life or health, there is no difference between, on the one hand, a retreaded tyre produced in the

[65]European Communities' appellant's submission, para. 343.

[66]*Ibid.*, para. 344 (referring to Appellate Body Report, *US – Gambling*, para. 369).

[67]*Ibid.*, para. 345 (referring to Appellate Body Report, *US – Corrosion-Resistant Steel Sunset Review*, para. 82).

[68]European Communities' appellant's submission, para. 348.

European Communities and, on the other hand, a retreaded tyre produced in Brazil from a casing imported from the European Communities, the importation of used tyres through court injunctions must be regarded as constituting arbitrary discrimination. The European Communities adds that the Panel's attempt to distinguish between, on the one hand, the actions of Brazilian courts in granting injunctions allowing imports of used tyres and, on the other hand, the compliance of administrative authorities with those injunctions, is ill-founded. A WTO Member must assume responsibility for the acts of all the branches of its government. The contradiction between the actions of the branches of the Brazilian government that have allowed the importation of used tyres, and those that ban the importation of retreaded tyres, must be regarded as arbitrary behaviour on the part of Brazil.

41. The European Communities also submits that the Panel erred in finding that the imports of used tyres under court injunctions resulted in unjustifiable discrimination only to the extent that they significantly undermined the objective of the Import Ban. In analyzing whether imports of used tyres under court injunctions were inconsistent with the chapeau of Article XX, the Panel applied the same quantitative approach that it had incorrectly applied when assessing the MERCOSUR exemption under that provision. The European Communities refers to the arguments it advanced in relation to the MERCOSUR exemption to explain why the volumes of imports are irrelevant for purposes of determining the consistency of a measure with the chapeau of Article XX.

42. The European Communities observes further that the court injunctions effectively exempt Brazilian retreaders from the import ban on used tyres, because they do not contain any temporal or quantitative limitations. Thus, the Panel's quantitative approach engenders uncertainty for the implementation of the Panel Report and is not in accordance with the prompt settlement of the dispute as required by Article 3.3 of the DSU. The Panel characterized imports of 10.5 million used tyres into Brazil in 2005 as "significant", but failed to identify the threshold below which imports of used tyres would no longer be "significant". The European Communities adds that, for the same reasons adduced in relation to unjustifiable discrimination, the Panel erred in finding that the imports of used tyres through court injunctions resulted in the Import Ban being applied in a manner that constitutes a disguised restriction on international trade only to the extent that these imports occurred in such quantities that they significantly undermined the objective of the Import Ban.

43. For all these reasons, the European Communities requests the Appellate Body to reverse the Panel's finding that imports of used tyres under court injunctions did not constitute arbitrary discrimination under the chapeau of Article XX, and constituted unjustifiable discrimination or a disguised restriction on international trade under the terms of this provision only to the extent that those imports significantly undermined the objective of the Import Ban. The European Communities requests the Appellate Body to find, instead, that imports of used tyres under court injunctions result in the Import Ban being applied inconsistently with all of the requirements of the chapeau of Article XX of the GATT 1994.

3. Conditional Appeal

44. Should the Appellate Body not find, as requested by the European Communities, that the MERCOSUR exemption results in the Import Ban being applied inconsistently with the chapeau of Article XX, then the European Communities conditionally appeals the Panel's decision to exercise judicial economy with respect to its separate claims that the MERCOSUR exemption is inconsistent with Articles I:1 and XIII:1 of the GATT 1994. In such circumstances, the European Communities requests the Appellate Body to reverse the Panel's decision to exercise judicial economy with respect to these claims and to complete the legal analysis and find that the MERCOSUR exemption is inconsistent with Articles I:1 and XIII:1, and not justified under Articles XX(d) and XXIV of the GATT 1994.

(a) The Panel's Exercise of Judicial Economy

45. The European Communities submits that, in declining to rule on the European Communities' claims under Articles I.1 and XIII:1 of the GATT 1994, the Panel exercised "false judicial economy" and did not provide a positive resolution to the dispute as required by Articles 3.3, 3.4, and 3.7 of the DSU.[69] In the light of the Panel's finding that the Import Ban was inconsistent with the chapeau of Article XX only to the extent that imports of used tyres were occurring in amounts that significantly undermined the objective of the Import Ban, Brazil was under no obligation to remove the MERCOSUR exemption *per se*. Therefore, the Panel should have addressed the European Communities' claims that the MERCOSUR exemption *per se* is incompatible with Articles I:1 and XIII:1.

(b) Completing the Legal Analysis

46. The European Communities submits that there are sufficient factual findings of the Panel and uncontested facts on record for the Appellate Body to complete the legal analysis and find that the MERCOSUR exemption is incompatible with Articles I:1 and XIII:1, and is not justified under Articles XX(d) and XXIV of the GATT 1994. The European Communities recalls that Brazil did not contest that the MERCOSUR exemption constitutes a violation of Articles I:1 and XIII:1. Therefore, the only question to be addressed by the Appellate Body is whether this measure can be justified under Articles XX(d) and XXIV.

(c) The MERCOSUR Exemption and Article XXIV of the GATT 1994

47. The European Communities argues that the MERCOSUR exemption is not justified under Article XXIV of the GATT 1994, because it does not satisfy the two conditions identified by the Appellate Body in its Report in *Turkey – Textiles*.[70] First, Brazil failed to demonstrate that MERCOSUR complies with the conditions of Article XXIV:8(a) and 5(a) of the GATT 1994. As explained extensively in the European Communities' submissions to the Panel, Brazil failed to demonstrate that MERCOSUR has achieved a liberalization of "substantially all"[71] the trade within MERCOSUR, as required by Article XXIV:8(a)(i). The European Communities contends that trade in the automotive and sugar sectors has not been entirely liberalized within MERCOSUR, and highlights that "the automotive sector alone accounts for approximately 29%"[72] of trade within MERCOSUR. In addition, according to the European Communities, exceptions to MERCOSUR's common external tariff "currently concern up to 10% of the tariff lines"[73] applicable to external trade, and individual MERCOSUR countries "maintain export duties and 'other regulations of commerce' on trade with third countries that are not common to all Mercosur countries."[74]

48. The European Communities adds that Brazil failed to demonstrate that MERCOSUR complies with the requirement in Article XXIV:5(a) of the GATT 1994 that duties and other restrictive regulations of commerce are not to be on the whole more restrictive than the general

[69]European Communities' appellant's submission, para. 375.

[74]*Ibid.*

incidence of these measures prior to the creation of MERCOSUR, in particular, as regards non-tariff measures. Indeed, emphasizes the European Communities, the measure at issue in this dispute illustrates that MERCOSUR countries continue to adopt such non-tariff measures.

49. Secondly, the European Communities maintains that Brazil has not shown that the MERCOSUR exemption was necessary for the formation of MERCOSUR. Nothing in the reasoning of the Appellate Body Report in *Turkey – Textiles* suggests that this condition would not apply to cases such as this one where a restriction is first imposed on all goods, and then subsequently removed only for goods originating in the customs union. Moreover, the European Communities considers that "Article XXIV would be turned into an almost limitless exception, which would allow parties to a customs union to take any measure derogating from WTO obligations"[75] if WTO Members were not required to demonstrate that the measure was necessary for the formation of the customs union in question.

50. The European Communities submits that the MERCOSUR exemption was not necessary for the formation of MERCOSUR. Article XXIV:8(a)(i) explicitly exempts measures consistent with Article XX from the requirement to eliminate barriers to trade with respect to substantially all the trade between the constituent members of a customs union. For this reason, it follows that Article XX cannot be invoked in order to justify the selective elimination of such trade barriers only with respect to trade within the customs union or free trade area. Nor can the MERCOSUR exemption be characterized as necessary for the formation of MERCOSUR because it was adopted several years after the conclusion of MERCOSUR.

(d) The MERCOSUR Exemption and Article XX(d) of the GATT 1994

51. The European Communities submits that the MERCOSUR exemption is also not justified under Article XX(d) of the GATT 1994. The Appellate Body found, in *Mexico – Taxes on Soft Drinks*, that the term "laws and regulations" in Article XX(d) covered "rules that form part of the domestic legal system of a WTO Member, including rules deriving from international agreements that have been incorporated into the domestic legal system of a WTO Member".[76] However, Brazil has not demonstrated that the obligation to comply with rulings of the MERCOSUR arbitral tribunals has been incorporated into the Brazilian legal system. The European Communities suggests further that the term "securing compliance" in Article XX(d) does not mean simply "complying". Instead, "securing compliance" refers to enforcement measures where compliance is achieved by persons other than the entity "securing" the compliance. Thus, Article XX(d) does not cover Brazil's adoption of the MERCOSUR exemption. Furthermore, the MERCOSUR exemption is not "necessary" within the meaning of Article XX(d) because Brazil could have complied with the ruling of the MERCOSUR arbitral tribunal by lifting the Import Ban with respect to all third countries, rather than only its MERCOSUR partners. Finally, the European Communities submits that the MERCOSUR exemption does not fulfil the requirements of the chapeau of Article XX, because it constitutes unjustifiable and arbitrary discrimination between countries where the same conditions prevail, in particular, given that, by virtue of it, Brazil allows the imports of retreaded tyres from MERCOSUR countries even when those tyres are made from used tyres originating in the European Communities.

[75]European Communities' appellant's submission, para. 392.

[76]*Ibid.*, para. 402 (quoting Appellate Body Report, *Mexico – Taxes on Soft Drinks*, para. 79).

B. *Arguments of Brazil – Appellee*

1. The Necessity Analysis

52. Brazil maintains that the Panel properly found that the Import Ban was "necessary" to protect human, animal, or plant life or health within the meaning of Article XX(b) of the GATT 1994, and therefore requests the Appellate Body to uphold this finding.

(a) The Contribution Analysis

53. First, Brazil argues that the Panel correctly assessed the contribution made by the Import Ban to the achievement of its objective. The paragraphs set out in Article XX focus on the measure, as such, while the chapeau focuses also on the application of the measure. Therefore, actual contribution is not relevant to the analysis under paragraph (b) of Article XX, and the Panel applied the correct legal standard in using phrases such as "can contribute" and "capable of contributing".[77] Such a standard is also particularly appropriate given that some measures—for example, environmental measures—may not have immediate effect. The Panel's approach was in line with "virtually all" other cases that have examined a measure's contribution under paragraphs (b) and (d) of Article XX of the GATT 1994 or under Article XIV of the *General Agreement on Trade in Services* (the "GATS").[78] This is the case whether the risk sought to be avoided is direct or indirect. Brazil adds that the need to undertake the weighing and balancing exercise also illustrates that the European Communities cannot be correct. If a panel were required to assess the extent of a measure's actual contribution, it would have to do the same for alternative measures in order to compare them. Yet, this is impossible, because an alternative measure is one that has not yet been realized. That the Panel was not, as the European Communities claims, required to quantify the Import Ban's contribution to reducing waste tyre volumes is confirmed in the Appellate Body Report in *EC – Asbestos*, where the Appellate Body held that "a risk may be evaluated either in quantitative or *qualitative* terms".[79] Brazil also expresses its understanding that, according to existing case law, if the measure can make a contribution to its objective, and no reasonably available alternatives exist, then the measure is "necessary".

54. In addition, Brazil argues that the Panel acted consistently with its duty under Article 11 of the DSU in finding that the Import Ban contributed to the achievement of its objective. The Panel relied on numerous studies and reports, which provided it with more than a sufficient basis to find that tyres used in Brazil are retreadable and are being retreaded. The Panel referred to the ABR Report[80] and INMETRO Technical Note 001/2006[81] merely as examples of such reports and studies. In addition, the Panel's reliance on INMETRO Technical Note 001/2006, rather than on an earlier INMETRO note, was justified, because it is well established that a panel may rely on evidence that post-dates the panel's establishment, and because Brazil had explained why it was not appropriate for the Panel to rely on the earlier INMETRO note. The mere fact that the Panel did not describe its conclusions on each piece of evidence—or respond to each of the European Communities' objections—does not mean that it did not consider the evidence. The European Communities may

[77]Brazil's appellee's submission, para. 74 (referring to Panel Report, paras. 7.118 and 7.142).

[78]*Ibid.*, para. 77 (referring to Panel Report, *US – Gambling*, para. 6.494; Panel Report, *Dominican Republic – Import and Sale of Cigarettes*, para. 7.217; Panel Report, *Korea – Various Measures on Beef*, para. 658; and GATT Panel Report, *US – Section 337 Tariff Act*, para. 5.31).

[79]*Ibid.*, para. 81 (quoting Appellate Body Report, *EC – Asbestos*, para. 167). (emphasis added by Brazil)

[80]*Supra*, footnote 41.

[81]*Supra*, footnote 42.

disagree with the weight the Panel assigned to the various factual elements before it, but there is no indication that the Panel exceeded its discretion as the trier of fact.

55. As regards numerous other arguments raised by the European Communities, Brazil identifies evidence that provides support for the Panel's findings that retreaded tyres have a shorter lifespan than new tyres and that new tyres are retreadable and are being retreaded in Brazil, and asserts that the Panel did not, as the European Communities claims, base its findings on speculation about future events. Brazil also emphasizes that imports of used tyres under court injunctions and imports of retreaded tyres under the MERCOSUR exemption are extraneous to the Import Ban and do not properly form part of the "necessity" analysis.

(b) Alternatives to the Import Ban

56. Brazil contends that the Panel correctly determined that none of the measures suggested by the European Communities constituted a reasonably available alternative to the Import Ban. As a preliminary matter, Brazil contends that the European Communities' appeal on this issue is premised on a mistaken understanding of Brazil's chosen level of protection. Brazil is *not* seeking to reach a fixed level of health and safety, or only to protect against mosquito-borne diseases and tyre fire emissions (accumulation risks). Rather, it seeks to reduce accumulation, transportation, and disposal risks associated with the generation of waste tyres in Brazil *to the maximum extent possible*. Because the Panel's finding of fact correctly identified the level of protection sought by Brazil, and the European Communities, in its appeal, does not challenge this finding under Article 11 of the DSU, the European Communities' claims of error regarding reasonably available alternatives fall outside the scope of appellate review.

57. Taking account of the proper definition of its chosen level of protection (including against disposal risks), Brazil asserts that the Panel properly recognized that stockpiling, landfilling, co-incineration, and material recycling all present risks to human health and the environment. The Panel also correctly dismissed a better enforcement of the import ban on used tyres as an alternative to the Import Ban, because such a measure would not allow Brazil to reduce the number of additional waste tyres generated by imported short-lifespan retreaded tyres. Brazil also rejects the European Communities' assertion that the Panel applied an incorrect definition of "alternative", because, for Brazil, an alternative must allow a Member to achieve its chosen level of protection, and that level requires a reduction to the maximum extent possible of risks arising from waste tyre accumulation, transportation, and disposal risks. Because the Panel correctly defined Brazil's level of protection, it was also correct to consider that other complementary measures to reduce the overall number of waste tyres were not "alternatives" to the Import Ban on retreaded tyres. Brazil adds that, contrary to the European Communities' claims on appeal, the Panel did not require a single alternative measure to achieve fully the desired objective, did not refuse to consider the proposed alternatives collectively, and did not focus on whether options were actually being employed instead of whether they were reasonably available.

58. Furthermore, Brazil argues that the Panel's findings on the availability of alternative measures rested on an objective assessment of the facts, as required by Article 11 of the DSU. According to Brazil, the Panel based its finding that disposal of waste tyres presents serious health and environmental risks on an extensive factual record. The evidence on record fully supports the Panel's finding that landfilling of *both* whole and shredded waste tyres presents human health and environmental risks. Brazil also argues that the Panel's reference to the fact that the European Communities prohibits landfilling was relevant, because the health and environmental objectives listed in the European Communities' Council Directive 1999/31/EC of 26 April 1999 on the landfill of waste [82] mirror Brazil's objective. Furthermore, the Brazilian legislation that allowed landfilling, and

[82]Exhibit BRA-42 submitted by Brazil to the Panel.

which the European Communities claims the Panel should have taken into account, was a temporary measure adopted in a single Brazilian state to combat a significant increase in dengue cases. That legislation does not demonstrate that landfilling is safe, but only that, in those circumstances, the short-term need to combat dengue was more pressing.

59. In relation to stockpiling, Brazil submits that the evidence on record, including a study by the California Environmental Protection Agency[83], supports the Panel's finding that stockpiling presents human health and environmental risks. Furthermore, the European Communities itself acknowledges that "'controlled stockpiling is *not a final disposal operation*' but merely 'temporary storage.'"[84] As regards co-incineration, the evidence on record fully supports the Panel's finding that incineration of waste tyres presents risks to human health, that toxic emissions from the incineration of tyres cannot be eliminated, and that these emissions are higher than those generated by the burning of conventional fuels. In the light of these acknowledged risks, it would not have made sense, as the European Communities now argues, for the Panel to have required Brazil to provide evidence on co-incineration in Brazil rather than in other countries, or to use increased co-incineration as an alternative. The Panel acted within its discretion in determining the weight attributed to several reports that the European Communities considers outdated and, in any event, the evidence relied upon by the Panel is not as "outdated", nor is the evidence cited by the European Communities as "recent", as the European Communities claims on appeal. The Appellate Body, therefore, should reject the European Communities' attempts to have it second-guess the Panel's appreciation of the evidence.

60. In relation to material recycling, Brazil submits that the Panel did not consider only civil engineering in reaching its findings on alternative measures. The Panel also considered evidence related to rubber asphalt, use of rubber granulates, and devulcanization. Nor did the Panel base its finding that material recycling applications could not dispose of existing volumes of waste tyres on evidence of devulcanization alone. Instead, contends Brazil, the Panel cited documents suggesting that material recycling applications *collectively* lacked adequate disposal capacity.

(c) The Weighing and Balancing Process

61. Brazil asserts that the Panel properly weighed and balanced the relevant factors and proposed alternatives in determining that the Import Ban was "necessary" within the meaning of Article XX(b) of the GATT 1994, and that the European Communities' appeal on this point amounts to mere disagreement with the Panel's exercise of its discretion in determining which evidence to rely upon in support of its findings. The Panel expressly recognized that the Import Ban is highly trade restrictive, but rejected the European Communities' argument that this fact alone precluded a finding that the ban was "necessary". Instead, the Panel properly recognized that there may be circumstances in which a highly restrictive measure is nonetheless necessary and, in the process of weighing and balancing, identified the specific circumstances of this case that led it to such a conclusion. With respect to the question of contribution, Brazil recalls its position that Article XX(b) does not require a party to quantify the measure's contribution to the objective pursued. In any event, the Import Ban's contribution is substantial "because it reduced imports of retreaded tyres from 18,455 tons in 1999 to 1,727 tons in 2005 (over 90 percent)."[85] Brazil also argues that, because imports of retreaded tyres, by definition, increase the amount of waste tyres in Brazil, the relationship between the Import Ban and Brazil's goal of reducing waste tyre risks to the maximum extent possible is both direct and certain.

[85]Brazil's appellee's submission, para. 177 (referring to Panel Report, para. 4.54; and Brazil's response to Question 40 posed by the Panel, Panel Report, p. 270).

2. The Chapeau of Article XX of the GATT 1994

(a) The MERCOSUR Exemption

62. Brazil argues that the Panel correctly held that the MERCOSUR exemption did not result in the Import Ban being applied in a manner that constituted "arbitrary or unjustifiable" discrimination or "a disguised restriction on international trade" within the meaning of the chapeau of Article XX of the GATT 1994. Accordingly, Brazil requests the Appellate Body to reject the European Communities' claims of error and to uphold the Panel's findings in this respect.

63. Brazil asserts that the Panel properly interpreted the meaning of the word "arbitrary" in the chapeau of Article XX, in accordance with the customary rules of interpretation of public international law. The Panel took into account the ordinary meaning of the word, along with both the context and the object and purpose of the chapeau of Article XX, as well as previous panel and Appellate Body reports. On this basis, the Panel interpreted the word "arbitrary" "as lacking a reasonable basis and requiring the need to convincingly explain the rationale of the measure".[86]

64. Brazil disputes the European Communities' assertion that what constitutes arbitrary discrimination must be determined in relation to the objective of the measure. The specific contents of the measure at issue, including its policy objective, must be examined under the exceptions listed in the paragraphs of Article XX. The chapeau of Article XX, in turn, requires panels to examine whether the measure at issue is applied reasonably, in a manner that does not result in an abusive exercise of a Member's right to pursue its policy objective. Brazil emphasizes that the European Communities' interpretation would impermissibly narrow the scope of the chapeau of Article XX and limit the flexibility that Members have to protect legitimate values under that provision. Brazil adds that, in any event, in this case the Panel did consider imports under the MERCOSUR exemption in relation to the objective of the measure at issue when it determined that, at the time of its examination, volumes of retreaded tyres imported under the MERCOSUR exemption did not significantly undermine the objective of the Import Ban. Furthermore, reasons Brazil, it would *not* have been reasonable or rational, in the light of the objective of the Import Ban, for Brazil to have implemented the MERCOSUR ruling by abolishing the ban altogether, as the European Communities suggests.

65. Brazil considers that the Panel correctly found that the discrimination resulting from the MERCOSUR exemption was not arbitrary. In Brazil's view, even under the European Communities' definition of "arbitrary", the following considerations identified by the Panel demonstrate that the MERCOSUR exemption did not amount to arbitrary discrimination: (i) Brazil introduced the exemption only after a dispute settlement tribunal established under MERCOSUR ruled that the ban violated Brazil's obligations under MERCOSUR; (ii) the MERCOSUR ruling was adopted in the context of an agreement intended to liberalize trade that is expressly recognized in Article XXIV of the GATT 1994; (iii) agreements of the type recognized by Article XXIV inherently provide for discrimination; (iv) Brazil had an obligation under international law to implement the ruling by the MERCOSUR tribunal; (v) Brazil applied the MERCOSUR ruling in the most narrow way possible, that is, by exempting imports of a particular kind of retreaded tyres (remoulded) from the application of the ban; and (vi) it was not reasonable for Brazil to implement the MERCOSUR ruling with respect to imports from all sources, because doing so would have forced Brazil to abandon its policy objective and its chosen level of protection. The Panel appropriately determined that these circumstances provided a rational basis for enacting the MERCOSUR exemption. Brazil rejects as a "blatant misrepresentation"[87] the European Communities' argument that the Panel's finding necessarily implies that mere compliance with any international agreement would exclude the existence of

[86]*Ibid.*, para. 191 (referring to Panel Report, paras. 7.260, 7.273, and 7.283).

[87]Brazil's appellee's submission, para. 209.

arbitrary discrimination, particularly given that the Panel expressly stated that its finding was limited to the "specific circumstances of the case".[88] Furthermore, the European Communities' systemic concerns in this respect are contrary to the well-established precept under general international law that "bad faith on the part of States is not to be presumed"[89], and it is "absurd"[90] to suggest that a WTO Member would conclude an agreement under Article XXIV for purposes of circumventing the requirements of the chapeau of Article XX.

66. Brazil also submits that the Panel correctly concluded that the legal standard under the chapeau of Article XX is different from the legal standard under Article XXIV. As Brazil argued before the Panel, a measure that does not meet the requirements of Article XXIV can nevertheless meet the requirements of the chapeau of Article XX.

67. Brazil considers that the Panel correctly found that the operation of the MERCOSUR exemption has not resulted in the Import Ban being applied in a manner that would constitute unjustifiable discrimination. Brazil has difficulty understanding the European Communities' objections to the Panel's analysis since the European Communities itself argues that what constitutes arbitrary or unjustifiable discrimination must be established in relation to the objective of the measure at issue, and the Panel did precisely that. The Panel determined how Brazil's policy objective of reducing unnecessary generation of tyre waste to the maximum extent possible was being affected by imports of retreaded tyres under the MERCOSUR exemption. The level of imports and their effect on the objective of the Import Ban were relevant, in particular, because the chapeau of Article XX focuses on the application of the measure at issue. Brazil also explains that the level of imports could not rise to a level that would undermine the objective of the Import Ban in the future, because Resolution No. 38 of the Câmara de Comércio Exterior (Chamber of Foreign Trade) of 22 August 2007[91] established annual limits on the number of retreaded tyres that can be imported into Brazil from MERCOSUR countries. According to Brazil, these import volumes "correspond roughly" to the import volumes that the Panel found "were not significant".[92]

68. Brazil considers that the European Communities' reference to the right of Members to challenge measures, as such, is misplaced. The chapeau of Article XX requires an examination of the manner in which a measure is being applied, and this will "rarely" be based on "immutable, static situations".[93] The European Communities' challenge to the Panel's finding that 2,000 tons of retreaded tyres is "insignificant" is similarly without merit. According to Brazil, it is worth noting that the level of 2,000 tons is only one seventh of the 14,000 tons previously imported from the European Communities and, in any event, the Panel's finding that 2,000 tons is not a significant amount is a factual finding that cannot be revisited on appeal.

69. In addition, Brazil submits that the Panel's finding that the MERCOSUR exemption did not result in the Import Ban being applied in a manner that constitutes "a disguised restriction on international trade" under the chapeau of Article XX is legally sound, and refers to its arguments before the Panel in support of this position.

[88]*Ibid.*, para. 210 (quoting Panel Report, para. 7.283).

[89]*Ibid.*, para. 213. (footnote omitted)

[90]*Ibid.*, para. 214.

[91]Exhibit BRA-175 submitted by Brazil to the Appellate Body.

[92]Brazil's appellee's submission, para. 225 (referring to Panel Report, para. 7.288).

[93]*Ibid.*, para. 229.

(b) Imports of Used Tyres

70. Brazil submits that the Panel committed no error in the analytical approach it adopted in determining whether imports of used tyres under court injunctions resulted in the Import Ban being applied in a manner that constituted "arbitrary discrimination", "unjustifiable discrimination", or "a disguised restriction on international trade" within the meaning of the chapeau of Article XX of the GATT 1994. Brazil requests the Appellate Body to reject the European Communities' claims of error and to uphold the Panel's findings that the imports of used tyres did not constitute "arbitrary discrimination" and constituted "unjustifiable discrimination" or "a disguised restriction on international trade" within the meaning of that provision only to the extent that import volumes of used tyres "significantly undermined" the objective of the Import Ban.

71. Brazil argues that the Panel correctly found that the imports of used tyres under court injunctions did not result in the Import Ban being applied in a manner that constituted "arbitrary discrimination". The Panel was satisfied, on the basis of the evidence before it, that there was a rational basis for the importation of used tyres. Furthermore, as it did in the context of the MERCOSUR exemption, the Panel did analyze whether the imports of used tyres significantly undermined the objective of the Import Ban—that is, it took the very approach advocated by the European Communities. The Panel did *not*, as the European Communities now claims, draw a distinction between the actions of certain Brazilian courts granting injunctions and the compliance by Brazilian administrative authorities with those court injunctions. Brazil also rejects the European Communities' allegation that there is a contradiction between the actions of different branches of the Brazilian government. Rather, insists Brazil, the Import Ban, the court injunctions, and the enforcement of the injunctions by the customs authorities were the result of the operation of the Rule of Law. "There is nothing unpredictable, irrational, abnormal, unreasonable, or even illegal in the conduct of Brazil's legislative, executive, or judiciary branches."[94]

72. With respect to the Panel's analysis of "unjustifiable discrimination", Brazil submits that it was appropriate for the Panel to consider the level of imports of used tyres. For the same reasons that Brazil articulated with respect to the MERCOSUR exemption, the effect that the volume of imports of used tyres had on Brazil's ability to achieve its policy objective was relevant to the Panel's analysis of unjustifiable discrimination. Brazil points out the inconsistencies in the European Communities' arguments, which, on the one hand, criticize the Panel for taking into account the effects of import volumes on Brazil's ability to achieve its policy objective, and, on the other hand, insist that arbitrary and unjustifiable discrimination can be established only when analyzed in relation to the objective of the measure at issue. Brazil disputes the European Communities' assertion that the Panel's analysis of the volume of imports involves uncertainty for implementation of its report. According to Brazil, monitoring of a WTO Member's compliance is an integral part of the dispute settlement mechanism, and there are various examples of cases where panels made findings that were based on facts and circumstances that were potentially subject to change.[95]

73. Finally, Brazil argues that the Panel correctly considered the volume of imports of used tyres as part of its determination that the Import Ban was being applied in a manner that constituted "a disguised restriction on international trade", and refers to the arguments it made before the Panel in support of this position.

[94]Brazil's appellee's submission, para. 245.

[95]See Brazil's appellee's submission, para. 253 (referring to Panel Report, *US – Section 301 Trade Act*, paras. 7.131-7.136, 7.170, 7.179, and 7.185; and Panel Report, *US – Shrimp (Article 21.5 – Malaysia)*, para. 6.1).

3. The European Communities' Conditional Appeal

(a) The Panel's Exercise of Judicial Economy

74. Brazil considers that the Panel was justified in deciding to exercise judicial economy with respect to the European Communities' separate claims that the MERCOSUR exemption was inconsistent with Articles I:1 and XIII:1 and not justified under Articles XX(d) and XXIV of the GATT 1994. In the light of the Panel's finding that the Import Ban was inconsistent with Article XI:1 of the GATT 1994, a separate finding in relation to an exemption to the Import Ban was not necessary to secure a positive resolution of the dispute. The MERCOSUR exemption could not exist in the absence of the Import Ban, which had previously been found to be inconsistent with the GATT 1994. The allegedly limited basis for the Panel's finding of inconsistency under Article XI:1 is not relevant, because Article 3.7 of the DSU "does not distinguish between different *degrees* of solutions".[96] Brazil also distinguishes the facts of this case from those in *EC – Export Subsidies on Sugar*, on the basis that "the remedies under the GATT and the DSU for a violation of Article XI (found by the Panel) are no different from the remedies for a violation of Article XIII or I."[97] Furthermore, the very condition on which the European Communities appeals the Panel's exercise of judicial economy contradicts its contention that separate rulings under Article I:1 and Article XIII:1 were necessary. According to Brazil, by conditioning its appeal on a finding by the Appellate Body that the MERCOSUR exemption does not result in the Import Ban being applied inconsistently with Article XX, the European Communities is implicitly recognizing that a finding that the Import Ban is not justified under Article XX renders unnecessary findings on its separate claims under Articles I:1 and XIII:1.

(b) Completing the Legal Analysis

75. In the event the Appellate Body were to reverse the Panel's decision to exercise judicial economy, Brazil submits that the Appellate Body does not have a sufficient basis on which to complete the analysis of the European Communities' claims that the MERCOSUR exemption is inconsistent with Articles I:1 and XIII:1, and with respect to Brazil's related defences under Articles XXIV and XX(d) of the GATT 1994. There are neither undisputed facts nor factual findings by the Panel concerning the consistency of MERCOSUR with Article XXIV:5(a) and 8(a) of the GATT 1994 or the justification of the MERCOSUR exemption under Article XX(d). Brazil specifically contests, as it did before the Panel, assertions made by the European Communities regarding intra-MERCOSUR liberalization of the automotive and sugar sectors, as well as with respect to alleged exceptions to the common external tariff. In addition, the European Communities' claims under Articles XIII:1 and I:1, and Brazil's related defence under Article XXIV, are not suitable for completion of the analysis, because they are not closely related to the provisions examined by the Panel, and because they involve novel legal issues that have not been explored in depth by the parties. Brazil cites as examples of such unexplored issues the questions of what constitutes "substantially all the trade" under Article XXIV:8(a)(i) and what constitutes "substantially the same duties and other regulations of commerce" under Article XXIV:8(a)(ii).

(c) The MERCOSUR Exemption and Article XXIV of the GATT 1994

76. In the event the Appellate Body considers it can complete the analysis with respect to the separate claims made by the European Communities in relation to the MERCOSUR exemption, Brazil submits that this measure is justified under Article XXIV of the GATT 1994.

[96]*Ibid.*, para. 268. (original emphasis)

[97]*Ibid.*, para. 269.

77. Brazil argues that it submitted sufficient evidence before the Panel to make a *prima facie* case that MERCOSUR meets the requirements of Article XXIV:5(a) and 8(a). In particular, Brazil submitted the results of calculations made by the Secretariat for MERCOSUR and the WTO Secretariat showing that the duties and other regulations of commerce applied at the time of MERCOSUR's formation (1995), and in 2006, were not "on the whole" higher or more restrictive than those applied prior to its formation. Brazil further suggests there is evidence on record demonstrating that "substantially all the trade" between constituent members of MERCOSUR has been liberalized, and that MERCOSUR countries maintain substantially the same duties and other regulations of commerce on trade *vis-à-vis* third countries, thus complying with the requirements of Article XXIV:8(a). Brazil notes in this regard that, before the Panel, it incorporated by reference all of the documents submitted by MERCOSUR members to the Committee on Regional Trade Agreements (the "CRTA").

78. Brazil contends that the European Communities has failed to rebut Brazil's *prima facie* demonstration that MERCOSUR is consistent with the requirements of Article XXIV:5 and 8. The fact that the CRTA and the Committee on Trade and Development did not reach the conclusion that MERCOSUR is in compliance with Article XXIV does not suggest that MERCOSUR is inconsistent with Article XXIV, in particular, because Members' measures are presumed WTO-consistent until sufficient evidence is presented to prove the contrary, and because the CRTA has only once concluded that a regional trade agreement was compatible with the GATT 1994.

79. In addition, Brazil maintains that the European Communities failed to substantiate its claims that MERCOSUR was inconsistent with Article XXIV. Although the European Communities asserts that the automotive and sugar sectors within MERCOSUR have not been fully liberalized, this is contradicted by the evidence it submitted to the Panel. According to Brazil, evidence before the Panel demonstrated that "the automotive sector has been the subject of continuing and progressive liberalization [and that] bilateral agreements between Mercosur members have already led, in practice, to duty-free trade in almost 100 percent of the commerce in the auto sector."[98] Brazil suggests further that the sugar sector alone cannot prevent compliance with the requirement under Article XXIV:8(a)(i) that "substantially all the trade" between the constituent territories be liberalized, because it "accounts for less than 0.001 percent of the total [trade]".[99] As regards the European Communities' assertion that there are exceptions to MERCOSUR's common external tariff, Brazil submits that the evidence on record demonstrates that MERCOSUR "applies a common external tariff to products in over 90 percent of the tariff lines and has a specific timetable in place to cover the remaining categories of products by 2008."[100] Brazil also rejects the European Communities' assertion that MERCOSUR does not meet the requirement under Article XXIV:5(a) that non-tariff barriers on trade with third countries not be "*on the whole* ... more restrictive"[101], noting that the only example provided by the European Communities is the Import Ban itself. According to Brazil, a single measure cannot constitute sufficient evidence to show that MERCOSUR does not meet the requirements of Article XXIV:5(a).

80. Moreover, Brazil contends that the Appellate Body's decision in *Turkey – Textiles* cannot be read as requiring Brazil to demonstrate that the MERCOSUR exemption was introduced upon the formation of a customs union, and that its formation would have been prevented if it were not allowed

[98]Brazil's appellee's submission, para. 295 (referring to Panel Report, para. 4.391; and WT/COMTD/1/Add.17, *supra*, footnote 73, p. 3).

[99]*Ibid.* (referring to Committee on Trade and Development, "Examination of the Southern Common Market (MERCOSUR) Agreement", WT/COMTD/1/Add.16, 16 May 2006 (Exhibit BRA-170 submitted by Brazil to the Panel), para. 14; and WT/COMTD/1/Add.17, *supra*, footnote 73, p. 3).

[100]*Ibid.*, para. 296 (referring to Brazil's response to Question 132 posed by the Panel, Panel Report, pp. 360-361, in turn citing WT/COMTD/1/Add.17, *supra*, footnote 73, p. 2).

[101]*Ibid.*, para. 297. (emphasis added by Brazil)

to introduce such a measure. The analytical approach adopted by the Appellate Body in *Turkey – Textiles* should not be applied in the present dispute, because the MERCOSUR exemption does not impose new restrictions against third countries but, rather, eliminates restrictive regulations between the parties to the customs union.[102] Furthermore, Brazil contends that a Member should not be allowed to demonstrate the necessity of its measure *only* as of the time a customs union is formed, because such customs unions and the integration of their members evolve and deepen over time.

81. Brazil also rejects the European Communities' argument that the fact that the text of Article XXIV:8(a)(i) exempts Article XX measures from the requirement to eliminate duties and other restrictive regulations of commerce demonstrates that the MERCOSUR exemption was not necessary for the formation of MERCOSUR. Such an interpretation would require the members of the customs union to exempt Article XX measures from internal liberalization, "lest they are later challenged by third countries for discrimination and not permitted to invoke Article XXIV to justify those measures."[103] Moreover, the Appellate Body has explained that "the terms of [Article XXIV:8(a)(i)] offer 'some flexibility' to the constituent members of a customs union when liberalizing their internal trade".[104] This flexibility in Article XXIV permits Brazil to eliminate the Import Ban in respect of MERCOSUR countries while maintaining it in respect of non-MERCOSUR countries. Brazil also emphasizes that the MERCOSUR exemption was not introduced pursuant to its obligations under Article XXIV:8(a)(i), but was rather the result of its unsuccessful attempt to defend the Import Ban before a MERCOSUR arbitral tribunal.

(d) The MERCOSUR Exemption and Article XX(d) of the GATT 1994

82. Should the Appellate Body decide to complete the analysis of the European Communities' claims under Articles I:1 and XIII:1 of the GATT 1994, Brazil submits that it should find the MERCOSUR exemption to be justified under Article XX(d) of the GATT 1994.

83. Brazil submits that the Panel correctly interpreted and applied the term "to secure compliance" in Article XX(d), in contrast to the European Communities' interpretation that a state "secures compliance" within the meaning of Article XX(d) only when it enforces rules or regulations as regards other actors, and not when it secures its own compliance with the laws or regulations of its domestic legal system. Moreover, the Appellate Body's interpretation of Article XX(d) in *Mexico – Taxes on Soft Drinks* made no such distinction. Rather, the Appellate Body's interpretation of the text of Article XX(d) makes clear that domestic laws or regulations that ensure compliance by a state with its obligations are within the scope of that provision. Brazil also contends that it has incorporated the obligation to comply with rulings of MERCOSUR tribunals into its domestic law, and that evidence to that effect exists in the record.

84. Lastly, Brazil contends that the MERCOSUR exemption is "necessary" within the meaning of Article XX(d). Brazil argues that it could not have complied with the ruling of the MERCOSUR tribunal by simply exempting all third countries from the Import Ban, as the European Communities suggests it should have done, because this would have forced Brazil to abandon its policy objective of reducing unnecessary generation of tyre waste to the maximum extent possible.

[102]For Brazil, *US – Line Pipe* is a more apposite case in the factual context of this dispute. (See Brazil appellee's submission, para. 301 (referring to Panel Report, *US – Line Pipe*, paras. 7.147 and 7.148))

[103]*Ibid.*, para. 307.

[104]*Ibid.*, para. 308 (quoting Appellate Body Report, *Turkey – Textiles*, para. 48).

C. *Arguments of the Third Participants*

85. Pursuant to Rule 24(2) and (4) of the *Working Procedures*, China, Cuba, Guatemala, Mexico, Paraguay, and Thailand chose not to file a third participant's submission but attended the oral hearing. Cuba, in its statement at the oral hearing, expressed its agreement with the Panel's findings that the Import Ban was necessary to reduce the exposure of human, animal, or plant life or health to risks arising from waste tyres. Cuba also emphasized the importance of the principle of sustainable development and environment preservation policies, and recalled that waste tyre management presents a challenge in particular for developing countries, given the significant environmental and economic costs it involves.

1. Argentina

86. Argentina agrees with the Panel's finding that the Import Ban contributed to the protection of human life and health within the meaning of Article XX(b) of the GATT 1994. Argentina submits that the Panel's necessity analysis was consistent with the case law of the Appellate Body, and that "the Panel's reasoning relie[d] on facts brought to its attention by the parties."[105] The Panel correctly rejected the European Communities' contention that the Import Ban did not contribute to reducing the number of waste tyres, based on its conclusion that "the direct effect of [the Import Ban] is to compel consumers of imported retreaded tyres to switch either to retreaded tyres produced domestically or to new tyres."[106] If the direct effect of the Import Ban were to impede additional imports of retreaded tyres with a shorter lifespan than new tyres, then it would fulfil Brazil's objective of avoiding generation and accumulation of waste tyres. Argentina underscores further that the Panel was not required to quantify the contribution of the Import Ban to the realization of the objective pursued.[107]

87. Argentina submits that the Panel was correct in concluding that the objective of protecting human health and life against life-threatening diseases "is both vital and important in the highest degree".[108] The Panel correctly found that the alternative measures identified by the European Communities aimed at reducing the number of waste tyres and at improving the management of waste tyres in Brazil, but not at preventing the generation of waste tyres to the maximum extent possible. Argentina also agrees with the Panel's finding that "the promotion of domestic retreading and enhanced retreadability of locally used tyres in Brazil would not lead to the reduction in the number of waste tyres additionally generated by 'imported short-lifespan retreaded tyres'."[109] For Argentina, the measures identified by the European Communities did not constitute alternatives that could be applied as a substitute for the Import Ban in preventing the generation of waste tyres to the maximum extent possible. Lastly, Argentina concludes that the Panel did not err in finding that there were no reasonably available alternatives to the Import Ban that would ensure the same level of protection to human life and health sought by Brazil.

2. Australia

88. Australia submits that the Panel erred in finding that the Import Ban was "necessary" within the meaning of Article XX(b) of the GATT 1994. Article XX(b) should be interpreted so as to maintain the careful balance between the rights and obligations of WTO Members to secure their trade interests and the rights of Members to impose measures necessary to protect human, animal, or

[105]Argentina's third participant's submission, para. 14.

[106]Argentina's third participant's submission, para. 16 (quoting Panel Report, para. 7.134).

[107]*Ibid.*, para. 18 (referring to Appellate Body Report, *EC – Asbestos*, para. 167).

[108]*Ibid.*, para. 26 (referring to Panel Report, para. 7.111).

[109]*Ibid.*, para. 24 (quoting Panel Report, para. 7.168).

plant life or health. In Australia's view, the Panel incorrectly balanced these factors in making its findings on necessity.

89. Australia notes that the Panel, in identifying the measure at issue, should have considered the MERCOSUR exemption in relation to a breach of Article XI:1 of the GATT 1994. Australia encourages the Appellate Body to treat the Import Ban and the MERCOSUR exemption "as an 'integrated whole'"[110] under Article XX(b).

90. Moreover, although the Appellate Body stated that a "necessary" measure is significantly closer to the pole of "indispensable" than to the opposite pole of simply "making a contribution", the Panel applied a definition of "necessary" that is closer to "making a contribution" than to "indispensable".[111] The Panel correctly considered the relative importance of the interests or values pursued by the Import Ban, but did not correctly examine the contribution of the measure to the realization of the ends pursued by it. The Panel also failed to consider adequately the restrictive impact of the Import Ban when conducting the weighing and balancing process. If the measure is properly identified as including both the Import Ban and exemptions to that ban, it is then more appropriate to determine first whether such a measure, in its totality, is necessary in the context of Article XX(b), taking into account the potential restrictive impact on international commerce, among other factors.

91. In relation to the Panel's assessment of alternative measures, Australia submits that the Panel did not properly weigh and balance possible alternatives, because it incorrectly identified the ends pursued by the measure, incorrectly limited its consideration of alternatives to those available "in reality"[112], and failed to consider potential alternatives cumulatively rather than only on an individual basis. Australia also argues that the Panel incorrectly excluded a better enforcement of the import ban on used tyres as an alternative measure to the Import Ban. For Australia, there is no basis in Appellate Body case law for excluding from the necessity analysis alternatives that relate to the manner in which the relevant measure is implemented in practice. The Panel also applied an incorrect definition of "alternatives" when limiting its analysis to those measures seeking to avoid the accumulation of waste tyres generated from imported retreaded tyres. Finally, Australia disagrees with the Panel's reasoning that "complementary" measures were not "alternative" measures, because they could not be directly substituted for the Import Ban. Although the Panel recognized that a combination of measures may be appropriate where different alternatives are complementary in addressing the risk, in practice, the Panel evaluated each individual alternative measure in isolation.

92. Australia argues further that the Panel erred in finding that the MERCOSUR exemption did not constitute arbitrary or unjustifiable discrimination within the meaning of the chapeau of Article XX of the GATT 1994. In defining "arbitrary" as "motivated by capricious or unpredictable reasons", the Panel placed too much emphasis on dictionary definitions and reduced the term to "inutility".[113] Consistent with the Appellate Body's statement in *US – Shrimp* that "the precise meaning of the terms in the chapeau [of Article XX] may shift 'as the kind and the shape of the measures at stake vary and as the facts making up specific cases differ'"[114], the Panel should have considered the specific factual situation that was before it. Australia adds that, although it accepts that compliance with an international agreement "could be considered as a factor by a panel in deciding

[110]Australia's third participant's submission, para. 5 (referring to Appellate Body Report, *EC – Asbestos*, para. 64).

[111]*Ibid.*, para. 6 (referring to Appellate Body Report, *Korea – Various Measures on Beef*, para. 161).

[112]*Ibid.*, para. 20.

[113]Australia's third participant's submission, para. 38 (referring to Appellate Body Report, *US – Gasoline*, p. 23, DSR 1996:I, 3, at 21; and Appellate Body Report, *Canada – Dairy*, para. 133).

[114]*Ibid.*, para. 39 (referring to Appellate Body Report, *US – Shrimp*, para. 159).

whether discrimination was 'arbitrary'"[115], this approach requires panels to "make a judgement on the status and validity of action under the agreement".[116]

93. With respect to the Panel's finding that unjustifiable discrimination occurs only to the extent that the objective of the Import Ban has been significantly undermined by a significant amount of imports, Australia submits that the Panel may have created a new test for the consideration of unjustifiable discrimination under the chapeau of Article XX. Australia recognizes that a measure with no real impact in practice may not constitute arbitrary or unjustifiable discrimination, but maintains that the import into Brazil of 2,000 tons of retreaded tyres per year would not appear to be insignificant or without practical impact. If the Appellate Body upholds the Panel's approach, the European Communities potentially would be forced to commence a new dispute under the DSU, either under Article 21.5 or under a newly constituted panel, in the event that imports of retreaded tyres from MERCOSUR countries increase to a level that would undermine the achievement of the objective of the Import Ban. Such re-litigation of essentially the same dispute would not ensure the prompt settlement of the dispute, as provided for in Article 3.3 of the DSU.

94. Finally, Australia considers that, for the same reasons as those presented in relation to the MERCOSUR exemption, the Panel erred in finding that the Brazilian court injunctions that permitted the importation of used tyres were not arbitrary.

3. Japan

95. Japan argues that what constitutes "arbitrary or unjustifiable discrimination" under the chapeau of Article XX of the GATT 1994 relates to the manner in which a challenged measure is applied and should not be defined in relation to the objective of that measure. The objective of a measure is relevant only to the determination of whether it falls under one of the paragraphs of Article XX, and not as an element to justify the measure's compatibility with the chapeau of that provision. The ordinary meaning of the term "arbitrary" indicates that an arbitrary discrimination test should focus primarily on *subjective* elements (such as motivations) in assessing the manner in which the measure is applied. As for the term "unjustifiable", the Panel correctly concluded that it suggests the "need to be able to 'defend' or convincingly explain the rationale for any discrimination in the application of the measure."[117] According to Japan, Members can reasonably provide such convincing explanation of the rationale based on *objective* elements, since they are considered to be easier to validate.

96. In addition, Japan agrees with the Panel that the importation of used tyres under court injunctions did not constitute arbitrary discrimination under the chapeau of Article XX, because the Panel focused on *subjective* elements in evaluating the manner of application of the Import Ban. For Japan, the administrative authority is obliged to follow a court order (where the authority has challenged it before the courts without success), and has no discretion not to obey it. Therefore, whether acts of all branches of a government are "arbitrary" usually needs to be examined in relation to the pertinent decision-making processes. In this case, the Panel correctly found that the actions of the Brazilian courts and those of Brazilian administrative authorities were not arbitrary. Japan adds that it does not necessarily follow that the government as a whole acted in an arbitrary manner just because acts of its difference branches contradict each other.

97. Japan next submits that the Panel was incorrect in assessing whether "unjustifiable discrimination" arose from the MERCOSUR exemption and from imports of used tyres under court injunctions on the basis of import volumes. Although import volumes may be a relevant factor in

[115] *Ibid.*, para. 42.

[116] *Ibid.*

[117] Japan's third participant's submission, para. 11 (quoting Panel Report, para. 7.260).

determining whether the application of a measure constitutes unjustifiable discrimination, import volumes are subject to strong fluctuation due to economic factors, and are therefore an inadequate benchmark for purposes of determining the consistency of a measure with the chapeau of Article XX. According to Japan, import volumes constitute a "vague threshold"[118] that would lead to disagreements between the parties as to the consistency of the measure in the implementation stage. Japan suggests that Brazil's disposal capacity is a more reasonable threshold, because it is directly related to the reduction in the amount of waste tyre accumulation in Brazil. Japan adds that Brazil's disposal capacity is more easily quantifiable and less prone to fluctuation due to supply and demand than to import volumes.

98. Finally, Japan submits that the Panel erroneously exercised judicial economy with respect to the European Communities' claims that the MERCOSUR exemption was inconsistent with Articles I:1 and XIII:1 of the GATT 1994. The Panel should have examined these claims, because the European Communities had set out, in its panel request, claims that the MERCOSUR exemption as a specific measure was inconsistent with these GATT provisions. Japan considers that a panel's discretion in exercising judicial economy must not adversely affect the appropriateness of the recommendations and rulings of the DSB, which are key to the full and satisfactory settlement of a dispute.[119] In this case, the Panel's exercise of judicial economy prevented the satisfactory settlement of the matter, because the Panel's findings required Brazil to rectify the Import Ban only in relation to imports of used tyres under court injunctions, but did not necessarily require Brazil to address the measure's inconsistency in relation to the MERCOSUR exemption.

4. Korea

99. Korea submits that the Panel erred in concluding that the Import Ban was capable of contributing to the achievement of its objective. Korea agrees with the Panel that "there is no requirement that there be a precise measurement of the health risk involved".[120] However, Korea distinguishes the facts in *EC – Asbestos* from the facts in this dispute, because the measure at issue in *EC – Asbestos* "was a ban on the use of the product and the qualitative linkage was of the product to cancer"[121], while in the present dispute there is no inherent danger in the product itself. In particular, when unlimited domestic production and importation from MERCOSUR countries are permitted, the statement that "numerical precision" is not required can be abused as "an excuse for any lack of effort in assessing degrees of risk".[122] In Korea's view, Brazil failed to demonstrate what amount of waste tyre reduction is optimal for achieving Brazil's objective and its chosen level of protection and how the limitations introduced by the Import Ban relate to any such level.

100. For Korea, the Panel's finding that the Import Ban was "capable of contributing to the overall reduction of the amount of waste tyres"[123] amounts to a violation of Article 11 of the DSU. It is unclear what the Panel understood as "capable of contributing", and the Panel should have quantified the extent of the actual contribution of the Import Ban to the achievement of its objective, particularly in the light of its subsequent finding that a quantity of 2,000 tons of retreaded tyres imported under the MERCOSUR exemption did not "significantly" undermine the objective of the measure.

[121] *Ibid.*, para. 9.

[122] *Ibid.*

[123] Korea's third participant's submission, para. 10.

101. Korea agrees with the Panel that Members can choose the level of protection they consider appropriate. However, the measure in question does not relate directly to the reduction of mosquito-borne diseases and tyre fire emissions. Rather, it is "derivative" and relates to the reduction in the number of waste tyres, which may have a "knock-on effect"[124] on the reduction of mosquito-borne diseases and tyre fire emissions. However, in Korea's view, the Panel failed to assess properly the relationship of the Import Ban to its stated goal of safeguarding human health through the reduction of waste tyres. For Korea, without a better assessment of whether or not the Import Ban actually results in a reduction of the accumulation of waste tyres, one cannot establish a measurable link (or, indeed, any link) to the stated health goal. Therefore, Korea reasons, "some sort of metric, even if not a precise one"[125], would have been necessary for the Panel to determine the contribution of the Import Ban to the achievement of its objective. Korea considers that the European Communities provided a number of alternatives to the Import Ban, any of which individually or in combination would provide less trade-restrictive measures in achieving the stated goal.

102. Korea argues further that the Panel erred in finding that the MERCOSUR exemption did not result in the Import Ban being applied in a manner inconsistent with the chapeau of Article XX of the GATT 1994. First, Korea agrees with the Panel that the ordinary meaning of the word "arbitrary" includes the "elements of capricious, unpredictable and inconsistent".[126] However, the Panel assessed the MERCOSUR exemption only in the light of the meaning of the terms "capricious" and "unpredictable". According to Korea, the term "inconsistent" informs the whole meaning of "arbitrary".[127] This is significant, because the MERCOSUR exemption is not capricious, or unpredictable. However, the Import Ban and the MERCOSUR exemption certainly were "inconsistent" in the light of the underlying justification, that is, the protection of humans from mosquito-borne diseases and tyre fire emissions. For Korea, there is no logical way of distinguishing between retreaded tyres from a MERCOSUR country and retreaded tyres from another WTO Member in relation to the protection of human life and health objective pursued by Brazil.

103. Secondly, Korea submits that the Panel erred in finding that 2,000 tons of retreaded tyres imported from MERCOSUR countries did not significantly undermine the objective of the Import Ban. Korea asserts that the initial burden was on Brazil to establish adequately the factual link between the health goal and the measure in question, and to do so "with some certainty and demonstrability".[128] Thus, in the absence of such a benchmark provided by Brazil, the Import Ban is by definition "arbitrary", because it "may be applied or not applied in inconsistent manners without any factual or logical basis."[129] Korea argues that the Panel misinterpreted the nature of the exception provided under Article XXIV of the GATT 1994 and how it interacts with the exception under Article XX.

104. Finally, Korea argues that there was no legal basis for the Panel to find that the open-ended MERCOSUR exemption was consistent with Brazil's defence under Article XX based on the novel standard of significantly undermining the objective that the Panel had construed.[130] This reasoning implied that MERCOSUR imports could increase to some unknown level that might then significantly undermine the protection of human life and health objective stated by Brazil. Korea contends that the Panel's approach virtually invited future disputes. This is not consistent with Article 3.3 of the DSU, which provides that prompt settlement of disputes is a key element of the dispute settlement system.

[124] *Ibid.*, para. 11.

[125] *Ibid.*, para. 12.

[126] *Ibid.*, para. 19.

[127] *Ibid.*, para. 20.

[128] Korea's third participant's submission, para. 29.

[129] *Ibid.*

[130] *Ibid.*, para. 33.

According to Korea, the Panel erred by attempting to make an "as applied" ruling based on transient facts, when the structure of the measure and the open-ended MERCOSUR exemption required an "as such" finding.

5. The Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu

105. The Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu submits that the Panel erred in its interpretation of the chapeau of Article XX of the GATT 1994, and in finding that the MERCOSUR exemption did not result in the Import Ban being applied in a manner that constituted either "arbitrary discrimination" or "a disguised restriction on international trade" within the meaning of the chapeau.
