106. The Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu submits that the Panel's finding that the MERCOSUR exemption did not constitute "arbitrary discrimination between countries where the same conditions prevail" was in error, because the MERCOSUR exemption "was done unpredictably".[131] In support of this argument, the Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu recalls that Brazil maintained a general ban on the importation of used tyres even after the formation of MERCOSUR, when Brazil should have eliminated most of the trade barriers with other MERCOSUR countries, and that Brazil even enacted new restrictions on imports when it enacted the Import Ban. Moreover, Brazil did not invoke the protection of human life and health in its defence before the MERCOSUR arbitral tribunal, and that tribunal did not specify how Brazil should implement its ruling. Brazil itself decided to adopt the MERCOSUR exemption. For these reasons, the Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu contends that "it is quite clear that no 'predictability' could be found in Brazil's trade policy, which would justify the effect of discrimination on retreaded tyres."[132] This lack of predictability results in the discrimination introduced by the MERCOSUR exemption being "arbitrary" within the meaning of the chapeau of Article XX.

107. In addition, the Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu argues that the MERCOSUR exemption should be considered arbitrary in the light of the objective of the Import Ban. It is uncontested that retreaded tyres exported from MERCOSUR countries into Brazil had the same potential to damage human life or health as retreaded tyres exported from non-MERCOSUR countries. For this reason, the Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu submits that, "if the protection of human life or health necessitates Brazil adopting an import ban on retreaded tyres, a loophole in the ban would undermine Brazil's asserted objective."[133] The MERCOSUR exemption is just such a loophole, and the discrimination that it engenders is, therefore, arbitrary.

108. The Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu argues further that the Panel erred in finding that the discrimination engendered by the MERCOSUR exemption was permissible pursuant to Article XXIV of the GATT 1994. Even assuming that MERCOSUR is consistent with Article XXIV, Article XXIV:8(a) specifically excludes measures adopted consistently with Article XX from the obligation to liberalize "substantially all the trade" within a customs union. The Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu also highlights that the objectives of Articles XX and XXIV "are diametrically opposed".[134]

[131] Third participant's submission of the Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu, para. 7.

[132] *Ibid.*, para. 13.

[133] *Ibid.*, para. 15.

[134] Third participant's submission of the Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu, para. 21.

109. The Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu also argues that the Panel erred in finding that the MERCOSUR exemption did not constitute "a disguised restriction on international trade" under the chapeau of Article XX, "because the amount of imported retreaded tyres did not increase 'significantly' following [its] introduction".[135] The chapeau of Article XX does not require evidence of a disruption in trade flows for a complainant to make a case that a disguised restriction exists. The "logic"[136] of the Appellate Body's rulings in *US – Shrimp* and in *US – Gambling* was "to discourage a [WTO] Member from adopting a measure having an adverse effect on international trade."[137] Therefore, a disguised restriction on international trade should be found to exist when there is a *possibility* that it does exist. The Panel's test of "significance", in contrast, clearly lacked a legal basis.

110. The Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu adds that, as a result of the MERCOSUR exemption, "the trade flow of retreaded tyres to Brazil has been changed in a manner benefiting other MERCOSUR countries"[138], because these countries are now "able to import used tyres from non-MERCOSUR countries in the first place, retread them locally, and finally re-export retreaded tyres to Brazil."[139] The Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu concludes that international trade in retreaded tyres will be distorted, and that a disguised restriction results from such trade distortion.

111. The Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu further suggests that the Panel's findings in this dispute might cause confusion for WTO Members when assessing whether a specific measure is WTO-consistent, create a tendency for WTO Members to initiate a multiplicity of WTO disputes, and undermine the security and predictability needed to conduct future trade. These problems stem from the Panel's failure to provide clear criteria for determining what volume of imports or increase in import volumes would be considered "significant". Moreover, since import volumes are generally determined by supply and demand, the Panel's significance test, if adopted, would make it difficult for WTO Members, who do not have the power to control trade flows into their domestic markets, to adopt WTO-consistent measures or to eliminate WTO-inconsistent measures.

6. United States

112. The United States agrees with the European Communities that the manner in which the Panel considered the MERCOSUR exemption in its Article XX analysis was erroneous in a number of respects. First, the Panel erred in disregarding the MERCOSUR exemption when determining whether the Import Ban was "necessary" within the meaning of Article XX(b) of the GATT 1994. The MERCOSUR exemption is contained in Portaria SECEX 14/2004[140], and this was the measure found by the Panel to be inconsistent with Article XI:1 of the GATT 1994. For this reason, the Panel was obliged to determine whether Brazil had established that the same measure—Portaria SECEX 14/2004—was justified under Article XX, including by considering the aspect of the MERCOSUR exemption in its necessity analysis. The United States highlights that a single sentence of Portaria SECEX 14/2004 contains both the Import Ban and the MERCOSUR exemption. According to the United States, the Panel should have considered, in determining the contribution of the measure to the

[135] *Ibid.*, para. 23 (referring to Panel Report, para. 7.354).

[136] *Ibid.*, para. 26.

[137] *Ibid.* (referring to Appellate Body Report, *US – Shrimp*, paras. 166-184; and Appellate Body Report, *US – Gambling*, para. 369).

[138] *Ibid.*, para. 27.

[139] *Ibid.* (referring to Panel Report, para. 7.352).

[140] See *supra*, footnote 3.

ends pursued by it, the fact that retreaded tyres continue to be imported due to the MERCOSUR exemption, and its failure to do so constituted a breach of Article 11 of the DSU.

113. However, the United States disagrees with the European Communities' apparent position that the contribution of the measure to the ends pursued must be evaluated quantitatively, or that demonstrating a contribution requires "verifiable" evidence of whether the measure "actually" contributed to the ends pursued.[141] Article XX(b) does not contain a requirement to quantify "necessity", and both quantitative and qualitative evidence may be relevant to the necessity analysis, including the analysis of the contribution of the measure to the ends pursued.

114. The United States also argues that the Panel erred in finding that the MERCOSUR exemption did not result in the Import Ban being applied in a manner that constitutes "arbitrary or unjustifiable discrimination" or "a disguised restriction on international trade", contrary to the chapeau of Article XX. First, the Panel erred in basing its finding that the MERCOSUR exemption did not constitute arbitrary discrimination on the fact that the exemption was adopted to comply with a ruling issued by a MERCOSUR tribunal. The ruling did not prescribe any specific implementation action and, more fundamentally, the United States objects to the Panel's reference to Article XXIV in the context of the MERCOSUR ruling. The United States explains that "Article XXIV does not 'expressly recognize' *any and all* frameworks for [WTO] Members to discriminate in favor of partners in customs unions or free trade areas, but rather recognizes particular agreements that meet the conditions specified therein."[142] The Panel could not have properly concluded that MERCOSUR is a type of agreement expressly recognized in Article XXIV, because it made no findings as to whether MERCOSUR meets the terms of Article XXIV.

115. Secondly, the United States maintains that the Panel erred in relying on the number of retreaded tyres imported into Brazil from MERCOSUR countries as a basis for its finding that the MERCOSUR exemption did not constitute "unjustifiable discrimination" or "a disguised restriction on international trade" under the chapeau of Article XX. The Panel found that the volume of imports from MERCOSUR countries appears not to have been "significant", but failed to offer any meaningful analysis of what volume would be "significant". The United States points out that import volumes may change, and that simple reliance on a figure "appears a dubious basis for the Panel's conclusion that the permitted imports will not 'undermine' the objective of the measure."[143] According to the United States, the chapeau of Article XX requires panels to evaluate whether unjustifiable discrimination or a disguised restriction on international trade exists, and not simply whether the discrimination that exists undermines the objective of the measure.

116. Finally, should the Appellate Body reach the European Communities' conditional appeal and decide to rule on the European Communities' separate claims that the MERCOSUR exemption is inconsistent with Articles I:1 and XIII:1 of the GATT 1994, the United States submits that Brazil may not rely on Article XXIV of the GATT 1994 as a defence. MERCOSUR has not been notified under Article XXIV as a customs union, as required by Article XXIV:7 of the GATT 1994. According to the United States, failure to notify a customs union under Article XXIV:7 does not merely render a customs union inconsistent with that paragraph; rather, pursuant to paragraph 1 of the *Understanding on the Interpretation of Article XXIV of the General Agreement on Tariffs and Trade 1994* (the "*Understanding on Article XXIV of the GATT 1994*"), such a customs union is not consistent with Article XXIV as a whole. Members that opt not to subject their customs union to the procedures set out in Article XXIV and the *Understanding on Article XXIV of the GATT 1994* or its interpretation are not entitled to invoke that provision as a defence. Moreover, the United States notes that

[141] United States' third participant's submission, para. 6 (referring to European Communities' appellant's submission, paras. 172-174).

[142] United States' third participant's submission, para. 9. (original emphasis)

[143] *Ibid.*, para. 11.

MERCOSUR countries notified MERCOSUR pursuant to paragraph 4(a) of the *GATT 1979 Decision on Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries* (the "Enabling Clause")[144] rather than under Article XXIV:7(a) of the GATT 1994. The United States argues that regional arrangements as defined under Articles 1, 2, and 3 of the Enabling Clause have different characteristics and are subject to different obligations than customs unions and free trade areas covered by Article XXIV.

III. Issues Raised in This Appeal

117. The following issues are raised in this appeal:

(a) with respect to the Panel's analysis of "necessity" within the meaning of Article XX(b) of the GATT 1994:

(i) whether the Panel erred in finding that the Import Ban is "necessary" to protect human or animal life or health[145]; and

(ii) whether the Panel breached its duty under Article 11 of the DSU to make an objective assessment of the facts;

(b) with respect to the Panel's interpretation and application of the chapeau of Article XX of the GATT 1994:

(i) whether the Panel erred in finding that the MERCOSUR exemption has not resulted in the Import Ban being applied in a manner that is inconsistent with the chapeau[146]; and

(ii) whether the Panel erred in its analysis of whether imports of used tyres under court injunctions have resulted in the Import Ban being applied in a manner that is inconsistent with the chapeau; and

(c) if the Appellate Body does *not* find that the MERCOSUR exemption results in the Import Ban being applied in a manner that is inconsistent with the chapeau of Article XX of the GATT 1994, then:

(i) whether the Panel erred in exercising judicial economy in relation to the European Communities' separate claim that the MERCOSUR exemption is inconsistent with Articles I:1 and XIII:1 of the GATT 1994; and, if so

(ii) whether the MERCOSUR exemption is inconsistent with Articles I:1 and XIII:1 and is not justified under Article XXIV or Article XX(d) of the GATT 1994.

[144]L/4903, 28 November 1979, BISD 26S/203.

[145]Panel Report, para. 7.215.

[146]*Ibid.*, paras. 7.289 and 7.354.

IV. Background and the Measure at Issue

A. *Factual Background*

118. Tyres are an integral component in passenger cars, lorries, and airplanes and, as such, their use is widespread in modern society. New passenger cars are typically sold with new tyres. When tyres need to be replaced, consumers in some countries[147] may have a choice between new tyres or "retreaded" tyres. This dispute concerns the latter category of tyres.[148] Retreaded tyres are used tyres that have been reconditioned for further use by stripping the worn tread from the skeleton (casing) and replacing it with new material in the form of a new tread, and sometimes with new material also covering parts or all of the sidewalls.[149] Retreaded tyres can be produced through different methods, one of which is called "remoulding".[150]

119. At the end of their useful life[151], tyres become waste, the accumulation of which is associated with risks to human, animal, and plant life and health.[152] Specific risks to human life and health include:

> (i) the transmission of dengue, yellow fever and malaria through mosquitoes which use tyres as breeding grounds; and (ii) the exposure of human beings to toxic emissions caused by tyre fires which may cause loss of short-term memory, learning disabilities, immune system suppression, cardiovascular problems, but also cancer, premature mortality, reduced lung function, suppression of the immune system, respiratory effects, heart and chest problems. [153]

Risks to animal and plant life and health include: "(i) the exposure of animals and plants to toxic emissions caused by tyre fires; and (ii) the transmission of a mosquito-borne disease (dengue) to animals."[154]

120. Governments take actions to minimize the adverse effects of waste tyres. Policies to address "waste" include preventive measures aiming at reducing the generation of additional waste tyres [155], as

[147]We note that Brazil is not the only WTO Member that has adopted a ban on imports of retreaded tyres. According to Brazil, countries that have restricted imports of used and retreaded tyres include Argentina, Bangladesh, Bahrain, Nigeria, Pakistan, Thailand, and Venezuela. (Brazil's first submission to the Panel, para. 67) At the oral hearing, Brazil identified the following as countries that ban imports of retreaded tyres: Argentina, Morocco, Nigeria, Pakistan, Thailand, Tunisia, and Venezuela.

[148]Retreaded tyres are classified in the *International Convention on the Harmonized Commodity Description and Coding System*, done at Brussels, 14 June 1983, under subheadings 4012.11 (motor cars), 4012.12 (buses and lorries), 4012.13 (aircraft), and 4012.19 (other types). (Panel Report, para. 2.4)

[149]Panel Report, para. 2.1.

[150]"Remoulding" consists of replacing the tread and the sidewall including all or part of the lower area of the tyre. The other two methods of retreading are "top-capping", which consists of replacing only the tread, and "re-capping", which entails replacing the tread and part of the sidewall. (*Ibid.*, para. 2.2)

[151]The Panel assumed that, on average, a tyre—whether new or retreaded—can be used on a passenger car for five years before it becomes a used tyre. (*Ibid.*, para. 7.128)

[152]*Ibid.*, para. 7.109.

[153]Panel Report, para. 7.109. See also *ibid.*, paras. 7.53-7.83.

[154]*Ibid.*, para. 7.112.

well as remedial measures aimed at managing and disposing of tyres that can no longer be used or retreaded, such as landfilling, stockpiling, the incineration of waste tyres, and material recycling.

121. The Panel observed that the parties to this dispute have not suggested that retreaded tyres used on vehicles pose any particular risks compared to new tyres, provided that they comply with appropriate safety standards. Various international standards exist in relation to retreaded tyres, including, for example, the norm stipulating that passenger car tyres may be retreaded only once.[156] One important difference between new and retreaded tyres is that the latter have a shorter lifespan and therefore reach the stage of being waste earlier.[157]

B. *The Measure at Issue*

122. Article 40 of Portaria No. 14 of the Secretaria de Comércio Exterior ("SECEX") (Secretariat of Foreign Trade of the Brazilian Ministry of Development, Industry, and Foreign Trade), dated 17 November 2004 ("Portaria SECEX 14/2004")[158] reads as follows:

> Article 40 – An import license will not be granted for retreaded tyres and used tyres, whether as a consumer product or feedstock, classified under NCM code 4012, except for remoulded tyres, classified under NCM codes 4012.11.00, 4012.12.00, 4012.13.00 and 4012.19.00, originating and proceeding from the Mercosur Member States under the Economic Complementation Agreement No. 18.[159]

Article 40 of Portaria SECEX 14/2004 contains three main elements: (i) an import ban on *retreaded* tyres (the "Import Ban")[160]; (ii) an import ban on *used* tyres; and (iii) an exemption from the Import Ban of imports of certain retreaded tyres from other countries of the Mercado Común del Sur ("MERCOSUR") (Southern Common Market), which has been referred to in this dispute as the "MERCOSUR exemption".[161] The MERCOSUR exemption did not form part of previous regulations prohibiting the importation of retreaded tyres, notably Portaria SECEX No. 8 of 25 September 2000

[155]See the Panel's finding, in paragraph 7.100 of its Report, that "policies to address 'waste' by non-generation of additional waste are a generally recognized means of addressing waste management issues", as well as footnote 1170 thereto, detailing the evidence on which the Panel relied in reaching this conclusion.

[156]*Ibid.*, para. 2.3.

[157]*Ibid.*, paras. 7.129 and 7.130.

[158]Exhibits BRA-84 and EC-29 submitted by Brazil and the European Communities, respectively, to the Panel. We note that, in November 2006, Article 40 of Portaria SECEX 14/2004 was replaced by Article 41 of Portaria SECEX No. 35 dated 24 November 2006, the text of which is identical to that of Article 40 of Portaria SECEX 14/2004. (European Communities' appellant's submission, para. 145 and footnote 18 thereto)

[159]See Panel Report, para. 2.7.

[160]Throughout this Report, reference to the "Import Ban" shall be understood as referring only to the import ban on retreaded tyres. It therefore does not include the MERCOSUR exemption, despite the fact that this exemption is contained in the same legal instrument as the Import Ban, that is, Article 40 of Portaria SECEX 14/2004.

[161]The MERCOSUR exemption applies exclusively to remoulded tyres, a subcategory of retreaded tyres, which result from the process of replacing the tread and the sidewall, including all or part of the lower area of the tyre. (See Panel Report, para. 2.74 and footnote 1440 to para. 7.265)

("Portaria SECEX 8/2000")[162], but was introduced as a result of a ruling issued by a MERCOSUR arbitral tribunal.[163]

123. This dispute concerns the Import Ban and the MERCOSUR exemption in Article 40 of Portaria SECEX 14/2004, but not the import ban on used tyres.[164] In its request for the establishment of a panel[165], the European Communities identified the Import Ban and the MERCOSUR exemption as distinct measures, and made separate claims against each of these measures. The European Communities claimed that the Import Ban was inconsistent with Article XI:1 of the GATT 1994, and could not be justified under Article XX of the GATT 1994.[166] The European Communities also made distinct claims that the MERCOSUR exemption was inconsistent with Article I:1 and Article XIII:1 of the GATT 1994, and could not be justified under either Article XXIV:5 of the GATT 1994 or the Enabling Clause.[167] In comments made during the interim review, Brazil stated that it had treated the Import Ban and the MERCOSUR exemption as two separate measures contained in the same legal instrument.[168]

124. Following the approach of the parties, the Panel analyzed the claim made against the Import Ban separately from the claims made against the MERCOSUR exemption. The Panel found the Import Ban to be inconsistent with Article XI:1 of the GATT 1994.[169] It then turned to Brazil's related defence under Article XX(b) of the GATT 1994, stating that its analysis of Brazil's justification of the violation should focus also on the Import Ban, because this was the "specific measure" that had been found to be inconsistent with Article XI:1.[170] Thus, according to the Panel, its analysis of the necessity of *that* specific measure should not have taken account of "elements extraneous to the measure itself" or of situations in which the Import Ban "does *not* apply (i.e. the exemption of MERCOSUR imports)".[171] The Panel recognized, nonetheless, that "the MERCOSUR

[162]Exhibits BRA-71 and EC-26 submitted by Brazil and the European Communities, respectively, to the Panel. See also Panel Report, para. 2.8.

[163]Following the adoption of Portaria SECEX 8/2000, Uruguay requested, on 27 August 2001, the initiation of arbitral proceedings within MERCOSUR. Uruguay alleged that Portaria SECEX 8/2000 constituted a new restriction of commerce between MERCOSUR countries, which was incompatible with Brazil's obligations under MERCOSUR. In its ruling of 9 January 2002, the arbitral tribunal found that the Brazilian measure was incompatible with MERCOSUR Decision CMC No. 22 of 29 June 2000, which obliges MERCOSUR countries not to introduce new *inter se* restrictions of commerce. (See Panel Report, para. 2.13; see also Exhibits BRA-103 and EC-40 submitted by Brazil and the European Communities, respectively, to the Panel) Following the arbitral award, Brazil enacted Portaria SECEX No. 2 of 8 March 2002, which eliminated the import ban for remoulded tyres originating in other MERCOSUR countries. (See Panel Report, para. 2.14; see also Exhibit BRA-78 submitted by Brazil to the Panel; see also Exhibit EC-41 submitted by the European Communities to the Panel) This exemption was incorporated into Article 40 of Portaria SECEX 14/2004.

[164]The European Communities confirmed, in response to questioning at the oral hearing, that it has not challenged the ban on the import of *used* tyres contained in Article 40 of Portaria SECEX 14/2004.

[165]WT/DS332/4, 18 November 2005. See also European Communities' first written submission to the Panel, para. 47.

[166]See, for instance, European Communities' first written submission to the Panel, paras. 89-168.

[167]*Supra*, footnote 144. See also European Communities' first written submission to the Panel, paras. 193-222.

[168]Panel Report, para. 6.17.

[169]The Panel found that the prohibition of the issuance of import licences for retreaded tyres has the effect of prohibiting the importation of retreaded tyres, and is thus inconsistent with Article XI:1 of the GATT 1994. (*Ibid.*, paras. 7.14, 7.15, and 7.34) In making the finding that Portaria SECEX 14/2004 is inconsistent with Article XI:1, the Panel focused on the import prohibition; its reasoning reflects the notion that an exemption from an import ban by its nature does not constitute a prohibition or restriction.

[170]*Ibid.*, para. 7.106.

[171]*Ibid.*, para. 7.107. (footnote omitted)

exemption is foreseen in the very legal instrument containing the import ban".[172] It then included the MERCOSUR exemption in its analysis of the chapeau of Article XX, because the chapeau involves consideration of the manner in which the specific measure to be justified (in this case, the Import Ban) is applied.

125. On appeal, the European Communities indicated, in response to questioning at the oral hearing, that the Import Ban and the MERCOSUR exemption are two aspects of a single measure—that is, Article 40 of Portaria SECEX 14/2004—and that this provision is the measure at issue. Notwithstanding this position, the European Communities does not appeal the Panel's analytical approach. More specifically, the European Communities does not contend that the Panel erred in identifying and separately treating as two distinct matters before it: a claim relating to the Import Ban; and a claim concerning the discrimination introduced by the MERCOSUR exemption.

126. We observe, nonetheless, that the Panel might have opted for a more holistic approach to the measure at issue by examining the two elements of Article 40 of Portaria SECEX 14/2004 that relate to retreaded tyres *together*. The Panel could, under such an approach, have analyzed whether the Import Ban in combination with the MERCOSUR exemption violated Article XI:1, and whether that *combined* measure, or the resulting partial import ban, could be considered "necessary" within the meaning of Article XX(b).[173]

127. Yet, the Panel's approach reflects the manner in which the European Communities formulated its claims to the Panel, and the fact that the MERCOSUR exemption was not part of the original ban on the importation of retreaded tyres adopted by Brazil (Portaria SECEX 8/2000), but was only introduced following a ruling in 2002 by a MERCOSUR arbitral tribunal. These considerations prompt us to examine the issues appealed on the basis of the conceptual approach adopted by the Panel in defining the scope of the measure at issue, which, as indicated above, has not specifically been appealed by the European Communities.

C. *Related Measures*

128. In addition to the Import Ban, Brazil has adopted a variety of other measures which were also challenged or discussed before the Panel. Although none of these measures are directly at issue in this appeal, we consider it useful to identify them briefly.

129. Presidential Decree 3.179, as amended[174], provides sanctions applicable to conduct and activities harmful to the environment, and other provisions, and its Article 47-A subjects the importation, as well as the marketing, transportation, storage, keeping or warehousing, of imported used and retreaded tyres to a fine of R$400/unit.

130. Resolution No. 258 of 26 August 1999 of the Conselho Nacional do Meio Ambiente ("CONAMA") (National Council for the Environment of the Ministry of the Environment) ("CONAMA Resolution 258/1999")[175], as amended by CONAMA Resolution No. 301 of 21 March 2002[176], created a collection and disposal scheme that makes it mandatory for domestic manufacturers

[172] *Ibid.*, para. 7.237; see also para. 6.19.

[173] Indeed, two of the third participants in this appeal—Australia and the United States—suggest that the Panel should have adopted such an approach. (Australia's third participant's submission, paras. 4 and 5; United States' third participant's submission, para. 5)

[174] See *supra*, footnote 5.

[175] Exhibits BRA-4 and EC-47 submitted by Brazil and by the European Communities, respectively, to the Panel.

[176] Exhibit BRA-68 submitted by Brazil to the Panel.

of new tyres and tyre importers to provide for the safe disposal of waste tyres in specified proportions.[177] CONAMA Resolution 258/1999, as amended in 2002, aims to ensure the environmentally appropriate final disposal of unusable tyres. Also, by exempting domestic retreaders from disposal obligations as long as they process tyres consumed within Brazil[178], CONAMA Resolution 258/1999, as amended in 2002, seeks to encourage Brazilian retreaders to retread more domestically used tyres.

131. Brazilian states have also enacted measures aiming at reducing risks arising from the accumulation of waste tyres. Law 12.114 of the State of Rio Grande do Sul prohibits the commercialization of imported used tyres within its territory, which includes imported retreaded tyres, as well as retreaded tyres made in Brazil from imported casings.[179] A 2005 amendment to that law allows the importation and marketing of imported retreaded tyres provided that the importer proves that it has destroyed ten used tyres in Brazil for every retreaded tyre imported. In the case of imports of used tyre casings, however, the destruction of only one used tyre per imported tyre is required.[180] The State of Paraná has adopted Paraná Rodando Limpo, a voluntary programme to collect, *inter alia*, all existing unusable tyres currently discarded throughout the territory of Paraná.[181]

132. Finally, we note that, notwithstanding the import ban on used tyres contained in Article 40 of Portaria SECEX 14/2004, a number of Brazilian retreaders have sought, and obtained, injunctions allowing them to import used tyre casings in order to manufacture retreaded tyres from those used tyres.[182] Although the Brazilian government has, within the Brazilian domestic legal system, opposed these injunctions, it has had mixed results in its efforts to prevent the grant, or obtaining the reversal, of court injunctions for the importation of used tyres.[183]

V. The Panel's Analysis of the Necessity of the Import Ban

A. *The Panel's Necessity Analysis under Article XX(b) of the GATT 1994*

133. The first legal issue raised by the European Communities' appeal relates to the Panel's finding that the Import Ban is "necessary" within the meaning of Article XX(b) of the GATT 1994.[184] The European Communities challenges three specific aspects of the Panel's analysis under Article XX(b). First, the European Communities contends that the Panel applied an "erroneous legal standard"[185] in assessing the contribution of the Import Ban to the realization of the ends pursued by it, and that it did not properly weigh this contribution in its analysis of the necessity of the Import Ban. Secondly, the European Communities submits that the Panel did not define correctly the alternatives to the Import Ban and erred in excluding possible alternatives proposed by the European Communities.[186] Thirdly, the European Communities argues that, in its analysis under Article XX(b), the Panel did not carry out

[177] See para. 154 and footnote 253 thereto of this Report.

[186] *Ibid.*, para. 209.

a proper, if any, weighing and balancing of the relevant factors.[187] We will examine these contentions of the European Communities in turn.

1. The Panel's Analysis of the Contribution of the Import Ban to the Achievement of Its Objective

134. In the analysis of the contribution of the Import Ban to the achievement of its objective, the Panel first recalled its previous findings that, through the Import Ban, Brazil pursued the objective of reducing exposure to the risks to human, animal, and plant life and health arising from the accumulation of waste tyres, and that such policy fell within the range of policies covered by paragraph (b) of Article XX of the GATT 1994.[188] The Panel also found that Brazil's chosen level of protection is the "reduction of the risks of waste tyre accumulation to the maximum extent possible".[189] In analyzing whether the Import Ban "contributes to the realization of the policy pursued, i.e. the protection of human, animal and plant life and health from the risks posed by the accumulation of waste tyres"[190], the Panel examined two questions. First, the Panel sought to assess whether the Import Ban can contribute to the reduction in the number of waste tyres generated in Brazil. Secondly, the Panel sought to evaluate whether a reduction in the number of waste tyres can contribute to the reduction of the risks to human, animal, and plant life and health arising from waste tyres.[191]

135. Regarding the first question, the Panel noted Brazil's explanation that the Import Ban would contribute to the achievement of the objective of reducing the number of waste tyres if imported retreaded tyres would be replaced either with domestically retreaded tyres made from tyres used in Brazil, or with new tyres capable of future retreading. The Panel began by examining the replacement of imported retreaded tyres with new tyres on Brazil's market.[192] The Panel determined that "all types of retreaded tyres (i.e. for passenger car, bus, truck and aircraft) have by definition a shorter lifespan than new tyres."[193] Accordingly, the Panel reasoned that "an import ban on retreaded tyres may lead to a reduction in the total number of waste tyres because imported retreaded tyres may be substituted for by new tyres which have a longer lifespan."[194] The Panel verified next whether there is a link between the replacement of imported retreaded tyres with domestically retreaded tyres and a reduction in the number of waste tyres in Brazil.[195] If retreaded tyres are manufactured in Brazil from tyres used in Brazil, the retreading of these used tyres contributes to the reduction of the accumulation of waste tyres in Brazil by "giving a second life to some used tyres, which otherwise would have become waste immediately after their first and only life."[196] The Panel added that "an import ban on retreaded tyres can encourage domestic retreaders to retread more domestic used tyres than they might have done otherwise"[197], because it "compel[s] consumers of imported retreaded tyres to switch either to retreaded tyres produced domestically or to new tyres."[198] The Panel then assessed whether domestic

[196] *Ibid.*, para. 7.133.

[197] *Ibid.*, para. 7.134. (footnote omitted)

[198] *Ibid.*

used tyres can be retreaded in Brazil. On the basis of the evidence provided by the parties, the Panel found that "at least some domestic used tyres are being retreaded in Brazil"[199], that Brazil "has the production capacity to retread domestic used tyres"[200], and that new tyres sold in Brazil have the potential to be retreaded.[201] The Panel also observed that "Article 40 of Portaria SECEX 14/2004 bans the importation of both used and retreaded tyres to Brazil" and that "the import ban on used tyres supports the effectiveness of the import ban on retreaded tyres regarding the reduction of waste tyres."[202] The Panel concluded that the Import Ban "is capable of contributing to the reduction of the overall amount of waste tyres generated in Brazil."[203]

136. The Panel then turned to the question of whether the reduction in the number of waste tyres would contribute to a reduction of the risks to human, animal, and plant life and health arising from waste tyres. For the Panel, "the very essence of the problem is the actual accumulation of waste in and of itself."[204] The Panel added that "[t]o the extent that this accumulation has been demonstrated to be associated with the occurrence of the risks at issue, including the providing of fertile breeding grounds for the vectors of these diseases, a reduction in this accumulation, even if it does not eliminate it, can reasonably be expected to constitute a step towards the reduction of the occurrence of the diseases and the tyre fires."[205] The Panel concluded that:

> ... the prohibition on the importation of retreaded tyres is capable of making a contribution to the objective pursued by Brazil, in that it can lead to a reduction in the overall number of waste tyres generated in Brazil, which in turn can reduce the potential for exposure to the specific risks to human, animal, plant life and health that Brazil seeks to address.[206]

137. According to the European Communities, the Panel, in its assessment of the contribution of the Import Ban to the realization of the ends pursued by it, referred only to the potential contribution this measure might make.[207] The European Communities argues that the Panel applied an "erroneous legal standard"[208] in so doing, and that the Panel should have sought "to establish the actual contribution of the measure to its stated goals, and the importance of this contribution".[209] For the European Communities, the Panel was required to determine the extent to which the Import Ban makes a contribution to the achievement of its stated objective because, otherwise, it is not possible to weigh and balance properly this contribution against other relevant factors.[210] Accordingly, the European Communities contends, the Panel erred by not quantifying the reduction of waste tyres resulting from the Import Ban.[211] For the European Communities, "[t]he very indirect nature of the

[211] *Ibid.*, para. 174.

alleged risks attributed to imported retreaded tyres should have called for a particularly diligent examination of the contribution made by the ban to the reduction of the number of the waste tyres arising in Brazil."[212]

138. Brazil counters that the Panel correctly assessed the contribution of the Import Ban to the achievement of its objective. Brazil argues that actual contribution is properly assessed under the chapeau of Article XX of the GATT 1994, which focuses on the application of the measure. Brazil asserts further that the Appellate Body expressly recognized, in *EC – Asbestos*, that "a risk may be evaluated either in quantitative or *qualitative* terms"[213] and, therefore, the Panel was under no obligation to quantify the Import Ban's contribution to the reduction in waste tyre volumes.

139. We begin by recalling that the analysis of a measure under Article XX of the GATT 1994 is two-tiered.[214] First, a panel must examine whether the measure falls under at least one of the ten exceptions listed under Article XX.[215] Secondly, the question of whether the measure at issue satisfies the requirements of the chapeau of Article XX must be considered.

140. We note at the outset that the participants do not dispute that it is within the authority of a WTO Member to set the public health or environmental objectives it seeks to achieve[216], as well as the level of protection that it wants to obtain, through the measure or the policy it chooses to adopt.[217]

141. Article XX(b) of the GATT 1994 refers to measures "necessary to protect human, animal or plant life or health". The term "necessary" is mentioned not only in Article XX(b) of the GATT 1994, but also in Articles XX(a) and XX(d) of the GATT 1994, as well as in Article XIV(a), (b), and (c) of the GATS. In *Korea – Various Measures on Beef*, the Appellate Body underscored that "the word 'necessary' is not limited to that which is 'indispensable'".[218] The Appellate Body added:

> Measures which are indispensable or of absolute necessity or inevitable to secure compliance certainly fulfil the requirements of Article XX(d). But other measures, too, may fall within the ambit of this exception. As used in Article XX(d), the term "necessary" refers, in our view, to a range of degrees of necessity. At one end of this continuum lies "necessary" understood as "indispensable"; at the other end, is "necessary" taken to mean as "making a contribution to." We consider that a "necessary" measure is, in this continuum, located significantly closer to the pole of "indispensable" than to the opposite pole of simply "making a contribution to".[219] (footnote omitted)

[212]European Communities' appellant's submission, para. 177.

[213]Brazil's appellee's submission, para. 81 (quoting Appellate Body Report, *EC – Asbestos*, para. 167). (emphasis added by Brazil)

[214]Appellate Body Report, *US – Gasoline*, p. 22, DSR 1996:I, 3, at 20. See also Appellate Body Report, *Dominican Republic – Import and Sale of Cigarettes*, para. 64.

[215]In other words, the policy objective of the measure at issue must fall under the range of policies covered by the paragraphs of Article XX of the GATT 1994. (See, for instance, Appellate Body Report, *US – Shrimp*, para. 149)

[216]Appellate Body Report, *US – Gasoline*, p. 30, DSR 1996:I, 3, at 28.

[217]Appellate Body Report, *EC – Asbestos*, para. 168.

[218]Appellate Body Report, *Korea – Various Measures on Beef*, para. 161.

[219]Appellate Body Report, *Korea – Various Measures on Beef*, para. 161.

142. In *Korea – Various Measures on Beef*, the Appellate Body explained that determining whether a measure is "necessary" within the meaning of Article XX(d):

> ... involves in every case a process of weighing and balancing a series of factors which prominently include the contribution made by the compliance measure to the enforcement of the law or regulation at issue, the importance of the common interests or values protected by that law or regulation, and the accompanying impact of the law or regulation on imports or exports.[220]

143. In *US – Gambling*, the Appellate Body addressed the "necessity" test in the context of Article XIV of the GATS. The Appellate Body stated that the weighing and balancing process inherent in the necessity analysis "begins with an assessment of the 'relative importance' of the interests or values furthered by the challenged measure"[221], and also involves an assessment of other factors, which will usually include "the contribution of the measure to the realization of the ends pursued by it" and "the restrictive impact of the measure on international commerce".[222]

144. It is against this background that we must determine whether the Panel erred in assessing the contribution of the Import Ban to the realization of the objective pursued by it, and in the manner in which it weighed this contribution in its analysis of the necessity of the Import Ban. We begin by identifying the objective pursued by the Import Ban. The Panel found that the objective of the Import Ban is the reduction of the "exposure to the risks to human, animal or plant life or health arising from the accumulation of waste tyres"[223], and noted that "few interests are more 'vital' and 'important' than protecting human beings from health risks, and that protecting the environment is no less important."[224] The Panel also observed that "Brazil's chosen level of protection is the reduction of the risks of waste tyre accumulation to the maximum extent possible."[225] Regarding the trade restrictiveness of the measure, the Panel noted that it is "as trade-restrictive as can be, as far as retreaded tyres from non-MERCOSUR countries are concerned, since it aims to halt completely their entry into Brazil."[226]

145. We turn to the methodology used by the Panel in analyzing the contribution of the Import Ban to the achievement of its objective. Such a contribution exists when there is a genuine relationship of ends and means between the objective pursued and the measure at issue. The selection of a methodology to assess a measure's contribution is a function of the nature of the risk, the objective pursued, and the level of protection sought. It ultimately also depends on the nature, quantity, and quality of evidence existing at the time the analysis is made. Because the Panel, as the trier of the facts, is in a position to evaluate these circumstances, it should enjoy a certain latitude in designing the appropriate methodology to use and deciding how to structure or organize the analysis of the contribution of the measure at issue to the realization of the ends pursued by it. This latitude is not, however, boundless. Indeed, a panel must analyze the contribution of the measure at issue to the

[220]*Ibid.*, para. 164.

[221]Appellate Body Report, *US – Gambling*, para. 306. (footnote omitted)

[222]*Ibid.* In *Korea – Various Measures on Beef*, the Appellate Body observed that "[a] measure with a relatively slight impact upon imported products might more easily be considered as 'necessary' than a measure with intense or broader restrictive effects." (Appellate Body Report, *Korea – Various Measures on Beef*, para. 163)

[223]Panel Report, para. 7.102.

[224]Panel Report, para. 7.108 (referring to Brazil's first written submission, para. 101).

[225]*Ibid.* (footnote omitted)

[226]*Ibid.*, para. 7.114.

realization of the ends pursued by it in accordance with the requirements of Article XX of the GATT 1994 and Article 11 of the DSU.

146. We note that the Panel chose to conduct a qualitative analysis of the contribution of the Import Ban to the achievement of its objective.[227] In previous cases, the Appellate Body has not established a requirement that such a contribution be quantified.[228] To the contrary, in *EC – Asbestos*, the Appellate Body emphasized that there is "no requirement under Article XX(b) of the GATT 1994 to *quantify*, as such, the risk to human life or health".[229] In other words, "[a] risk may be evaluated either in quantitative or qualitative terms."[230] Although the reference by the Appellate Body to the quantification of a risk is not the same as the quantification of the contribution of a measure to the realization of the objective pursued by it (which could be, as it is in this case, the reduction of a risk), it appears to us that the same line of reasoning applies to the analysis of the contribution, which can be done either in quantitative or in qualitative terms.

147. Accordingly, we do not accept the European Communities' contention that the Panel was under an obligation to quantify the contribution of the Import Ban to the reduction in the number of waste tyres and to determine the number of waste tyres that would be reduced as a result of the Import Ban.[231] In our view, the Panel's choice of a qualitative analysis was within the bounds of the latitude it enjoys in choosing a methodology for the analysis of the contribution.

148. The Panel analyzed the contribution of the Import Ban to the achievement of its objective in a coherent sequence. It examined first the impact of the replacement of imported retreaded tyres with *new tyres* on the reduction of waste. Secondly, the Panel sought to determine whether imported retreaded tyres would be replaced with *domestically retreaded tyres*, which led it to examine whether domestic used tyres can be and are being retreaded in Brazil. Thirdly, it considered whether the reduction in the number of waste tyres would contribute to a reduction of the risks to human, animal, and plant life and health.

149. The Panel's analysis was not only directed at an assessment of the current situation and the *immediate* effects of the Import Ban on the reduction of the exposure to the targeted risks. The Panel's approach also focused on evaluating the extent to which the Import Ban is likely to result in a reduction of the exposure to these risks.[232] In the course of its reasoning, the Panel made and tested some key hypotheses, including: that imported retreaded tyres are being replaced with new tyres[233] and domestically retreaded tyres[234]; that some proportion of domestic used tyres are retreadable and are being retreaded[235]; that Brazil introduced a number of measures to facilitate the access of

[230] *Ibid.*

[231] European Communities, appellant's submission, para. 174.

[232] In the Panel's view, "it cannot be reasonably expected that the specific measure under consideration would entirely eliminate the risk ... or even that its impact on the actual reduction of the incidence of the diseases at issue would manifest itself very rapidly after the enactment of the measure." (Panel Report, para. 7.145)

[233] *Ibid.*, para. 7.130.

[234] *Ibid.*, paras. 7.133-7.135.

[235] *Ibid.*, para. 7.136.

domestic retreaders to good-quality used tyres[236]; that more automotive inspections in Brazil lead to an increase in the number of retreadable used tyres[237]; and that Brazil has the production capacity to retread such tyres.[238] The Panel sought to verify these hypotheses on the basis of the evidence adduced by the parties and found them to be logically sound and supported by sufficient evidence. In the next Section, we will examine the European Communities' claim that the Panel failed to make an objective assessment of the facts with respect to the verification of some of these hypotheses. Assuming, for the time being, that the Panel assessed the facts in accordance with Article 11 of the DSU, it appears to us that the Panel's analysis supports its conclusion that the Import Ban is capable of making a contribution and can result in a reduction of exposure to the targeted risks.[239] We have now to determine whether this was sufficient to conclude that the Import Ban is "necessary" within the meaning of Article XX(b) of the GATT 1994.

150. As the Panel recognized, an import ban is "by design as trade-restrictive as can be".[240] We agree with the Panel that there may be circumstances where such a measure can nevertheless be necessary, within the meaning of Article XX(b). We also recall that, in *Korea – Various Measures on Beef*, the Appellate Body indicated that "the word 'necessary' is not limited to that which is 'indispensable'".[241] Having said that, when a measure produces restrictive effects on international trade as severe as those resulting from an import ban, it appears to us that it would be difficult for a panel to find that measure necessary unless it is satisfied that the measure is apt to make a material contribution to the achievement of its objective. Thus, we disagree with Brazil's suggestion that, because it aims to reduce risk exposure to the maximum extent possible, an import ban that brings a marginal or insignificant contribution can nevertheless be considered necessary.[242]

151. This does not mean that an import ban, or another trade-restrictive measure, the contribution of which is not immediately observable, cannot be justified under Article XX(b). We recognize that certain complex public health or environmental problems may be tackled only with a comprehensive policy comprising a multiplicity of interacting measures. In the short-term, it may prove difficult to isolate the contribution to public health or environmental objectives of one specific measure from those attributable to the other measures that are part of the same comprehensive policy. Moreover, the results obtained from certain actions—for instance, measures adopted in order to attenuate global warming and climate change, or certain preventive actions to reduce the incidence of diseases that may manifest themselves only after a certain period of time—can only be evaluated with the benefit of time.[243] In order to justify an import ban under Article XX(b), a panel must be satisfied that it brings about a material contribution to the achievement of its objective. Such a demonstration can of course be made by resorting to evidence or data, pertaining to the past or the present, that establish that the import ban at issue makes a material contribution to the protection of public health or

[236] Panel Report, para. 7.137.

[239] *Ibid.*, para. 7.148.

[240] *Ibid.*, para. 7.211.

[241] Appellate Body Report, *Korea – Various Measures on Beef*, para. 161.

[242] Brazil's appellee's submission, paras. 80 and 83. According to Brazil, given its chosen level of protection to reduce the risk of waste tyre accumulation to the maximum extent possible, "[i]f the Panel finds that there are no reasonable alternatives to the measure, the measure is necessary—no matter how small its contribution—because the WTO does not second-guess the Member's chosen level of protection." (*Ibid.*, para. 80)

[243] In this respect, we note that, in *US – Gasoline*, the Appellate Body stated, in the context of Article XX(g) of the GATT 1994, that, "in the field of conservation of exhaustible natural resources, a substantial period of time, perhaps years, may have to elapse before the effects attributable to implementation of a given measure may be observable." (Appellate Body Report, *US – Gasoline*, p. 21, DSR 1996:I, 3, at 20)

environmental objectives pursued. This is not, however, the only type of demonstration that could establish such a contribution. Thus, a panel might conclude that an import ban is necessary on the basis of a demonstration that the import ban at issue is apt to produce a material contribution to the achievement of its objective. This demonstration could consist of quantitative projections in the future, or qualitative reasoning based on a set of hypotheses that are tested and supported by sufficient evidence.

152. We have now to assess whether the qualitative analysis provided by the Panel establishes that the Import Ban is apt to produce a material contribution to the achievement of the objective of reducing exposure to the risks arising from the accumulation of waste tyres.

153. We observe, first, that the Panel analyzed the contribution of the Import Ban as initially designed, without taking into account the imports of remoulded tyres under the MERCOSUR exemption. As we indicated above, this is not the only possible approach. Nevertheless, we proceed with our examination of the Panel's reasoning on that basis for the reasons we explained earlier. In the light of the evidence adduced by the parties, the Panel was of the view that the Import Ban would lead to imported retreaded tyres being replaced with retreaded tyres made from local casings[244], or with new tyres that are retreadable.[245] As concerns new tyres, the Panel observed, and we agree, that retreaded tyres "have by definition a shorter lifespan than new tyres"[246] and that, accordingly, the Import Ban "may lead to a reduction in the total number of waste tyres because imported retreaded tyres may be substituted for by new tyres which have a longer lifespan."[247] As concerns tyres retreaded in Brazil from local casings, the Panel was satisfied that Brazil had the production capacity to retread domestic used tyres[248] and that "at least some domestic used tyres are being retreaded in Brazil."[249] The Panel also agreed that Brazil has taken a series of measures to facilitate the access of domestic retreaders to good-quality used tyres[250], and that new tyres sold in Brazil are high-quality tyres that comply with international standards and have the potential to be retreaded.[251] The Panel's conclusion with which we agree was that, "if the domestic retreading industry retreads more domestic used tyres, the overall number of waste tyres will be reduced by giving a second life to some used tyres, which otherwise would have become waste immediately after their first and only life."[252] For these reasons, the Panel found that a reduction of waste tyres would result from the Import Ban and that, therefore, the Import Ban would contribute to reducing exposure to the risks associated with the accumulation of waste tyres. As the Panel's analysis was qualitative, the Panel did not seek to estimate, in quantitative terms, the reduction of waste tyres that would result from the Import Ban, or the time horizon of such a reduction. Such estimates would have been very useful and, undoubtedly, would have strengthened the foundation of the Panel's findings. Having said that, it does not appear to us erroneous to conclude, on the basis of the hypotheses made, tested, and accepted by the Panel, that fewer waste tyres will be generated with the Import Ban than otherwise.

[244]Panel Report, paras. 7.126-7.130.

[245]*Ibid.*, paras. 7.131-7.142.

[246]*Ibid.*, para. 7.130.

[247]Panel Report, para. 7.130.

[248]*Ibid.*, para. 7.141. The Panel noted that, in 2005, 33.4 million new tyres (all types included) were sold in Brazil (either domestically produced or imported) and 18.6 million retreaded tyres were produced domestically.

[249]*Ibid.*, para. 7.136.

[250]*Ibid.*, para. 7.137.

[251]*Ibid.*

[252]*Ibid.*, para. 7.133.

154. Moreover, we wish to underscore that the Import Ban must be viewed in the broader context of the comprehensive strategy designed and implemented by Brazil to deal with waste tyres. This comprehensive strategy includes not only the Import Ban but also the import ban on used tyres, as well as the collection and disposal scheme adopted by CONAMA Resolution 258/1999, as amended in 2002, which makes it mandatory for domestic manufacturers and importers of new tyres to provide for the safe disposal of waste tyres in specified proportions.[253] For its part, CONAMA Resolution 258/1999, as amended in 2002, aims to reduce the exposure to risks arising from the accumulation of waste tyres by forcing manufacturers and importers of new tyres to collect and dispose of waste tyres at a ratio of five waste tyres for every four new tyres. This measure also encourages Brazilian retreaders to retread more domestic used tyres by exempting domestic retreaders from disposal obligations as long as they process tyres consumed within Brazil.[254] Thus, the CONAMA scheme provides additional support for and is consistent with the design of Brazil's strategy for reducing the number of waste tyres. The two mutually enforcing pillars of Brazil's overall strategy—the Import Ban and the import ban on used tyres—imply that the demand for retreaded tyres in Brazil must be met by the domestic retreaders, and that these retreaders, in principle, can use only domestic used tyres for raw material.[255] Over time, this comprehensive regulatory scheme is apt to induce sustainable changes in the practices and behaviour of the domestic retreaders, as well as other actors, and result in an increase in the number of retreadable tyres in Brazil and a higher rate of retreading of domestic casings in Brazil. Thus, the Import Ban appears to us as one of the key elements of the comprehensive strategy designed by Brazil to deal with waste tyres, along with the import ban on used tyres and the collection and disposal scheme established by CONAMA Resolution 258/1999, as amended in 2002.

[253]Article 3 of CONAMA Resolution 258/1999, as amended in 2002, provides:

> The time periods and quantities for collection and environmentally appropriate final disposal of unusable tyres resulting from use on automotive vehicles and bicycles covered by this Regulation are as follows:
>
> I – as of 1 January 2002: for every four new tyres produced in Brazil or imported new or reconditioned tyres, including those on imported vehicles, manufacturers and importers must ensure final disposal of one unusable tyre;
>
> II – as of 1 January 2003: for every two new tyres produced in Brazil or imported new or reconditioned tyres, including those on imported vehicles, manufacturers and importers must ensure final disposal of one unusable tyre;
>
> III – as of 1 January 2004:
>
> a) for every one new tyre produced in Brazil or imported new tyre, including those on imported vehicles, manufacturers and importers must ensure final disposal of one unusable tyre;
>
> b) for every four imported reconditioned tyres, of any type, importers must ensure final disposal of five unusable tyres;
>
> IV – as of 1 January 2005:
>
> a) for every four new tyres produced in Brazil or imported tyres, including those on imported vehicles, manufacturers and importers must ensure final disposal of five unusable tyres;
>
> b) for every three imported reconditioned tyres, of any type, importers must ensure final disposal of four unusable tyres.

[254]Panel Report, para. 7.137.

[255]Leaving aside, as explained above, the imports under the MERCOSUR exemption and under court injunctions.

155. As we explained above, we agree with the Panel's reasoning suggesting that fewer waste tyres will be generated with the Import Ban in place. In addition, Brazil has developed and implemented a comprehensive strategy to deal with waste tyres. As a *key element* of this strategy, the Import Ban is likely to bring a material contribution to the achievement of its objective of reducing the exposure to risks arising from the accumulation of waste tyres. On the basis of these considerations, we are of the view that the Panel did not err in finding that the Import Ban contributes to the achievement of its objective.

2. The Panel's Analysis of Possible Alternatives to the Import Ban

156. In order to determine whether a measure is "necessary" within the meaning of Article XX(b) of the GATT 1994, a panel must assess all the relevant factors, particularly the extent of the contribution to the achievement of a measure's objective and its trade restrictiveness, in the light of the importance of the interests or values at stake. If this analysis yields a preliminary conclusion that the measure is necessary, this result must be confirmed by comparing the measure with its possible alternatives, which may be less trade restrictive while providing an equivalent contribution to the achievement of the objective pursued. It rests upon the complaining Member to identify possible alternatives to the measure at issue that the responding Member could have taken.[256] As the Appellate Body indicated in *US – Gambling*, while the responding Member must show that a measure is necessary, it does not have to "show, in the first instance, that there are *no* reasonably available alternatives to achieve its objectives."[257] We recall that, in order to qualify as an alternative, a measure proposed by the complaining Member must be not only less trade restrictive than the measure at issue, but should also "preserve for the responding Member its right to achieve its desired level of protection with respect to the objective pursued".[258] If the complaining Member has put forward a possible alternative measure, the responding Member may seek to show that the proposed measure does not allow it to achieve the level of protection it has chosen and, therefore, is not a genuine alternative. The responding Member may also seek to demonstrate that the proposed alternative is not, in fact, "reasonably available".[259] As the Appellate Body indicated in *US – Gambling,* "[a]n alternative measure may be found not to be 'reasonably available' ... where it is merely theoretical in nature, for instance, where the responding Member is not capable of taking it, or where the measure imposes an undue burden on that Member, such as prohibitive costs or substantial technical difficulties."[260] If the responding Member demonstrates that the measure proposed by the complaining Member is not a genuine alternative or is not "reasonably available", taking into account the interests or values being pursued and the responding Member's desired level of protection, it follows that the measure at issue is necessary.[261]

157. Before the Panel, the European Communities put forward two types of possible alternative measures or practices: (i) measures to reduce the number of waste tyres accumulating in Brazil; and (ii) measures or practices to improve the management of waste tyres in Brazil.[262] The Panel examined the alternative measures proposed by the European Communities in some detail, and in each case found that the proposed measure did not constitute a reasonably available alternative to the Import Ban. Among the reasons that the Panel gave for its rejections were that the proposed alternatives

[262] Panel Report, para. 7.159.

were already in place, would not allow Brazil to achieve its chosen level of protection, or would carry their own risks and hazards.

158. Regarding the measures to reduce the accumulation of waste tyres, the Panel first discussed measures to encourage domestic retreading or improve the retreadability of domestic used tyres. The Panel observed that these measures had already been implemented or were in the process of being implemented[263] so that the impact of these measures and the Import Ban "could be cumulative rather than substitutable".[264] Therefore, the Panel disagreed with the European Communities that "the institution of domestic measures to encourage timely domestic retreading and to improve the retreadability of domestic used tyres would achieve the same outcome as the import ban".[265]

159. The Panel went on to discuss the European Communities' contention that Brazil should prevent imports of used tyres into Brazil through court injunctions. The Panel noted that imports of used tyres were already prohibited by law in Brazil, "so that if the 'alternative measure' proposed by the European Communities is the prohibition of used tyres, it could be said that Brazil actually already imposes that measure."[266] Accordingly, the Panel concluded that the possible alternative measures identified by the European Communities to avoid the *generation* of waste tyres could not "apply *as a substitute*" for the Import Ban but are, rather, complementary measures that Brazil already applies, at least in part.[267]

160. Turning to alternatives aiming to improve management of waste tyres, the Panel examined, first, collection and disposal schemes and, secondly, disposal methods.

161. The European Communities referred mainly to two collection and disposal schemes.[268] In the analysis of these schemes, the Panel recalled that "Brazil's chosen level of protection is the reduction of the risks associated with waste tyre accumulation to the maximum extent possible".[269] According to the Panel, "insofar as the level of protection pursued by Brazil involves the 'non-generation' of waste tyres in the first place", collection and disposal schemes, such as that adopted by CONAMA Resolution 258/1999 or the Paraná Rodando Limpo[270] programme, "would not seem able to achieve the same level of protection as the import ban".[271] The Panel also noted Brazil's concern that these collection and disposal schemes do not address or eliminate disposal risks.[272] The Panel concluded that these schemes cannot be considered as alternatives to the Import Ban at the level of protection sought by Brazil, because they were already implemented in Brazil and do not address the risks associated with the disposal of waste tyres.[273]

[271] Panel Report, para. 7.177.

[272] *Ibid.*

[273] *Ibid.*, para. 7.178.

162. The Panel then examined the following disposal methods identified by the European Communities: (i) landfilling; (ii) stockpiling; (iii) incineration of waste tyres in cement kilns and similar facilities; and (iv) material recycling.

163. Concerning *landfilling*, the Panel found that the landfilling of waste tyres may pose the very risks Brazil seeks to reduce through the Import Ban, and for this reason cannot constitute a reasonably available alternative.[274] For the Panel, landfilling of waste tyres poses problems, including the "instability of sites that will affect future land reclamation, long-term leaching of toxic substances, and the risk of tyre fires and mosquito-borne diseases."[275] The Panel also observed that the evidence it examined showing the existence of such risks did not make a clear distinction between landfilling of shredded tyres (also referred to as "controlled landfilling") and landfilling of whole tyres ("uncontrolled landfilling"). Thus, for the Panel, it was not possible to conclude that landfilling of shredded tyres does not pose risks similar to those linked to other types of waste tyre landfills.[276]

164. Regarding *stockpiling*[277], the Panel observed that this method does not "dispose of" waste tyres[278], and added that "the evidence shows that even the so-called 'controlled stockpiling' that is to say stockpiles designed to prevent the risk of fires and pests may still pose considerable risks to human health and the environment."[279] The Panel concluded that stockpiling did not constitute an alternative to the Import Ban.[280]

165. With respect to the *incineration* of waste tyres, the Panel found that sufficient evidence demonstrated that health risks exist in relation to the incineration of waste tyres, even if such risks could be significantly reduced through strict emission standards.[281] For the Panel, the evidence suggested that "the question still remains whether toxic chemicals emitted by incineration of waste tyres, regardless of the level of emission, may potentially pose health risks to humans."[282] The Panel added that, although emission levels can vary largely depending on the emission control technology, "the most up-to-date technology that can control toxic emissions to minimum levels is not necessarily readily available, mostly for financial reasons."[283]

166. Finally, the Panel examined *material recycling* applications. Regarding civil engineering applications using waste tyres, the Panel found that demand for these applications was fairly limited partly due to their high costs, that they are capable of disposing of only a small number of waste tyres, and that the evidence casts doubt on the safety of some of these engineering applications.[284] With respect to rubber asphalt, the Panel found that the information showed that "the use of rubber asphalt results in higher costs."[285] Consequently, "the demand for this technology is limited and its waste disposal capacity is reduced."[286] The Panel also noted that the use of rubber granulates in the

[284] *Ibid.*, paras. 7.201 and 7.202.

[285] *Ibid.*, para. 7.205.

[286] Panel Report, para. 7.205. (footnote omitted)

production of certain products may dispose of only a limited amount of waste tyres.[287] Finally, as regards devulcanization and other forms of chemical or thermal transformation, the Panel observed that, "under current market conditions, the economic viability of these options has yet to be demonstrated."[288] In the light of these considerations, the Panel concluded that "it is not clear that material recycling applications are entirely safe"[289], and that even if they were completely harmless, "they would not be able to dispose of a quantity of waste tyres sufficient to achieve Brazil's desired level of protection due to their prohibitive costs and thus cannot constitute a reasonably available alternative".[290]

167. On appeal, the European Communities contends that the Panel erred in its analysis of the measures or practices that were presented as possible alternatives to the Import Ban. In particular, the European Communities submits that the Panel used in its analysis an incorrect concept of "alternative". In addition, the European Communities argues that the Panel should have considered as alternatives to the Import Ban a better enforcement of the ban on imports of used tyres and of existing collection and disposal schemes.

168. Brazil asserts that the Panel was correct in finding that none of the alternative measures suggested by the European Communities constituted "reasonably available" alternatives to the Import Ban. For Brazil, the Panel correctly took account of Brazil's chosen level of protection—that is, the reduction of risks associated with the generation of waste tyres in Brazil to the maximum extent possible—in concluding that none of the alternatives suggested by the European Communities avoided the generation of additional waste tyres in the first place.

169. The Panel examined each of the measures or practices put forward by the European Communities in order to determine whether they were reasonably available alternatives in the light of the objective of the Import Ban and Brazil's chosen level of protection.[291]

170. We note that the objective of the Import Ban is the reduction of the "exposure to the risks to human, animal or plant life or health arising from the accumulation of waste tyres"[292] and that "Brazil's chosen level of protection is the reduction of [these] risks ... to the maximum extent possible"[293], and that a measure or practice will not be viewed as an alternative unless it "preserve[s] for the responding Member its right to achieve its desired level of protection with respect to the objective pursued".[294]

171. We recall that tyres—new or retreaded—are essential for modern transportation. However, at the end of their useful life, they turn into waste that carries risks for public health and the environment.[295] Governments, legitimately, take actions to minimize the adverse effects of waste tyres. They may adopt preventive measures aiming to reduce the accumulation of waste tyres, a category into which the Import Ban falls. Governments may also contemplate remedial measures for the management and disposal of waste tyres, such as landfilling, stockpiling, incineration of waste tyres, and material recycling. Many of these measures or practices carry, however, their own risks or

[292] Panel Report, para. 7.102.

[293] *Ibid.*, para. 7.108. (footnote omitted)

[294] Appellate Body Report, *US – Gambling,* para. 308. (footnote omitted)

[295] See *supra*, para. 119.

require the commitment of substantial resources, or advanced technologies or know-how. Thus, the capacity of a country to implement remedial measures that would be particularly costly, or would require advanced technologies, may be relevant to the assessment of whether such measures or practices are reasonably available alternatives to a preventive measure, such as the Import Ban, which does not involve "prohibitive costs or substantial technical difficulties".[296]

172. Among the possible alternatives, the European Communities referred to measures to encourage domestic retreading or improve the retreadability of used tyres, as well as a better enforcement of the import ban on used tyres and of existing collection and disposal schemes. In fact, like the Import Ban, these measures already figure as elements of a comprehensive strategy designed by Brazil to deal with waste tyres.[297] Substituting one element of this comprehensive policy for another would weaken the policy by reducing the synergies between its components, as well as its total effect. We are therefore of the view that the Panel did not err in rejecting as alternatives to the Import Ban components of Brazil's policy regarding waste tyres that are complementary to the Import Ban.

173. We move now to the other measures or practices proposed by the European Communities as alternatives to the Import Ban.[298] The European Communities contends that the Panel committed an error of law by applying a "narrow definition of alternative"[299], according to which an alternative to the Import Ban is "a measure that must avoid the waste tyres arising specifically from imported retreaded tyres"[300], or one "equal to a waste non-generation measure".[301] For the European Communities, this narrow definition differs from "the objective allegedly pursued by the challenged measure"[302], and resulted in the rejection of several disposal and waste management measures presented by the European Communities that should have been accepted as alternatives to the Import Ban.

174. In evaluating whether the measures or practices proposed by the European Communities were "alternatives", the Panel sought to determine whether they would achieve Brazil's policy objective and chosen level of protection[303], that is to say, reducing the "exposure to the risks to human, animal or plant life or health arising from the accumulation of waste tyres"[304] to the maximum extent possible.[305] In this respect, we believe, like the Panel, that non-generation measures are more apt to

[296]Appellate Body Report, *US – Gambling*, para. 308.

[297]The Panel noted that Brazil has already implemented or is in the process of implementing measures to encourage domestic retreading or improve the retreadability of tyres. (Panel Report, para. 7.169) The Panel observed that "imports of used tyres *are* already prohibited". (*Ibid.*, para. 7.171 (original emphasis)) The Panel agreed with Brazil that "collection and disposal schemes such as Resolution CONAMA 258/1999 as amended [in 2002] and Paraná Rodando Limpo have already been implemented in Brazil". (*Ibid.*, para. 7.178)

[298]These measures or practices are the following disposal methods: landfilling; stockpiling; incineration of waste tyres; and material recycling.

> We must therefore now consider whether any alternative measure, less inconsistent with GATT 1994, that is, less trade-restrictive than a complete import ban, would have been reasonably available to Brazil to achieve the same objective, taking into account Brazil's chosen level of protection. (footnote omitted)

achieve this objective because they prevent the accumulation of waste tyres, while waste management measures dispose of waste tyres only once they have accumulated. Furthermore, we note that, in comparing a proposed alternative to the Import Ban, the Panel took into account specific risks attached to the proposed alternative, such as the risk of leaching of toxic substances that might be associated to landfilling[306], or the risk of toxic emissions that might arise from the incineration of waste tyres.[307] In our view, the Panel did not err in so doing. Indeed, we do not see how a panel could undertake a meaningful comparison of the measure at issue with a possible alternative while disregarding the risks arising out of the implementation of the possible alternative.[308] In this case, the Panel examined as proposed alternatives landfilling, stockpiling, and waste tyre incineration, and considered that, even if these disposal methods were performed under controlled conditions, they nevertheless pose risks to human health similar or additional to those Brazil seeks to reduce through the Import Ban.[309] Because these practices carry their own risks, and these risks do not arise from non-generation measures such as the Import Ban, we believe, like the Panel, that these practices are not reasonably available alternatives.

175. With respect to material recycling, we share the Panel's view that this practice is not as effective as the Import Ban in reducing the exposure to the risks arising from the accumulation of waste tyres. Material recycling applications are costly, and hence capable of disposing of only a limited number of waste tyres.[310] We also note that some of them might require advanced technologies and know-how that are not readily available on a large scale. Accordingly, we are of the view that the Panel did not err in concluding that material recycling is not a reasonably available alternative to the Import Ban.

3. The Weighing and Balancing of Relevant Factors by the Panel

176. The European Communities argues that, in its analysis of the necessity of the Import Ban, the Panel stated that it had weighed and balanced the relevant factors, but it "has not actually done it".[311] According to the European Communities, although the Appellate Body has not defined the term "weighing and balancing", "this language refers clearly to a process where, in the first place, the importance of each element is assessed individually and, then, its role and relative importance is taken into consideration together with the other elements for the purposes of deciding whether the challenged measure is necessary to attain the objective pursued."[312] The European Communities reasons that, "since the Panel failed to establish ... the extent of the actual contribution the [Import Ban] makes to the reduction of the number of waste tyres arising in Brazil, ... it was incapable of 'weighing and balancing' this contribution against any of the other relevant factors."[313] In addition, the European Communities contends that "the Panel base[d] ... its 'weighing and balancing' exercise on the wrong analysis it ... made of the alternatives".[314] In sum, the European Communities argues that

[306]*Ibid.*, para. 7.183.

[307]*Ibid.*, para. 7.194.

[308]This was recognized by the Appellate Body in *EC – Asbestos*, where it stated that the risks attached to a proposed measure should be included in the exercise of comparison aiming to determine whether it is a reasonably available alternative to the measure at issue. (Appellate Body Report, *EC – Asbestos*, para. 174)

[309]Panel Report, para. 7.195; see also para. 7.186 (landfilling); para. 7.189 (stockpiling); and para. 7.194 (waste tyre incineration).

[310]*Ibid.*, paras. 7.201 and 7.205-7.208.

[311]European Communities' appellant's submission, para. 285.

[312]*Ibid.*, para. 284.

[313]*Ibid.*, para. 288.

[314]European Communities' appellant's submission, para. 290. (underlining omitted)

the Panel conducted a "superficial analysis"[315] that is not a real weighing and balancing of the different factors and alternatives, because it did not balance "its arguments about the measure and the alternatives with the absolute trade-restrictiveness of the import ban and with a real evaluation of the contribution of the import ban to the objective pursued."[316]

177. Brazil counters that the Panel correctly weighed and balanced the relevant factors and proposed alternatives in its necessity analysis. Brazil argues that the Panel expressly recognized that the Import Ban is highly trade restrictive, but properly weighed and balanced this factor against the other relevant factors. In relation to contribution, Brazil considers that Article XX(b) of the GATT 1994 does not require quantification, and that, in any event, the Import Ban's contribution to the reduction of imports of retreaded tyres is "substantial".[317] Brazil adds that, because imports of retreaded tyres by definition increase the amount of waste tyres in Brazil, the contribution of the Import Ban to the reduction of risks arising from waste tyres to the maximum extent possible is "both direct and certain".[318]

178. We begin our analysis by recalling that, in order to determine whether a measure is "necessary" within the meaning of Article XX(b) of the GATT 1994, a panel must consider the relevant factors, particularly the importance of the interests or values at stake, the extent of the contribution to the achievement of the measure's objective, and its trade restrictiveness. If this analysis yields a preliminary conclusion that the measure is necessary, this result must be confirmed by comparing the measure with possible alternatives, which may be less trade restrictive while providing an equivalent contribution to the achievement of the objective. This comparison should be carried out in the light of the importance of the interests or values at stake.[319] It is through this process that a panel determines whether a measure is necessary.[320]

179. In this case, the Panel identified the objective of the Import Ban as being the reduction of the exposure to risks arising from the accumulation of waste tyres. It assessed the importance of the interests underlying this objective. It found that risks of dengue fever and malaria arise from the accumulation of waste tyres and that the objective of protecting human life and health against such diseases "is both vital and important in the highest degree".[321] The Panel noted that the objective of the Import Ban also relates to the protection of the environment, a value that it considered—correctly, in our view—important.[322] Then, the Panel analyzed the trade restrictiveness of the Import Ban and its contribution to the achievement of its objective. It appears from the Panel's reasoning that it considered that, in the light of the importance of the interests protected by the objective of the Import Ban, the contribution of the Import Ban to the achievement of its objective outweighs its trade restrictiveness. This finding of the Panel does not appear erroneous to us.[323]

180. The Panel then proceeded to examine the alternatives to the Import Ban proposed by the European Communities. The Panel explained that some of them could not be viewed as alternatives to the Import Ban because they were complementary to it and were already included in Brazil's

[315] *Ibid.*, para. 295.

[319] Appellate Body Report, *US – Gambling*, para. 307.

[320] *Ibid.*

[321] Panel Report, para. 7.210. (footnote omitted)

[322] *Ibid.*, para. 7.112.

[323] *Supra*, paras. 150-155.

comprehensive policy.[324] Next, the Panel compared the other alternatives proposed by the European Communities—landfilling, stockpiling, incineration, and material recycling—with the Import Ban, taking into consideration the specific risks associated with these proposed alternatives. The Panel concluded from this comparative assessment that none of the proposed options was a reasonably available alternative to the Import Ban.

181. The European Communities argues that the Panel failed to make a proper collective assessment of all the proposed alternatives, a contention that does not stand for the following reasons. First, the Panel did refer to its collective examination of these alternatives in concluding that "none of these, either individually *or collectively*, would be such that the risks arising from waste tyres in Brazil would be safely eliminated, as is intended by the current import ban."[325] Secondly, as noted by the Panel and discussed above, some of the proposed alternatives are not real substitutes for the Import Ban since they complement each other as part of Brazil's comprehensive policy.[326] Finally, having found that other proposed alternatives were not reasonably available or carried their own risks, these alternatives would not have weighed differently in a collective assessment of alternatives.

182. In sum, the Panel's conclusion that the Import Ban is necessary was the result of a process involving, first, the examination of the contribution of the Import Ban to the achievement of its objective against its trade restrictiveness in the light of the interests at stake, and, secondly, the comparison of the possible alternatives, including associated risks, with the Import Ban. The analytical process followed by the Panel is consistent with the approach previously defined by the Appellate Body.[327] The weighing and balancing is a holistic operation that involves putting all the variables of the equation together and evaluating them in relation to each other after having examined them individually, in order to reach an overall judgement. We therefore do not share the European Communities' view that the Panel did not "actually" weigh and balance the relevant factors[328], or that the Panel made a methodological error in comparing the alternative options proposed by the European Communities with the Import Ban.

183. In the light of all these considerations, we are of the view that the Panel did not err in the manner it conducted its analysis under Article XX(b) of the GATT 1994 as to whether the Import Ban was "necessary to protect human, animal or plant life or health".

B. *The Panel's Necessity Analysis and Article 11 of the DSU*

184. The European Communities claims that the Panel breached its duties under Article 11 of the DSU in its analysis of the "necessity" of the Import Ban under Article XX(b) of the GATT 1994. In particular, the European Communities submits that the Panel failed to make an objective assessment of the facts in its assessment of the contribution of the Import Ban to the achievement of its objective, and in its examination of the proposed alternatives.

[324] For example, measures to encourage domestic retreading and improve the retreadability of domestic used tyres, a better implementation of the import ban on used tyres, and a better implementation of existing collection and disposal schemes. See also Panel Report, paras. 7.169, 7.171, and 7.178.

[328] European Communities' appellant's submission, para. 285.

1. Article 11 of the DSU and the Panel's Analysis of the Contribution of the Import Ban to the Achievement of Its Objective

185. We recall that Article 11 requires a panel to conduct "an objective assessment of the matter before it, including an objective assessment of the facts of the case". This assessment implies, among other things, that a panel must consider all the evidence presented to it, assess its credibility, determine its weight, and ensure that its factual findings have a proper basis in that evidence.[329]

186. Within these parameters, it is generally "within the discretion of the panel to decide which evidence it chooses to utilize in making findings"[330], and panels are "not required to accord to factual evidence of the parties the same meaning and weight as do the parties".[331] A panel is entitled "to determine that certain elements of evidence should be accorded more weight than other elements—that is the essence of the task of appreciating the evidence"[332]—and the Appellate Body "will not interfere lightly with the panel's exercise of its discretion".[333] Thus, a participant challenging a panel's findings of fact under Article 11 of the DSU is required to demonstrate that the panel has exceeded the bounds of its discretion as the trier of facts.

187. Against this background, we turn to the contentions of the European Communities. First, the European Communities argues that there was an insufficient factual foundation for the Panel's conclusion that it had "no reason to believe that new tyres sold in Brazil are low-quality tyres" that were not capable of being retreaded[334], and that the Panel ignored "substantial evidence" produced by the European Communities demonstrating the existence of "low-quality non-retreadable tyres"[335] in the Brazilian market.

188. Brazil submits that the Panel's conclusion is supported by the evidence on record and adds that high rates of retreadability in the country demonstrate that new tyres sold in Brazil "generally have [the] potential for future retreading".[336]

189. We observe that, in support of its position that it had "no reason to believe that new tyres sold in Brazil are low-quality tyres" that are not suitable for retreading, the Panel referred to standards applied to new tyres sold in Brazil that are "strict technical and performance standards that are based on international standards".[337] The European Communities argues that potential retreadability is not an element of these standards and that, therefore, the Panel's position on the retreadability of new

[329]Appellate Body Report, *EC – Hormones*, paras. 132 and 133. [335]European Communities' appellant's submission, para. 183. (footnote omitted)

[336]Brazil's appellee's submission, para. 116.

[337]Panel Report, para. 7.137.

tyres sold in Brazil had no factual basis.[338] We are not persuaded by this argument. The Panel's position was not that these standards include retreadability but, rather, that they result in a level of quality for new tyres that increases the potential for them to be retreaded.[339] Thus, the Panel's finding did not lack a factual basis since there was a relationship between the standards to which the Panel referred and its conclusion that it had "no reason to believe that new tyres sold in Brazil are low-quality tyres"[340] that are not retreadable.

190. Nor did the Panel disregard the evidence presented by the European Communities in reaching its conclusion on retreadability. To the contrary, the Panel expressly referred to various studies submitted by the European Communities in Exhibits EC-15 and EC-67 through EC-71, which related to the existence of "cheap low-quality new tyres in Brazil".[341] The Panel simply attached more weight to other pieces of evidence that were before it [342], as Article 11 of the DSU entitles it to do.[343]

191. The European Communities asserts further that the Panel relied on "arbitrarily chosen pieces of evidence" and failed to consider contradictory evidence[344] in basing its finding that "at least some domestic used tyres are being retreaded in Brazil"[345] exclusively on a statement contained in a report by the Associação Brasileira do Segmento de Reforma de Pneus (the "ABR") (Brazilian Association of the Retreading Industry) (the "ABR Report").[346] According to the European Communities, the Panel neglected to consider evidence contained in a second report by the ABR[347] that contradicted this statement.[348] We do not find merit in this argument. The Panel relied on various studies and reports other than the ABR Report.[349] Moreover, the Panel took into account the evidence in the second report by the ABR[350] as the express reference it made to that report confirms.[351]

[347]*Supra*, footnote 43.

[348]European Communities' appellant's submission, paras. 186 and 187.

[349]For example, the Panel relied on, *inter alia*, retreadability figures for the Brazilian company Mazola Comércio (Panel Report, para. 7.135 and footnote 1236 thereto (referring to Exhibit BRA-93 submitted by Brazil to the Panel)); studies by the consultancy LAFIS and the Institute of Technological Research of the State of São Paulo (*ibid.*, footnote 1237 (referring to Exhibits EC-92 and BRA-159 submitted by the European Communities and Brazil, respectively, to the Panel)); a video by BS Colway (*ibid.*, footnote 1239 (referring to Exhibit EC-72 submitted by the European Communities to the Panel)); and retreadability figures in Brazil (*ibid.*, footnote 1241 (referring to Brazil's oral statement at the second Panel meeting, paras. 57-61; Brazil's comments on Question 107 posed by the Panel to the European Communities, Panel Report, pp. 317-323; Brazil's response to Question 117 posed by the Panel, Panel Report, pp. 332-334; and Exhibit BRA-162 submitted by Brazil to the Panel)) and in other countries (*ibid.*, footnote 1242 (referring to Brazil's first written submission to the Panel, para. 79, where Brazil provided some examples of retreadability figures for the United Kingdom, the United States, Australia, and France)). See also Brazil's response to Question 17 posed by the Panel, *ibid.*, p. 257.

[350]Exhibit BRA-157, *supra*, footnote 43.

192. The European Communities next charges the Panel with failing to discount the evidentiary value of Technical Note 001/2006 of the Instituto Nacional de Metrologia, Normalização e Qualidade Industrial ("INMETRO") (National Institute for Metrology, Standardization and Industrial Quality)[352], on the grounds that it was issued during the course of the Panel proceedings, and with neglecting to consider contradictory evidence contained in an earlier INMETRO Technical Note 83/2000.[353]

193. It is well settled that a panel may consider a piece of evidence that post-dates its establishment.[354] Thus, INMETRO Technical Note 001/2006 was clearly an admissible piece of evidence. The European Communities, however, seems to suggest that the fact that INMETRO Technical Note 001/2006 post-dates the establishment of the Panel undermines its "evidentiary value", because Brazil was well aware of the significance of INMETRO Technical Note 001/2006 at that time. In our view, this amounts to an argument that the Panel should have attached more weight to one piece of evidence than to another, and does not suffice to demonstrate that the Panel exceeded the bounds of its discretion by attaching more weight to INMETRO Technical Note 001/2006—a more recent document—than to INMETRO Technical Note 83/2000. Furthermore, the Panel did not neglect INMETRO Technical Note 83/2000. As the European Communities acknowledges[355], the Panel expressly referred to this particular piece of evidence in its analysis.[356]

194. The European Communities further maintains that the Panel ignored evidence contained in a study by the consultancy LAFIS[357] indicating that the rate of retreading of passenger car tyres in Brazil is below 9.99 per cent.[358] The Panel, however, specifically considered the LAFIS study in its analysis as to whether domestic used tyres are retreadable and are being retreaded in Brazil.[359] It also discussed the arguments presented by Brazil and the European Communities in relation to this figure.

195. The European Communities charges the Panel with "bolster[ing] its conclusions"[360] on the retreadability of domestic casings with speculation on future measures that Brazil may take and, in particular, in stating that "mandatory inspections are taking place in Brazil and that more frequent inspections are to be expected once Bill 5979/2001 is approved".[361] However, the Panel's finding that "mandatory inspections are taking place"[362] was based on inspection requirements imposed by Brazil's National Code of Traffic and applicable technical standards, which were in force at the time the Panel

[362]*Ibid.*

conducted its review[363], and is not vitiated by the Panel's additional reference to possible consequences of the approval of Bill 5979/2001.

196. In addition, the European Communities contends that, in analyzing the contribution of the Import Ban to the realization of the ends pursued by it, the Panel erred in failing to accord any evidentiary weight to the fact that Brazilian retreaders have sought court injunctions that permit the importation of used tyres for further retreading.[364] The European Communities claims that the Panel engaged in a "wilful exclusion"[365] of evidence relating to the importation of used tyres through court injunctions, even though this evidence was relevant because it demonstrates that Brazilian retreaded tyres are produced with imported casings, and casts doubt on Brazil's position that domestic casings suitable for retreading are readily available in Brazil.[366]

197. We are not persuaded that the Panel ignored evidence relating to the importation of used tyres through court injunctions in its analysis of the contribution of the Import Ban to the realization of the ends pursued by it. The Panel acknowledged these injunctions and the arguments put forth by the European Communities in its analysis of the conflicting arguments and evidence regarding the level of retreadability of tyres in Brazil.[367] In the end, the Panel ascribed more weight to evidence adduced by Brazil suggesting that "at least some domestic used tyres are being retreaded in Brazil"[368] and that "domestic used tyres are suitable for retreading".[369] It appears to us that, in proceeding in that manner, the Panel did not exceed the bounds of its discretion as the trier of facts.

198. In the light of the above considerations, we *find* that the Panel did not fail to conduct an objective assessment of the facts of the case, as required by Article 11 of the DSU, when evaluating the contribution of the Import Ban to the achievement of its objective.

2. Article 11 of the DSU and the Panel's Examination of Possible Alternatives to the Import Ban

199. The European Communities contends that, in its analysis of possible alternatives to the Import Ban, the Panel did not make an objective assessment of the facts as required by Article 11 of the DSU. The European Communities' claim of error under Article 11 is directed at the Panel's appreciation of the evidence concerning a number of disposal methods for waste tyres suggested by the European Communities as alternatives to the Import Ban, namely, landfilling, controlled stockpiling, co-incineration, and material recycling.

200. According to the European Communities, the Panel's factual findings in relation to each of these alternatives were not based on an objective assessment, because the Panel ignored important facts and arguments submitted by the European Communities and referred to the evidence before it "in a selective and distorted manner".[370] The European Communities also charges the Panel with

[363]See *ibid.*, para. 7.138 (referring to Law No. 9.503 of 23 September 1997 (National Code of Traffic) (Exhibit BRA-102 submitted by Brazil to the Panel); and Brazil's response to Question 8 posed by the European Communities).

[367]Panel Report, para. 7.140.

[368]*Ibid.*, para. 7.136.

[369]*Ibid.*, para. 7.142.

[370]European Communities' appellant's submission, para. 247.

failing to consider one specific alternative to the Import Ban suggested by the European Communities, namely, the National Dengue Control Programme.[371]

201. Regarding the landfilling of waste tyres, the Panel reviewed the extensive evidentiary record on the risks posed by landfills of waste tyres.[372] In the course of its analysis of this evidence, the Panel noted the distinction made by the European Communities between "uncontrolled" and "controlled" landfills[373], but observed that "the evidence on the health and environmental risks posed by landfills of waste tyres does not make a clear distinction between 'uncontrolled' and the so-called 'controlled' landfills"[374], and that its assessment of that evidence indicated that "it [was] not possible to conclude that controlled landfills do not pose risks similar to those linked to other types of waste tyre landfills."[375] Therefore, contrary to the European Communities' assertion that the Panel erred in basing its findings exclusively on evidence relating to uncontrolled landfilling, the Panel's conclusion that landfilling "may pose the very risks Brazil seeks to avoid through the import ban"[376] was based on evidence that demonstrates that risks arise indistinctively from controlled and uncontrolled landfills.

202. The European Communities also suggests that the Panel erred under Article 11 in its rejection of landfilling as an alternative to the Import Ban because it did not take into account legislation allowing some landfilling of shredded tyres in Brazil. It is true that the Panel did not refer specifically to this legislation in its analysis. We note, however, that Brazil had argued that the legislation in question was exceptional, temporary, and in no way contradicted the existence or risks generally associated with landfilling.[377] A panel enjoys discretion in assessing whether a given piece of evidence is relevant for its reasoning[378], and is not required to discuss, in its report, each and every piece of evidence.[379]

203. We turn to the European Communities' argument that the Panel did not objectively assess the facts in observing that "stockpiling as such does not 'dispose of' waste tyres" and that controlled stockpiling "may still pose considerable risks to human health and the environment".[380] The Panel did not, as the European Communities contends, erroneously treat stockpiling as a "final disposal operation".[381] To the contrary, the Panel recognized that stockpiling is used only for temporary storage.[382] Moreover, the Panel's finding that stockpiling, even as an intermediate operation, carries risks of its own rested on various pieces of evidence, including a California Environmental Protection

[371] *Supra*, footnote 53.

[372] Panel Report, para. 7.183 and footnotes 1318 and 1319 thereto (referring to Exhibits BRA-1, BRA-8, BRA-38, BRA-41, BRA-45, and BRA-58 submitted by Brazil to the Panel).

[373] *Ibid.*, para. 7.184.

[374] *Ibid.*

[375] *Ibid.* In particular, we observe that the evidence relating to the risk of tyre fires and to the long-term leaching of toxic chemicals referred to in paragraph 7.183 and footnote 1318 thereto of the Panel Report does not appear to distinguish between landfilling of whole tyres and landfilling of shredded tyres.

[380] Panel Report, para. 7.188. (footnote omitted)

[381] European Communities' appellant's submission, para. 255.

[382] Panel Report, footnote 1330 to para. 7.188. The Panel referred to the *Basel Convention Technical Guidelines on the Identification and Management of Used Tyres* (1999) (Exhibit BRA-40 submitted by Brazil to the Panel), p. 12, which states, *inter alia*, that "[s]tockpiling with proper control can be used only for temporary storage before an end-of-life tyre is forwarded to a recovery operation."

Agency study that concludes, in relation to controlled stockpiling, that "[a]ll tire and rubber storage facilities should be considered high-risk storage facilities."[383]

204. Regarding co-incineration, the Panel found that "Brazil has provided sufficient evidence to demonstrate that health risks exist in relation to the incineration of waste tyres, even if such risks can be significantly reduced through strict emission standards."[384] In reaching this conclusion, the Panel relied on evidence consisting of technical studies and reports of regulatory agencies relating to activities in countries other than Brazil.[385] The Panel acted within its margin of discretion as the trier of facts in considering that evidence relating to co-incineration activities in countries other than Brazil was relevant to the question of whether co-incineration poses health risks if used in Brazil, and in relying on that evidence.

205. With respect to material recycling applications such as civil engineering, rubber asphalt, rubber products, and devulcanization, the Panel found that it is not clear that they "are entirely safe"[386], and that even if they were, material recycling applications "would not be able to dispose of a quantity of waste tyres sufficient to achieve Brazil's desired level of protection due to their prohibitive costs".[387] The European Communities contends that both of these findings lacked a proper factual foundation.

206. The Panel stated that "*it is not clear* whether some of these engineering applications are sufficiently safe."[388] It also expressed the view that "the evidence is *inconclusive* on whether rubber asphalt exposures are more hazardous than conventional asphalt exposures."[389] Furthermore, the Panel did "not find evidence showing that devulcanization or other forms of chemical or thermal transformation such as pyrolisis pose substantial health or environmental risks."[390] It is on the basis of these findings that the Panel concluded that "*it is not clear* that material recycling applications are entirely safe."[391] The Panel relied on numerous pieces of evidence to make these findings[392], and the European Communities has not demonstrated that this evidence cannot support the Panel's finding. Moreover, in finding that material recycling was not a reasonably available alternative to the Import Ban, the Panel relied mainly on the limited disposal capacity of these applications; safety considerations were not central to its reasoning.

[383] Panel Report, para. 7.189 and footnote 1331 thereto (referring to California Environmental Protection Agency (US), Integrated Waste Management Board, "Tire Pile Fires: Prevention, Response, Remediation" (2002) (Exhibit BRA-29 submitted by Brazil to the Panel)).

[384] *Ibid.*, para. 7.194.

[385] *Ibid.*, para. 7.192 and footnotes 1339-1342 thereto. In particular, the Panel referred to a report which concluded that "emissions of toxic organics ... [as a result of co-incineration of waste tyres] cannot be effectively controlled." (*Ibid.*, footnote 1339 (quoting Okopol Institut für Ökologie und Politik GmbH, "Expertise on the Environmental Risk Associated with the Co-Incineration of Wastes in the Cement Kiln 'Four E' of CBR Usine de Lixhe, Belgium" (circa 1998) (Exhibit BRA-46 submitted by Brazil to the Panel)) The Panel also pointed to evidence that demonstrated that "there is no scientific basis for [concluding] that burning waste tires in cement kilns is safe" (*ibid.* (quoting letter from Seymour I. Schwartz to the California Integrated Waste Management Board, dated 21 January 1998 (Exhibit BRA-49 submitted by Brazil to the Panel)), and that "[u]se [of waste tyres] in wet cement kilns is not an optimal environmental solution" (*ibid.* (quoting European Environment Agency, "Waste from road vehicles" (2001) (Exhibit BRA-108 submitted by Brazil to the Panel)).

[386] *Ibid.*, para. 7.208.

[387] *Ibid.*

[388] Panel Report, para. 7.202. (emphasis added)

[389] *Ibid.*, para. 7.205. (footnote omitted; emphasis added)

[390] *Ibid.*, para. 7.207.

[391] *Ibid.*, para. 7.208. (emphasis added)

[392] *Ibid.*, para. 7.202 and footnote 1359 thereto.

207. Indeed, the Panel determined that evidence adduced in relation to civil engineering[393], rubber asphalt[394], rubber products[395], and devulcanization[396] suggested that each of these applications involve high costs that would significantly limit their ability "to dispose of a quantity of waste tyres sufficient to achieve Brazil's desired level of protection".[397] The European Communities argues that the Panel erred in rejecting material recycling applications on the basis of their costs[398], suggesting that the Panel erroneously equated *high* costs with *prohibitive* costs, when only the latter would justify a finding that a given alternative is not "reasonably available". This argument is based on an artificial distinction between high and prohibitive costs. Further, in our view, this is not an issue relating to the Panel's appreciation of the evidence, but rather to its legal characterization of the facts. In any event, what disqualifies these alternatives, according to the Panel, is not their high costs as such, but the effect of these high costs in limiting the disposal capacity of these methods.

208. Finally, the European Communities claims that the Panel failed to analyze as a possible alternative measure the National Dengue Control Programme, and that this failure constitutes a violation of Article 11 of the DSU.[399] We observe that the European Communities referred to the National Dengue Control Programme in its second written submission to the Panel in support of its contention that "authorities in Brazil seem to encourage material recycling as an alternative."[400] We note further that the alternative measure identified there was material recycling, and that the National Dengue Control Programme was discussed under the subheading "Material recycling" in the European Communities' written submission merely as one example of material recycling.[401] Thus, the National Dengue Control Programme was not submitted by the European Communities as a distinct alternative measure but, rather, was presented as an illustration of material recycling, which the Panel discussed extensively.

209. Accordingly, we *find* that the Panel did not fail to conduct an objective assessment of the facts, as required by Article 11 of the DSU, in finding that the disposal methods for waste tyres suggested by the European Communities were not reasonably available alternatives to the Import Ban.

C. *General Conclusion on the Necessity Analysis under Article XX(b) of the GATT 1994*

210. At this stage, it may be useful to recapitulate our views on the issue of whether the Import Ban is necessary within the meaning of Article XX(b) of the GATT 1994. This issue illustrates the tensions that may exist between, on the one hand, international trade and, on the other hand, public health and environmental concerns arising from the handling of waste generated by a product at the end of its useful life. In this respect, the fundamental principle is the right that WTO Members have to determine the level of protection that they consider appropriate in a given context. Another key element of the analysis of the necessity of a measure under Article XX(b) is the contribution it brings to the achievement of its objective. A contribution exists when there is a genuine relationship of ends and means between the objective pursued and the measure at issue. To be characterized as necessary, a measure does not have to be indispensable. However, its contribution to the achievement of the objective must be material, not merely marginal or insignificant, especially if the measure at issue is as trade restrictive as an import ban. Thus, the contribution of the measure has to be weighed against its trade restrictiveness, taking into account the importance of the interests or the values underlying the objective pursued by it. As a key component of a comprehensive policy aiming to reduce the risks arising from the accumulation of waste tyres, the Import Ban produces such a material contribution to the realization of its objective. Like the Panel, we consider that this contribution is sufficient to conclude that the Import Ban is necessary, in the absence of reasonably available alternatives.

211. The European Communities proposed a series of alternatives to the Import Ban. Whereas the Import Ban is a preventive non-generation measure, most of the proposed alternatives are waste management and disposal measures that are remedial in character. We consider that measures to encourage domestic retreading or to improve the retreadability of tyres, a better enforcement of the import ban on used tyres, and a better implementation of existing collection and disposal schemes, are complementary to the Import Ban; indeed, they constitute mutually supportive elements of a comprehensive policy to deal with waste tyres. Therefore, these measures cannot be considered real alternatives to the Import Ban. As regards landfilling, stockpiling, co-incineration of waste tyres, and material recycling, these remedial methods carry their own risks or, because of the costs involved, are capable of disposing of only a limited number of waste tyres. The Panel did not err in concluding that the proposed measures or practices are not reasonably available alternatives.

212. Accordingly, having already found that the Panel did not breach its duty under Article 11 of the DSU, and in the light of the above considerations, we *uphold* the Panel's finding, in paragraph 7.215 of the Panel Report, that the Import Ban can be considered "necessary to protect human, animal or plant life or health."

VI. The Panel's Interpretation and Application of the Chapeau of Article XX of the GATT 1994

A. *The MERCOSUR Exemption and the Chapeau of Article XX of the GATT 1994*

213. After finding that the Import Ban was provisionally justified under Article XX(b) of the GATT 1994[402], the Panel examined whether the application of the Import Ban by Brazil satisfied the requirements of the chapeau of Article XX.

[402] Panel Report, para. 7.215.

214. The chapeau of Article XX of the GATT 1994 reads:

> Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, nothing in this Agreement shall be construed to prevent the adoption or enforcement ... of measures [of the type specified in the subsequent paragraphs of Article XX].

215. The focus of the chapeau, by its express terms, is on the application of a measure already found to be inconsistent with an obligation of the GATT 1994 but falling within one of the paragraphs of Article XX.[403] The chapeau's requirements are two-fold. First, a measure provisionally justified under one of the paragraphs of Article XX must not be applied in a manner that would constitute "arbitrary or unjustifiable discrimination" between countries where the same conditions prevail. Secondly, this measure must not be applied in a manner that would constitute "a disguised restriction on international trade". Through these requirements, the chapeau serves to ensure that Members' rights to avail themselves of exceptions are exercised in good faith to protect interests considered legitimate under Article XX, not as a means to circumvent one Member's obligations towards other WTO Members.[404]

216. Having determined that the exemption from the Import Ban of remoulded tyres originating in MERCOSUR countries resulted in discrimination in the application of the Import Ban, the Panel examined whether this discrimination was arbitrary or unjustifiable. The Panel concluded that, as of the time of its examination, the operation of the MERCOSUR exemption had not resulted in the Import Ban being applied in a manner that would constitute "arbitrary or unjustifiable discrimination", within the meaning of the chapeau of Article XX.[405] The Panel also found that the MERCOSUR exemption had not been shown "to date" to result in the Import Ban being applied in a manner that would constitute "a disguised restriction on international trade", within the meaning of the chapeau of Article XX.[406] The European Communities appeals these findings of the Panel.

1. The MERCOSUR Exemption and Arbitrary or Unjustifiable Discrimination

217. Regarding the issue of whether the MERCOSUR exemption has resulted in the Import Ban being applied in a manner that would constitute "arbitrary or unjustifiable discrimination" between countries where the same conditions prevail, the Panel noted, first, that the health impact of remoulded tyres imported from MERCOSUR countries and their European counterparts can be expected to be comparable.[407] The Panel also observed that it was only after a MERCOSUR tribunal found Brazil's ban on the importation of remoulded tyres to constitute a new restriction on trade prohibited under MERCOSUR that Brazil exempted remoulded tyres originating in MERCOSUR countries from the application of the Import Ban.[408] For the Panel, the MERCOSUR exemption "does not seem to be motivated by capricious or unpredictable reasons [as it] was adopted further to a ruling

[403]Appellate Body Report, *US – Gasoline*, p. 22, DSR 1996:I, 3, at 20; Appellate Body Report, *US – Gambling*, para. 339.

[404]Appellate Body Report, *US – Gasoline*, p. 22, DSR 1996:I, 3, at 20-21; Appellate Body Report, *US – Gambling*, para. 339.

[405]Panel Report, para. 7.289.

[406]*Ibid.*, paras. 7.354 and 7.355.

[407]Panel Report, para. 7.270.

[408]*Ibid.*, para. 7.271.

within the framework of MERCOSUR, which has binding legal effects for Brazil, as a party to MERCOSUR."[409] The Panel added that the discrimination arising from the MERCOSUR exemption was not "*a priori* unreasonable", because this discrimination arose in the context of an agreement of a type expressly recognized under Article XXIV of the GATT 1994 that "inherently provides for preferential treatment in favour of its members, thus leading to discrimination between those members and other countries."[410]

218. The European Communities argued before the Panel that Brazil was at least partially responsible for the ruling that resulted in the MERCOSUR exemption because it did not defend itself in the MERCOSUR proceedings on grounds related to human health and safety.[411] The Panel was not persuaded by this submission. Indeed, the Panel considered it would not be appropriate for it "to assess in detail the choice of arguments by Brazil in the MERCOSUR proceedings or to second-guess the outcome of the case in light of Brazil's litigation strategy in those proceedings."[412]

219. For the Panel, the MERCOSUR ruling provided a reasonable basis to enact the MERCOSUR exemption, with the implication that the resulting discrimination is not arbitrary.[413] The Panel indicated, however, that it was not suggesting that "the invocation of any international agreement would be sufficient under any circumstances, in order to justify the existence of discrimination in the application of a measure under the chapeau of Article XX."[414] The Panel acknowledged that "casings from non-MERCOSUR countries, as well as casings originally used in MERCOSUR, may be retreaded in a MERCOSUR country and exported to Brazil as originating in MERCOSUR."[415] The Panel underscored that, "[i]f such imports were to take place in such amounts that the achievement of the objective of the measure at issue would be significantly undermined, the application of the import ban in conjunction with the MERCOSUR exemption would constitute a means of unjustifiable discrimination."[416] However, as of the time of the Panel's examination, "volumes of imports of retreaded tyres under the exemption appear not to have been significant."[417] The Panel concluded that the MERCOSUR exemption has not resulted in the Import Ban being applied in a manner that would constitute arbitrary or unjustifiable discrimination.[418]

220. The European Communities claims that the Panel erred in its interpretation and application of the term "arbitrary or unjustifiable discrimination" in the chapeau of Article XX of the GATT 1994, and in finding that the MERCOSUR exemption does not constitute such discrimination. According to

[409]*Ibid.*, para. 7.272.

[410]*Ibid.*, para. 7.273.

[411]Article 50(d) of the Treaty of Montevideo provides for an exception similar to Article XX(b) of the GATT 1994. (See *infra*, footnote 443)

[412]Panel Report, para. 7.276 and footnote 1451 thereto.

[413]*Ibid.*, para. 7.281.

[414]Panel Report, para. 7.283. The Panel also considered that it was not contrary to the terms of Article XXIV:8(a) of the GATT 1994—which specifically excludes measures taken under Article XX from the requirement to liberalize "substantially all the trade" within a customs union—to take into account, as it did, "the fact that the MERCOSUR exemption was adopted as a result of Brazil's obligations under MERCOSUR." (*Ibid.*, para. 7.284)

[415]*Ibid.*, para. 7.286.

[416]*Ibid.*, para. 7.287.

[417]*Ibid.*, para. 7.288. The Panel noted that imports of retreaded tyres under the MERCOSUR exemption had increased tenfold since 2002, from 200 to 2,000 tons per year by 2004. For the Panel, "[t]hat figure remains much lower than the 14,000 tons per year imported from the European Communities alone prior to the imposition of the import ban." (*Ibid.* (referring to European Communities' first written submission to the Panel, para. 80))

[418]*Ibid.*, para. 7.289.

the European Communities, whether a measure involves arbitrary or unjustifiable discrimination can only be determined by taking into account the objective of the measure at issue, in this case, the protection of life and health from risks arising from mosquito-borne diseases and tyre fires. A measure will not be arbitrary if it "appears as reasonable, predictable and foreseeable"[419] in the light of this objective. It follows, according to the European Communities, that the Panel erred in finding that the MERCOSUR exemption did not constitute arbitrary discrimination because it was introduced in response to a ruling of a MERCOSUR arbitral tribunal. The MERCOSUR exemption does not further but may undermine the stated objective of the measure. For this reason, it must be regarded as "unreasonable, contradictory, and thus arbitrary".[420] For the European Communities, allowing a Member's obligations under other international agreements to render discrimination consistent with the chapeau of Article XX would seriously undermine the effectiveness of the chapeau. The European Communities adds that, in any event, the MERCOSUR tribunal did not oblige Brazil to discriminate between its MERCOSUR partners and other WTO Members, and that Brazil could have implemented the ruling by lifting the Import Ban for all third countries.[421]

221. With respect to the Panel's finding that unjustifiable discrimination could arise if imports under the MERCOSUR exemption were to take place in such amounts that the achievement of the objective of the Import Ban would be significantly undermined [422], the European Communities argues that the Panel applied a test that has no basis in the text of Article XX and no support in the case law of the Appellate Body or of previous panels. The European Communities also notes that "the level of imports in a given year may be subject to strong fluctuations, and for this reason ... is entirely inadequate for the purposes of assessing the compatibility of a measure with Article XX".[423]

222. Brazil, for its part, supports the Panel's finding that the MERCOSUR exemption does not result in the Import Ban being applied in a manner that constitutes "arbitrary discrimination", contrary to the chapeau of Article XX. In addition, Brazil disputes the European Communities' argument that what constitutes "arbitrary discrimination" must be determined only in relation to the objective of the Import Ban. According to Brazil, the specific contents of the measure, including its policy objectives, must be examined under the exceptions listed in the paragraphs of Article XX. The chapeau of Article XX requires panels to examine whether the measure at issue is applied reasonably, in a manner that does not result in an abusive exercise of a Member's right to pursue its policy objectives. Brazil adds, for the sake of argument, that the Panel in any event considered the objective of the Import Ban when it determined that, at the time of its examination, volumes of imports of retreaded tyres under the MERCOSUR exemption did not significantly undermine the objective of the Import Ban. Furthermore, according to Brazil, the Panel was correct in finding that the ruling of the MERCOSUR tribunal provided a rational basis for the adoption of the MERCOSUR exemption.

223. For Brazil, the operation of the MERCOSUR exemption has not resulted in the Import Ban being applied in a manner that would constitute "unjustifiable discrimination". The Panel determined how Brazil's policy objective of reducing to the maximum extent possible unnecessary generation of tyre waste was being affected by imports of retreaded tyres under the MERCOSUR exemption. The level of imports and their effect on the objective of the Import Ban were relevant, in particular, because the chapeau of Article XX focuses on the application of the measure at issue.

[422]Panel Report, para. 7.287.

[423]European Communities' appellant's submission, para. 340.

224. We begin our analysis by recalling that the function of the chapeau is the prevention of abuse of the exceptions specified in the paragraphs of Article XX.[424] In *US – Shrimp*, the Appellate Body stated that "[t]he chapeau of Article XX is, in fact, but one expression of the principle of good faith."[425] The Appellate Body added that "[o]ne application of this general principle, the application widely known as the doctrine of *abus de droit*, prohibits the abusive exercise of a state's rights and enjoins that whenever the assertion of a right 'impinges on the field covered by [a] treaty obligation, it must be exercised bona fide, that is to say, reasonably.'"[426] Accordingly, the task of interpreting and applying the chapeau is "the delicate one of locating and marking out a line of equilibrium between the right of a Member to invoke an exception under Article XX and the rights of the other Members under varying substantive provisions (e.g., Article XI) of the GATT 1994, so that neither of the competing rights will cancel out the other and thereby distort and nullify or impair the balance of rights and obligations constructed by the Members themselves in that Agreement."[427] The location of this line of equilibrium may move "as the kind and the shape of the measures at stake vary and as the facts making up specific cases differ."[428]

225. Analyzing whether discrimination is arbitrary or unjustifiable usually involves an analysis that relates primarily to the cause or the rationale of the discrimination. Thus, we observe that, in *US – Gasoline*, the Appellate Body assessed the two explanations provided by the United States for the discrimination resulting from the application of the baseline establishment rules at issue.[429] As it found them unsatisfactory, the Appellate Body concluded that the application of the baseline establishment rules resulted in arbitrary or unjustifiable discrimination.[430] In *US – Shrimp*, the Appellate Body relied on a number of factors in finding that the measure at issue resulted in arbitrary or unjustifiable discrimination. The assessment of these factors by the Appellate Body was part

[424]Appellate Body Report, *US – Gasoline*, p. 22, DSR 1996:I, 3, at 21.

[425]Appellate Body Report, *US – Shrimp*, para. 158.

[426]*Ibid.* (quoting B. Cheng, *General Principles of Law as applied by International Courts and Tribunals* (Stevens and Sons, Ltd., 1953), chap. 4, at 125).

[427]*Ibid.*, para. 159.

[428]*Ibid.*

[429]The *US – Gasoline* case involved a programme aiming to ensure that pollution from gasoline combustion did not exceed 1990 levels. Baselines for the year 1990 were set as a means for determining compliance with the programme requirements. These baselines could be either individual or statutory, depending on the nature of the entity concerned. Whereas individual baselines were available to domestic refiners, they were not to foreign refiners.

The first explanation provided by the United States for such discrimination was the impracticability of verification and enforcement of individual baselines for foreign refiners. (Appellate Body Report, *US – Gasoline*, pp. 25-26, DSR 1996:I, 3, at 23-24) Secondly, the United States explained that imposing the statutory baseline requirement on domestic refiners as well was not an option, because it was not feasible to require domestic refiners to incur the physical and financial costs and burdens entailed by immediate compliance with a statutory baseline. (*Ibid.*, p. 28, DSR 1996:I, 3, at 26-27)

[430]*Ibid.*, p. 29, DSR 1996:I, 3, at 27.

of an analysis that was directed at the cause, or the rationale, of the discrimination.[431] *US – Shrimp (Article 21.5 – Malaysia)* concerned measures taken by the United States to implement recommendations and rulings of the DSB in *US – Shrimp*. The Appellate Body's analysis of these measures under the chapeau of Article XX focused on whether discrimination that might result from the application of those measures had a legitimate cause or rationale in the light of the objectives listed in the paragraphs of Article XX.[432]

226. The Appellate Body Reports in *US – Gasoline*, *US – Shrimp*, and *US – Shrimp (Article 21.5 – Malaysia)* show that the analysis of whether the application of a measure results in arbitrary or unjustifiable discrimination should focus on the cause of the discrimination, or the rationale put forward to explain its existence. In this case, Brazil explained that it introduced the MERCOSUR exemption to comply with a ruling issued by a MERCOSUR arbitral tribunal. This ruling arose in the context of a challenge initiated by Uruguay against Brazil's import ban on remoulded tyres, on the grounds that it constituted a new restriction on trade prohibited under MERCOSUR. The MERCOSUR arbitral tribunal found Brazil's restrictions on the importation of remoulded tyres to be a violation of its obligations under MERCOSUR. These facts are undisputed.

227. We have to assess whether this explanation provided by Brazil is acceptable as a justification for discrimination between MERCOSUR countries and non-MERCOSUR countries in relation to retreaded tyres. In doing so, we are mindful of the function of the chapeau of Article XX, which is to prevent abuse of the exceptions specified in the paragraphs of that provision.[433] In our view, there is such an abuse, and, therefore, there is arbitrary or unjustifiable discrimination when a measure provisionally justified under a paragraph of Article XX is applied in a discriminatory manner "between countries where the same conditions prevail", and when the reasons given for this discrimination bear no rational connection to the objective falling within the purview of a paragraph of Article XX, or would go against that objective. The assessment of whether discrimination is arbitrary or unjustifiable should be made in the light of the objective of the measure. We note, for example, that one of the bases on which the Appellate Body relied in *US – Shrimp* for concluding that the operation of the measure at issue resulted in unjustifiable discrimination was that one particular aspect of the application of the measure (the measure implied that, in certain circumstances, shrimp caught abroad using methods identical to those employed in the United States would be

[431]These factors were: (i) the discrimination that resulted from a "rigid and unbending requirement" (Appellate Body Report, *US – Shrimp*, para. 177; see also para. 163) that countries exporting shrimp into the United States adopt a regulatory programme that is essentially the same as the United States' programme; (ii) the discrimination that resulted from the failure to take into account different conditions that may occur in the territories of other WTO Members, in particular, specific policies and measures other than those applied by the United States that might have been adopted by an exporting country for the protection and conservation of sea turtles (*ibid.*, paras. 163 and 164); (iii) the discrimination that resulted from the application of the measure was "difficult to reconcile with the declared policy objective of protecting and conserving sea turtles" (*ibid.*, para. 165), because, in some circumstances, shrimp caught abroad using methods identical to those employed in the United States would be excluded from the United States market; and (iv) the discrimination that resulted from the fact that, while the United States negotiated seriously with some WTO Members exporting shrimp into the United States for the purpose of concluding international agreements for the protection and conservation of sea turtles, it did not do so with other WTO Members (*ibid.*, paras. 166 and 172).

[432]Thus, the Appellate Body endorsed the panel's conclusion that conditioning market access on the adoption of a regulatory programme for the protection and conservation of sea turtles comparable in effectiveness—as opposed to the adoption of "essentially the same" regulatory programme—"allows for sufficient flexibility in the application of the measure so as to avoid 'arbitrary or unjustifiable discrimination'". (Appellate Body Report, *US – Shrimp (Article 21.5 – Malaysia)*, para. 144) The Appellate Body also considered that the measures adopted by the United States permitted a degree of flexibility that would enable the United States to consider the particular conditions prevailing in Malaysia, notably because it provides that, in making certification determinations, the United States authorities "shall also take fully into account other measures the harvesting nation undertakes to protect sea turtles". (*Ibid.*, para. 147)

[433]Appellate Body Report, *US – Gasoline*, p. 22, DSR 1996:I, 3, at 21.

excluded from the United States market[434]) was "difficult to reconcile with the declared objective of protecting and conserving sea turtles".[435] Accordingly, we have difficulty understanding how discrimination might be viewed as complying with the chapeau of Article XX when the alleged rationale for discriminating does not relate to the pursuit of or would go against the objective that was provisionally found to justify a measure under a paragraph of Article XX.

228. In this case, the discrimination between MERCOSUR countries and other WTO Members in the application of the Import Ban was introduced as a consequence of a ruling by a MERCOSUR tribunal. The tribunal found against Brazil because the restriction on imports of remoulded tyres was inconsistent with the prohibition of new trade restrictions under MERCOSUR law. In our view, the ruling issued by the MERCOSUR arbitral tribunal is not an acceptable rationale for the discrimination, because it bears no relationship to the legitimate objective pursued by the Import Ban that falls within the purview of Article XX(b), and even goes against this objective, to however small a degree. Accordingly, we are of the view that the MERCOSUR exemption has resulted in the Import Ban being applied in a manner that constitutes arbitrary or unjustifiable discrimination.

229. The Panel considered that the MERCOSUR exemption resulted in discrimination between MERCOSUR countries and other WTO Members, but that this discrimination would be "unjustifiable" only if imports of retreaded tyres entering into Brazil "were to take place in such amounts that the achievement of the objective of the measure at issue would be significantly undermined".[436] The Panel's interpretation implies that the determination of whether discrimination is unjustifiable depends on the quantitative impact of this discrimination on the achievement of the objective of the measure at issue. As we indicated above, analyzing whether discrimination is "unjustifiable" will usually involve an analysis that relates primarily to the cause or the rationale of the discrimination. By contrast, the Panel's interpretation of the term "unjustifiable" does not depend on the cause or rationale of the discrimination but, rather, is focused exclusively on the assessment of the *effects* of the discrimination. The Panel's approach has no support in the text of Article XX and appears to us inconsistent with the manner the Appellate Body has interpreted and applied the concept of "arbitrary or unjustifiable discrimination" in previous cases.[437]

230. Having said that, we recognize that in certain cases the effects of the discrimination may be a relevant factor, among others, for determining whether the cause or rationale of the discrimination is acceptable or defensible and, ultimately, whether the discrimination is justifiable. The effects of discrimination might be relevant, depending on the circumstances of the case, because, as we indicated above[438], the chapeau of Article XX deals with the manner of application of the measure at issue. Taking into account as a relevant factor, among others, the effects of the discrimination for determining whether the rationale of the discrimination is acceptable is, however, fundamentally different from the Panel's approach, which focused exclusively on the relationship between the effects of the discrimination and its justifiable or unjustifiable character.

[434]Appellate Body Report, *US – Shrimp*, para. 165.

[435]*Ibid.*

[436]Panel Report, para. 7.287.

[437]See *supra*, paras. 225 and 226. We also observe that the Panel's approach was based on a logic that is different in nature from that followed by the Appellate Body when it addressed the national treatment principle under Article III:4 of the GATT 1994 in *Japan – Alcoholic Beverages II*. In that case, the Appellate Body stated that Article III aims to ensure "equality of competitive conditions for imported products in relation to domestic products". (Appellate Body Report, *Japan – Alcoholic Beverages II*, p. 16, DSR 1996:I, 97, at 109) The Appellate Body added that "it is irrelevant that 'the trade effects' of the [measure at issue], as reflected in the volumes of imports, are insignificant or even non-existent". (*Ibid.*, at 110) For the Appellate Body, "Article III protects expectations not of any particular trade volume but rather of the equal competitive relationship between imported and domestic products." (*Ibid.* (footnote omitted))

[438]*Supra*, para. 215.

231. We also note that the Panel found that the discrimination resulting from the MERCOSUR exemption is not arbitrary. The Panel explained that this discrimination cannot be said to be "capricious" or "random"[439] because it was adopted further to a ruling within the framework of MERCOSUR.[440]

232. Like the Panel, we believe that Brazil's decision to act in order to comply with the MERCOSUR ruling cannot be viewed as "capricious" or "random". Acts implementing a decision of a judicial or quasi-judicial body—such as the MERCOSUR arbitral tribunal—can hardly be characterized as a decision that is "capricious" or "random". However, discrimination can result from a rational decision or behaviour, and still be "arbitrary or unjustifiable", because it is explained by a rationale that bears no relationship to the objective of a measure provisionally justified under one of the paragraphs of Article XX, or goes against that objective.[441]

233. Accordingly, we *find* that the MERCOSUR exemption has resulted in the Import Ban being applied in a manner that constitutes arbitrary or unjustifiable discrimination. Furthermore, we *reverse* the Panel's finding, in paragraph 7.287 of the Panel Report, that, under the chapeau of Article XX of the GATT 1994, discrimination would be unjustifiable only if imports of retreaded tyres entering into Brazil "were to take place in such amounts that the achievement of the objective of the measure at issue would be significantly undermined". We therefore *reverse* the Panel's findings, in paragraphs 7.288 and 7.289 of the Panel Report, that the MERCOSUR exemption has not resulted in unjustifiable discrimination. We also *reverse* the Panel's findings, in paragraphs 7.281 and 7.289 of the Panel Report, that, to the extent that the MERCOSUR exemption is not the result of "capricious" or "random" action, the Import Ban is not applied in a manner that would constitute arbitrary discrimination.

234. This being said, we observe, like the Panel[442], that, before the arbitral tribunal established under MERCOSUR, Brazil could have sought to justify the challenged Import Ban on the grounds of human, animal, and plant health under Article 50(d) of the Treaty of Montevideo.[443] Brazil, however, decided not to do so. It is not appropriate for us to second-guess Brazil's decision not to invoke Article 50(d), which serves a function similar to that of Article XX(b) of the GATT 1994. However, Article 50(d) of the Treaty of Montevideo, as well as the fact that Brazil might have raised this defence in the MERCOSUR arbitral proceedings[444], show, in our view, that the discrimination

[439]Panel Report, para. 7.281.

[440]*Ibid.*, para. 7.272.

[441]See *supra*, paras. 227 and 228.

[442]Panel Report, paras. 7.275 and 7.276.

[443]Treaty of Montevideo, Instrument Establishing the Latin American Integration Association (ALADI), done at Montevideo, August 1980 (Exhibit EC-39 submitted by the European Communities to the Panel). Article 50(d) reads as follows:

> No provision under the present Treaty shall be interpreted as precluding the adoption and observance of measures regarding:
>
> ...
>
> d. Protection of human, animal and plant life and health;

[444]See Panel Report, para. 7.275.

associated with the MERCOSUR exemption does not necessarily result from a conflict between provisions under MERCOSUR and the GATT 1994.[445]

2. The MERCOSUR Exemption and Disguised Restriction on International Trade

235. The European Communities also challenges the Panel's conclusion that the MERCOSUR exemption had not been shown to date to result in the Import Ban being applied in a manner that would constitute "a disguised restriction on international trade".[446]

236. When examining whether the Import Ban was applied in a manner that constitutes a disguised restriction on international trade, the Panel was not persuaded by the European Communities' contention that Brazil adopted the prohibition on the importation of retreaded tyres as "a disguise to conceal the pursuit of trade-restrictive objectives".[447] The Panel recalled that Brazil bans both used and retreaded tyre imports; for the Panel, such an approach "is consistent with Brazil's declared objective of reducing to the greatest extent possible the unnecessary accumulation of short-lifespan tyres"[448], and "in principle deprives Brazilian retreaders of the opportunity to source casings from abroad".[449]

237. The Panel went on to examine more specifically the European Communities' argument that "the MERCOSUR exemption results in the application of the measure in a manner that constitutes a disguised restriction on international trade, as it alters trade flows in a manner that benefits, in addition to Brazilian retreaders, retreaders from other MERCOSUR countries."[450] The Panel recalled that, under this exemption, "it is quite possible for retreaders from MERCOSUR countries benefiting from the exemption to source casings from abroad (for example from the European Communities), retread them locally, and then export the retreaded tyres to Brazil under the MERCOSUR exemption."[451] The Panel referred to the reasoning that it had developed with respect to arbitrary or unjustifiable discrimination and considered that, if imports from MERCOSUR countries were to occur in significant amounts, the Import Ban would be applied in a manner that constitutes a disguised restriction on international trade.[452] The Panel was however of the view that, as of the time of its examination, "the volume of imports of remoulded tyres that has actually taken place under the MERCOSUR exemption has not been significant."[453]

238. On appeal, the European Communities does not challenge the Panel's conclusion that the Import Ban was adopted with the intention of protecting public health and the environment. Its appeal is, instead, limited to the specific findings made by the Panel in relation to the MERCOSUR

[445]In addition, we note that Article XXIV:8(a) of the GATT 1994 exempts, where necessary, measures permitted under Article XX from the obligation to eliminate "duties and other restrictive regulations of commerce" with respect to "substantially all the trade" within a customs union. Therefore, if we assume, for the sake of argument, that MERCOSUR is consistent with Article XXIV and that the Import Ban meets the requirements of Article XX, this measure, where necessary, could be exempted by virtue of Article XXIV:8(a) from the obligation to eliminate other restrictive regulations of commerce within a customs union.

[446]Panel Report, para. 7.355.

[447]*Ibid.*, para. 7.330 (quoting Panel Report, *EC – Asbestos,* para. 8.236).

[448]*Ibid.*, para. 7.343.

[449]*Ibid.*

[450]*Ibid.*, para. 7.350.

[451]*Ibid.*, para. 7.352. (footnote omitted)

[452]*Ibid.*, para. 7.353.

[453]*Ibid.*, para. 7.354. (footnote omitted) See also *supra*, footnote 417.

exemption[454] and the imports of used tyres through court injunctions.[455] For the European Communities, the Panel addressed this question with a reasoning almost identical to that it had developed in respect of the existence of arbitrary or unjustifiable discrimination.[456] Therefore, the European Communities reasons, if the Panel's approach concerning arbitrary or unjustifiable discrimination is not endorsed by the Appellate Body, the Panel's finding that the MERCOSUR exemption has not been shown to date to result in a disguised restriction on international trade should also be reversed.[457] In response to questioning at the oral hearing, the European Communities confirmed that its claim in this regard is based on the same arguments it put forward in relation to arbitrary or unjustifiable discrimination.

239. We agree with the European Communities' observation that the reasoning developed by the Panel to reach the challenged conclusion was the same as that made in respect of arbitrary or unjustifiable discrimination. Indeed, the Panel conditioned a finding of a disguised restriction on international trade on the existence of significant imports of retreaded tyres that would undermine the achievement of the objective of the Import Ban. We explained above why we believe that the Panel erred in finding that the MERCOSUR exemption would result in arbitrary or unjustifiable discrimination only if the imports of retreaded tyres from MERCOSUR countries were to take place in such amounts that the achievement of the objective of the Import Ban would be significantly undermined.[458] As the Panel's conclusion that the MERCOSUR exemption has not resulted in a disguised restriction on international trade was based on an interpretation that we have reversed, this finding cannot stand. Therefore, we also *reverse* the Panel's findings, in paragraphs 7.354 and 7.355 of the Panel Report, that "the MERCOSUR exemption ... has not been shown to date to result in the [Import Ban] being applied in a manner that would constitute ... a disguised restriction on international trade."

B. *Imports of Used Tyres through Court Injunctions and the Chapeau of Article XX of the GATT 1994*

1. Imports of Used Tyres through Court Injunctions and Arbitrary or Unjustifiable Discrimination

240. The European Communities submits that the Panel erred in its analysis of the imports of used tyres through court injunctions under the chapeau of Article XX of the GATT 1994. We begin our analysis with the requirement in the chapeau of Article XX that the measure at issue not be applied in a manner that would result in "arbitrary or unjustifiable discrimination".

241. The Panel determined that the imports of used tyres through court injunctions resulted in discrimination in favour of domestic retreaders. This is because these imports enabled retreaded tyres to be produced in Brazil from imported casings, while retreaded tyres produced abroad using the same casings could not be imported.[459] Having done so, the Panel went on to examine whether this discrimination is arbitrary or unjustifiable.

[454]Panel Report, paras. 7.350-7.355.

[455]*Ibid.*, paras. 7.347-7.349 and 7.355. We examine this aspect of the European Communities' appeal in Section VI.B.2 of this Report.

[456]European Communities' appellant's submission, para. 366.

[457]*Ibid.*, paras. 367 and 368.

[458]*Supra*, Section VI.A.1.

[459]Panel Report, para. 7.243.

242. The Panel noted that the importation of used tyres into Brazil is prohibited, and that "used tyres have been imported into Brazil in recent years only as a result of injunctions granted by Brazilian courts in specific cases."[460] The Panel found that the discrimination resulting from the imports of used tyres through court injunctions was not the consequence of a "capricious" or "random" action, and that, to this extent, the Import Ban was not applied in a manner that would constitute arbitrary discrimination.[461]

243. The Panel recalled, however, that the contribution of the Import Ban to the achievement of its objective "is premised on imports of used tyres being prohibited".[462] For the Panel, the granting of injunctions allowing used tyres to be imported "runs directly counter to this premise, as it effectively allows the very used tyres that are prevented from entering into Brazil *after* retreading to be imported *before* retreading."[463] The Panel examined the volumes of imports of used tyres that have taken place under the court injunctions. For the Panel, the amounts of imports of used tyres that have actually taken place under the court injunctions were significant.[464] Accordingly, the Panel found that, "since used tyre imports have been taking place under the court injunctions in such amounts that the achievement of Brazil's declared objective is being significantly undermined, the measure at issue is being applied in a manner that constitutes a means of unjustifiable discrimination."[465]

244. For the European Communities, the Panel erred in finding that the imports of used tyres through court injunctions do not result in arbitrary discrimination, given that "[w]hat is arbitrary must be decided in the light of the stated objectives of the measure".[466] Because, from the point of view of the protection of human life or health, there is no difference between, on the one hand, a retreaded tyre produced in the European Communities and, on the other hand, a retreaded tyre produced in Brazil from a casing imported from the European Communities, prohibiting imported retreaded tyres while allowing the importation of used tyres through court injunctions must be regarded as constituting arbitrary discrimination.[467] Furthermore, the European Communities maintains that, as regards the issue of whether court injunctions constitute unjustifiable discrimination, the Panel adopted the same erroneous quantitative approach as it did when discussing the MERCOSUR exemption.[468] The European Communities adds that the Panel's approach engenders uncertainty for

[460]*Ibid.*, para. 7.292. (footnote omitted) The Panel also observed that Brazil has challenged these injunctions "with a certain degree of success". (*Ibid.*) For the Panel, the imports of used tyres were "the result of successful court challenges", and found their basis "in the customs authorities' need to give effect to judicial orders". (*Ibid.*) The Panel added that nothing in the evidence suggested that the decisions of the Brazilian courts granting those injunctions were capricious or unpredictable, nor does "the decision of the Brazilian administrative authorities to comply with the preliminary injunctions ... seem irrational or unpredictable". (*Ibid.*, para. 7.293)

[461]*Ibid.*, para. 7.294.

[462]*Ibid.*, para. 7.295.

[463]*Ibid.* (original emphasis)

[464]Panel Report, paras. 7.297 and 7.303. In particular, the Panel noted that, in 2005, Brazil imported approximately 10.5 million used tyres, compared to 1.4 million in 2000, the year in which the ban on imports of used and retreaded tyres was first enacted (Portaria SECEX 8/2000). The Panel also observed that the total number of retreaded tyres imported annually to Brazil, from all sources, was 2-3 million prior to the Import Ban. Thus, according to the Panel, in 2005, the imports of used tyres were approximately three times the amount of retreaded and used tyres combined that were imported annually prior to the Import Ban. (*Ibid.*, paras. 7.301 and 7.302)

[465]*Ibid.*, para. 7.306.

[466]European Communities' appellant's submission, para. 357.

[467]*Ibid.*

[468]*Ibid.*, para. 360.

the implementation of the Panel Report, because the Panel did not identify "the threshold below which the imports of used tyres would no longer be significant".[469]

245. Brazil submits that the Panel did not err in the analytical approach it adopted to determine whether imports of used tyres under court injunctions resulted in the Import Ban being applied in a manner that constituted "arbitrary or unjustifiable discrimination" under the chapeau of Article XX. For Brazil, it was appropriate for the Panel to consider the level of imports of used tyres in its determination. Brazil thus dismisses the European Communities' argument that the Panel's approach engenders uncertainty for the implementation of the Panel Report, and stresses that the monitoring of a WTO Member's compliance is an integral part of the dispute settlement system.

246. As we explained above, the analysis of whether the application of a measure results in arbitrary or unjustifiable discrimination should focus on the cause or rationale given for the discrimination.[470] For Brazil, the fact that Brazilian retreaders are able to use imported casings is the result of the decisions of the Brazilian administrative authorities to comply with court injunctions.[471] We observe that this explanation bears no relationship to the objective of the Import Ban—reducing exposure to the risks arising from the accumulation of waste tyres to the maximum extent possible. The imports of used tyres through court injunctions even go against the objective pursued by the Import Ban. As we indicated above, there is arbitrary or unjustifiable discrimination, within the meaning of the chapeau of Article XX, when a Member seeks to justify the discrimination resulting from the application of its measure by a rationale that bears no relationship to the accomplishment of the objective that falls within the purview of one of the paragraphs of Article XX, or goes against this objective. Accordingly, we *find* that the imports of used tyres through court injunctions have resulted in the Import Ban being applied in a manner that constitutes arbitrary or unjustifiable discrimination.

247. The Panel approached the question of whether the imports of used tyres through court injunctions result in unjustifiable discrimination in the same manner as it did with the MERCOSUR exemption. We explained above why we are of the view that this quantitative approach—according to which discrimination would be characterized as unjustifiable only if imports under the MERCOSUR exemption take place in such amounts that the achievement of the objective of the measure at issue would be "significantly undermined"[472]—is flawed.[473] Accordingly, we *reverse* the Panel's findings, in paragraphs 7.296 and 7.306 of the Panel Report, that the imports of used tyres through court injunctions have resulted in the Import Ban being applied in a manner that constitutes unjustifiable discrimination only to the extent that such imports have taken place in volumes that significantly undermine the achievement of the objective of the Import Ban. Furthermore, for the same reasons as those explained in paragraph 232, we *reverse* the Panel's finding, in paragraph 7.294 of the Panel Report, that the imports of used tyres under court injunctions have not resulted in arbitrary discrimination to the extent that such imports are not the result of "capricious" or "random" action.

2. Imports of Used Tyres and Disguised Restriction on International Trade

248. The Panel found that, "since imports of used tyres take place in significant amounts under court injunctions to the benefit of the domestic retreading industry, the [Import Ban] is being applied

[469] *Ibid.*, para. 363.

[472] Panel Report, para. 7.287 (as regards the MERCOSUR exemption); see also para. 7.296 (with respect to the imports of used tyres through court injunctions).

[473] *Supra*, Section VI.A.1.

in a manner that constitutes a disguised restriction on international trade."[474] The Panel reasoned that the restriction on international trade inherent in the Import Ban has operated to the benefit of domestic retreaders, because "[t]he granting of court injunctions for the importation of used tyres has ... in effect meant that ... domestic retreaders have been able to continue to benefit from the importation of used tyres as material for their own activity in significant amounts, while their competitors from non-MERCOSUR countries have been kept out of the Brazilian market."[475]

249. The European Communities submits that the Panel erred in finding that the imports of used tyres through court injunctions would have resulted in the Import Ban being applied in a manner that constitutes a disguised restriction on international trade only to the extent that these imports are taking place in such quantities that they significantly undermine the objective of the Import Ban.[476] The European Communities refers to the arguments it made regarding the existence of arbitrary or unjustifiable discrimination, and reiterates its view that the Panel's reliance on import volumes for the purpose of determining compatibility with the chapeau of Article XX of the GATT 1994 is erroneous.[477]

250. Brazil argues that the Panel correctly considered the volume of imports of used tyres as part of its determination that the Import Ban was being applied in a manner that constituted a disguised restriction on international trade, and refers to the arguments that it made before the Panel in support of this position.

251. The reasoning elaborated by the Panel to reach the challenged finding was the same as that it developed in respect of "arbitrary or unjustifiable discrimination". Indeed, the Panel conditioned a finding of a disguised restriction on international trade on the existence of imports of used tyres in amounts that would significantly undermine the achievement of the objective of the Import Ban. We explained above why we consider this reasoning of the Panel erroneous. As the challenged finding results from the same reasoning that we have found to be erroneous and have rejected, this finding of the Panel cannot stand. Accordingly, we *reverse* the Panel's finding, in paragraph 7.349 of the Panel Report, that the imports of used tyres through court injunctions have resulted in the Import Ban being applied in a manner that constitutes a disguised restriction on international trade only to the extent that these imports are taking place in such quantities that they significantly undermine the objective of the Import Ban.

252. We found that the MERCOSUR exemption and the imports of used tyres under court injunctions have resulted in the Import Ban being applied in a manner that is inconsistent with the chapeau of Article XX of the GATT 1994. In the light of these findings, we *uphold*, albeit for different reasons, the Panel's findings, in paragraphs 7.357 and 8.1(a)(i) and (ii) of the Panel Report, that the Import Ban, found by the Panel to be inconsistent with Article XI:1 of the GATT 1994, is not justified under Article XX of the GATT 1994.

VII. The European Communities' Claims that the MERCOSUR Exemption Is Inconsistent with Article I:1 and Article XIII:1 of the GATT 1994

253. Before the Panel, the European Communities made separate claims regarding the MERCOSUR exemption, namely, that the MERCOSUR exemption was inconsistent with Article I:1 and Article XIII:1 of the GATT 1994. Brazil did not contest that the MERCOSUR exemption was

[474] Panel Report, para. 7.349.

[475] *Ibid.*, para. 7.348. (footnote omitted)

[476] *Ibid.*, para. 7.349.

[477] European Communities' appellant's submission, para. 367.

prima facie inconsistent with Articles I:1 and XIII:1, but claimed that it was justified under Articles XX(d) and XXIV of the GATT 1994.

254. After noting that the MERCOSUR exemption and the Import Ban have the same legal basis, namely, Article 40 of Portaria SECEX 14/2004[478], the Panel emphasized that, under Article 11 of the DSU, "it was required to address only those issues that are necessary for the resolution of the matter between the parties."[479] The Panel recalled its earlier findings that the Import Ban was inconsistent with Article XI:1 and not justified under Article XX(b). It then decided to exercise judicial economy in respect of the European Communities' separate claims that the MERCOSUR exemption was inconsistent with Article I:1 and Article XIII:1, and not justified under Articles XX(d) or Article XXIV of the GATT 1994. According to the Panel, the MERCOSUR exemption derives from and exists only in relation to the Import Ban. The Panel reasoned that, as it had already found that the Import Ban was inconsistent with the requirements of the GATT 1994, it was unnecessary to examine the European Communities' separate claims regarding the MERCOSUR exemption.[480]

255. On appeal, the European Communities requests that we reverse the Panel's decision to exercise judicial economy in relation to its separate claims regarding the MERCOSUR exemption. The European Communities also requests us to complete the legal analysis and find that the MERCOSUR exemption is inconsistent with Articles I:1 and XIII:1, and not justified under Article XX(d) or Article XXIV of the GATT 1994. This request, however, is conditioned upon our upholding the Panel's finding that the MERCOSUR exemption does not result in the Import Ban being applied inconsistently with the requirements of the chapeau of Article XX.

256. As we have found that the MERCOSUR exemption results in the Import Ban being applied inconsistently with the chapeau of Article XX, the condition on which the European Communities' request is predicated has not been fulfilled. It is therefore not necessary for us to rule on the European Communities' conditional appeal. Accordingly, we do not examine the European Communities' conditional appeal and make no finding in relation to its separate claims that the MERCOSUR exemption is inconsistent with Article I:1 and Article XIII:1 of the GATT 1994, and not justified under Article XX(d) or Article XXIV of the GATT 1994.

257. Having said that, we observe that it might have been appropriate for the Panel to address the European Communities' separate claims that the MERCOSUR exemption was inconsistent with Article I:1 and Article XIII:1. We have previously indicated that the principle of judicial economy "allows a panel to refrain from making multiple findings that the same measure is inconsistent with various provisions when a single, or a certain number of findings of inconsistency, would suffice to resolve the dispute"[481], and it seems that the Panel assumed this to be the case in the present dispute. However, the Panel found that the MERCOSUR exemption resulted in the Import Ban being applied *consistently* with the requirements of the chapeau of Article XX. In view of this finding, we must acknowledge that we have difficulty seeing how the Panel could have been justified in not addressing the separate claims of inconsistency under Article I:1 and Article XIII:1 directed at the MERCOSUR exemption. We emphasize that panels must be mindful, when applying the principle of judicial economy, that the aim of the dispute settlement mechanism under Article 3.7 of the DSU is to secure a positive solution to the dispute. Therefore, a panel's discretion to decline to rule on different claims of inconsistency adduced in relation to the same measure is limited by its duty to make findings that

[478]See Panel Report, para. 7.453.

[479]*Ibid.*, para. 7.454 (referring to Appellate Body Report, *US – Wool Shirts and Blouses*, p. 18, DSR 1996:I, 323, at 339).

[480]*Ibid.*, para. 7.455.

[481]Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 133.

will allow the DSB to make sufficiently precise recommendations and rulings 'in order to ensure effective resolution of disputes to the benefit of all Members.'"[482]

VIII. Findings and Conclusions

258. For the reasons set out in this Report, the Appellate Body:

(a) with respect to the analysis of the necessity of the Import Ban under Article XX(b) of the GATT 1994:

(i) upholds the Panel's finding, in paragraph 7.215 of the Panel Report, that the Import Ban can be considered "necessary" within the meaning of Article XX(b) and is thus provisionally justified under that provision; and

(ii) finds that the Panel did not breach its duty under Article 11 of the DSU to make an objective assessment of the facts;

(b) with respect to the analysis under the chapeau of Article XX of the GATT 1994:

(i) reverses the Panel's findings, in paragraphs 7.287, 7.354, and 7.355 of the Panel Report, that the MERCOSUR exemption would result in the Import Ban being applied in a manner that constitutes unjustifiable discrimination and a disguised restriction on international trade only to the extent that it results in volumes of imports of retreaded tyres that would significantly undermine the achievement of the objective of the Import Ban;

(ii) reverses the Panel's findings, in paragraphs 7.281 and 7.289 of the Panel Report, that the MERCOSUR exemption has not resulted in arbitrary discrimination; also reverses the Panel's findings, in paragraphs 7.288 and 7.289 of the Panel Report, that the MERCOSUR exemption has not resulted in unjustifiable discrimination; and finds, instead, that the MERCOSUR exemption has resulted in the Import Ban being applied in a manner that constitutes arbitrary or unjustifiable discrimination within the meaning of the chapeau of Article XX;

(iii) reverses the Panel's findings, in paragraphs 7.296, 7.306, 7.349, and 7.355 of the Panel Report, that the imports of used tyres under court injunctions have resulted in the Import Ban being applied in a manner that constitutes unjustifiable discrimination and a disguised restriction on international trade only to the extent that such imports have taken place in volumes that significantly undermine the achievement of the objective of the Import Ban;

(iv) reverses the Panel's finding, in paragraph 7.294 of the Panel Report, that the imports of used tyres under court injunctions have not resulted in arbitrary discrimination; and finds, instead, that the imports of used tyres under court injunctions have resulted in the Import Ban being applied in a manner that constitutes arbitrary or unjustifiable discrimination within the meaning of the chapeau of Article XX; and

[482]Appellate Body Report, *Australia – Salmon*, para. 223.

(c) with respect to Article XX of the GATT 1994, upholds, albeit for different reasons, the Panel's findings, in paragraphs 7.357 and 8.1(a)(i) and (ii) of the Panel Report, that the Import Ban is not justified under Article XX of the GATT 1994; and

(d) with respect to the European Communities' claims that the MERCOSUR exemption is inconsistent with Article I:1 and Article XIII:1 of the GATT 1994, finds that the condition on which the European Communities' appeal is predicated is not satisfied, and therefore does not consider it.

259. The Appellate Body recommends that the DSB request Brazil to bring its measure, found in this Report, and in the Panel Report as modified by this Report, to be inconsistent with the GATT 1994, into conformity with its obligations under that Agreement.

Original: English

BRAZIL – MEASURES AFFECTING IMPORTS OF RETREADED TYRES

Notification of an Appeal by the European Communities
under Article 16.4 and Article 17 of the Understanding on Rules
and Procedures Governing the Settlement of Disputes (DSU),
and under Rule 20(1) of the *Working Procedures for Appellate Review*

The following notification, dated 3 September 2007, from the Delegation of the European Commission, is being circulated to Members.

---

1. Pursuant to Article 16.4 and Article 17 of the DSU and to Rule 20.1 of the Working Procedures for Appellate Review, the European Communities submits its Notice of Appeal on certain issues of law covered in the Report of the Panel on *Brazil – Measures Affecting Imports of Retreaded Tyres*[1] and certain legal interpretations developed by the Panel.

2. The European Communities seeks review by the Appellate Body of the following aspects of the Report of the Panel:

(a) The Panel's finding that the import ban on retreaded tyres was necessary within the meaning of Article XX(b) of the GATT. The Panel's finding and corresponding reasoning are contained in paragraphs 7.103 to 7.216 of the Panel Report. The EC appeals this finding notably because:

- in assessing the contribution of the measure to the protection of human, animal and plant life and health, the Panel merely assesses whether the ban is capable of making a potential contribution to its stated objectives. This reasoning is inconsistent with Article XX(b) of the GATT. Moreover, in reaching its conclusion regarding the potential contribution of the ban, the Panel also fails to make an objective assessment of the matter before it, including of the facts of the case, as required by Article 11 of the DSU, and effectively shifts the burden of proof to the EC;

[1] WT/DS332/R, circulated on 12 June 2007.

- in assessing the reasonably available alternative measures, the Panel wrongly excludes some of the alternatives proposed by the European Communities, on the basis that those alternatives are related to the manner in which the import ban is implemented *in practice*, that they are not necessarily readily available, that they do not avoid the waste tyres arising specifically from imported retreaded tyres, that they already exist in Brazil, or that they are individually capable of disposing only of a small number of waste tyres. Moreover, the Panel has ignored important facts and arguments presented by the European Communities, has referred to the evidence submitted by the parties in a selective and distorted manner, and has effectively shifted the burden of proof to the EC. These findings are inconsistent with Article XX(b) of the GATT and with the Panel's duty to make an objective assessment of the matter before it, including of the facts of the case, as required by Article 11 of the DSU;

- contrary to Article XX (b) of the GATT, the Panel has erred by not carrying out a process of weighing and balancing the relevant factors and elements (objective pursued, trade-restrictiveness of the measure, contribution and alternatives);

(b) the Panel's finding that the exemption, from the import ban and other challenged measures, of imports of retreaded tyres from other Mercosur countries does not constitute arbitrary or unjustifiable discrimination (paragraphs 7.270 to 7.289 of the Panel Report). This finding is inconsistent with the chapeau of Article XX of the GATT;

(c) the Panel's finding that the imports of used tyres do not constitute arbitrary discrimination and that they constitute unjustified discrimination only to the extent that they significantly undermine the objectives of the ban (paragraphs 7.292 to 7.294, 7.296 and 7.306 of the Panel Report). This finding is inconsistent with the chapeau of Article XX of the GATT;

(d) the Panel's finding that the Mercosur exemption does not constitute a disguised restriction on international trade, and that imports of used tyres would constitute a disguised restriction only to the extent that they significantly undermine the objectives of the ban (paragraphs 7.347 to 7.355 of the Panel Report). This finding is inconsistent with the chapeau of Article XX of the GATT;

(e) the Panel's decision to exercise judicial economy with respect to the European Communities' claims under Articles XIII:1 and I:1 of the GATT (paragraphs 7.453 to 7.456 and 8.2 of the Panel Report). Since the Panel found that the Mercosur exemption is not incompatible with the chapeau of Article XX GATT, a separate finding on the compatibility of this exemption with Articles XIII:1 and I:1 GATT would have been necessary to secure a positive resolution of the dispute, as required by Articles 3.3, 3.4, 3.7 and 11 of the DSU. The European Communities therefore asks the Appellate Body to find that the Mercosur exemption is incompatible with Articles XIII:1 and I:1 of the GATT, and is not justified either by Article XXIV or by Article XX(d) of the GATT.

Feliciano, Presiding Member
Ehlermann, Member
Matsushita, Member

I. Introduction: Statement of the Appeal

1. The European Communities, the United States and Canada appeal from certain issues of law and legal interpretations in the Panel Reports, *EC Measures Concerning Meat and Meat Products (Hormones)*.[1] These two Panel Reports, circulated to Members of the World Trade Organization ("WTO") on 18 August 1997, were rendered by two Panels composed of the same three persons.[2] These Panel Reports are similar, but they are not identical in every respect. The Panel in the complaint brought by the United States was established by the Dispute Settlement Body (the "DSB") on 20 May 1996. On 16 October 1996, the DSB established the Panel in the complaint brought by Canada. The European Communities and Canada agreed, on 4 November 1996, that the composition of the latter Panel would be identical to the composition of the Panel established at the request of the United States.

2. The Panel dealt with a complaint against the European Communities relating to an EC prohibition of imports of meat and meat products derived from cattle to which either the natural hormones: oestradiol-17β, progesterone or testosterone, or the synthetic hormones: trenbolone acetate, zeranol or melengestrol acetate ("MGA"), had been administered for growth promotion purposes. This import prohibition was set forth in a series of Directives of the Council of Ministers that were enacted before 1 January 1995. Those Directives were:

1. Council Directive 81/602/EEC of 31 July 1981 ("Directive 81/602")[3];
2. Council Directive 88/146/EEC of 7 March 1988 ("Directive 88/146")[4]; and
3. Council Directive 88/299/EEC of 17 May 1988 ("Directive 88/299").[5]

[1]Complaint by the United States, WT/DS26/R/USA, (the "US Panel Report") and Complaint by Canada, WT/DS48/R/CAN, (the "Canada Panel Report").

[2]As the composition of both Panels was identical, we will refer to the Panels as "the Panel".

[3]Official Journal, No. L 222, 7 August 1981, p. 32.

[4]Official Journal, No. L 70, 16 March 1988, p. 16.

[5]Official Journal, No. L 128, 21 May 1988, p. 36.

3. Directive 81/602 prohibited the administration to farm animals of substances having a hormonal action and of substances having a thyrostatic action. It also prohibited the placing on the European market of both domestically produced and imported meat and meat products derived from farm animals to which such substances had been administered. Two exceptions to this prohibition were provided for. One exception covered substances with an oestrogenic, androgenic or gestagenic action when used for therapeutic or zootechnical purposes and administered by a veterinarian or under a veterinarian's responsibility. The other exception related to three natural hormones (oestradiol - 17β, progesterone and testosterone) and two synthetic hormones (trenbolone acetate and zeranol) used for growth promotion purposes if allowed under the regulations of the Member States of the European Economic Community ("EEC"), until a detailed examination of the effects of these substances could be carried out and until the EEC could take a decision on the use of these substances for growth promotion. The sixth hormone involved in this appeal, MGA, was not included in the second exception; it was covered by the general prohibition concerning substances having a hormonal or thyrostatic action.

4. Seven years later[6], Directive 88/146 was promulgated prohibiting the administration to farm animals of the synthetic hormones: trenbolone acetate and zeranol, for any purposes, as well as the administration of the natural hormones: oestradiol - 17β, progesterone and testosterone, for growth promotion or fattening purposes. This Directive permitted Member States of the EEC to authorize, under specified conditions, the use of the three natural hormones for therapeutic and zootechnical purposes. Directive 88/146 explicitly prohibited both the intra-EEC trade and the importation from third countries of meat and meat products obtained from animals to which substances having oestrogenic, androgenic, gestagenic or thyrostatic action had been administered. Trade in meat and meat products derived from animals treated with such substances for therapeutic or zootechnical purposes was allowed only under certain conditions. Those conditions were set out in Directive 88/299.

5. Effective as of 1 July 1997, Directives 81/602, 88/146 and 88/299 were repealed and replaced with Council Directive 96/22/EC of 29 April 1996 ("Directive 96/22").[7] This Directive maintains the prohibition of the administration to farm animals of substances having a hormonal or thyrostatic action. As under the previously applicable Directives, it is prohibited to place on the market, or to import from third countries, meat and meat products from animals to which such substances, including the six hormones at issue in this dispute, were administered. This Directive also continues to allow Member States to authorize the administration, for therapeutic and zootechnical purposes, of certain substances having a hormonal or thyrostatic action. Under certain conditions, Directive 96/22 allows the placing on the market, and the importation from third countries, of meat and meat products from animals to which these substances have been administered for therapeutic and zootechnical purposes.

6. The Panel circulated its Reports to the Members of the WTO on 18 August 1997. The US Panel Report and the Canada Panel Report reached the same conclusions in paragraph 9.1:

(i) The European Communities, by maintaining sanitary measures which are not based on a risk assessment, has acted inconsistently with the

[6]It should be noted that on 31 December 1985 the Council of Ministers adopted Directive 85/649/EEC prohibiting the use in livestock farming of certain substances having a hormonal action, Official Journal, No. L 382, 31 December 1985, p. 228. This Directive prohibited the use of all the hormones (except MGA, the use of which had been previously prohibited) for growth promotion purposes and established more detailed provisions concerning authorized therapeutic uses. This Directive was challenged in the Court of Justice of the European Communities, which annulled it on procedural grounds in its Judgment of 23 February 1988, [1988] E.C.R. 855. Shortly afterwards, the European Commission submitted to the Council a proposal for a substantively identical Directive, which the Council adopted on 7 March 1988 as Directive 88/146/EEC.

[7]Official Journal, No. L 125, 23 May 1996, p. 3.

requirements contained in Article 5.1 of the Agreement on the Application of Sanitary and Phytosanitary Measures.

(ii) The European Communities, by adopting arbitrary or unjustifiable distinctions in the levels of sanitary protection it considers to be appropriate in different situations which result in discrimination or a disguised restriction on international trade, has acted inconsistently with the requirement contained in Article 5.5 of the Agreement on the Application of Sanitary and Phytosanitary Measures.

(iii) The European Communities, by maintaining sanitary measures which are not based on existing international standards without justification under Article 3.3 of the Agreement on the Application of Sanitary and Phytosanitary Measures, has acted inconsistently with the requirements of Article 3.1 of that Agreement.

In both Reports, the Panel recommended in paragraph 9.2:

... that the Dispute Settlement Body requests the European Communities to bring its measures in dispute into conformity with its obligations under the Agreement on the Application of Sanitary and Phytosanitary Measures.

7. On 24 September 1997, the European Communities notified the DSB of its decision to appeal certain issues of law covered in the Panel Reports and certain legal interpretations developed by the Panel, pursuant to paragraph 4 of Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU"), and filed two notices of appeal[8] with the Appellate Body pursuant to Rule 20 of the *Working Procedures for Appellate Review* (the "*Working Procedures*"). Pursuant to Rule 21 of the *Working Procedures*, the European Communities filed an appellant's submission on 6 October 1997. On 9 October 1997, the United States and Canada filed appellants' submissions pursuant to Rule 23(1) of the *Working Procedures*. On 20 October 1997, the United States and Canada each filed an appellee's submission pursuant to Rule 22 of the *Working Procedures* and the European Communities filed its own appellee's submission pursuant to Rule 23(3) of the *Working Procedures*. On the same day, Australia, New Zealand and Norway filed separate third participants' submissions in accordance with Rule 24 of the *Working Procedures*.

8. The oral hearing was held on 4 and 5 November 1997. The participants and third participants presented oral arguments and responded to questions put to them by the Members of the Division hearing this appeal. The participants and third participants also gave oral concluding statements.

II. Arguments of the Participants and Third Participants

A. *Claims of Error by the European Communities - Appellant*

1. Burden of Proof

9. The European Communities argues that the Panel erred in its allocation of the burden of proof in this dispute in three respects. In the view of the European Communities, the Panel erred on the issue of

[8]WT/DS26/9, 25 September 1997, and WT/DS48/7, 25 September 1997.

burden of proof under the *Agreement on the Application of Sanitary and Phytosanitary Measures* (the "*SPS Agreement*") in general; in allocating the burden of proof under Article 3.3 of the *SPS Agreement*; and in allocating the burden of proof under Article 5.1 of the *SPS Agreement*.

10. In respect of the issue of burden of proof under the *SPS Agreement* in general, the European Communities argues that the Panel erred in finding that the burden of proof under the *SPS Agreement* rests on the Member imposing a measure.[9] According to the European Communities, none of the general considerations invoked by the Panel supports the view that special rules on the burden of proof should be applied in proceedings concerning the *SPS Agreement*.

11. As to the allocation of the burden of proof under Article 3.3 of the *SPS Agreement*, the European Communities disagrees with the Panel's finding that Article 3.3 constitutes an exception to the general obligation, contained in Article 3.1, to base measures on international standards, and that the burden of proof under Article 3.3 is therefore on the responding party.[10] The European Communities argues that the *SPS Agreement* expressly recognizes that a Member has the right to choose an appropriate level of sanitary and phytosanitary protection, and that Article 3.3 lays down specific conditions governing the exercise of that right in those cases where an international standard exists. According to the European Communities, Article 3.1 does not provide a "general obligation" to be read in isolation, but presents one of three options available to a Member when an international standard exists.

12. With regard to the burden of proof under Article 5.1 of the *SPS Agreement*, the European Communities opposes the Panel's finding that Canada and the United States had met their burden of presenting a *prima facie* case of inconsistency with Article 5.1, in respect of importation of meat treated with the MGA hormone.[11] The European Communities notes that Canada and the United States stated that they had conducted risk assessments and had authorized MGA for growth promotion, but refused to provide scientific evidence and information, claiming their studies were proprietary and confidential in nature. The European Communities believes that the Panel has fundamentally erred in law by condoning the refusals by Canada and the United States to submit all studies available.

2. Standard of Review

13. The European Communities claims that the Panel erred in law[12] by not according deference to the following aspects of the EC measures: first, the decision of the European Communities to set and apply a level of sanitary protection higher than that recommended by the Codex Alimentarius (the "Codex") for the risks arising from the use for growth promotion of the hormones in dispute; second, the EC's scientific assessment and management of the risk from the hormones at issue, and third, the EC's adherence to the precautionary principle and its aversion to accepting any increased carcinogenic risk.

14. It is submitted by the European Communities that WTO panels should adopt a deferential "reasonableness" standard when reviewing a Member's decision to adopt a particular science policy or a Member's determination that a particular inference from the available data is scientifically plausible. To the European Communities, the Panel in this case imposed its own assessment of the scientific evidence.

[9]US Panel Report, paras. 8.52-8.54; Canada Panel Report, paras. 8.55-8.57.

[10]US Panel Report, para. 8.86; Canada Panel Report, para. 8.89.

[11]US Panel Report, para. 8.253; Canada Panel Report, para. 8.256.

[12]US Panel Report, paras. 8.124, 8.127, 8.133, 8.134, 8.145, 8.146, 8.194, 8.199, 8.213 and 8.255; Canada Panel Report, paras. 8.127, 8.130, 8.136, 8.137, 8.148, 8.149, 8.197, 8.202, 8.216 and 8.258.

15. The European Communities asserts that GATT 1947 panel reports rejected a *de novo* standard of review in relation to fact-finding[13], and that this approach has been maintained by panels established under the DSU.[14] It is contended that the "reasonable deference standard of review" has been given expression in the *Marrakesh Agreement Establishing the World Trade Organization*[15] (the "*WTO Agreement*") in Article 17.6 of the *Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994* (the "*Anti-Dumping Agreement*"). The European Communities considers that the principle of reasonable deference is applicable in all highly complex factual situations, including the assessment of the risks to human health arising from toxins and contaminants, and that therefore, the Panel applied an inappropriate standard of review in the present case.

3. The Precautionary Principle

16. The European Communities submits that the Panel erred in law in considering that the precautionary principle was only relevant for "provisional measures" under Article 5.7 of the *SPS Agreement*.[16] The precautionary principle is already, in the view of the European Communities, a general customary rule of international law or at least a general principle of law, the essence of which is that it applies not only in the management of a risk, but also in the assessment thereof. It is claimed that the Panel therefore erred in stating that the application of the precautionary principle "would not override the explicit wording in Articles 5.1 and 5.2 [of the *SPS Agreement*]", and in suggesting that that principle might be in conflict with those Articles. The European Communities asserts that Articles 5.1 and 5.2 and Annex A.4 of the *SPS Agreement* do not prescribe a particular type of risk assessment, but rather simply identify factors that need to be taken into account. Thus, these provisions do not prevent Members from being cautious when setting health standards in the face of conflicting scientific information and uncertainty.

4. Objective Assessment of the Facts

17. The European Communities argues that the Panel failed to make an objective assessment of the facts and therefore did not comply with its obligations under Article 11 of the DSU. The Panel, it is alleged, disregarded or distorted the evidence with regard to both the MGA and the other five hormones at issue supplied by the Panel's experts, as well as the scientific evidence presented by the European Communities. In support of this contention, the European Communities submits that the Panel has manifestly distorted the views of both Dr. Lucier[17] and Dr. André.[18] According to the European

[13]The European Communities refers to: Panel Report, *United States - Imposition of Anti-Dumping Duties on Imports of Fresh and Chilled Atlantic Salmon from Norway*, adopted 27 April 1994, ADP/87; Panel Report, *United States - Imposition of Countervailing Duties on Imports of Fresh and Chilled Atlantic Salmon from Norway*, adopted 28 April 1994, SCM/153; Panel Report, *Korea - Anti-Dumping Duties on Imports of Polyacetal Resins from the United States*, adopted 27 April 1993, BISD 40S/205; Panel Report, *United States - Measures Affecting Imports of Softwood Lumber from Canada*, adopted 27-28 October 1993, BISD 40S/358, Panel Report, *United States - Anti-Dumping Duties on Imports of Stainless Steel Plate from Sweden*, ADP/117, 24 February 1994, unadopted; Panel Report, *EC - Anti-Dumping Duties on Audio Tapes in Cassettes originating in Japan*, ADP/136, 28 April 1995, unadopted; and Panel Report, *United States - Imposition of Countervailing Duties on Certain Hot-rolled Lead and Bismuth Carbon Steel Products originating in France, Germany and the United Kingdom*, SCM/185, 15 November 1994, unadopted.

[15]Done at Marrakesh, Morocco, 15 April 1994.

[16]US Panel Report, paras. 8.157 and 8.158; Canada Panel Report, paras. 8.160 and 8.161.

[17]See, in particular, US Panel Report, footnote 331; Canada Panel Report, footnote 437.

[18]See, in particular, US Panel Report, footnote 348; Canada Panel Report, footnote 455.

Communities, contrary to what the Panel found, the evidence provided to the Panel by the majority of its own scientific experts indicated that there was a real risk of adverse effects arising from the use of the hormones at issue. It is also claimed that the Panel manifestly distorted the scientific evidence by considering that the 1995 European Communities Scientific Conference on Growth Promotion in Meat Production (the "1995 EC Conference") amounted to a risk assessment in the sense of Articles 5.1 and 5.2. The distinction made by the Panel between general studies on the health risks associated with hormones and specific studies addressing the health risks of residues in food of hormones used for growth promotion purposes was, in the view of the European Communities, devised by the Panel for the sole purpose of enabling it to conclude that the Monographs of the International Agency for Research on Cancer ("IARC")[19] are not relevant as a risk assessment in this case. This, the European Communities asserts, amounts to a distortion of relevant scientific evidence. The European Communities also alleges that the Panel violated Article 11 of the DSU by discarding several articles and opinions of individual scientists invoked by the European Communities.

18. With regard to the problems relating to the control of the correct use of the hormones, the European Communities contends that it submitted convincing specific evidence to the Panel, but that the Panel either failed to take this evidence into account or failed to summarize it properly in the Panel Report. Finally, the Panel allegedly ignored the arguments made by the European Communities as to why the situations compared by the Panel under Article 5.5 were not comparable. In rejecting the six reasons advanced by the European Communities as to why the distinction in the levels of sanitary protection between carbadox and olaquindox, on the one hand, and the hormones at issue in this dispute, on the other, is not arbitrary or unjustifiable, the European Communities argues that the Panel failed to take into account the evidence before it.

5. Temporal Application of the *SPS Agreement*

19. The European Communities states that the Panel's conclusion that the *SPS Agreement* applies to measures that were enacted before the entry into force of the *SPS Agreement* but that did not cease to exist after that date, is too sweeping.[20] According to the European Communities, the *SPS Agreement* shows a different intention in some of its provisions, at least if these provisions are interpreted in the way proposed by the Panel. Articles 5.1 to 5.5 require that certain preparatory actions and procedures be followed before a measure is adopted and obligations of this kind are exhausted once the measures under consideration are adopted. The European Communities, therefore, concludes that the *SPS Agreement* does not apply to the procedure for the elaboration of the EC measures at issue in this dispute.

6. Article 3.1

20. The European Communities submits that the Panel erred in interpreting the term "based on" in stating that Article 3.2 "equates" measures "based on" international standards with measures which "conform to" such standards.[21] The European Communities asserts that these terms differ in their meaning.

21. It is pointed out by the European Communities that Article 3 employs the term "based on" in paragraphs 1 and 3, whereas it uses the term "conform to" in paragraph 2. Also, Article 2 distinguishes between "based on" (paragraph 2) and "conform to" (paragraph 4). This differing language in consecutive paragraphs of different articles cannot be accidental.

[19]The 1987 Monographs of the IARC on the Evaluation of Carcinogenic Risks to Humans, Supplement 7 (the "1987 IARC Monographs").

[20]US Panel Report, paras. 8.25 and 8.26; Canada Panel Report, paras. 8.28 and 8.29.

[21]US Panel Report, para. 8.72; Canada Panel Report, para. 8.75.

22. To the European Communities, a measure may deviate – but not substantially – from the content of a recommendation of the Codex and still be considered as "based on" that recommendation for the purposes of Article 3.1. However, what constitutes a "substantial" deviation is not defined in the *SPS Agreement*. The submission of the European Communities is that Article 3 of the *SPS Agreement* accomplishes its object of furthering international harmonization by allowing Members to choose one of three alternative options. First, a Member may opt to conform its sanitary measures to the Codex recommendations, in accordance with Article 3.2. Second, a Member may wish merely to "base [its] sanitary ... measures on international ... recommendations", in accordance with Article 3.1, instead of conforming to such recommendations. Third, a Member may decide, in accordance with Article 3.3, to establish sanitary measures which provide a "higher level of sanitary protection" than would measures "based on" the Codex recommendations. As noted above[22], it is firm view of the European Communities that these three options are of equal standing and that Article 3.3 cannot be qualified as an exception to Article 3.1. The European Communities therefore objects to the Panel's interpretation of and conclusions concerning Article 3.1.

7. Article 3.3

23. The European Communities contends that the Panel's finding that whatever the difference might be between the two exceptions in Article 3.3, a sanitary measure can only be justified under this provision if it is consistent with the requirements contained in Article 5[23], in effect reduces the two alternative conditions in the first sentence of Article 3.3 to "mere surplusage". According to the European Communities, Article 3.3 defines the concept of the first condition ("scientific justification") in the footnote thereto without making a direct reference to Article 5, paragraphs 1 to 8, as it does with respect to the second condition ("as a consequence of choosing a higher level of protection"). The absence in the footnote to Article 3.3 of language referring to Articles 5.1-5.8 is in itself sufficient indication of the intention of the drafters to qualify the application of Article 5 in the case of the first condition. Thus, the European Communities asserts, the plain meaning and structure of Article 3.3 imply that the risk assessment requirements of Article 5 apply only if the second of these two alternative conditions is met.

8. Article 5.1

24. The European Communities contests the Panel's finding that Article 5.1 requires a Member imposing an SPS measure to submit evidence that it "took into account" a risk assessment when it enacted or maintained a measure[24], since neither the ordinary meaning of the words "based on", in context, nor the object and purpose of Article 5, suggest a "minimum procedural requirement" under Article 5.1.

25. The European Communities contends that to require concrete evidence in the preamble of the EC Directives or some other evidence that the European Communities actually considered the scientific studies in enacting or maintaining the measures at issue is unreasonable and arbitrary, and runs counter to the object and purpose of Article 5 and the *SPS Agreement*. There is no legal authority for the Panel's interpretation that risk assessment cannot be on-going and therefore no reason for restricting risk assessment to "old evidence". The European Communities asserts that there is a legitimate SPS goal of providing an opportunity for potentially affected Members to produce scientific evidence relevant to particular measures, and of ensuring consideration of that evidence by the Member adopting the SPS measure. Therefore, the European Communities submits that all parties and third parties should have the right to present "new" relevant evidence to the Panel.

[22]Para. 11 of this Report.

[23]US Panel Report, para. 8.83; Canada Panel Report, para. 8.86.

[24]US Panel Report, para. 8.113; Canada Panel Report, para. 8.116.

26. With regard to the Panel's findings on the consistency of the import prohibition with the substantive requirements of Article 5.1, the European Communities claims that the Panel erred in its interpretation of Article 5.1 in six separate respects. First, the Panel was incorrect in distinguishing between studies that specifically address the hormones for growth promotion purposes, such as the 1982 Report of the EC Scientific Veterinary Committee[25] (the "Lamming Report") and the JECFA Reports[26], and studies which relate to hormones in general, such as the 1987 IARC Monographs and articles and opinions of individual scientists referred to by the European Communities.[27] The Panel's assumption that such a distinction makes a qualitative difference in terms of risk assessment is wrong, and the distinction is arbitrary. The European Communities argues that Articles 5.1 and 5.2 neither prescribe risk assessment techniques nor specify the requirements of a risk assessment.

27. Second, the Panel's view of Article 5.1 as imposing a substantive obligation on Members to conform their SPS measures to the conclusions reflected in the JECFA Reports or the reports of other scientific committees is manifestly incorrect. The "scientific basis" of SPS measures cannot be confined to the formalized conclusions of committees called upon to review or analyze the risks a substance may pose. Those conclusions are just one of the elements to be taken into account. The "available scientific evidence", referred to in Article 5.2, includes both generally held or majority scientific views as well as minority, or dissenting, scientific opinion (often first expressed by individual scientists). The European Communities also controverts the Panel's finding that the reports of the European Parliament are "non-scientific"[28], and contends that this finding is manifestly wrong, certainly as regards the so-called Pimenta Report.[29]

28. Third, the Panel's interpretation that "based on" within the meaning of Article 5.1 means "in conformity with" is mistaken.[30] The European Communities states that reports of scientific committees frequently say practically nothing or very little on some of the factors indicated in Articles 5.1 and 5.2. To the European Communities, Article 5.1 is designed to compel Members to have some plausible scientific rationale as the "basis" for their sanitary measures, but not to conform their measures absolutely to the technical and scientific conclusions of the reports.

29. Fourth, the European Communities contends that the "most fundamental error of interpretation" of the Panel relates to the concept of risk and risk assessment.[31] "Risk" does not mean "harm" or "adverse effect". "Risk", for the purposes of the *SPS Agreement*, is the "potential" for the harm or adverse effects arising and, therefore, the mere possibility of risk arising suffices for the purposes of Articles 5.1 and 5.2. A risk evaluated to be one in a million is sufficient justification. If there is a potential for adverse effects (no matter how small), then there is, according to the European Communities, a risk. The concept of risk in the *SPS Agreement* is a qualitative, not a quantitative concept. Any identified increase in cancer (whether

quantitative or qualitative) must be sufficient to constitute a risk against which WTO Members are entitled to protect their population.

30. Fifth, the European Communities disputes the Panel's finding that the problem of control is irrelevant to risk assessment[32], as contrary to common sense and to the express language of Article 5.2 and Annex C of the *SPS Agreement* clarifies. The European Communities also points out that the condition "in accordance with good veterinary practice" is part of the content of the Codex recommendation, and that effective control is necessary to ensure that the hormones at issue are administered in accordance with good practice. Evaluation of any potential risk arising from lack of observance of good practice is an inherent part of the risk assessment exercise. Moreover, it was for the European Communities, and not for the Panel, to determine whether the control measures of an exporting Member are adequate to achieve the EC's appropriate level of sanitary protection. The Panel has disregarded the EC's arguments relating to the practical and technical difficulties that are specific to control of the hormones at issue. The European Communities also protests as an error in law the Panel's conclusion that banning the use of a substance does not necessarily offer better protection of human health than other means of merely regulating its use.

31. Finally, the European Communities submits that the Panel was manifestly wrong in finding that a risk assessment must be carried out for each individual substance.[33] Nowhere in the *SPS Agreement*, and in particular in Articles 5.1 and 5.2, is there language requiring a risk assessment "for each individual substance". In the view of the European Communities, there is nothing to prevent classes or categories of substances from being assessed together if this is scientifically justified.

9. Article 5.5

32. The European Communities argues that the Panel erred in its interpretation of Article 5.5. With respect to the first element, namely, the existence of different levels of protection in different situations, the Panel erroneously interpreted Article 5.5 in holding that situations involving the same health risk or substance are comparable situations for the purposes of Article 5.5.[34] The European Communities submits that it is inappropriate to compare the level of protection relating to hormones used for growth promotion purposes with the level of protection relating to naturally-occurring hormones. Science and the regulatory practices of Members do not treat man-made risks, such as the risks created by hormones used for growth promotion, and naturally-occurring risks, such as those arising from the presence of hormones in meat, milk, cabbage or broccoli, in the same way. The *SPS Agreement* applies only to man-made risks because the naturally-occurring hormones in meat and other foodstuffs are not "contaminants and toxins" within the meaning of the *SPS Agreement*. Furthermore, the European Communities submits that, contrary to what the Panel found[35], there is no difference, let alone a significant difference, in the EC level of protection against naturally-occurring hormones and its level of protection against added hormones. The EC measures provide for the same level of protection against naturally-occurring hormones and added hormones, namely, the risk determined by nature.

33. In respect of the second element of Article 5.5, namely, the arbitrary or unjustifiable nature of distinctions in levels of protection, the European Communities contends that the Panel has erroneously assumed that the only factors relevant to determining what is an arbitrary or unjustifiable distinction are "scientific" factors. Other factors, such as public perception of what is dangerous and of what level of risk is acceptable, and the benefit, if any, to be gained from shouldering a risk, must also be relevant. Moreover,

[32]US Panel Report, para. 8.146; Canada Panel Report, para. 8.149.

[33]US Panel Report, para. 8.257; Canada Panel Report, para. 8.260.

[34]US Panel Report, para. 8.176; Canada Panel Report, para. 8.179.

[35]US Panel Report, paras. 8.191 and 8.212; Canada Panel Report, paras. 8.194 and 8.215.

the European Communities argues that, contrary to what the Panel found[36], the distinction between the level of protection adopted in respect of the hormones at issue when used for growth promotion and the level of protection adopted with respect to carbadox and olaquindox is not arbitrary or unjustifiable.

34. As to the third element of Article 5.5, namely discrimination or a disguised restriction on international trade resulting from the distinction in the levels of protection, the European Communities objects to the Panel's finding that it was sufficient to demonstrate "the significance of the difference in levels of protection combined with the arbitrariness thereof".[37] Article 5.5 makes a resultant "discrimination or a disguised restriction on international trade" an additional element beyond arbitrary and unjustifiable distinctions in the levels of protection a Member considers appropriate. The European Communities does not consider the approach developed by the Appellate Body in *Japan - Taxes on Alcoholic Beverages*[38] ("*Japan - Alcoholic Beverages*") and invoked by the Panel in this case as appropriate for the very different problem in determining discrimination (between countries) and a disguised restriction of trade in a regulatory regime designed to protect human health.

35. Furthermore, it is argued by the European Communities that Article 5.5 must be interpreted together with Article 2.3 of the *SPS Agreement*. Accordingly, "discrimination" in Article 5.5 means "discrimination between States where identical or similar conditions prevail". The Panel ignored Article 2.3 and assumed that discrimination can be between substances, risks and levels of protection. This assumption cannot be correct since otherwise the term "discrimination" would add nothing to "arbitrary and unjustifiable distinctions", in the view of the European Communities.

36. The European Communities stresses that there is no import ban for beef as such and that the restriction applies only to non-conforming products. This is the inevitable consequence of any SPS measure, and cannot be enough to establish a "disguised restriction on international trade". The European Communities continued to import the same amount of meat after the ban as before, and the prohibition of hormones for growth promotion has no effect on the surpluses of beef. The suggestion of the Panel that the reduction of beef surpluses in the European Communities might have been a secondary motive, is, in any event, not sufficient to establish the discrimination or disguised restriction on international trade contemplated in Article 5.5. Finally, the European Communities submits that the fact that 70% of the bovine meat produced in the United States and Canada is from cattle to which hormones have been administered for growth promotion is no indication of a disguised restriction on trade.

10. Procedural Issues

37. The European Communities asserts that a number of procedural decisions taken by the Panel were unfair and require review by the Appellate Body. The European Communities objects to the Panel's view that it need consider the EC's procedural objections only where the European Communities could make a "precise claim" of prejudice.[39] The Panel should have asked itself whether its procedural decisions were consistent with the DSU, not whether the European Communities could make a precise claim of prejudice. It is asserted by the European Communities that the Panel committed a legal procedural error in refusing to accept the scientific assessments of the European Communities, declining to set up an expert review group, and proceeding to decide itself a scientific matter on which the Panel had no expertise. The Panel's decision to receive a range of opinions from individual experts[40] deprived the European

[36]US Panel Report, para. 8.238; Canada Panel Report, para. 8.241.

[37]US Panel Report, para. 8.184; Canada Panel Report, para. 8.187.

[38]Adopted 1 November 1996, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R.

[39]US Panel Report, paras. 8.14-8.15; Canada Panel Report, paras. 8.18-8.19.

[40]US Panel Report, para. 8.7; Canada Panel Report, para. 8.7.

Communities of the procedural guarantees provided for expert review groups in the DSU. By following this procedure, the Panel put itself in a position to choose freely between different scientific opinions. The European Communities contends that the selection of scientific experts by the Panel violated Articles 11, 13.2 and Appendix 4 of the DSU as well as Article 13.2 of the *SPS Agreement*. The European Communities objects to the selection of two experts on the grounds that one of them was a national of a party or third party and had links with the pharmaceutical industry, while the other was a member of the Codex/JECFA group that had produced the report on the use of hormones in animal growth promotion and was the "rapporteur" of this study. Further, according to the European Communities, these two experts lacked expertise in the field.

38. The European Communities also alleges that the Panel erred in refusing to request that Canada and the United States provide the studies on which their authorities had based their decisions to authorize the use of MGA for growth promotion. In the view of the European Communities, the Panel had a duty to carry out an objective assessment of the facts, and declining to request the complainants to produce the evidence on which they based their own domestic decisions is not compatible with this duty. Moreover, Article 18.2 of the DSU provides safeguards for the protection of confidential information. Thus, the allegedly confidential nature of the information on MGA should have been no obstacle to its production and use in the proceeding. The European Communities also asserts that the Panel based the main part of its reasoning concerning Article 5.5 of the *SPS Agreement* on a claim that the complainants had *not* made, i.e. that there was a difference of treatment between artificially-added, or exogenous, natural and synthetic hormones when used for growth promotion purposes and the naturally-present endogenous hormones in untreated meat and other foods (such as milk, cabbage, broccoli or eggs). In the view of the European Communities, not only is this "claim" wrong in law and in fact, but the Panel also violated the DSU in relying on it especially since the United States expressly protested against the Panel's use of such a "claim". The European Communities asserts that panels are not entitled to make findings going beyond what has been requested by the parties.

39. The European Communities submits further that the Panel took a number of decisions granting "extended third party rights" to Canada and the United States – and not to other third parties – that are not justified by Article 9.3, and are contrary to Articles 7.1, 7.2, 18.2 and 10.3 of the DSU as well as the terms of reference of the Panel. These decisions were: first, to give access to all of the information submitted in the United States' proceeding to Canada; second, to give access to all the information submitted in the Canadian proceeding to the United States; third, to hold a joint meeting with the scientific experts; and fourth, to invite the United States to observe and make a statement at the second substantive meeting in the proceeding initiated by Canada.

B. *Arguments by the United States - Appellee*

1. Burden of Proof

40. With regard to the allocation of the burden of proof under Article 3.3 of the *SPS Agreement*, the United States refers to the Appellate Body Report in *United States - Shirts and Blouses*[41] and argues that, like Articles XX and XI:2(c)(i) of the GATT 1994, Article 3.3 of the *SPS Agreement* is not a positive rule establishing an obligation in itself. It is in the nature of an affirmative defence, and the Panel was therefore correct in finding that the burden of proof under Article 3.3 rests on the defending party. As to the burden of proof under Article 5.1 of the *SPS Agreement*, the United States contends that the European Communities, in complaining that Canada and the United States did not provide their confidential information concerning MGA, misses the point that the Panel had to determine whether the European Communities had based its import ban on a risk assessment.

[41]Adopted 23 May 1997, WT/DS33/AB/R, pp. 14 and 16.

2. Standard of Review

41. The United States submits that the deferential "reasonableness" standard of review advocated by the European Communities is without support in the text of either the DSU or the *SPS Agreement*. The United States observes that, under Article 5.1, the Panel was called upon to determine if the EC ban was "based on" an assessment, as appropriate to the circumstances, of the risks to human health. Such a determination does not require a panel to conduct its own risk assessment or substitute its own judgement regarding risks, but only to determine if the measure is "based on" a risk assessment. Under Article 2.2, the question for a panel is not whether it would have come to a different conclusion "based on" the evidence, but rather whether the scientific evidence submitted by the Member maintaining the measure is "sufficient" as a basis for that measure. The United States believes that in this sense, the European Communities is correct in asserting that a panel is not to conduct a *de novo* review of the scientific basis of the measure.

42. The United States argues, however, that nothing in the *SPS Agreement* or the *WTO Agreement* requires a Panel to defer to the Member maintaining the SPS measure. In examining measures under the *Agreement on Textiles and Clothing* (the "ATC"), which, like the *SPS Agreement*, does not provide for a particular standard of review, two previous panels found that it would not be appropriate either to apply a *de novo* standard of review or to grant undue deference to the administrative findings of national authorities.[42] The United States cautions that the GATT panel reports cited by the European Communities, involving anti-dumping and countervailing duty disputes, do not support the existence of a deferential standard of review in the *SPS Agreement*. Those GATT panel reports involved situations where national authorities had taken anti-dumping or countervailing duty measures pursuant to detailed national legislation and procedures mandated by the *Tokyo Round Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade* (the "*Tokyo Round Anti-Dumping Code*"). According to the United States, the *Decision on Review of Article 17.6 of the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994* shows that Members have yet to decide if the standard of review set out in Article 17.6 of the *Anti-Dumping Agreement* is capable of general application. The United States asserts that the European Communities is mistaken in arguing that this standard of review applies to the *SPS Agreement*.

3. The Precautionary Principle

43. In the view of the United States, the claim of the European Communities that there is a generally-accepted principle of international law which may be referred to as the "precautionary principle" is erroneous as a matter of international law. The United States does not consider that the "precautionary principle" represents a principle of customary international law; rather, it may be characterized as an "approach" – the content of which may vary from context to context. The *SPS Agreement* does recognize a precautionary approach; indeed, Article 5.7 permits the provisional adoption of SPS measures even where the relevant scientific evidence is insufficient. Thus, the United States believes that there is no need to invoke a "precautionary principle" in order to be risk-averse since the *SPS Agreement*, by its terms, recognizes the discretion of Members to determine their own level of sanitary protection. The European Communities does not explain how "the precautionary principle" affects the requirements in the *SPS Agreement* that a measure be "based on" scientific principles and a risk assessment, and not maintained without sufficient scientific evidence. The EC's invocation of a "precautionary principle" cannot create a risk assessment where there is none, nor can a "principle" create "sufficient scientific evidence" where there is none.

[42]The United States refers to: Panel Report, *United States - Underwear*, adopted 25 February 1997, WT/DS24/R; and Panel Report, *United States - Shirts and Blouses*, adopted 23 May 1997, WT/DS33/R.

4. Objective Assessment of the Facts

44. According to the United States, the European Communities improperly requests the Appellate Body to review the Panel's factual findings to determine whether they were either "inadequate" or "not objective", and thus inconsistent with Article 11 of the DSU. The United States submits that, according to Article 17.6 of the DSU, factual findings are clearly beyond review by the Appellate Body. Furthermore, the United States contends that the European Communities has not shown either improper influence or conflict of interest that might warrant consideration of the objectivity of the Panel.

5. Temporal Application of the *SPS Agreement*

45. The United States argues that the European Communities, in claiming that Articles 5.1 to 5.5 do not apply to SPS measures adopted before the *SPS Agreement* entered into force, has misread the *SPS Agreement*. There is no support for this claim in the text, context or negotiating history of the *SPS Agreement*. If the position of the European Communities were accepted, this would, in the view of the United States, leave a gaping exception to the disciplines of the *SPS Agreement*.

6.Article 3.1

46. According to the United States, since the EC measures are not "based on" the Codex standards, even under the broad test of "based on" proposed by the European Communities, there is no need for the Appellate Body to address the alleged difference between measures "based on" international standards and measures that "conform to" international standards. The United States recognizes that Article 3 of the *SPS Agreement* uses the two different terms in Articles 3.1 and 3.2, but suggests that whether any theoretical difference between those two terms would have any meaning in practice is a question for another case.

7.Article 3.3

47. The United States believes that the European Communities is incorrect in claiming that its ban need not be "based on" a risk assessment under Article 5.1 in order to qualify under Article 3.3 as a measure for which there is a "scientific justification" for departing from an international standard. A risk assessment provides the necessary "examination and evaluation of available scientific information" required in the footnote to Article 3.3. The European Communities provides no explanation why the "relevant provisions" of the *SPS Agreement*, referred to in that footnote, do not include Article 5.1. The context of the footnote to Article 3.3 includes the definition of "risk assessment" in Annex A of the *SPS Agreement*. According to the United States, the fact that Articles 5.1 and 5.2 relate to conducting a risk assessment make it clear that these Articles are "relevant provisions" of the *SPS Agreement* for purposes of the footnote, and that any doubt regarding the applicability of Article 5.1 is removed by the last sentence of Article 3.3.

8. Article 5.1

48. The United States maintains that the Panel's finding that there is a "procedural requirement" inherent in Article 5.1 is simply a common sense reading of Article 5.1. It would be difficult to see how a measure is "based on" a risk assessment if the Member did not even know of the existence of the risk assessment or never considered the risk assessment in enacting or maintaining the measure. Furthermore, the Panel Report should not be read as imposing a rigid requirement to be satisfied only by referring to the risk assessment in the preamble to the measure. Such a reference, the United States contends, is simply one means of demonstrating that a risk assessment was taken into account.

49. The Panel was correct, according to the United States, in finding that in order that a measure may be "based on" a risk assessment, the scientific principles underlying the measure must reflect the scientific

conclusions reached by the scientists conducting the risk assessment. The United States submits that the European Communities did not, at any time during the panel proceedings, produce a risk assessment identifying any risk. In the case of the hormone MGA, it is even more obvious that the EC ban is not "based on" a risk assessment.

50. With regard to the problems of control of correct use of the hormones, the United States submits that the Panel correctly characterized the argument of the European Communities as being a general statement that there is no guarantee of 100 percent compliance with any system of laws. Such a generalized concern is not an adequate basis for the EC ban. Furthermore, there is no evidence that the control of the hormones at issue is more difficult than the control of other veterinary drugs (the use of which is allowed), or that control is more difficult under a regime where hormones are allowed for growth promotion under specific conditions than under a current regime where they are banned. During the oral hearing, the United States observed that the scientific studies indicated that the hormones are safe when used in accordance with good practice. According to the United States, these studies do not address the question of whether the hormones at issue are unsafe when not used in accordance with good practice.

51. As to whether a separate risk assessment is necessary for each particular substance, the United States submits that under Article 5.1, the European Communities must base its ban with respect to MGA on an "evaluation, as appropriate to the circumstances, of the potential for adverse effects on human health arising from the presence of residues of MGA in meat ...". The European Communities provided no such evaluation of MGA. The scientific studies that the European Communities referred to deal with a general class of compounds, and do not deal specifically with MGA.

9. Article 5.5

52. The United States supports the finding that the situation involving carbadox and the situation involving the six hormones at issue are different situations which can nonetheless be compared for the purposes of Article 5.5. To the United States, the Panel was correct in finding that the EC distinction in the levels of protection involving carbadox and the level of protection involving the hormones at issue was arbitrary and resulted in a disguised restriction on international trade. In coming to that conclusion, the Panel found that the hormones at issue, banned in the European Communities, were used for growth promotion purpose in the bovine meat sector where the European Communities wanted to limit supplies and was arguably less concerned with international competitiveness while carbadox, allowed in the European Communities, is used for growth promotion purposes in the pork meat sector where the European Communities has no domestic surpluses and where international competitiveness is a high priority. The United States claims that this issue relates to factual findings that are not reviewable by the Appellate Body.

10.Procedural Issues

53. The United States asks the Appellate Body to dismiss each of the procedural claims raised by the European Communities. The appeal by the European Communities on these issues, the United States claims, raises a threshold question as to whether, and if so, under what circumstances, the procedures employed by the Panel during the proceeding could be considered to be issues of law covered in the Panel Report or legal interpretations developed by the Panel within the meaning of Article 17.6 of the DSU. The United States asserts that the European Communities has not pointed to any textual basis for its arguments, nor to any past practice under the GATT 1947 or the *WTO Agreement*. The United States submits that, to sustain a claim that a panel's handling of procedural issues was inconsistent with the DSU, a party to a dispute must have raised objections in a timely manner during the panel proceeding, if feasible. In the view of the United States, any other response to procedural objections will weaken the authority of panels and destabilize the dispute settlement system. It would also be fundamentally unfair to permit a party to wait and see what the outcome of a panel proceeding is and make its procedural objections only when it is too

late for the panel to address them. The United States urges that the objections raised by the European Communities should be rejected to the extent that they were not first made to the Panel.

54. With respect to the EC's objection concerning the Panel's selection of experts, the United States observes that during the panel proceeding, the European Communities did not object to the participation of two experts who are not only nationals of the Member States of the European Union, but are also employed by institutions of such Member States. As to the EC's objection to the alleged links of one of the experts to the pharmaceutical industry, the United States asserts that the European Communities did not question these links at the time this expert's name was raised by the Panel, even though the European Communities expressed similar concerns at that time with regard to two other scientists proposed by the Panel.

55. Turning to the issue of whether a procedural objection should be based on a "precise claim" of prejudice, the United States believes that while a Panel clearly has the duty of following the relevant rules of the DSU and the covered agreements, a party seeking the reversal or a modification of a procedural ruling should assume the responsibility of providing concrete reasons and legal arguments justifying its objection. Otherwise, every procedural ruling of a Panel could be subject to objections posed for unspecified reasons.

56. The United States asserts that the Panel's decision to consult individual experts, instead of convening an expert review group, was consistent with the DSU and the *SPS Agreement*. The European Communities itself concedes that Article 13 of the DSU and Article 11.2 of the *SPS Agreement* are permissive, and not mandatory, provisions. The United States contends that the Panel was not required to convene an expert review group, either under the terms of Article 13 of the DSU or Article 11.2 of the *SPS Agreement*. If the Panel had convened an expert review group, the rules and procedures of Appendix 4 of the DSU would have been applicable. Since the Panel did not convene such a group, the Panel's decision not to follow the rules and procedures of Appendix 4 was completely consistent with the DSU and was within the discretion accorded to panels in their procedural decisions.

57. The United States contends that the Panel's harmonization of the two panel proceedings did not impair the rights of defence of the European Communities. The use of the same panelists for both proceedings accorded a procedural advantage to the European Communities. According to the United States, rather than having two meetings with each of the two separate Panels, the European Communities was able to have four sessions with the same Panel. The European Communities willingly agreed to have the same panelists in both proceedings.

58. With respect to the issue of extended third party rights, the United States submits that the European Communities failed to make to the Panel the detailed objections it made for the first time in its appellant's submission. There is no reason why, if one panel may grant such rights in one dispute, another panel may not also grant such rights in another dispute.[43] The United States believes that there were strong reasons to provide it with extended third party rights in the Canadian panel proceeding. The United States asserts that the European Communities is mistaken in asserting that the Panel's grant of extended third party rights gave the complainants access to documents. Both the United States and the European Communities made public their submissions and statements to the Panel in the United States' panel proceeding, and therefore Canada already had access to all these documents.

C. *Arguments by Canada - Appellee*

1. Burden of Proof

[43]The United States refers to Panel Report, *European Communities - Regime for the Importation, Sale and Distribution of Bananas*, adopted 25 September 1997, WT/DS27/R/USA ("*European Communities - Bananas*").

59. On the matter of allocation of the burden of proof under the *SPS Agreement* in general, Canada contends that the Panel adopted the reasoning provided by the Appellate Body in *United States - Shirts and Blouses*.[44] As to the allocation of the burden of proof under Article 3.3 of the *SPS Agreement*, Canada insists that the Panel's findings are correct, although it would be more accurate to hold that "... the burden of proof under Article 3.1 shifts to the defending party to show either that the measure in dispute is consistent with the obligation in Article 3.1, or to invoke the exception under 3.1 and show that it meets the conditions of that exception".[45] Should the Appellate Body reverse or modify the Panel's findings on the burden of proof, Canada submits that in any event, Canada has established a *prima facie* case of violation. With regard to the burden of proof under Article 5.1 of the *SPS Agreement*, Canada believes that it had provided sufficient evidence concerning the import ban on meat treated with MGA to establish a *prima facie* case.

2. The Precautionary Principle

60. The Panel did not take a position on whether the "precautionary principle" constituted part of the body of international law. Rather, in Canada's view, the Panel acknowledged that the "precautionary principle" was reflected in Article 5.7 of the *SPS Agreement*, and correctly held that the "precautionary principle" could not override Articles 5.1 and 5.2, or any other provision of the *SPS Agreement*. Canada also regards the issue of whether the "precautionary principle" is "built into" other provisions of the *SPS Agreement* as irrelevant in this appeal. Moreover, the European Communities has not explained what is meant by the "precautionary principle" having been "built into" other provisions of the *SPS Agreement*, and how this could in any way affect the conclusions of the Panel. The "precautionary principle" should be characterized as the "precautionary approach" because it has not yet become part of public international law. Canada considers the precautionary approach or concept as an *emerging* principle of international law, which may in the future crystallize into one of the "general principles of law recognized by civilized nations", within the meaning of Article 38(1)(c) of the *Statute of the International Court of Justice*.

3. Objective Assessment of the Facts

61. Canada submits that many of the claims made by the European Communities in its appellant's submission purport to be claims relating to errors of law but are in reality claims alleging errors of fact. The Appellate Body made it clear in its Report in *European Communities - Bananas*[46], that factual findings are, pursuant to Article 17.6 of the DSU, beyond review by the Appellate Body.

4. Temporal Application of the *SPS Agreement*

62. Canada argues that the distinction drawn by the European Communities between provisions of the *SPS Agreement* that include the terms "maintain" or "apply", and others that do not, is not sustainable. This dichotomy presented by the European Communities would mean that measures in existence on 1 January 1995 are indefinitely exempt from the disciplines of Articles 5.1 and 5.5, but it is hardly credible that the Members intended to exempt them. Other covered agreements contain specific provisions dealing with temporal issues, therefore, non-application of provisions of the *SPS Agreement*, such as Articles 5.1 and 5.5, would have been dealt with expressly in the text of the *SPS Agreement*. In any event, the EC measures at issue in this dispute include EC Directives 96/22/EC and 96/23/EC, which were adopted after the *WTO Agreement* entered into force.

[44]Adopted 23 May 1997, WT/DS33/AB/R.

[45]Canada's appellee's submission, para. 59.

[46]Adopted 25 September 1997, WT/DS27/AB/R.

5.Article 3.1

63. Canada maintains that the EC's argument that Article 3.1 does not constitute a "general obligation", but is one of three options available to Members when Codex recommendations exist, is incorrect. Article 3.1 sets out a positive obligation for Members to base their SPS measures on international standards, guidelines or recommendations. The words of Article 3.1 do not describe three "options". If the drafters of the agreement had intended such a meaning, they would have said so. Canada supports the Panel's conclusion that the terms "conform to" and "based on" are "co-extensive". Even if the Appellate Body accepts the view that "conforms to" is narrower in scope than "based on", Article 3.1 does not present a second "option", as argued by the European Communities. A measure that "conforms to" an international standard would also be "based on" that standard.

6. Article 3.3

64. The key element of the footnote to Article 3.3 is that it requires an examination and evaluation of available scientific information. Since the *SPS Agreement* defines a risk assessment as: "the *evaluation* of the potential for adverse effects on human ... health ...", the "examination and evaluation of scientific information" in the footnote to Article 3.3 refers to a risk assessment. A Member cannot, in Canada's view, determine that the relevant international standards are not sufficient to achieve its appropriate level of sanitary protection unless the Member does an evaluation of that risk (i.e. a risk assessment), taking into account available scientific evidence.

7. Article 5.1

65. Canada considers that the Panel's interpretation of Article 5.1 accords with the ordinary meaning of the words in their context. If a measure is "founded on" a risk assessment then there must be some evidence that the measure was built upon that foundation. Such a requirement would not amount to "freezing the scientific record", since the Panel made clear that it was looking for evidence that a risk assessment was taken into account when the EC measures were established *or at any later point in time*. In Canada's view, the Panel's reading of Article 5.1 is sound, and accords with the basic obligations set out in Article 2.2 that a measure must not be maintained without sufficient scientific evidence. If the scientific conclusions reflected in the EC measures do not conform with any of those reached in the risk assessments, then the scientific foundation for the measure clearly does not come from those risk assessments.

66. Canada submits that in defining what is a risk assessment, the European Communities focuses on the word "potential" to the exclusion of "evaluation". In doing so, the European Communities has stopped the process at identifying an adverse effect without carrying out the evaluation of the risk, i.e. performing a risk assessment.

67. At the oral hearing, when asked about the need for a separate risk assessment of each individual substance, Canada opined that one can use characteristics of chemical families as a starting point for exploring whether something might pose a hazard, but it is then necessary to go on and do a full evaluation of that chemical in order to determine whether it in fact poses a hazard.

8. Article 5.5

68. According to Canada, the scope of "different situations" referred to in Article 5.5 is at least as broad as the Panel found. The limited scope suggested by the European Communities conflicts with the ordinary meaning of "different situations". Canada also submits that in the light of the object and purpose of the *SPS Agreement* and the context of Article 5.5, there is no reason to limit the scope of comparison between levels of protection for human health. In Canada's view, the Panel correctly found that the European

Communities had not justified the distinctions in its purported levels of protection. The Panel did not "confine" the range of factors to be taken into consideration; the Panel considered all the arguments the European Communities had provided, but found them wanting. Canada contests the argument of the European Communities that the significance of the difference in levels of protection is no guide to the significance of trade effects. No measure could be more trade restrictive than an import ban.

9.Procedural Issues

69. Canada submits that all of the procedural rulings made by the Panel were fair to all the parties, did not result in any prejudice or injustice, and were within the Panel's jurisdiction and discretion. In particular, Canada believes that the Panel acted within its jurisdiction in making comparisons and findings with respect to the levels of protection for endogenous natural hormones, even if those precise arguments on Article 5.5 of the *SPS Agreement* were not made by Canada or the United States. Article 11 of the DSU does not limit the mandate of the Panel by compelling it to use only the arguments made by the parties. A panel is not prevented from making an objective finding that does not correspond to either party's argument.

70. Concerning the Panel's decision to consult experts in their individual capacities, rather than as an expert review group, Canada submits that the process chosen by the Panel ensured that all the views of the experts advising the Panel were brought to the Panel's attention. Far from prejudicing the European Communities, this process gave the European Communities an opportunity to elicit evidence to support its arguments from any of the Panel's experts. While Article 11.2 of the *SPS Agreement* provides that in disputes involving scientific or technical issues, a Panel should seek advice from experts chosen by the Panel in consultation with the parties to the dispute, this provision does not require the Panel to accept all expert advice without scrutiny. Canada submits that, to the contrary, the Panel had no authority to delegate its fact-finding duty to the experts in such a manner.

71. It is also submitted by Canada that the objection of the European Communities to the nationality of the experts selected to assist the Panel is without merit. Canada is unaware that the European Communities raised any such objection during the Panel's selection of experts. In Canada's view, by suggesting an expert who was a national of one of its Member States, the European Communities waived its right to object to the other scientists on the basis of their nationality. The Panel's decisions on "extended third party rights" were proper exercises of the Panel's discretion, and are not inconsistent with the DSU. The European Communities made references to materials that it had placed before the US Panel, but did not provide those materials in the Canada Panel proceeding. Thus, according to Canada, rather than prejudice the EC case, the Panel allowed all the submissions by the European Communities before the US Panel to be considered by the Canada Panel. Canada maintains that the decision of the Panel to convene a joint meeting of the experts was also within the discretion of the Panel. The European Communities has failed to demonstrate that it suffered any substantive prejudice as a result of this decision. In Canada's view, pursuant to Article 11 of the *SPS Agreement,* the Panel was entitled to seek advice from experts chosen by the Panel in consultation with the parties, but was under no obligation to convene a meeting with the experts, either severally or jointly.

D. *Claims of Error by the United States - Appellant*

1.Article 2.2

72. In its capacity as appellant, the United States submits that the Panel erred because, having made all of the findings necessary to find that the EC measure was inconsistent with Article 2.2, it did not take the final step and declare the import ban to be inconsistent with Article 2.2.[47] Article 2.2 requires the European

[47]US Panel Report, para. 8.271.

Communities to have sufficient scientific evidence to support its measure. Since the Panel methodically listed and reviewed all of the scientific evidence presented by the European Communities, and in respect of each piece of evidence made a factual finding that the evidence did not support the EC measure, the United States submits that the Panel should have come to the legal conclusion that the EC import prohibition is maintained without sufficient scientific evidence. In the view of the United States, there was no need for the Panel to determine exactly how much scientific evidence is "sufficient" for purposes of Article 2.2. The Panel found that the European Communities had presented no evidence to support its ban; "no evidence" cannot be considered to meet the threshold of "sufficient evidence".

73. In justifying why it made no finding under Article 2.2, the Panel stated that Articles 3 and 5 provide for more specific obligations than the "basic rights and obligations" set out in Article 2. According to the United States, Articles 3 and 5 of the *SPS Agreement* do not necessarily provide for more specific rights and obligations than all of the "basic rights and obligations" set out in Article 2. Neither Article 3 nor Article 5 says how much evidence is necessary to support an SPS measure. Article 2.2 establishes that quantum of evidence in requiring that measures not be maintained "without sufficient scientific evidence". The United States submits, therefore, that nothing in the text of Articles 2, 3 or 5 indicate that all of the obligations in Article 2 are subsumed under the provisions of Articles 3 and 5.

2. Article 5.6

74. It is urged by the United States that the Panel erred[48] in failing to make a finding under Article 5.6 of the *SPS Agreement*, and that the Panel's findings on Article 5.5 are sufficient to establish that the EC ban is inconsistent with Article 5.6 of the *SPS Agreement*. The United States notes that the European Communities prohibits the use of the natural hormones to promote growth, while having no limits on the residues of these exact same substances either naturally-present or used for therapeutic or zootechnical purposes. Since the European Communities accepts the residues of these naturally-occurring hormones in meat as safe, then the EC ban is, in the view of the United States, more trade restrictive than required.

75. The United States also notes that the European Communities prohibits the use of the three synthetic hormones at issue, while permitting the use of similar hormones (the three natural hormones) for therapeutic and zootechnical purposes as well as the use of carbadox, another synthetic compound, for growth promotion purposes. In the view of the United States, the European Communities has, in each instance, chosen the most trade restrictive approach (a ban on trade) with respect to the six hormones for growth promotion purposes. The United States argues that the European Communities could permit residues of these hormones used for growth promotion purposes at the same levels that it permits for other purposes and still achieve its level of protection. The fact that the European Communities permits these levels for these other purposes demonstrates that similarly treating residues from growth promotion would be reasonably available to the European Communities and would be technically and economically feasible. Permitting these levels for growth promotion purposes would also be significantly less trade restrictive than the current EC ban.

76. The Panel found that "no scientific evidence is available which concludes that an identifiable risk arises from the use of any of the hormones at issue for growth promotion purposes in accordance with good practice."[49] In the view of the United States, this finding is sufficient in itself to establish that the EC ban is inconsistent with Article 5.6. If there is no identifiable risk from the use of these hormones for growth promotion in accordance with good practice, then the EC ban cannot be necessary to achieve a level of protection from an identified risk. The ban is then, by definition, more trade restrictive than required to achieve the appropriate level of sanitary protection by the European Communities.

[48]US Panel Report, para. 8.247.

[49]US Panel Report, para. 8.134.

E. *Claims of Error by Canada - Appellant*

1. Article 5.6

77. Canada states that its appeal is designed to safeguard its right to rely on its arguments presented to the Panel with respect to Article 5.6, in the event that the Appellate Body decides to modify or reverse the Panel's findings with respect to Articles 3.1, 5.1 or 5.5 of the *SPS Agreement*. Canada asserts that the EC measures are inconsistent with Article 5.6 of the *SPS Agreement*. Canada submits that according to the wording of paragraph 5 of Annex A, Article 5.5 and the object and purpose of the *SPS Agreement*, if there is no scientific evidence of an identifiable risk, there is no basis on which to adopt a measure to achieve a level of sanitary protection under the *SPS Agreement*, except as provided in Article 5.7.

78. In Canada's view, if a Member could adopt a level of protection and implement a sanitary measure even if it did not provide scientific evidence of an identifiable risk, no effect could be given to the obligation contained in Article 5 to base measures on an assessment of risks. This approach would undermine the wording and object and purpose of the *SPS Agreement*. Canada notes that the Panel found that the European Communities had not provided any scientific evidence of an identifiable risk related to the hormones at issue when used for growth promotion purposes in accordance with good practice.[50] If there is no scientific evidence of an identifiable risk, and therefore no basis on which to adopt a measure to achieve a level of sanitary protection under the *SPS Agreement*, except for Article 5.7, then by definition, no SPS measure could be adopted that would not be more trade restrictive than required. In Canada's conclusion, applying the Panel's findings with respect to the six hormones at issue to the requirements of Article 5.6, the EC measures are more trade restrictive than required, and inconsistent with Article 5.6.

F. *Arguments by the European Communities - Appellee*

1. Article 2.2

79. The European Communities questions whether the statement of the Panel regarding Article 2.2 amounts to an issue of law covered in the Panel Report or a legal interpretation developed by the Panel in the sense of Article 17.6 of the DSU. Although the Panel declined to rule on Article 2.2 because of a legal interpretation reached by the Panel regarding the relationship between Articles 2 and 5 of the *SPS Agreement*, the refusal by the Panel to rule on Article 2.2 places this statement outside the scope of appellate review. The Panel did not address the substantive requirements of Article 2.2, and has not made the necessary findings on whether the scientific evidence submitted by the European Communities is sufficient. The European Communities agrees with the United States that nothing in the text of Articles 2, 3 and 5 of the *SPS Agreement* indicates that all of the obligations set out in Article 2 are subsumed under the provisions of Articles 3 and 5. From the factual, procedural and substantive points of view, the questions that need to be considered under Article 2.2 are different from those examined by the Panel under Articles 3.1, 5.1, 5.2 and 5.5 of the *SPS Agreement*. It appears to the European Communities that there is no "sufficient basis" in the Panel Report for the Appellate Body to rule on the claims of the United States in respect of Article 2.2. Moreover, the United States bases its claims on certain paragraphs of the Panel Report that are founded on a manifest misunderstanding or clear distortion of the facts, or inadequate reasoning by the Panel, as explained by the European Communities in its own appeal.

80. The European Communities submits that, should the Appellate Body examine the applicability of Article 2.2 of the *SPS Agreement*, it should also examine the applicability of Article 5.7, which is expressly

[50]Canada Panel Report, paras. 8.165 and 8.264.

referred to in Article 2.2. The European Communities believes that its measures are consistent with Article 2.2 of the *SPS Agreement*.

81. The European Communities observes that in its appeal, the United States does not discuss what constitutes "sufficient" scientific evidence. Since the concepts of "risk" and "risk assessment" in the *SPS Agreement* are not quantitative, but qualitative concepts, the word "sufficient" also cannot be taken to refer to the quantitative, but rather to the qualitative, aspects of the scientific evidence used by the regulatory authorities of a Member. The use of the words "scientific principles" in the same Article reinforces the view that Article 2.2 and the *SPS Agreement* in general do not require sanitary measures to be "based on" the "best" scientific evidence or the "weight" of available scientific evidence. The European Communities submits, therefore, that the real question is not whether the sanitary measure is "based on" the "best" science or the "preponderance" of science or whether there is conflicting science. Rather, the question is only whether the government maintaining a measure has a scientific basis for that measure.

2. Article 5.6

82. The European Communities also questions whether the statements of the Panel regarding Article 5.6 amount to an issue of law covered in the Panel Report or a legal interpretation developed by the Panel, for purposes of Article 17.6 of the DSU. Although the Panel's refusal to rule on Article 5.6 rests on a certain view of the Panel regarding the relationship between Articles 2 and 5 of the *SPS Agreement*, such a refusal places the matter outside the scope of appellate review. The European Communities submits that the Panel did not apply the substantive requirements of Article 5.6, and did not make the necessary factual findings that: first, the EC measures are more trade restrictive than required to achieve the EC's level of protection; secondly, there is another measure reasonably available taking into account technical and economic feasibility; and thirdly, this other measure both achieves the EC's level of sanitary protection and is significantly less trade restrictive. Finally, the European Communities argues that Canada and the United States base their claims on certain paragraphs of the Panel Report that are founded on a manifest misunderstanding or clear distortion of the facts or inadequate reasoning by the Panel, as the European Communities has explained in its appeal.

83. The European Communities is convinced that the EC measures are consistent with Article 5.6 of the *SPS Agreement*. According to the European Communities, the objective is to ensure that consumers are not exposed to any residues of hormones used for growth promotion purposes. The European Communities acknowledges that some hormones are present naturally and cannot be avoided. It also acknowledges that some hormones are administered to cattle for therapeutic and zootechnical purposes, purposes which are unavoidable and beneficial. However, the European Communities has decided that the exposure of its population to hormones above this level should be avoided, and that in particular, there should be a zero level of tolerance for hormones used for growth promotion purposes.

84. The European Communities has considered some possible alternatives to the prohibition of imports of bovine meat containing residues of hormones administered for growth promotion: first, the application of Maximum Residue Limits ("MRLs") to such meat; second, the application of some kind of control to all imports of meat to determine whether hormones had been administered for growth promotion purposes; and third, reliance on the exporters labelling their meat to indicate whether hormones had been administered for growth promotion purposes. According to the European Communities, however, none of the above alternative measures would achieve the specified level of protection.

G. *Arguments by the Third Participants*

1. Australia

85. Australia considers that the Panel erred in law in its general interpretations concerning the burden of proof under the *SPS Agreement*[51], and supports the arguments put forward by the European Communities. However, it is also contended by Australia that paragraphs 8.54 and 8.58 of the Canada Panel Report and paragraphs 8.51 and 8.55 of the US Panel Report present correct interpretations of the burden of proof and that the Panel has, in general, followed these correct interpretations in its legal reasoning and findings.

86. The conclusion reached by the Panel with regard to the temporal application of the *SPS Agreement* is also supported by Australia. However, Australia also recognizes the concerns raised by the European Communities and agrees that there is nothing in the *SPS Agreement* that could be interpreted to mean that measures already in place at the time the *SPS Agreement* came into force are necessarily inconsistent simply because the "preparatory and procedural obligations" provided in Article 5 may not have been met. On the other hand, Australia admits that nothing in the *SPS Agreement* suggests that such measures can escape application of key provisions, such as Articles 5.1 and 5.2.

87. The Panel's interpretation that the *SPS Agreement* "equates" the terms "conform to" and "based on" ignores, in Australia's view, the ordinary meaning of these terms in their context and fails to give effect to all the terms of the *SPS Agreement*. The Panel has ignored the significant fact that the *SPS Agreement* uses the expression "conform to" in both Article 3.2 and Article 2.4, i.e. in the two situations where rebuttable presumptions are established that certain measures are consistent with the *SPS Agreement* and/or the GATT 1994. Australia believes that the issue of whether a particular measure is "based on" an international standard, or "conforms to" such a standard, is something which can only be determined on a case-by-case basis.

88. The Panel failed to give effect to all the terms of the *SPS Agreement* by its treatment of the two options provided in Article 3.3. According to Australia, the Panel has ignored the differences in the wording of the two options, and their explicit identification as alternatives by the use of the word "or" in Article 3.3. This interpretation has resulted in the Panel concluding that both alternatives mean that a measure can only be justified under Article 3.3 if it meets the requirements of Article 5. In Australia's view, while a Member's determination under the first of these options must be "based on" an examination and evaluation of available scientific information "in conformity with" the relevant provisions of the *SPS Agreement*, there remains an important distinction between the two options which the Panel failed to recognize.

89. Australia also considers as erroneous the Panel's interpretation of "risk", specifically its use of the term "identifiable risk", which has no basis in the text of the *SPS Agreement*. What the Panel is required to examine under Articles 5.1 and 5.2 is whether the EC measure is "based on" a risk assessment, and not whether there was an "identifiable risk".

90. In discussing whether there is a need for a separate risk assessment for each individual substance, Australia draws particular attention to the wording of Article 5.1 providing for a risk assessment "as appropriate to the circumstances". This wording expressly recognizes that what constitutes an appropriate risk assessment may differ from case to case. In the view of Australia, the determination of whether a risk assessment is required for a particular individual substance should therefore be made on a case-by-case basis. The Panel recognized that in order to find an SPS measure inconsistent with Article 5.5 all elements of this provision need to be present[52] but the Panel, nevertheless, gave undue weight, in the view of Australia, to the significance of the distinction in the levels of protection. The Panel's reference to the

[51]US Panel Report, paras. 8.52-8.54; Canada Panel Report, paras. 8.55-8.57.

[52]US Panel Report, para. 8.174; Canada Panel Report, para. 8.177.

Appellate Body Report in *Japan - Alcoholic Beverages*[53] concerning the requirements of Article III:2 of the GATT 1994 was misleading and inappropriate.

91. Although Australia supports the view of the United States that the EC measures are inconsistent with Article 2.2 of the *SPS Agreement*, Australia does not believe there was any need for the Panel to make such a finding.

2. New Zealand

92. New Zealand refers to its third party submission to the Panel relating to Articles 2.2 and 5.6. New Zealand submits that since the Panel found that there was no scientific evidence that indicated that an identifiable risk arises from the use of any of the hormones at issue when used for growth promotion purposes in accordance with good practice, the Appellate Body should consider the applicability of Articles 2.2 and 5.6 of the *SPS Agreement* to the import ban.

3. Norway

93. Norway stresses that the *SPS Agreement* does not contain obligations to harmonize different levels of protection. The right of every Member to set its own level of protection is, according to Norway, an inherent right that has always been accepted by the GATT and now by the *WTO Agreement*. In the view of Norway, Members have a variety of options when deciding on their appropriate level of protection. They may decide to adopt a more lenient approach or a more stringent approach. Member A may decide to have a (close to) zero tolerance for deaths related to the usage of certain substances, while Member B accepts one death per million per year. This is entirely for Member A and Member B to decide. When, thereafter, each Member chooses the measure necessary to achieve its level of protection, that measure must comply with the basic obligations of Articles 2, 3 and 5 of the *SPS Agreement*. As long as the existence of a risk is established, the WTO is only concerned with the justification of the measure the Member chooses to apply to achieve the level of protection it has deemed appropriate. According to Norway, there is no requirement on that Member to come to the same conclusions concerning the evaluation of the available scientific evidence that other Members or international organizations may have reached.

94. On the issue of burden of proof, Norway argues that the Panel erred when it described Article 3.1 as the general rule, thus imposing an obligation on Members to harmonize their SPS measures. Article 3.1 clearly states that harmonization is merely an objective or option, by using the words "... on as wide a basis as possible". The "exceptions" to this objective are not limited to situations covered by Article 3.3. There are others, as can be seen from the words "... except as otherwise provided for in this Agreement, and in particular in paragraph 3". Norway submits that instead of designating one paragraph of Article 3 as a general rule and others as exceptions, the Panel should have read Article 3 within the context of Articles 2.2 and 2.3. In the view of Norway, where the SPS measure is identical for domestic and imported products, the general rule – as with all obligations – is that the complainant must present a *prima facie* case of violation. The requirement in Article 2.2 that measures be "necessary" does not alter the above. SPS measures are not exceptional measures, and the burden of proving that a measure is not necessary rests in the first instance with the complainant.

95. In respect of Article 5.5, Norway submits that it is the level of protection that is at issue, rather than the measure, which must "conform to" other parts of the *SPS Agreement*. It is for the complainant to prove that a decision on different levels of protection violates Article 5.5.

[53]Adopted 1 November 1996, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R.

III. Issues Raised in this Appeal

96. This appeal raises the following legal issues:

(a) Whether the Panel correctly allocated the burden of proof in this case;

(b) Whether the Panel applied the appropriate standard of review under the *SPS Agreement*;

(c) Whether, or to what extent, the precautionary principle is relevant in the interpretation of the *SPS Agreement*;

(d) Whether the provisions of the *SPS Agreement* apply to measures enacted before the date of entry into force of the *WTO Agreement*;

(e) Whether the Panel made an objective assessment of the facts pursuant to Article 11 of the DSU;

(f) Whether the Panel acted within the scope of its authority in its selection and use of experts, in granting additional third party rights to the United States and Canada and in making findings based on arguments not made by the parties;

(g) Whether the Panel correctly interpreted Articles 3.1 and 3.3 of the *SPS Agreement*;

(h) Whether the EC measures are "based on" a risk assessment within the meaning of Article 5.1 of the *SPS Agreement*;

(i) Whether the Panel correctly interpreted and applied Article 5.5 of the *SPS Agreement*; and

(j) Whether the Panel appropriately exercised "judicial economy" in not making findings on the consistency of the EC measures with Article 2.2 and Article 5.6 of the *SPS Agreement*.

IV. Allocating the Burden of Proof in Proceedings Under the *SPS Agreement*

97. The first general issue that we must address relates to the allocation of the burden of proof in proceedings under the *SPS Agreement*. The Panel appropriately describes this issue as one "of particular importance"[54], in view of the nature of disputes under that Agreement. Such disputes may raise multiple and complex issues of fact.

98. The Panel begins its analysis by setting out the general allocation of the burden of proof between the contending parties in any proceedings under the *SPS Agreement*. The initial burden lies on the complaining party, which must establish a *prima facie* case of inconsistency with a particular provision of the *SPS Agreement* on the part of the defending party, or more precisely, of its SPS measure or measures complained about. When that *prima facie* case is made, the burden of proof moves to the defending party, which must in turn counter or refute the claimed inconsistency. This seems straightforward enough and is in conformity with our ruling in *United States - Shirts and Blouses*[55], which the Panel invokes and which embodies a rule applicable in any adversarial proceedings.

[54]US Panel Report, para. 8.48; Canada Panel Report, para. 8.51.

[55]Adopted 23 May 1997, WT/DS33/AB/R, p. 14.

99. The Panel, however, proceeds to make a general, unqualified, interpretative ruling that the *SPS Agreement* allocates the "evidentiary burden" to the Member imposing an SPS measure. To support this general statement, which renders the Panel's reference to our own ruling in *United States - Shirts and Blouses* little more than lip-service, the Panel first points to:

> ... the wording of many of the provisions contained in [the SPS] Agreement and in particular the first three words thereof: "*Members shall ensure* that ..." (e.g. Articles 2.2, 2.3, 5.1 and 5.6 of the SPS Agreement).[56]

100. The Panel next quotes Article 5.8 of the *SPS Agreement*, while parenthetically noting that this Article "relates more to transparency than to any requirement of legal justification".[57] Article 5.8 provides:

> When a Member has reason to believe that a specific sanitary or phytosanitary measure introduced or maintained by another Member is constraining, or has the potential to constrain, its exports and the measure is not based on the relevant international standards, guidelines or recommendations, or such standards, guidelines or recommendations do not exist, an explanation of the reasons for such sanitary or phytosanitary measure may be requested and shall be provided by the Member maintaining the measure.

101. Lastly, the Panel seeks support for its general interpretative ruling in Article 3.2 of the *SPS Agreement*, which establishes a presumption of consistency with relevant provisions of that Agreement and of the GATT 1994 for measures that conform to international standards, guidelines and recommendations. From this presumption, the Panel extracts a reverse inference that if a measure does *not* conform to international standards, the Member imposing such a measure must bear the burden of proof in any complaint of inconsistency with a provision of the *SPS Agreement*.[58]

102. We find the general interpretative ruling of the Panel to be bereft of basis in the *SPS Agreement* and must, accordingly, reverse that ruling. It does not appear to us that there is any necessary (i.e. logical) or other connection between the undertaking of Members to ensure, for example, that SPS measures are "applied only to the extent necessary to protect human, animal or plant life or health ..."[59], and the allocation of burden of proof in a dispute settlement proceeding. Article 5.8 of the *SPS Agreement* does not purport to address burden of proof problems; it does not deal with a dispute settlement situation. To the contrary, a Member seeking to exercise its right to receive information under Article 5.8 would, most likely, be in a pre-dispute situation, and the information or explanation it receives may well make it possible for that Member to proceed to dispute settlement proceedings and to carry the burden of proving on a *prima facie* basis that the measure involved is not consistent with the *SPS Agreement*. The Panel's last reason involves, quite simply, a *non-sequitur*. The converse or *a contrario* presumption created by the Panel does not arise. The presumption of consistency with relevant provisions of the *SPS Agreement* that arises under Article 3.2 in respect of measures that conform to international standards may well be an *incentive* for Members so to conform their SPS measures with such standards. It is clear, however, that a decision of a Member not to conform a particular measure with an international standard does not authorize imposition of a special or generalized burden of proof upon that Member, which may, more often than not, amount to a *penalty*.

[56]US Panel Report, para. 8.52; Canada Panel Report, para. 8.55.

[57]US Panel Report, para. 8.53; Canada Panel Report, para. 8.56.

[58]US Panel Report, para. 8.54; Canada Panel Report, para. 8.57.

[59]*SPS Agreement*, Article 2.2.

103. In initiating its discussion on the requirements of Articles 3.1 and 3.3 of the *SPS Agreement*, the Panel turns once more to allocating the burden of proof between the complaining parties and the defending party. The Panel states:

> One purpose of the SPS Agreement, as explicitly recognized in the preamble, is to promote the use of international standards, guidelines and recommendations. To that end, Article 3.1 imposes an obligation on all Members to base their sanitary measures on international standards except as otherwise provided for in the SPS Agreement, and in particular in Article 3.3 thereof. In this sense, Article 3.3 provides an *exception* to the general obligation contained in Article 3.1. Article 3.2, in turn, specifies that the complaining party has the burden of overcoming a presumption of consistency with the SPS Agreement in the case of a measure based on international standards. It thereby suggests by implication that when a measure is not so based, the burden is on the respondent to show that the measure is justified under the exceptions provided for in Article 3.3.
>
> We find, therefore, that once the complaining party provides a *prima facie* case (i) that there is an international standard with respect to the measure in dispute, and (ii) that the measure in dispute is *not* based on this standard, the burden of proof under Article 3.3 shifts to the defending party.[60] (underlining added)

104. The Panel relies on two interpretative points in reaching its above finding. First, the Panel posits the existence of a "general rule - exception" relationship between Article 3.1 (the general obligation) and Article 3.3 (an exception)[61] and applies to the *SPS Agreement* what it calls "established practice under GATT 1947 and GATT 1994" to the effect that the burden of justifying a measure under Article XX of the GATT 1994 rests on the defending party.[62] It appears to us that the Panel has misconceived the relationship between Articles 3.1, 3.2 and 3.3, a relationship discussed below[63], which is qualitatively different from the relationship between, for instance, Articles I or III and Article XX of the GATT 1994. Article 3.1 of the *SPS Agreement* simply excludes from its scope of application the kinds of situations covered by Article 3.3 of that Agreement, that is, where a Member has projected for itself a higher level of sanitary protection than would be achieved by a measure based on an international standard. Article 3.3 recognizes the autonomous right of a Member to establish such higher level of protection, provided that that Member complies with certain requirements in promulgating SPS measures to achieve that level. The general rule in a dispute settlement proceeding requiring a complaining party to establish a *prima facie* case of inconsistency with a provision of the *SPS Agreement* before the burden of showing consistency with that provision is taken on by the defending party, is *not* avoided by simply describing that same provision as an "exception". In much the same way, merely characterizing a treaty provision as an "exception" does not by itself justify a "stricter" or "narrower" interpretation of that provision than would be warranted by examination of the ordinary meaning of the actual treaty words, viewed in context and in the light of the treaty's object and purpose, or, in other words, by applying the normal rules of treaty interpretation. It is also well to remember that a *prima facie* case is one which, in the absence of effective refutation by the

[60]US Panel Report, paras. 8.86 and 8.87; Canada Panel Report, paras. 8.89 and 8.90.

[61]US Panel Report, para. 8.86; Canada Panel Report, para. 8.89.

[62]US Panel Report, footnote 288; Canada Panel Report, footnote 393.

[63]Paras. 169-172 of this Report.

defending party, requires a panel, as a matter of law, to rule in favour of the complaining party presenting the *prima facie* case.[64]

105. Secondly, the Panel relies upon the reverse presumption or implication it discovered in Article 3.2 of the *SPS Agreement*. As already noted, we have been unable to find any basis for that implication or presumption.[65]

106. We believe, therefore, and so hold that the Panel erred in law both in its two interpretative points and its finding set out in paragraphs 8.86 and 8.87 of the US Panel Report and paragraphs 8.89 and 8.90 of the Canada Panel Report (quoted above).[66]

107. The legal interpretations developed and the findings set out above by the Panel appear to have been applied, *inter alia*, in the following paragraphs that have also been appealed by the European Communities:

> We recall the conclusions we reached above on burden of proof, in particular that the European Communities has, with respect to its measures which deviate from international standards, the burden of proving the existence of a risk assessment (and, derived therefrom, an identifiable risk) on which the EC measures in dispute are based. It is not, in this dispute, for the United States to prove that there is *no* risk.[67]
>
> ...
>
> We finally recall our findings reached above on the specific burden of proof under Article 3.3. In particular, we found that the burden of proving that the requirements imposed by Article 3.3 (*inter alia*, consistency with Article 5) are met, in order to justify a sanitary measure which deviates from an international standard, rests with the Member imposing that measure. Since the EC measures examined in this section (relating to all hormones in dispute other than MGA) are not based on existing international standards and need to be justified under the exceptions provided for in Article 3.3, the European Communities bears the burden of proving that the determination and application of its level of protection is consistent with Articles 5.4 to 5.6.[68]

108. To the extent that the Panel[69] purports to absolve the United States and Canada from the necessity of establishing a *prima facie* case showing the absence of the risk assessment required by Article 5.1, and the failure of the European Communities to comply with the requirements of Article 3.3, and to impose upon the European Communities the burden of proving the existence of such risk assessment and the consistency of its measures with Articles 5.4, 5.5 and 5.6 *without regard to whether or not the complaining parties had already established their prima facie case*, we consider and so hold that the Panel once more erred in law.

[64]Appellate Body Report, *United States - Shirts and Blouses*, adopted 23 May 1997, WT/DS33/AB/R, p. 14.

[65]Para. 102 of this Report.

[66]See para. 103 of this Report.

[67]US Panel Report, para. 8.151; Canada Panel Report, para. 8.154.

[68]US Panel Report, para. 8.165; Canada Panel Report, para. 8.168.

[69]US Panel Report, paras. 8.151 and 8.165; Canada Panel Report, paras. 8.154 and 8.168.

109. In accordance with our ruling in *United States - Shirts and Blouses*[70], the Panel should have begun the analysis of each legal provision by examining whether the United States and Canada had presented evidence and legal arguments sufficient to demonstrate that the EC measures were inconsistent with the obligations assumed by the European Communities under each Article of the *SPS Agreement* addressed by the Panel, i.e., Articles 3.1, 3.3, 5.1 and 5.5. Only after such a *prima facie* determination had been made by the Panel may the onus be shifted to the European Communities to bring forward evidence and arguments to disprove the complaining party's claim.[71]

V. The Standard of Review Applicable in Proceedings Under the *SPS Agreement*

110. The European Communities appeals from certain findings of the Panel[72] upon the ground that the Panel failed to apply an appropriate standard of review in assessing certain acts of, and scientific evidentiary material submitted by, the European Communities.[73] The European Communities claimed, more specifically, that:

> ... the panel erred in law in not according deference to the following elements of the EC measures:
>
> -the EC's decision to set and apply a level of sanitary protection higher than that recommended by Codex Alimentarius for the risks arising from the use of these hormones for growth promotion;
>
> -the EC's scientific assessment and management of the risk from the hormones at issue; and
>
> -the EC's adherence to the precautionary principle and its aversion to accepting any increased carcinogenic risk.
>
> The panel also erred in law because it:
>
> -assigned a high probative value to the scientific views presented by some of the five scientific experts chosen by it (and to the views of the technical expert appointed by Codex Alimentarius);
>
> -disregarded in effect or distorted the scientific evidence presented by the EC and its scientific advisors, and systematically considered the scientific views of the panel-appointed experts or even a minority of those experts, of higher probative value than the scientific evidence presented by the EC scientists;

[70]Adopted 23 May 1997, WT/DS33/AB/R, pp. 14-16.

[71]Our finding that the Panel erred in allocating the burden of proof generally to the Member imposing the measure, however, does not deal with the quite separate issue of whether the United States and Canada actually made a *prima facie* case of violation of each of the following Articles of the *SPS Agreement:* 3.1, 3.3, 5.1 and 5.5. See in this respect, footnote 180 of this Report.

[72]US Panel Report, paras. 8.124, 8.127, 8.133, 8.134, 8.145, 8.146, 8.194, 8.199, 8.213 and 8.255; Canada Panel Report, paras. 8.127, 8.130, 8.136, 8.137, 8.148, 8.149, 8.197, 8.202, 8.216 and 8.258.

[73]EC's appellant's submission, para. 140.

-based its legal interpretations and findings on a number of critical issues on the majority of scientific views presented by its own appointed experts, instead of limiting itself to examining whether the scientific evidence presented by the EC was based on "*scientific principles*" (as required by Article 2:2 [of the *SPS Agreement*]).[74]

111. In the view of the European Communities, the principal alternative approaches to the problem of formulating the "proper standard of review" so far as panels are concerned are two-fold. The first is designated as "*de novo* review". This standard of review would allow a panel complete freedom to come to a different view than the competent authority of the Member whose act or determination is being reviewed. A panel would have to "verify whether the determination by the national authority was _correct' both factually and procedurally".[75] The second is described as "deference". Under a "deference" standard, a panel, in the submission of the European Communities, should not seek to redo the investigation conducted by the national authority but instead examine whether the "procedure" required by the relevant WTO rules had been followed.[76]

112. Clearly referring only to an appropriate standard of review of *factual* determinations by the domestic authorities of a Member, the European Communities submits that the principle of deference has been embodied in Article 17.6(i) of the *Anti-Dumping Agreement*, which reads as follows:

17.6 In examining the matter referred to in paragraph 5:

(i)in its assessment of the facts of the matter, the panel shall determine whether the authorities' establishment of the facts was proper and whether their evaluation of those facts was unbiased and objective. If the establishment of the facts was proper and the evaluation was unbiased and objective, even though the panel might have reached a different conclusion, the evaluation shall not be overturned;

113. The European Communities further urges that the above-quoted standard, which it describes as a "deferential _reasonableness' standard"[77] is applicable in "all highly complex factual situations, including the assessment of the risks to human health arising from toxins and contaminants"[78], and should have been applied by the Panel in the present case.

114. The first point that must be made in this connection, is that the *SPS Agreement* itself is silent on the matter of an appropriate standard of review for panels deciding upon SPS measures of a Member. Nor are there provisions in the DSU or any of the covered agreements (other than the *Anti-Dumping Agreement*) prescribing a particular standard of review. Only Article 17.6(i) of the *Anti-Dumping Agreement* has language on the standard of review to be employed by panels engaged in the "assessment of the facts of the matter". We find no indication in the *SPS Agreement* of an intent on the part of the

[74]EC's appellant's submission, para. 139.

[75]EC's appellant's submission, para. 122.

[76]EC's appellant's submission, para. 123.

[77]EC's appellant's submission, para. 128.

[78]EC's appellant's submission, para. 127.

Members to adopt or incorporate into that Agreement the standard set out in Article 17.6(i) of the *Anti-Dumping Agreement*. Textually, Article 17.6(i) is specific to the *Anti-Dumping Agreement*.[79]

115. The standard of review appropriately applicable in proceedings under the *SPS Agreement*, of course, must reflect the balance established in that Agreement between the jurisdictional competences conceded by the Members to the WTO and the jurisdictional competences retained by the Members for themselves.[80] To adopt a standard of review not clearly rooted in the text of the *SPS Agreement* itself, may well amount to changing that finely drawn balance; and neither a panel nor the Appellate Body is authorized to do that.

116. We do not mean, however, to suggest that there is at present no standard of review applicable to the determination and assessment of the facts in proceedings under the *SPS Agreement* or under other covered agreements. In our view, Article 11 of the DSU bears directly on this matter and, in effect, articulates with great succinctness but with sufficient clarity the appropriate standard of review for panels in respect of both the ascertainment of facts and the legal characterization of such facts under the relevant agreements. Article 11 reads thus:

The function of panels is to assist the DSB in discharging its responsibilities under this Understanding and the covered agreements. Accordingly, a panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements, and make such other findings as will assist the DSB in making the recommendations or in giving the rulings provided in the covered agreements. Panels should consult regularly with the parties to the dispute and give them adequate opportunity to develop a mutually satisfactory solution". (underlining added)

117. So far as fact-finding by panels is concerned, their activities are always constrained by the mandate of Article 11 of the DSU: the applicable standard is neither *de novo* review as such, nor "total deference", but rather the "objective assessment of the facts". Many panels have in the past refused to undertake *de*

[79]On the other hand, as suggested by the United States, we must note the *Decision on the Review of Article 17.6 of the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994*, which states:

Ministers,

Decide as follows:

The standard of review in paragraph 6 of Article 17 of the Agreement on Implementation of Article VI of GATT 1994 shall be reviewed after a period of three years with a view to considering the question of whether it is capable of general application. (underlining added)

This Ministerial Decision evidences that the Ministers were aware that Article 17.6 of the *Anti-Dumping Agreement* was applicable only in respect of that Agreement.

[80]See, for example, S.P. Croley and J.H. Jackson, "WTO Dispute Panel Deference to National Government Decisions, The Misplaced Analogy to the U.S.Chevron Standard-of-Review Doctrine", in E.-U. Petersmann (ed.), *International Trade Law and the GATT/WTO Dispute Settlement System* (Kluwer, 1997) 185, p. 189; P.A. Akakwam, "The Standard of Review in the 1994 Antidumping Code: Circumscribing the Role of GATT Panels in Reviewing National Antidumping Determinations" (1996), 5:2 *Minnesota Journal of Global Trade* 277, pp. 295-296.

novo review[81], wisely, since under current practice and systems, they are in any case poorly suited to engage in such a review. On the other hand, "total deference to the findings of the national authorities", it has been well said, "could not ensure an 'objective assessment' as foreseen by Article 11 of the DSU".[82]

118. In so far as legal questions are concerned - that is, consistency or inconsistency of a Member's measure with the provisions of the applicable agreement - a standard not found in the text of the *SPS Agreement* itself cannot absolve a panel (or the Appellate Body) from the duty to apply the customary rules of interpretation of public international law.[83] It may be noted that the European Communities refrained from suggesting that Article 17.6 of the *Anti-Dumping Agreement* in its entirety was applicable to the present case. Nevertheless, it is appropriate to stress that here again Article 11 of the DSU is directly on point, requiring a panel to "make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements ...".

119. We consider, therefore, that the issue of failure to apply an appropriate standard of review, raised by the European Communities, resolves itself into the issue of whether or not the Panel, in making the above and other findings referred to and appealed by the European Communities, had made an "objective assessment of the matter before it, including *an objective assessment of the facts* ...". This particular issue is addressed (in substantial detail) below.[84] Here, however, we uphold the findings of the Panel appealed by the European Communities upon the ground of failure to apply either a "deferential reasonableness standard" or the standard of review set out in Article 17.6(i) of the *Anti-Dumping Agreement*.

VI. The Relevance of the Precautionary Principle in the Interpretation of the *SPS Agreement*

120. We are asked by the European Communities to reverse the finding of the Panel relating to the precautionary principle. The Panel's finding and its supporting statements are set out in the Panel Reports in the following terms:

> The European Communities also invokes the precautionary principle in support of its claim that its measures in dispute are based on a risk assessment. To the extent that this principle could be considered as part of customary international law *and* be used to interpret Articles 5.1 and 5.2 on the assessment of risks as a customary rule of interpretation of public international law (as that phrase is used in Article 3.2 of the DSU), we consider that this principle would not override the explicit wording of Articles 5.1 and 5.2 outlined above, in particular since the precautionary principle has been incorporated and given a specific meaning in Article 5.7 of the SPS Agreement. We note, however, that the European Communities has explicitly stated in this case that it is not invoking Article 5.7.

[81]Panel Report, *United States - Underwear*, adopted 25 February 1997, WT/DS24/R; Panel Report, *Korea - Anti-Dumping Duties on Imports of Polyacetal Resins from the United States*, adopted 27 April 1993, BISD 40S/205; Panel Report, *United States - Imposition of Anti-Dumping Duties on Imports of Fresh and Chilled Atlantic Salmon from Norway,* adopted 27 April 1994, ADP/87; and Panel Report, *United States - Initiation of a Countervailing Duty Investigation into Softwood Lumber Products from Canada*, adopted 3 June 1987, BISD 34S/194.

[82]Panel Report, *United States - Underwear*, adopted 25 February 1997, WT/DS24/R, para. 7.10

[83]DSU, Article 3.2.

[84]Paras. 131-144 of this Report.

> We thus find that the precautionary principle cannot override our findings made above, namely that the EC import ban of meat and meat products from animals treated with any of the five hormones at issue for growth promotion purposes, in so far as it also applies to meat and meat products from animals treated with any of these hormones *in accordance with good practice*, is, from a substantive point of view, not *based on* a risk assessment.[85] (underlining added)

121. The basic submission of the European Communities is that the precautionary principle is, or has become, "a general customary rule of international law" or at least "a general principle of law".[86] Referring more specifically to Articles 5.1 and 5.2 of the *SPS Agreement*, applying the precautionary principle means, in the view of the European Communities, that it is not necessary for *all* scientists around the world to agree on the "possibility and magnitude" of the risk, nor for *all* or most of the WTO Members to perceive and evaluate the risk in the same way.[87] It is also stressed that Articles 5.1 and 5.2 do not prescribe a particular type of risk assessment and do not prevent Members from being cautious in their risk assessment exercise.[88] The European Communities goes on to state that its measures here at stake were precautionary in nature and satisfied the requirements of Articles 2.2 and 2.3, as well as of Articles 5.1, 5.2, 5.4, 5.5 and 5.6 of the *SPS Agreement*.[89]

122. The United States does not consider that the "precautionary principle" represents customary international law and suggests it is more an "approach" than a "principle".[90] Canada, too, takes the view that the precautionary principle has not yet been incorporated into the corpus of public international law; however, it concedes that the "precautionary approach" or "concept" is "an *emerging* principle of law" which may in the future crystallize into one of the "general principles of law recognized by civilized nations" within the meaning of Article 38(1)(c) of the *Statute of the International Court of Justice*.[91]

123. The status of the precautionary principle in international law continues to be the subject of debate among academics, law practitioners, regulators and judges. The precautionary principle is regarded by some as having crystallized into a general principle of customary international *environmental* law. Whether it has been widely accepted by Members as a principle of *general* or *customary international law* appears less than clear.[92] We consider, however, that it is unnecessary, and probably imprudent, for the Appellate Body in this appeal to take a position on this important, but abstract, question. We note that the Panel itself did not make any definitive finding with regard to the status of the precautionary principle in international law and that the precautionary principle, at least outside the field of international environmental law, still awaits authoritative formulation.[93]

[86]EC's appellant's submission, para. 91.

[87]EC's appellant's submission, para. 88.

[88]EC's appellant's submission, para. 94.

[89]EC's appellant's submission, para. 98.

[90]United States' appellee's submission, para. 92.

[91]Canada's appellee's submission, para. 34.

[92]Authors like P. Sands, J. Cameron and J. Abouchar, while recognizing that the principle is still evolving, submit nevertheless that there is currently sufficient state practice to support the view that the precautionary principle is a principle of customary international law. See, for example, P. Sands, *Principles of International Environmental Law*, Vol. I (Manchester University Press 1995) p. 212; J. Cameron, "The Status of the Precautionary Principle in International Law", in J. Cameron and T. O'Riordan (eds.), *Interpreting the Precautionary Principle* (Cameron May, 1994) 262, p. 283; J.Cameron and J. Abouchar, "The Status of the Precautionary Principle in International Law", in D. Freestone and E. Hey (eds.), *The Precautionary Principle*

124. It appears to us important, nevertheless, to note some aspects of the relationship of the precautionary principle to the *SPS Agreement*. First, the principle has not been written into the *SPS Agreement* as a ground for justifying SPS measures that are otherwise inconsistent with the obligations of Members set out in particular provisions of that Agreement. Secondly, the precautionary principle indeed finds reflection in Article 5.7 of the *SPS Agreement*. We agree, at the same time, with the European Communities, that there is no need to assume that Article 5.7 exhausts the relevance of a precautionary principle. It is reflected also in the sixth paragraph of the preamble and in Article 3.3. These explicitly recognize the right of Members to establish their own appropriate level of sanitary protection, which level may be higher (i.e., more cautious) than that implied in existing international standards, guidelines and recommendations. Thirdly, a panel charged with determining, for instance, whether "sufficient scientific evidence" exists to warrant the maintenance by a Member of a particular SPS measure may, of course, and should, bear in mind that responsible, representative governments commonly act from perspectives of prudence and precaution where risks of irreversible, e.g. life-terminating, damage to human health are concerned. Lastly, however, the precautionary principle does not, by itself, and without a clear textual directive to that effect, relieve a panel from the duty of applying the normal (i.e. customary international law) principles of treaty interpretation in reading the provisions of the *SPS Agreement*.

125. We accordingly agree with the finding of the Panel that the precautionary principle does not override the provisions of Articles 5.1 and 5.2 of the *SPS Agreement*.

in International Law (Kluwer, 1996) 29, p. 52. Other authors argue that the precautionary principle has not yet reached the status of a principle of international law, or at least, consider such status doubtful, among other reasons, due to the fact that the principle is still subject to a great variety of interpretations. See, for example, P. Birnie and A. Boyle, *International Law and the Environment* (Clarendon Press, 1992), p. 98; L. Gündling, "The Status in International Law of the Precautionary Principle" (1990), 5:1,2,3 *International Journal of Estuarine and Coastal Law* 25, p. 30; A. deMestral (et. al), *International Law Chiefly as Interpreted and Applied in Canada*, 5th ed. (Emond Montgomery, 1993), p. 765; D. Bodansky, in *Proceedings of the 85th Annual Meeting of the American Society of International Law* (ASIL, 1991), p. 415.

[93]In *Case Concerning the Gabcíkovo-Nagymaros Project (Hungary/Slovakia),* the International Court of Justice recognized that in the field of environmental protection "... new norms and standards have been developed, set forth in a great number of instruments during the last two decades. Such new norms have to be taken into consideration, and such new standards given proper weight ...". However, we note that the Court did not identify the precautionary principle as one of those recently developed norms. It also declined to declare that such principle could override the obligations of the Treaty between Czechoslovakia and Hungary of 16 September 1977 concerning the construction and operation of the Gabcíkovo/Nagymaros System of Locks. See, *Case Concerning the Gabcíkovo-Nagymaros Project (Hungary/Slovakia),* I.C.J. Judgement, 25 September 1997, paras. 140, 111-114. Not yet reported in the I.C.J. Reports but available on internet at http://www.icj-cij.org/idecis.htm.

VII. Application of the *SPS Agreement* to Measures Enacted Before 1 January 1995

126. Although Directives 81/602, 88/148 and 88/299 were enacted before the entry into force of the *WTO Agreement* on 1 January 1995, the Panel held[94] that, in line with Article 28 of the *Vienna Convention on the Law of Treaties* (the "*Vienna Convention*")[95], the *SPS Agreement* should apply to the EC measures at issue because they continued to exist after 1 January 1995 and the *SPS Agreement* does not show any intention to limit its application to measures enacted after the entry into force of the *WTO Agreement*. The Panel stated that, to the contrary, several provisions of the *SPS Agreement*, and in particular Articles 2.2, 3.3, 5.6, 5.8 and 14 thereof, confirm the *SPS Agreement* does indeed apply to SPS measures which were enacted before 1 January 1995 but were maintained thereafter.[96]

127. The European Communities submits that this conclusion of the Panel is "too sweeping"[97] and that the *SPS Agreement* shows an intention to limit the temporal application of the Agreement, and in particular Articles 5.1 to 5.5 thereof, to measures enacted after the entry into force of the Agreement.

128. We addressed the issue of temporal application in our Report in *Brazil - Measures Affecting Desiccated Coconut* and concluded on the basis of Article 28 of the *Vienna Convention* that:

> Absent a contrary intention, a treaty cannot apply to acts or facts which took place, or situations which ceased to exist, before the date of its entry into force.[98]

We agree with the Panel that the *SPS Agreement* would apply to situations or measures that did not cease to exist, such as the 1981 and 1988 Directives, unless the *SPS Agreement* reveals a contrary intention. We also agree with the Panel that the *SPS Agreement* does not reveal such an intention. The *SPS Agreement* does not contain any provision limiting the temporal application of the *SPS Agreement*, or of any provision thereof, to SPS measures adopted after 1 January 1995.[99] In the absence of such a provision, it cannot be assumed that central provisions of the *SPS Agreement*, such as Articles 5.1 and 5.5, do not apply to measures which were enacted before 1995 but which continue to be in force thereafter. If the negotiators had wanted to exempt the very large group of SPS measures in existence on 1 January 1995 from the disciplines of provisions as important as Articles 5.1 and 5.5, it appears reasonable to us to expect that they would have said so explicitly. Articles 5.1 and 5.5 do not distinguish between SPS measures adopted before 1 January 1995 and measures adopted since; the relevant implication is that they are intended to be applicable to both. Furthermore, other provisions of the *SPS Agreement*, such as Articles 2.2, 2.3, 3.3 and 5.6, expressly contemplate applicability to SPS measures that already existed on 1 January 1995. Finally, we observe, more generally, that Article XVI.4 of the *WTO Agreement* stipulates that:

[94]US Panel Report, para. 8.25; Canada Panel Report, para. 8.28.

[95]Done at Vienna, 23 May 1969, 1155 UNTS 331; (1969), 8 International Legal Materials, 679.

[96]US Panel Report, para. 8.26; Canada Panel Report, para. 8.29.

[97]EC's appellant's submission, para. 264.

[98]Adopted 20 March 1997, WT/DS22/AB/R, p. 15.

[99]Note that Article 14 of the *SPS Agreement* allows the *least-developed country Members* and other *developing country Members* to delay implementation of the provisions of that Agreement for a period of *five and two years*, respectively, following the date of entry into force of the *WTO Agreement*. Developing country Members may only delay application of the provisions of that Agreement where such application is prevented by lack of technical expertise, technical infrastructure or resources. This right to *defer* application of the provisions of the *SPS Agreement* concerns, however, both SPS measures existing before the entry into force of the *WTO Agreement* and SPS measures enacted since.

Each Member shall ensure the conformity of its laws, regulations and administrative procedures with its obligations as provided in the annexed Agreements.

Unlike the GATT 1947, the *WTO Agreement* was accepted definitively by Members, and therefore, there are no longer "existing legislation" exceptions (so-called "grandfather rights").[100]

129. We are aware that the applicability, as from 1 January 1995, of the requirement that an SPS measure be based on a risk assessment to the many SPS measures already in existence on that date, may impose burdens on Members. It is pertinent here to note that Article 5.1 stipulates that SPS measures must be based on a risk assessment, *as appropriate to the circumstances*, and this makes clear that the Members have a certain degree of flexibility in meeting the requirements of Article 5.1.

130. We therefore affirm the finding of the Panel with regard to the temporal application of the *SPS Agreement*. We also note that the measure at issue in this appeal is, since 1 July 1997, no longer embodied in the pre-1995 Directives referred to above, but rather in Directive 96/22, which was elaborated and enacted *after* the entry into force of the *WTO Agreement*. None of the parties contests that the currently applicable measure is subject to the disciplines of Articles 5.1 and 5.5 of the *SPS Agreement*.

VIII. The Requirement of Objective Assessment of the Facts by a Panel Under Article 11 of the DSU

131. The European Communities claims that the Panel has disregarded or distorted the evidence submitted by the European Communities to the Panel, as well as the opinions and statements made by the scientific experts advising the Panel. It is claimed, in other words, that the Panel has failed to make an objective assessment of the facts as required by Article 11 of the DSU, and the European Communities asks us to reverse the findings so arrived at by the Panel.

132. Under Article 17.6 of the DSU, appellate review is limited to appeals on questions of law covered in a panel report and legal interpretations developed by the panel. Findings of fact, as distinguished from legal interpretations or legal conclusions, by a panel are, in principle, not subject to review by the Appellate Body. The determination of whether or not a certain event did occur in time and space is typically a question of fact; for example, the question of whether or not Codex has adopted an international standard, guideline or recommendation on MGA is a factual question. Determination of the credibility and weight properly to be ascribed to (that is, the appreciation of) a given piece of evidence is part and parcel of the fact finding process and is, in principle, left to the discretion of a panel as the trier of facts. The consistency or inconsistency of a given fact or set of facts with the requirements of a given treaty provision is, however, a legal characterization issue. It is a legal question. Whether or not a panel has made an objective assessment of the facts before it, as required by Article 11 of the DSU, is also a legal question which, if properly raised on appeal, would fall within the scope of appellate review.

[100]With the exception of the measures taken by a Member under specific mandatory legislation referred to in paragraph 3(a) of the language incorporating the GATT 1994 into the *WTO Agreement*.

133. The question which then arises is this: when may a panel be regarded as having failed to discharge its duty under Article 11 of the DSU to make an objective assessment of the facts before it? Clearly, not every error in the appreciation of the evidence (although it may give rise to a question of law) may be characterized as a failure to make an objective assessment of the facts. In the present appeal, the European Communities repeatedly claims that the Panel disregarded or distorted or misrepresented the evidence submitted by the European Communities and even the opinions expressed by the Panel's own expert advisors. The duty to make an objective assessment of the facts is, among other things, an obligation to consider the evidence presented to a panel and to make factual findings on the basis of that evidence. The deliberate disregard of, or refusal to consider, the evidence submitted to a panel is incompatible with a panel's duty to make an objective assessment of the facts. The wilful distortion or misrepresentation of the evidence put before a panel is similarly inconsistent with an objective assessment of the facts. "Disregard" and "distortion" and "misrepresentation" of the evidence, in their ordinary signification in judicial and quasi-judicial processes, imply not simply an error of judgment in the appreciation of evidence but rather an egregious error that calls into question the good faith of a panel.[101] A claim that a panel disregarded or distorted the evidence submitted to it is, in effect, a claim that the panel, to a greater or lesser degree, denied the party submitting the evidence fundamental fairness, or what in many jurisdictions is known as due process of law or natural justice.

134. It is, accordingly, incumbent upon us to examine the claims of the European Communities that the Panel here disregarded or distorted at least some of the evidence submitted to it.

A. *Evidence with Regard to MGA*

135. According to the European Communities, the Panel's finding that the experts advising the Panel have stated on several occasions that they are not aware of any publicly available scientific studies that evaluate the safety of MGA[102] is manifestly not true.[103] The Panel cited only two of its experts (Dr. Ritter and Dr. McLean) and the statements of these two scientists do not entirely support the Panel's conclusion. Furthermore, the Panel did not mention that Dr. André and Dr. Lucier, two other experts advising the Panel, had respectively said that MGA is a "real risk" and that MGA is an "extraordinarily potent progestant", that is "about 30 times more potent than progesterone and orally active".[104] We note that Dr. Ritter clearly stated with regard to MGA that he had "no information other than of a proprietary nature which [he] did not use"[105] and that Dr. McLean stated he had made no comment in his submission about MGA "because there hasn't been a large amount of data package available".[106] These two statements tend to support the Panel's conclusion. It is true that the Panel does not refer to the statements by Dr. Lucier and Dr. André. However, these statements do not contradict the Panel's conclusion that there is no publicly available study on the safety of MGA. Furthermore, while the Panel could have made a reference to and an evaluation of the statements by Dr. André and Dr. Lucier concerning MGA, it is generally within the discretion of the Panel to decide which evidence it chooses to utilize in making findings. We do not think that the Panel's silence on the statements of Dr. André and Dr. Lucier constitutes a distortion or disregard of evidence.

[101]It might be asked whether the European Communities did not merely intend to use "disregard" and "distortion" as unusually forceful synonyms for "misapprehend" or "misappreciation". It is not, however, clear that the European Communities did so intend, considering among other things the marked frequency with which "disregard" and "distortion" were used.

[102]US Panel Report, para. 8.255; Canada Panel Report, para. 8.258.

[103]EC's appellant's submission, para. 168.

[104]EC's appellant's submission, para. 170, quoting Annex to the US and Canada Panel Reports, para. 852.

[105]Annex to the US and Canada Panel Reports, para. 352.

[106]Annex to the US and Canada Panel Reports, para. 354 .

136. The European Communities argues that the Panel failed to request the submission of data on MGA and contends that this failure constituted a violation of Article 11 of the DSU. However, we see nothing in Article 11 to suggest that there is an obligation on the Panel to gather data relating to MGA and that it was therefore required to request the submission of this data.

137. Furthermore, the European Communities states that the Panel arbitrarily disregarded all the information concerning MGA that the European Communities had supplied to the Panel. The information here referred to are studies and reports of the IARC on hormones, including progestins, a category of substances to which MGA is said to belong. However, we note that the Panel did not simply ignore the IARC studies and reports but rather had indicated it did not consider them to be relevant because it found that a risk assessment needs to be carried out for each individual substance.[107]

B. *Evidence with Regard to the Five Other Hormones*

138. With regard to the five other hormones in dispute, the European Communities contends that the Panel manifestly distorted the scientific evidence presented by the European Communities and eliminated dissenting scientific views of its own experts in an attempt to make the desired result fit the scientific record.[108] First, the European Communities submits[109] that the Panel incorrectly quotes some of the statements of Dr. Lucier and totally ignores other more relevant statements he made.[110] We note that the Panel did indeed quote Dr. Lucier incorrectly. The Panel wrongly interpreted Dr. Lucier's statement in paragraph 819 of the Annex as meaning that the 0 to 1 in a million risk is caused by the *total amount of oestrogens in treated meat*. It is clear that Dr. Lucier stated that this risk is caused by the small fraction of oestrogens that is *added for growth promotion purposes*. However, this mistake on the part of the Panel in interpreting Dr. Lucier's statement does not constitute a *deliberate* disregard of evidence or *gross* negligence amounting to bad faith. The Panel also failed to refer to certain other statements made by Dr. Lucier. It seems to us that these statements either merely clarify the statement discussed above or are of a general nature. The Panel cannot realistically refer to all statements made by the experts advising it and should be allowed a substantial margin of discretion as to which statements are useful to refer to explicitly. The same thing may be said with regard to the claim by the European Communities that the Panel failed to quote certain statements by Dr. Ritter and Dr. McLean.[111]

139. Second, it is claimed that the Panel manifestly distorted the views of Dr. André when it said that he did not contest the statements made by the other Panel experts on the safety of the hormones in dispute.[112] To the contrary, according to the European Communities, the views expressed by Dr. André support the scientific opinions presented by the EC scientists.[113] Whether or not the views of Dr. André support the statements made by the other Panel experts or the opinions expressed by the EC scientists may be an issue of fact; it does require some technical expertise to deal with it. However, even if the Panel has interpreted

[107]US Panel Report, para. 8.257; Canada Panel Report, para. 8.260. The Panel pointed out that with respect to the five other hormones in dispute, JECFA, Codex and the European Communities itself have conducted or invoked risk assessments for each individual substance. Furthermore, the Panel referred to the paper presented at the 1995 EC Scientific Conference by J. Bridges and O. Bridges on "Hazards of Growth Promoting Agents and Strategies of Risk Assessment" (Conference Proceedings, p. 250). US Panel Report, para. 8.260; Canada Panel Report, para. 8.263.

[108]EC's appellant's submission, para. 350.

[109]EC's appellant's submission, para. 347.

[110]See, in particular, footnote 331 of the US Panel Report and footnote 437 of the Canada Panel Report.

[111]See the statements of Dr. Ritter in paras. 322, 743 and 782, and the statement of Dr. McLean in para. 824, of the Annex to the US and Canada Panel Reports.

[112]See footnote 348 of the US Panel Report and footnote 455 of the Canada Panel Report.

[113]See, in particular, paras. 6.99 to 6.101 of the US Panel Report and paras. 6.98 to 6.100 of the Canada Panel Report.

the views of Dr. André incorrectly, we see no reason, and no reason was advanced, to consider this mistake as a *deliberate disregard* or *distortion* of evidence.

140. Third, it is claimed that the Panel manifestly distorted the scientific evidence by considering that the 1995 EC Scientific Conference amounted to a risk assessment in the sense of Articles 5.1-5.2. However, we note that the Panel does not state that the 1995 EC Conference amounted to a risk assessment. The Panel includes this Conference in the listing of scientific evidence concerning the hormones at issue referred to by the European Communities.[114] With regard to the reports mentioned in this list, the Panel states that several of these reports appear to meet the minimum requirements of a risk assessment, referring to the Lamming Report and the 1988 and 1989 JECFA Reports.[115] The Panel does not, however, refer to the 1995 EC Conference. The Panel discusses the scientific conclusions to be drawn from the 1995 EC Scientific Conference but this does not amount to designating the Conference as a risk assessment.[116]

141. Fourth, the European Communities contends that the distinction made by the Panel between studies that generally relate to the hormones in dispute and studies that specifically address residues in food of these hormones when used for growth promotion purposes is a distinction devised by the Panel for the sole purpose of rejecting the relevance of the 1987 IARC Monographs in this case and amounts to a distortion of relevant scientific evidence.[117] We note, however, that the Panel did consider the 1987 IARC Monographs but held that they could not be regarded as part of a risk assessment for the hormones at issue because the Monographs do not address the carcinogenic potential of these hormones when used specifically for growth promotion purposes or with respect to residue levels comparable to those present after such use[118], or the potential for adverse effects arising from the presence *in food* of residues of the hormones in dispute or from residue levels comparable to those present in food. The Panel's distinction between general and specific studies and its treatment of the 1987 IARC Monographs does not, therefore, appear arbitrary. Furthermore, we note that the Panel concluded, in the alternative, that the Monographs have been taken into account in, and do not contradict, the other studies referred to by the European Communities, in particular the 1988 and 1989 JECFA Reports.[119] We believe that the Panel's treatment of the 1987 IARC Monographs does not amount to a distortion of evidence.

142. Fifth, the European Communities submits that the Panel made no attempt whatsoever to discuss "the scientific views and evidence presented by the other EC scientists" and therefore violated Article 11 of the DSU.[120] It is our understanding that the European Communities refers here to the articles and opinions of individual scientists that are included in the Panel's list of scientific evidence referred to by the European Communities.[121] We note that, contrary to what the European Communities claims, the Panel does discuss these articles and opinions of individual scientists. The Panel Report included a summary discussion of these articles and opinions.[122] However, as the Panel explains, the scientific evidence included in these

[114]US Panel Report. para. 8.108; Canada Panel Report, para 8.111. The 1995 EC Conference Proceedings were submitted by the European Communities itself as annexes to its first submission to the Panel in both the US and Canada proceedings.

[115]US Panel Report, para. 8.111; Canada Panel Report, para. 8.114.

[116]US Panel Report, para. 8.123; Canada Panel Report, para. 8.126.

[117]EC's appellant's submission, para. 368.

[118]US Panel Report, para. 8.127; Canada Panel Report, para. 8.130.

[119]US Panel Report, para. 8.129; Canada Panel Report, para. 8.132.

[120]EC's appellant's submission, para. 380.

[121]US Panel Report, para. 8.108; Canada Panel Report, para. 8.111.

[122]US Panel Report, para. 8.130; Canada Panel Report, para. 8.133. The Panel itself refers to some of the articles and opinions in paras. 4.131-4.136 and 4.180 of the US Panel Report, and paras. 4.154-4.166 of the Canada Panel Report.

articles and opinions relates to the carcinogenic or genotoxic potential of entire categories of hormones or the hormones at issue in general; not when used specifically for growth promotion purposes or with respect to residue levels comparable to those present in meat after such use. In our opinion, the Panel's treatment of the articles and opinions of individual scientists, like its treatment of the 1987 IARC Monographs, does not amount to a distortion of evidence.

C. *Evidence with Regard to the Issue of Control*

143. With regard to the issue of control, the European Communities contends that the Panel failed to take into account the evidence submitted by the European Communities[123] and ignored statements made by some of its own experts.[124] We observe that the Panel did indeed not explicitly refer to all the evidence regarding the issue of control before it. The Panel had found that the risks related to the general problems of control should not be taken into account in risk assessment[125] and accordingly did not refer extensively to the evidence regarding the issue of control. Furthermore, we note that the Panel, subsequently and in the alternative, concluded that even if the issue of control, and the evidence relating to that issue, could be taken into account, the European Communities had not supplied *convincing* evidence. The Panel, it appears, excluded that evidence on the *legal ground* of non-relevancy; as will be seen later, the Panel erred in law in holding the evidence non-relevant. Nevertheless, it did examine the evidence.[126]

144. The European Communities also claims that the Panel incorrectly quoted the statements of its experts.[127] Referring to a number of specific statements[128], the Panel stated that the experts advising the Panel made clear that the potential for abuse under a regime where the hormones in dispute are allowed under specified conditions and under the current regime where they are banned, would be comparable. The European Communities submits that in the statements referred to by the Panel, the experts either explicitly stated they were speculating or added strong reservations to their opinions. After reading these statements carefully, we come to the conclusion that the Panel did not in fact represent the opinions of its experts accurately. However, this mistake does not amount to the egregious disregarding or distorting of evidence before the Panel.

D. *Evidence on Article 5.5*

145. The European Communities claims that in finding that the difference in its levels of protection in respect of five of the hormones at issue and in respect of carbadox and olaquindox is arbitrary or

[123]The European Communities contends that it submitted convincing specific evidence to the Panel that control would be more difficult under a regime where the hormones in dispute were allowed (under specific conditions of use) than under the current EC regime where the hormones in dispute are banned. It also contends that it submitted clear evidence to the Panel, specifying the risks for human health that the inadequate control of these hormones can pose and that in the United States and Canada there were instances in which the MRL's were not respected. Finally the European Communities submitted evidence relating the practical and technical difficulties that are specific to control of hormones. EC's appellant's submission, paras. 403-433.

[124]EC's appellant's submission, para. 416. The European Communities submits that, for example, Dr. André's reference to misuse in France (see para. 168 of the Annex to the US and Canada Panel Reports) and Dr. McLean's statement on the difficulty of controlling treatment of animals (see para. 474 of the Annex to the US and Canada Panel Reports) were not taken into account by the Panel.

[125]US Panel Report, para. 8.146; Canada Panel Report, para. 8.149.

[126]US Panel Report, para. 8.146; Canada Panel Report, para. 8.149.

[127]EC's appellant's submission, para. 419.

[128]US Panel Report, footnote 362; Canada Panel Report, footnote 469.

unjustifiable[129], the Panel did not take into account the evidence before it.[130] We note that the Panel considered in detail each of the arguments and related evidence referred to by the European Communities on this particular point.[131] Although the Panel did not agree with the arguments advanced by the European Communities, we do not believe that in doing so, the Panel arbitrarily ignored or manifestly distorted the evidence before it. We deal with these arguments below in some detail.[132]

IX. Certain Procedures Adopted by the Panel

A. *The Selection and Use of Experts*

[129]US Panel Report, para. 8.238; Canada Panel Report, para. 8.241.

[130]The European Communities argues that it had advanced six reasons why this distinction is not arbitrary or unjustifiable but the Panel rejected all these reasons, and in doing so, it failed to take into account the evidence before it. The reasons advanced by the European Communities were the following: first, that carbadox and olaquindox are not hormones and have a different mode of action; second, that carbadox and olaquindox act as growth promoters by combating the development of bacteria; third, that carbadox and olaquindox are only available in prepared feedstuffs in predetermined dosages; fourth, that there are no alternatives to carbadox and olaquindox; fifth, that carbadox cannot be abused; and sixth, that carbadox is used in very small quantities and is hardly absorbed. EC's appellant's submission, paras. 529-548.

[131]US Panel Report, paras. 8.231-8.238; Canada Panel Report, paras. 8.234-8.240.

[132]See paras. 227-235 of this Report.

146. The European Communities considers that in its selection and use of experts, the Panel has violated Article 11.2 of the *SPS Agreement* and Articles 11, 13.2 and Appendix 4 of the DSU.[133] We note that the Panel decided to request the opinion of experts on certain scientific and other technical matters raised by the parties to the dispute, and rather than establishing an experts review group, the Panel considered it more useful to leave open the possibility of receiving a range of opinions from the experts in their individual capacity. The Panel stresses, among other things, that:

> We considered, however, that neither Article 11.2 of the SPS Agreement nor Article 13.2 of the DSU limits our right to seek information from *individual* experts as provided for in Article 11.2, first sentence, of the SPS Agreement and Articles 13.1 and 13.2, first sentence, of the DSU.[134]

147. We agree with the Panel. Both Article 11.2 of the *SPS Agreement* and Article 13 of the DSU enable panels to seek information and advice as they deem appropriate in a particular case. Article 11.2 of the *SPS Agreement* states:

> In a dispute under this Agreement involving scientific or technical issues, a panel should seek advice from experts chosen by the panel in consultation with the parties to the dispute. To this end, the panel may, when it deems it appropriate, establish an advisory technical experts group. (underlining added)

Article 13 of the DSU provides, in relevant part:

> 1. Each panel shall have the right to seek information and technical advice from any individual or body which it deems appropriate ...
>
> 2. Panels may seek information from any relevant source and may consult experts to obtain their opinion on certain aspects of the matter. With respect to a factual issue concerning a scientific or other technical matter raised by a party to the dispute, a panel *may* request an advisory report in writing from an experts review group ... (underlining added)

We find that in disputes involving scientific or technical issues, neither Article 11.2 of the *SPS Agreement,* nor Article 13 of the DSU prevents panels from consulting with individual experts. Rather, both the *SPS Agreement* and the DSU leave to the sound discretion of a panel the determination of whether the establishment of an expert review group is necessary or appropriate.

[133]EC's appellant's submission, para. 587.

[134]US Panel Report, para. 8.7; Canada Panel Report, para. 8.7.

148. Both Article 11.2 of the *SPS Agreement* and Article 13.2 of the DSU require panels to consult with the parties to the dispute during the selection of the experts. However, it is not claimed by any of the participants in this appeal that the Panel did not consult with them when appointing the experts. Moreover, it is uncontested that the experts have been selected in accordance with procedures on which all the participants have previously agreed.[135] It is similarly uncontested that, among the experts consulted by the Panel, there are nationals from each of the parties to the dispute. The rules and procedures set forth in Appendix 4 of the DSU apply in situations in which expert review groups have been established. However, this is not the situation in this particular case. Consequently, once the panel has decided to request the opinion of individual scientific experts, there is no legal obstacle to the panel drawing up, in consultation with the parties to the dispute, *ad hoc* rules for those particular proceedings.

149. We conclude, therefore, that in its selection and use of experts, the Panel has not acted inconsistently with Articles 11, 13.2 and Appendix 4 of the DSU and Article 11.2 of the *SPS Agreement*.

B. *Additional Third Party Rights to the United States and Canada*

150. The European Communities contends that, notwithstanding its protest that these decisions affected its rights of defence, the Panel took a number of decisions granting additional third party rights to Canada and the United States which are not justified by Article 9.3 of the DSU, are inconsistent with Articles 7.1, 7.2, 18.2 and 10.3 thereof, and were not granted to the other third parties.[136] We recall that the European Communities refers to the following decisions of the Panel: first, to hold a joint meeting with scientific experts; second, to give access to all of the information submitted in the United States' proceeding to Canada; third, to give access to all of the information submitted in the Canadian proceeding to the United States; and fourth, to invite the United States to observe and make a statement at the second substantive meeting in the proceeding initiated by Canada.

151. Article 9.3 of the DSU reads as follows:

> If more than one panel is established to examine the complaints related to the same matter, to the greatest extent possible the same persons shall serve as panelists on each of the separate panels and the timetable for the panel process in such disputes shall be harmonized.

After examining the procedural course of the two disputes, we consider that four aspects should be underlined. First, both proceedings dealt with the same matter. Second, all the parties to both disputes agreed that the same panelists would serve on both proceedings. Third, although the proceeding initiated by Canada started several months after the proceeding started by the United States, the Panel managed to finish the Panel Reports at the same time. Fourth, given the fact that the same panelists were conducting two proceedings dealing with the same matter, neither Canada nor the United States were ordinary third parties in each other's complaint.

152. With respect to the decision of the Panel to hold a joint meeting with scientific experts, the Panel explains as follows:

> Prior to our meeting with scientific experts, we decided to hold that meeting jointly for both this Panel, requested by Canada, and the parallel panel requested by the United States. This decision stemmed from the similarities of the two cases (the same EC measures are at issue and both cases are dealt

[135]US Panel Report, paras. 6.1-6.10; Canada Panel Report, paras. 6.1-6.9.

[136]EC's appellant's submission, paras. 605 and 612.

> with by the same panel members), our decision to use the same scientific experts in both cases and the fact that we had already decided to invite Canada and the United States to participate in the meeting with scientific experts in each of the two cases. In addition, we considered that, from a practical perspective, there was a need to avoid repetition of arguments and/or questions at our meetings with the scientific experts. The European Communities objected to this decision arguing that one joint meeting with experts, instead of two separate meetings, was likely to affect its procedural rights of defence. Where it made precise claims of prejudice to its rights of defence, we took corrective action.[137]

We consider the explanation of the Panel quite reasonable, and its decision to hold a joint meeting with the scientific experts consistent with the letter and spirit of Article 9.3 of the DSU. Clearly, it would be an uneconomical use of time and resources to force the Panel to hold two successive but separate meetings gathering the same group of experts twice, expressing their views twice regarding the same scientific and technical matters related to the same contested EC measures. We do not believe that the Panel has erred by addressing the EC procedural objections only where the European Communities could make a precise claim of prejudice. It is evident to us that a procedural objection raised by a party to a dispute should be sufficiently specific to enable the panel to address it.[138]

153. The decision of the Panel to use and provide all information to the parties in both disputes was taken in view of its previous decision to hold a joint meeting with the experts.[139] The European Communities asserts that it cannot see how providing information in one of the proceedings to a party in the other helps to harmonize timetables.[140] We can see a relation between timetable harmonization within the meaning of Article 9.3 of the DSU and economy of effort. In disputes where the evaluation of scientific data and opinions plays a significant role, the panel that is established later can benefit from the information gathered in the context of the proceedings of the panel established earlier. Having access to a common pool of information enables the panel and the parties to save time by avoiding duplication of the compilation and analysis of information already presented in the other proceeding.[141] Article 3.3 of the DSU recognizes the importance of avoiding unnecessary delays in the dispute settlement process and states that the prompt settlement of a dispute is essential to the effective functioning of the WTO. In this particular case, the Panel tried to avoid unnecessary delays, making an effort to comply with the letter and spirit of Article 9.3 of the DSU. Indeed, as noted earlier, despite the fact that the Canadian proceeding was initiated several months later than that of the United States, the Panel managed to finish both Panel Reports at the same time.

154. Regarding the participation of the United States in the second substantive meeting of the Panel requested by Canada, the Panel states:

[137]Canada Panel Report, para. 8.18. See also US Panel Report, para. 8.14.

[138]Furthermore, the DSU, and in particular its Appendix 3, leave panels a margin of discretion to deal, always in accordance with due process, with specific situations that may arise in a particular case and that are not explicitly regulated. Within this context, an appellant requesting the Appellate Body to reverse a panel's ruling on matters of procedure must demonstrate the prejudice generated by such legal ruling.

[139]US Panel Report, para. 8.15; Canada Panel Report, para. 8.19.

[140]EC's appellant's submission, para. 610.

[141]Moreover, in the proceeding initiated by Canada, the European Communities made references to materials that it had previously submitted in the proceeding initiated by the United States. Canada's appellee's submission, para. 216.

> This decision was, *inter alia*, based on the fact that our second meeting was held the day after our joint meeting with the scientific experts and that the parties to this dispute would, therefore, most likely comment on, and draw conclusions from, the evidence submitted by these experts to be considered in both cases. Since in the panel requested by the United States the second meeting was held before the joint meeting with scientific experts, we considered it appropriate, in order to safeguard the rights of the United States in the proceeding it requested, to grant the United States the opportunity to observe our second meeting in this case and to make a brief statement at the end of that meeting.[142]

The explanation of the Panel appears reasonable to us. If the Panel had not given the United States an opportunity to participate in the second substantive meeting of the proceedings initiated by Canada, the United States would not have had the same degree of opportunity to comment on the views expressed by the scientific experts that the European Communities and Canada enjoyed. Although Article 12.1 and Appendix 3 of the DSU do not specifically require the Panel to grant this opportunity to the United States, we believe that this decision falls within the sound discretion and authority of the Panel, particularly if the Panel considers it necessary for ensuring to all parties due process of law. In this regard, we note that in *European Communities - Bananas*[143], the panel considered that particular circumstances justified the grant to third parties of rights somewhat broader than those explicitly envisaged in Article 10 and Appendix 3 of the DSU. We conclude that, in the case before us, circumstances justified the Panel's decision to allow the United States to participate in the second substantive meeting of the proceedings initiated by Canada.

C. *The Difference Between Legal Claims and Arguments*

155. Arguing that panels are not entitled to make findings beyond what has been requested by the parties, the European Communities asserts that the Panel has erred by basing the main part of its reasoning on Article 5.5 of the *SPS Agreement* on a claim that the complainants had not made.[144] According to the European Communities, the complainants did not complain of a supposed difference of treatment between artificially added or exogenous natural and synthetic hormones when used for growth promotion purposes compared with the naturally present endogenous hormones in untreated meat and other foods (such as milk, cabbage, broccoli or eggs). The European Communities states that nowhere in the sections of the Panel Reports summarising the arguments on Article 5.5 is there any mention of such an argument.

156. Considering that in the request for the establishment of a panel in the proceeding initiated by the United States[145], as well as in the proceeding started by Canada[146], both complainants have included a claim that the EC ban is inconsistent with Article 5 of the *SPS Agreement,* we believe that the objection of the European Communities overlooks the distinction between legal claims made by the complainant and arguments used by that complainant to sustain its legal claims. In *India - Patent Protection for Pharmaceutical and Agricultural Chemical Products* we said:

> We stated ... in *Brazil - Desiccated Coconut* that all claims must be included in the request for establishment of a panel in order to come within the panel's

[142]Canada Panel Report, para. 8.20.

[144]EC's appellant's submission, paras. 495 and 594.

[145]WT/DS26/6, 25 April 1996.

[146]WT/DS48/5, 17 September 1996.

> terms of reference, based on the practice of panels under the GATT 1947 and the Tokyo Round Codes. That past practice required that a claim had to be included in the documents referred to, or contained in, in the terms of reference in order to form part of the "matter" referred to a panel for consideration. Following both this past practice and the provisions of the DSU, in *European Communities - Bananas*, we observed that there is a significant difference between the *claims* identified in the request for the establishment of a panel, which establish the panel's terms of reference under Article 7 of the DSU, and the *arguments* supporting those claims, which are set out and progressively clarified in the first written submissions, the rebuttal submissions and the first and second panel meetings with the parties as a case proceeds.[147] (footnotes omitted)

Panels are inhibited from addressing legal claims falling outside their terms of reference. However, nothing in the DSU limits the faculty of a panel freely to use arguments submitted by any of the parties – or to develop its own legal reasoning – to support its own findings and conclusions on the matter under its consideration. A panel might well be unable to carry out an objective assessment of the matter, as mandated by Article 11 of the DSU, if in its reasoning it had to restrict itself solely to arguments presented by the parties to the dispute. Given that in this particular case both complainants claimed that the EC measures were inconsistent with Article 5.5 of the *SPS Agreement*, we conclude that the Panel did not make any legal finding beyond those requested by the parties.

X. The Interpretation of Articles 3.1 and 3.3 of the *SPS Agreement*

157. The European Communities appeals from the conclusion of the Panel that the European Communities, by maintaining SPS measures which are not based on existing international standards without justification under Article 3.3 of the *SPS Agreement*, has acted inconsistently with the requirements contained in Article 3.1 of that Agreement.

[147] Adopted 16 January 1998, WT/DS50/AB/R, para. 88.

158. It will be seen below that the Panel is actually saying that the European Communities acted inconsistently with the requirements of both Articles 3.1 and 3.3 of the *SPS Agreement*, a position that flows from the Panel's view of a supposed "general rule - exception" relationship between Articles 3.1 and 3.3, a view we have indicated we do not share.[148]

159. The above conclusion of the Panel has three components: first, international standards, guidelines and recommendations exist in respect of meat and meat products derived from cattle to which five of the hormones involved have been administered for growth promotion purposes; secondly, the EC measures involved here are not based on the relevant international standards, guidelines and recommendations developed by Codex, because such measures are not in conformity with those standards, guidelines and recommendations; and thirdly, the EC measures are "not justified under", that is, do not comply with the requirements of Article 3.3. *En route* to its above-mentioned conclusion, the Panel developed three legal interpretations, which have all been appealed by the European Communities and which need to be addressed: the first relates to the meaning of "based on" as used in Article 3.1; the second is concerned with the relationship between Articles 3.1, 3.2 and 3.3 of the *SPS Agreement*; and the third relates to the requirements of Article 3.3 of the *SPS Agreement*. As may be expected, the Panel's three interpretations are intertwined.

A. *The Meaning of "Based On" as Used in Article 3.1 of the SPS Agreement*

160. Article 3.1 provides:

> To harmonize sanitary and phytosanitary measures on as wide a basis as possible, Members shall base their sanitary or phytosanitary measures on international standards, guidelines or recommendations, where they exist, except as otherwise provided for in this Agreement, and in particular in paragraph 3.

161. Addressing the meaning of "based on", the Panel constructs the following interpretations:

> The SPS Agreement does not explicitly define the words *based on* as used in Article 3.1. However, Article 3.2, which introduces a presumption of consistency with both the SPS Agreement and GATT for sanitary measures which *conform to* international standards, equates measures *based on* international standards with measures which *conform to* such standards. Article 3.3, in turn, explicitly relates the definition of sanitary measures *based on* international standards to the level of sanitary protection achieved by these measures. Article 3.3 stipulates the conditions to be met for a Member to enact or maintain certain sanitary measures which are *not* based on international standards. It applies more specifically to measures "which result in a *higher level* of sanitary ... protection than would be achieved by measures based on the relevant international standards" or measures "which result in a *level* of sanitary ... protection *different* from that which would be achieved by measures based on international standards". One of the determining factors in deciding whether a measure is *based on* an international standard is, therefore, the level of protection that measure achieves. According to Article 3.3

[148] See paras. 104 and 106 of this Report.

> all measures which *are* based on a given international standard should in principle achieve the *same* level of sanitary protection. Therefore, if an international standard reflects a specific level of sanitary protection and a sanitary measure implies a *different* level, that measure cannot be considered to be *based on* the international standard.

We find, therefore, that for a sanitary measure to be *based on* an international standard in accordance with Article 3.1, that *measure* needs to reflect the same level of sanitary protection as the *standard*. In this dispute a comparison thus needs to be made between the level of protection reflected in the EC measures in dispute and that reflected in the Codex standards for each of the five hormones at issue.[149] (underlining added)

162. We read the Panel's interpretation that Article 3.2 "equates" measures "based on" international standards with measures which "conform to" such standards, as signifying that "based on" and "conform to" are identical in meaning. The Panel is thus saying that, henceforth, SPS measures of Members *must* "conform to" Codex standards, guidelines and recommendations.

163. We are unable to accept this interpretation of the Panel. In the first place, the ordinary meaning of "based on" is quite different from the plain or natural import of "conform to". A thing is commonly said to be "based on" another thing when the former "stands" or is "founded" or "built" upon or "is supported by" the latter.[150] In contrast, much more is required before one thing may be regarded as "conform[ing] to" another: the former must "comply with", "yield or show compliance" with the latter. The reference of "conform to" is to "correspondence in form or manner", to "compliance with" or "acquiescence", to "follow[ing] in form or nature".[151] A measure that "conforms to" and incorporates a Codex standard is, of course, "based on" that standard. A measure, however, based on the same standard might not conform to that standard, as where only some, not all, of the elements of the standard are incorporated into the measure.

164. In the second place, "based on" and "conform to" are used in different articles, as well as in differing paragraphs of the same article. Thus, Article 2.2 uses "based on", while Article 2.4 employs "conform to". Article 3.1 requires the Members to "base" their SPS measures on international standards; however, Article 3.2 speaks of measures which "conform to" international standards. Article 3.3 once again refers to measures "based on" international standards. The implication arises that the choice and use of different words in different places in the ***SPS Agreement*** are deliberate, and that the different words are designed to convey different meanings. A treaty interpreter is not entitled to assume that such usage was merely inadvertent on the part of the Members who negotiated and wrote that Agreement.[152] Canada has suggested the use of different terms was "accidental" in this case, but has offered no convincing argument to support its suggestion. We do not believe this suggestion has overturned the inference of deliberate choice.

165. In the third place, the object and purpose of Article 3 run counter to the Panel's interpretation. That purpose, Article 3.1 states, is "[t]o harmonize [SPS] measures on as wide a basis as possible ...". The preamble of the ***SPS Agreement*** also records that the Members "[d]esir[e] to *further the use of harmonized [SPS] measures between Members* on the basis of international standards, guidelines and recommendations developed by the relevant international organizations ...". (emphasis added) Article 12.1

[150]L. Brown (ed.), *The New Shorter Oxford English Dictionary on Historical Principles* (Clarendon Press), Vol. I, p. 187.

[151]L. Brown (ed.), *The New Shorter Oxford English Dictionary on Historical Principles* (Clarendon Press), Vol. I, p. 477.

[152]Appellate Body Report, *United States - Underwear*, adopted 25 February 1997, WT/DS24/AB/R, p. 17.

created a Committee on Sanitary and Phytosanitary Measures and gave it the task, *inter alia*, of "furtherance of its objectives, in particular with respect to harmonization" and (in Article 12.2) to "encourage the use of international standards, guidelines and recommendations by all Members". It is clear to us that harmonization of SPS measures of Members on the basis of international standards is projected in the Agreement, as a *goal*, yet to be realized *in the future*. To read Article 3.1 as requiring Members to harmonize their SPS measures *by conforming those measures with international standards*, guidelines and recommendations, *in the here and now*, is, in effect, to vest such international standards, guidelines and recommendations (which are by the terms of the Codex *recommendatory* in form and nature[153]) with *obligatory* force and effect. The Panel's interpretation of Article 3.1 would, in other words, transform those standards, guidelines and recommendations into binding *norms*. But, as already noted, the ***SPS Agreement*** itself sets out no indication of any intent on the part of the Members to do so. We cannot lightly assume that sovereign states intended to impose upon themselves the more onerous, rather than the less burdensome, obligation by mandating *conformity* or *compliance with* such standards, guidelines and recommendations.[154] To sustain such an assumption and to warrant such a far-reaching interpretation, treaty language far more specific and compelling than that found in Article 3 of the ***SPS Agreement*** would be necessary.

166. Accordingly, we disagree with the Panel's interpretation that "based on" means the same thing as "conform to".

167. After having erroneously "equated" measures "based on" an international standard with measures that "conform to" that standard[155], the Panel proceeds to Article 3.3. According to the Panel, Article 3.3 "explicitly relates" the "definition of sanitary measures *based on* international standards to the level of sanitary protection achieved by those measures". The Panel then interprets Article 3.3 as saying that "all measures which are based on a given international standard should *in principle* achieve the *same* level of sanitary protection", and argues *a contrario* that "if a sanitary measure implies a *different* level (from that reflected in an international standard), that measure cannot be considered to be *based on* the international standard". The Panel concludes that, under Article 3.1, "for a sanitary measure to be *based on* an international standard ..., that *measure* needs to reflect the same level of sanitary protection as the *standard*".[156]

[153]US Panel Report, para. 8.59; Canada Panel Report, para. 8.62.

[154]The interpretative principle of *in dubio mitius*, widely recognized in international law as a "supplementary means of interpretation", has been expressed in the following terms:

> "The principle of *in dubio mitius* applies in interpreting treaties, in deference to the sovereignty of states. If the meaning of a term is ambiguous, that meaning is to be preferred which is less onerous to the party assuming an obligation, or which interferes less with the territorial and personal supremacy of a party, or involves less general restrictions upon the parties."

[155]US Panel Report, para. 8.72; Canada Panel Report, para. 8.75.

[156]US Panel Report, para. 8.73; Canada Panel Report, para. 8.76.

168. It appears to us that the Panel reads much more into Article 3.3 than can be reasonably supported by the actual text of Article 3.3. Moreover, the Panel's entire analysis rests on its flawed premise that "based on", as used in Articles 3.1 and 3.3, means the same thing as "conform to" as used in Article 3.2. As already noted, we are compelled to reject this premise as an error in law. The correctness of the rest of the Panel's intricate interpretation and examination of the consequences of the Panel's litmus test, however, have to be left for another day and another case.

B. *Relationship Between Articles 3.1, 3.2 and 3.3 of the SPS Agreement*

169. We turn to the relationship between Articles 3.1, 3.2 and 3.3 of the *SPS Agreement*. As observed earlier, the Panel assimilated Articles 3.1 and 3.2 to one another, designating the product as the "general rule", and contraposed that product to Article 3.3 which denoted the "exception". This view appears to us an erroneous representation of the differing situations that may arise under Article 3, that is, where a relevant international standard, guideline or recommendation exists.

170. Under Article 3.2 of the *SPS Agreement*, a Member may decide to promulgate an SPS measure that conforms to an international standard. Such a measure would embody the international standard completely and, for practical purposes, converts it into a municipal standard. Such a measure enjoys the benefit of a presumption (albeit a rebuttable one) that it is consistent with the relevant provisions of the *SPS Agreement* and of the GATT 1994.

171. Under Article 3.1 of the *SPS Agreement*, a Member may choose to establish an SPS measure that is based on the existing relevant international standard, guideline or recommendation. Such a measure may adopt some, not necessarily all, of the elements of the international standard. The Member imposing this measure does not benefit from the presumption of consistency set up in Article 3.2; but, as earlier observed, the Member is not penalized by exemption of a complaining Member from the normal burden of showing a *prima facie* case of inconsistency with Article 3.1 or any other relevant article of the *SPS Agreement* or of the GATT 1994.

172. Under Article 3.3 of the *SPS Agreement*, a Member may decide to set for itself a level of protection different from that implicit in the international standard, and to implement or embody that level of protection in a measure not "based on" the international standard. The Member's appropriate level of protection may be higher than that implied in the international standard. The right of a Member to determine its own appropriate level of sanitary protection is an important right. This is made clear in the sixth preambular paragraph of the *SPS Agreement*:

Members,

> ...
>
> *Desiring* to further the use of harmonized sanitary and phytosanitary measures between Members, on the basis of international standards, guidelines and recommendations developed by the relevant international organizations, including the Codex Alimentarius Commission, the International Office of Epizootics, and the relevant international and regional organizations operating within the framework of the International Plant Protection Convention, without requiring Members to change their appropriate level of protection of human, animal or plant life or health; (underlining added)

As noted earlier, this right of a Member to establish its own level of sanitary protection under Article 3.3 of the *SPS Agreement* is an autonomous right and *not* an "exception" from a "general obligation" under Article 3.1.

C. *The Requirements of Article 3.3 of the SPS Agreement*

173. The right of a Member to define its appropriate level of protection is not, however, an absolute or unqualified right. Article 3.3 also makes this clear:

> Members may introduce or maintain sanitary or phytosanitary measures which result in a higher level of sanitary or phytosanitary protection than would be achieved by measures based on the relevant international standards, guidelines or recommendations, if there is a scientific justification, or as a consequence of the level of sanitary or phytosanitary protection a Member determines to be appropriate in accordance with the relevant provisions of paragraphs 1 through 8 of Article 5.[2] Notwithstanding the above, all measures which result in a level of sanitary or phytosanitary protection different from that which would be achieved by measures based on international standards, guidelines or recommendations shall not be inconsistent with any other provision of this Agreement.
>
> ———————
>
> [2]For the purposes of paragraph 3 of Article 3, there is a scientific justification if, on the basis of an examination and evaluation of available scientific information in conformity with the relevant provisions of this Agreement, a Member determines that the relevant international standards, guidelines or recommendations are not sufficient to achieve its appropriate level of sanitary or phytosanitary protection.

174. The European Communities argues that there are two situations covered by Article 3.3 and that its SPS measures are within the first of these situations.[157] It is claimed that the European Communities has maintained SPS measures "which result in a higher level of ... protection than would be achieved by measures based on the relevant" Codex standard, guideline or recommendation, for which measures "there is a scientific justification".[158] It is also, accordingly, argued that the requirement of a risk assessment under Article 5.1 does not apply to the European Communities. At the same time, it is emphasized that the EC measures have satisfied the requirements of Article 2.2.[159]

175. Article 3.3 is evidently not a model of clarity in drafting and communication. The use of the disjunctive "or" does indicate that two situations are intended to be covered. These are the introduction or maintenance of SPS measures which result in a higher level of protection:

> (a)"if there is a scientific justification"; or
> (b)"as a consequence of the level of ... protection a Member determines to be appropriate in accordance with the relevant provisions of paragraphs 1 through 8 of Article 5".

[157]EC's appellant's submission, paras. 240-244.

[158]*SPS Agreement*, Article 3.3.

[159]EC's appellee's submission, para. 88.

It is true that situation (a) does not speak of Articles 5.1 through 5.8. Nevertheless, two points need to be noted. First, the last sentence of Article 3.3 requires that "all measures which result in a [higher] level of ... protection", that is to say, measures falling within situation (a) as well as those falling within situation (b), be "not inconsistent with any other provision of [the SPS] Agreement". "Any other provision of this Agreement" textually includes Article 5. Secondly, the footnote to Article 3.3, while attached to the end of the first sentence, defines "scientific justification" as an "examination and evaluation of available scientific information in conformity with relevant provisions of this Agreement ...". This examination and evaluation would appear to partake of the nature of the risk assessment required in Article 5.1 and defined in paragraph 4 of Annex A of the *SPS Agreement*.

176. On balance, we agree with the Panel's finding that although the European Communities has established for itself a level of protection higher, or more exacting, than the level of protection implied in the relevant Codex standards, guidelines or recommendations, the European Communities was bound to comply with the requirements established in Article 5.1. We are not unaware that this finding tends to suggest that the distinction made in Article 3.3 between two situations may have very limited effects and may, to that extent, be more apparent than real. Its involved and layered language actually leaves us with no choice.

177. Consideration of the object and purpose of Article 3 and of the *SPS Agreement* as a whole reinforces our belief that compliance with Article 5.1 was intended as a countervailing factor in respect of the right of Members to set their appropriate level of protection. In generalized terms, the object and purpose of Article 3 is to promote the harmonization of the SPS measures of Members on as wide a basis as possible, while recognizing and safeguarding, at the same time, the right and duty of Members to protect the life and health of their people. The ultimate goal of the harmonization of SPS measures is to prevent the use of such measures for arbitrary or unjustifiable discrimination between Members or as a disguised restriction on international trade, without preventing Members from adopting or enforcing measures which are both "necessary to protect" human life or health and "based on scientific principles", and without requiring them to change their appropriate level of protection. The requirements of a risk assessment under Article 5.1, as well as of "sufficient scientific evidence" under Article 2.2, are essential for the maintenance of the delicate and carefully negotiated balance in the *SPS Agreement* between the shared, but sometimes competing, interests of promoting international trade and of protecting the life and health of human beings. We conclude that the Panel's finding that the European Communities is required by Article 3.3 to comply with the requirements of Article 5.1 is correct and, accordingly, dismiss the appeal of the European Communities from that ruling of the Panel.

XI. The Reading of Articles 5.1 and 5.2 of the *SPS Agreement*: Basing SPS Measures on a Risk Assessment

178. We turn to the appeal of European Communities from the Panel's conclusion that, by maintaining SPS measures which are not based on a risk assessment, the European Communities acted inconsistently with the requirements contained in Article 5.1 of the *SPS Agreement*.

179. Article 5.1 of the *SPS Agreement* provides:

> Members shall ensure that their sanitary or phytosanitary measures are based on an assessment, as appropriate to the circumstances, of the risks to human, animal or plant life or health, taking into account risk assessment techniques developed by the relevant international organizations. (underlining added)

A. *The Interpretation of "Risk Assessment"*

180. At the outset, two preliminary considerations need to be brought out. The first is that the Panel considered that Article 5.1 may be viewed as a specific application of the basic obligations contained in Article 2.2 of the *SPS Agreement*[160], which reads as follows:

> Members shall ensure that any sanitary or phytosanitary measure is applied only to the extent necessary to protect human, animal or plant life or health, is based on scientific principles and is not maintained without sufficient scientific evidence, except as provided for in paragraph 7 of Article 5. (underlining added)

We agree with this general consideration and would also stress that Articles 2.2 and 5.1 should constantly be read together. Article 2.2 informs Article 5.1: the elements that define the basic obligation set out in Article 2.2 impart meaning to Article 5.1.

181. The second preliminary consideration relates to the Panel's effort to distinguish between "risk assessment" and "risk management". The Panel observed that an assessment of risk is, at least with respect to risks to human life and health, a "scientific" examination of data and factual studies; it is not, in the view of the Panel, a "policy" exercise involving social value judgments made by political bodies.[161] The Panel describes the latter as "non-scientific" and as pertaining to "risk management" rather than to "risk assessment".[162] We must stress, in this connection, that Article 5 and Annex A of the *SPS Agreement* speak of "risk assessment" only and that the term "risk management" is not to be found either in Article 5 or in any other provision of the *SPS Agreement*. Thus, the Panel's distinction, which it apparently employs to achieve or support what appears to be a restrictive notion of risk assessment, has no textual basis. The fundamental rule of treaty interpretation requires a treaty interpreter to read and interpret the words actually used by the agreement under examination, and not words which the interpreter may feel should have been used.

1. Risk Assessment and the Notion of "Risk"

182. Paragraph 4 of Annex A of the *SPS Agreement* sets out the treaty definition of risk assessment: This definition, to the extent pertinent to the present appeal, speaks of:

> ... the evaluation of the potential for adverse effects on human or animal health arising from the presence of additives, contaminants, toxins or disease-causing organisms in food, beverages or feedstuffs. (underlining added)

183. Interpreting the above definition, the Panel elaborates risk assessment as a two-step process that "should (i) *identify* the *adverse effects* on human health (if any) arising from the presence of the hormones at issue when used as growth promoters *in meat* ..., and (ii) if any such adverse effects exist, *evaluate* the *potential* or probability of occurrence of such effects".[163]

184. The European Communities appeals from the above interpretation as involving an erroneous notion of risk and risk assessment. Although the utility of a two-step analysis may be debated, it does not

[160] US Panel Report, para. 8.93; Canada Panel Report, para. 8.96.

[161] US Panel Report, para. 8.94; Canada Panel Report, para. 8.97.

[162] US Panel Report, para. 8.95; Canada Panel Report, para. 8.98.

[163] US Panel Report, para. 8.98; Canada Panel Report, para. 8.101.

appear to us to be substantially wrong. What needs to be pointed out at this stage is that the Panel's use of "probability" as an alternative term for "potential" creates a significant concern. The ordinary meaning of "potential" relates to "possibility" and is different from the ordinary meaning of "probability".[164] "Probability" implies a higher degree or a threshold of potentiality or possibility. It thus appears that here the Panel introduces a quantitative dimension to the notion of risk.

185. In its discussion on a statement made by Dr. Lucier at the joint meeting with the experts in February 1997[165], the Panel states the risk referred to by this expert is an estimate which "... only represents a statistical range of 0 to 1 in a million, not a scientifically identified risk".[166] The European Communities protests vigorously that, by doing so, the Panel is in effect requiring a Member carrying out a risk assessment to quantify the potential for adverse effects on human health.[167]

186. It is not clear in what sense the Panel uses the term "scientifically identified risk". The Panel also frequently uses the term "identifiable risk"[168], and does not define this term either. The Panel might arguably have used the terms "scientifically identified risk" and "identifiable risk" simply to refer to an ascertainable risk: if a risk is not ascertainable, how does a Member ever know or demonstrate that it exists? In one part of its Reports, the Panel opposes a requirement of an "identifiable risk" to the uncertainty that theoretically always remains since science can *never* provide *absolute* certainty that a given substance will not *ever* have adverse health effects.[169] We agree with the Panel that this theoretical uncertainty is not the kind of risk which, under Article 5.1, is to be assessed. In another part of its Reports, however, the Panel appeared to be using the term "scientifically identified risk" to prescribe implicitly that a certain *magnitude* or threshold level of risk be demonstrated in a risk assessment if an SPS measure based thereon is to be regarded as consistent with Article 5.1.[170] To the extent that the Panel purported to require a risk assessment to establish a minimum magnitude of risk, we must note that imposition of such a quantitative requirement finds no basis in the *SPS Agreement*. A panel is authorized only to determine whether a given SPS measure is "based on" a risk assessment. As will be elaborated below, this means that a panel has to determine whether an SPS measure is sufficiently supported or reasonably warranted by the risk assessment.

2. Factors to be Considered in Carrying Out a Risk Assessment

187. Article 5.2 of the *SPS Agreement* provides an indication of the factors that should be taken into account in the assessment of risk. Article 5.2 states that:

> In the assessment of risks, Members shall take into account available scientific evidence; relevant processes and production methods; relevant inspection, sampling and testing methods; prevalence of specific diseases or pests; existence of pest- or disease-free areas; relevant ecological and environmental conditions; and quarantine or other treatment.

[164]The dictionary meaning of "potential" is "that which is possible as opposed to actual; a possibility"; L. Brown (ed.), *The New Shorter Oxford English Dictionary on Historical Principles,* Vol. 2, p. 2310 (Clarendon Press, 1993). In contrast, "probability" refers to "degrees of likelihood; the appearance of truth, or likelihood of being realized", and "a thing judged likely to be true, to exist, or to happen"; *Id.*, p. 2362.

[165]Para. 819 of the Annex to the US and Canada Panel Reports.

[166]US Panel Report, footnote 331; Canada Panel Report, footnote 437.

[167]EC's appellant's submission, paras. 392-397.

[168]US Panel Report, paras. 8.124, 8.134, 8.136, 8.151, 8.153, 8.161, 8.162; Canada Panel Report, paras. 8.127, 8.137, 8.139, 8.154, 8.156, 8.164, 8.165.

[169]US Panel Report, paras. 8.152-8.153; Canada Panel Report, paras. 8.155-8.156

[170]US Panel Report, footnote 331; Canada Panel Report, footnote 437.

The listing in Article 5.2 begins with "available scientific evidence"; this, however, is only the beginning. We note in this connection that the Panel states that, for purposes of the EC measures in dispute, a risk assessment required by Article 5.1 is "a *scientific* process aimed at establishing the *scientific* basis for the sanitary measure a Member intends to take".[171] To the extent that the Panel intended to refer to a process characterized by systematic, disciplined and objective enquiry and analysis, that is, a mode of studying and sorting out facts and opinions, the Panel's statement is unexceptionable.[172] However, to the extent that the Panel purports to exclude from the scope of a risk assessment in the sense of Article 5.1, all matters not susceptible of quantitative analysis by the empirical or experimental laboratory methods commonly associated with the physical sciences, we believe that the Panel is in error. Some of the kinds of factors listed in Article 5.2 such as "relevant processes and production methods" and "relevant inspection, sampling and testing methods" are not necessarily or wholly susceptible of investigation according to laboratory methods of, for example, biochemistry or pharmacology. Furthermore, there is nothing to indicate that the listing of factors that may be taken into account in a risk assessment of Article 5.2 was intended to be a closed list. It is essential to bear in mind that the risk that is to be evaluated in a risk assessment under Article 5.1 is not only risk ascertainable in a science laboratory operating under strictly controlled conditions, but also risk in human societies as they actually exist, in other words, the actual potential for adverse effects on human health in the real world where people live and work and die.

B. *The Interpretation of "Based On"*

1. A "Minimum Procedural Requirement" in Article 5.1?

188. Although it expressly recognizes that Article 5.1 does *not* contain any specific procedural requirements for a Member to base its sanitary measures on a risk assessment, the Panel nevertheless proceeds to declare that "there is a minimum procedural requirement contained in Article 5.1". That requirement is that "the Member imposing a sanitary measure needs to submit evidence that at least it actually *took into account* a risk assessment when it enacted or maintained its sanitary measure in order for that measure to be considered as *based on* a risk assessment".[173] The Panel goes on to state that the European Communities did not provide any evidence that the studies it referred to or the scientific conclusions reached therein "*have actually been taken into account by the competent EC institutions* either when it *enacted* those measures (in 1981 and 1988) or *at any later point in time*".[174] (emphasis added) Thereupon, the Panel holds that such studies could not be considered as part of a risk assessment on which the European Communities based its measures in dispute. Concluding that the European Communities had not met its burden of proving that it had satisfied the "minimum procedural requirement" it had found in Article 5.1, the Panel holds the EC measures as inconsistent with the requirements of Article 5.1.

[171]US Panel Report, para. 8.107; Canada Panel Report, para. 8.110.

[172]"The ordinary meaning of _scientific', as provided by dictionary definitions, includes _of, relating to, or used in science', _broadly, having or appearing to have an exact, objective, factual, systematic or methodological basis', _of, relating to, or exhibiting the methods or principles of science' and _of, pertaining to, using, or based on the methodology of science'. Dictionary definitions of _science' include _the observation, identification, description, experimental investigation, and theoretical explanation of natural phenomena', _any methodological activity, discipline, or study', and _knowledge attained through study or practice'". (footnotes omitted) *United States' Statement of Administrative Action, Uruguay Round Agreements Act*, 203d Congress, 2d Session, House Document 103-316, Vol. 1, 27 September 1994, p. 90.

[173]US Panel Report, para. 8.113; Canada Panel Report, para. 8.116.

[174]US Panel Report, para. 8.114; Canada Panel Report, para. 8.117.

189. We are bound to note that, as the Panel itself acknowledges, no textual basis exists in Article 5 of the *SPS Agreement* for such a "minimum procedural requirement". The term "based on", when applied as a "minimum procedural requirement" by the Panel, may be seen to refer to a human action, such as particular human individuals "taking into account" a document described as a risk assessment. Thus, "take into account" is apparently used by the Panel to refer to some subjectivity which, at some time, may be present in particular individuals but that, in the end, may be totally rejected by those individuals. We believe that "based on" is appropriately taken to refer to a certain *objective relationship* between two elements, that is to say, to an *objective situation* that persists and is observable between an SPS measure and a risk assessment. Such a reference is certainly embraced in the ordinary meaning of the words "based on" and, when considered in context and in the light of the object and purpose of Article 5.1 of the *SPS Agreement*, may be seen to be more appropriate than "taking into account". We do not share the Panel's interpretative construction and believe it is unnecessary and an error of law as well.

190. Article 5.1 does not insist that a Member that adopts a sanitary measure shall have carried out its own risk assessment. It only requires that the SPS measures be "based on an assessment, as appropriate for the circumstances ...". The SPS measure might well find its objective justification in a risk assessment carried out by another Member, or an international organization. The "minimum procedural requirement" constructed by the Panel, could well lead to the elimination or disregard of available scientific evidence that rationally supports the SPS measure being examined. This risk of exclusion of available scientific evidence may be particularly significant for the bulk of SPS measures which were put in place before the effective date of the *WTO Agreement* and that have been simply maintained thereafter.

191. In the course of demanding evidence that EC authorities actually "took into account" certain scientific studies, the Panel refers to the preambles of the EC Directives here involved. The Panel notes that such preambles did not mention any of the scientific studies referred to by the European Communities in the panel proceedings. Preambles of legislative or quasi-legislative acts and administrative regulations commonly fulfil requirements of the internal legal orders of WTO Members. Such preambles are certainly not required by the *SPS Agreement*; they are not normally used to demonstrate that a Member has complied with its obligations under international agreements. The absence of any mention of scientific studies in the preliminary sections of the EC Directives does not, therefore, prove anything so far as the present case is concerned.

2. Substantive Requirement of Article 5.1 - Rational Relationship Between an SPS Measure and a Risk Assessment

192. Having posited a "minimum procedural requirement" of Article 5.1, the Panel turns to the "substantive requirements" of Article 5.1 to determine whether the EC measures at issue are "based on" a risk assessment. In the Panel's view, those "substantive requirements" involve two kinds of operations: first, identifying the scientific conclusions reached in the risk assessment and the scientific conclusions implicit in the SPS measures; and secondly, examining those scientific conclusions to determine whether or not one set of conclusions matches, i.e. conforms with, the second set of conclusions.[175] Applying the "substantive requirements" it finds in Article 5.1, the Panel holds that the scientific conclusions implicit in the EC measures do not conform with any of the scientific conclusions reached in the scientific studies the European Communities had submitted as evidence.[176]

193. We consider that, in principle, the Panel's approach of examining the scientific conclusions implicit in the SPS measure under consideration and the scientific conclusion yielded by a risk assessment

[175]US Panel Report, para. 8.117; Canada Panel Report, para. 8.120.

[176]US Panel Report, para. 8.137; Canada Panel Report, para. 8.140.

is a useful approach. The relationship between those two sets of conclusions is certainly relevant; they cannot, however, be assigned relevance to the exclusion of everything else. We believe that Article 5.1, when contextually read as it should be, in conjunction with and as informed by Article 2.2 of the *SPS Agreement*, requires that the results of the risk assessment must sufficiently warrant – that is to say, reasonably support – the SPS measure at stake. The requirement that an SPS measure be "based on" a risk assessment is a substantive requirement that there be a rational relationship between the measure and the risk assessment.

194. We do not believe that a risk assessment has to come to a monolithic conclusion that coincides with the scientific conclusion or view implicit in the SPS measure. The risk assessment could set out both the prevailing view representing the "mainstream" of scientific opinion, as well as the opinions of scientists taking a divergent view. Article 5.1 does not require that the risk assessment must necessarily embody only the view of a majority of the relevant scientific community. In some cases, the very existence of divergent views presented by qualified scientists who have investigated the particular issue at hand may indicate a state of scientific uncertainty. Sometimes the divergence may indicate a roughly equal balance of scientific opinion, which may itself be a form of scientific uncertainty. In most cases, responsible and representative governments tend to base their legislative and administrative measures on "mainstream" scientific opinion. In other cases, equally responsible and representative governments may act in good faith on the basis of what, at a given time, may be a divergent opinion coming from qualified and respected sources. By itself, this does not necessarily signal the absence of a reasonable relationship between the SPS measure and the risk assessment, especially where the risk involved is life-threatening in character and is perceived to constitute a clear and imminent threat to public health and safety. Determination of the presence or absence of that relationship can only be done on a case-to-case basis, after account is taken of all considerations rationally bearing upon the issue of potential adverse health effects.

195. We turn now to the application by the Panel of the substantive requirements of Article 5.1 to the EC measures at stake in the present case. The Panel lists the following scientific material to which the European Communities referred in respect of the hormones here involved (except MGA):

-the 1982 Report of the EC Scientific Veterinary Committee, Scientific Committee for Animal Nutrition and the Scientific Committee for Food on the basis of the Report of the Scientific Group on Anabolic Agents in Animal Production ("Lamming Report");

-the 1983 Symposium on Anabolics in Animal Production of the *Office international des epizooties* ("OIE") ("1983 OIE Symposium");

-the 1987 Monographs of the International Agency for Research on Cancer ("IARC") on the Evaluation of Carcinogenic Risks to Humans, Supplement 7 ("1987 IARC Monographs");

-the 1988 and 1989 JECFA Reports;

-the 1995 European Communities Scientific Conference on Growth Promotion in Meat Production ("1995 EC Scientific Conference");

-articles and opinions by individual scientists relevant to the use of hormones (three articles in the journal Science, one article in the International Journal of Health Service, one report in The Veterinary Record and separate scientific opinions of Dr. H. Adlercreutz, Dr. E. Cavalieri, Dr. S.S. Epstein, Dr. J.G. Liehr, Dr. M. Metzler, Dr.

> Perez-Comas and Dr. A. Pinter, all of whom were part of the EC delegation at [the] joint meeting with experts).[177]

196. Several of the above scientific reports appeared to the Panel to meet the minimum requirements of a risk assessment, in particular, the Lamming Report and the 1988 and 1989 JECFA Reports. The Panel assumes accordingly that the European Communities had demonstrated the existence of a risk assessment carried out in accordance with Article 5 of the *SPS Agreement*.[178] At the same time, the Panel finds that the conclusion of these scientific reports is that the use of the hormones at issue (except MGA) for growth promotion purposes is "safe". The Panel states:

> ... none of the scientific evidence referred to by the European Communities which specifically addresses the safety of some or all of the hormones in dispute when used for growth promotion, indicates that an identifiable risk arises for human health from such use of these hormones if good practice is followed. All of the scientific studies outlined above came to the conclusion that the use of the hormones at issue (all but MGA, for which no evidence was submitted) for growth promotion purposes is safe; most of these studies adding that this conclusion assumes that good practice is followed.[179]

197. Prescinding from the difficulty raised by the Panel's use of the term "identifiable risk", we agree that the scientific reports listed above do not rationally support the EC import prohibition.[180]

[177]US Panel Report, para. 8.108; Canada Panel Report, para. 8.111.

[178]US Panel Report, para. 8.111; Canada Panel Report, para. 8.114.

[179]US Panel Report, para. 8.124; Canada Panel Report, para. 8.127.

[180]In paras. 97-109 of this Report, we conclude that the Panel mistakenly required that the European Communities take on the burden of proof that its measures related to the hormones involved here, except MGA, are based on a risk assessment. We determine that the United States and Canada have to make a *prima facie* case that these measures are *not* based on a risk assessment. However, after careful consideration of the panel record, we are satisfied that the United States and Canada, although not required to do so by the Panel, did, in fact, make this *prima facie* case that the SPS measures related to the hormones involved here, except MGA, are not based on a risk assessment.

198. With regard to the scientific opinion expressed by Dr. Lucier at the joint meeting with the experts, and as set out in paragraph 819 of the Annex to the US and Canada Panel Reports[181], we should note that this opinion by Dr. Lucier does not purport to be the result of scientific studies carried out by him or under his supervision focusing specifically on residues of hormones in meat from cattle fattened with such hormones.[182] Accordingly, it appears that the single divergent opinion expressed by Dr. Lucier is not reasonably sufficient to overturn the contrary conclusions reached in the scientific studies referred to by the European Communities that related specifically to residues of the hormones in meat from cattle to which hormones had been administered for growth promotion.

199. The European Communities laid particular emphasis on the 1987 IARC Monographs and the articles and opinions of individual scientists referred to above.[183] The Panel notes, however, that the scientific evidence set out in these Monographs and these articles and opinions relates to the carcinogenic potential of entire *categories* of hormones, or of the hormones at issue *in general*. The Monographs and the articles and opinions are, in other words, in the nature of general studies of or statements on the carcinogenic potential of the named hormones. The Monographs and the articles and opinions of individual scientists have not evaluated the carcinogenic potential of those hormones when used specifically *for growth promotion purposes*. Moreover, they do not evaluate the specific potential for carcinogenic effects arising from the presence *in "food"*, more specifically, "meat or meat products" of residues of the hormones in dispute. The Panel also notes that, according to the scientific experts advising the Panel, the data and studies set out in these 1987 Monographs have been taken into account in the 1988 and 1989 JECFA Reports and that the conclusions reached by the 1987 IARC Monographs are complementary to, rather than contradictory of, the conclusions of the JECFA Reports.[184] The Panel concludes that these Monographs and these articles and opinions are insufficient to support the EC measures at issue in this case.

200. We believe that the above findings of the Panel are justified. The 1987 IARC Monographs and the articles and opinions of individual scientists submitted by the European Communities constitute general studies which do indeed show the existence of a general risk of cancer; but they do not focus on and do not address the particular kind of risk here at stake - the carcinogenic or genotoxic potential of the residues of those hormones found in meat derived from cattle to which the hormones had been administered for growth promotion purposes – as is required by paragraph 4 of Annex A of the *SPS Agreement*. Those general studies, are in other words, relevant but do not appear to be sufficiently specific to the case at hand.

[181]This paragraph reads in relevant part:

> For every million women alive in the United States, Canada, Europe today, about a 110,000 of those women will get breast cancer. This is obviously a tremendous public health issue. Of those 110,000 women get breast cancer, maybe several thousand of them are related to the total intake of exogenous oestrogens from every source, including eggs, meat, phyto-oestrogens, fungal oestrogens, the whole body burden of exogenous oestrogens. And by my estimates one of those 110,000 would come from eating meat containing oestrogens as a growth promoter, if used as prescribed.

[182]Assuming that Dr. Lucier's estimate is realistic, it is noteworthy that there could be up to 371 persons who, under the conditions identified by Dr. Lucier, would get cancer in the Member States of the European Union. The total population of the Member States of the European Union in 1995 was 371 million.

[183]Para. 195 of this Report.

[184]US Panel Report, para. 8.129; Canada Panel Report, para. 8.132.

201. With regard to risk assessment concerning MGA, the European Communities referred to the 1987 IARC Monographs. These Monographs deal with, *inter alia*, the category of progestins of which the hormone progesterone is a member. The European Communities argues that because MGA is an anabolic agent which mimics the action of progesterone, the scientific studies and experiments relied on by the 1987 IARC Monographs were highly relevant.[185] However, the Monographs and the articles and opinions of the individual scientists did not include any study that demonstrated how closely related MGA is chemically and pharmacologically to other progestins and what effects MGA residues would actually have on human beings when such residues are ingested along with meat from cattle to which MGA has been administered for growth promotion purposes. It must be recalled in this connection that none of the other scientific material submitted by the European Communities referred to MGA, and that no international standard, guideline or recommendation has been developed by Codex relating specifically to MGA. The United States and Canada declined to submit any assessment of MGA upon the ground that the material they were aware of was proprietary and confidential in nature. In other words, there was an almost complete absence of evidence on MGA in the panel proceedings. We therefore uphold the Panel's finding that there was no risk assessment with regard to MGA.

202. The evidence referred to above by the European Communities related to the biochemical risk arising from the ingestion by human beings of residues of the five hormones here involved in treated meat, where such hormones had been administered to the cattle in accordance with good veterinary practice.[186] The European Communities also referred to distinguishable but closely related risks - risks arising from failure to observe the requirements of good veterinary practice, in combination with multiple problems relating to detection and control of such abusive failure, in the administration of hormones to cattle for growth promotion.

203. The Panel considers this type of risk and examines the arguments made by the European Communities but finds no assessment of such kind of risk. Ultimately, the Panel rejects those arguments principally on *a priori* grounds. First, to the Panel, the provisions of Article 5.2 relating to "relevant inspection, sampling and testing methods":

> ... do not seem to cover the general problem of control (such as the problem of ensuring the observance of good practice) which can exist for any substance. The risks related to the general problem of control do not seem to be specific to the substance at issue but to the economic or social incidence related to a substance or its particular use (such as economic incentives for abuse). These non-scientific factors should, therefore not be taken into account in a risk assessment but in *risk management*.[187] (underlining added)

[185]EC's appellant's submission, para. 179 *ff*.

[186]Although the term used in the Codex Standards for the three natural hormones is *good animal husbandry practice* (Section I, MRLs, *Codex Alimentarius*, Vol. 3, pp. 7, 12 and 14), the Glossary of Terms and Definitions of the *Codex Alimentarius* does not contain this term. Instead, it defines the concept:

> "**Good Practice in the Use of Veterinary Drugs (GPVD):** Is the official recommended or authorized usage including withdrawal periods, approved by national authorities, of veterinary drugs under practical conditions".

We will therefore use the term *good veterinary practice* as a shorthand expression of the concept defined in the *Codex Alimentarius*.

[187]US Panel Report, para. 8.146; Canada Panel Report, para. 8.149.

Moreover, the Panel finds that, assuming these factors could be taken into account in a risk assessment, the European Communities has not provided convincing evidence that the control or prevention of abuse of the hormones here involved is more difficult than the control of other veterinary drugs, the use of which is allowed in the European Communities. Further, the European Communities has not provided evidence that control would be more difficult under a regime where the use of the hormones in dispute is allowed under specific conditions than under the current EC regime of total prohibition both domestically and in respect of imported meat. The Panel concludes by saying that banning the use of a substance does not necessarily offer better protection of human health than other means of regulating its use.[188]

204. The European Communities appeals from these findings of the Panel principally on two grounds: firstly, that the Panel has misinterpreted Article 5.2 of the *SPS Agreement*; secondly, that the Panel has disregarded and distorted the evidence submitted by the European Communities.[189]

205. In respect of the first ground, we agree with the European Communities that the Panel has indeed misconceived the scope of application of Article 5.2. It should be recalled that Article 5.2 states that in the assessment of risks, Members shall take into account, in addition to "available scientific evidence", "relevant processes and production methods; [and] relevant inspection, sampling and testing methods". We note also that Article 8 requires Members to "observe the provisions of Annex C in the operation of control, inspection and approval procedures ...". The footnote in Annex C states that "control, inspection and approval procedures include, *inter alia*, procedures for sampling, testing and certification". We consider that this language is amply sufficient to authorize the taking into account of risks arising from failure to comply with the requirements of good veterinary practice in the administration of hormones for growth promotion purposes, as well as risks arising from difficulties of control, inspection and enforcement of the requirements of good veterinary practice.

206. Most, if not all, of the scientific studies referred to by the European Communities, in respect of the five hormones involved here, concluded that their use for growth promotion purposes is "safe"[190], if the hormones are administered in accordance with the requirements of good veterinary practice. Where the condition of observance of good veterinary practice (which is much the same condition attached to the standards, guidelines and recommendations of Codex with respect to the use of the five hormones for growth promotion) is *not* followed, the logical inference is that the use of such hormones for growth promotion purposes may or may not be "safe".[191] The *SPS Agreement* requires assessment of the potential for adverse effects on human health arising from the presence of contaminants and toxins in food. We consider that the object and purpose of the *SPS Agreement* justify the examination and evaluation of all such risks for human health whatever their precise and immediate origin may be. We do not mean to suggest that risks arising from potential abuse in the administration of controlled substances and from control problems need to be, or should be, evaluated by risk assessors in each and every case. When and if risks of these types do in fact arise, risk assessors may examine and evaluate them. Clearly, the necessity or propriety of examination and evaluation of such risks would have to be addressed on a case-by-case basis. What, in our view, is a fundamental legal error is to exclude, on an *a priori* basis, any such risks from the scope of application of Articles 5.1 and 5.2. We disagree with the Panel's suggestion that exclusion of risks resulting from the combination of potential abuse and difficulties of control is justified by distinguishing between "risk assessment" and "risk management". As earlier noted, the concept of "risk

[188]US Panel Report, para. 8.146; Canada Panel Report, para. 8.149.

[189]EC's appellant's submission, para. 399 and 401.

[190]US Panel Report, para. 8.124; Canada Panel Report, para. 8.127.

[191]This point was clearly brought out during the oral hearing and both the United States and Canada expressed agreement with this inference. See footnote 186 of this Report concerning the usage of the terms "good veterinary practice" and "good animal husbandry practice".

management" is not mentioned in any provision of the *SPS Agreement* and, as such, cannot be used to sustain a more restrictive interpretation of "risk assessment" than is justified by the actual terms of Article 5.2, Article 8 and Annex C of the *SPS Agreement*.

207. The question that arises, therefore, is whether the European Communities did, in fact, submit a risk assessment demonstrating and evaluating the existence and level of risk arising in the present case from abusive use of hormones and the difficulties of control of the administration of hormones for growth promotion purposes, within the United States and Canada as exporting countries, and at the frontiers of the European Communities as an importing country. Here, we must agree with the finding of the Panel that the European Communities in fact restricted itself to pointing out the condition of administration of hormones "in accordance with good practice" "without further providing an assessment of the potential adverse effects related to non compliance with such practice".[192] The record of the panel proceedings shows that the risk arising from abusive use of hormones for growth promotion combined with control problems for the hormones at issue, may have been examined on two occasions in a scientific manner. The first occasion may have occurred at the proceedings before the Committee of Inquiry into the Problem of Quality in the Meat Sector established by the European Parliament, the results of which constituted the basis of the Pimenta Report of 1989. However, none of the original studies and evidence put before the Committee of Inquiry was submitted to the Panel. The second occasion could have been the 1995 EC Scientific Conference on Growth Promotion in Meat Production. One of the three workshops of this Conference examined specifically the problems of "detection and control". However, only one of the studies presented to the workshop discussed systematically some of the problems arising from the combination of potential abuse and problems of control of hormones and other substances.[193] The study presented a theoretical framework for the systematic analysis of such problems, but did not itself investigate and evaluate the actual problems that have arisen at the borders of the European Communities or within the United States, Canada and other countries exporting meat and meat products to the European Communities. At best, this study may represent the beginning of an assessment of such risks.

208. In the absence of any other relevant documentation, we find that the European Communities did not actually proceed to an assessment, within the meaning of Articles 5.1 and 5.2, of the risks arising from the failure of observance of good veterinary practice combined with problems of control of the use of hormones for growth promotion purposes. The absence of such a risk assessment, when considered in conjunction with the conclusion actually reached by most, if not all, of the scientific studies relating to the other aspects of risk noted earlier, leads us to the conclusion that no risk assessment that reasonably supports or warrants the import prohibition embodied in the EC Directives was furnished to the Panel. We affirm, therefore, the ultimate conclusion of the Panel that the EC import prohibition is not based on a risk assessment within the meaning of Articles 5.1 and 5.2 of the *SPS Agreement* and is, therefore, inconsistent with the requirements of Article 5.1.

209. Since we have concluded above[194] that an SPS measure, to be consistent with Article 3.3, has to comply with, *inter alia*, the requirements contained in Article 5.1, it follows that the EC measures at issue, by failing to comply with Article 5.1, are also inconsistent with Article 3.3 of the *SPS Agreement*.

XII. The Reading of Article 5.5 of the *SPS Agreement*: Consistency of Levels of Protection and Resulting Discrimination or Disguised Restriction on International Trade

[192] US Panel Report, para. 8.143; Canada Panel Report, para. 8.146.

[193] B. Jülicher, "Sampling Strategies", in *Proceedings of the Scientific Conference on Growth Promotion in Meat Production*, Brussels, 29 November to 1 December 1995, pp. 521-540.

[194] See para. 177 of this Report.

210. The European Communities also appeals from the conclusion of the Panel[195] that, by adopting arbitrary or unjustifiable distinctions in the levels of sanitary protection it considers appropriate in different situations which result in discrimination or a disguised restriction on international trade, the European Communities acted inconsistently with the requirements set out in Article 5.5 of the *SPS Agreement*.[196]

A. *General Considerations: the Elements of Article 5.5*

211. Article 5.5 of the *SPS Agreement* needs to be quoted in full:

> With the objective of achieving consistency in the application of the concept of appropriate level of sanitary or phytosanitary protection against risks to human life or health, or to animal and plant life or health, each Member shall avoid arbitrary or unjustifiable distinctions in the levels it considers to be appropriate in different situations, if such distinctions result in discrimination or a disguised restriction on international trade. Members shall cooperate in the Committee, in accordance with paragraphs 1, 2 and 3 of Article 12, to develop guidelines to further the practical implementation of this provision. In developing the guidelines, the Committee shall take into account all relevant factors, including the exceptional character of human health risks to which people voluntarily expose themselves.

212. Article 5.5 must be read in context. An important part of that context is Article 2.3 of the *SPS Agreement*, which provides as follows:

> Members shall ensure that their sanitary and phytosanitary measures do not arbitrarily or unjustifiably discriminate between Members where identical or similar conditions prevail, including between their own territory and that of other Members. Sanitary and phytosanitary measures shall not be applied in a manner which would constitute a disguised restriction on international trade.

When read together with Article 2.3, Article 5.5 may be seen to be marking out and elaborating a particular route leading to the same destination set out in Article 2.3.

213. The objective of Article 5.5 is formulated as the "achieving [of] consistency in the application of the concept of appropriate level of sanitary or phytosanitary protection". Clearly, the desired consistency is defined as a goal to be achieved in the future. To assist in the realization of that objective, the Committee on Sanitary and Phytosanitary Measures is to develop *guidelines for the practical implementation of Article 5.5*, bearing in mind, among other things, that ordinarily, people do not voluntarily expose themselves to health risks. Thus, we agree with the Panel's view that the statement of that goal does not establish a *legal obligation* of consistency of appropriate levels of protection. We think, too, that the goal set is not absolute or perfect consistency, since governments establish their appropriate levels of protection frequently on an *ad hoc* basis and over time, as different risks present themselves at different times. It is only arbitrary or unjustifiable inconsistencies that are to be avoided.

[195] EC's appellant's submission, para. 448.

[196] US Panel Report, paras. 8.206, 8.218, 8.244, 8.266 and 8.269; Canada Panel Report, paras. 8.209, 8.221, 8.247, 8.269 and 8.272.

214. Close inspection of Article 5.5 indicates that a complaint of violation of this Article must show the presence of three distinct elements. The first element is that the Member imposing the measure complained of has adopted its own appropriate levels of sanitary protection against risks to human life or health in several different situations. The second element to be shown is that those *levels of protection* exhibit arbitrary or unjustifiable differences ("distinctions" in the language of Article 5.5) in their treatment of different situations. The last element requires that the arbitrary or unjustifiable differences result in discrimination or a disguised restriction of international trade. We understand the last element to be referring to the *measure* embodying or implementing a particular level of protection as resulting, in its application, in discrimination or a disguised restriction on international trade.

215. We consider the above three elements of Article 5.5 to be cumulative in nature; all of them must be demonstrated to be present if violation of Article 5.5 is to be found. In particular, both the second and third elements must be found. The second element alone would not suffice. The third element must also be demonstrably present: the implementing measure must be shown to be applied in such a manner as to result in discrimination or a disguised restriction on international trade. The presence of the second element – the arbitrary or unjustifiable character of differences in *levels of protection* considered by a Member as appropriate in differing situations – may in practical effect operate as a "warning" signal that the implementing *measure* in its application *might* be a discriminatory measure or *might* be a restriction on international trade disguised as an SPS measure for the protection of human life or health. Nevertheless, the measure itself needs to be examined and appraised and, in the context of the differing levels of protection, shown to result in discrimination or a disguised restriction on international trade.

B. *Different Levels of Protection in Different Situations*

216. We examine the first element set out in Article 5.5, namely, that a Member has established different levels of protection which it regards as appropriate for itself in differing situations. The Panel, interpreting the term "different situations", states in effect that situations involving the same substance or the same adverse health effect may be compared to one another.[197] The European Communities protests this interpretation as erroneous: while it agrees that there must be some common element (e.g. the substance or drug, or the health risk), it argues that such common element is not necessarily sufficient to ensure a rational comparison.[198]

217. There appears no need to examine this matter at any length. Clearly, comparison of *several* levels of sanitary protection deemed appropriate by a Member is necessary if a panel's inquiry under Article 5.5 is to proceed at all. The situations exhibiting differing levels of protection cannot, of course, be compared unless they are comparable, that is, unless they present some common element or elements sufficient to render them comparable. If the situations proposed to be examined are *totally* different from one another, they would not be rationally comparable and the differences in levels of protection cannot be examined for arbitrariness.

218. In examining the EC measures here involved[199] and at least one other SPS measure of the European Communities[200], the Panel finds that several different levels of protection were projected by the European Communities:

[197]US Panel Report, para. 8.176; Canada Panel Report, para. 8.179.

[198]EC's appellant's submission, para. 455.

[199]See paras. 2-5 of this Report.

[200]Directive du Conseil 70/524/CEE of 23 November 1970, Official Journal No. L 270, 14 December 1970, p. 1, the Annexes of which are replaced by Commission Directive 91/248/EEC of 12 April 1991, Official Journal No. L 124, 18 May 1991, p. 1.

(i) the level of protection in respect of natural hormones when used for growth promotion[201];
(ii) the level of protection in respect of natural hormones occurring endogenously in meat and other foods[202];
(iii) the level of protection in respect of natural hormones when used for therapeutic or zootechnical purposes[203];
(iv) the level of protection in respect of synthetic hormones (zeranol and trenbolone) when used for growth promotion[204]; and
(v) the level of protection in respect of carbadox and olaquindox.[205]

C. *Arbitrary or Unjustifiable Differences in Levels of Protection*

219. The Panel then proceeds to compare level of protection (i) with, firstly, level of protection (ii) and, secondly, with level of protection (iii). Thereafter, the Panel compares levels of protection (i) and (iv) with level of protection (v). The Panel holds that the differences between levels of protection (i) and (iv) on the one hand, and level of protection (ii) on the other, are arbitrary and unjustifiable.[206] It further held that the differences in levels of protection (i) and (iv) on the one hand, and level (v) on the other, are also arbitrary and unjustifiable.[207] In contrast, the Panel does not undertake to compare level of protection (iii) with level of protection (i).[208] We examine below *seriatim* what the Panel has done and the results it has obtained.

220. The Panel first compares the levels of protection established by the European Communities in respect of natural and synthetic hormones when used for growth promotion purposes (levels of protection (i) and (iv)) with the level of protection set by the European Communities in respect of natural hormones occurring endogenously in meat and other natural foods (level of protection (ii)). The Panel finds the difference between these levels of protection "arbitrary" and "unjustifiable" basically because, in its view, the European Communities had not provided any reason other than the difference between added hormones and hormones naturally occurring in meat and other foods that have formed part of the human diet for centuries, and had not submitted any evidence that the risk related to natural hormones used as growth promoters is higher than the risk related to endogenous hormones.[209] The Panel adds that the residue level of natural hormones in some natural products (such as eggs and broccoli) is higher than the residue level of hormones administered for growth promotion in treated meat.[210] Furthermore, the Panel states the practical difficulties of detecting the presence of residues of natural hormones in treated meat would also be present in respect of natural hormones occurring endogenously in meat and other foods.[211] The Panel

[208]US Panel Report, para. 8.200; Canada Panel Report, para. 8.203.

[209]US Panel Report, para. 8.193; Canada Panel Report, para. 8.196.

[210]US Panel Report, para. 8.194; Canada Panel Report, para. 8.197.

[211]US Panel Report, para. 8.195; Canada Panel Report, para. 8.198.

stresses the very marked gap between a "no-residue" level of protection against natural hormones used for growth promotion and the "unlimited-residue" level of protection with regard to hormones occurring naturally in meat and other foods.[212] Much the same reasons are deployed by the Panel in comparing the levels of protection in respect of synthetic hormones used for growth promotion and in respect of natural hormones endogenously occurring in meat and other foods.[213]

221. We do not share the Panel's conclusions that the above differences in levels of protection in respect of added hormones in treated meat and in respect of naturally-occurring hormones in food, are merely arbitrary and unjustifiable. To the contrary, we consider there is a fundamental distinction between added hormones (natural or synthetic) and naturally-occurring hormones in meat and other foods. In respect of the latter, the European Communities simply takes no regulatory action[214]; to require it to prohibit totally the production and consumption of such foods or to limit the residues of naturally-occurring hormones in food, entails such a comprehensive and massive governmental intervention in nature and in the ordinary lives of people as to reduce the comparison itself to an absurdity. The other considerations cited by the Panel, whether taken separately or grouped together, do not justify the Panel's finding of arbitrariness in the difference in the level of protection between added hormones for growth promotion and naturally-occurring hormones in meat and other foods.

222. Because the Panel finds that the difference in the level of protection in respect of the three natural hormones, when used for growth promotion purposes, and the level of protection in respect of natural hormones present endogenously in meat and other foods is unjustifiable, the Panel regards it as unnecessary to decide whether the difference in the levels of protection set by the European Communities in respect of natural hormones used as growth promoters and in respect of the same hormones when used for therapeutic or zootechnical purposes, is justified.[215] Because, however, we have reached a conclusion different from that of the Panel, we consider it appropriate to complete the Panel's analysis in order that we may be in a position to review the Panel's conclusion concerning consistency with Article 5.5 as a whole. The matter of therapeutic and zootechnical uses of hormones was fully argued before the Panel.[216] Although the failure of the Panel to proceed with this comparison was not expressly appealed by the United States, the United States relies markedly upon the fact that the European Communities treats therapeutic and zootechnical uses of natural hormones differently from growth promotion use of the same hormones.[217]

223. The European Communities has argued that there are two important differences between the administration of hormones for growth promotion purposes and their administration for therapeutic and zootechnical purposes. The first difference concerns the frequency and scale of the treatment.[218] Therapeutic use is occasional as opposed to regular and continuous use that characterizes growth promotion.[219] Therapeutic use is selective as it concerns only individual sick or diseased animals; growth

[212]US Panel Report, para. 8.196; Canada Panel Report, para. 8.199.

[213]US Panel Report, paras. 8.213, 8.264 and 8.265; Canada Panel Report, paras. 8.216, 8.267 and 8.268.

[214]It may be questioned whether the European Communities has established at all an appropriate level of protection in respect of naturally-occurring hormones in meat and other foods (i.e. which are part of peoples' daily diet). We have accepted *arguendo* the assumption of the Panel that the European Communities did, for the purposes of this analysis.

[215]US Panel Report, para. 8.200; Canada Panel Report, para. 8.203.

[216]See, for example, US Panel Report, paras. 4.63, 4.64, 4.68, 4.69, 4.71, 4.223, 4.224, 4.225, 4.226 and 4.227, and Canada Panel Report, paras. 4.141, 4.147, 4.217, 4.238 and 4.242.

[218]EC's appellee's submission, paras. 82-84.

[219]US Panel Report, para. 4.71; Canada Panel Report, para. 4.242.

promotion involves the administration of hormones to all herds and all the members of a herd of cattle. Thus, therapeutic use takes place on a small scale and normally involves cattle intended for breeding and not for slaughter; in contrast, the use of these hormones for growth promotion occurs on a much larger scale and is much more difficult and costly to control.[220] Zootechnical use may relate to entire herds but would occur only once a year[221]; it is thus clearly distinguishable from the use of hormones continuously and over long periods of time (apparently most of the lifespan of the animals involved). This difference has been stressed in particular by Dr. André, one of the experts advising the Panel.[222]

224. The second difference concerns the mode of administration of hormones. In order to prevent abuse[223], the European Communities has regulated in substantial detail the conditions under which the administration of natural hormones may be authorized by the Member States of the European Union for therapeutic and zootechnical purposes. The hormones must, in the first place, be administered by a veterinarian or under the responsibility of a veterinarian.[224] In addition, Directive 96/22/EC specifies detailed conditions, such as, for example: strict withdrawal periods; administration by injection or, in case of varying disfunctions, by vaginal spirals, but not by implants; clear identification of the individual animal so treated; and recording of the details of treatment by the responsible veterinarian (e.g. type of treatment, type of veterinary drug used or authorized, date of treatment, identity of the animals treated).[225]

225. The conclusion we come to, after consideration of the foregoing factors, is that, on balance, the difference in the levels of protection concerning hormones used for growth promotion purposes, on the one hand, and concerning hormones used for therapeutic and zootechnical purposes, on the other, is not, in itself, "arbitrary or unjustifiable".

226. We turn to the Panel's comparison between the levels of protection set by the European Communities in respect of natural and synthetic hormones for growth promotion and with respect to carbadox and olaquindox.[226] Carbadox and olaquindox are anti-microbial agents or compounds which are mixed with the feed given to piglets (maximum age of four months). According to a report of JECFA[227], submitted to the Panel by the United States, carbadox is a feed additive that is a known genotoxic carcinogen, that is, carbadox *induces* and does not merely promote cancer.[228] The experts advising the Panel confirmed that carbadox was genotoxic in character.

[220]US Panel Report, para. 8.198; Canada Panel Report, para. 8.201.

[221]US Panel Report, para. 8.199; Canada Panel Report, para. 8.202.

[222]US Panel Report, paras. 6.183, 6.184 and 6.189; Canada Panel Report, paras. 6.182, 6.183 and 6.188.

[223]See the ninth paragraph of the Preamble of Directive 96/22/EC, dated 29 April 1996, which states:

> Whereas the prohibition on the use of hormonal substances for fattening purposes should continue to apply; whereas the use of certain substances for therapeutic or zootechnical purposes may be authorized but must be strictly controlled in order to prevent any misuse; (underlining added)

[224]US Panel Report, para. 4.69; Canada Panel Report, para. 4.192.

[225]US Panel Report, para. 4.69; Canada Panel Report, para. 4.238.

[226]EC Directive 70/524/CEE of 23 November 1970 governs the use of additives to animal feed. This Directive allows Member States to permit the use of certain additives listed in Annex I of the Directive, under the conditions there specified. On 12 April 1991, EC Directive 91/248/EEC replaced Annexes I and II of the 1970 Directive with new Annexes. The new Annex I includes the following under the subheading "growth promoters": carbadox and olaquindox.

[227]Evaluation of Certain Veterinary Drug Residues in Food: Thirty-sixth Report of the Joint FAO/WHO Expert Committee on Food Additives ("JECFA"), Technical Report Series 799 (World Health Organization, 1990), pp. 45-50.

[228]US Panel Report, para. 4.220.

227. In the panel proceedings, the European Communities sought to justify the difference in the levels of protection in respect of the natural and synthetic hormones (except MGA) and in respect of carbadox and olaquindox.[229] The Panel responds to these arguments and the European Communities has reiterated its original arguments in its appellant's submission.[230] We canvass the arguments of the European Communities and the Panel's responses, which are set out below in very summary form.

228. The first argument of the European Communities is that carbadox and olaquindox are not hormones, but rather anti-microbial agents. The Panel responds that the European Communities has not explained why this difference would itself justify a different regulatory treatment in the light of the carcinogenic potential of both kinds of substances.[231]

229. The second argument of the European Communities is that carbadox and olaquindox only indirectly act as growth promoters by suppressing the development of bacteria and aiding the intestinal flora of piglets, thereby also exerting preventive therapeutic effects; hormones, it is said, have no preventive therapeutic action when used as growth promoters. However, the Panel considers that both the hormones in dispute and carbadox and olaquindox may have therapeutic effects.[232]

230. The European Communities' third argument is that carbadox and olaquindox are only commercially available in prepared feedstuffs (not as injections or implants) in predetermined dosages and, therefore, are less open to abuse. The Panel observes that, according to experts advising it, products containing any of the five hormones at issue for implantation or injection are also packaged in predetermined dosages. The experts add that carbadox as an additive in feedstuffs poses additional risks since it may harm the persons handling the feedstuff.[233]

231. The fourth argument of the European Communities is that there are no alternatives to carbadox or olaquindox available that have the same therapeutic action. The Panel notes that, according to one of the experts, there are readily available alternatives such as oxytetracycline. According to Canada, oxytetracycline has been the subject of a risk assessment by JECFA and Codex has adopted the Acceptable Daily Intakes (ADI) and MRLs recommended by JECFA.[234]

232. The European Communities' fifth argument is that carbadox cannot be abused since it has growth promotion effects only in piglets up to four months old and a fixed withdrawal period of at least 28 days is set in the relevant Directive. In turn, the Panel notes that, according to its expert advisors, there is no assurance that the piglets treated with carbadox would not be slaughtered and that residues of carbadox would not thereby enter the food chain of human beings. The Panel adds that the use of the hormones at issue as growth promoters could similarly be subjected to strict conditions.[235]

233. The sixth argument the European Communities made is that carbadox is used in very small quantities and is hardly absorbed in the piglet's gut with the result that it leaves practically no residues at all in pork meat destined for human consumption. The Panel replies that, according to the experts advising it,

[232]US Panel Report, para. 8.232 (with respect to carbadox only); Canada Panel Report, para. 8.235.

[233]US Panel Report, para. 8.233 (with respect to carbadox only); Canada Panel Report, para. 8.236.

[234]US Panel Report, para. 8.234 (with respect to carbadox only); Canada Panel Report, para. 8.237.

[235]US Panel Report, para. 8.235; Canada Panel Report, para. 8.238.

once a substance has been administered to an animal, there will always be some residue of this substance or a metabolite left, albeit a very small amount, in the meat of that animal.[236] In this connection, Canada volunteered the comment that, according to a 1991 study commissioned by the European Communities and provided to the Panel, metabolites of carbadox and olaquindox are "nearly completely absorbed in the gut" and that "in using carbadox, a mutagenic or carcinogenic risk for the consumer seems negligible if the withdrawal time is closely respected".[237]

234. The European Communities made a seventh argument which was not repeated in its appeal: the complaining parties limit their claim to one or two substances out of 10,000 to 15,000 veterinary medicinal substances the use of which the European Communities authorizes, which indicates "a remarkable degree of consistency in its levels of sanitary protection".[238] The Panel notes that the European Communities has advised it that the EC Council, by a Decision of 26 February 1996, has already taken action *motu proprio* to review carbadox and olaquindox. To the Panel, the arguments of the European Communities suggest that it acknowledges that the difference in the levels of protection in respect of added hormones and in respect of carbadox and olaquindox may not be justified and should be reviewed.[239]

235. Having reviewed the above arguments and counter-arguments, we must agree with the Panel that the difference in the EC levels of protection in respect of the hormones in dispute when used for growth promotion, on the one hand, and carbadox and olaquindox, on the other, is unjustifiable in the sense of Article 5.5.

D. *Resulting in Discrimination or a Disguised Restriction on International Trade*

236. In interpreting this last element or requirement of Article 5.5, the Panel recalls the conclusion of the Appellate Body in *United States - Standards for Reformulated and Conventional Gasoline*[240] ("*United States - Gasoline*") to the effect that the terms "arbitrary discrimination", "unjustifiable discrimination" and "disguised restriction on international trade" found in Article XX of the GATT 1994, may be read side-by-side and impart meaning to one another.[241] The Panel also recalls our statement in *Japan - Alcoholic Beverages*[242], and in particular the requirement in Article III:2, second sentence, of the GATT 1994 that dissimilar taxation needs to be "applied ... so as to afford protection to domestic production". It quotes the passage stating, in part, that "[the dissimilar taxation] may be so much more that it will be clear from that very differential that the dissimilar taxation was applied _so as to afford protection'. In some cases, that may be enough to show a violation".[243] The Panel then renders its interpretation of the last requirement of Article 5.5 of the *SPS Agreement* as follows:

> We consider the reasoning in both Appellate Body Reports to be equally relevant to the relationship between the three elements contained in Article 5.5. All three elements impart meaning to one another. Nevertheless, in order to give effect to all three elements contained in Article 5.5 and giving full

[242]Adopted 1 November 1996, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R.

[243]US Panel Report, para. 8.183; Canada Panel Report, para. 8.186.

> meaning to the text and context of this provision, we consider that all three elements need to be distinguished and addressed separately. However, we also agree that in some cases where a Member enacts, for comparable situations, sanitary measures which reflect different levels of protection, the significance of the difference in levels of protection combined with the arbitrariness thereof may be sufficient to conclude that this difference in levels of protection "result[s] in discrimination or a disguised restriction on international trade" in the sense of Article 5.5 (in line with the argument that the magnitude of the very differential of a dissimilar taxation may be enough to conclude that a dissimilar taxation is applied so as to afford protection, as provided for in the second sentence of Article III:2 of GATT.[244] (underlining added)

237. The European Communities urges that the Panel committed several errors of legal interpretation. Firstly, the Panel disregards the alternative character of the three elements of the *chapeau* of Article XX of the GATT 1994, and the fact that the three elements of Article 5.5 of the *SPS Agreement* are additional and cumulative in nature.[245] Secondly, Article III:2, second sentence, of the GATT 1994 is concerned with the impact of a tax on the competitive relations concerning directly competitive or substitutable products. On the other hand, discrimination and disguised restriction in the sense of Article 5.5 of the *SPS Agreement* are entirely different concepts.[246] Thirdly, and as a consequence of its interpretation of Article 5.5, a "discrimination or a disguised restriction on international trade" is not really, for the Panel, a third or additional requirement at all under Article 5.5.[247]

238. We agree with the Panel's view that "all three elements [of Article 5.5] need to be distinguished and addressed separately".[248] We also recall our interpretation that Article 5.5 and, in particular, the terms "discrimination or a disguised restriction on international trade", have to be read in the context of the basic obligations contained in Article 2.3, which requires that "sanitary ... *measures* shall not be *applied in a manner which would constitute a disguised restriction on international trade*". (emphasis added)[249]

239. However, we disagree with the Panel on two points. First, in view of the structural differences between the standards of the *chapeau* of Article XX of the GATT 1994 and the elements of Article 5.5 of the *SPS Agreement*, the reasoning in our Report in *United States - Gasoline*, quoted by Panel, cannot be casually imported into a case involving Article 5.5 of the *SPS Agreement*. Secondly, in our view, it is similarly unjustified to assume applicability of the reasoning of the Appellate Body in *Japan - Alcoholic Beverages*[250] about the inference that may be drawn from the sheer size of a tax differential for the application of Article III:2, second sentence, of the GATT 1994, to the quite different question of whether arbitrary or unjustifiable differences in levels of protection against risks for human life or health, "result in discrimination or a disguised restriction on international trade".[251]

[249]See para. 212 of this Report.

[250]Adopted 1 November 1996, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R.

[251]The differential involved in *Japan - Alcoholic Beverages* was a tax differential, which is very different from a differential in levels of protection. Unlike a differential in levels of protection, a tax differential is always expressed in quantitative terms and a significant tax differential in favour of domestic products will inevitably affect the competitiveness of imported products and thus afford protection to domestic products. There is a clear and linear relationship between a tax differential and the protection afforded to domestic products. There is, however, no such relationship between a differential in levels of human health protection and discrimination or disguised restriction on trade.

240. In our view, the degree of difference, or the extent of the discrepancy, in the levels of protection, is only one kind of factor which, along with others, may cumulatively lead to the conclusion that discrimination or a disguised restriction on international trade in fact results from the application of a measure or measures embodying one or more of those different levels of protection. Thus, we do not think that the difference between a "no residues" level and "unlimited residues" level is, together with a finding of an arbitrary or unjustifiable difference, sufficient to demonstrate that the third, and most important, requirement of Article 5.5 has been met. It is well to bear in mind that, after all, the difference in levels of protection that is characterizable as arbitrary or unjustifiable is only an element of (indirect) proof that a Member may actually be applying an SPS measure in a manner that discriminates between Members or constitutes a disguised restriction on international trade, prohibited by the basic obligations set out in Article 2.3 of the *SPS Agreement*. Evidently, the answer to the question whether arbitrary or unjustifiable differences or distinctions in levels of protection established by a Member do in fact result in discrimination or a disguised restriction on international trade must be sought in the circumstances of each individual case.

241. In the present appeal, it is necessary to address this question only with regard to the difference in the levels of protection established in respect of the hormones in dispute and in respect of carbadox and olaquindox.

242. According to the Panel, the "significance" of the "arbitrary or unjustifiable" distinction in the level of protection concerning the hormones in dispute as compared with the level of protection in respect of carbadox and olaquindox results in discrimination or a disguised restriction on international trade. It bases this finding on: (i) the great difference in the levels of protection, namely, the difference between a "no residue" level for the five hormones at issue when used as growth promoters, as opposed to an "unlimited residue" level for carbadox and olaquindox; (ii) the absence of any plausible justification put forward by the European Communities for this significant difference; and (iii) the nature of the EC measure, i.e., the prohibition of imports, which necessarily restricts international trade.[252]

243. The Panel adduces, in support of its finding, three additional factors: (iv) the objectives (apart from the protection of human health) that it believes the European Communities had in mind in enacting or maintaining the EC ban, as reflected in the preambles of the measures in dispute, the reports of the European Parliament and the opinions rendered by the EC Social and Economic Committee. These include the harmonizing of the regulatory schemes of the different Member States of the European Union and the removal of competitive distortions in and barriers to intra-community trade in beef, and the bringing about of an increase in the consumption of beef, thereby reducing the internal beef surpluses, and providing more favourable treatment to domestic producers[253]; (v) before the import ban came into force (in 1987), the percentage of animals treated for growth promotion with the hormones in dispute was significantly lower in the European Communities than in Canada and the United States. The apparent implication, for the Panel, is that the EC measures constitute *de facto* discrimination against imported beef produced with growth promotion hormones[254]; and (vi) that the hormones at issue are used for growth promotion in the bovine sector "where the European Communities seemingly wants to limit supplies and is arguably less concerned with international competitiveness", whereas carbadox and olaquindox are used for

[252]US Panel Report, para. 8.241; Canada Panel Report, para. 8.244.

[253]US Panel Report, para 8.242; Canada Panel Report, para. 8.245.

[254]US Panel Report, para 8.242; Canada Panel Report, para. 8.245.

growth promotion in the pork meat sectors "where the European Communities has no domestic surpluses and where international competitiveness is a higher priority".[255]

244. In its appeal, the European Communities stresses that the prohibition of the use of hormones for growth promotion purposes applies equally to beef produced within the European Communities and to imports of such beef.[256] It is also emphasized that the predominant motivation for both the prohibition of the domestic use of growth promotion hormones and the prohibition of importation of treated meat, is the protection of the health and safety of its population. No suggestion has been made that the import prohibition of treated meat was the result of lobbying by EC domestic producers of beef. It is also pointed out that legislation (in representative governments) normally reflects multiple objectives. The fact that there was a higher percentage of beef treated with growth promotion hormones in Canada and in the United States, as compared with the European Communities, was simply a reflection of the fact that Canada and the United States had allowed this practice for a long time while the European Communities had not. The long history of the EC Directives should be recalled in this connection. The import prohibition could not have been designed simply to protect beef producers in the European Communities *vis-à-vis* beef producers in the United States and Canada, for beef producers in the European Communities were precisely forbidden to use the same hormones for the same purpose. We note, in this connection, that the prohibition of domestic use also necessarily excludes any exports of treated meat by domestic producers.

245. We do not attribute the same importance as the Panel to the supposed multiple objectives of the European Communities in enacting the EC Directives that set forth the EC measures at issue. The documentation that preceded or accompanied the enactment of the prohibition of the use of hormones for growth promotion and that formed part of the record of the Panel makes clear the depth and extent of the anxieties experienced within the European Communities concerning the results of the general scientific studies (showing the carcinogenicity of hormones), the dangers of abuse (highlighted by scandals relating to black-marketing and smuggling of prohibited veterinary drugs in the European Communities) of hormones and other substances used for growth promotion and the intense concern of consumers within the European Communities over the quality and drug-free character of the meat available in its internal market.[257] A major problem addressed in the legislative process of the European Communities related to the differences in the internal regulations of various Member States of the European Union (four or five of which permitted, while the rest prohibited, the use for growth promotion of certain hormones), the resulting distortions in competitive conditions in and the existence of barriers to intra-community trade. The necessity for harmonizing the internal regulations of its Member States was a consequence of the European Communities' mandate to establish a common (internal) market in beef.[258] Reduction of any

[262]United States' appellant's submission, para. 18.

[263]United States' appellant's submission, para. 20.

[264]Canada's appellant's submission, paras. 19-22.

beef surplus through an increase in the consumption of beef within the European Communities, is not only in the interests of EC farmers, but also of non-hormone using farmers in exporting countries. We are unable to share the inference that the Panel apparently draws that the import ban on treated meat and the Community-wide prohibition of the use of the hormones here in dispute for growth promotion purposes in the beef sector were not really designed to protect its population from the risk of cancer, but rather to keep out US and Canadian hormone-treated beef and thereby to protect the domestic beef producers in the European Communities.

246. Our conclusion, therefore, is that the Panel's finding that the "arbitrary or unjustifiable" difference in the EC levels of protection in respect of the hormones at issue on the one hand and in respect of carbadox and olaquindox on the other hand, "result in discrimination or a disguised restriction on international trade", is not supported either by the architecture and structure of the EC Directives here at stake or of the subsequent Directive on carbadox and olaquindox, or by the evidence submitted by the United States and Canada to the Panel. The Panel's finding is itself unjustified and erroneous as a matter of law. Accordingly, we reverse the conclusion of the Panel that the European Communities has acted inconsistently with the requirements set out in Article 5.5 of the *SPS Agreement*.

XIII. Appeals by the United States and Canada: Articles 2.2 and Article 5.6 of the *SPS Agreement*

247. The Panel refrained from making findings under Articles 2.2 and 5.6 of the *SPS Agreement*. In respect of Article 2.2, the Panel, having found that the EC measures are inconsistent with Articles 3.1, 5.1 and 5.5, did not believe there was any necessity for making a finding on the consistency of the same EC measures with Article 2.2. The Panel, in so concluding, also considered that Articles 3 and 5 provide for more specific rights and obligations than the "basic rights and obligations" set out in Article 2.[259]

248. In respect of Article 5.6, the Panel held that since it had already found the EC level of protection reflected in the EC measure in dispute was adopted in violation of Article 5.5, there was no need to examine whether that same measure is also more trade restrictive than necessary to achieve that level in the sense of Article 5.6.[260]

249. The United States, *qua* appellant, believes the Panel has made all the findings necessary for the purpose and should have declared the EC import prohibition inconsistent with Article 2.2.[261] It is also submitted by the United States that the text of Articles 2, 3 and 5 does not indicate that all of the obligations in Article 2.2 are subsumed under Articles 3 and 5.[262] In respect of Article 5.6, it is similarly urged by the United States that the Panel's findings on Article 5.5 are sufficient to establish that the EC import prohibition is also inconsistent with Article 5.6.[263] Similar submissions are made by Canada as appellant.[264]

250. We agree with the Panel's application of the notion of judicial economy. We have affirmed the Panel's conclusion that the EC measures are inconsistent with Article 5.1 in view of the failure of the

European Communities to provide a risk assessment that reasonably supports such measures. Under the circumstances, the necessity or propriety of proceeding to determine whether Article 2.2 of the *SPS Agreement* has also been violated is not at all clear to us. Had we reversed the Panel's conclusion in respect of the inconsistency of the EC measures with Article 5.1, it would have been logically necessary to inquire whether Article 2.2 might nevertheless have been violated. We are, of course, surprised by the fact that the Panel did not begin its analysis of this whole case by focusing on Article 2 that is captioned "Basic Rights and Obligations", an approach that appears logically attractive. We recall the reading that we have given above to Articles 2 and 5 – that Article 2.2 informs Article 5.1, and that similarly Article 2.3 informs Article 5.5 – but believe that further analysis of their relationship should await another case.

251. We have, at the same time, reversed the Panel's conclusion under Article 5.5 of the *SPS Agreement* that the levels of protection set by the European Communities in respect of the use of hormones for growth promotion result in discrimination or a disguised restriction on international trade. However, it cannot be assumed that all the findings of fact necessary to proceed to a determination of consistency or inconsistency of the EC measures with the requirements of Article 5.6 have been made by the Panel, which Article also provides that "technical and economic feasibility" should be taken into account. There appears all the more reason for refraining from an examination of the legality of the measures under Article 5.6 and for adhering to the prudential dictates of the principle of judicial economy.

252. We consider, therefore, and so hold, that the Panel did not err in refraining from making findings on Articles 2.2 and 5.6 of the *SPS Agreement*.

XIV. Findings and Conclusions

253. For the reasons set out in the preceding sections of this Report, the Appellate Body:

(a) reverses the Panel's general interpretative ruling that the *SPS Agreement* allocates the evidentiary burden to the Member imposing an SPS measure, and also reverses the Panel's conclusion that when a Member's measure is not based on an international standard in accordance with Article 3.1, the burden is on that Member to show that its SPS measure is consistent with Article 3.3 of the *SPS Agreement*;

(b) concludes that the Panel applied the appropriate standard of review under the *SPS Agreement*;

(c) upholds the Panel's conclusions that the precautionary principle would not override the explicit wording of Articles 5.1 and 5.2, and that the precautionary principle has been incorporated in, *inter alia*, Article 5.7 of the *SPS Agreement*;

(d) upholds the Panel's conclusion that the *SPS Agreement*, and in particular Articles 5.1 and 5.5 thereof, applies to measures that were enacted before the entry into force of the *WTO Agreement*, but that remain in force thereafter;

(e) concludes that the Panel, although it sometimes misinterpreted some of the evidence before it, complied with its obligation under Article 11 of the DSU to make an objective assessment of the facts of the case;

(f) concludes that the procedures followed by the Panel in both proceedings – in the selection and use of experts, in granting additional third party rights to the United States and Canada and in making findings based on arguments not made by the parties – are consistent with the DSU and the *SPS Agreement*;

(g) reverses the Panel's conclusion that the term "based on" as used in Articles 3.1 and 3.3 has the same meaning as the term "conform to" as used in Article 3.2 of the *SPS Agreement*;

(h) modifies the Panel's interpretation of the relationship between Articles 3.1, 3.2 and 3.3 of the *SPS Agreement*, and reverses the Panel's conclusion that the European Communities by maintaining, without justification under Article 3.3, SPS measures which are not based on existing international standards, acted inconsistently with Article 3.1 of the *SPS Agreement*;

(i) upholds the Panel's finding that a measure, to be consistent with the requirements of Article 3.3, must comply with, *inter alia*, the requirements contained in Article 5 of the *SPS Agreement*;

(j) modifies the Panel's interpretation of the concept of "risk assessment" by holding that neither Articles 5.1 and 5.2 nor Annex A.4 of the *SPS Agreement* require a risk assessment to establish a minimum quantifiable magnitude of risk, nor do these provisions exclude *a priori*, from the scope of a risk assessment, factors which are not susceptible of quantitative analysis by the empirical or experimental laboratory methods commonly associated with the physical sciences;

(k) reverses the Panel's finding that the term "based on" as used in Article 5.1 of the *SPS Agreement* entails a "minimum procedural requirement" that a Member imposing an SPS measure must submit evidence that it actually took into account a risk assessment when it enacted or maintained the measure;

(l) upholds the Panel's finding that the EC measures at issue are inconsistent with the requirements of Article 5.1 of the *SPS Agreement*, but modifies the Panel's interpretation by holding that Article 5.1, read in conjunction with Article 2.2, requires that the results of the risk assessment must sufficiently warrant the SPS measure at stake;

(m) reverses the Panel's findings and conclusions on Article 5.5 of the *SPS Agreement*; and

(n) concludes that the Panel exercised appropriate judicial economy in not making findings on Articles 2.2 and 5.6 of the *SPS Agreement*.

254. The foregoing legal findings and conclusions uphold, modify and reverse the findings and conclusions of the Panel in Parts VIII and IX of the Panel Reports, but leave intact the findings and conclusions of the Panel that were not the subject of this appeal.

255. The Appellate Body *recommends* that the Dispute Settlement Body request the European Communities to bring the SPS measures found in this Report and in the Panel Reports, as modified by this Report, to be inconsistent with the *SPS Agreement* into conformity with the obligations of the European Communities under that Agreement.

I. Introduction

1. The European Communities, the United States, and Canada each appeals certain issues of law and legal interpretations developed in the Panel Report, *United States – Continued Suspension of Obligations in the EC – Hormones Dispute*[1] (the "Panel Report, *US – Continued Suspension*"), and the Panel Report, *Canada – Continued Suspension of Obligations in the EC – Hormones Dispute*[2] (the "Panel Report, *Canada – Continued Suspension*").[3] The Panels were established to consider complaints by the European Communities concerning the suspension of concessions or other obligations by the United States and by Canada against the European Communities because of the latter's alleged failure to comply with the recommendations and rulings of the Dispute Settlement Body (the "DSB") stemming from the *EC – Hormones* dispute.[4] The European Communities asserts that the United States and Canada must cease the suspension of concessions because the European

[1]WT/DS320/R, 21 March 2008.
[2]WT/DS321/R, 21 March 2008.
[3]In this Report, we refer to the United States first and then to Canada, in keeping with the chronology of the WT/DS numbers assigned to these disputes.
[4]The recommendations and rulings of the DSB resulted from the adoption on 13 February 1998, by the DSB, of the Appellate Body Report, WT/DS26/AB/R, WT/DS48/AB/R; the Panel Report, WT/DS26/R/USA; and the Panel Report, WT/DS48/R/CAN.

Communities adopted Directive 2003/74/EC[5] and notified it to the DSB as a measure taken to comply with the DSB's recommendations and rulings in *EC – Hormones*.[6]

2. Before the panels in *EC – Hormones*[7], the United States and Canada claimed that the ban imposed by the European Communities on meat from cattle treated with six hormones—oestradiol-17β, progesterone, testosterone, trenbolone acetate, zeranol, and melengestrol acetate ("MGA")—was inconsistent with the *Agreement on the Application of Sanitary and Phytosanitary Measures* (the "*SPS Agreement*"), in particular, Articles 2, 3, and 5 thereof, the *Agreement on Technical Barriers to Trade* (the "*TBT Agreement*"), and the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994").

3. The panel in *EC – Hormones* held that:

- by maintaining sanitary measures that are not based on a risk assessment, the European Communities had acted inconsistently with Article 5.1 of the *SPS Agreement*;

- by adopting arbitrary or unjustifiable distinctions in the levels of sanitary protection it considered appropriate in different situations which result in discrimination or a disguised restriction on international trade, the European Communities had acted inconsistently with Article 5.5 of the *SPS Agreement*; and

- by maintaining sanitary measures that are not based on existing international standards without justification under Article 3.3 of the *SPS Agreement*, the European Communities had acted inconsistently with Article 3.1 of that Agreement.[8]

4. The European Communities appealed the panel's findings under Articles 3.1, 3.3, 5.1, and 5.5 of the *SPS Agreement*. In addition, the European Communities claimed that the panels had erred in the selection and use of scientific experts, in allocating the burden of proof, and in applying the standard of review. The United States and Canada appealed the panel's decision not to make findings relating to Articles 2.2 and 5.6 of the *SPS Agreement*.

[5]Directive 2003/74/EC of the European Parliament and of the Council of 22 September 2003 amending Council Directive 96/22/EC concerning the prohibition on the use in stockfarming of certain substances having a hormonal or thyrostatic action and of beta-agonists, *Official Journal of the European Union*, L Series, No. 262 (14 October 2003) 17 (Exhibits EC-1 and US-3 submitted by the European Communities and the United States, respectively, to the Panel).

[6]Panel Report, *US – Continued Suspension*, para. 1.1; Panel Report, *Canada – Continued Suspension*, para. 1.1.

[7]As the same individuals served on both panels, in this Report we will henceforth refer to the panels in the singular.

[8]Panel Report, *EC – Hormones (US)*, para. 9.1; Panel Report, *EC – Hormones (Canada)*, para. 9.1.

5. The Appellate Body upheld, albeit on the basis of modified reasoning, the panel's findings that the European Communities' import ban on meat and meat products treated with the six hormones at issue was inconsistent with Article 5.1 of the *SPS Agreement*, and, as a consequence, was also inconsistent with Article 3.3 of that Agreement. The Appellate Body found that the scientific studies submitted by the European Communities in that dispute were not "sufficiently specific to the case at hand"[9], because they were "general studies which do indeed show the existence of a general risk of cancer; but they do not focus on and do not address the particular kind of risk here at stake".[10] For this reason, the Appellate Body concluded that "no risk assessment that reasonably support[ed] or warrant[ed] the import prohibition embodied in the [European Communities'] Directives was furnished to the Panel"[11], and accordingly found that the European Communities' import ban, imposed under Directive 96/22/EC, was not "based on" a risk assessment within the meaning of Article 5.1. Moreover, the Appellate Body disagreed with the panel's interpretation of the relationship between Articles 3.1 and 3.3 of the *SPS Agreement*. The panel interpreted Article 3.3 to be an exception to the "general obligation" of Article 3.1, and found that the European Communities had not acted consistently with Article 3.1 and had not provided appropriate scientific justification for a higher level of SPS protection under Article 3.3. The Appellate Body concluded, however, that the right of Members to establish a higher level of sanitary protection under Article 3.3 is an autonomous right and not an exception to a "general obligation" under Article 3.1. Accordingly, the Appellate Body reversed the panel's conclusion that the import prohibition was inconsistent with Article 3.1. Nevertheless, as the Appellate Body found that the European Communities' import prohibition was inconsistent with Article 5.1, it also concluded that the import prohibition was inconsistent with Article 3.3. The Appellate Body, however, modified the panel's interpretation of "risk assessment" by holding that there was no requirement "to establish a minimum quantifiable magnitude of risk", and that the factors "not susceptible of quantitative analysis by the empirical or experimental laboratory methods commonly associated with the physical sciences" were not excluded from the scope of a risk assessment.[12] The Appellate Body also reversed the panel's findings that the European Communities had acted inconsistently with Article 5.5 of the *SPS Agreement*, which requires that a WTO Member avoid arbitrary or unjustifiable distinctions in the levels of sanitary protection that result in discrimination or a disguised restriction on international trade. Furthermore, the Appellate Body agreed with the panel that the precautionary principle would not override Articles 5.1 and 5.2 and that it had been incorporated in, *inter alia*, Article 5.7 of the *SPS Agreement*. With regard to the selection and use of experts by the panel, the Appellate Body concluded that the panel had acted consistently with the

[9]Appellate Body Report, *EC – Hormones*, para. 200.

[11]*Ibid.*, para. 208.

[12]*Ibid.*, para. 253(j).

requirements of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU") and the *SPS Agreement*. The Appellate Body rejected the European Communities' claim that the panel had erred in the standard applied to the review of the evidence and thus found that the panel had complied with its obligation under Article 11 of the DSU. Finally, the Appellate Body concluded that the panel's exercise of judicial economy was proper in not making findings under Articles 2.2 and 5.6 of the *SPS Agreement*.

6. On 13 February 1998, the DSB adopted the panel and Appellate Body Reports in *EC – Hormones* and recommended that the European Communities bring its measures into conformity with the *SPS Agreement*. Following the adoption of the panel and Appellate Body reports by the DSB, the European Communities requested that the reasonable period of time for implementation be determined through arbitration in accordance with Article 21.3(c) of the DSU. The Arbitrator determined a reasonable period of time of 15 months, expiring on 13 May 1999.[13]

7. On 12 May 1999, the European Communities addressed a communication to the Chairman of the DSB, which stated:

> [T]he Community has undertaken a complementary risk assessment in light of the relevant clarifications on risk assessment provided by the Appellate Body.
>
> In light of such results of that risk assessment as are now available to it, the Community is not in a position to lift its existing import ban on 13 May.
>
> The Community now intends to study in more depth these results in order to evaluate on this basis and in the light of any new relevant information what steps may be necessary in light of our WTO rights and obligations.[14]

8. As a result, the United States and Canada requested the DSB to authorize suspension of concessions and other obligations pursuant to Article 22.2 of the DSU. The European Communities objected to the levels of suspension of concessions proposed by the United States and Canada, and requested that such levels be determined through arbitration pursuant to Article 22.6 of the DSU.[15] The Arbitrators concluded that the levels of nullification and impairment in relation to United States and Canadian meat exports were US$116.8 million and Can$11.3 million, respectively.[16] On 26 July 1999, the United States and Canada obtained authorization from the DSB to suspend concessions and other obligations in relation to the European Communities.

[16]Decision by the Arbitrators, *EC – Hormones (US) (Article 22.6 – EC)*, para. 83; Decision by the Arbitrators, *EC – Hormones (Canada) (Article 22.6 – EC)*, para. 72.

9. On 29 July 1999, the United States applied 100 per cent import duties on a range of imports from certain member States of the European Communities.[17] On 1 August 1999, Canada applied 100 per cent *ad valorem* duties on a similar range of imports from the European Communities.[18]

10. After the adoption of the panel and Appellate Body Reports in the *EC – Hormones* dispute, the European Commission initiated 17 scientific studies to assess any risks to human health posed by the six hormones at issue.[19] On 30 April 1999, the Scientific Committee on Veterinary Measures relating to Public Health (the "SCVPH") of the European Communities issued the Assessment of Potential Risks to Human Health from Hormone Residues in Bovine Meat and Meat Products[20] (the "1999 Opinion"). Subsequent to the adoption of the 1999 Opinion, additional scientific information was made available to the European Commission in the form of scientific studies conducted by: (i) the United Kingdom's Veterinary Products Committee sub-group on the 1999 Opinion (October 1999); (ii) the Committee for Veterinary Medicinal Products ("CVMP") of the European Union (a subcommittee of the European Medicines Agency (EMEA)) (December 1999); and (iii) the Joint FAO/WHO Expert Committee on Food Additives ("JECFA") (February 2000). At the request of the European Commission, the SCVPH examined this scientific information and, on 3 May 2000, issued a review of its 1999 Opinion in which it declined to alter the conclusions contained therein[21] (the "2000 Opinion"). On 10 April 2002, a second review of the 1999 Opinion was issued by the SCVPH[22] (the "2002 Opinion") on the basis of more recent scientific data collected since the previous review. The scientific data reviewed by the SCVPH included the final results of all 17 studies that had been commissioned by the European Commission.

11. In the light of the conclusions of the 1999, 2000, and 2002 Opinions, the European Communities adopted Directive 2003/74/EC on 22 September 2003[23], which amends Directive 96/22/EC in relation to the prohibition of the use of hormones in stockfarming. Directive 2003/74/EC maintains the permanent prohibition of the placing on the market of meat and meat products from animals treated with oestradiol-17β for growth-promotion purposes originally contained in Directive 96/22/EC.[24] In relation to the five other hormones—testosterone, progesterone, trenbolone acetate, zeranol, and MGA—Directive 2003/74/EC continues to apply the prohibition

[18]European Union Surtax Order, *Canada Gazette Part II*, Vol. 133, No. 17 (18 August 1999).
[19]These scientific studies are contained in Exhibits EC-7 (US) through EC-42 (US) and Exhibits EC-4 (CDA) through EC-39 (CDA) submitted by the European Communities to the Panel.
[20]"Opinion of the SCVPH – Assessment of Potential Risks to Human Health from Hormone Residues in Bovine Meat and Meat Products" (30 April 1999) (Exhibits US-4 and CDA-2 submitted by the United States and Canada, respectively, to the Panel). The main conclusions of the 1999 Opinion are set out in Panel Report, *US – Continued Suspension*, para. 7.391, and Panel Report, *Canada – Continued Suspension*, para. 7.388.
[21]"Review of Specific Documents relating to the SCVPH Opinion of 30 April 99 on the Potential Risks to Human Health from Hormone Residues in Bovine Meat and Meat Products" (adopted on 3 May 2000) (Exhibits US-17 and CDA-4 submitted by the United States and Canada, respectively, to the Panel). The main conclusions of the 2000 Opinion are set out in Panel Report, *US – Continued Suspension*, para. 7.392, and Panel Report, *Canada – Continued Suspension*, para. 7.389.
[22]"Opinion of the SCVPH on Review of Previous SCVPH Opinions of 30 April 1999 and 3 May 2000 on the Potential Risks to Human Health from Hormone Residues in Bovine Meat and Meat Products" (adopted on 10 April 2002) (Exhibits US-1 and CDA-17 submitted by the United States and Canada, respectively, to the Panel). The 2002 Opinion confirmed the validity of the 1999 and 2000 Opinions and concluded that no amendments to those Opinions were justified. The main conclusions of the 2002 Opinion are set out in Panel Report, *US – Continued Suspension*, para. 7.393, and Panel Report, *Canada – Continued Suspension*, para. 7.390.
[23]*Supra*, footnote 5.
[24]Directive 2003/74/EC, *supra*, footnote 5, Recital 10 and Article 1 (amending Articles 2 and 3 of Directive 96/22/EC).

contained in Directive 96/22/EC, but on a provisional basis.[25] Directive 2003/74/EC specifies that, even though the scientific information available showed the existence of risks associated with these substances, "the current state of knowledge does not make it possible to give a quantitative estimate of the risk to consumers".[26] Accordingly, the prohibition of these five hormones should apply "while the Community seeks more complete scientific information from any source, which could shed light and clarify the gaps in the present state of knowledge of these substances".[27]

12. On 27 October 2003, the European Communities notified the DSB of the adoption, publication, and entry into force of Directive 2003/74/EC, as well as the 1999, 2000, and 2002 Opinions, which it considered to be risk assessments that sufficiently justified the permanent and provisional import prohibitions under the *SPS Agreement*.[28] The European Communities therefore claimed that it had fully implemented the DSB's recommendations and rulings in the original *EC – Hormones* disputes, and consequently considered that the suspensions of concessions by the United States and Canada were no longer justified. The United States and Canada refused to lift the measures taken pursuant to the DSB's authorization to suspend concessions or other obligations. The European Communities requested consultations with the United States and Canada on 8 November 2004.[29] The Panel was established, at the request of the European Communities, on 17 February 2005.[30]

13. Before the Panel, the European Communities put forward two "series of main claims", and a conditional "alternative" claim. In its first "series of main claims", the European Communities argued that, by maintaining their suspension of concessions and other obligations, the United States and Canada were seeking redress of a perceived violation of the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*") without having recourse to the rules and procedures of the DSU, in violation of Article 23.2(a) of the DSU read in conjunction with Articles 21.5 and 23.1.[31] The European Communities argued that the United States and Canada should have initiated a compliance proceeding under Article 21.5 of the DSU following notification of the implementing measure to the DSB if they considered that this measure was not consistent with the covered agreements. Their failure to do so violated the specific prohibition to make unilateral determinations set out in Article 23.2(a) of the DSU. The European Communities therefore argued that the continued suspension of concessions or other obligations by the United States and Canada constituted a violation of Article 23.2(a) read in conjunction with Articles 21.5 and 23.1 of the DSU.

14. In its second "series of main claims", the European Communities argued that the United States and Canada, by failing to have recourse to, and abide by, the rules and procedures of the DSU, violated Article 23.1 read in conjunction with Articles 22.8 and 3.7 of the DSU. In particular, the European Communities argued that Article 22.8 of the DSU prohibits the continued application of the suspension of concessions when the measure found to be inconsistent is removed. In addition to the two series of main claims, the European Communities asserted that the continued suspension of concessions or other obligations by the United States and Canada violates Articles I and II of the

[25] *Ibid.*

[27] *Ibid.*, Recital 10.

[28] WT/DS26/22, WT/DS48/20.

[29] Panel Report, *US – Continued Suspension*, para. 1.1; Panel Report, *Canada – Continued Suspension*, para. 1.1.

[30] Panel Report, *US – Continued Suspension*, para. 1.3; Panel Report, *Canada – Continued Suspension*, para. 1.3. Two separate Panels were established to examine the complaints against the United States and Canada, respectively; however, the Panels were composed of the same panelists. As the composition of both Panels was identical, in this Report we refer to the Panels collectively as the "Panel".

[31] Panel Report, *US – Continued Suspension*, para. 7.153; Panel Report, *Canada – Continued Suspension*, para. 7.140.

GATT 1994.[32] Finally, the European Communities made an "alternative" claim[33], conditional on "the Panel find[ing] no violation of Article 23 of the DSU, ... that [the United States'/Canada's] measure[s] violate[] Article 22.8 of the DSU and Articles I and II of the GATT 1994."[34]

15. The United States and Canada rejected the European Communities' claims, arguing that their measures suspending concessions or other obligations are consistent with Article 22.8 of the DSU. According to the United States and Canada, the suspension of concessions was authorized by the DSB and this authorization remains in effect.[35] They further argued that the European Communities has failed to comply with the DSB's recommendations and rulings stemming from *EC – Hormones*, because Directive 2003/74/EC is inconsistent with the *SPS Agreement*, in particular, Articles 3.3, 5.1, and 5.7.[36] The United States also alleged that the European Communities' implementing measure is inconsistent with Article 5.2 of the *SPS Agreement*.[37]

16. The Panel Reports were circulated to Members of the World Trade Organization (the "WTO") on 31 March 2008. The Panel began its analysis with the European Communities' first series of main claims and found that the United States and Canada "violated Article 23.1 and 23.2(a) of the DSU by seeking redress of a violation of the *WTO Agreement* through a determination that the [European Communities'] implementing measure did not comply with the DSB recommendations and rulings in the *EC – Hormones* case without having recourse to dispute settlement in accordance with the rules and procedures of the DSU."[38] Turning to the European Communities' second series of main claims, the Panel explained that the European Communities' "second series of main claims" and its "conditional" claim under Article 22.8 of the DSU were both "based on the [European Communities'] view that it has complied with the recommendations and rulings of the DSB in the *EC – Hormones* case by adopting Directive 2003/74/EC and properly notifying it to the DSB".[39] "The difference", according to the Panel, "is that, under the conditional claim, the European Communities alleges actual compliance, and not that it should be presumed to have complied in good faith."[40] The Panel then observed that it "could not agree with the European Communities and base [its] findings of violation of Article 23.1 read in conjunction with Article 22.8 and 3.7 of the DSU on an irrebuttable presumption of good faith compliance".[41] Consequently, the Panel said that it would have to determine whether it had jurisdiction to examine the consistency of the European Communities' implementing measure with the *SPS Agreement*. It concluded that it was "entitled to determine whether the European Communities has removed the measure found to be inconsistent with a covered agreement in order to establish whether Article 22.8 has been breached" by the United States and Canada.[42] In particular, the Panel determined that it would review the compatibility of the European

Communities' implementing measure with Articles 5.1, 5.7, and 3.3 of the *SPS Agreement*.[43] In the case against the United States, the Panel said it would additionally examine the compatibility with Article 5.2 of the *SPS Agreement*.[44]

17. The Panel proceeded to examine the compatibility of the European Communities' implementing measure and made the following findings. As regards Article 5.2 in the case against the United States, the Panel found that "the European Communities took into account risk assessment techniques of the relevant international organizations and took into account the factors listed in Article 5.2 of the *SPS Agreement*."[45]

18. In relation to Article 5.1 of the *SPS Agreement*, the Panel found:

> [T]he Opinions do not constitute a risk assessment because the Opinions do not satisfy the definition of a risk assessment contained in Annex A(4) second sentence and because the scientific evidence referred to in the Opinions does not support the conclusions therein. Because the Opinions are not a risk assessment as appropriate to the circumstances, the measure cannot be based on a risk assessment within the meaning of Article 5.1.[46] (footnote omitted)
>
> In light of the above, the Panel concludes that the [European Communities'] implementing measure on oestradiol-17β is not compatible with Article 5.1 of the *SPS Agreement*.[47]

19. In respect of Article 5.7 of the *SPS Agreement*, the Panel found:

> [I]t has not been demonstrated that relevant scientific evidence was insufficient, within the meaning of Article 5.7 of the *SPS Agreement*, in relation to any of the five hormones with respect to which the European Communities applies a provisional ban.[48]
>
> We therefore conclude that the [European Communities'] compliance measure does not meet the requirements of Article 5.7 of the *SPS Agreement* as far as the provisional ban on progesterone, testosterone, zeranol, trenbolone acetate and melengestrol acetate is concerned.[49]

20. The Panel refrained from making findings on Article 3.3 of the *SPS Agreement*, explaining that, "[i]n light of our mandate and of our objectives in engaging in a review of the conformity of the [European Communities'] implementing measure with the *SPS Agreement*, we see no reason to reach

a conclusion on Article 3.3 of the *SPS Agreement*, to the extent that this conclusion depends on a violation of Article 5."[50]

21. Having concluded its analysis under the *SPS Agreement*, the Panel made the following findings in respect of the European Communities' second series of main claims:

> [W]e conclude that it has not been established that the European Communities has removed the measure found to be inconsistent with a covered agreement.[51]
>
> For these reasons and those developed above, we find that the European Communities did not demonstrate a breach of Article 22.8 of the DSU by [the United States and Canada].[52]
>
> The Panel recalls its understanding that violations of Articles 23.1 and 3.7 were only claimed in relation to the violation of Article 22.8 of the DSU. To the extent that Article 22.8 has not been breached, the European Communities has not established a violation of Articles 23.1 and 3.7 of the DSU. The Panel concludes that there is no violation of Articles 23.1 and 3.7 of the DSU by [the United States and Canada] as a result of a breach of Article 22.8.[53]

22. The Panel also rejected the European Communities' claims under Articles I:1 and II of the GATT 1994.[54] Finally, the Panel addressed the European Communities' alternative claim of violation of Article 22.8 of the DSU:

> We recall that the European Communities also raised a *conditional* claim of violation of Article 22.8 of the DSU *per se*. The European Communities specified in its first written submission that this claim was "made in the alternative and only on the condition that the Panel does not establish any violation under Articles 23.1, 23.2(a), 3.7, 22.8 and 21.5 of the DSU".
>
> We note that we have established a violation of Article 23.1 and 23.2(a). We also recall that we have already addressed the alleged violation of Article 22.8 of the DSU as part of our review of the [European Communities'] claim of violation of Article 23.1 read together with Article 22.8 and Article 3.7 of the DSU. Under those circumstances, it is not necessary for the Panel to address the conditional claim of violation [of] 22.8 of the DSU *per se* in the alternative.[55] (original emphasis; footnote omitted)

[50]Panel Report, *US – Continued Suspension*, para. 7.845; Panel Report, *Canada – Continued Suspension*, para. 7.830.
[51]Panel Report, *US – Continued Suspension*, para. 7.847; Panel Report, *Canada – Continued Suspension*, para. 7.832.
[52]Panel Report, *US – Continued Suspension*, para. 7.850; Panel Report, *Canada – Continued Suspension*, para. 7.835.
[53]Panel Report, *US – Continued Suspension*, para. 7.851; Panel Report, *Canada – Continued Suspension*, para. 7.836.
[54]Panel Report, *US – Continued Suspension*, para. 7.853; Panel Report, *Canada – Continued Suspension*, para. 7.838.
[55]Panel Report, *US – Continued Suspension*, paras. 7.854 and 7.855; Panel Report, *Canada – Continued Suspension*, paras. 7.839 and 7.840.

23. On the basis of the above, the Panel concluded that the United States and Canada had made the following "procedural violations":

> (a) by seeking, through the measure at issue—that is the suspension of concessions or other obligations subsequent to the notification of the [European Communities'] implementing measure (Directive 2003/74/EC)—the redress of a violation of obligations under a covered agreement without having recourse to, and abiding by, the rules and procedures of the DSU, [the United States and Canada have] breached Article 23.1 of the DSU;
>
> (b) by making a determination within the meaning of Article 23.2(a) of the DSU to the effect that a violation had occurred without having recourse to dispute settlement in accordance with the rules and procedures of the DSU, [the United States and Canada have] breached Article 23.2(a) of the DSU.[56]

24. As regards the European Communities' claims concerning Article 23.1 of the DSU, read together with Articles 22.8 and 3.7, the Panel concluded:

> (a) to the extent that the measure found to be inconsistent with the *SPS Agreement* in the *EC – Hormones* dispute [(WT/DS26, WT/DS48)] has not been removed by the European Communities, [the United States and Canada have] not breached Article 22.8 of the DSU;
>
> (b) to the extent that Article 22.8 has not been breached, the European Communities has not established a violation of Articles 23.1 and 3.7 of the DSU *as a result of a breach of Article 22.8*.[57] (original emphasis)

25. In the light of its conclusions, the Panel recommended that the DSB request the United States and Canada to bring their measures into conformity with their obligations under the DSU.[58] The Panel made the following additional remarks and suggestion pursuant to Article 19.1 of the DSU regarding the implementation of its findings and conclusions:

[56]Panel Report, *US – Continued Suspension*, para. 7.856; Panel Report, *Canada – Continued Suspension*, para. 7.841.

[57]Panel Report, *US – Continued Suspension*, para. 7.857; Panel Report, *Canada – Continued Suspension*, para. 7.842.

[58]Panel Report, *US – Continued Suspension*, para. 8.2; Panel Report, *Canada – Continued Suspension*, para. 8.2.

> Whereas it is for the Members to decide on the appropriate steps needed to bring measures found in breach of their WTO obligations into conformity, the Panel deems it important to recall its conclusion in [paragraph 7.251 in *US – Continued Suspension* and paragraph 7.244 in *Canada – Continued Suspension*] as the parties have apparently diverging opinions as to how this report should be implemented by the respondent. As already mentioned, while the Panel performed functions similar to that of an Article 21.5 panel, this was done only in order to determine whether Article 22.8 of the DSU had been breached. This Panel was not called upon, nor does it have jurisdiction, to determine the compatibility of Directive 2003/74/EC with the covered agreements. In that context, the Panel suggests that, in order to implement its findings under Article 23 and in order to ensure the prompt settlement of this dispute, [the United States and Canada] should have recourse to the rules and procedures of the DSU without delay.[59]

26. On 29 May 2008, the European Communities notified the DSB, pursuant to Article 16.4 of the DSU, of its intention to appeal certain issues of law covered in the Panel Reports in *US – Continued Suspension* and *Canada – Continued Suspension* and certain legal interpretations developed by the Panel and filed a single Notice of Appeal[60], pursuant to Rule 20 of the *Working Procedures for Appellate Review*[61] (the "*Working Procedures*").

27. In a letter dated 30 May 2008, the Division noted that, in the interests of "fairness and orderly procedure", as referred to in Rule 16(1) of the *Working Procedures*, and in agreement with the participants, the appellate proceedings in respect of the European Communities' appeal from the Panel Reports in *US – Continued Suspension* and *Canada – Continued Suspension* would be consolidated due to the substantial overlap in the content of the disputes. A single Division would hear and decide the appeals, and a single oral hearing would be held by the Division.[62] The participants were further informed that Appellate Body Member, Mr. Georges Abi-Saab, had been selected, on the basis of rotation, to serve on the Division hearing these appeals, and that, in accordance with Rule 15 of the *Working Procedures*, the Appellate Body had notified the Chairman of the DSB of its decision to authorize Mr. Abi-Saab to complete the disposition of the appeals even though his second term as Appellate Body Member was due to expire before the completion of the appellate proceedings.

28. On 5 June 2008, the European Communities filed an appellant's submission.[63] On 10 June 2008, the United States and Canada each notified the DSB, pursuant to Article 16.4 of the DSU, of its intention to appeal certain issues of law covered in the respective Panel Report and certain legal interpretations developed by the Panel and filed a Notice of Other Appeal[64], pursuant to Rule 23(1) and (2) of the *Working Procedures*. On 13 June 2008, the United States and Canada each filed an other appellant's submission.[65] On 26 June 2008, Canada, the European Communities, and

[59]Panel Report, *US – Continued Suspension*, para. 8.3; Panel Report, *Canada – Continued Suspension*, para. 8.3.

[60]WT/DS320/12, WT/DS321/12 (attached as Annex I to this Report).

[61]WT/AB/WP/5, 4 January 2005.

[62]At the oral hearing, the United States and Canada confirmed their preference for two separate Appellate Body reports. We have issued separate reports (WT/DS320/AB/R and WT/DS321/AB/R), which are identical except for the Findings and Conclusions section.

[63]Pursuant to Rule 21 of the *Working Procedures*.

[64]WT/DS320/13 (attached as Annex II to this Report); WT/DS321/13 (attached as Annex III to this Report).

[65]Pursuant to Rule 23(3) of the *Working Procedures*.

the United States each filed an appellee's submission[66], and Australia, Brazil, New Zealand, and Norway each filed a third participant's submission.[67] On the same day, China, India, Mexico, and the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu each notified the Appellate Body Secretariat of its intention to appear at the oral hearing as a third participant.[68]

29. After consultation with the Appellate Body Secretariat, Canada, the European Communities, and the United States each agreed that it would not be possible for the Appellate Body to circulate its Reports in these appeals within the 90-day time-limit referred to in Article 17.5 of the DSU.[69] Canada, the European Communities, and the United States agreed that additional time was needed because of the preliminary procedural issue arising in these proceedings, the size of the Panel record, the number and complexity of the issues appealed, and the fact that there was another appellate proceeding running simultaneously. Accordingly, Canada, the European Communities, and the United States each confirmed that it would deem the Appellate Body Reports in these proceedings, issued no later than 16 October 2008, to be Appellate Body reports circulated pursuant to Article 17.5 of the DSU.

30. On 27 June 2008, the European Communities sent a letter to the Appellate Body Secretariat noting that the United States and Canada had filed their appellee's submissions after the 5:00 p.m. time-limit set out by the Division in the Working Schedule drawn up for these appeals. The European Communities referred to Rule 18(1) of the *Working Procedures* and requested that the Division "inform the parties of the treatment that should be accorded to these documents".[70] The United States and Canada responded in separate letters and requested the Division to reject the European Communities' request.[71] At the oral hearing, the Division gave a ruling on the European Communities' request regarding the late filing of the appellee's submission by the United States and Canada. The Division emphasized the importance of all participants adhering strictly to the time-limits set out in the Working Schedule, given the time constraints imposed upon both the participants and the Appellate Body Members in these proceedings. It also noted that the failure to strictly observe such time-limits can have an impact upon the fairness and the orderly conduct of the proceedings. However, having thoroughly examined the matter, and in the light of the particular time-limits concerned and potential prejudice that might be involved, the Division decided nevertheless to consider the appellees' submissions filed by the United States and Canada.

[66]Pursuant to Rules 22 and 23(4) of the *Working Procedures*. After consultation with the participants, the Division hearing this appeal allocated additional time for filing the appellees' submissions and the third participants' submissions and notifications, pursuant to Rules 16, 22, 23, 24, and 26 of the *Working Procedures*.

[67]Pursuant to Rule 24(1) of the *Working Procedures*.

[68]Pursuant to Rule 24(2) of the *Working Procedures*.

[69]Letter from the European Commission to the Director of the Appellate Body Secretariat dated 11 July 2008; Letter from Canada to the Director of the Appellate Body Secretariat dated 15 July 2008; Letter from the United States to the Director of the Appellate Body Secretariat dated 17 July 2008.

[70]Letter from the European Commission to the Director of the Appellate Body Secretariat dated 27 June 2008.

[71]Letter from Canada to the Director of the Appellate Body Secretariat dated 30 June 2008; Letter from the United States to the Director of the Appellate Body Secretariat dated 1 July 2008. Canada noted that the European Communities' appellee's submission sent via email was also slightly delayed. The United States noted that the European Communities announced in an email message that it had delivered printed copies of its appellee's submission to the Appellate Body Secretariat and to the other participants and third participants before 5 p.m.; however, the United States received the electronic copy of the European Communities' appellee's submission after 5 p.m., whereas the Working Schedule states that "[t]welve printed copies, as well as an electronic copy, of each written submission should be filed by 5 p.m., Geneva, Switzerland time, on the due date indicated in this Working Schedule". (original underlining) In the event the Appellate Body were to rule on the European Communities' request regarding the United States' appellee's submission, the United States requested the Appellate Body also to inform the European Communities of the treatment to be accorded to its submission in the light of Rule 18 of the *Working Procedures*.

31. Canada, the European Communities, and the United States requested, on 3 June 2008, that the Division authorize public observation of the oral hearing. They argued that public observation of the oral hearing was not precluded by the DSU, the *Working Procedures*, or the *Rules of Conduct for the Understanding on Rules and Procedures Governing the Settlement of Disputes*[72] (the "*Rules of Conduct*"). The participants proposed various logistical arrangements that would allow public observation, while respecting the confidentiality of any third participants that did not wish to disclose their oral statements or responses to questions.[73] On 4 June 2008, the Division invited the third participants to comment in writing on the participants' request to open the hearing to public observation. In particular, the Division asked for the third participants' views on the permissibility of opening the hearing for public observation under the DSU and the *Working Procedures*, and, if they so wished, on the specific logistical arrangements proposed in the requests. Comments were received, on 12 June 2008, from Australia, Brazil, China, India, Mexico, New Zealand, Norway, and the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu. Australia, New Zealand, Norway, and the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu supported the participants' request to open the hearing to public observation. Brazil, China, India, and Mexico requested the Appellate Body to deny the participants' request. According to these third participants, the oral hearing forms part of the proceedings of the Appellate Body and, therefore, is subject to the requirement of Article 17.10 of the DSU that "[t]he proceedings of the Appellate Body shall be confidential". On 16 June 2008, the Division invited Canada, the European Communities, and the United States to comment on the submissions made by the third participants. Third participants who wished to submit comments on the submissions made by the other third participants were also invited to do so. Additional comments from Canada, the European Communities, and the United States were received on 23 June 2008. On 7 July 2008, the Division held an oral hearing with the participants and third participants, exclusively dedicated to exploring the issues raised by the request of the participants to authorize public observation. The participants and third participants made oral statements and responded to questions from the Division. At the end of the oral hearing, the participants and third participants were invited to submit, by close of business, 8 July 2008, additional comments relating specifically to the technical modalities proposed by the participants for public observation. Comments were received from Brazil, China, India, and Mexico, as well as Canada, the European Communities, and the United States.

32. On 10 July 2008, the Division issued a Procedural Ruling in which it authorized the public observation of the oral hearing and adopted additional procedures for that purpose in accordance with Rule 16(1) of the *Working Procedures*. The Procedural Ruling is attached as Annex 4 of this Report. Public observation took place via simultaneous closed-circuit television broadcast to a separate room. Notice of the opening of the hearing to public observation and registration instructions were provided on the WTO website. A total of 80 individuals registered to observe the oral hearing.

33. The oral hearing took place on 28-29 July 2008. Pursuant to the additional procedures adopted by the Division, Canada, the European Communities, and the United States were authorized to disclose their oral statements and responses to questions. Australia, New Zealand, Norway, and the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu were also authorized to disclose their statements and responses to questions. The oral statements and responses to questions of the other third participants were not subject to observation by the public.

[72]The *Rules of Conduct*, as adopted by the DSB on 3 December 1996 (WT/DSB/RC/1), are incorporated into the *Working Procedures* (WT/AB/WP/5), as Annex II thereto. (See WT/DSB/RC/2, WT/AB/WP/W/2)

[73]The participants expressed a preference for simultaneous closed-circuit broadcast to a separate room.

II. Arguments of the Participants and the Third Participants

A. *Claims of the European Communities – Appellant*

1. Procedural Issue – Public Observation of the Oral Hearing

34. The European Communities requested the Appellate Body to allow public observation of the oral hearing in these proceedings. The European Communities recognizes that Article 17.10 of the DSU provides that "[t]he proceedings of the Appellate Body shall be confidential". Nevertheless, for the European Communities, "it is by no means obvious that the term 'proceedings' covers the oral hearing of the Appellate Body."[74] The European Communities submits that "an interpretation of the ordinary meaning of that term in its context and in light of the DSU's object and purpose will demonstrate that '[t]he proceedings of the Appellate Body' rather refers to the Appellate Body's internal work, and does not include its oral hearing, and that Article 17.10 in any event does not prohibit an open oral hearing."[75]

35. The European Communities acknowledges that Article 14.1 of the DSU refers to the "deliberations" of the panel as being confidential. However, the European Communities argues that the choice of the different words "deliberations" and "proceedings" may be explained by the fact that the idea of creating an Appellate Body emerged relatively late in the negotiations on the DSU, and the fact that the DSU regulates the appellate review in much more rudimentary terms than the panel procedure. Therefore, the European Communities finds no basis for understanding the choice of the different words "deliberations" and "proceedings" as reflecting an intention to draw a difference for the question at issue, and to rule out public observation of Appellate Body oral hearings. The European Communities also refers to the French and Spanish versions of Article 17.10 that use the terms "*travaux*" and "*actuaciones*", respectively. The European Communities states that these are "very broad terms that could cover every work which the Appellate Body performs", but that such a literal reading "would give rise to absurd results".[76] Thus, these terms have to be given a "more plausible meaning"[77] and are best understood as capturing the internal work of the Appellate Body.

36. According to the European Communities, interpreting "proceedings" more broadly than "the internal work of the Appellate Body" leads to problematic results. First, the oral hearing would be confidential with "the absurd result ... that the parties themselves could not attend the hearing in their own dispute".[78] Secondly, it would preclude the Appellate Body from referring to the arguments of the participants in the Appellate Body report. Thirdly, the Notices of Appeal could not be circulated to WTO Members and made public.

37. The European Communities asserts that, if the Appellate Body was "empowered"[79] by Article 17.9 of the DSU to draw up its *Working Procedures* and thereby to create the "oral hearing", even though an oral hearing is not foreseen in the DSU, it is also entitled to hold an oral hearing that is open for public observation. The European Communities submits that allowing public observation of the oral hearing "gives effect to the choice which the DSU offers to the parties"[80] under Article 18.2 of the DSU, which provides that "[n]othing in [the DSU] shall preclude a party to a dispute from disclosing statements of its own positions". Moreover, the European Communities states that, in accordance with Article 3.7 of the DSU, the objective of the WTO dispute settlement mechanism is

[74]European Communities' request for an open hearing, para. 9.
[75]*Ibid.*
[76]European Communities' request for an open hearing, para. 15.
[77]*Ibid.*
[78]*Ibid.*, para. 19.
[79]*Ibid.*, para. 25.
[80]*Ibid.*, para. 26. (emphasis omitted)

"to secure a positive solution to a dispute". It follows that if the parties to a dispute jointly consider that an open hearing is an important part of their desired way to find a positive solution of their dispute, then it is in line with the object and purpose of the DSU to accommodate that request.

38. The European Communities maintains that confidentiality under the DSU is correctly understood as protecting the interests of WTO Members where they consider that they need that protection, and not as an obligation imposed, even where WTO Members do not desire confidentiality. The European Communities adds that "[t]he other function of confidentiality is to protect the integrity of the (quasi-)judicial process, but in contrast to secret deliberations, this function does not require closed hearings."[81] On the contrary, the European Communities argues that open hearings are even better and more natural for the judicial process, as the tradition of open oral hearings in national and international judiciaries around the world demonstrates.

39. Finally, the European Communities submits that the Appellate Body should follow the example of the Panel in these proceedings and of other panels which have allowed public observation of their meetings with the parties. The European Communities additionally refers to various international courts and tribunals that allow the public to observe their hearings.

40. The European Communities rejects the arguments made by the third participants that oppose the request to open the hearing on the basis of their interpretation of the scope of the term "proceedings". The European Communities states that none of these third participants "has commented on the many inconsistencies that would arise out of such a reading ..., not least the fact that the confidentiality requirement obviously does not apply to certain other aspects of the 'proceedings' in a broad sense (such as the notice of appeal, the disclosure of statements in the report etc. ...)."[82] The European Communities also rejects the relevance of the interpretation of the term "proceedings" in *Canada – Aircraft*, because that case involved a different issue, namely, whether additional procedures were necessary for the protection of business confidential information. As regards Article 18.2 of the DSU, the European Communities considers that this provision "trumps any confidentiality requirements that may exist elsewhere in the agreement"[83], rather than vice-versa, as suggested by some third participants. Moreover, the European Communities disagrees with the argument that the Appellate Body's decision in this case will prejudge the outcome of the DSU review negotiations.

41. For these reasons, the European Communities requests the Appellate Body to allow public observation of the hearing in these proceedings. The European Communities states that its preferred format is to allow public observation of the Appellate Body's oral hearing "by way of real-time closed-circuit audio and video broadcast to a separate room".[84]

2. Articles 23.2(a) and 21.5 of the DSU

42. Although it agrees with the Panel's finding that the United States and Canada have acted inconsistently with Articles 23.2(a) and 23.1 of the DSU, the European Communities asserts that the Panel erred by failing to find that Article 23.2(a), read together with Articles 21.5 and 23.1, required the United States and Canada to initiate Article 21.5 proceedings if they considered that Directive 2003/74/EC did not comply with the DSB's recommendations and rulings in *EC – Hormones*.

43. According to the European Communities, when a WTO Member considers that the implementing measure taken by another WTO Member is not consistent with the covered agreements,

[81]*Ibid.*, para. 31.
[82]European Communities' comments on third participants' comments, para. 4.
[83]*Ibid.*, para. 10.
[84]European Communities' request for an open hearing, para. 45.

and proceeds to enforce what it considers to be its rights under the DSU, that Member is obliged first to have recourse to a compliance procedure under Article 21.5 of the DSU. The European Communities asserts that "a WTO Member is not entitled, in these circumstances, to seek the redress of an alleged violation through the suspension of obligations without first having recourse to a compliance procedure."[85]

44. In the view of the European Communities, the Panel confused the question of whether recourse to Article 21.5 is obligatory and the question of what procedures are available under Article 21.5. The European Communities disagrees with the Panel's interpretation of the phrase "except through recourse to dispute settlement in accordance with the rules and procedures of this Understanding" in Article 23.2(a) as "encompassing any of the means of dispute settlement provided in the DSU, including consultation, conciliation, good offices and mediation".[86] According to the European Communities, "[i]t is not in dispute"[87] that the United States and Canada disagree with the European Communities as to the consistency of Directive 2003/74/EC with the *SPS Agreement*. Consequently, the present dispute "clearly" falls within the scope of Article 21.5 because it concerns a "disagreement as to the existence or consistency with a covered agreement of measures taken to comply with the recommendations and rulings"[88] of the DSB in *EC – Hormones*. The European Communities emphasizes that consultation, conciliation, good offices, and mediation under the DSU have no effect unless the results are accepted by the parties. In this dispute, the European Communities argues, "it is manifest that no procedure requiring the agreement between the parties was available"[89], because the European Communities exhausted all available options, including arbitration under Article 25 of the DSU, in its attempt to come to an agreement with the responding parties. The European Communities submits that the phrase "shall be decided through recourse to these dispute settlement procedures, including wherever possible resort to the original panel" in Article 21.5 implies an obligation to have recourse to compliance panel proceedings and that, in the absence of an amicable solution, there must be a final and binding ruling by an adjudicative body. The European Communities concludes from this that "Article 21.5 of the DSU is the applicable provision because the WTO members clearly privileged that provision in case of disagreement between the parties on implementation".[90] Thus, the European Communities maintains that the Panel erred in failing to draw the necessary conclusion that an Article 21.5 panel proceeding was the only applicable procedure available under the DSU and that such a panel procedure was "the only way for the United States and Canada to proceed".[91]

45. The European Communities argues furthermore that the Panel erred in finding that compliance panel proceedings may be initiated by the European Communities as the original responding party in *EC – Hormones*. On the contrary, the European Communities submits, it is inherent in the wording, context, and object and purpose of the provision that the original complaining parties, that is, the United States and Canada, are required to have recourse to Article 21.5.[92] The European Communities maintains that references in Articles 3.12, 4.4, 4.7, and 6 of the DSU to "complaining party" and "complainant" confirm that the WTO dispute settlement system is based on the notion of "adversarial proceedings" and "is not applicable to requests for an abstract confirmation of the *consistency* of a measure"[93] by the defending party. Thus, where a complaining party alleges that an implementing measure is not consistent with the covered agreements, the "implementing Member cannot have recourse to Article 21.5 of the DSU in order to confirm the WTO-consistency of

[85]European Communities' appellant's submission, para. 57.
[86]*Ibid.*, para. 48 (referring to Panel Report, *US – Continued Suspension*, para. 7.247; and Panel Report, *Canada – Continued Suspension*, para. 7.240).
[87]European Communities' appellant's submission, para. 59.
[88]*Ibid.*, para. 49.
[89]*Ibid.*, para. 54.
[90]*Ibid.*, para. 61.
[91]European Communities' appellant's submission, para. 55.
[92]See *ibid.*, para. 75.
[93]*Ibid.*, para. 78. (original emphasis)

its compliance measure."[94] The European Communities asserts that this understanding is confirmed by the very notion of the DSU as a "dispute" settlement system and by the basic logic reflected in Article 3.3 of the DSU and Article XXIII:2 of the GATT 1994, which assumes a situation where a WTO Member considers that its rights are being impaired by another Member's measure and therefore challenges that measure, and "does not address the situation where a Member is complaining against its own measure".[95]

46. The European Communities additionally contends that "[i]t would be manifestly impossible for the European Communities to fulfil the very basic requirements of Article 6" as regards the content of the request for the establishment of a panel, because "it would not be in a position to identify the provisions of the *SPS Agreement* that are violated."[96] Moreover, the European Communities maintains that compliance panel proceedings initiated by the European Communities would not lead to recommendations addressed to the retaliatory measures taken by the United States and Canada, because these measures are not the measure taken to comply with respect to which a disagreement exists within the meaning of Article 21.5. The European Communities also points out that an original complainant may refuse to participate in compliance panel proceedings initiated by the original respondent, as in fact occurred in *EC – Bananas III (Article 21.5 – EC)*. The European Communities considers that the "subsequent practice"[97] that has developed in the WTO dispute settlement system confirms its understanding that Article 21.5 is only available to complaining parties in the original dispute. The European Communities points out that, since the establishment of the WTO, 30 out of 31 proceedings pursuant to Article 21.5 were initiated by the original complaining party, and the panel report in the one remaining proceeding, initiated by the original responding party, was never adopted. This demonstrates that such a procedure is not an option for the original responding party.

47. On this basis, the European Communities requests the Appellate Body to reverse the Panel's findings that the scope of the phrase "recourse to these dispute settlement procedures" in Article 23.2(a) is not limited to Article 21.5 panel proceedings initiated, in this case, by the United States and Canada as the original complaining parties, and that the European Communities, as the original respondent, may initiate Article 21.5 proceedings.

3. Article 22.8 of the DSU

48. The European Communities alleges that the Panel erred in finding that the European Communities' second series of main claims were premised on: (i) a violation by the United States and Canada of their obligations under Article 22.8 of the DSU; and (ii) the actual conformity with the *SPS Agreement* of the implementing measure taken by the European Communities.[98] In its second series of main claims before the Panel, the European Communities argued that the United States and Canada have acted inconsistently with Article 23.1 of the DSU, read together with Articles 22.8 and 3.7, by maintaining the suspension of concessions despite the removal of the "measure found to be inconsistent" within the meaning of Article 22.8—that is, Directive 96/22/EC.[99]

49. The European Communities explains that it never argued that the claim under Article 23.1 of the DSU was dependent on a violation of Article 22.8 by the United States and Canada and never argued that this claim would be premised on the conformity of the implementing measure with the

[94]*Ibid.*, para. 78.

SPS Agreement. Rather, the violation the European Communities claimed was the unilateral determination made by the United States and Canada according to which "the measure taken to comply" with the recommendations and rulings of the DSB, that is, Directive 2003/74/EC, is not, in their view, consistent with the *SPS Agreement*. The European Communities adds that such a determination is a violation of Article 23.1 of the DSU read in the light of Article 22.8 of the DSU, not a claim of violation of Article 22.8 in itself, and is not premised on the conformity of the implementing measure with the *SPS Agreement*. The European Communities additionally notes that only in the alternative, and only on the condition that the Panel did not establish any violation under Articles 23.1, 23.2(a), 3.7, 22.8 and 21.5 of the DSU, did the European Communities make an alternative claim under Article 22.8 of the DSU.[100]

50. The European Communities asserts that the Panel "fail[ed] to provide any serious legal argumentation"[101] as to why, under Article 22.8, what is to be achieved is not the removal of the measure, but actual compliance with the DSB's recommendations and rulings. The European Communities takes issue with the Panel's finding that the replacement of Directive 96/22/EC by Directive 2003/74/EC did not constitute the removal of the inconsistent measure within the meaning of Article 22.8, because Directive 2003/74/EC, like its predecessor, imposes an import ban on meat treated with hormones. According to the European Communities, this finding contradicts the Panel's earlier finding that "it is not the ban on meat treated with growth promotion hormones as such that was found illegal in the *EC – Hormones* case, but the justification for this ban which was found insufficient."[102] Moreover, the European Communities underscores the Panel's finding that Directive 2003/74/EC "shows all the signs of an implementing measure having gone through all the formal process required for its adoption and showing, on its face, all the signs of a measure adopted in good faith."[103] The European Communities contends that, because the Panel concluded that Directive 96/22/EC—the measure found to be inconsistent with a covered agreement—has been removed, it follows from the wording of Article 22.8 that the application of the suspension of concessions was no longer authorized after the adoption and the subsequent notification of Directive 2003/74/EC to the DSB. The European Communities also emphasizes that Articles 3.7 and 22.8 both recognize that the suspension of concessions or other obligations is a temporary measure of last resort.[104]

51. The European Communities emphasizes that Article 22.8 refers to whether the "measure found to be inconsistent with a covered agreement" has been removed. The European Communities asserts that, in this particular case, the measure found to be inconsistent within the meaning of Article 22.8 was the measure that was subject to the original dispute in *EC – Hormones* and that was identified by the Appellate Body as the measure found to be inconsistent with the *SPS Agreement* in 1998. That measure was Directive 96/22/EC. Thus, once the European Communities adopted Directive 2003/74/EC, which was based on a new risk assessment that explicitly aimed at addressing the shortcomings found in *EC – Hormones* with respect to Directive 96/22/EC, the suspension of concessions or other obligations could no longer be applied. Once the original measure was removed, the suspension of concessions would continue without its main objective—implementation of the DSB's recommendations and rulings—because the implementing measure had already been taken. The objective to induce compliance could only "revive after it has been properly established before a

[102]*Ibid*., para. 106 (quoting Panel Report, *US – Continued Suspension*, para. 7.207; and Panel Report, *Canada – Continued Suspension*, para. 7.199). (emphasis omitted)
[103]*Ibid*., para. 108 (quoting Panel Report, *US – Continued Suspension*, para. 7.238; and Panel Report, *Canada – Continued Suspension*, para. 7.231). (emphasis omitted)
[104]*Ibid*., paras. 115 and 116. The European Communities also refers to its own conduct in *US – FSC*, where it suspended the application of retaliatory measures and initiated an Article 21.5 proceeding because it considered the United States' implementing measure to be inconsistent with the relevant covered agreements. (*Ibid*., para. 156)

compliance procedure under Article 21.5 of the DSU that the implementing measure has been insufficient to remedy a WTO violation."[105]

52. The European Communities contends that "Articles 21 and 22 of the DSU [were] ... drafted around a basic dichotomy between 'the measure found to be inconsistent' and the 'measures taken to comply'."[106] Therefore, "whether the measure taken [by the European Communities] to comply is compliant with the recommendations and rulings of the DSB"[107] is a matter to be determined by a panel acting under Article 21.5 of the DSU. Unlike Article 21.5, Article 22.8 refers to whether the measure has been removed and does not refer to whether the measure taken to comply is consistent with the DSB's recommendations and rulings. The European Communities adds that interpreting Article 22.8 as referring to "actual compliance", as the Panel did, would allow the original complaining Member to make a unilateral determination of the substantive merits of the measure taken to comply without recourse to Article 21.5 of the DSU.

53. The European Communities considers that the Panel "fundamentally erred" in the manner in which it identified the "measure found to be inconsistent with a covered agreement" in order to determine whether it "has been removed"[108] within the meaning of Article 22.8 of the DSU. The European Communities states that, even though the Panel initially considered that Directive 96/22/EC, that is, the SPS measure subject to the original proceedings in *EC – Hormones*, was removed, the Panel later held the view that considering Directive 96/22/EC as the measure found to be inconsistent with a covered agreement within the meaning of Article 22.8 is "unsatisfactory, as Directive 96/22/EC was replaced by Directive 2003/74/EC which also imposes an import ban".[109]

54. For these reasons, the European Communities requests the Appellate Body to reverse the Panel's finding that the European Communities' claims under Articles 23.1, 22.8, and 3.7 of the DSU were premised on a violation of Article 22.8 and on the actual compliance of Directive 2003/74/EC with the *SPS Agreement*. It also requests the Appellate Body to complete the analysis and find that the United States and Canada have breached Article 23.1 of the DSU by continuing the suspension of concessions despite the adoption and subsequent notification to the DSB of Directive 2003/74/EC.

4. The Panel's Terms of Reference

55. The European Communities maintains that its alternative claim of a "direct"[110] violation of Article 22.8, on the basis of its actual compliance with the *SPS Agreement*, was "strictly"[111] predicated on the condition that the Panel found no violations pursuant to the European Communities' two series of main claims. The European Communities asserts that the Panel should not have ignored the "hierarchy"[112] and "conditional order of the legal claims" because it "form[ed] part of [its] mandate".[113] The European Communities reiterates that its second series of main claims, alleging that the United States and Canada have violated Article 23.1, read together with Articles 22.8 and 3.7, did

[105]European Communities' appellant's submission, para. 141.
[106]*Ibid*., paras. 136 and 137 (referring to the Appellate Body's statement in paragraph 36 of its Report in *Canada – Aircraft (Article 21.5 – Brazil)* that "a measure which has been 'taken to comply ...' ... will *not* be the same measure as the measure which was the subject of the original dispute, so that, in principle, there would be two separate and distinct measures" (original emphasis; footnote omitted)).
[107]*Ibid*., para. 142.
[108]*Ibid*., para. 145.
[109]European Communities' appellant's submission, para. 146 (quoting Panel Report, *US – Continued Suspension*, paras. 7.283 and 7.284; and Panel Report, *Canada – Continued Suspension*, paras 7.299 and 7.300).
[110]*Ibid*., para. 160 (quoting Panel Report, *US – Continued Suspension*, para. 7.164; and Panel Report, *Canada – Continued Suspension*, para. 7.151).
[111]*Ibid*., para. 165.
[112]*Ibid*., para. 162.
[113]*Ibid*., para. 167.

not depend on the presumed or actual compliance of Directive 2003/74/EC with the DSB's recommendations and rulings, but were premised on the fact that the measure found to be inconsistent with a covered agreement, within the meaning of Article 22.8, had been removed. Therefore, whether Directive 2003/74/EC complies with the *SPS Agreement* was only relevant for the European Communities' conditional "alternative" claim, which the Panel should have examined only if the condition that the Panel found no violation under the European Communities' two series of main claims had been met. On this basis, the European Communities argues that the Panel ignored the clear indication by the European Communities as to the hierarchy and conditional order of its claims and exceeded its mandate by reviewing the compatibility of Directive 2003/74/EC with the *SPS Agreement*, even though the Panel had already found that the United States and Canada had breached Articles 23.1 and 23.2(a) of the DSU.

56. The European Communities alleges that, as shown by the panel report in *EC – Sardines*, when a panel has clear indications by the complaining party as to the order of its legal claims, it is "bound by the sequencing order of the legal claims"[114] if such an order does not affect the proper interpretation of the relevant provisions of the covered agreements. In this dispute, the order of claims raised by the European Communities did not affect the proper interpretation of the relevant provisions of the DSU and the *SPS Agreement*, and the Panel erred in failing to follow this order.

57. The European Communities emphasizes that its "main point in these proceedings was to establish that the proper place to review compliance was before an Article 21.5 panel at the request of the United States or Canada on the basis of explicit claims setting out their objections to the new measures."[115] It adds that, had the Panel followed the order and conditions of the claims made by the European Communities, it would not have acted as a compliance panel in blatant disregard of its terms of reference and the very specific requirements under Article 21.5 of the DSU as informed, *inter alia*, by Article 6 of the DSU. The European Communities notes, in this regard, what it considers to be contradictory statements by the Panel with respect to whether or not the Panel was "substitut[ing]" itself for, or "perform[ing]"[116] the role of, an Article 21.5 panel.

58. Therefore, the European Communities asserts that the Panel "acted ... in blatant disregard of [its] terms of reference and the ... requirements under Article 21.5 of the DSU"[117] and erroneously assumed the function of an Article 21.5 panel, in contravention with Articles 7 and 21.5 of the DSU.

5. The Panel's Suggestion for Implementation

59. The European Communities requests the Appellate Body to "modify"[118] the Panel's suggestion that the United States and Canada "should have recourse to the rules and procedures of the DSU without delay".[119] According to the European Communities, as a result of the Panel's findings that the United States and Canada have breached Articles 23.2(a) and 23.1 of the DSU, there is "no doubt"[120] that the continued suspension of concessions is inconsistent with the DSU, even if a compliance proceeding were initiated without delay. Consequently, the European Communities considers that "the United States and Canada should remove their suspension of WTO obligations and

[114]European Communities' appellant's submission, para. 168 (referring to Panel Report, *EC – Sardines*, paras. 7.14-7.19).
[115]*Ibid.*, para. 170.
[116]*Ibid.*, paras. 172 and 173 (referring to Panel Report, *US – Continued Suspension*, paras. 7.276 and 8.3; and Panel Report, *Canada – Continued Suspension*, paras. 7.292 and 8.3). (emphasis omitted)
[117]*Ibid.*, para. 171.
[118]*Ibid.*, para. 456.
[119]*Ibid.*, para. 478 (quoting Panel Report, *US – Continued Suspension*, para. 8.3; and Panel Report, *Canada – Continued Suspension*, para. 8.3).
[120]*Ibid.*, para. 468.

have recourse to the rules and procedures of the DSU without delay if they continue to take issue with the European Communities' implementation of the recommendations"[121] stemming from *EC – Hormones*.

60. The European Communities adds that the phrase "through recourse to dispute settlement" in Article 23.2(a) requires an outcome of the recourse in the form of binding decisions or an agreement between the parties. Thus, the European Communities argues, the inconsistency resulting from the continued suspension of concessions will not disappear if the United States and Canada merely request consultations or initiate mediation procedures. Instead, the United States and Canada must "complete"[122] Article 21.5 proceedings against the European Communities. The European Communities further submits that it "would be deprived of the protection of Article 23 of the DSU, if [it] can secure the withdrawal of the sanctions only by winning in the compliance dispute brought by the United States and Canada, as suggested by the Panel."[123] In the European Communities' view, Article 23 would be "turned on its head"[124] if a WTO Member were allowed to make first a unilateral determination—by keeping the suspension of concessions in place—that an implementing measure of another Member is WTO-inconsistent, and only later obtain multilateral findings in proceedings initiated by the implementing Member that provide a valid basis for the determination.

61. The European Communities states that the circumstances of this dispute require "clarity" and a suggestion by the Appellate Body would be "very useful"[125], explaining that the Panel's suggestion is "too vague to be of much assistance".[126] Thus, the European Communities requests the Appellate Body to "improve"[127] the Panel's suggestion so as to make it clear that the United States and Canada must cease applying the suspension of concessions, and must seek resolution of any remaining disagreement concerning the consistency with the *SPS Agreement* of Directive 2003/74/EC by having recourse to Article 21.5 panel proceedings or any other proceeding to which the parties may agree.

6. The Panel's Selection of Experts

62. The European Communities takes issue with the Panel's selection of two experts—Dr. Jacques Boisseau and Dr. Alan Boobis—who contributed to the reports by JECFA regarding the use of the hormones at issue in this dispute. The European Communities claims that "any 'reliance' the Panel[] [has] placed on what these two experts from JECFA said is a violation of the relevant rules on conflict of interest, of its rights of due process and of the requirement for the Panel[] to perform an 'objective assessment' of the matter before [it]"[128], as required under Article 11 of the DSU.

63. Recalling the Appellate Body's finding in *Thailand – H-Beams* that the "requirement of due process is fundamental to ensuring a fair and orderly conduct of dispute settlement proceedings"[129], the European Communities posits that due process "informs the entire Dispute Settlement Understanding".[130] In the view of the European Communities, "the consultation of experts by the Panel[] for the purposes of scientific and technical advice including their selection must respect general principles of law, and in particular the principle of due process."[131] The European

[123]*Ibid.*, para. 475.
[124]*Ibid.*, para. 476. (emphasis omitted)
[125]*Ibid.*, para. 477.
[126]*Ibid.*, para. 479.
[127]*Ibid.*, para. 480.
[128]European Communities' appellant's submission, para. 202.
[129]*Ibid.*, para. 184 (quoting Appellate Body Report, *Thailand – H-Beams*, para. 88).
[130]*Ibid.*, para. 184.
[131]*Ibid.*, para. 188.

Communities adds that "[i]t is inherent in the principle of due process that the parties to a dispute are given a fair hearing including that the experts a court, tribunal or panel hears or consults are *independent and impartial*."[132]

64. The European Communities contends that "the relevant legal test"[133] for evaluating whether an expert is independent and impartial is found in Section VI.2 of the *Rules of Conduct*, which requires that experts "disclose any information that could reasonably be expected to be known to them at the time [they are requested to serve as experts] which ... is likely to affect or give rise to justifiable doubts as to their independence or impartiality." The European Communities asserts that this standard is "quite simple and low" and "does not require certainty or high probability".[134] The European Communities asserts that "the Panel[] never actually addressed the relevant legal question"[135] of whether this standard served to disqualify these experts.

65. The European Communities alleges that the Panel disregarded its "most important objection"[136] that Drs. Boisseau and Boobis, who participated in the drafting of JECFA reports, could not be independent and impartial because they were asked to evaluate the risk assessments that were "very critical of the JECFA reports".[137] The European Communities observes that as "co-authors" of the JECFA reports, these experts "cannot be considered to be independent and impartial in these circumstances, because this would amount to asking them to review and criticise reports that are their own doing".[138]

66. In addition, the European Communities claims that the Panel's decision to select these experts was "based on a very narrow definition of a perceived conflict of interest because it required an actual or almost certain conflict, not a perceived, likelihood or a justifiable doubts test".[139] According to the European Communities, a perceived conflict of interest arises in this dispute due to the fact that Dr. Boisseau took "a position in favour of the safety of these hormones" and Dr. Boobis "has been receiving funding from the pharmaceutical industry in his research and counselling".[140]

67. The European Communities alleges several further errors committed by the Panel. It faults the Panel for "relying overwhelmingly"[141] on the opinions of Drs. Boisseau and Boobis on practically all scientific aspects of the matters; for failing to ensure that Drs. Boisseau and Boobis complied with the self-disclosure requirement before their selection; and for failing to "actually examine[] whether all of the experts had a potential conflict of interest and whether [Drs. Boisseau and Boobis] fulfilled the conditions to be truly independent and impartial".[142] Finally, the European Communities argues that, "even if one were to take the view that the Panel[] could accept the non-independent experts provided that they would constantly bear in mind the potential conflicts [of interest and the lack of independence] when weighing the expert opinions, it is clear that the Panel[] refused to do so, considering the issue of the experts finally resolved when dismissing the European Communities'

[132] *Ibid.* (original emphasis)
[133] *Ibid.*, para. 195.
[134] *Ibid.*

[136] *Ibid.*, para. 203.
[137] *Ibid.*, para. 196.
[138] European Communities' appellant's submission, para. 205. The European Communities seeks to draw analogy from a judgment by the European Court of Human Rights, which found that a person was denied a fair trial because the expert appointed by the relevant tribunal had drafted the report triggering the trial against that person. (*Ibid.*, para. 206 (referring to European Court of Human Rights, Judgment of 6 May 1985, *Case of Bönisch* v. *Austria*, Application no. 8658/79 (Exhibit EC-131 submitted by the European Communities to the Appellate Body)))
[139] European Communities' appellant's submission, para. 203.
[140] *Ibid.*
[141] *Ibid.*, para. 212.
[142] *Ibid.*, para. 192.

objections."[143] Indeed, these experts "dominate[d] the entire scientific examination by the Panel[] both from the point of view of how often they [were] referred to and whether the Panel[] ever question[ed] their opinions and whether their opinions go beyond science and stray into the area of the risk regulator."[144]

68. On this basis, the European Communities submits that the Panel failed to respect the principle of due process; failed to ensure compliance with the requirements on self-disclosure under the *Rules of Conduct*; erred in accepting as experts persons whose independence and impartiality was not assured; and acted inconsistently with its obligations under Article 11 of the DSU. The European Communities therefore requests the Appellate Body to "reverse all the findings of the Panel[] which depend on the advice they received from" Drs. Boisseau and Boobis.[145]

7. Article 5.1 of the *SPS Agreement*

69. The European Communities argues that the Panel erred in finding that the permanent ban on meat and meat products from cattle treated with oestradiol-17β applied pursuant to Directive 2003/74/EC was not based on a risk assessment within the meaning of Article 5.1 and Annex A, paragraph 4, of the *SPS Agreement*. The European Communities requests the Appellate Body to reverse this finding for the following reasons.

70. The European Communities submits that the Panel erred in its interpretation and application of Article 5.1 and Annex A, paragraph 4, of the *SPS Agreement* as informed by Article 5.2 of that Agreement. The European Communities asserts that the Panel "[a]dopted an extremely narrow and consequently erroneous"[146] interpretation of "risk assessment" when it excluded from the scope of its analysis under Article 5.1 arguments and evidence concerning the misuse and abuse and difficulties of control in the administration of hormones to cattle for growth-promotion purposes. The European Communities refers to the Panel's statement that Article 5.2 of the *SPS Agreement* "instructs Members on how to conduct a risk assessment"[147], and argues that the Panel erroneously rendered Article 5.2 "entirely *procedural*".[148] In the European Communities' view, Article 5.2 "does not prescribe a given method or procedure to be followed in conducting a risk assessment", but provides "*substantive factors*"[149] to be taken into account in a risk assessment and offers guidance on the substantive content of a "risk assessment" within the meaning of Article 5.1. Consequently, the Panel made a "fundamental legal error" by "considerably narrowing down the scope"[150] of a risk assessment within the meaning of Article 5.1. In doing so, the Panel wrongly excluded "risk management" aspects from the coverage of Article 5.1, and thereby adopted the same restrictive interpretation of "risk assessment" in Article 5.1 that was overturned by the Appellate Body in *EC – Hormones*.[151]

71. The European Communities relies on the Appellate Body's finding in *EC – Hormones* that risk assessors "may examine and evaluate ... risks arising from potential abuse in the administration of controlled substances and from control problems".[152] The European Communities maintains that the SCVPH Opinions explicitly addressed evidence concerning the abusive use and difficulties of control in the administration of hormones for growth-promotion purposes, and yet the Panel "simply

[152] European Communities' appellant's submission, para. 324 (referring to Appellate Body Report, *EC – Hormones*, paras. 206 and 207).

ignore[d] the evidence".[153] The Panel failed to take account of the fact that the abusive use and difficulties of control were important factors in the risk assessment underlying the SCVPH Opinions, adding considerably to the risk identified. Instead, the Panel instructed the scientific experts to examine only that part of the evidence concerning the residues in meat from these hormones administrated "in accordance with good veterinary practice".[154] The European Communities adds that the fact that Codex Alimentarius Commission ("Codex") standards do not usually address the possibility of misuse and abuse throws the Panel's approach into question, because the notion of risk assessment under Article 5.1 of the *SPS Agreement* is clearly wider than that under Codex.

72. The European Communities also asserts that the Panel erred in finding that the European Communities has acted inconsistently with Article 5.1 by failing to evaluate specifically the risks arising from residues of oestradiol-17β in meat from cattle treated with this substance for growth-promoting purposes. The European Communities highlights the conclusion in the risk assessment underlying Directive 2003/74/EC that new evidence concerning the genotoxicity[155] of oestradiol suggests that oestradiol-17β "acts as a complete carcinogen by exerting tumour initiating and promoting effects".[156] This conclusion demonstrates that the risk assessment focused on and addressed specifically the particular kind of risks at stake—the carcinogenic and genotoxic potential of the residues of oestradiol-17β found in meat treated with this hormone.

73. The European Communities maintains further that the Panel erred in requiring the quantification of the risks to human health arising from the consumption of meat containing residues of oestradiol-17β. The European Communities asserts that, by referring to "potential occurrence"[157] of adverse effects when posing questions to the experts, the Panel "imposed a quantitative method of risk assessment on the European Communities borrowed from Codex Alimentarius and JECFA".[158] However, the Panel's rejection of a "purely qualitative analysis of risk"[159] and the imposition of such a quantitative requirement find no basis in the *SPS Agreement* and contradict the Appellate Body's finding in *EC – Hormones* that a risk assessment under the *SPS Agreement* does not require the establishment of a minimum magnitude of risk. In addition, the experts acknowledged that quantification of risk is not necessary for substances that have genotoxic potential, such as oestradiol-17β. For this reason, the European Communities suggests that a qualitative analysis of risk must be *a fortiori* sufficient to meet the requirements of Article 5.1 and Annex A, paragraph 4, of the *SPS Agreement*.

74. The European Communities argues that the Panel erred in allocating the burden of proof under Article 5.1 of the *SPS Agreement*. The fact that the European Communities is the complaining party in this dispute "does not change the basic standard on the burden of proof under the *SPS Agreement*".[160] Accordingly, it was incumbent upon the United States and Canada to rebut the *prima facie* case of consistency made by the European Communities in relation to Directive 2003/74/EC.

[153] *Ibid.*, para. 329.

[154] *Ibid.*, para. 274 (referring to Question 13 posed by the Panel to the scientific experts, Panel Reports, Annex D, p. D-22; Panel Report, *US – Continued Suspension*, paras. 6.102, 6.164, and 6.165; and Panel Report, *Canada – Continued Suspension*, paras. 6.94, 6.154, and 6.155).

[155] Genotoxicity is the ability to cause damage to genetic material (DNA). Such damage may be mutagenic and/or carcinogenic. (See Panel Report, *US – Continued Suspension*, footnote 370 to para. 7.77; and Panel Report, *Canada – Continued Suspension*, footnote 362 to para. 7.75 (referring to replies of Dr. Boobis and Dr. Guttenplan to Question 2 posed by the Panel to the scientific experts, Panel Reports, Annex D, paras. 41 and 58, respectively) See also transcript of the Panel's joint meeting with the scientific experts on 27-28 September 2006, Panel Reports, Annex G, paras. 85-90)

[160] *Ibid.*, para. 287.

The European Communities submits that, because of the particularity of the case, this obligation to rebut the *prima facie* case made by the European Communities amounts to the same standard as making a *prima facie* case in a dispute where the United States and Canada proceed with a normal panel procedure against an SPS measure taken by the European Communities. The Panel nevertheless found that the United States and Canada had "sufficiently refuted the [European Communities'] allegation of compliance in [their] first written submission[s] through positive evidence of breach of the *SPS Agreement*"[161] without articulating the rationale for this conclusion. Therefore, the Panel erred in law in shifting the burden of proof to the European Communities without first examining, provision by provision under the *SPS Agreement*, whether the arguments of the United States and Canada had sufficient merit to shift the burden of proof back to the European Communities.

75. The European Communities further argues that the Panel failed to conduct an objective assessment of the facts of the case, as required by Article 11 of the DSU. While the European Communities agrees with the Appellate Body's interpretation of the standard of review applicable under the *SPS Agreement*, it also notes that, when reviewing governmental measures in highly complex or technical matters, domestic courts and international tribunals usually follow a "reasonableness" approach to the fact-finding of competent authorities. The European Communities recalls that, according to the Appellate Body's interpretation of Article 5.1, Members are entitled to rely on "divergent opinion[s] coming from qualified and respected sources"[162] in their risk assessments when adopting SPS measures. For this reason, a panel reviewing a Member's SPS measure under Article 5.1 should seek to determine whether there is any reasonable scientific basis for such measures and respect the "important and autonomous right"[163] of Members to set their level of SPS protection. A panel should not substitute its scientific judgement for that of the Member taking the measure and should not "second guess"[164] Members, particularly in situations where available science is providing alternative and competing explanations. Thus, in this dispute, the Panel should have asked whether there were divergent opinions in the scientific community, and, if the European Communities based itself on a divergent opinion, if those opinions are qualified and respected.

76. Instead of determining "whether there was any reputable support within the relevant scientific community for the determination made by the European Communities in the light of its chosen level of protection"[165], the Panel stated that it was in a situation "similar"[166] to that of a risk assessor and sought to determine what the correct scientific conclusions were relating to the hormones at issue. In doing so, the Panel "drifted into a *de novo* review"[167] of the European Communities' risk assessment and decided "to become the jury on the correct science ... by picking and choosing between the conflicting and contradictory opinions of the experts in an arbitrary manner".[168] The Panel imposed its choices on the European Communities between the different "scientifically plausible alternatives", either by basing itself on the views expressed by a majority of the experts, or by selecting the "most specific" or "best supported" views.[169] As a result, the Panel failed to take into account diverging views reflecting a "genuine and legitimate scientific controversy"[170] among the experts over the safety of residues of hormones in meat. The Panel also ignored that some of the experts reported the same

[170] *Ibid.*, para. 248.

concerns as expressed in the SCVPH Opinions, "praised"[171] the analysis in those Opinions, or highlighted that the Opinions followed a different, but equally plausible, scientific approach.

77. The European Communities alleges the following specific errors in connection with its claim that the Panel failed to make an objective assessment of the facts. First, the European Communities alleges that the Panel acted inconsistently with Article 11 of the DSU when it failed to take into account evidence related to the assessment of risks to human health arising from exposure to residues of hormones from multiple endogenous and exogenous sources. The European Communities maintains that the Panel Reports explain this issue "very briefly"[172], even though it was raised several times in the European Communities' written submissions and comments, and was discussed extensively during the meeting of the Panel with the experts. The European Communities observes that "there is no mention at all [of the risks of multiple exposures] in the Panel['s] findings."[173]

78. Secondly, the European Communities maintains that the Panel "failed to consider or distorted"[174] scientific evidence demonstrating that no safe threshold levels exist for the consumption by humans of oestradiol-17β due to its actual or potential genotoxicity. The European Communities emphasizes that a majority of the experts advising the Panel agreed that there was sufficient scientific evidence in support of the European Communities' conclusion that oestradiol-17β is actually or potentially genotoxic. However, the Panel "side-stepped" such crucial evidence and "mischaracteri[zed]" the evidence when finding that the European Communities had "not provided analysis of the potential for these [genotoxic] effects to arise from the consumption of meat and meat products which contain residues of oestradiol-17β".[175] The European Communities observes that to have conclusive evidence on whether or not a threshold can be applied "might require scientific testing on humans", which would be "totally unethical" and require a Member "to do the impossible".[176] The European Communities considers the conclusion that no threshold levels may be established in relation to oestradiol-17β to be "just as valid"[177] scientifically as the opposing position held by the United States, Canada, and JECFA. Therefore, the Panel acted inconsistently with Article 11 of the DSU by ignoring "the totality of the evidence"[178] and by failing to recognize the significance of the "'genuine' and 'legitimate' scientific controversy"[179] relating to the question of whether risks to human health arising from the consumption of residues of oestradiol-17β could be addressed through the establishment of threshold levels.

79. The European Communities argues furthermore that the Panel reached the "manifestly unfounded"[180] finding that the European Communities had not evaluated the specific risks to humans arising from the consumption of meat containing residues of oestradiol-17β as a result of the cattle being treated with this hormone for growth-promotion purposes. In reaching this finding, the Panel incorrectly imposed a "specificity" or "direct causality"[181] requirement pursuant to which the European Communities had to demonstrate *actual* adverse effects, rather than the *possibility* of

[171] *Ibid.*, para. 247.

[181] *Ibid.*, para. 262.

adverse effects, contrary to the Appellate Body's findings in *EC – Hormones* and *Japan – Apples*.[182] In the European Communities' view, the Appellate Body's findings in these disputes did not prevent a Member from meeting the standard in Article 5.1 by demonstrating that the identified adverse effects may "*possibl[y] arise* from the residues in meat" and that "there is no need to demonstrate real causality" as the Panel in this dispute required.[183] Moreover, the European Communities notes that no country has conducted the kind of specificity test required by the Panel, and the European Communities cannot be found in violation of the *SPS Agreement* for failing to meet such a test. In addition, the Panel ignored the fact that three of the experts advising the Panel confirmed that the potential for adverse effects had been demonstrated by the European Communities. On this basis, the European Communities submits that the Panel ignored and "grossly misinterpreted" part of the relevant evidence in reaching this finding and failed to explain how its conclusions "have a reasonable relationship to the totality of the evidence".[184] As a result, the Panel exceeded the bounds of its discretion as the trier of facts in its assessment of the evidence, in violation of Article 11 of the DSU.

80. The European Communities submits that the Panel failed to interpret and apply correctly Article 5.1 of the *SPS Agreement* and failed to conduct an objective assessment of the matter as required by Article 11 of the DSU. Therefore, the European Communities requests the Appellate Body to reverse the Panel's findings under Article 5.1 of the *SPS Agreement*.

8. Article 5.7 of the *SPS Agreement*

81. The European Communities argues that the Panel erred in finding that the relevant scientific evidence on the five hormones was not "insufficient" within the meaning of Article 5.7 of the *SPS Agreement* and that, consequently, the provisional ban on the importation and marketing of meat from cattle treated with these five hormones does not meet the requirements of Article 5.7. The European Communities requests the Appellate Body to reverse this finding for the following reasons.

82. First, the European Communities argues that the Panel erred in its interpretation of Article 5.7 because it expressly rejected the relevance of the level of protection set by a Member for evaluating whether the scientific evidence is "insufficient" within the meaning of Article 5.7. The European Communities takes issue with the Panel's "sweeping statement"[185] that the "presumption of consistency of measures conforming to international standards", provided in Article 3.2 of the *SPS Agreement*, "implies that these standards ..., particularly those referred to in this case, are based on risk assessments that meet the requirements of the *SPS Agreement*."[186] According to the European Communities, the presumption of consistency that applies to measures conforming to international standards under Article 3.2 does not necessarily lead to the conclusion that the scientific evidence underlying the international standards is sufficient to conduct a risk assessment within the meaning of Article 5.1. This is because the international standard may not be based on a risk assessment at all, may be based on a risk assessment that is not informed by all factors listed in Articles 5.1 and 5.2, or the relevant evidence behind the international standard may be insufficient, or outdated, or no longer the mainstream scientific opinion.

[182] *Ibid.*, para. 261 (referring to Panel Report, *US – Continued Suspension*, paras. 7.511 and 7.512; and Panel Report, *Canada – Continued Suspension*, paras. 7.483 and 7.484, in turn referring to Appellate Body Report, *EC – Hormones*, para. 200; and Appellate Body Report, *Japan – Apples*, para. 202 and footnote 372 thereto).
[183] *Ibid.*, para. 261. (original emphasis)
[184] *Ibid.*, para. 270.
[185] European Communities' appellant's submission, para. 388.
[186] *Ibid.*, para. 387 (quoting Panel Report, *US – Continued Suspension*, para. 7.644; and Panel Report, *Canada – Continued Suspension*, para. 7.622).

83. The European Communities asserts that an international standard already "implies or encapsulates"[187] a certain level of protection. However, Article 3.3 of the *SPS Agreement* allows Members to adopt SPS measures that result in a higher level of protection than the one underlying an international standard. Consequently, the intended level of protection must be relevant for determining whether the scientific evidence is "insufficient" within the meaning of Article 5.7, and a Member that sets a higher level of protection may find the relevant scientific evidence underlying an international standard to be insufficient. The European Communities thus maintains that the Panel's approach entirely disconnected the sufficiency of the scientific evidence from the level of protection set by the European Communities, and this approach is contrary to the explicit wording of Article 3.3 and the views expressed by the experts it had selected. Referring to the distinction drawn by the Appellate Body in *Japan – Apples* between "scientific uncertainty" and "insufficiency of scientific evidence"[188], the European Communities notes that this distinction does not exclude that the insufficiency of the scientific evidence may be due to scientific uncertainty created by the existence of divergent minority opinions.

84. Secondly, the European Communities argues that the Panel erred in imposing on the European Communities the initial burden of demonstrating that Directive 2003/74/EC meets the requirements of Article 5.7 in relation to the provisional ban on the five hormones at issue. By imposing the burden of proof on the European Communities, the Panel "seem[ed]"[189] to have erroneously considered Article 5.7 as an exception to the rules laid down in Article 5.1, even though Article 5.7 confers to WTO Members a "qualified right"[190] to take provisional measures under certain conditions. The European Communities maintains that Article 5.7 has "its own legal regime that is distinct from Article 5.1".[191] This is because Article 2.2 of the *SPS Agreement* explicitly exempts measures taken under Article 5.7 from its scope of application, and Article 5.1, which is a specific application of the obligations in Article 2.2, cannot be applicable under the circumstances where Article 2.2 is not applicable. The European Communities recalls the Appellate Body's finding in *Japan – Apples* that a link exists between Articles 5.7 and 5.1 in that "relevant scientific evidence" will be "insufficient" within the meaning of Article 5.7 if the body of available scientific evidence does not allow the performance of an adequate assessment of risks as required under Article 5.1.[192] On this basis, the European Communities argues that "there is a continuum of 'relevant scientific evidence' that is divided between the respective scopes of application of Articles 5.1 and 5.7."[193] Therefore, a Member that is "sufficiently diligent ... must be able"[194] to take an SPS measure under either Article 5.1 or Article 5.7, and the sufficiency of the scientific evidence "is determinative on whether or not the measure concerned falls under Article 5.1 or 5.7".[195] Thus, the European Communities argues that, because it has a right to impose provisional measures when it considers that relevant scientific evidence is insufficient, the United States and Canada should bear the burden of demonstrating that this condition for applying provisional measures under Article 5.7 has not been fulfilled. Instead, the Panel erroneously shifted this burden to the European Communities when it limited its review exclusively to the "insufficiencies"[196] identified by the European Communities in its submissions. By requiring the European Communities to identify the issue for which relevant

scientific evidence is insufficient, the Panel allocated to the European Communities the burden "to prove the negative".[197]

85. Thirdly, the European Communities argues that the Panel erred in finding that, where international standards for a substance exist, a "critical mass" of new scientific evidence that calls into question the fundamental precepts of previous knowledge is required to render the relevant scientific evidence "insufficient" within the meaning of Article 5.7. The European Communities asserts that the "critical mass" standard developed by the Panel "imposed a high quantitative and qualitative threshold"[198] with respect to the new scientific evidence that is required to render prior scientific evidence insufficient. The European Communities submits that the quality of the scientific evidence is more important that the quantity. For this reason, even a single study made by qualified and respectable scientists, even when in the minority, could be considered *a priori* sufficient to question the sufficiency of the previous scientific evidence if its merits are particularly relevant for the circumstances of the risk assessment. According to the European Communities, the Panel's mistake stemmed from the erroneous premise of its analysis that the existence of an international standard presupposes that the scientific evidence has been sufficient to conduct a risk assessment. This error led the Panel to assume wrongly that a "critical mass" of new evidence is required to question the sufficiency of the scientific evidence and consequently to disregard "serious concerns"[199] expressed by the experts in relation to the "fundamental scientific controversy"[200] concerning the risks to human health posed by the five hormones. The European Communities observes that the relevant question is not only whether relevant scientific evidence can "become" insufficient, but also whether it "is" insufficient in the first place.[201] Furthermore, the European Communities argues that the Panel's application of the "critical mass" standard excludes *a priori* the possibility of a WTO Member basing its risk assessment on a "respectable minority view".[202] This effectively "preclude[d] [the] application"[203] of the precautionary principle in the interpretation of Articles 5.1 and 5.7, contrary to the Appellate Body's finding that "the precautionary principle indeed finds reflection in Article 5.7 of the *SPS Agreement*."[204] The European Communities explains that the Panel's "critical mass" standard implies that the scientific evidence passes immediately from a state of insufficiency to a state of complete knowledge, because there will be no "transitional period"[205] in which Article 5.7 could apply.

86. The European Communities alleges that, in applying the "critical mass" standard to the evidence before it, the Panel "systematically downplay[ed]"[206] and ignored "highly relevant scientific evidence"[207] which "support[ed] the position of the European Communities ... that in fact the scientific evidence was indeed insufficient"[208] to perform a risk assessment. The European Communities challenges the Panel's analysis of the evidence on the following issues with respect to all five hormones: (i) effects of hormones on certain population groups; (ii) dose response; (iii) long latency periods for cancer and confounding factors; and (iv) adverse effects on human growth and

[208] *Ibid.*, para. 427.

reproduction.[209] In addition, the European Communities raises specific concerns relating to the Panel's application of the "critical mass" standard when it evaluated the sufficiency of the information individually for each of the five hormones.

87. As regards the Panel's finding that the scientific evidence on the effects of the five hormones on certain population groups was not "insufficient" within the meaning of Article 5.7, the European Communities argues that the Panel ignored Dr. Sippell's testimony that the development of more sensitive detection methods has identified lower endogenous hormonal levels in pre-pubertal children than previously thought, calling into question the range of physiological levels of sex hormones believed to exist in humans. According to the European Communities, the Panel downplayed the significance of this development by referring to Dr. Boobis' statement that such new detection methods were "not yet validated".[210] In the area of dose response, the European Communities submits that the Panel Reports contain "no serious analysis"[211] of this issue, and that the only basis articulated by the Panel in support of its conclusion was its prior finding that the ultra-sensitive detection methods had not yet been validated. The European Communities also suggests that the Panel ignored Dr. Cogliano's testimony confirming that the relevant scientific evidence was insufficient to conduct a risk assessment for all of the five hormones, because "you cannot estimate that dose-response curve with any kind of certainty."[212]

88. In respect of the long latency period of cancer and the existence of confounding factors, the European Communities argues that the Panel's "critical mass" standard "essentially require[d] the European Communities to do the impossible"[213], because long latency periods for cancer and the existence of confounding factors do not permit the establishment of a causal link between the prevalence of cancer and the consumption of residues of the five hormones in meat. In order to establish such causal link, it would be necessary to conduct tests on humans by isolating them from the rest of the population "for years if not decades", which constitutes "an unrealistic requirement".[214]

89. As for the evidence of adverse effects of the five hormones on human growth and reproduction, the European Communities argues that the Panel "systematically downplay[ed]"[215] the opinions of Drs. Sippell and Guttenplan in reaching its finding that the relevant scientific evidence was not "insufficient" within the meaning of Article 5.7. For the European Communities, "[t]he fact that the new evidence relates *inter alia* to children, the most vulnerable and sensitive part of the population, is a major concern for the European Communities" and this concern is "reinforced by the opinions expressed by Dr. Sippell and Dr. Guttenplan".[216] The European Communities additionally maintains that the Panel "arbitrarily"[217] gave a different status to the statements of different experts advising the Panel. For example, whereas Dr. Guttenplan's expression of concerns regarding potential developmental effects of hormones on children was characterized by the Panel as an expression of "doubts"[218], the opinion of Dr. Boobis that new evidence obtained by the European Communities did

[209]In its appellant's submission, the European Communities also refers to the Panel's analysis concerning bioavailability. (European Communities' appellant's submission, paras. 179 and 432) However, at the oral hearing, the European Communities stated that this issue was not implicated in its appeal of the Panel's findings under Article 5.7.

not indicate additional concern regarding risks of the five hormones was "manifestly given the status of scientific evidence".[219]

90. Turning to the Panel's assessment of each of the five hormones individually, the European Communities argues that the Panel ignored evidence demonstrating that progesterone and testosterone are carcinogenic to humans. Such evidence consisted of International Agency for Research on Cancer ("IARC") studies that concluded that progesterone is "possibly carcinogenic to humans"[220] and that testosterone is a "probable carcinogenic to humans".[221] The European Communities further submits that the Panel confused Articles 5.1 and 5.7 when it concluded that the IARC studies addressed the carcinogenicity of progesterone and testosterone in general, but did not specifically address the carcinogenic potential to humans of consuming residues of these hormones in meat. According to the European Communities, it is precisely because scientific evidence is lacking on this specific question that the European Communities decided to impose provisional restrictions on the basis of available pertinent information.

91. With respect to the Panel's finding that the relevant scientific evidence on trenbolone acetate was not "insufficient" within the meaning of Article 5.7, the European Communities argues that the Panel drew its conclusions exclusively on the basis of Dr. Boobis' opinion. The European Communities draws attention to Dr. Guttenplan's opinion that the scientific evidence showed that trenbolone acetate was "significantly estrogenic" and that it did not appear that "accurate ADIs [(acceptable daily intakes)] can be established at this point" for this substance.[222] The Panel "attempt[ed] to downplay"[223] this opinion of Dr. Guttenplan by referring to his statement that, although accurate acceptable daily intakes ("ADIs") cannot be established, a risk assessment can still be carried out. In the European Communities' view, the Panel failed to ascertain whether Dr. Guttenplan merely meant that the four steps of the JECFA risk assessment can be formally conducted or whether a risk assessment within the meaning of Article 5.1 of the *SPS Agreement* can be conducted, and that it was the latter that was relevant to the Panel's analysis.

92. As regards the Panel's finding that the relevant scientific evidence was not "insufficient" in relation to the carcinogenicity of zeranol, the European Communities argues that the Panel failed to take into account Dr. Guttenplan's testimony that "additional tests of zeranol should be carried out".[224] The European Communities argues further that the Panel downplayed Dr. Sippell's concerns regarding the effects of zeranol in human breast cancer cells by relying, instead, on Dr. Boobis' opinion.

93. Moreover, the European Communities argues that the Panel concluded "in a sweeping manner"[225] that the evidence on MGA was "sufficient" to conduct a risk assessment, because a process towards adopting an international standard for this hormone is underway in Codex. The European Communities also charges the Panel with downplaying the new studies the European Communities has conducted since 1999, even though the Panel recognized that the evaluation carried out by JECFA was based on studies that date back to the 1960s and 1970s. Furthermore, the European Communities criticizes the Panel for disregarding the opinion of Dr. De Brabander in relation to trenbolone acetate, zeranol, and MGA, which called into question residue levels estimated

[220]*Ibid*., para. 437 (referring to Panel Report, *US – Continued Suspension*, para. 7.737; and Panel Report, *Canada – Continued Suspension*, para. 7.714, in turn referring to IARC written replies to Question 25 posed by the Panel, Panel Reports, Annex E-3, p. 129). (emphasis omitted)

[221]*Ibid*., para. 438.

[222]European Communities' appellant's submission, para. 439 (quoting Panel Report, *US – Continued Suspension*, para. 7.779; and Panel Report, *Canada – Continued Suspension*, para. 7.761).

[223]*Ibid*., para. 440.

[224]*Ibid*., para. 441 (quoting Panel Report, *US – Continued Suspension*, para. 7.797; and Panel Report, *Canada – Continued Suspension*, para. 7.781).

[225]*Ibid*., para. 442.

by JECFA and raised concerns regarding the potential effects of these hormones and their metabolites on the environment.

94. Finally, the European Communities asserts that the Panel failed to make an objective assessment of the facts in reaching its findings under Article 5.7 of the *SPS Agreement*, in violation of Article 11 of the DSU. The European Communities underscores Dr. Cogliano's statement that "the data are not sufficient" to conduct a "low-dose prediction of risk at levels you might find in hormone-treated meat"[226], and observes that this statement was not reflected in the Panel Reports. The European Communities argues that the Panel decided to accept only those expert opinions that it considered "acceptable", and in so doing the Panel "arbitrarily chose between different scientific opinions" instead of establishing whether the European Communities had "followed a scientifically plausible alternative" when adopting Directive 2003/74/EC and the Panel thus "failed to recognise the legal significance of a genuine scientific controversy".[227] Consequently, the Panel found that the SCVPH Opinions "came to the wrong scientific conclusions"[228], and thus conducted a *de novo* review of the facts, contrary to the requirements in Article 11 of the DSU to make an objective assessment of the facts, as reflected in the European Communities' risk assessment.

95. The European Communities submits that the Panel failed to interpret and apply correctly Article 5.7 of the *SPS Agreement* and failed to conduct an objective assessment of the matter as required by Article 11 of the DSU. Therefore, the European Communities requests the Appellate Body to reverse the Panel's findings under Article 5.7 of the *SPS Agreement*.

B. *Arguments of the United States – Appellee*

1. Procedural Issue – Public Observation of the Oral Hearing

96. The United States requests that the Appellate Body allow public observation of the oral hearing in these proceedings. The United States refers to the experience with open hearings at the panel stage and states that this development has been of great benefit to the WTO and the multilateral trading system. The United States explains that "[t]he ability of the public at large—e.g., representatives of civil society, such as NGOs, journalists, academics, and individual citizens—to observe dispute settlement hearings has helped foster greater confidence in the WTO dispute settlement system and the manner in which it operates."[229] The United States also considers that the practice of having open panel meetings with the parties has served to strengthen the "legitimacy and credibility"[230] of the system and that this increased confidence in the dispute settlement process can translate into a greater acceptance of the outcome of the dispute settlement proceeding, with potential benefits in respect of implementation. In addition, the United States points out that the practice of opening panel meetings with the parties has also been of great benefit to the governments of many WTO Members because "a significant number of delegates from WTO Members that were not parties to the dispute have taken advantage of the opportunity to attend an open panel meeting in order to follow a dispute more closely than they otherwise could."[231] The United States further notes that "opening meetings allows the WTO to compare more favourably to other international fora"[232] and refers to the practice of many international tribunals. The United States observes that this dispute

[226]European Communities' appellant's submission, para. 279 (quoting transcript of the Panel's joint meeting with the scientific experts on 27-28 September 2006, Panel Reports, Annex G, para. 871).
[227]*Ibid.*, para. 281.
[228]*Ibid.*, para. 282.
[229]United States' request for an open hearing, para. 5.
[230]*Ibid.*
[231]United States' request for an open hearing, para. 6.
[232]*Ibid.*, para. 7.

involves questions of human health and scientific judgements and therefore "provides a particularly strong example of public interest in WTO dispute settlement".[233]

97. In the United States' view, there is nothing in the DSU, the *Working Procedures* or the *Rules of Conduct* that addresses the issue of open hearings "directly".[234] The United States does not consider that Article 17.10 precludes open appellate hearings. The United States argues that because there is no mention of an Appellate Body oral hearing in the DSU, "Article 17.10 cannot be directed at the question of whether such a hearing should be open or closed."[235] The United States observes, in this regard, that third parties that were not third participants in both appeals in *US – Shrimp (Thailand)* and *US – Customs Bond Directive* were allowed to attend the consolidated oral hearing that was held for those appeals. The United States adds that "[s]omething similar appears to have occurred"[236] in the *US – 1916 Act* appellate proceedings. The United States submits, furthermore, that "there is nothing in the DSU that authorizes a third party to observe any Appellate Body hearing" and that, "[i]f Article 17.10 required that the hearing be confidential, then the Appellate Body could not have permitted third parties to observe the hearing."[237]

98. According to the United States, Article 17.10 has not been interpreted as "literally requiring the confidentiality of Appellate Body hearings" because Appellate Body reports "routinely describe events at a hearing or even include quotations from the statements or answers to questions".[238] Moreover, the United States notes that an Appellate Body report routinely discloses the arguments of the participants and third participants in their written submissions, and Notices of Appeal and of Other Appeal are always circulated as public WT/DS documents.

99. The United States also emphasizes that Article 17.10 must be read and applied in conjunction with Article 18.2 of the DSU. For the United States, the phrase "[n]othing in this Understanding" in Article 18.2 must be read to mean "that not even Article 17.10 could interfere with a party's right to disclose its own positions to the public, including statements made in the course of an Appellate Body hearing".[239] The United States adds that if the statements and answers to questions can be made public by the participants, there is no reason why the parties cannot agree to have such statements and answers made public at the time they are uttered.

100. The United States alleges that it is not aware of anything in the negotiating history of the DSU that would suggest that parties could not agree to open an Appellate Body hearing to public observation. Nor does the United States consider that the *Working Procedures* require an oral hearing that is closed to the public. Furthermore, it does not see anything in the *Rules of Conduct* that would be an impediment to opening the hearing, because where parties agree to make their statements in the presence of the public, "there is no confidential information to be protected and no confidentiality of the proceedings to be maintained."[240] The United States clarifies that by authorizing the request of the participants, the Appellate Body "would not be prejudging"[241] the DSU review negotiations.

[238]*Ibid.*, para. 21.
[239]United States' request for an open hearing, para. 24. (emphasis omitted)
[240]*Ibid.*, para. 26.
[241]*Ibid.*, para. 28.

101. In response to the comments of the third participants, the United States refers to the Recommendations by the Preparatory Committee for the WTO.[242] The United States asserts that the Recommendations indicate that the Preparatory Committee viewed Article 17.10 as focused on the deliberations of the Appellate Body and any confidential information submitted by the participants to an appeal. The United States also argues that the third participants that oppose the request to open the hearing fail to reconcile their understanding of the term "proceedings" with the fact that statements made at the oral hearing and responses to questions are routinely quoted and described in Appellate Body reports. Moreover, the United States points out that Article 18.2 refers to "statements of its own positions", which include responses to questions posed at the oral hearing, and does not impose a limitation on when the disclosure may occur. Finally, the United States rejects the argument that the Appellate Body may not consider the request to open the hearing because transparency is being discussed in the DSU review negotiations.

102. The United States therefore requests that the Appellate Body allow public observation of the oral hearing and discusses several modalities that could be used to accommodate any third participants wishing to maintain the confidentiality of their submissions. The United States, however, indicates a preference for allowing public observation by means of closed-circuit simultaneous broadcast.

2. Articles 23.2(a) and 21.5 of the DSU

103. The United States submits that the Panel properly found that the phrase "recourse to dispute settlement" within the meaning of Article 23.2(a) of the DSU is not limited to an Article 21.5 panel proceeding and that Article 23.2(a) did not require the United States to initiate a compliance panel proceeding for purposes of examining the compatibility of Directive 2003/74/EC with the *SPS Agreement*.

104. The United States considers that the Panel's interpretation of the phrase "recourse to dispute settlement in accordance with [the DSU]" in Article 23.2(a) as encompassing all procedures under the DSU, rather than relating exclusively to an Article 21.5 panel proceeding, was "sensible and well supported"[243] by the text of the DSU. The United States observes that Article 21.5 refers to "these dispute settlement procedures" without specifying any particular subset of the procedures provided in the DSU, and thus does not exclude any aspect of the DSU procedures.[244] Moreover, in the United States' view, a complaining party always retains the option to initiate an ordinary panel proceeding to avoid the limitations on the scope of measures and claims that may be brought in an Article 21.5 proceeding. Therefore, the United States argues, Article 21.5 provides no contextual support for the European Communities' assertion that the phrase "rules and procedures of [the DSU]" in Article 23.2(a) refers exclusively to a panel operating under the jurisdictional limitations and accelerated timeframes provided for in Article 21.5. The United States contends that, unless the European Communities is suggesting that it would refuse to participate in any proceeding other than a compliance panel proceeding initiated by the United States to examine the consistency of Directive 2003/74/EC with the *SPS Agreement*, there is no reason to assume that an Article 21.5 proceeding is the only means by which the United States and the European Communities could reach a resolution of this dispute.

105. The United States disagrees with the European Communities' interpretation of the term "shall be decided" in Article 21.5 as indicating that "final" resolution results only from a panel proceeding. If that were the case, this dispute would have been finally resolved in 1998 with the adoption of the

[242]United States' comments on third participants' comments, paras. 5 and 6 (referring to Establishment of the Appellate Body: Recommendations by the Preparatory Committee for the WTO approved by the Dispute Settlement Body on 10 February 1995 (WT/DSB/1), para. 9).

[243]United States' appellee's submission, para. 126.

[244]See *ibid.*, para. 127.

DSB's recommendations and rulings in *EC – Hormones*. The United States argues that the term "shall be decided" should not be read in such a restrictive way, because the goal of the DSU is to secure a positive resolution, and a mutually acceptable solution is preferable for achieving this goal. The United States also disagrees with the European Communities' contention that the term "shall be decided" in Article 21.5 requires a decision by an adjudicative body. Rather, the use of the passive tense leaves open the question by whom a disagreement under Article 21.5 should be decided, and may include the parties, a regular panel, an arbitrator, or a mediator or other facilitator.

106. The United States submits that the European Communities' "frustrated experience as an original responding party"[245] initiating an Article 21.5 proceeding in *EC – Bananas III (Article 21.5 – EC)* does not lead to the conclusion that such an approach is disallowed by the DSU. The United States argues that the European Communities "cannot have it both ways": insisting, in *EC – Bananas III (Article 21.5 – EC)*, upon the right to initiate an Article 21.5 proceeding when it "thought that avenue would be to its advantage", and now arguing that an original respondent is foreclosed from initiating an Article 21.5 proceeding.[246] Moreover, the United States rejects the European Communities' claim that the fact that the panel report in *EC – Bananas III (Article 21.5 – EC)* was not adopted signifies certain "subsequent practice"[247], noting that it was the European Communities itself that did not seek adoption of that report.[248]

107. For these reasons, the United States requests the Appellate Body to reject the European Communities' claim that Article 23.2(a) of the DSU required the United States to initiate an Article 21.5 panel proceeding for purposes of examining the WTO-consistency of Directive 2003/74/EC. The United States nevertheless observes that the Appellate Body need not address the European Communities' claims in this regard if it reverses the Panel's findings that the United States has acted inconsistently with Articles 23.1 and 23.2(a) of the DSU, as requested by the United States in its other appeal.[249]

3. Article 22.8 of the DSU

108. The United States maintains that the Panel correctly interpreted Article 22.8 of the DSU in finding that it requires not just the *pro forma* removal of the measure found to be inconsistent, but the achievement of actual compliance with the DSB's recommendations and rulings, before the application of the suspension of concessions must be terminated.

109. The United States alleges that, in replacing Directive 96/22/EC with Directive 2003/74/EC, the European Communities simply switched the legal instruments underlying the import ban and, in so doing, failed to remove the inconsistent measure within the meaning of Article 22.8. The United States contends that the phrase "until such time as the measure found to be inconsistent with a covered agreement has been removed" in Article 22.8 requires the elimination of the WTO-inconsistency, that is, actual compliance. The United States notes that the ordinary meaning of "removed" is "lifted, taken away".[250] The United States explains that it is difficult to see how a WTO-inconsistent measure can be said to be taken away if an equivalent measure is put in its place. The United States further argues that the context provided by other provisions of the DSU—namely, Articles 21.1, 21.5, 22.1, and 22.2—confirm that it is actual compliance that is required by Article 22.8. These provisions

[245]United States' appellee's submission, para. 134.

[246]*Ibid.*

[247]*Ibid.*, para. 115 (quoting Article 31(3)(b) of the *Vienna Convention on the Law of Treaties* (the "*Vienna Convention*").

[248]*Ibid.*, para. 135.

[249]*Ibid.*, para. 125 (referring to United States' other appellant's submission, sections II and III). See also *infra*, paras. 188-194.

[250]United States' appellee's submission, para. 102 (quoting *The New Shorter Oxford English Dictionary*, 4th edn, L. Brown (ed.) (Clarendon Press, 1993), Vol. 2, p. 2543).

indicate that the drafters of the DSU "contemplated that suspension of concessions and 'full implementation' were alternatives to one another".[251] The United States adds that interpreting Article 22.8 as requiring actual compliance is also supported by the purpose of the suspension of concessions, which is to induce compliance.

110. The United States rejects the European Communities' contention that Articles 21 and 22 of the DSU establish a "basic dichotomy" between "the measure found to be inconsistent" and the "measures taken to comply", arguing that the European Communities draws an "artificial distinction" between the "removal of a measure" and "existence or consistency" of a measure taken to comply.[252] The United States draws attention to Article 3.7 of the DSU as reflecting the object and purpose of the DSU. Article 3.7 provides that "the first objective of the dispute settlement mechanism is usually to secure the withdrawal of the measures concerned", which the United States understands as referring "not to ... a mere repeal of a measure that is replaced by another, but ... instead to an actual elimination of the measure that brings about compliance".[253] According to the United States, the removal of an inconsistent measure, accompanied by the taking of a measure that undermines such removal, results in the absence of a measure taken to comply.

111. Moreover, the United States disagrees with the European Communities' contention that Article 22.8 requires the suspension of concessions to be terminated "in the presence of an implementation [measure]" that has not yet been found to be WTO-inconsistent through Article 21.5 proceedings.[254] The United States submits that this contention is not supported by Article 22.8, which does not state that the suspension of concessions shall only be applied "until the measure found to be inconsistent is *claimed* to have been removed".[255] The United States also rejects the European Communities' argument that the Panel, in finding that Directive 96/22/EC was replaced by Directive 2003/74/EC, failed to consider that Directive 96/22/EC ceased to exist upon the adoption of Directive 2003/74/EC, and that the latter contains changes to the justification for the import restrictions imposed by the former. According to the United States, the Panel's approach was consistent with the Appellate Body's treatment in *EC – Hormones* of Directive 96/22/EC as a substitute for the previous Directives that had "ceased to exist" when they were replaced by Directive 96/22/EC, despite changes made by that Directive to the import restrictions imposed by the previous Directives.[256]

112. Furthermore, the United States alleges that the European Communities' logic, according to which an original complainant must terminate its suspension of concessions and initiate an Article 21.5 proceeding when an original respondent claims compliance, will lead to "a strange and absurd result".[257] If the Article 21.5 panel concludes that compliance has not been achieved, there is neither a renewed reasonable period of time nor another opportunity to request authorization for the suspension of concessions.

113. On this basis, the United States requests the Appellate Body to reject the European Communities' appeal of the Panel's findings that Article 22.8 of the DSU requires the achievement of

[251] *Ibid.*, para. 103. (emphasis omitted)
[252] *Ibid.*, para. 104 (quoting European Communities' appellant's submission, paras. 136-142).
[253] *Ibid.*, para. 106. (emphasis omitted)
[254] United States' appellee's submission, para. 114 (referring to European Communities' appellant's submission, para. 98). As regards the European Communities' argument that it had suspended retaliatory action during the Article 21.5 proceedings in *US – FSC*, the United States contends that the European Communities continues to suspend concessions in *US – Offset Act (Byrd Amendment)* without initiating an Article 21.5 proceeding, even though the United States has notified the DSB of the repeal of the Continued Dumping and Subsidy Offset Act of 2000. (*Ibid.*)
[255] *Ibid.*, para. 115. (original emphasis)
[256] *Ibid.*, para. 111.
[257] *Ibid.*, para. 117.

actual compliance with the DSB's recommendations and rulings before the application of the suspension of concessions must be terminated.

4. The Panel's Terms of Reference

114. The United States disagrees with the European Communities' claim that the Panel exceeded its terms of reference by assuming the powers of an Article 21.5 panel.

115. The United States observes that, pursuant to Article 7.1 of the DSU, a panel's standard terms of reference cover the matter referred to in the request for the establishment of a panel. The United States notes that, in its panel request, the European Communities specifically asked the Panel to consider its complaint with a view to finding that the United States had acted inconsistently with Article 22.8 of the DSU. Article 22.8 thus fell within the Panel's terms of reference, and the Panel was free to develop its own legal reasoning when addressing the claims raised by the European Communities under Article 22.8.

116. For the United States, the Panel's finding that the European Communities' claims under Article 22.8 were premised on the actual compliance of Directive 2003/74/EC with the *SPS Agreement* was based on a correct interpretation of Article 22.8 and was supported by the text, context, and object and purpose of the DSU. Furthermore, the United States rejects the European Communities' reference to the panel report in *EC – Sardines* as "inapposite", noting that, unlike in this dispute, following the order of analysis requested by the complainant in that dispute did not lead to an error of law.[258]

117. Accordingly, the United States requests the Appellate Body to reject the European Communities' assertion that the Panel exceeded its terms of reference under Articles 7 and 21.5 of the DSU by examining the compatibility of Directive 2003/74/EC with the *SPS Agreement*. The United States maintains that the Panel in fact limited its terms of reference improperly on the basis of the manner in which the European Communities presented its claims.[259]

5. The Panel's Suggestion for Implementation

118. The United States asserts that the Appellate Body should decline the European Communities' request to improve the Panel's suggestion for implementation. The United States disagrees with the European Communities' contention that "the Panel's suggestions require that the United States remove the suspension of concessions, and initiate and conclude an Article 21.5 compliance panel proceeding."[260] The United States underscores that, on the contrary, the Panel declined to suggest that the United States discontinue its suspension of concessions despite its finding that the United States has committed procedural violations under Articles 23.2(a) and 23.1 of the DSU. The United States considers that a suggestion on implementation is "inappropriate"[261], because it is for a WTO Member to decide on the steps needed to bring itself into conformity. In addition, the United States argues that the Appellate Body should reject the European Communities' request to improve the Panel's suggestion, because improvement of panels' suggestions is not within the Appellate Body's mandate,

[258] United States' appellee's submission, para. 122 (referring to European Communities' appellant's submission, para. 68, in turn referring to Panel Report, *EC – Sardines*, paras. 7.17 and 7.18).
[259] See also *infra*, para. 196.
[260] United States' appellee's submission, para. 136. (footnote omitted)
[261] *Ibid.*, para. 139.

which is circumscribed by Articles 17.6 and 17.13 of the DSU. The United States observes that, in any event, the Appellate Body would not need to address this issue if it were to reverse the Panel's findings of procedural violations under Articles 23.1 and 23.2(a), as requested by the United States in its other appeal.

6. The Panel's Selection of Experts

119. The United States argues that the European Communities is "[r]ecycling yet another of its failed challenges from its appeal in *EC – Hormones*"[262] by objecting to the expert selection process in its appeal. The United States explains that, in *EC – Hormones*, the Appellate Body found no fault with the panel because it had consulted with the parties regarding the selection of experts. The United States describes the steps taken by the Panel in this case to consult with the parties on expert selection, and concludes that the Panel's conduct in the selection of experts was transparent and consultative, providing the parties with notice and opportunities to respond, express their concerns, and be heard before the Panel made its decisions. Moreover, the United States asserts that the Panel "obtain[ed] self-disclosure information from all of the experts, including from Dr. Boisseau".[263]

120. Noting the assertion by the European Communities that the relevant legal test was "likelihood or justifiable doubts" as to an expert's independence or impartiality, the United States argues that "[t]he fact of the matter is that the Panel and the parties were provided with full disclosure of the experts' professional affiliations and financial interests" and "[t]he record demonstrates that the Panel took the [European Communities'] concerns into account in concluding that the two experts in question were not disqualified from serving."[264]

121. The United States alleges that the European Communities provides no support for the claims regarding due process rights, arguing that the European Communities cited nothing more "than the most general statement" by the Appellate Body in *Thailand – H-Beams* and a judgment by the European Court of Human Rights that the European Communities "recycled from its challenge to the panel's expert selection process in *EC – Hormones*".[265] In the United States' view, neither of those citations supports the European Communities' claim. Finally, to the extent the European Communities alleges a breach of Article 11 of the DSU, the United States argues that the Panel acted within the proper bounds of its discretion as fact-finder.

122. Consequently, the United States requests the Appellate Body to reject the European Communities' claim that the Panel acted inconsistently with the principle of due process, the requirements in the *Rules of Conduct*, and its duties under Article 11 of the DSU, in selecting Drs. Boisseau and Boobis, and to reject the request to reverse the Panel's findings that relied on the advice of these two experts.

7. Article 5.1 of the *SPS Agreement*

123. The United States argues that the Panel was correct in finding that the European Communities' permanent ban on meat and meat products from cattle treated with oestradiol-17β for growth-promoting purposes was not based on a risk assessment within the meaning of Article 5.1 of the *SPS Agreement.* The United States requests the Appellate Body to dismiss the European Communities' appeal for the following reasons.

[262]United States' appellee's submission, para. 83.
[263]*Ibid*., para. 86. (footnote omitted)
[264]*Ibid*., paras. 87 and 88.
[265]*Ibid*., para. 89.

124. The United States rejects the European Communities' argument that the Panel erred by excluding, on an *a priori* basis, the European Communities' evidence regarding misuse and abuse in the administration of oestradiol-17β. The United States considers that the "core"[266] of the European Communities' argument is that, because misuse and abuse in the administration of oestradiol-17β might occur one day, the European Communities is justified in banning oestradiol-17β entirely. Contrary to the European Communities' argument, the Panel "fully appreciated"[267] the significance of the European Communities' assertion that misuse and abuse in the administration of oestradiol-17β can add to the risks identified in relation to this substance. However, the Panel correctly considered that additional risks arising from misuse and abuse would only be relevant for its analysis if the European Communities had succeeded in demonstrating that a specific risk arose from the consumption by humans of residues of oestradiol-17β in meat. Hence, the United States asserts that, consistent with the Appellate Body's findings in *EC – Hormones*, the Panel did not *a priori* exclude misuse and abuse from the scope of application of Articles 5.1 and 5.2 of the *SPS Agreement*. Rather, the Panel acknowledged the fact that the European Communities had taken those factors into account, recognized that such factors were not relevant to the initial inquiry regarding whether a specific risk had been identified, and provided a detailed account of its reasoning.

125. The United States maintains further that the Panel correctly held that the European Communities had not evaluated specifically the risks arising from the consumption of meat and meat products containing residues of oestradiol-17β as a result of cattle being treated with hormones for growth-promotion purposes. The Panel's examination of whether the European Communities had demonstrated the potential for adverse effects arising specifically from the presence of hormone residues in meat was based on a "careful tracing"[268] of the Appellate Body's interpretation of a "risk assessment" under Article 5.1, as defined by Annex A, paragraph 4, to the *SPS Agreement*. The United States rejects the European Communities' assertion that the Panel's articulation of the "specificity" test would require the demonstration of actual effects in humans. Rather, it is possible to perform tests on laboratory animals and extrapolate the results to human beings, and the European Communities recognizes that other countries have found ways to evaluate the possibility of adverse effects arising from the consumption by humans of hormone residues in meat by performing tests on laboratory animals. The United States also contends that "one expert's statement, divorced from the rest of the evidentiary record" is not sufficient to demonstrate that the European Communities has evaluated the specific risk arising from residues of oestradiol-17β in meat.[269] Instead, the evidentiary record supported the Panel's conclusion that the European Communities had identified only "general risks"[270] and had failed to address the specific risk as required by the *SPS Agreement*, that is, the "possibility that these adverse effects come into being, originate, or result from the consumption of meat or meat products which contain veterinary residues of oestradiol-17β as a result of the cattle being treated with the hormone for growth promotion purposes."[271] The Panel's finding that the European Communities had failed to show the specificity required of a risk assessment resulted from an analytical process that was appropriately grounded in the precepts of scientific inquiry and prior Appellate Body reports.

126. In addition, the United States refutes the European Communities' argument that the Panel required the quantification of risks by focusing its inquiry on whether the European Communities had

[266]United States' appellee's submission, para. 53.
[267]*Ibid*., para. 54 (referring to European Communities' appellant's submission, paras. 319 and 331).
[268]United States' appellee's submission, para. 57.
[269]*Ibid*., para. 60 (referring to European Communities' appellant's submission, para. 342, in turn referring to reply of Dr. Guttenplan to Question 13 posed by the Panel to the scientific experts, Panel Report, *US – Continued Suspension*, para. 7.523, and Panel Report, *Canada – Continued Suspension*, para. 7.495).
[270]*Ibid*., para. 61.
[271]*Ibid*., para. 65 (quoting European Communities' appellant's submission, para. 344, in turn quoting Panel Report, *US – Continued Suspension*, para. 7.537 (emphasis added by the European Communities omitted)).

demonstrated the "potential occurrence of these adverse effects".[272] According to the United States, the Panel did not preclude that a qualitative risk assessment could be sufficient for purposes of Article 5.1. Instead, the Panel's reference to "potential occurrence" of risks focused on whether the European Communities' risk assessment was "sufficiently specific to the case at hand".[273] The United States asserts that the Panel's finding that the European Communities' risk assessment did not have the required specificity is a finding of fact, which the European Communities cannot succeed in disturbing on the basis of its allegation that the Panel imposed some kind of "'quantification' requirement".[274]

127. The United States argues furthermore that the Panel did not err in allocating the burden of proof under Article 5.1 of the *SPS Agreement*. The Panel properly noted that "one of the particularities of this case"[275] was that the European Communities' claim under Article 22.8 of the DSU was premised on the assertion by the European Communities that it had brought itself into conformity with the *SPS Agreement* through Directive 2003/74/EC. For this reason, and taking into account the European Communities' concern that it should not be required to "prove a negative", the Panel was justified in allocating to the European Communities the burden of establishing a *prima facie* case of conformity with the *SPS Agreement*, including Article 5.1 of that Agreement. Once the Panel found that the European Communities had established such a *prima facie* case, the burden of proof shifted to the United States. The Panel then rightly found that the United States had rebutted the European Communities' *prima facie* case of consistency through positive evidence of breach of the *SPS Agreement*. The United States agrees with the Panel's finding that, consistent with the "particularities"[276] of the European Communities' claim under Article 22.8, "the burden shifted back and forth between the parties and eventually 'neutralized' each other since each party also submitted evidence in support of its allegations."[277] The United States further agrees with the Panel's approach that it would "weigh all the evidence before it"[278] in considering whether an allegation had been proven. In so doing, the Panel did not state or consider that it had placed the burden of proof on the European Communities.

128. The United States argues that the Panel did not fail to conduct an objective assessment of the matter, as required by Article 11 of the DSU, in reaching its finding that the European Communities' permanent ban on oestradiol-17β was not based on a risk assessment within the meaning of Article 5.1. According to the United States, the more deferential "reasonableness"[279] standard that the European Communities posits should apply to "measures adopted by governments or specialised agencies in highly complex or technical matters"[280] finds no support in the text of the *SPS Agreement*. This Agreement "does not prescribe a particular standard of review or include specific provisions addressing the review by a panel of a determination or examination conducted by a national authority".[281] Moreover, the United States recalls that the Appellate Body rejected the European Communities' attempt to introduce a "deferential 'reasonableness' standard" in *EC – Hormones*, finding that "[t]o adopt a standard of review not clearly rooted in the text of the *SPS Agreement* itself, may well amount to changing that finely drawn balance" between the jurisdictional

[272] *Ibid.*, para. 62 (quoting Panel Report, *US – Continued Suspension*, para. 7.521).

[281] United States' appellee's submission, para. 34 (referring to Appellate Body Report, *EC – Hormones*, paras. 114-116).

competences conceded by WTO Members and the jurisdictional competences retained by Members for themselves.[282]

129. The United States additionally rejects the European Communities' argument that panels must apply the "generally applicable standard of review"[283] differently, depending upon the specific provision of the *SPS Agreement* that is being applied to the facts. The United States recalls the standard of review proposed by the European Communities for a claim arising under Article 5.1 of the *SPS Agreement*, according to which a panel must defer to a Member's risk assessment "if the evidence before the panel provides for at least one scientifically plausible set of conclusions under which an adverse effect might occur."[284] In the United States' view, the European Communities' formulation has no support in the covered agreements and "conflates the concept of 'standard of review' and the application of law to facts".[285] On this basis, the United States submits that the standards of review proposed by the European Communities "are products of [its own] wishful thinking and find no support in the DSU, the *SPS Agreement*, or the findings of the Appellate Body".[286]

130. The United States observes that the Appellate Body has consistently held that the standard of review to be applied by panels to their fact-finding in SPS disputes is "neither *de novo* review, as such, nor 'total deference', but rather the 'objective assessment of the facts'".[287] The United States emphasizes that a panel will be regarded as having failed to make an objective assessment where it "deliberately disregards", "refuses to consider", or "wilfully distorts or misrepresents" evidence submitted to it.[288] This requires "more than just an error of judgement in the appreciation of evidence, but rather an 'egregious error that calls into question the good faith of a panel'".[289] Moreover, panels "enjoy a 'margin of discretion' as triers of fact" and are "not required to accord to factual evidence of the parties the same meaning and weight as do the parties", and may properly "determine that certain elements of evidence should be accorded more weight than other elements".[290]

131. The United States rejects the European Communities' contention that the Panel exceeded the bounds of its discretion under Article 11 of the DSU in its appreciation of the evidence. The Panel's statement that "its situation [was] similar"[291] to that of a risk assessor does not support the European Communities' allegation that the Panel impermissibly conducted a *de novo* review. Rather, the Panel considered itself to be in a situation "similar" to that of a risk assessor insofar as it would benefit from hearing a full spectrum of scientific experts to obtain a complete picture of both mainstream and divergent scientific views.[292] The United States also dismisses the European Communities' allegation that the Panel exceeded the bounds of its discretion in choosing to rely on the views expressed by the "majority of experts", or on the "most specific" or "best supported" view.[293] The United States asserts that the Panel's exercise of judgement in evaluating the evidence was "part and parcel of the Panel's duty to make an objective assessment of the facts".[294] Moreover, the Panel could not have realistically referred to all statements made by the experts advising it and should have had a substantial margin of

[292] *Ibid.*, para. 44.
[293] Panel Report, *US – Continued Suspension*, para. 7.420; Panel Report, *Canada – Continued Suspension*, para. 7.411.
[294] United States' appellee's submission, para. 47.

discretion as to which statements to refer to explicitly. The United States submits that the Panel's findings in relation to: (i) exposure to hormones from multiple sources; (ii) the genotoxicity of oestradiol-17β; (iii) the specificity of the risk assessment; and (iv) the role of misuse and abuse of hormones as factors in a risk assessment were all within the bounds of its discretion as the trier of facts and should therefore be upheld by the Appellate Body.

132. The United States additionally contends that the European Communities' challenges raised under Article 11 of the DSU to the Panel's fact-finding appear to be claims that the Panel breached Article 12.7 of the DSU by failing to set out the findings of fact, the applicability of relevant provisions, and the basic rationale underlying its findings. However, no such claim of error under Article 12.7 has been made by the European Communities on appeal. For this reason, to the extent that the European Communities' challenges raised under Article 11 should properly have been raised under Article 12.7 instead, those claims should be disregarded as not properly subject to review by the Appellate Body.

133. The United States concludes that the Panel did not err in finding that Directive 2003/74/EC is inconsistent with Article 5.1 of the *SPS Agreement*, and requests the Appellate Body to reject the European Communities' appeal concerning the Panel's findings.

8. Article 5.7 of the *SPS Agreement*

134. The United States argues that the Panel correctly found that the relevant scientific evidence on the five hormones subject to the provisional ban was not "insufficient" within the meaning of Article 5.7 of the *SPS Agreement.* The United States requests the Appellate Body to dismiss this ground of the European Communities' appeal for the following reasons.

135. The United States argues that the Panel correctly interpreted Article 5.7, taking account of the context provided by Articles 3.2 and 3.3 of the *SPS Agreement*. The United States recalls that, pursuant to Article 3.2, a measure conforming to an international standard shall be deemed to be consistent with the relevant provisions of the *SPS Agreement*. Thus, the Panel was justified in finding that the existence of international standards demonstrated that there had been sufficient scientific evidence to conduct a risk assessment within the meaning of Article 5.1. Indeed, it would not make sense that the *SPS Agreement* would require a measure conforming to an international standard to be deemed consistent with Article 5.1 if the international standard was not based on a proper risk assessment. In any event, the United States charges the European Communities with failing to take into account that, "*in this case*, the international standards for the hormones in question are unquestionably supported by proper risk assessments."[295]

136. The United States contends furthermore that the European Communities' desired level of SPS protection was irrelevant for the Panel's determination of whether the scientific evidence was "insufficient" within the meaning of Article 5.7. First, the United States submits that the European Communities had failed to show that its appropriate level of protection is different from the level of protection that the Codex standards are designed to achieve. Secondly, the United States notes that a risk assessment is a scientific process aimed at identifying whether a risk exists, and risk assessors "need not have any particular level of protection in mind in conducting the risk assessment".[296] Therefore, the question of whether the relevant scientific evidence is "insufficient" within the meaning of Article 5.7 is a matter entirely separate "from the 'appropriate level of [SPS] protection'"[297] that a Member chooses to set. In addition, the United States considers remarkable the European Communities' statement that "[s]cience is essentially about measuring past fact and hypothesizing

[295]United States' appellee's submission, para. 70. (original emphasis)
[296]*Ibid*., para. 72.
[297]*Ibid*., para. 73.

about the future, including postulating about future risk."[298] The United States argues that this statement reveals the European Communities' "fundamental misunderstanding of science", because the scientific method is about "rigorously testing a hypothesis using experimentation rather than 'measuring past fact' or 'hypothesizing about the future'".[299]

137. The United States maintains that the Panel did not err in finding that a "critical mass of new evidence" is required to render previously sufficient scientific evidence "insufficient" within the meaning of Article 5.7. The United States observes that the Panel did not impose a quantitative requirement by referring to the "critical mass" of new evidence. Instead, the Panel used this term to indicate "a situation where evidence becomes so quantitatively and qualitatively sufficient to call into question the fundamental precepts of previous knowledge and evidence", such that new scientific information is "at the origin of a change in the understanding of a scientific issue".[300] The United States points out that the five hormones subject to the provisional ban had been studied intensively for decades and the international standards for four of them had existed for over 20 years. The United States additionally recalls that, in *EC – Hormones*, the European Communities argued that the scientific evidence concerning the same five hormones had been "sufficient to justify its legislation and [it] [had] not need[ed] to rely on the exception provided for in Article 5.7 concerning cases where relevant scientific evidence was insufficient."[301] Under these circumstances, it was "appropriate" for the Panel to focus on the question of "whether relevant scientific evidence had *become* insufficient".[302] The United States adds that there was "plentiful" evidence in the record demonstrating that the relevant scientific evidence "[was] and remains sufficient" to conduct a risk assessment for the five hormones.[303]

138. The United States asserts that the Panel correctly allocated the burden of proof in its analysis under Article 5.7. As it argues in respect of Article 5.1[304], the United States submits that the Panel properly noted that "one of the particularities of this case"[305] was that the European Communities' claim under Article 22.8 of the DSU was premised on an assertion by the European Communities that it had brought itself into conformity with the *SPS Agreement* through the adoption of Directive 2003/74/EC. For this reason, and taking into account the European Communities' concern that it should not be required to "prove a negative", the Panel was justified in allocating on the European Communities the burden of establishing a *prima facie* case of conformity with the *SPS Agreement*, including with Article 5.7 of that Agreement. The United States agrees with the Panel that "the burden shifted back and forth between the parties and eventually 'neutralized' each other since each party also submitted evidence in support of its allegations."[306] The United States further agrees with the Panel's approach that it would "weigh all the evidence before it"[307] in considering whether an allegation had been proved. Furthermore, the United States observes that "the Panel did not state or consider that it had placed the burden of proof on the [European Communities]."[308] Thus,

[298]United States' appellee's submission, para. 74 (quoting European Communities' appellant's submission, para. 398).

[302]*Ibid.* (original emphasis)
[303]*Ibid*., para. 81.
[304]See *supra*, para. 127.
[305]United States' appellee's submission, para. 93 (quoting Panel Report, *US – Continued Suspension*, para. 7.384; and Panel Report, *Canada – Continued Suspension*, para. 7.381).
[306]United States' appellee's submission, para. 94 (referring to Panel Report, *US – Continued Suspension*, para. 7.386).
[307]*Ibid.* (quoting Panel Report, *US – Continued Suspension*, para. 7.386; and Panel Report, *Canada – Continued Suspension*, para. 7.383). (emphasis omitted)
[308]*Ibid.*, para. 96.

the United States dismisses as "speculation"[309] the European Communities' assertion that the Panel treated Article 5.7 as an exception to Article 5.1.

139. Finally, the United States argues that the Panel did not fail to conduct an objective assessment of the facts as required by Article 11 of the DSU in reaching its findings under Article 5.7 of the *SPS Agreement*. As noted earlier[310], the United States argues that the "reasonableness approach"[311] that the European Communities posits should apply to "measures adopted by governments or specialised agencies in highly complex or technical matters"[312] has no support in the text of the *SPS Agreement*. Moreover, the United States submits that the Panel did not conduct a *de novo* review and, instead, acted within the bounds of its discretion by attributing to the different pieces of evidence a different weight and significance than that attributed by the European Communities.[313] As regards certain statements by the experts concerning the "sufficiency" of the relevant scientific evidence on which the European Communities relies, the United States asserts that these statements "were all made at the conclusion of the Panel's meeting with the experts when the experts were given the opportunity to make general, concluding remarks on the previous two days".[314] According to the United States, the experts were not instructed to limit their remarks to certain hormones and, in fact, the statements of the experts quoted by the European Communities either explicitly addressed oestradiol-17β or did not specify to which of the hormones the experts' statements made reference.[315] The United States reiterates that "there was plentiful evidence in the record demonstrating that the relevant scientific evidence"[316] remains sufficient to conduct a risk assessment for these five hormones, including statements by the experts acknowledging that the data were sufficient to conduct risk assessments for the five hormones subject to the provisional ban. Thus, the United States concludes that the Panel's consideration of whether there was a "'critical mass of new evidence' was proper and well-supported".[317] Finally, the United States maintains that, to the extent the European Communities' challenges raised under Article 11 of the DSU "should properly have been raised under [Article 12.7 of the DSU] instead, those claims should be disregarded as not properly subject to review by the Appellate Body."[318]

140. The United States concludes that the Panel did not err in finding that Directive 2003/74/EC is inconsistent with Article 5.7 of the *SPS Agreement*, and requests the Appellate Body to reject the European Communities' appeal concerning the Panel's findings.

C. *Arguments of Canada – Appellee*

1. Procedural Issue – Public Observation of the Oral Hearing

141. Canada requests that the Appellate Body open the hearing in these proceedings to public observation. Canada observes that, if "[r]ead out of context", the first sentence of Article 17.10 "may

[309] *Ibid.*
[310] See *supra*, para. 128.

[312] *Ibid.* (quoting European Communities' appellant's submission, para. 223).
[313] See *supra*, paras. 130 and 131.
[314] United States' appellee's submission, para. 81.
[315] *Ibid.* (referring to statements by Drs. Sippell, Guttenplan, Cogliano, and Boisseau, quoted in European Communities' appellant's submission, paras. 422, 423, 424, and 425, respectively).
[316] United States' appellee's submission, para. 81 (referring to comments by the United States on the replies of the scientific experts, Codex, JECFA, and IARC to questions posed by the Panel, Panel Reports, Annex F, paras. 47 and 48).
[317] *Ibid.*, para. 82.
[318] *Ibid.*, para. 49.

appear to require closed oral hearings before the Appellate Body".[319] However, Canada argues that when the key terms of the sentence—"proceedings" and "confidential"—are properly interpreted in accordance with the customary rules of treaty interpretation, in the context of the entire DSU and, in particular, Article 17 itself, it can be seen that the sentence does not, and was not intended to, operate as a bar to open hearings.

142. In Canada's submission, the term "proceedings" in Article 17.10 "encompasses the entire appellate process".[320] As regards the term "confidential", Canada states that an examination of the context of Article 17.10 and the practice of WTO dispute settlement demonstrates that this provision does not require that the entire appellate process must remain strictly secret and out of the public's knowledge. Canada adds that if Article 17.10 required absolute confidentiality, then all of the steps within an appeal would have to remain out of the public knowledge, including the initial Notice of Appeal and the final Appellate Body report. However, both of these documents are made public upon circulation. Moreover, Appellate Body reports, which are made public, include summaries of the participants' written submissions and refer to the participants' arguments made during the oral hearing. Canada thus concludes that many aspects of the Appellate Body's proceedings during the "substantive portion"[321] of the appellate process are actually revealed to the public and are not subject to confidentiality under Article 17.10.

143. Canada also draws attention to Article 18.2 of the DSU, which "permits parties to reveal their positions to the public".[322] Canada asserts that, "[a]s was recognized by the Panel, all three parties, by making a unanimous request for a public oral hearing in these two parallel appeals, are relying on their right, stated in ... Article 18.2, to make their oral arguments public."[323] Canada adds that Article 18.2 does not prescribe a specific means of making a party's arguments public and, consequently, it does not matter whether such right is exercised after the oral hearing or contemporaneously with the oral hearing.

144. Canada submits that the *Rules of Conduct* "do not present an obstacle"[324] to the Appellate Body holding open hearings. Furthermore, Canada considers that, under Rule 16(1) of the *Working Procedures*, "[t]he Appellate Body has discretion ... to respond favourably to the unanimous request by all three parties to the appeal in this case and to open the oral hearing to the public."[325]

145. Canada additionally asserts that open hearings are an important contribution to the legitimacy and the perception of legitimacy of the WTO dispute settlement system. Canada cautions that "[t]he legitimacy of the WTO dispute settlement system would suffer if the oral hearing at the appellate level were to be closed while at the panel stage the hearings were open."[326]

146. In response to the comments of the third participants, Canada asserts that the third participants that oppose the request to open the hearing seek to divorce the term "proceedings" from its context and ignore the meaning of "confidential" altogether.[327] Canada further notes that, given the entitlement of parties under Article 18.2 to disclose their written submissions, oral statements, and answers to questions, "it would be absurd to find that where those parties agree that they wish to present their positions at an appellate hearing in open session, they may not do so."[328] Canada also objects to the argument that the Appellate Body's decision on this issue would prejudge the outcome

[319] Canada's request for an open hearing, para. 4.
[320] *Ibid.*, para. 5.
[321] Canada's request for an open hearing, para. 7.
[322] *Ibid.*, para. 9.
[323] *Ibid.*, para. 14.
[324] *Ibid.*, para. 15.
[325] *Ibid.*, para. 19.
[326] *Ibid.*, para. 24.
[327] Canada's comments on third participants' comments, para. 8.
[328] *Ibid.*, para. 10.

of the DSU review negotiations. This argument, according to Canada, misconstrues the nature and scope of the participants' request, because they are not asking the Appellate Body to decide that all appellate hearings must be open to the public. Canada observes, moreover, that the argument is premised on the incorrect notion that "whenever a matter in dispute settlement is or might be the subject of negotiations among the membership, panels and the Appellate Body should decline to consider the matter lest it 'prejudge' the outcome of the negotiations."[329]

147. Accordingly, Canada requests that the Appellate Body allow public observation of the hearing in these proceedings. Canada states that, in order to accommodate any third participants wishing to retain the confidentiality of their oral submissions, a "practical solution" would be to have "a video link between the room in which the oral hearing takes place and a second room in which the public can watch the oral hearing"[330] and to interrupt the broadcast if a third participant so wishes.

2. Articles 23.2(a) and 21.5 of the DSU

148. Canada submits that the Panel correctly found that "recourse to dispute settlement" within the meaning of Article 23.2(a) of the DSU is not limited to Article 21.5 panel proceedings and that Articles 21.5, 23.1, and 23.2(a) did not require Canada to initiate a compliance panel proceeding for purposes of examining the compatibility of Directive 2003/74/EC with the *SPS Agreement*.

149. According to Canada, the European Communities' characterization of this dispute as a "disagreement as to the existence or consistency with a covered agreement of measures taken to comply", within the meaning of Article 21.5, "ignores ... that the essence of this dispute is not specifically about a 'disagreement' over the [European Communities'] alleged compliance measure".[331] Rather, Canada argues that Article 22.8 is the provision of the DSU that specifically applies to the post-retaliation stage and that it is for the European Communities, as the party seeking termination of the suspension of concessions, to demonstrate that it has removed its WTO-inconsistent measure within the meaning of Article 22.8. Canada maintains that the European Communities' unilateral assertion of compliance by virtue of Directive 2003/74/EC does not compel Canada to initiate an Article 21.5 proceeding, and does not require Canada to lift the suspension of concessions. Canada submits that to allow a unilateral declaration of compliance to displace the multilateral authorization to suspend concessions "would contravene the very rule against unilateralism that the [European Communities] accuses Canada of breaching".[332]

150. Canada further submits that the European Communities has the option of initiating an Article 21.5 proceeding itself. This is confirmed by the fact that the panel in *EC – Bananas III (Article 21.5 – EC)* did not decline jurisdiction, even though the proceeding was initiated by the European Communities, the respondent in the original proceedings. Canada recalls that the panel report in *EC – Bananas III (Article 21.5 – EC)* was not adopted because the European Communities, the only party that participated in that proceeding, did not request its adoption. Consequently, the European Communities' assertion that "subsequent practice" confirms that Article 21.5 panel proceedings may not be initiated by the original respondent "is without any foundation".[333] Canada disagrees with the European Communities' argument that the panel's inability to compel other parties to participate in *EC – Bananas (Article 21.5 – EC)* shows why an original respondent may not initiate

[329]Canada's comments on third participants' comments, para. 15.
[330]Canada's request for an open hearing, para. 29.
[331]Canada's appellee's submission, paras. 7 (referring to European Communities' appellant's submission, para. 49) and 8.
[332]*Ibid.*, para. 9.
[333]Canada's appellee's submission, para. 11 (referring to the European Communities' appellant's submission, para. 91).

Article 21.5 proceedings, because "no panel can ever compel a party to a dispute to appear"[334] in any panel proceeding.

151. Canada asserts that the Panel correctly found that, while recourse to an Article 21.5 panel was one of the procedural mechanisms available to the European Communities to demonstrate that it had "removed" its WTO-inconsistent measure and obtain the termination of Canada's suspension of concessions, the European Communities had several other procedural avenues available to it. These include good offices and consultations, arbitration under Article 25 of the DSU, and recourse to a panel *de novo*. The availability of a new panel proceeding is demonstrated by the fact that the European Communities initiated the present dispute and put the issue of whether Directive 2003/74/EC had brought it into compliance "squarely before the Panel"[335] through its conditional claims. Thus, contrary to the European Communities' assertion that an Article 21.5 panel proceeding is the only procedure providing finality to the dispute, the fact that the European Communities put the issue of actual compliance "squarely" before the Panel in this case demonstrates its own belief that the Panel was in a position to adjudicate "the central matter at issue" in this dispute.[336]

152. On this basis, Canada requests the Appellate Body to reject the European Communities' appeal regarding the Panel's finding that Articles 21.5 and 23.2(a) did not require Canada to initiate an Article 21.5 panel proceeding for purposes of examining the WTO-consistency of Directive 2003/74/EC.

3. Article 22.8 of the DSU

153. Canada argues that, contrary to the European Communities' claims, the Panel correctly interpreted Article 22.8 of the DSU by concluding that the phrase "until such time as the measure found to be inconsistent with a covered agreement has been removed" means that the illegality itself must be removed, and not only the originally impugned measure.

154. According to Canada, the European Communities "advocates an overly narrow and formalistic interpretation that fails to situate Article 22.8 in its proper context"[337] when arguing that the "mere existence"[338] of an implementing measure and its subsequent notification would be enough to satisfy the requirement under Article 22.8 that the WTO-inconsistent measure is removed. In contrast, the Panel properly took into account the context of Article 22.8 when finding that the removal of the inconsistent measure, under the first scenario in Article 22.8, required actual compliance with the DSB's recommendations and rulings before the suspension of concessions could be terminated. Canada maintains that the second and third scenarios requiring termination of the suspension of concessions under Article 22.8 "contemplate situations where the issue of the nullification or impairment caused by ... non-compliance with [the covered agreements] has been satisfactorily addressed".[339] Furthermore, Canada asserts that the Panel correctly found that the ongoing surveillance by the DSB of the implementation of the recommendations and rulings, as provided in the second sentence of Article 22.8, was intended to ensure that Members fully implement the DSB's recommendations and rulings. Canada also submits that surveillance by the DSB would be rendered meaningless if its role were to be reduced to one of a passive observer that would "simply take note of the 'existence' of an alleged implementing measure, without ensuring that its recommendations and rulings have indeed been implemented".[340] Canada adds that the Panel's

[334]*Ibid.*, para. 12.
[335]*Ibid.*, para. 15.
[336]*Ibid.*, para. 15.
[337]Canada's appellee's submission, para. 21.
[338]*Ibid.*, para. 18 (quoting European Communities' appellant's submission, para. 101).
[339]*Ibid.*, para. 25.
[340]*Ibid.*, para. 26.

interpretation was also consistent with the principle of "prompt" compliance with the DSB's recommendations and rulings expressed in Articles 21.1 and 3.2 of the DSU.

155. Canada further submits that the Panel's interpretation of Article 22.8 was consistent with the object and purpose of the DSU to provide security and predictability to the multilateral trading system as set forth in Article 3.2. This is because, in Canada's view, "Article 22.8 is the linchpin for ensuring that the suspension of concessions achieves the objective of inducing full compliance"[341], and Article 22.8 should not be interpreted so narrowly as to weaken the effectiveness of the suspension of concessions. Canada contends that the interpretation of Article 22.8 advocated by the European Communities would require the immediate termination of Canada's suspension of concessions upon the mere unverified assertion and unilateral declaration of compliance with the DSB's recommendations and rulings and would require "the initiation by Canada of new litigation" in order not to "displace Canada's multilaterally authorized suspension of concessions".[342] If it is eventually established that the alleged implementing measure does not comply with the DSB's recommendations and rulings, the Member seeking compliance "will continue to suffer, without any relief, the nullification or impairment caused by the failure of the non-compliant Member to bring itself into compliance".[343] Thus, Canada argues, the interpretation of Article 22.8 advocated by the European Communities should be rejected in order to avoid "a cycle of 'recurrent litigation'".[344]

156. Canada therefore requests the Appellate Body to reject the European Communities' appeal of the Panel's finding that Article 22.8 of the DSU requires actual compliance with the DSB's recommendations and rulings before the suspension of concessions must be terminated.

4. The Panel's Terms of Reference

157. Canada contends that the European Communities' claim that the Panel exceeded its terms of reference when it assumed a role similar to that of a compliance panel confuses the issue of the Panel's jurisdiction with the issue of the sequence of the European Communities' claims. Canada notes that, under its alternative and conditional claim, the European Communities implicitly acknowledged that the Panel had jurisdiction to examine the compatibility of Directive 2003/74/EC with the *SPS Agreement*. Thus, the real contention underlying the European Communities' claim that the Panel exceeded its terms of reference is not that the Panel improperly examined the consistency of Directive 2003/73/EC with the *SPS Agreement*, but, rather, that the Panel did so in addressing the European Communities' second series of main claims.

158. Canada maintains that the Panel correctly found that it had no choice but to review the consistency of Directive 2003/74/EC with the *SPS Agreement*, because the presumption of good faith compliance, which the European Communities relied upon in making its second series of main claims, was rebuttable by Canada. Canada recalls the Panel's observation that its examination of Directive 2003/74/EC under the *SPS Agreement* was "not the result of ... disregarding the order in which"[345] the European Communities presented its claims, but was done for the purpose of addressing the European Communities' second series of main claims under Articles 23.1, 22.8, and 3.7 of the DSU. Hence, the Panel's approach was not a result of it disregarding the sequence of the European Communities' claims, but the result of a reasoned analysis of the second series of main claims.

159. Canada further argues that, although the European Communities' panel request did not refer to provisions of the *SPS Agreement*, the Panel correctly found that the compatibility of Directive 2003/74/EC with the *SPS Agreement* was *ipso facto* an issue before the Panel. Thus, the

[341] *Ibid.*, para. 33.
[342] Canada's appellee's submission, para. 34.
[343] *Ibid.*, para. 35.
[344] *Ibid.* (quoting Panel Report, *Canada – Continued Suspension*, para. 7.230).
[345] *Ibid.*, para. 40 (quoting Panel Report, *Canada – Continued Suspension*, para. 7.357).

Panel did not breach Article 7 of the DSU, because this provision requires panels to address the relevant provisions of the covered agreement cited by the parties. Canada recalls that the European Communities' second series of main claims was premised on a violation of Article 22.8 by Canada, which in turn depended on a finding that the measure found to be inconsistent with the *SPS Agreement* in *EC – Hormones* had been removed. Consequently, Article 22.8 required the Panel to consider the consistency of Directive 2003/74/EC with the *SPS Agreement* as a condition precedent to a finding of violation by Canada of Article 22.8. In addition, Canada maintains that the Panel's approach was consistent with the Appellate Body's finding in *Argentina – Footwear (EC)* that a panel cannot make an "objective assessment of the matter" if it only refers in its reasoning to the "specific provisions cited by the parties in their claims".[346] Canada observes, moreover, that the Panel considered that the issue of the substantive compliance of the European Communities' implementing measure was raised "early in the proceedings" and therefore "no party to the dispute could claim that it did not have the opportunity to address the legal arguments of the other."[347]

160. On this basis, Canada requests the Appellate Body to reject the European Communities' claim that the Panel exceeded its terms of reference under Articles 7 and 21.5 of the DSU when examining the compatibility of Directive 2003/74/EC with the *SPS Agreement*.

5. The Panel's Suggestion for Implementation

161. In its appellee's submission, Canada did not address the European Communities' request that the Appellate Body modify the Panel's suggestion for implementation. However, in its other appellant's submission, Canada requests the Appellate Body to reverse the Panel's suggestion for implementation, because the suggestion was contradictory to the Panel's findings under Article 22.8.[348]

6. The Panel's Selection of Experts

162. Canada rejects the European Communities' argument that Section VI of the *Rules of Conduct* sets forth the relevant legal standard.[349] Rather, Canada submits that the only standard governing conflict of interest questions is found in Section II (Governing Principle) of the *Rules of Conduct*. That provision requires that all persons covered under the *Rules of Conduct*, including experts, "shall be independent and impartial", and "shall avoid direct or indirect conflicts of interest". Moreover, Canada asserts that Drs. Boisseau and Boobis met the disclosure requirement under the Working Procedures for Consultations with Scientific and/or Technical Experts (the "Experts Working Procedures") developed by the Panel, and that, in particular, both complied with the requirements by disclosing their involvement in JECFA. In Canada's view, "it was up to the Panel to evaluate whether this had an impact [on] the independence and impartiality of these candidates in this case."[350]

163. Canada submits that the Panel correctly found that Drs. Boisseau and Boobis were independent and impartial. Canada recalls that the Panel "expressly addressed"[351] the allegation that these two experts were defending their prior work when it explained that the purpose of consulting them was to obtain advice about the substance of JECFA's risk assessment, and to help identify the extent to which concerns raised by the European Communities had been considered in JECFA's risk assessment. Canada also highlights the Panel's explanations that it was asking the experts about

[346] Canada's appellee's submission, para. 43 (quoting Appellate Body Report, *Argentina – Footwear (EC)*, para. 74).
[347] *Ibid.* (referring to Panel Report, *Canada – Continued Suspension*, para. 7.371).
[348] See also *infra*, para. 206.
[349] Canada's appellee's submission, para. 47 (referring to European Communities' appellant's submission, para. 195).
[350] *Ibid.*, para. 49.
[351] *Ibid.*, para. 54.

JECFA's consensual view, which may differ from the experts' personal views, and that both experts admitted to the Panel that the state of scientific knowledge can evolve.

164. Canada observes that the conflict of interest alleged by the European Communities is not covered by the Illustrative List of Information to be Disclosed set out in Annex 2 of the *Rules of Conduct*. Therefore, according to Canada, "an expert's previous participation in JECFA would not put the person in a conflict-of-interest situation when he or she provides advice to the Panel."[352] In Canada's view, participation by these experts both in JECFA and as advisers to the Panel occurred in a personal, independent, professional capacity and for no monetary gain. Moreover, Canada submits, it is inaccurate to portray participation by Drs. Boisseau and Boobis in JECFA committees as "giving them an (almost proprietary) interest in the outcome of the JECFA process that they would have felt compelled to defend when advising the Panel".[353] Canada maintains that the JECFA process "is a diffuse one, in which a number of scientists participate but the precise outcome is uncertain beforehand".[354] The experts, Canada submits, were contributors to a process "aimed at reaching a consensus out of what may initially be a variety of scientific views", which is "very different" from scientific conclusions arrived at through the efforts of, and published by, an individual scientist.[355]

165. Canada considers that the practical consequence of the Panel excluding Drs. Boisseau and Boobis as experts would have been that "the pool of eligible experts would have been shrunk significantly, such that it would have become very difficult for the Panel to appoint experts in all the areas of expertise that it had identified."[356] Pointing to an example in which a particular scientist had examined issues relating to genetically modified organisms for both the European Food Safety Authority and JECFA, Canada avers that this is consistent with its view that independent scientific experts serving in their personal capacity may advise different international bodies (or national bodies) on the same subject matter without compromising their independence and impartiality.

166. Canada therefore requests the Appellate Body to reject the European Communities' claim that the Panel acted inconsistently with the principle of due process, the requirements of the *Rules of Conduct*, and Article 11 of the DSU in selecting Drs. Boisseau and Boobis, and to reject the request to reverse the Panel's findings that relied on the advice of these two experts.

7. Article 5.1 of the *SPS Agreement*

167. Canada argues that the Panel was correct in finding that the European Communities' permanent ban on meat and meat products from cattle treated with oestradiol-17β for growth-promoting purposes was not based on a risk assessment within the meaning of Article 5.1 of the *SPS Agreement*. Canada requests the Appellate Body to dismiss the European Communities' appeal.

168. Canada argues that the Panel correctly interpreted Article 5.1 of the *SPS Agreement*, as informed by Article 5.2 of the *SPS Agreement*, and did not ignore in its analysis the European Communities' arguments regarding misuse and abuse in the administration of hormones. Canada maintains that the European Communities did not provide evidence demonstrating that it had evaluated misuse and abuse in the administration of oestradiol-17β as a specific risk in relation to the consumption of meat from cattle treated with this hormone for growth-promotion purposes. Therefore, "it is even unreasonable to presume misuse/abuse of hormones"[357] for purposes of the Panel's examination of Article 5.1 in this dispute. In addition, Canada asserts that the Panel was correct in finding that the issue of misuse and abuse was relevant "only to the extent that it [could]

[352] *Ibid.*, para. 55.
[353] *Ibid.*, para. 56.
[354] Canada's appellee's submission, para. 56.
[355] *Ibid.*
[356] *Ibid.*, para. 57.
[357] *Ibid.*, para. 87.

lead to an increased concentration of hormone residues in meat and meat products than would otherwise occur if good veterinary practices are applied."[358] The Panel found in this regard that the European Communities had not evaluated the potential for adverse effects arising from the consumption of meat containing residues of oestradiol-17β as a result of cattle being treated with this hormone for growth-promotion purposes. Thus, because the European Communities had not specifically assessed the risk arising from consumption of meat containing hormone residues, the Panel rightly found that whether the concentrations of residues of oestradiol-17β in meat could be higher as a result of misuse and abuse did not need to be addressed. Canada rejects the European Communities' argument that the Panel placed undue emphasis on the Codex standards, which assume good veterinary practices. Canada submits that the Panel did not perceive its task as evaluating the SCVPH Opinions against the assessments by JECFA; rather, once it had found that the European Communities had taken Codex into account, thereby complying with the terms of Article 5.1 of the *SPS Agreement*, the Panel was correct in using Codex's approach to risk assessment as a general reference.

169. Canada contends moreover that the Panel did not exclude *a priori* from its analysis evidence on possible misuse and abuse in the administration of hormones, which was the legal error identified by the Appellate Body in *EC – Hormones*. Rather, the Panel "properly confined its inquiry to the assessment that was material to the context of this case".[359] Canada submits that the Panel properly rejected the European Communities' attempt to interpret the Appellate Body's finding in *EC – Hormones*—that risk assessments may include matters not susceptible of quantitative analysis—as allowing "risk management" considerations to be taken into account in a "risk assessment" within the meaning of Article 5.1.[360] According to Canada, the European Communities' arguments relating to "risk management" seek "to distract from the main weakness of its case: that it did not assess the specific risk".[361]

170. Canada asserts that the Panel correctly held that the European Communities' risk assessment was not sufficiently specific to the particular risk at issue, that is, the adverse effects to human health arising from consumption of meat from cattle treated with oestradiol-17β for growth-promotion purposes. Canada draws attention to the Appellate Body's findings in *EC – Hormones* that the scientific evidence considered in a risk assessment must be "sufficiently specific"[362] to the substance at issue in order for it to "sufficiently warrant" or "reasonably support" the SPS measure.[363] Canada maintains that the European Communities was not absolved from conducting a quantitative assessment of such risk simply because the SCVPH Opinions indicate that oestradiol-17β is genotoxic. This is because the evidence referred to in the SCVPH Opinions relates to the genotoxicity of oestradiol-17β *in vitro*[364], which does not indicate that it is genotoxic *in vivo*.[365] Canada rejects the European Communities' allegation that the Panel ignored Dr. Guttenplan's statement that the scientific evidence was specific in relation to the relevant risk. This statement must be interpreted as

[358] Canada's appellee's submission, para. 88 (referring to Panel Report, *Canada – Continued Suspension*, para. 6.154).
[359] *Ibid.*
[360] *Ibid.*, para. 93 (referring to Panel Report, *Canada – Continued Suspension*, paras. 7.491 and 7.492).
[361] *Ibid.*, para. 93.
[362] *Ibid.*, para. 97 (quoting Appellate Body Report, *EC – Hormones*, para. 200).
[363] Canada's appellee's submission, para. 98 (quoting Appellate Body Report, *EC – Hormones*, para. 193). (underlining omitted)
[364] *In vitro* means outside of the body, usually in a cell-based system in a test tube or culture dish.. (Panel Report, *US – Continued Suspension*, footnote 509 to para. 7.393(d); and Panel Report, *Canada – Continued Suspension*, footnote 500 to para. 7.390(d) (referring to transcript of the Panel meeting with the scientific experts, Panel Reports, Annex G, para. 96))
[365] *In vivo* means in the whole organism, the intact organism (Panel Report, *US – Continued Suspension*, footnote 585 to para. 7.472 (referring to transcript of the Panel meeting with the scientific experts, Panel Reports, Annex G, para. 96))

referring only to the "hazard identification"[366] phase of a risk assessment, and Dr. Guttenplan subsequently stated that "the evidence evaluating the occurrence of adverse effects is weak."[367] Canada also notes that two other experts indicated very clearly that the European Communities "did not have scientific evidence to support the assertion of the specific risk".[368] Therefore, the Panel had a "solid basis"[369] for finding that the risk assessments were not sufficiently specific to the relevant risk arising from hormone residues in meat.

171. Canada also contests the European Communities' assertion that the Panel erred in requiring a quantification of risks. Canada observes that, although the Appellate Body recognized in *EC – Hormones* that a risk assessment could be performed either quantitatively or qualitatively, it also held that a risk assessment is a process "characterized by systematic, disciplined and objective enquiry and analysis".[370] Therefore, a qualitative risk assessment must be "done in a scientifically rigorous fashion"[371], and the European Communities could not make a qualitative assessment on the basis of unproven assumptions where the available quantitative data go against those assumptions. The European Communities' risk assessment did not meet this standard, because it did not contain either quantitative or qualitative evidence of the genotoxic potential of oestradiol-17β *in vivo*. In addition, the European Communities failed to substantiate its assertion that no threshold could be identified for oestradiol-17β, because it did not provide evidence suggesting that this hormone is a "direct-acting genotoxicant".[372]

172. Canada submits furthermore that the Panel's examination of whether the European Communities had evaluated the "potential occurrence of adverse effects"[373] does not express a preference for a quantitative analysis of risk and is consistent with the *SPS Agreement*. This is because the only possible way to examine the "potential" for adverse effects, within the meaning of Annex A, paragraph 4, to the *SPS Agreement*, is to "ask whether those adverse effects could ever occur".[374] Canada also points out that the Panel recognized that "potential" is a lesser threshold than "likelihood".[375] Canada adds that the Panel's approach is consistent with the Appellate Body's finding in *EC – Hormones*, because the Appellate Body did not fault the panel in that dispute for finding that a risk assessment under Annex A, paragraph 4, requires an evaluation of "the potential ... of occurrence of such effects".[376] Canada additionally recalls the Appellate Body's reasoning that Article 5.1 is "intended as a countervailing factor in respect of the right of Members to set their appropriate level of protection"[377] pursuant to Article 3.3 of the *SPS Agreement*. By contrast, the European Communities seems to be arguing for an "unqualified right to define its own level of protection"[378] by asserting that the Panel erred in favouring quantitative methods over qualitative ones when examining the risk assessment performed by the European Communities.

173. Canada asserts that the Panel made an objective assessment of the matter in reaching its finding that the European Communities' permanent ban on oestradiol-17β was not based on a risk

assessment within the meaning of Article 5.1. As the trier of facts, the Panel was entitled to accord more weight to the views of those experts it found to be credible and persuasive. Canada emphasizes that, under the Appellate Body's interpretation, an objective assessment under Article 11 of the DSU implies, among other things, that a "panel must consider all the evidence presented to it, assess its credibility, determine its weight, and ensure that its factual findings have a proper basis in that evidence."[379] Within these parameters, "panels enjoy discretion as the trier of facts, including in disputes involving the evaluation of scientific evidence"[380] and, in the exercise of this discretion, are entitled "to determine that certain elements of evidence should be accorded more weight than other elements".[381] Thus, "[r]equiring panels, in their assessment of the evidence before them, to give precedence to the importing Member's evaluation of scientific evidence and risk is not compatible with this well-established principle."[382] Canada underscores that, given the discretion afforded to panels to appreciate the value of the evidence before them, the Appellate Body has made clear that "not every error in the appreciation of the evidence ... may be characterized as a failure to make an objective assessment of the facts."[383]

174. Canada maintains that the European Communities has failed to demonstrate that the Panel exceeded the bounds of its discretion as the trier of facts in reaching its factual findings regarding the consistency with the *SPS Agreement* of the permanent ban on meat from cattle treated with oestradiol-17β imposed pursuant to Directive 2003/74/EC. Canada does not view the Panel's statement that it was in a situation "similar"[384] to that of a risk assessor as an indication that the Panel "drifted into a *de novo* review"[385] of the European Communities' risk assessment. Rather, the Panel made use of the advice given by the experts as context to assess the alleged compliance of the European Communities' measure with the recommendations and rulings of the DSB in *EC – Hormones*. In this regard, the Panel specifically acknowledged that it was poorly suited to engage in a *de novo* review of the European Communities' risk assessment.[386] According to Canada, as the trier of facts, the Panel was entitled to give greater weight to the advice of certain experts, and was under no obligation to treat all advice received from the experts "on an equal footing".[387] Thus, rather than "picking and choosing"[388] between the opinions of the experts, the Panel weighed the advice received from the different experts and carried out an objective assessment of the matter before it, in conformity with Article 11 of the DSU.

175. Turning to the specific allegations of error made by the European Communities under Article 11 of the DSU, Canada characterizes as "simply false"[389] the European Communities' allegation that the Panel did not take into account evidence related to exposure to hormones from multiple sources. The Panel "specifically acknowledge[d] that it had considered the issue [of multiple

exposure]"[390] in its analysis of the European Communities' risk assessment under Article 5.1, and for this reason did not fail to conduct an objective assessment as required by Article 11.

176. Furthermore, Canada rejects the European Communities' contention that the Panel imposed an incorrect "specificity" or "direct causality" requirement.[391] Rather than requiring the "demonstration of actual effects"[392], the Panel correctly required the European Communities "to evaluate the possibility that the identified adverse effect came into being, originated, or resulted from the presence of residues of oestradiol-17β in meat or meat products as a result of the cattle being treated with the hormone for growth promoting purposes."[393] According to Canada, this neither amounts to a requirement that the European Communities demonstrate "actual effects"[394], nor is it a violation of Article 11 by the Panel.

177. Finally, Canada maintains that the Panel "extensively dealt" with the evidence[395] related to the genotoxicity of oestradiol-17β in its report and concluded that the scientific evidence referred to in the SCVPH Opinions did not "support the European Communities' conclusion that for oestradiol-17β genotoxicity had already been demonstrated explicitly", nor did it "support the conclusion that the presence of residues of oestradiol-17β in meat and meat products as a result of the cattle being treated with the hormone for growth promotion purposes leads to increased cancer risk".[396] Therefore, Canada asserts that the Panel carefully considered all the evidence before it on the genotoxicity of oestradiol-17β, and did not fail to conduct an objective assessment of the matter as required by Article 11 of the DSU.

178. Canada concludes that the Panel correctly interpreted and applied Article 5.1 of the *SPS Agreement* and did not fail to make an objective assessment of the matter under Article 11 of the DSU. Canada therefore requests the Appellate Body to dismiss the appeal of the European Communities regarding the Panel's findings under Article 5.1 of the *SPS Agreement*.

8. Article 5.7 of the *SPS Agreement*

179. Canada argues that the Panel properly found that the relevant scientific evidence on the five hormones subject to the provisional ban was not "insufficient" within the meaning of Article 5.7 of the *SPS Agreement*. Canada requests the Appellate Body to dismiss this ground of the European Communities' appeal.

180. Canada submits that the Panel correctly considered the relevance of international standards in determining that the scientific evidence on risks posed by the five hormones was not "insufficient" within the meaning of Article 5.7. Canada observes that the Panel did not find that the existence of international standards created an irrebuttable presumption of the sufficiency of scientific evidence and amounted to a "legal bar"[397] to the adoption of provisional measures under Article 5.7. Rather, the Panel was "expressing a presumption, not a conclusion"[398], when it found that the existence of international standards "implies" that sufficient evidence existed to complete a risk assessment. This is borne out by the Panel's recognition that previously sufficient evidence could subsequently become

[390] Canada's appellee's submission, para. 77 (referring to Panel Report, *Canada – Continued Suspension*, para. 7.501).
[391] *Ibid.*, para. 79 (referring to European Communities' appellant's submission, paras. 259-270).

[393] *Ibid.*, para. 80 (quoting Panel Report, *Canada – Continued Suspension*, para. 7.485). (underlining omitted)
[394] *Ibid.* (quoting European Communities' appellant's submission, para. 261).
[395] *Ibid.*, para. 81.
[396] *Ibid.* (quoting Panel Report, *Canada – Continued Suspension*, para. 7.540). (underlining omitted)
[397] Canada's appellee's submission, para. 117.
[398] *Ibid.*, para. 118. (underlining omitted)

"insufficient" within the meaning of Article 5.7 when it is "unsettled"[399] by new studies. Therefore, contrary to the European Communities' contention, the Panel explicitly recognized that, despite the existence of international standards, there could be situations where relevant scientific evidence becomes insufficient to conduct an adequate risk assessment. On that basis, the Panel went on to assess whether the "insufficiencies" identified by the European Communities were enough to render insufficient the previously sufficient evidence upon which the JECFA assessments were based.

181. In addition, Canada suggests that the Panel correctly excluded from the scope of its analysis under Article 5.7 the level of protection chosen by the European Communities. The Panel was correct in finding that the ability of the European Communities to conduct a risk assessment on four of the provisionally banned hormones could not "hinge on"[400] its decision to apply a higher level of protection than that reflected in the international standards. The European Communities' argument that the "sufficiency" of scientific evidence under Article 5.7 depends on the acceptable level of risk adopted by a Member[401] undermines the "basic logic" of the *SPS Agreement*, according to which Article 5.7 operates as a "temporary 'safety valve'"[402] in situations where there is insufficient scientific evidence to allow a Member to conduct a risk assessment that fulfils the requirements of Articles 2.2 and 5.1. The European Communities' approach would allow Members "to effectively exclude from the available pool of relevant scientific evidence, any evidence that does not support their chosen level of protection"[403] for purposes of evaluating whether there is sufficient scientific evidence to conduct a risk assessment. Canada argues that a Member's desired level of protection is not relevant for determining whether the scientific evidence is "insufficient" within the meaning of Article 5.7, because the "autonomous right"[404] of WTO Members to introduce measures that result in a higher level of protection than the one achieved by measures based on international standards under Article 3.3 is subject to the requirement that such measures be based on a risk assessment.

182. Canada maintains that the Panel did not err in allocating to the European Communities the burden of proving the insufficiency of the scientific evidence under Article 5.7. Canada considers that the Panel correctly characterized Article 5.7 as a "qualified exemption"[405] from the obligation under Article 2.2 not to maintain SPS measures without sufficient scientific evidence. Article 5.7 is not an option that can be freely chosen by a Member. Rather, it operates as a "temporary 'safety valve'"[406] in situations where some evidence exists but are not enough to complete a full risk assessment. The Panel shifted the burden of proof under Article 5.7 to the European Communities only once it was satisfied that Canada had sufficiently refuted the European Communities' allegation of compliance through positive evidence of a breach of Article 5.7. Canada posits further that this allocation of the burden of proof is consistent with the Appellate Body's ruling in *US – Wool Shirts and Blouses*, because it was for the European Communities, as the party alleging a breach of Article 22.8 of the DSU, to demonstrate that its implementing measure complied with Article 5.7 of the *SPS Agreement*.[407]

183. Furthermore, Canada argues that the Panel did not err in finding that, in situations where international risk assessments have been conducted for the substances at issue, a "critical mass" of

[399] *Ibid.*, para. 119 (referring to Panel Report, *Canada – Continued Suspension*, para. 7.598).
[400] *Ibid.*, para. 122.
[401] *Ibid.*, para. 121 (referring to European Communities' appellant's submission, para. 397; and Panel Report, *Canada – Continued Suspension*, paras. 7.618 and 7.619).
[402] *Ibid.*, para. 122.
[403] *Ibid.*, para. 123.
[404] Canada's appellee's submission, para. 124 (quoting Appellate Body Report, *EC – Hormones*, para. 172).
[405] *Ibid.*, para. 114 (quoting Appellate Body Report, *Japan – Agricultural Products II*, para. 80. (emphasis omitted))
[406] *Ibid.*, para. 122.
[407] *Ibid.*, para. 115 (referring to Appellate Body Report, *US – Wool Shirts and Blouses*, p. 14, DSR 1997:I, 323, at 335).

new evidence would be required to render the relevant scientific evidence "insufficient" for the purposes of Article 5.7. Canada dismisses the European Communities' argument that the "critical mass" standard excludes *a priori* the possibility that a WTO Member base its risk assessment on respectable minority views. Canada recalls the Appellate Body's finding that a measure conforming to the requirements of Article 5.1 may be based on minority opinions.[408] In these situations, Canada argues, there is "inherently"[409] sufficient evidence to perform a risk assessment that provides a basis for the SPS measure. Article 5.7, in contrast, only applies to situations where there is "insufficient" scientific evidence to conduct a risk assessment "at all", regardless of whether a measure is based on "minority" or "mainstream" scientific opinions.[410] Therefore, contrary to the European Communities' contention, "the concept of critical mass as applied by the Panel cannot be assimilated with the findings of the Appellate Body on the validity of basing an SPS measure on minority views."[411] Canada adds that the notion of "critical mass" used by the Panel does not specify how much evidence would be needed to make insufficient scientific evidence that was previously sufficient, nor does it exclude the possibility that one "new study or series of studies could call into question the scientific assumptions underpinning the current understanding of a scientific issue."[412] Thus, Canada submits, the Panel's "critical mass" standard "correctly sets a high threshold"[413] reflecting the presumption in this dispute that the available scientific evidence had been sufficient to adopt the relevant international standards.

184. Finally, Canada argues that the Panel did not fail to conduct an objective assessment of the facts under Article 11 of the DSU in reaching its findings under Article 5.7 of the *SPS Agreement*. Canada asserts that the European Communities' allegation that the Panel acted inconsistently with Article 11 appears to have "lost sight of the process that the Panel was engaged in"[414], which was to arrive at an objective determination of the facts in accordance with Article 11 of the DSU. Canada refers to its earlier arguments that, as the trier of facts, the Panel had the discretion to determine what weight to attach to the statements made by the experts in the course of the proceedings, and to assess the experts' expertise and credibility.[415] Canada rejects the European Communities' allegations that the Panel "systematically downplay[ed]"[416] the expert opinions indicating that the scientific evidence was insufficient to carry out a risk assessment. According to Canada, such allegations fail to take into account the fact that, in addition to reviewing the written answers by the experts to the Panel's questions, the Panel was able to "observe these experts" during the meetings with them and was able to "arrive at an assessment of their respective expertise and their credibility in particular areas".[417] Thus, it was on this basis that the Panel was entitled to rely more on the views expressed by some experts than those of others. Therefore, the Panel's reliance on the views of these experts was fully consistent with its function as the trier of facts, and thus was consistent with Article 11 of the DSU.

185. Canada concludes that the Panel correctly interpreted and applied Article 5.7 of the *SPS Agreement* and did not fail to make an objective assessment of the matter under Article 11 of the DSU. Canada therefore requests the Appellate Body to dismiss the appeal of the European Communities regarding the Panel's findings under Article 5.7 of the *SPS Agreement*.

[417] *Ibid.*, para. 130.

D. *Claims of the United States – Other Appellant*

186. The United States claims that the Panel erred in finding that the United States has acted inconsistently with Articles 23.1 and 23.2(a) of the DSU by "seeking the redress" of a violation in relation to Directive 2003/74/EC and by making a determination of violation without recourse to the rules and procedures of the DSU. The United States requests the Appellate Body to reverse these findings of the Panel.

1. Alleged Discrepancies in the Panel's Description of the Measure at Issue

187. The United States submits that conceptual difficulties and apparent discrepancies exist in the Panel's description of the measure at issue and in the Panel's identification of the relevant timeframes associated with the suspension of concessions. The Panel described the measure at issue as the "suspension of concessions ... continued without recourse to the procedures under the DSU", or the "continued application by the United States ... of its decision to apply ... import duties in excess of bound rates ... without recourse to the procedures under the DSU."[418] These descriptions are not only different, but confuse the legal claims made by the European Communities with what should be a factual description of the measure. The relevant timeframe of the measure was identified as from the "adoption of Directive 2003/74/EC", or "after the notification to the DSB of Directive 2003/74/EC".[419] Such discrepancies, in the United States' view, reflect a conceptual difficulty with the Panel's approach and show that the Panel appeared to be struggling to explain how it could find that the suspension of concessions authorized by the DSB is inconsistent with the United States' obligations under the WTO. According to the United States, "the Panel appear[ed] to be trying to characterize the measure not as the duties themselves, but as something else, something that changed in the measure once the [European Communities] notified its (inaccurate) claim of compliance"[420]; nonetheless, there was no new measure as a result of the European Communities' claim of compliance and no modification or other alteration in the duties.

2. The Panel's Findings under Article 23.1 of the DSU

188. The United States argues that the Panel "simply err[ed]" when it found that the application of the suspension of concessions was "without recourse to the procedures under the DSU".[421] The United States observes that, before it was authorized by the DSB to suspend concessions, it had extensive and lengthy recourse to multiple procedures under the DSU and "had fully complied with all relevant rules and procedures of the DSU ... in bringing the *EC – Hormones* dispute, determining the applicable [reasonable period of time] for compliance, determining the appropriate level of suspension of concessions, and obtaining the authorization of the DSB to suspend concessions".[422] The United States emphasizes that the DSB's authorization to suspend concessions, which it was granted on 26 July 1999, "has never been revoked and the [United States'] application of duties pursuant to that authorization has continued, unchanged", to this day.[423]

189. The United States asserts that, by finding that the United States was seeking the redress of a violation in relation to Directive 2003/74/EC, the Panel "re-characteriz[ed]"[424], without any legal

[420] *Ibid.*, para. 27.
[421] United States' other appellant's submission, para. 29.
[422] *Ibid.*, para. 17.
[423] *Ibid.*, para. 18.
[424] *Ibid.*, para. 31.

basis, the United States' suspension of concessions as now being directed against Directive 2003/74/EC. The United States further submits that the European Communities' notification of Directive 2003/74/EC to the DSB was a mere unilateral declaration of compliance, and that such a declaration does not fulfil any of the three conditions under Article 22.8 that must be satisfied before the DSB's authorization would cease to operate. The United States explains, moreover, that the Panel seemed to have improperly inferred that there was "some deadline by which a Member must respond to such a unilateral declaration"[425], when no such deadline was provided for in the DSU. Therefore, the United States argues that the Panel erroneously permitted the unilateral declaration of compliance to transform the legal justification for the suspension of concessions maintained by the United States. Given that the Panel found that the inconsistent measure has in fact not been removed, the multilateral DSB authorization remains in place and effective.

190. In the United States' view, the Panel's re-characterization of the legal justification for the suspension of concessions, as now directed against Directive 2003/74/EC, is "fatally flawed"[426] for several reasons. First, the Panel's finding is inconsistent with the ordinary meaning of the term "authorized", which is defined as "legally or formally sanctioned or appointed"[427], and with the fact that an "authorized" act is by definition consistent with the law. Therefore, the Panel's finding that the United States' suspension of concessions, which remains authorized, could constitute a violation of Article 23.1 was based on the paradoxical proposition that an act permitted by the law can simultaneously be prohibited by the law. Secondly, the Panel's analysis relied on a "false dichotomy"[428]: where a measure taken to comply is notified, a complaining party either terminates the suspension of concessions because it concludes that the measure is consistent with the covered agreements, or continues the suspension of concessions because it considers that the measure does not bring the implementing Member into compliance. In the United States' view, such a false dichotomy lacks a basis in the DSU because the DSU does not require a Member to form definitive conclusions regarding the validity of a unilateral declaration of compliance. The United States simply kept the duties in place and maintained the *status quo* on the basis that the European Communities' declaration of compliance has not been multilaterally confirmed.

191. In addition, the United States asserts that the Panel erred in the allocation of the burden of proof as it relieved the European Communities of the duty to make a *prima facie* case of inconsistency under Article 23.1 of the DSU. Furthermore, the United States recalls that, in rejecting the United States' argument that the European Communities has failed to show that the conditions under Article 22.8 for terminating the suspension of concessions have been met, the Panel reasoned that it is the obligation of the Member suspending concessions to ensure that the suspension is applied only until such time as foreseen in Article 22.8. The United States contends that Article 22.8 does not assign such responsibility to the Member suspending concessions and does not specify the procedures for determining whether the conditions in Article 22.8 are met. To the United States, "[w]hat is clear"[429] under Article 22.8 is that there is no basis to find that a multilateral authorization to suspend concessions is to be terminated by a unilateral declaration of compliance. A responding Member should not be able to escape the suspension of concessions and force the complaining party to engage in dispute settlement "simply by notifying a claim of compliance".[430]

192. The United States submits that the Panel's findings under Article 23.1 lead to "fundamentally problematic"[431] consequences, because, simply by claiming compliance, a Member could escape the

[425] *Ibid.*, para. 37.
[426] *Ibid.*, para. 40.
[427] *Ibid.*, para. 43 (quoting *The New Shorter Oxford English Dictionary*, 4th edn, L. Brown (ed.) (Clarendon Press, 1993), Vol. 1, p. 151).
[428] United States' other appellant's submission, para. 45.
[429] *Ibid.*, para. 57.
[430] *Ibid.*, para. 62.
[431] *Ibid.*, para. 60.

application of the suspension of concessions and force the complaining party to initiate another dispute settlement proceeding, potentially creating an "endless loop"[432] of litigation. The United States additionally submits that the Panel "effectively read[s] into [Article 22.8 of the DSU] an obligation" on the Member suspending concessions "to take steps by some deadline to ascertain whether the conditions in Article 22.8 have been met".[433] Consequently, the Panel's approach "would add to the rights and obligations of Members in contravention of"[434] Article 19.2 of the DSU. The United States asserts that the DSU does not specify the rules applicable to the situation in the post-suspension stage where an original responding party has declared itself to be in compliance four years after the reasonable period of time for implementation has expired. Thus, panels and the Appellate Body "should not supplant the work and efforts of Members to provide clarifications or improvements to the DSU".[435] The United States observes that the DSU "does not leave parties in a post-suspension state of play bereft of tools to obtain redress and resolution"[436], and recourse to a normal panel proceeding remains an option to Members in the post-retaliation stage, as the European Communities chose to do in this dispute.

3. The Panel's Findings under Article 23.2(a) of the DSU

193. The United States also takes issue with the Panel's finding that the statements made by the United States at the DSB meetings constituted a unilateral "determination" to the effect that a violation occurred within the meaning of Article 23.2(a) of the DSU. This conclusion, according to the United States, was neither consistent with the ordinary meaning of the term "determination" in its context and in the light of the object and purpose of the DSU, nor supported by the negotiating history of the DSU. According to its ordinary meaning, a "determination" is a "final and definitive" decision that results from some kind of deliberative process and leads to a significant consequence.[437] The United States finds contextual support for this interpretation in the final clause of Article 23.2(a), which requires that determinations be consistent with the recommendations and rulings of the DSB, and thus confirms that a determination must be final and definitive. The United States argues that its statements made at the DSB meetings did not constitute a "determination", because these statements did not embody any definitiveness or finality and were, instead, punctuated with equivocation. Due to the complexity of making any good faith attempt to examine the European Communities' claim that Directive 2003/74/EC is consistent with the *SPS Agreement*, the United States needed time for review and could not be expected to have made a determination within a mere few weeks of the notification of Directive 2003/74/EC by the European Communities. Turning to the negotiating history of Article 23.2(a), the United States maintains that the "determination" that the negotiators intended to target under Article 23.2(a) was of the type and nature of the unilateral determinations made under Section 301 of the United States Trade Act of 1974[438], which were made at the conclusion of formal investigations and which resulted in certain legal consequences.[439] In addition, the United States contends that subjecting Members' DSB statements, which "are generally diplomatic or political in nature and prepared ... independently of any ... deliberative proceedings", to the discipline of Article 23.2(a) "will undoubtedly result in a 'chilling' effect on those statements".[440]

194. Furthermore, the United States alleges that a "determination" within the meaning of Article 23.2(a) cannot be inferred or implied, and the Panel erred in making such an inference from

[432] *Ibid.*, para. 65.
[433] United States' other appellant's submission, para. 66.
[434] *Ibid.*
[435] *Ibid.*, para. 69.
[436] *Ibid.*, para. 70.
[437] *Ibid.*, paras. 74-78.
[438] United States Trade Act of 1974, Public Law No. 93-618, 88 Stat. 1978 (1975), *United States Code*, Title 19, section 2101.
[439] United States' other appellant's submission, para. 88.
[440] *Ibid.*, paras. 93 and 95.

the United States' "inaction" regarding the suspension of concessions.[441] The United States adds that the Panel's inference "effectively reads into Article 23 a deadline by which a determination will be imputed to a Member"[442], even though Article 23 contains no such deadline and the Panel itself struggled to identify the proper timeframe after which the "continuation of suspension" would be considered to be inconsistent with Article 23. For the United States, "[t]he Panel's findings appear[ed] to require complaining parties and other Members to be silent in the face of a claim of compliance or risk having any reaction other than agreement be construed to be a 'determination'."[443] The United States additionally observes that, "even if the reaction is not sufficient to be a 'determination', it appears that a Member would risk such a reaction ripening into a 'determination' based simply on the passing of an unspecified deadline, which the Panel acknowledged does not exist."[444]

4. The Scope of the Panel's Mandate and the Panel's Suggestion

195. In the event the Appellate Body upholds the Panel's findings under Articles 23.2(a) and 23.1, the United States requests the Appellate Body to reverse the Panel's "erroneous suggestion"[445] that the United States must bring itself into conformity by having recourse to the rules and procedures of the DSU without delay. The United States contends that the Panel engaged in a detailed review of Directive 2003/74/EC and its consistency with both the DSB's recommendations and rulings and the *SPS Agreement*. Thus, recourse to the rules and procedures of the DSU has already been achieved, because "a fair and objective reading of the language in Articles 23.1 and 23.2(a) does not exclude instances"[446] in which a Member may "have recourse" by participating in a dispute settlement proceeding initiated by another WTO Member, as the United States did in this dispute. The United States observes that requiring re-litigation of the matters that have already been "reviewed and considered"[447] in these proceedings would not be an efficient use of the WTO dispute settlement system, and would be contrary to the objective of "prompt settlement" of disputes set out in Article 3.3 of the DSU.

196. The United States further submits that the Panel erred in finding that it had no jurisdiction to rule on the compatibility of Directive 2003/74/EC with the *SPS Agreement*. The United States argues that the Panel improperly limited the scope of its mandate on the basis that the European Communities had articulated its claim under Article 22.8 as a conditional claim. The United States asserts that "[a] panel's terms of reference, once determined at the outset of the dispute, cannot be narrowed or otherwise modified by a complaining party."[448] According to the United States, the relevant provision governing the terms of reference of a panel is Article 7 of the DSU, which "does not provide for a change to the terms of reference based on the complaining party's submissions".[449] Therefore, in the United States' view, this finding by the Panel should be reversed, and the Panel's findings regarding the WTO-inconsistency of Directive 2003/74/EC, made in the context of addressing the European Communities' second series of main claims, should be considered "direct" findings.[450]

[450] *Ibid.*, para. 119.

5. Conclusion

197. In sum, the United States requests the Appellate Body to: (i) reverse the Panel's findings that the United States has acted inconsistently with Articles 23.1 and 23.2(a) of the DSU; (ii) reverse the Panel's suggestion that the United States should have recourse to the rules and procedures of the DSU without delay; and (iii) reverse the Panel's conclusion that it was not empowered to make a direct determination of the consistency of Directive 2003/74/EC with the *SPS Agreement*. The United States nevertheless clarifies that the Appellate Body need not reach the last two issues if it reverses the Panel's findings that the United States has acted inconsistently with Articles 23.1 and 23.2(a) of the DSU.

E. *Claims of Canada – Other Appellant*

198. Canada requests the Appellate Body to reverse the Panel's finding that Canada has acted inconsistently with Articles 23.1 and 23.2(a) of the DSU by maintaining the suspension of concessions after the notification of Directive 2003/74/EC by the European Communities. Canada submits that the Panel erred in addressing the European Communities' claims of violation under Articles 23.1 and 23.2(a) completely separately from the requirements of Article 22.8 of the DSU. Even if the Panel did not err in examining Article 23 in isolation from Article 22.8, Canada argues that the Panel erred in finding that Canada has breached Articles 23.1 and 23.2(a) by seeking the redress of a violation without recourse to the rules and procedures of the DSU.

1. The Panel's Examination of Articles 23.1 and 23.2(a) "In Isolation" from Article 22.8 of the DSU

199. Canada alleges that the "fundamental legal error"[451] of the Panel is its examination of the European Communities' claim under Articles 23.1 and 23.2(a) in isolation from its analysis under Article 22.8 of the DSU. According to Canada, the "[k]ey to this case is Article 22.8 of the DSU"[452], which, as *lex specialis* applicable to the post-retaliation phase of a dispute, sets out the three conditions that must be met in order to have the suspension of concessions terminated, one of the conditions being actual compliance with the DSB's recommendations and rulings. Canada maintains that the "continuous involvement of the DSB", pursuant to the second sentence of Article 22.8, "suggests that [the DSB] retains jurisdiction over the matter until its recommendations and rulings have been fully implemented".[453] Canada explains that "[t]his is consistent with the ongoing obligation on the Member being retaliated against to comply with its WTO obligations, including the requirement to comply promptly with the recommendations and rulings of the DSB."[454]

200. As regards Article 23, Canada submits that this provision begins by setting out general obligations that apply to what it refers to as the pre-dispute settlement stage of a dispute and then proceeds by setting out specific obligations (*lex specialis*) applicable through the compliance and retaliation stages of dispute settlement proceedings. Whereas the examples of prohibited unilateral conduct contained in Article 23.2 are not exhaustive, the structure of the Article indicates that, when a particular dispute has entered the compliance or retaliation stages, the relevant obligations are those in subparagraphs (b) and (c) of Article 23.2, and the general obligations contained in Articles 23.1 and 23.2(a) are no longer pertinent. Indeed, Canada observes, the only way for a complaining Member to have reached the compliance or retaliation stage is to have already satisfied those general obligations by having engaged in the WTO dispute settlement process and obtained a DSB ruling that the responding Member has violated its obligations. Canada additionally notes that the *travaux*

[451] Canada's other appellant's submission, para. 6.
[452] *Ibid.*, para. 35.
[453] *Ibid.*, para. 36.
[454] *Ibid.* (footnote omitted)

préparatoires provide a further indication that the DSU negotiators did not contemplate that Article 23 would apply to a post-retaliation situation. Canada thus argues that, in this case, since it has had recourse to the rules and procedures of the DSU in the *EC – Hormones* dispute and is suspending concessions pursuant to a DSB authorization, Canada has already satisfied the obligations contained in Articles 23.1 and 23.2(a). Therefore, as suggested by the text of Article 23.2(c), the Panel should have turned first to the provisions of Article 22, including the specific requirements of Article 22.8 that apply to the question of whether the suspension of concessions should be terminated. By failing to do so, the Panel's approach resulted in "contradictory findings"[455] that, on the one hand, Canada has breached Articles 23.1 and 23.2(a) of the DSU by continuing the suspension of concessions and, on the other hand, that Canada has the right to continue the suspension of concessions pursuant to Article 22.8 because the European Communities' inconsistent measure has not been removed.

201. Canada asserts, moreover, that the Panel failed to consider the object and purpose of the DSU. By considering Article 23 in isolation from other provisions of the DSU, the Panel arrived at findings that ultimately lessen the effectiveness of the WTO dispute settlement mechanism. The result is that "a non-compliant WTO Member could avoid the duly authorized suspension of concessions by another Member merely by adopting an alleged implementing measure, notifying such measure to the DSB and waiting to be challenged."[456] In Canada's view, such a result has the effect of undermining DSB-authorized retaliation, thereby weakening an important incentive for Members to bring their measures promptly into compliance. Canada contends that only a further multilateral determination of compliance by the DSB can set aside the DSB's prior authorization to suspend concessions. In Canada's view, the European Communities has the burden of initiating a panel proceeding—either an Article 21.5 proceeding or a *de novo* action against the suspension of concessions—to obtain such a multilateral determination.

202. Canada further maintains that, in examining the European Communities' claims under Articles 23.1 and 23.2(a) of the DSU in isolation from its examination of Article 22.8, the Panel erroneously followed the order of analysis proposed by the European Communities, even though such order of analysis is contrary to the principle of *lex specialis*, according to which the specific terms of a treaty must prevail over the general provisions.[457] The application of the *lex specialis* principle should have led the Panel to begin its analysis by determining whether the conditions for the termination of the suspension of concessions set out in Article 22.8 have been met. Canada criticizes the Panel for using "two different and inconsistent manners of identifying the [European Communities'] implementing measure at issue".[458] Canada explains that, while examining the second series of the European Communities' main claims, the Panel gave a broad interpretation to the term "measure" in Article 22.8 of the DSU and recognized that the phrase "until such time as the measure found to be inconsistent with a covered agreement has been removed" means that the "illegality itself" and not only the originally impugned measure had been removed. By contrast, in its approach to the first series of the European Communities' main claims, the Panel based its finding of a violation of Articles 23.1 and 23.2(a) of the DSU on the fact that the European Communities had notified a measure that had not yet been subject to dispute settlement.

[455]Canada's other appellant's submission, para. 43.
[456]*Ibid.*, para. 47.
[457]*Ibid.*, paras. 52-57. Canada refers to the Appellate Body's statement in *Canada – Wheat Exports and Grain Imports* that "panels are free to structure the order of their analysis as they see fit" but they "may find it useful to take account of the manner in which a claim is presented to them" by the complaining party; however, Canada contends that "panels must be careful not to simply follow the order of analysis as pleaded by a complainant", which may itself contain errors of law, especially if the relationship between two provisions mandates a certain sequence of analysis. (*Ibid.*, paras. 54 and 55 (quoting Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, paras. 109 and 126))
[458]Canada's other appellant's submission, para. 63.

203. Canada also criticizes the Panel for ignoring the procedural history of the case. According to Canada, Directive 2003/74/EC should be situated in the post-retaliation context and should not be considered as "a new measure *ab initio*".[459] Given that Canada had obtained DSB authorization to suspend concessions, the onus should be placed on the European Communities to demonstrate its compliance to a WTO panel. The Panel's findings that Canada has breached Articles 23.1 and 23.2(a) lead to a "manifestly absurd or unreasonable" interpretation that the mere adoption and notification of an alleged implementing measure by a WTO Member, which failed to bring itself into compliance within the reasonable period of time, could render the suspension of concessions authorized by the DSB inconsistent with the DSU. Canada asserts that the Panel's finding under Articles 23.1 and 23.2(a) renders ineffective the substantive requirements set out in Article 22.8 regarding the suspension of concessions, contrary to the principle of effectiveness that should govern treaty interpretation.

2. The Panel's Findings under Article 23.1 of the DSU

204. Canada contends that, even if the Panel was correct in considering Articles 23.1 and 23.2(a) in isolation, the Panel erred in finding that Canada was "seeking the redress" of a WTO violation by continuing the suspension of concessions in respect of a measure that had not yet been subject to recourse to the DSU. According to Canada, the Panel's finding ignored the fact that Canada had "sought and obtained"[460] DSB authorization to suspend concessions as a result of the inconsistencies found in *EC – Hormones*, and that Canada has taken no action to "seek the redress" of any alleged WTO-inconsistency of the European Communities' purported implementing measure. Canada further asserts that simply because Directive 2003/74/EC is a new measure does not imply that the legal basis for Canada's continued suspension of concessions has changed and that the suspension is now aimed at seeking the redress for any violations caused by Directive 2003/74/EC. Because Canada's suspension of concessions was authorized by the DSB, it is "by definition"[461] WTO-consistent. In Canada's view, "[t]he Panel erred in imputing alleged WTO inconsistencies of the [European Communities'] purported implementing measure as the reasons for Canada's continued suspension of concessions in this case."[462] Such an outcome would, in Canada's view, severely hinder the security and predictability of the WTO dispute settlement system, as Members would be unsure as to when, or for how long, they could properly rely on a DSB authorization to suspend concessions.

3. The Panel's Findings under Article 23.2(a) of the DSU

205. Furthermore, Canada alleges that the Panel erred in finding that Canada made a unilateral determination that a violation occurred in relation to Directive 2003/74/EC, contrary to Article 23.2(a), on the basis of Canada's statements at the DSB meetings and its continued application of the suspension of concessions. According to Canada, there is an insufficient amount of "firmness or immutability" with respect to the statements made by Canada at the DSB meetings for the Panel to conclude that Canada made "more or less a final decision" regarding the WTO-inconsistency of Directive 2003/74/EC.[463] Canada also argues that, because it had obtained DSB authorization to suspend concessions, it did not see the need to take a decision regarding the WTO-consistency of Directive 2003/74/EC, and that it was up to the European Communities to establish that it had

[459]*Ibid.*, para. 64.
[460]*Ibid.*, para. 80.
[461]Canada's other appellant's submission, para. 84.
[462]*Ibid.*, para. 80. Canada adds that the Panel's finding is flawed because it was not based on the notion of malfeasance (*ibid.*, para. 81 (referring to Panel Report, *EC – Commercial Vessels*, para. 7.188)) but, rather, was based on the notion of "non-feasance, whereby Canada's inaction, *i.e.*, failure to terminate its suspension of concessions following the notification of [Directive 2003/74/EC] would be construed as 'seeking redress' of a violation pursuant to Article 23.1 of the DSU." (*Ibid.*, para. 81)
[463]*Ibid.*, paras. 87-89 (quoting Panel Report, *US – Section 301 Trade Act*, footnote 657 to para. 7.50; and referring to statements made at the DSB meetings held on 7 November and 1 December 2003).

implemented the DSB's recommendations and rulings in *EC – Hormones*. Therefore, the Panel erroneously found that Canada's continuation of the suspension of concessions "corroborate[d]"[464] the fact that Canada made a determination of violation in relation to Directive 2003/74/EC, because it is the DSB's authorization, rather than Canada's expression of views on the WTO-consistency of this Directive, that formed the basis of Canada's continued suspension of concessions.

4. The Scope of the Panel's Mandate and the Panel's Suggestion

206. Finally, should the Appellate Body uphold the Panel's finding that Canada has breached Articles 23.1 and 23.2(a) of the DSU, Canada requests the Appellate Body to reverse the Panel's finding that it did not have jurisdiction to determine the compatibility of Directive 2003/74/EC with the *SPS Agreement*. Canada explains that the Panel specifically acknowledged that Article 22.8 of the DSU required it to consider, as a condition precedent to finding a breach of this provision by Canada, the consistency of Directive 2003/74/EC with the *SPS Agreement*. In addition, Canada considers that this finding contradicts the Panel's finding that was made in the context of its examination of the European Communities' second series of main claims. In that context, the Panel found that Canada has not breached Article 22.8, because the European Communities has not removed the inconsistency found in *EC – Hormones*.

207. Canada further requests the Appellate Body to reverse the Panel's suggestion that Canada should have recourse to the rules and procedures of the DSU without delay. Canada asserts that the Panel's suggestion ignores the fact that, earlier in its report, the Panel conducted an extensive review of the compatibility of the European Communities' implementing measure with the *SPS Agreement*. Nor does such recommendation contribute to a "prompt settlement" of the dispute as required by Article 3.3 of the DSU, because it would require a new panel proceeding to look at an issue that is already being dealt with in the context of the current proceedings. Finally, in Canada's view, this suggestion is contradictory to the Panel's findings under Article 22.8, and its statement that it was performing a function similar to that of an Article 21.5 panel. The suggestion is also inconsistent with Article 19.2 of the DSU, because it diminishes Canada's right to suspend concessions pursuant to the authorization given by the DSB.

5. Conclusion

208. In sum, Canada requests the Appellate Body to reverse the Panel's findings under Articles 23.1 and 23.2(a) of the DSU that Canada was "seeking the redress" of a violation and made a "determination" of violation with respect to Directive 2003/74/EC. Canada requests the Appellate Body to find, instead, that: (i) Articles 23.1 and 23.2(a) of the DSU do not apply to a situation where, following the adoption of an alleged implementing measure after the reasonable period of time has elapsed, a Member continues the suspension of concessions pursuant to the DSB's authorization; (ii) Canada has not acted inconsistently with Articles 23.1 and 23.2(a) because the European Communities failed to demonstrate that it brought itself into compliance, in accordance with Article 22.8 of the DSU; and (iii) the Panel erred in finding that it was bound by the manner in which the European Communities presented its two main claims. Should the Appellate Body uphold the Panel's findings under Articles 23.1 and 23.2(a) of the DSU, Canada requests the Appellate Body to reverse the Panel's finding that it did not have jurisdiction to determine the compatibility of Directive 2003/74/EC with the covered agreements, and to remove the suggestion that Canada should have recourse to the rules and procedures of the DSU without delay.[465]

[464] *Ibid*., para. 91 (quoting Panel Report, *Canada – Continued Suspension*, para. 7.224).
[465] Canada's other appellant's submission, paras. 99-101.

F. *Arguments of the European Communities – Appellee*

209. The European Communities submits that the Panel correctly found that the United States and Canada have breached Articles 23.1 and 23.2(a) of the DSU by maintaining the suspension of concessions after the notification of Directive 2003/74/EC, and requests the Appellate Body to dismiss Canada's and the United States' other appeals "in their entirety".[466]

210. The European Communities makes two preliminary arguments. First, the European Communities observes that the United States and Canada do not appear to dispute that Directive 2003/74/EC is a "measure taken to comply with the recommendations and rulings" of the DSB in the *EC – Hormones* dispute. Secondly, the European Communities asserts that the United States and Canada "entirely ignore"[467] the fact that the European Communities' first series of main claims included Article 21.5, but did not include Article 22.8 of the DSU. The European Communities adds that the error in the Panel's reasoning was to ignore Article 21.5, rather than Article 22.8, as the United States and Canada allege, although this error does not undermine the correctness of the Panel's conclusions of violation of Articles 23.2(a) and 23.1.

1. The "Harmonious" Interpretation of Articles 21, 22, and 23 of the DSU in the Post-Suspension Stage of a Dispute

211. The European Communities maintains that the "general and fundamental"[468] provisions of Article 23 of the DSU apply throughout the implementation stage of a dispute. The European Communities rejects the distinction made by Canada between "a new measure *ab initio*" and "a measure taken"[469] to implement the DSB's recommendations and rulings, as well as Canada's assertion that Articles 23.1 and 23.2(a) apply only to a new measure. The European Communities submits that such a distinction lacks a textual basis in the covered agreements. The European Communities recalls that Article XVI:4 of the *WTO Agreement* requires Members to ensure the conformity of their laws with their WTO obligations, and maintains that, in the light of this provision, the multilateral dispute settlement system "relies on good faith compliance and the presumption of conformity of measures taken by WTO Members"[470], which does not change in the post-retaliation stage of a dispute. Therefore, the European Communities argues, where a Member has taken a measure to implement the DSB's recommendations and rulings, the Member suspending the concessions bears the burden of proving the WTO-inconsistency of the implementing measure.[471] The general burden of proving that a measure is WTO-inconsistent cannot be reversed simply because the original complainant has taken retaliatory measures. The European Communities additionally contends that Canada, by stating that "Article 23.1 is concerned with measures in respect of which no WTO dispute settlement proceedings have taken place"[472], effectively reduces the scope of application of Article 23.1 and makes it "essentially meaningless in the implementation stage".[473]

212. The European Communities further submits that the interpretation of Articles 21 and 22, referenced in Article 23.2(b) and (c), should not change depending on the stage of the dispute settlement process, including when the dispute reaches the post-suspension stage. The European Communities asserts that the *lex specialis* applicable to its first series of main claims is Article 21.5, and not Article 22.8, as Canada argues. Article 22.8 "was part of and context for"[474] the European

[474] *Ibid*., para. 51.

Communities' second series of main claims. The European Communities emphasizes that Directive 2003/74/EC, as a measure taken to comply, must be presumed to be compliant with the covered agreements until shown otherwise through an Article 21.5 proceeding. The European Communities maintains that a Member suspending concessions must ensure that the suspension "complies at all times with the conditions laid down in Article 22.8".[475] On this basis, the European Communities argues that the adoption of a measure taken to comply triggers the following duties of the original complaining party: (i) to cease the suspension of concessions; (ii) to form a view on whether the measure found to be inconsistent has been removed; and (iii) to have recourse to Article 21.5 proceedings if it considers that the measure taken to comply is not consistent with the covered agreements. The European Communities considers that its understanding of Members' obligations in the post-suspension stage results from a "harmonious"[476] interpretation of Articles 21, 22, and 23 of the DSU that gives effect to each of these provisions. The European Communities emphasizes that the WTO dispute settlement system is based on adversarial procedures where a Member claims the inconsistency of a measure taken by another Member, and is not applicable to requests for an abstract confirmation of the consistency of a measure.

213. The European Communities maintains that the object and purpose of the DSU, according to Articles 3.7 and 3.3, is to secure a positive solution to, and prompt settlement of, a dispute. Thus, the United States' and Canada's suggestion that they can simply wait until the European Communities brings a dispute to prove the consistency of its implementing measure goes fundamentally against the object and purpose of the DSU. The European Communities emphasizes that, upon the adoption of a measure taken to comply, the Member suspending concessions is required to cease the application of the suspension while it fulfils its obligation to have recourse to dispute settlement procedures under Article 21.5. Such an interpretation is consistent with the function of the dispute settlement system, which is for adjudicating disputes and not for maintaining retaliatory measures where a measure to comply is taken in good faith. The European Communities disagrees with the United States' and Canada's argument that the European Communities' interpretation would fail to give effect to Article 22.8 of the DSU. It explains that, on the contrary, where a good faith measure has been taken to comply, as the European Communities did in this case by adopting Directive 2003/74/EC, there is no legitimate interest in continuing the suspension of concessions, because the suspension would have achieved its objective and the suspension "does nothing to induce compliance".[477] The European Communities additionally submits that allowing a Member to continue the suspension of concessions despite the adoption of a measure taken to comply effectively allows that Member to "extort"[478] more than what it is entitled to under the covered agreements. By maintaining the suspension of concessions, the United States and Canada "in truth"[479] wish to see the European Communities remove the import ban imposed on meat treated with hormones, even though removal of the ban is not required under the covered agreements as long as the ban is based on a risk assessment consistent with the *SPS Agreement*. Finally, the European Communities submits that its position is consistent with the approach taken in the Articles on Responsibility of States for Internationally Wrongful Acts[480] (the "Articles on State Responsibility"), which require that countermeasures be suspended if the internationally wrongful act has ceased and the dispute is pending before a tribunal that has the authority to make decisions binding upon the parties.[481]

[479] *Ibid.*, para. 84.
[480] Articles on Responsibility of States for Internationally Wrongful Acts, adopted by the International Law Commission at its fifty-third session (2001) (Exhibit EC-136 submitted by the European Communities to the Appellate Body), Article 52.3. The text of the Articles are annexed to United Nations General Assembly Resolution, A/RES/56/83, 29 January 2002 (Exhibit EC-135 submitted by the European Communities to the Appellate Body).
[481] See European Communities' appellee's submission, paras. 94-96.

214. The European Communities sums up its position on the proper interpretation of Articles 21, 22, and 23 as follows. The fact that the suspension of concessions was authorized, and subsequently also applied, does not change the proper interpretation and application of Articles 21 and 23. The original complaining Member remains under an obligation to have recourse to a compliance procedure under Article 21.5 if it disagrees with the existence or consistency of a measure taken to comply with a covered agreement. If it fails to do so, and simply waits and continues to apply the suspension of concessions, it necessarily is seeking redress and makes a unilateral determination that a violation has occurred in respect of the implementing measure within the meaning of Articles 23.2(a) and 23.1. In such a situation, the continued application of the suspension of concessions is simultaneously, *first*, evidence that the original complaining Member disagrees with the existence or consistency with a covered agreement of the measure taken to comply while refusing to have recourse to a compliance procedure under Article 21.5 (thus, making a "determination" that the new measure is WTO-inconsistent); and, *secondly*, a breach of Article 23.1, read together with Articles 22.8 and 3.7, because it seeks redress following its unilateral determination that the measure found to be inconsistent with the covered agreements has not been removed.

2. The Panel's Findings under Article 23.1 of the DSU

215. With respect to the Panel's finding that the United States is seeking the redress of a violation within the meaning of Article 23.1, the European Communities recalls the United States' contention that the Panel erroneously re-characterized the suspension of concessions as now directed against Directive 2003/74/EC. The European Communities asserts that this contention is without merit, because the United States could no longer maintain its suspension of concessions once the European Communities had removed Directive 96/22/EC. The Panel confirmed the removal of Directive 96/22/EC, and the United States has not appealed this finding. Additionally, the European Communities argues that "the United States ignores that there is a presumption of good faith compliance by WTO Members", and that the adoption of an implementing measure in good faith "triggers" an obligation to remove the suspension of concessions and requires the complaining Member to initiate Article 21.5 proceedings in case there is disagreement as to the WTO-consistency of the new measure.[482] The European Communities observes, moreover, that "even the United States acknowledged that it was maintaining its suspension of concessions against the new measure".[483] The European Communities further submits that, contrary to the United States' assertion, the Panel's finding does not lead to a paradoxical result that the authorized suspension of concessions can be both consistent and inconsistent with the covered agreements at the same time. Rather, the European Communities argues, the suspension of concessions was initially WTO-consistent, and subsequently became WTO-inconsistent in the light of the notification of Directive 2003/74/EC and the removal of the measure found to be WTO-inconsistent in *EC – Hormones*, namely, Directive 96/22/EC. Therefore, the continued application of sanctions in the presence of a compliance measure that the DSB has not found to be WTO-inconsistent implies that a Member is seeking to redress a violation.

216. Turning to the Panel's finding that Canada is seeking the redress of a violation within the meaning of Article 23.1, the European Communities disagrees with Canada's argument that the notification of Directive 2003/74/EC does not change the legal basis of Canada's suspension of concessions. The European Communities submits that, contrary to Canada's assertion, Article 22.8 of the DSU does not specify that it is for the respondent to show that it has removed the original measure. According to the European Communities, "[i]f anything, Article 22.8 of the DSU seems to indicate that such an assessment should be carried out by the complaining Member, since it is the one suspending concessions".[484] The European Communities adds that the use of the passive tense in the phrase "[t]he suspension of concessions ... shall only be applied" appears to indicate the obligation for

[482] European Communities' appellee's submission, para. 104. (emphasis omitted)
[483] *Ibid.*, para. 106 (referring to Panel Report, *US – Continued Suspension*, paras. 7.219-7.221 and footnote 438 thereto).
[484] European Communities' appellee's submission, para. 114.

the Member suspending concessions to terminate those measures when the original measure has been removed. The European Communities contends that, in any event, it has effectively shown that the inconsistent measure, namely, Directive 96/33/EC, was removed, and both the Panel and Canada recognized that Directive 2003/74/EC was a different measure.

3. The Panel's Findings under Article 23.2(a) of the DSU

217. As regards the Panel's finding that the United States made a determination within the meaning of Article 23.2(a), the European Communities considers that the United States' appeal is based on a "wrong reading of the Panel's findings", because the Panel did not make its finding based only on the statements made by the United States at the DSB meetings.[485] Instead, the Panel took into account the statements made by the United States at the DSB meetings and its decision to maintain its suspension of concessions as *evidence* that the United States had made a "determination" prohibited by Article 23.2(a) of the DSU.[486] The European Communities disagrees with the United States that the statements made at the DSB meetings lacked definitiveness. On the contrary, the United States expressed a "*definitive judgement*"[487] concerning the WTO-consistency of Directive 2003/74/EC. The European Communities dismisses the United States' argument that it could not have made a determination within weeks of the notification of Directive 2003/74/EC, contending, instead, that the term "determination" does not contain any temporal connotation. The European Communities also disagrees with the United States' view that the Panel inferred the existence of a "determination" from inaction. According to the European Communities, the United States "actively considered" that Directive 2003/74/EC was WTO-inconsistent and "actively continued" the suspension of concessions.[488] The European Communities further submits that, even if the negotiators of the DSU referred to Section 301 of the United States Trade Act of 1974, they did so as an example that was not intended to be an exhaustive illustration of the types of unilateral conduct prohibited by Article 23. The European Communities, moreover, rejects the United States' contention that statements made at DSB meetings are diplomatic in nature and have no legal effects, referring to the Appellate Body's observation in *US – Upland Cotton (Article 21.5 – Brazil)* that certain statements by the United States Government indicated that it was taking a measure for the purpose of complying.[489] Additionally, the European Communities notes that the United States' statements at the DSB meetings occurred in the particular context of seeking redress of a violation by continuing its application of sanctions against the European Communities. The European Communities also rejects the United States' argument that the Panel failed to establish when the United States had made a determination in breach of Article 23.2(a). In the European Communities' view, the Panel properly observed that the deadline by which a Member shall have recourse to the DSU in accordance with Article 23 "was not an issue before the Panel".[490]

218. The European Communities further argues that the Panel correctly found that Canada made a determination to the effect that a violation has occurred within the meaning of Article 23.2(a). The European Communities maintains that Canada's statements at DSB meetings that it was not removing the suspension of concessions, together with the fact that it has maintained the suspension of concessions, provide a sufficient amount of firmness or immutability indicating that Canada made a more or less final decision regarding the WTO-inconsistency of Directive 2003/74/EC. The European Communities explains that, because it had notified a new measure, which was different both legally and in substance, Canada needed to take a final decision regarding its conformity with the WTO agreements, which it did (as confirmed by its statements and the continuation of its suspension of

[485] *Ibid.*, para. 119.

concessions, as concluded by the Panel), and thus Canada made a "determination" in the sense of Article 23.2(a) without having recourse to the DSU.

4. The Scope of the Panel's Mandate and the Panel's Suggestion

219. Finally, the European Communities reiterates that, by ignoring the sequence of the legal claims made by the European Communities, the Panel exceeded its terms of reference in examining the consistency of Directive 2003/74/EC with the *SPS Agreement*, contrary to Articles 7 and 21.5 of the DSU.[491] Moreover, the European Communities repeats its request that the Appellate Body improve the Panel's suggestion—that the United States and Canada should have recourse to the rules and procedures of the DSU—by making it explicit that they must resort to Article 21.5 proceedings and cease the suspension of concessions without delay.

G. *Arguments of the Third Participants*

1. Australia

(a) Procedural Issue – Public Observation of the Oral Hearing

220. Australia supports the request of the participants to allow public observation of the oral hearing in these proceedings. Australia considers that enhancing the transparency of WTO dispute settlement proceedings can enhance the credibility of the dispute settlement system, and endorses the participants' arguments as to the value of open hearings. Australia submits that, although the first sentence of Article 17.10 "would seem to preclude a request that hearings of the Appellate Body be held in public", this provision must be read together with other provisions in the DSU, in particular, Article 17.10, second sentence, Article 17.14, and Article 18.2.[492] According to Australia, "[i]n order to allow meaning to be given to these other provisions, the apparent injunction in the first sentence of Article 17.10 cannot be absolute."[493] Australia observes that Article 17.10, second sentence, foresees that Appellate Body reports will contain sufficient information concerning the parties' statements and arguments to provide a basis for the Appellate Body's findings. It adds that the requirement in Article 17.14 that Appellate Body reports be circulated to WTO Members prior to adoption "would not be possible if the first sentence of Article 17.10 imposed an absolute requirement of confidentiality".[494] Australia also refers to Article 18.2 of the DSU and states that there is no difference between parties disclosing statements contemporaneously by publishing them on a website and disclosing them by making them in an open hearing. Finally, Australia observes that in the absence of an express prohibition in the DSU precluding an open hearing, the Appellate Body should authorize the participants' request, which "would be fully consonant with the object and purpose of the DSU".[495]

(b) Articles 21, 22, and 23 of the DSU

221. Australia submits that, although the DSU does not expressly provide procedures to be followed in the post-retaliation stage of a dispute, parties' actions should continue to be guided by the following two fundamental principles: (i) multilateral determination of non-compliance; and (ii) that the party asserting non-compliance bears the burden of establishing a *prima facie* case.

[491] See *supra*, paras. 55-58.
[492] Australia's comments on participants' request for an open hearing, p. 1.
[493] *Ibid.*, p. 2.
[494] *Ibid.*
[495] *Ibid.*

222. Australia asserts that Article 23.1 of the DSU establishes an overarching obligation for Members to have recourse to the rules and procedures of the DSU, including Article 21.5 of the DSU. Australia emphasizes that Article 21.5 is the governing provision in cases of disagreement regarding the WTO-consistency of a measure taken to comply with the DSB's recommendations and rulings, and it also applies to disagreements as to whether an inconsistent measure has been removed within the meaning of Article 22.8 of the DSU. Thus, Australia agrees with the European Communities that the disagreement regarding whether Directive 2003/74/EC removed the measure found to be inconsistent with the covered agreements in *EC – Hormones* should have been resolved through recourse to Article 21.5 panel proceedings. On this basis, Australia submits that the Panel erred in finding that the procedure under Article 21.5 of the DSU could be merely one of the mechanisms available.

223. Australia notes that the DSU is silent as to whether the suspension of concessions should cease when disputes arise regarding the removal of an inconsistent measure within the meaning of Article 22.8. According to Australia, it is open to a Member to continue the suspension of concessions pending the outcome of the Article 21.5 panel proceedings. Despite recognizing that Article 21.5 does not expressly address the issue of which party may initiate Article 21.5 proceedings, Australia argues that the Panel erred in relying on the unadopted panel report in *EC – Bananas III (Article 21.5 – EC)* for its finding that "proceedings under Article 21.5 are [not] open only to the original complainant."[496]

224. Australia notes that panels cannot rule on claims that have not been brought by the complaining party. Australia argues that none of the provisions of the *SPS Agreement* were within the Panel's terms of reference, and the Panel had no jurisdiction to consider the consistency of Directive 2003/74/EC with that Agreement. Australia contends that allowing claims under the *SPS Agreement* in this dispute would effectively reverse the burden of proof between the parties and "is inconsistent with the fundamental principle ... that the party asserting non-compliance with a covered agreement bears the burden of establishing a *prima facie* case".[497]

(c) The Panel's Selection of Experts

225. Australia agrees with the argument of the European Communities that panels must observe due process in both selecting and consulting with experts. Australia contends that fundamental fairness and due process "permeates all aspects of the WTO dispute settlement process, including a panel's use of experts".[498] Australia then maintains that the principle of due process equally informs Articles 11 and 13.2 of the DSU and Article 11.2 of the *SPS Agreement* and that, in selecting and consulting experts under these provisions, a panel is "duty bound to ensure that due process is respected".[499]

226. Citing the Appellate Body's finding in *US – 1916 Act* that the discretionary authority to grant enhanced participatory rights to third parties is "circumscribed, for example, by the requirements of due process"[500], Australia submits that a panel's discretion in the use of experts under Article 13.2 of the DSU and Article 11.2 of the *SPS Agreement* must be similarly circumscribed by the requirements of due process. Due process, Australia argues, requires that panels "seek, and take *full* account of, the views of the parties on the types of experts required and the suitability of individual experts".[501] They must also take full account of the views of the parties on the substance of the advice to be

[501] *Ibid.*, para. 51. (original emphasis)

sought from the experts and must not seek advice from any particular expert on matters outside their field of expertise. WTO Members have recognized in the *Rules of Conduct* that experts must be "independent and impartial" and "avoid direct and indirect conflicts of interest".[502]

(d) Articles 5.1 and 5.7 of the *SPS Agreement*

227. Australia asserts that the *SPS Agreement* balances the right to take measures to protect human, animal, or plant life or health against the trade liberalization goals of the WTO. It adds that "[t]his balance cannot be maintained if panels fail to apply appropriate standards of review."[503] Australia therefore agrees with the European Communities that the application of the appropriate standard of review by panels is fundamental to their assessment of the consistency of a Member's measure with its obligations under the *SPS Agreement*. The standard of review applicable in this case refers to the nature and appropriate intensity of scrutiny of a panel's evaluation of a Member's regulatory judgement or an assessment made by a competent body relied upon by that Member. The applicable standard of review addresses the threshold circumstance in which a panel may legitimately interfere in that judgement or factual assessment. As the Appellate Body has explained, the standard of objective assessment of the facts provided in Article 11 of the DSU "precludes [either] a *de novo* review or 'total deference' by a panel to the findings of a national authority".[504] Australia also agrees with the European Communities that the appropriate standard of review to be applied in a given dispute shall be informed "by both Article 11 of the DSU and the particular covered agreement(s) and obligations at issue".[505] Australia argues that this is supported by the Appellate Body's finding in *US – Softwood Lumber VI (Article 21.5 – Canada)* that the proper standard of review to be applied by a panel must "be understood in the light of the specific obligations of the relevant agreements that are at issue".[506]

228. Australia maintains that the standard of review to be applied by panels "may vary between different obligations under the *SPS Agreement*" and must reflect the "balance between regulatory autonomy and international supervision"[507] that is reflected in that Agreement. In Australia's view, the most significant limitation imposed by the text of the *SPS Agreement* on a panel's fact-finding jurisdiction is provided in Article 5.1. Article 5.1 imposes a "positive obligation on Members to obtain and rely upon a risk assessment that is appropriate to the circumstances".[508] This obligation requires that a "rigorous investigative and fact-finding process *compulsorily precedes*"[509] any review by a WTO panel of the relevant SPS measure. Therefore, a panel may not "usurp the role of a risk assessor"[510] by conducting the risk assessment itself, because doing so would "nullif[y]"[511] the competence retained by Members under Article 5.1 of the *SPS Agreement* and would amount to a *de novo* review inconsistent with Article 11 of the DSU. According to Australia, panels must accord "considerable deference (but not total deference)" to a Member's risk assessment where that Member has performed a "comprehensive and transparent" risk assessment.[512] This is consistent with the requirement in Article 5.1 that a risk assessment be "as appropriate to the circumstances". This requirement suggests that risk assessors may tailor their risk assessment to the specific circumstances

[502] *Ibid.*, para. 51.
[503] *Ibid.*, para. 28.
[504] *Ibid.*, para. 30 (referring to Appellate Body Report, *EC – Hormones*, para. 117).

[510] *Ibid.*, para. 36.
[511] *Ibid.*
[512] *Ibid.*

of a case, and that a panel may not attempt to choose between such a risk assessment and an alternative assessment that is not "similarly embedded"[513] in the specific circumstances.

229. Australia submits that, where the available scientific evidence may be susceptible to more than one interpretation by a "qualified and respected source"[514], a panel must accord deference to a Member's risk assessment, even where the panel's own preferred view appears to be supported by the "'preponderant' weight of the evidence".[515] Accordingly, a panel must not interfere with a Member's risk assessment solely because it might have drawn different conclusions on the basis of the available evidence, and must limit the scope of its review to determining whether "the risk assessor's decision [is] objective and credible".[516] For these reasons, Australia agrees with the European Communities that the Panel in this dispute misunderstood and misapplied the appropriate standard of review under Article 5.1 of the *SPS Agreement*. Although the Panel may have benefited from obtaining divergent scientific views for purposes of its background understanding, it could not deliberately place itself in a position whereby it could choose the scientific opinion it preferred. Yet, the Panel's various statements suggest that the Panel erroneously considered that its role was "to choose a position from among the different scientific views".[517] For example, the Panel stated that "its situation [was] similar"[518] to that of a risk assessor and that it "followed the majority of experts expressing concurrent views" or accepted the "most specific" or "best supported"[519] views among the experts. Australia maintains that the Panel should have focused on "whether the European Communities' risk assessment represented an objective and credible view"[520] from a qualified and respected source.

230. In addition, Australia contends that a particular risk assessment may support a range of possible measures, and that Members retain the discretion to select the most appropriate measure to address a particular risk "taking into account the relevant circumstances and its appropriate level of protection".[521] Australia submits that the "fundamental importance of the non-trade objectives of SPS measures" warrants "considerable deference"[522] by panels to the regulatory decision-making of Members, in particular, where the scientific evidence supports more than one credible interpretation.

231. Furthermore, Australia shares the European Communities' concerns regarding the relevance attributed by the Panel to the existence of international standards for four of the hormones subject to the provisional ban. Although international standards may be relevant in interpreting provisions of the *SPS Agreement*, they are not "dispositive"[523] of the meaning of these provisions and should not be "elevated"[524] to binding treaty obligations. For this reason, Australia agrees with the European Communities that the "existence of international standards is not determinative of whether there is sufficient evidence to conduct a risk assessment under the first requirement of Article 5.7."[525] Australia considers that the Panel's approach failed to adequately take into account Article 3.3 of the

SPS Agreement, which permits Members to take SPS measures that result in a higher level of protection than would be achieved by measures based on the relevant international standards.

2. Brazil

(a) Procedural Issue – Public Observation of the Oral Hearing

232. Brazil "strongly disagrees"[526] with the participants' request that the Appellate Body allow public observation of the oral hearing in these proceedings.

233. Brazil observes that the term "proceedings" is defined as "the business transacted by a court"[527], whereas "deliberations" is defined as "careful consideration, weighing up with a view to decision; ... consideration and discussion of a question by a legislative assembly, a committee, etc.; debate".[528] According to Brazil, the ordinary meaning leaves no doubt that the terms "proceedings" and "deliberations" are "not interchangeable", and that "proceedings" is a far broader concept than "deliberations" and encompasses the latter and a wide variety of steps taken by Members or conducted by the Appellate Body, including hearings.[529] Brazil further argues that the participants' interpretation of the term "proceedings" "runs counter to case-law", and notes that, in *Canada – Aircraft*, the Appellate Body interpreted the term "proceedings" as including "the conduct of the oral hearing".[530] Brazil observes, moreover, that Rule 28(1) of the *Working Procedures* "clearly sets out that the oral hearing is part of the appellate proceedings".[531]

234. Brazil asserts that in the light of the ordinary meaning of Article 17.10, the case-law, and the *Working Procedures*, there is no room for finding that "proceedings" are limited to "internal work" and exclude oral hearings, as alleged by the participants.[532] Therefore, Brazil considers that the first sentence of Article 17.10 "must be construed as requiring the confidentiality of any written submissions, legal memoranda, written responses to questions, oral statements, oral hearings, deliberations, exchange of views and all internal workings of the Appellate Body"[533] and, consequently, opening the oral hearings to the public in the appellate review stage is inconsistent with multilateral trading rules, despite the participants' efforts to prove the contrary.

235. Brazil does not see Article 18.2 as providing support for the participants' request to open the oral hearing to public observation. Brazil describes Article 18.2 as granting a right to parties to disclose their own statements to the public. According to Brazil, the participants fail to show how a right granted by Article 18.2 to Members can modify the obligation established in Article 17.10, an obligation that is applicable not only to WTO Members, but also to the Appellate Body. Brazil cautions that accepting the participants' request "would lead to the absurd conclusion that, by mutual consent, the parties to a dispute can override multilateral rules".[534] Brazil adds that, by this logic, "mutual consent" would be a "blanket authorization" to some Members to achieve goals not necessarily permitted by the multilaterally agreed rules; in fact, "mutual consent", when *contra legem*, would undermine the whole purpose of a multilateral framework.

[533] *Ibid.*, para. 12.
[534] Brazil's comments on participants' request for an open hearing, para. 17.

236. Lastly, Brazil notes that transparency is an issue being discussed in the negotiations on the review of the DSU. Brazil submits that, in the light of the different positions of Members on this issue and its impact on the functioning of the dispute settlement mechanism, "the authority to make a decision on whether or not to open panels' and Appellate Body's proceedings to the public should lie with the WTO Membership as a whole, rather than being introduced through the 'back door', as the result of a series of 'stand-alone requests'".[535]

(b) Articles 21, 22, and 23 of the DSU

237. Brazil asserts that the Panel erred in analyzing the European Communities' claims under Articles 21.5, 23.1, and 23.2(a) of the DSU in "complete isolation" from the post-suspension context of this dispute and from the "systemic non-compliance" by the European Communities. Brazil also considers that the Panel erred in its acceptance, at least in part, of the European Communities' argument that this dispute is about a procedural violation. According to Brazil, the focus of the dispute should not be the retaliatory measures by the United States and Canada; rather, the focus should remain on whether the European Communities has complied with the DSB's recommendations and rulings in *EC – Hormones*. Brazil notes that Article 22.8 of the DSU sets out three conditions that must be met before termination of the suspension of concessions is required, with the first condition being the removal of the inconsistent measure. Brazil contends that, because none of the conditions set out in Article 22.8 have been fulfilled, the DSB's authorization to suspend concessions granted to the United States and Canada remains in place. In Brazil's view, "the multilateral authorization to suspend concessions can only be revoked by an equally *multilateral* ruling."[536]

238. Brazil disagrees with the Panel's finding that the United States and Canada were seeking redress of a violation within the meaning of Article 23.1 of the DSU by continuing the multilaterally authorized suspension of concessions after the adoption of Directive 2003/74/EC. According to Brazil, the European Communities' unilateral declaration that its implementing measure complies with the DSB's recommendations and rulings, or the alleged presumption of good faith compliance, cannot turn the suspension of concessions authorized by the DSB into an illegal measure. Brazil adds that the authorization to suspend concessions was in effect at the time of the European Communities' declaration, and that the United States and Canada "were simply exercising a right duly and previously authorized".[537] Brazil also takes issue with the Panel's interpretation of the term "determination" in Article 23.2(a) of the DSU. Noting that the "determinations" prohibited under Article 23.2(a) are unilateral assessments of the kind examined in the *US – Section 301 Trade Act* dispute[538], Brazil states that this provision is not intended to capture "[s]imple interventions and statements made at DSB or other WTO meetings".[539] Brazil adds that the suspension of concessions, authorized by the DSB and obtained through recourse to dispute settlement, cannot be considered to be a unilateral "determination".

239. Turning to the Panel's analysis under Article 22.8 of the DSU, Brazil agrees with the Panel that the removal of the measure found to be inconsistent must be understood as requiring substantive compliance. Consequently, Brazil argues, the Panel's analysis of Directive 2003/74/EC in the light of the *SPS Agreement* is of "paramount importance for providing an effective solution to the dispute".[540] Brazil considers, in this regard, that panels have authority to examine issues or legal provisions not included in the terms of reference to the extent necessary for providing a prompt solution to the dispute.

[535] *Ibid.*, para. 18 (referring to Canada's request for an open hearing, para. 20).
[536] Brazil's third participant's submission, para. 12. (original emphasis)
[537] Brazil's third participant's submission, para. 18.
[538] *Ibid.*, para. 21 (referring to Panel Report, *US – Section 301 Trade Act*, footnote 657 to para. 7.50).
[539] *Ibid.*, para. 21.
[540] *Ibid.*, para. 29.

240. Finally, Brazil asserts that, in the post-retaliation stage of a dispute, the original respondent bears the burden of proving that its implementing measure is WTO-consistent. According to Brazil, once an authorization is granted to a Member under Article 22.6 of the DSU to suspend concessions or other obligations, a turning point has been reached in the procedures established in the DSU. Thus, Brazil argues, where the original respondent has not complied with WTO rules for a long period of time despite the DSB's recommendations and rulings, the burden of making a *prima facie* case of compliance rests upon that party. Brazil submits that this "would not be a disproportionate burden" on the non-complying party because, in the "post-retaliation" stage, this Member "will have maintained an inconsistent measure for many years and the dispute settlement system should take this into consideration".[541] Brazil is also of the view that the original respondent can initiate Article 21.5 proceedings to establish compliance. Brazil argues that such an interpretation is consistent with the rationale that underpins Article 22.6 of the DSU, which places the burden on the original respondent to demonstrate that the level of the suspension of concessions proposed by the complaining Member is not justified under the DSU.

3. China

241. Pursuant to Rule 24(2) of the *Working Procedures*, China chose not to submit a third participant's submission.

242. China submits that the request made by the participants to open the oral hearing to public observation should be rejected by the Appellate Body. China disagrees with the participants' interpretation of the term "proceedings" in Article 17.10. China states that the drafters of the DSU intentionally used the different terms "deliberations" and "proceedings" in Articles 14.1 and 17.10, respectively. China does not understand the term "proceedings" in Article 17.10 as referring "only to the internal work of the Appellate Body".[542] China observes that the term "proceedings" is also used in Article 17.5 of the DSU, which provides that "the proceedings shall not exceed 60 days from the date a party to the dispute formally notifies its decision to appeal to the date the Appellate Body circulates its report". Article 17.12 requires that the Appellate Body "address each of the issues raised in accordance with paragraph 6 during the appellate proceeding". These provisions do not provide contextual support for the interpretation of "proceedings" put forward by the participants. In China's view, the requirement in Article 17.10 that the proceedings of the Appellate Body be confidential must be interpreted to mean that only the participants and third participants may be present at the oral hearing, and all written submissions to the Appellate Body are treated as confidential.

243. China asserts, furthermore, that the purpose of the oral hearing is to provide all participants with adequate opportunity to present and argue their case before the Division with the aim of clarifying the legal issues in the appeal. Accordingly, China considers that the "main task [of] the Division, when dealing with the oral hearing issues, is to provide such opportunity to all participants and secure their right and obligation under the current DSU."[543] China emphasizes that any determination by the Appellate Body in this appeal "shall not prejudice" the position of Members in the ongoing negotiations on the review of the DSU.[544]

4. India

244. India stresses that the Appellate Body should reject the participants' request to allow public observation of the oral hearing in these proceedings. India submits that "the issue of external

[541] *Ibid.*, para. 34.
[542] China's comments on participants' request for an open hearing, p. 1.
[543] *Ibid.*, p. 2.
[544] *Ibid.*

transparency" is being discussed in the negotiations on the review of the DSU and that "[t]hese negotiations have not yet been completed, and there is no consensus on whether and which form of external transparency is acceptable to the entire WTO Membership."[545] India argues that until such consensus is achieved, panel and Appellate Body proceedings have to be held in closed sessions. India emphasizes that the confidentiality of the panel and Appellate Body proceedings provided under the DSU is a "substantive" matter[546], and any decision by the Appellate Body to open its proceedings to public observation necessarily involves consultations with, and decisions by, WTO Members, and not just the participants and third participants.

5. Mexico

245. Pursuant to Rule 24(2) of the *Working Procedures*, Mexico chose not to submit a third participant's submission.

246. Mexico disagrees with the request made by the participants to allow public observation of the oral hearing in these proceedings. Mexico observes that its position is supported by Article 17.10 of the DSU, which states that "[t]he proceedings of the Appellate Body shall be confidential."

6. New Zealand

(a) Procedural Issue – Public Observation of the Oral Hearing

247. New Zealand supports the request of the participants to allow public observation of the oral hearing in these proceedings. New Zealand observes that Rule 27 of the *Working Procedures*, which regulates the oral hearing, "makes no mention of confidentiality".[547] New Zealand additionally notes that the DSU does not mention hearings at the Appellate Body stage and therefore does not explicitly preclude opening such a hearing. New Zealand also agrees with the participants that Article 17.10, "read in accordance with the rules of treaty interpretation and in the context of other provisions in the DSU" does not preclude public observation of the oral hearing. Therefore, New Zealand considers that the joint request of the participants to open the hearing of the Appellate Body in these consolidated appeals is neither inconsistent with, nor precluded by, the DSU, the other covered agreements, or the *Working Procedures*.

(b) Articles 21, 22, and 23 of the DSU

248. New Zealand submits that the Panel erred in finding that the United States and Canada have acted inconsistently with Articles 23.1 and 23.2(a) of the DSU. In New Zealand's view, the Panel should have interpreted Articles 23.1 and 23.2(a) in the context of the other provisions of the DSU, in particular Article 22.8, which sets out three conditions that must be met in order to have the suspension of concessions terminated. New Zealand maintains that the first condition under Article 22.8, which is the relevant one in this dispute, refers to situations where the inconsistent measure has actually been removed, and not where the measure is merely claimed to have been removed. Thus, New Zealand submits, because the Panel found that the European Communities has not removed the inconsistent measure within the meaning of Article22.8, the United States and Canada have every right to continue the suspension of concessions. New Zealand contends that, by comparison, Article 23 is the "framework provision setting up the requirement to have recourse to dispute settlement"[548] and does not address the specific situation in this case, where the United States

[545]India's comments on participants' request for an open hearing, p. 1.
[546]*Ibid.*
[547]New Zealand's comments on participants' request for an open hearing, p. 1.
[548]New Zealand's third participant's submission, para. 3.21.

and Canada have already had recourse to dispute settlement. New Zealand adds that Article 23 does not impose an obligation on the United States and Canada to cease the suspension of concessions or to resort to Article 21.5 proceedings.

249. New Zealand maintains that, in reaching its finding of violation under Articles 23.1 and 23.2(a) of the DSU, the Panel failed to consider the object and purpose of the DSU, which is to provide security and predictability to the multilateral trading system. New Zealand observes that the Panel's finding leads to the result that the Member authorized to suspend concessions must terminate the suspension whenever the non-compliant Member notifies its adoption of an implementing measure to the DSB and then waits to be challenged. New Zealand adds that the Panel's approach "would almost inevitably give rise to the situation where an implementing Member could continually impose successive rounds of litigation at will, merely by asserting that it had complied"[549], thus undermining the predictability of the suspension of concessions and its importance in inducing prompt compliance. New Zealand also argues that the Panel's examination of Articles 23.1 and 23.2(a) in isolation from Article 22.8 "reduce[s]" the latter provision "to redundancy or inutility".[550]

250. New Zealand submits that the Panel's suggestion that the United States and Canada should have recourse to the rules and procedures of the DSU without delay "is simply not tenable".[551] Such a suggestion undermines the authorization to suspend concessions that the United States and Canada have obtained from the DSB. This is incompatible with the objective of "prompt settlement" of disputes envisaged in Article 3.3 of the DSU, because it would result in a "redundant" proceeding in which a new panel would look at "an issue that was already dealt with in the context of the current proceedings".[552]

(c) Terms of Reference

251. New Zealand contends that the Panel erred in stating that it did not have jurisdiction to rule on the compatibility of Directive 2003/74/EC with the covered agreements. New Zealand submits that the Panel should have explicitly determined the compatibility of Directive 2003/74/EC with the covered agreements because it had substantively reviewed the Directive and had concluded that the measure found to be inconsistent with the *SPS Agreement* in *EC – Hormones* had not been removed by the European Communities. In New Zealand's view, the Panel Report is sufficiently comprehensive for the Appellate Body to determine explicitly the compatibility of Directive 2003/74/EC with Articles 5.1 and 5.7 of the *SPS Agreement*.

(d) Articles 5.1 and 5.7 of the *SPS Agreement*

252. New Zealand "strongly"[553] disagrees with the European Communities' arguments in relation to Articles 5.1 and 5.7 of the *SPS Agreement* because they would "seriously undermine the principles and obligations"[554] of that Agreement. The *SPS Agreement* imposes a "very important" requirement that SPS measures be developed and implemented in a manner that is "transparent, consistent, scientifically-based, and the least trade-restrictive"[555], and this requirement is at the "forefront"[556] of this dispute. New Zealand recalls that Article 2.2 of the *SPS Agreement* imposes a general obligation that SPS measures be based on scientific principles and not maintained without sufficient

[549]*Ibid.*, para. 3.30.
[550]*Ibid.*, para. 3.36.
[551]*Ibid.*, para. 3.62.
[552]New Zealand's third participant's submission, para. 3.62 (quoting Canada's other appellant's submission, para. 96).
[553]*Ibid.*, para. 3.42.
[554]*Ibid.*, para. 3.43.
[555]*Ibid.*, para. 3.44.
[556]*Ibid.*, para. 3.45.

scientific evidence. This obligation is given specific application by Article 5.1, which requires that SPS measures be "based on" a risk assessment, which, according to the Appellate Body's interpretation, entails that there must be a "rational relationship between the measure and the risk assessment" whereby the results of the risk assessment sufficiently warrant the SPS measures at stake.[557] In New Zealand's view, the Panel correctly concluded that Directive 2003/74/EC was not based on a risk assessment within the meaning of Article 5.1. The Panel's findings were supported by an exhaustive overview of all relevant scientific evidence, drawing upon the expertise and knowledge of a group of eminent scientific and technical experts.

253. New Zealand states that the risk assessment at issue in this dispute is the second type of risk assessment provided for in paragraph 4 of Annex A to the *SPS Agreement*, which is "designed to protect from risks arising from additives, contaminants, toxins or disease-causing organisms in foodstuffs".[558] New Zealand recalls that, with regard to this type of risk assessment, the Appellate Body indicated in *EC – Hormones* that a Member is required to "identify the adverse effects on human or animal health (if any) arising from the presence of such additives, contaminants, toxins or disease-causing organisms in foodstuffs", and, "if any adverse effects exist, evaluate the potential (or possibility) of the occurrence of such effects."[559] The Appellate Body also found that "the 'risk' evaluated in a risk assessment must be ascertainable—'theoretical uncertainty is not the kind of risk which ... is to be assessed'."[560] New Zealand also refers to the panel's finding in *Japan – Apples* that a panel's review of a measure under Article 5.1 would also involve an evaluation of whether the risk assessment was "as appropriate to the circumstances", and whether it took into account "risk assessment techniques developed by the relevant international organizations."[561] New Zealand recalls further the Appellate Body's finding in *EC – Hormones* that the European Communities "did not actually proceed to an assessment, within the meaning of Articles 5.1 and 5.2, of the risks arising from the failure of observance of good veterinary practice combined with problems of control of the use of hormones for growth promotion purposes."[562] New Zealand concludes that, as in *EC – Hormones*, the European Communities "once again"[563] has failed to demonstrate that the risk assessment underlying Directive 2003/74/EC satisfies the requirements of the *SPS Agreement*.

254. New Zealand argues that, as the Member invoking Article 5.7, the European Communities bears the burden of demonstrating that the four requirements of Article 5.7 have been met, including the requirement that the measure be imposed in a situation where relevant scientific evidence is "insufficient".[564] New Zealand recalls the Appellate Body's finding that these four requirements are "cumulative"[565], and that, whenever one of them is not met, the measure at issue is inconsistent with Article 5.7. New Zealand asserts that European Communities has failed to demonstrate that it has satisfied any of the requirements under Article 5.7 with respect to Directive 2003/74/EC.

[557] *Ibid.*, para. 3.46 (referring to Appellate Body Report, *EC –Hormones*, para. 193).
[558] New Zealand's third participant's submission, para. 3.52.
[559] *Ibid.* (referring to Appellate Body Report, *EC – Hormones*, para. 183). (emphasis omitted)
[560] *Ibid.*, para. 3.53 (quoting Appellate Body Report, *EC – Hormones*, para. 186).
[561] *Ibid.*, para. 3.54 (quoting Panel Report, *Japan – Apples*, para. 8.236).
[562] *Ibid.*, para. 3.55 (quoting Appellate Body Report, *EC – Hormones*, para. 208).
[563] *Ibid.*, para. 3.56.
[564] *Ibid.*, para. 3.58 (referring to Panel Report, *Japan – Apples*, para. 8.212). In addition, the other requirements are: (i) the provisional SPS measure must be adopted on the "basis of available pertinent information"; (ii) the Member seeks to "obtain the additional information necessary for a more objective risk assessment"; and (iii) the Member reviews the measure "accordingly within a reasonable period of time".
[565] *Ibid.*, para. 3.59 (referring to Appellate Body Report, *Japan – Agricultural Products II*, para. 89).

7. Norway

(a) Procedural Issue – Public Observation of the Oral Hearing

255. Norway supports the participants' request that the Appellate Body allow public observation of the oral hearing in these proceedings. Norway asserts that the meaning of the term "proceedings" in isolation is not unequivocal, and resort must be had to context and object and purpose as set out in Article 31(1) of the *Vienna Convention on the Law of Treaties*[566] (the "*Vienna Convention*"). Turning to Articles 17.5 and 17.12 of the DSU as context, Norway recognizes that these provisions use the term "proceedings" "as 'short-hand' for all stages in an appeal", but it considers that this is "not dispositive in itself".[567] Norway also recognizes that Article 17.10 is drafted differently from Article 14.1, which uses the term "deliberations", but it does not consider that this implies that the term "proceedings" in the first sentence of Article 17.10 must be read to require confidentiality of the oral hearing before the Appellate Body. Norway asserts that it "cannot see that the object and purpose of Article 17.10 is different from [that of] Article 14.1 of the DSU, which is to protect the internal work of panels" and argues that "[t]he object and purpose thus indicates that the term 'proceedings' in Article 17.10 should be given a restrictive interpretation, focussing on the internal work of the Appellate Body, and not encompass[ing] the oral hearing."[568] Norway submits that a restrictive interpretation of "proceedings" is also supported by the Spanish and French versions of the DSU referring to the term "*actuaciones*" in Spanish and the term "*travaux*" in French, in accordance with Article 33 of the *Vienna Convention*. Norway finds further support for a restrictive interpretation of the term "proceedings" in the fact that Article 18.2 specifically authorizes parties to a dispute to disclose their submissions and statements to the public. In Norway's view, Article 18.2 cannot be interpreted to require "more confidentiality than the parties require".[569]

256. Norway thus considers that the DSU allows the Appellate Body to open the oral hearing to the public where all participants to the dispute so request and that the Appellate Body has discretion under Rule 16(1) of the *Working Procedures* to respond favourably to the request. Norway states that allowing public observation will bring the Appellate Body more into line with other international tribunals where "open hearings is the norm".[570] Norway further considers that allowing public observation "will be beneficial to the process and to the legitimacy of the Appellate Body's work".[571]

(b) Articles 21, 22, and 23 of the DSU

257. Norway maintains that Article 22.8 of the DSU requires that the suspension of concessions be temporary and conditional. Norway emphasizes that once compliance is achieved, be it through a simple revocation of the inconsistent measure or its replacement with another measure that ensures compliance, the right to suspend concessions "*automatically* lapses"[572] without a need for formal revocation of the authorization by the DSB. Norway submits that, where the parties disagree as to whether the measure taken to comply actually achieves compliance, as is the case in this dispute, the parties must resort to Article 21.5 panel proceedings. Once a panel (and the Appellate Body, if the panel report is appealed) determines that the implementing measure brings the Member concerned into compliance with the recommendations and rulings of the DSB, "the previous authorization [to

[566] Done at Vienna, 23 May 1969, 1155 UNTS 331; 8 International Legal Materials 679.
[567] Norway's comments on participants' request for an open hearing, para. 15.
[568] *Ibid.*, para. 23.

[570] *Ibid.*, para. 39.
[571] *Ibid.*
[572] Norway's third participant's submission, para. 6. (original emphasis)

suspend concessions] lapses *ipso facto* once the report is adopted, without there being a need for the DSB to revoke it formally as the temporal condition ... no longer exists".[573]

258. Norway further submits that a presumption of good faith compliance is applicable under the DSU, and the original complainant who considers that the measure taken to comply fails to achieve compliance has an obligation to initiate Article 21.5 proceedings. Noting that Articles 22.8 and 21.5 do not set forth any time-limits for initiating Article 21.5 proceedings, Norway claims that this does not mean that the original complainant may simply refuse to launch such proceedings. In Norway's view, beyond a certain point in time, Article 23.2(a) may be breached. To avoid unreasonable delays, Article 21.5 should be interpreted to allow both the original complainant and the original respondent to initiate Article 21.5 proceedings. Norway contends that Article 21.5 is written in the passive form without specifying which party may initiate the proceedings and, consequently, this provision allows both parties to launch Article 21.5 proceedings. The fact that the compliance panel report in *EC – Bananas III (Article 21.5 – EC)* remained unadopted, and that the panel refused to make any recommendations or rulings, does not in itself prove that an original respondent may not invoke Article 21.5, because that case involved particular circumstances that explain the outcome.

259. Norway explains that, in Article 21.5 proceedings launched by the original respondent, the panel may not "make a declaratory judgment based on the presentation of the original respondent, but must make an objective assessment of the matter before it."[574] However, where the original complainant refuses to participate, any claim that the new measure is inconsistent with other provisions of the covered agreements will not be heard. In such proceedings, the original respondent may be considered as a "complainant" for purposes of Article 6.1 and an "applicant" for purposes of Article 6.2 of the DSU. The requirements of Article 6.2 can be fulfilled by referring to the original panel and Appellate Body reports, together with the identification of the specific measure taken to comply and a description of how it ensures compliance. Norway adds that, in such proceedings, "[o]nly the violations specifically addressed"[575] in the panel and Appellate Body reports in the original dispute will be within the Article 21.5 panel's terms of reference. This is because the original respondent does not complain about specific violations by other Members, but asks for a "declaratory finding"[576] of compliance with the DSB's recommendations and rulings in the original dispute. By not launching Article 21.5 panel proceedings first, the original complainant loses certain rights to present new claims that it would have been able to include in the panel's terms of reference if it had initiated the Article 21.5 proceedings and submitted the request for the establishment of a panel. Consequently, Norway submits that allowing the original respondent to launch Article 21.5 proceedings would provide the original complainants with the incentive to launch Article 21.5 panel proceedings first.

8. Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu

260. Pursuant to Rule 24(2) of the *Working Procedures*, the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu chose not to submit a third participant's submission.

261. The Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu supports the request of the participants to allow public observation of the oral hearing in these proceedings "in the interests of greater transparency".[577]

[573] *Ibid.*, para. 7.
[574] *Ibid.*, para. 15.
[575] Norway's third participant's submission, para. 17.
[576] *Ibid.*, para. 18.
[577] Comments of Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu on participants' request for an open hearing, p. 1.

III. Issues Raised in This Appeal

262. The following issues are raised on appeal by the European Communities:

(a) Whether the Panel erred in failing to find that the United States and Canada had to initiate proceedings pursuant to Article 21.5 of the DSU in order to comply with their obligations, under Articles 23.1 and 23.2(a), to have recourse to the rules and procedures of the DSU;

(b) Whether the Panel erred in finding that Article 22.8 of the DSU was not breached by the United States and Canada because the European Communities has failed to comply with the recommendations and rulings of the DSB in *EC – Hormones*, which underlie the authorization given to the United States and Canada to suspend concessions and other obligations;

(c) Whether the Panel exceeded its terms of reference by examining the compatibility of Directive 2003/74/EC[578] with Articles 5.1 and 5.7 of the *SPS Agreement*;

(d) Whether the Panel erred by failing to make the suggestion, pursuant to its authority under Article 19.1 of the DSU, that the United States and Canada cease the suspension of concessions and resort to Article 21.5 proceedings, or any other proceedings to which the parties may agree, to resolve any disagreements as to the consistency of Directive 2003/74/EC with the *SPS Agreement*;

(e) Whether the Panel failed to respect the principle of due process, and therefore failed to comply with its duties under Article 11 of the DSU, in selecting, and relying upon the advice of, two experts who were not "independent and impartial" as required by the *Rules of Conduct*;

(f) Whether the Panel erred in interpreting and applying Article 5.1 of the *SPS Agreement* in assessing the consistency of the import ban on meat from cattle treated with oestradiol-17β for growth-promotion purposes, applied pursuant to Directive 2003/74/EC, in particular by:

  (i) adopting a narrow interpretation of "risk assessment" and failing to take into account evidence on misuse and abuse in the administration of hormones;

  (ii) requiring the European Communities to evaluate specifically the risks arising from the presence of residues of oestradiol-17β in meat or meat products as a result of the cattle being treated with this hormone for growth-promotion purposes;

  (iii) imposing a quantitative method of risk assessment on the European Communities;

  (iv) incorrectly allocating the burden of proof; and

[578] Directive 2003/74/EC of the European Parliament and of the Council of 22 September 2003 amending Council Directive 96/22/EC concerning the prohibition on the use in stockfarming of certain substances having a hormonal or thyrostatic action and of beta-agonists, *Official Journal of the European Union*, L Series, No. 262 (14 October 2003) 17 (Exhibits EC-1 and US-3 submitted by the European Communities and the United States, respectively, to the Panel).

(v) failing to make an objective assessment of the matter before it, as required by Article 11 of the DSU, by articulating and applying an incorrect standard of review.

(g) Whether the Panel erred in interpreting and applying Article 5.7 of the *SPS Agreement* when assessing the consistency of the provisional import ban on meat from cattle treated with testosterone, progesterone, trenbolone acetate, zeranol, and melengestrol acetate ("MGA") for growth-promotion purposes, applied under Directive 2003/74/EC. More specifically, whether the Panel erred in finding that the relevant scientific evidence was insufficient because it:

(i) incorrectly found that the determination of whether the relevant scientific evidence is insufficient "must be disconnected" from the chosen level of protection;

(ii) articulated and applied an incorrect legal test pursuant to which, where international standards exist for a substance, a "critical mass of new scientific evidence" is required to render the relevant scientific evidence "insufficient";

(iii) incorrectly allocated the burden of proof; and

(iv) failed to make an objective assessment of the matter before it, as required by Article 11 of DSU.

263. The following issues are raised on appeal by the United States and Canada:

(a) Whether the Panel erred in finding that the United States and Canada were seeking the redress of a violation within the meaning of Article 23.1 of the DSU, by maintaining the suspension of concessions after the notification of Directive 2003/74/EC by the European Communities;

(b) Whether the Panel erred in finding that the United States and Canada made a unilateral determination that Directive 2003/74/EC is not consistent with the WTO agreements without recourse to the rules and procedures of the DSU, in breach of Article 23.2(a) of the DSU.

264. In the event that the Appellate Body were to uphold the Panel's finding that the United States and Canada acted inconsistently with Articles 23.2(a) and 23.1 of the DSU, the United States and Canada conditionally appeal the following issues:

(a) Whether the Panel erred in concluding that it was not called upon, and hence did not have jurisdiction, to determine the compatibility of Directive 2003/74/EC with Articles 5.1 and 5.7 of the *SPS Agreement*;

(b) Whether the Panel erred in suggesting, pursuant to Article 19.1 of the DSU, that the United States and Canada have recourse to the rules and procedures of the DSU without delay.

IV. The Application of the DSU in the Post-Suspension Stage of a Dispute

A. *Introduction*

265. We begin with the issues raised on appeal by Canada, the European Communities, and the United States relating to the interpretation and application of several provisions of the DSU in the post-suspension stage of a dispute. This stage refers to the period after a WTO Member has suspended concessions or other obligations to another Member[579], having received authorization to do so from the DSB. The authorization to suspend concessions stems from the other Member's failure to bring into compliance measures that have been found to be inconsistent with the covered agreements by a panel or the Appellate Body.

266. This appeal relates to the *EC – Hormones* dispute in which, following a complaint by the United States and Canada, the ban imposed by the European Communities on imports of meat from cattle treated with growth-promoting hormones, pursuant to Directive 96/22/EC, was found to be inconsistent with the *SPS Agreement*.[580] Because the European Communities failed to bring itself into compliance within the reasonable period of time, which expired on 13 May 1999[581], the United States and Canada requested the DSB to authorize suspension of concessions pursuant to Article 22.2 of the DSU.[582] The United States and Canada obtained authorization from the DSB to suspend concessions in relation to the European Communities on 26 July 1999, following an arbitration at the European Communities' request.[583] On 29 July 1999, the United States applied 100 per cent import duties on a range of imports from certain member States of the European Communities.[584] On 1 August 1999, Canada applied 100 per cent *ad valorem* duties on a similar range of imports from the European Communities.[585]

267. After the adoption of the panel and Appellate Body reports in the *EC – Hormones* dispute, the European Commission commissioned 17 scientific studies to assess the risks to human health posed by the six hormones at issue.[586] On the basis of these studies and additional scientific information made available to the European Commission, the Scientific Committee on Veterinary Measures relating to Public Health (the "SCVPH") issued three Opinions in 1999, 2000, and 2002 concerning risks to human health posed by the six hormones.[587] In the light of these Opinions, the European Communities adopted Directive 2003/74/EC on 22 September 2003[588], which amends Directive 96/22/EC. Directive 2003/74/EC maintains the permanent prohibition on the importation of meat and meat products from animals treated with oestradiol-17β for growth-promotion purposes originally contained in Directive 96/22/EC.[589] In relation to the five other hormones—testosterone, progesterone, trenbolone acetate, zeranol, and MGA—Directive 2003/74/EC imposes the prohibition on a provisional basis.[590] Directive 2003/74/EC specifies that, even though the scientific information available showed the existence of risks associated with these substances, "the current state of

[579] We will use the term "suspension of concessions" as an abbreviated reference to "the suspension of concessions or other obligations".

knowledge does not make it possible to give a quantitative estimate of the risk to consumers".[591] The prohibition of these five hormones applies "while the Community seeks more complete scientific information from any source, which could shed light and clarify the gaps in the present state of knowledge of these substances".[592]

268. On 27 October 2003, the European Communities notified the DSB of the adoption, publication, and entry into force of Directive 2003/74/EC, as well as the 1999, 2000, and 2002 Opinions, which it considered provided a sufficient justification for the permanent and provisional prohibitions on the importation of meat from cattle treated with the six hormones under the *SPS Agreement*.[593] The European Communities therefore claimed that it had fully implemented the DSB's recommendations and rulings in the original *EC – Hormones* dispute, and consequently considered that the suspension of concessions by the United States and Canada was no longer justified. The United States and Canada refused to lift the suspension of concessions imposed pursuant to the authorization obtained from the DSB, because they did not consider that Directive 2003/74/EC had brought the European Communities into compliance with the DSB's recommendations and rulings.[594] The European Communities initiated the present proceedings alleging that the United States and Canada acted inconsistently with their obligations under the DSU by continuing the suspension of concessions.[595]

269. A summary of the findings of the Panel is provided in section B and the claims and arguments raised on appeal are described in section C. In sections D and E we address the claims raised by the European Communities, including whether Article 22.8 of the DSU required the United States and Canada to cease the application of the suspension of concessions upon the European Communities' notification of Directive 2003/74/EC, and whether the United States and Canada were required to initiate Article 21.5 proceedings if they did not consider that Directive 2003/74/EC is consistent with the covered agreements. Section F addresses the claims raised by the United States and Canada in their other appeals concerning the Panel's findings that they breached Articles 23.2(a) and 23.1 of the DSU by seeking the redress of a violation without recourse to the rules and procedures of the DSU. Section G addresses the conditional claims raised by the United States and Canada in relation to the Panel's finding that it did not have jurisdiction to determine the compatibility of Directive 2003/74/EC with the covered agreements. Finally, section H addresses the issues raised by all three participants concerning the suggestion made by the Panel pursuant to Article 19.1 of the DSU.

B. *The Panel's Findings*

1. Scope of the European Communities' Claims

270. Before the Panel, the European Communities raised "two sets of main claims" against the continued suspension of concessions by the United States and Canada. It asserted that the continued suspension is inconsistent with: (i) Article 23.2(a), read together with Articles 21.5 and 23.1 of the DSU; and (ii) Article 23.1, read in conjunction with Articles 22.8 and 3.7 of the DSU. In addition, the European Communities raised claims under Articles I and II of the GATT 1994.[596] In the event

[593]WT/DS26/22; WT/DS48/20.
[594]WT/DSB/M/157; WT/DSB/M/159.
[595]In December 2004, the United States requested information from the European Communities pursuant to Article 5.8 of the *SPS Agreement* concerning the justification underlying Directive 2003/74/EC. (Panel Report, *US – Continued Suspension*, para. 7.227) The Panel was established on 14 January 2005 at the European Communities' request. (Panel Report, *US – Continued Suspension*, para. 1.2; Panel Report, *Canada – Continued Suspension*, para. 1.2)
[596]Panel Report, *US – Continued Suspension*, para. 3.1; Panel Report, *Canada – Continued Suspension*, para. 3.2.

that the Panel found no violation of Article 23 of the DSU, the European Communities claimed, in the alternative, that the continued suspension by the United States and Canada is inconsistent with Article 22.8 of the DSU.[597]

271. At the outset of its analysis, the Panel made some preliminary remarks concerning the scope of its mandate. The Panel recalled that the matter before it was the alleged failure of the United States and Canada to comply with their obligations under the DSU by maintaining the suspension of concessions authorized by the DSB in the *EC – Hormones* dispute, even though the European Communities had adopted Directive 2003/74/EC and notified this Directive to the DSB as the measure taken to comply.[598] The Panel noted that, in its first written submission, the European Communities divided its claims into "two main sets of claims" and one conditional claim. Under the first set of claims, the European Communities alleged that the United States and Canada, by maintaining the suspension of concessions, were seeking redress of a perceived violation by the European Communities of the covered agreements without recourse to the rules and procedures of the DSU, in breach of Article 23.2(a), read in conjunction with Articles 21.5 and 23.1 of the DSU.[599] Under the second set of claims, the European Communities submitted that, because it should be *presumed* to have complied in good faith with the DSB's recommendations and rulings by adopting and notifying Directive 2003/74/EC, the continued application of the suspension of concessions by the United States and Canada is also inconsistent with Article 23.1, read together with Articles 22.8 and 3.7 of the DSU.[600] Finally, in the event that the Panel was not to find "any violation under Articles 23.1, 23.2(a), 3.7, 22.8, and 21.5 of the DSU"[601], the European Communities raised a conditional claim alleging that the United States and Canada violated Article 22.8 of the DSU *per se* because, by adopting Directive 2003/74/EC, the European Communities had achieved *actual* (rather than *presumed*) compliance requiring termination of the suspension of concession in accordance with Article 22.8.[602]

272. The Panel considered that this approach, although not specified in the European Communities' request for the establishment of a panel, "is actually a clarification of the claims listed in its request for the establishment of a panel and not arguments".[603] Thus, the Panel considered that the approach outlined in the European Communities' first written submission constituted part of the Panel's terms of reference.[604] The Panel therefore decided that it would address the two main claims as elaborated by the European Communities in its first written submission, and would address the conditional claim only if the European Communities failed to establish its two main claims.[605]

2. The European Communities' Claim that the United States and Canada Breached Article 23.2(a) of the DSU Read Together with Articles 23.1 and 21.5

273. The Panel first examined the European Communities' claim under Article 23.2(a), read together with Articles 23.1 and 21.5 of the DSU. The Panel referred to the phrase "[i]n such cases", which connects paragraphs 1 and 2 of Article 23, and observed that this phrase indicated that it would have to determine whether the conditions of Article 23.1 were met before it could assess whether the United States and Canada breached Article 23.2(a) of the DSU. In the Panel's view, "Article 23.1 applies in this case only with respect to a determination against a measure which has not yet been subject to a recourse to the rules and procedures of the DSU."[606] According to the Panel, Directive 2003/74/EC is such a measure.[607] Noting that Directive 2003/74/EC, like the measure it replaced, imposed an import ban, the Panel recalled that it is not the import ban on meat treated with hormones, but rather the justification for this ban, that was found to be inconsistent with the *SPS Agreement* in *EC – Hormones*. Therefore, the Panel "d[id] not consider that the fact that the ban remains in place means that no new measure has been adopted".[608] The Panel further found that, although the United States and Canada were authorized to suspend concessions, such "'authorization by the DSB' does not mean [an] 'obligation to suspend concessions'."[609] Thus, in the Panel's view, "the fact that, after the European Communities' notification of Directive 2003/74/EC", the United States and Canada "continue[] to apply [their] suspension of concessions even though [they have] no obligation to do so is evidence" that the United States and Canada are "actively" seeking the redress of a violation within the meaning of Article 23.1.[610]

274. Having found that the conditions for the applicability of Article 23.1 were met, the Panel proceeded to examine whether the United States and Canada had "ma[d]e a determination to the effect that a violation has occurred" within the meaning of Article 23.2(a) in respect of Directive 2003/74/EC. The Panel observed that statements made at two DSB meetings concerning the notification of Directive 2003/74/EC indicated that the United States and Canada reached "a more or less final decision"[611] that the new Directive fails to implement the DSB's recommendations and rulings in *EC – Hormones* and is inconsistent with the *SPS Agreement*. Such statements, in the Panel's view, constitute a "determination" under Article 23.2(a) of the DSU.[612] The Panel added that, even if such statements were considered provisional, "the subsequent continuation of the suspension of concessions by [the United States and Canada] without alteration and without saying that [they were] still studying [Directive 2003/74/EC]" confirms that they made such a "determination".[613] The Panel further found that, because the DSB's authorization to suspend concessions does not apply to Directive 2003/74/EC[614] and does not amount to "a multilateral determination of inconsistency"

[606]Panel Report, *US – Continued Suspension*, para. 7.205; Panel Report, *Canada – Continued Suspension*, para. 7.197.

regarding that Directive[615], the United States and Canada failed to make a determination through recourse to the rules and procedures of the DSU, in violation of Article 23.2(a) of the DSU. Because the United States and Canada "ha[d] not made any determination through recourse to dispute settlement in accordance with the rules and procedures of the DSU," the Panel concluded *a fortiori* that the United States and Canada "ha[d] failed to make any such determination consistent with the findings contained in the panel or Appellate Body report adopted by the DSB or an arbitration award rendered under the DSU."[616] Therefore, the Panel found that the United States and Canada had breached Article 23.2(a) of the DSU.[617]

275. Next, the Panel turned to the European Communities' claim that the United States and Canada were required to initiate Article 21.5 proceedings if they considered that Directive 2003/74/EC was not consistent with the covered agreements. The Panel stated that recourse to the rules and procedures of the DSU, within the meaning of Article 23.2(a), "encompasses any of the means of dispute settlement provided in the DSU, including consultation, conciliation, good offices and mediation"[618] and is not limited to panel proceedings under Article 21.5 of the DSU. On this basis, the Panel "[did] not find it necessary to make a finding on whether [the United States and Canada] breached Article 21.5 by not having recourse to the procedure under that provision".[619]

276. On the basis of the above, the Panel concluded that the United States and Canada:

> violated Article 23.1 and 23.2(a) of the DSU by seeking redress of a violation of the WTO Agreement through a determination that the [European Communities'] implementing measure did not comply with the DSB recommendations and rulings in the *EC – Hormones* case without having recourse to dispute settlement in accordance with the rules and procedures of the DSU.[620]

3. The European Communities' Claim that the United States and Canada Breached Article 23.1 of the DSU Read Together with Articles 22.8 and 3.7

277. The Panel then turned to the European Communities' claim that the United States and Canada breached Article 23.1, read together with Articles 22.8 and 3.7 of the DSU, by continuing the suspension of concession even though the measure found to be inconsistent in *EC – Hormones* had been removed. The Panel observed that its earlier findings that the United States and Canada committed a "procedural error under the DSU [and] breached Articles 23.1 and 23.2(a)"[621] were "completely unrelated to whether the European Communities implemented the DSB recommendations and rulings"[622] in *EC – Hormones* in substance. In contrast, the Panel found that the European Communities' allegation of violations of Articles 22.8, 23.1, and 3.7 of the DSU was premised on the

[615]Panel Report, *US – Continued Suspension*, para. 7.242; Panel Report, *Canada – Continued Suspension*, para. 7.235.
[616]Panel Report, *US – Continued Suspension*, para. 7.244; Panel Report, *Canada – Continued Suspension*, para. 7.237. (emphasis omitted)
[617]Panel Report, *US – Continued Suspension*, para. 7.245; Panel Report, *Canada – Continued Suspension*, para. 7.238.
[618]Panel Report, *US – Continued Suspension*, para. 7.247; Panel Report, *Canada – Continued Suspension*, para. 7.240.
[619]Panel Report, *US – Continued Suspension*, para. 7.249; Panel Report, *Canada – Continued Suspension*, para. 7.242.
[620]Panel Report, *US – Continued Suspension*, para. 7.251; Panel Report, *Canada – Continued Suspension*, para. 7.244.
[621]Panel Report, *US – Continued Suspension*, para. 7.270; Panel Report, *Canada – Continued Suspension*, para. 7.286.
[622]Panel Report, *US – Continued Suspension*, para. 7.272; Panel Report, *Canada – Continued Suspension*, para. 7.288.

"*conformity* (presumed or actual) with the *SPS Agreement*"[623] of Directive 2003/74/EC. This is because, in the Panel's view, the phrase "until such time as the measure found to be inconsistent ... has been removed" in Article 22.8 implies that what is to be achieved is not the removal of the measure, but actual compliance with the DSB's recommendations and rulings.[624] Thus, Article 22.8 may be breached "only if the European Communities has complied with the recommendations and rulings of the DSB and [the United States and Canada] failed to immediately remove [their] suspension of concessions or other obligations."[625]

278. With respect to the European Communities' argument that it should benefit from "a presumption of good faith compliance"[626] regarding Directive 2003/74/EC, the Panel acknowledged that, under general international law, States enjoy a presumption of good faith in the performance of their treaty obligations.[627] Nevertheless, the Panel found that this presumption does not mean that the European Communities "actually complied with its treaty obligations"[628] and additionally observed that the United States and Canada may also invoke the presumption of good faith with regard to their respective measures.[629] Turning to the text of the DSU, the Panel found that "there is no express exclusion of the application of the principle of good faith in the DSU".[630] The Panel then rejected the United States' and Canada's argument that "the presumption of good faith compliance cannot supersede the multilateral authorization of the DSB ... to suspend concessions."[631] According to the Panel, "the removal of the measure found to be inconsistent with a covered agreement supersedes the DSB authorization to suspend concessions", because nothing in Article 22.8 of the DSU suggests that a Member suspending concessions can continue to do so as long as the authorization has not been repealed by the DSB.[632]

279. Next, the Panel examined the European Communities' argument that the presumption of good faith compliance is only rebuttable by recourse to Article 21.5 by the United States and Canada. In examining this argument, the Panel considered it important "to determine the extent to which the unavailability of any legal recourse for the European Communities in a post retaliation situation may justify that the presumption of good faith compliance be irrebuttable, except through recourse to the procedure provided in Article 21.5 of the DSU."[633] The Panel noted, first, that "nowhere does the DSU provide that a presumption of good faith compliance should be rebuttable only through recourse

[623]Panel Report, *US – Continued Suspension*, para. 7.272; Panel Report, *Canada – Continued Suspension*, para. 7.288.

[629]Panel Report, *US – Continued Suspension*, para. 7.323; Panel Report, *Canada – Continued Suspension*, para. 7.323.
[630]Panel Report, *US – Continued Suspension*, para. 7.336; Panel Report, *Canada – Continued Suspension*, para. 7.336.
[631]Panel Report, *US – Continued Suspension*, para. 7.342; Panel Report, *Canada – Continued Suspension*, para. 7.342.
[632]Panel Report, *US – Continued Suspension*, para. 7.343; Panel Report, *Canada – Continued Suspension*, para. 7.343.
[633]Panel Report, *US – Continued Suspension*, para. 7.348; Panel Report, *Canada – Continued Suspension*, para. 7.346.

to Article 21.5 of the DSU."[634] Secondly, the Panel observed that "it appears that, even under the current DSU, several means seem *a priori* to be available to the European Communities to obtain termination of the suspension of concessions or other obligations", including good offices and consultations, Article 21.5 proceedings, arbitration under Article 25 of the DSU, and recourse to regular panel procedures (as the European Communities had done in the present case).[635] For these reasons, the Panel rejected the European Communities' argument "that the presumption of good faith compliance which the European Communities enjoys should be rebuttable only through a recourse by the complainants in the original case to Article 21.5 of the DSU."[636] The Panel was not persuaded that Article 21.5 is the "only avenue" for addressing "a claim of compliance by a Member alleging to have complied with DSB recommendations and rulings", nor that Article 21.5 proceedings are "open only to the original complainant".[637]

280. The Panel concluded:

> while we agree with the existence of a presumption of good faith compliance, we do not agree with the European Communities that the presumption of good faith that it enjoys may only be rebutted in an Article 21.5 procedure. We find, on the contrary, that this presumption, because it applies to measures taken by all parties, must be rebuttable before this Panel. Just as the [European Communities'] allegations are intended to rebut the presumption of good faith conformity of the [United States and Canadian] retaliatory measures with Article 22.8 of the DSU, [the United States and Canada] should be allowed to rebut the presumption of [European Communities'] compliance by proving actual non-compliance.[638]

[634]Panel Report, *US – Continued Suspension*, para. 7.349; Panel Report, *Canada – Continued Suspension*, para. 7.347.
[635]Panel Report, *US – Continued Suspension*, para. 7.350; Panel Report, *Canada – Continued Suspension*, para. 7.348. The Panel noted that the broad language ("such dispute shall be decided through recourse to these dispute settlement procedures") used in Article 21.5 "could be deemed to encompass any procedure available under the DSU for the resolution of disputes". The Panel, however, opined that "other terms in Article 21.5 support the view that the Article 21.5 procedure is actually a panel procedure with a shorter deadline" and read the phrase "including whenever possible resort to the original panel" not as meaning that resort to a panel is generally preferred, but as requesting resort to the panelists that served on the original case, rather than to other individuals. (Panel Report, *US – Continued Suspension*, para. 7.351; Panel Report, *Canada – Continued Suspension*, para. 7.349)
[636]Panel Report, *US – Continued Suspension*, para. 7.356; Panel Report, *Canada – Continued Suspension*, para. 7.354.
[637]Panel Report, *US – Continued Suspension*, para. 7.355; Panel Report, *Canada – Continued Suspension*, para. 7.353.
[638]Panel Report, *US – Continued Suspension*, para. 7.357(f); Panel Report, *Canada – Continued Suspension*, para. 7.355(f). The Panel clarified:

> In reaching these conclusions, we do not consider that we add to or diminish the rights and obligations of WTO Members. We do not apply the presumption of good faith compliance independently from the obligations of the European Communities under the WTO Agreement. The European Communities has an obligation to comply with the WTO Agreement in general and with the recommendations and rulings of the DSB and the general principle of good faith implies that the European Communities do so in good faith. In doing so we apply the principle of good faith consistently with WTO law and general public international law.

(Panel Report, *US – Continued Suspension*, para. 7.358; Panel Report, *Canada – Continued Suspension*, para. 7.356) (footnotes omitted)

281. The Panel noted that, by invoking a presumption of good faith compliance, the European Communities was supporting its claim that the United States and Canada acted inconsistently with Article 23.1, read together with Articles 22.8 and 3.7, because they failed to terminate the suspension of concessions upon the removal of the measure found to be inconsistent with a covered agreement within the meaning of Article 22.8.[639] Thus, having determined that the presumption of good faith compliance is rebuttable in these proceedings, the Panel observed that, "for all practical purposes, this amounts to addressing the [European Communities'] 'alternative' claim of violation of Article 22.8 *per se*."[640] The Panel, however, explained that "this is not the result of us merely disregarding the order in which the European Communities wanted us to review this case".[641] Rather, the Panel considered that it was "still reviewing the [European Communities'] claim of violation of Article 23.1, read together with Articles 22.8 and 3.7" and "not reviewing a claim of violation of Article 22.8 in isolation."[642]

4. The Panel's Jurisdiction

282. The Panel recognized that its "terms of reference do not include any provision of the *SPS Agreement*"[643] and that, as a consequence, it was not within its mandate to review the alleged violations of the *SPS Agreement* or to make findings under that Agreement. Nonetheless, the Panel found that it "should address the compatibility of [Directive 2003/74/EC] with the provisions of the *SPS Agreement* referred to by the parties to the extent necessary to determine, with respect to the [European Communities'] claim relating to Article 22.8, whether the [European Communities'] measure found to be inconsistent in the *EC – Hormones* case has been removed."[644] Therefore, the Panel considered "that these are sufficient reasons for it to conclude that it has jurisdiction to consider the compatibility of the [European Communities'] implementing measure with the *SPS Agreement* as part of its review of the claim raised by the European Communities with respect to Article 22.8 of the DSU."[645] The Panel recognized that it was difficult for the European Communities to "identify all potential problems of incompatibility".[646] Instead, the Panel considered it "preferable, both from a legal and practical point of view, to consider *all* the allegations and arguments raised by each party, as long as the other party had the opportunity to comment on those allegations and arguments".[647] On this basis, the Panel found that it could review the compatibility of the Directive 2003/74/EC with Articles 5.1, 5.2[648], 5.7, and 3.3 of the *SPS Agreement*.[649]

[639]Panel Report, *US – Continued Suspension*, para. 7.332; Panel Report, *Canada – Continued Suspension*, para. 7.332.
[640]Panel Report, *US – Continued Suspension*, para. 7.359; Panel Report, *Canada – Continued Suspension*, para. 7.357.
[641]Panel Report, *US – Continued Suspension*, para. 7.359; Panel Report, *Canada – Continued Suspension*, para. 7.357.
[642]Panel Report, *US – Continued Suspension*, para. 7.359; Panel Report, *Canada – Continued Suspension*, para. 7.357.
[643]Panel Report, *US – Continued Suspension*, para. 7.360; Panel Report, *Canada – Continued Suspension*, para. 7.358.
[644]Panel Report, *US – Continued Suspension*, para. 7.375; Panel Report, *Canada – Continued Suspension*, para. 7.372. The Panel was "mindful of the procedural problems raised by this approach", but did not consider that, by proceeding in this manner, it was exceeding its jurisdiction to the extent that such a review is necessary in order to address the European Communities' claims under Article 22.8. (*Ibid.*)
[645]Panel Report, *US – Continued Suspension*, para. 7.379; Panel Report, *Canada – Continued Suspension*, para. 7.376.
[646]Panel Report, *US – Continued Suspension*, para. 7.403; Panel Report, *Canada – Continued Suspension*, para. 7.400.
[647]Panel Report, *US – Continued Suspension*, para. 7.404; Panel Report, *Canada – Continued Suspension*, para. 7.401. (original emphasis)
[648]The Panel reviewed Article 5.2 of the *SPS Agreement* in *US – Continued Suspension* only, because Canada did not make a claim under this provision.

5. Burden of Proof

283. Regarding the allocation of burden of proof, the Panel stated that it was for the European Communities to prove its claim that the United States and Canada had breached Article 22.8 of the DSU.[650] This claim was premised on the removal by the European Communities of the measure that had been found to be inconsistent in *EC – Hormones* and on its allegation that Directive 2003/74/EC was consistent with the *SPS Agreement*. The Panel shared the European Communities' concern that this could generate for the original respondent at the beginning of the proceedings a situation "equivalent to having to 'prove a negative', since the spectrum of provisions against which the legality of the [European Communities'] measure may have to be reviewed remain[ed] very broad" as long as the original complainants had not made their own allegations of inconsistency of the implementing measure.[651] The Panel noted that the European Communities enjoyed a rebuttable presumption of good faith compliance and thus, once it had established a *prima facie* case on the basis of that presumption, the burden shifted to the United States and Canada to rebut that presumption. The Panel, however, considered that the United States and Canada "sufficiently refuted the [European Communities'] allegation of compliance"[652] with the *SPS Agreement* and, subsequently, the European Communities responded to the allegations of violation. Therefore, the Panel believed that the European Communities "never actually had to 'prove a negative' in this case."[653] In the Panel's view, the "presumptions based on good faith enjoyed by each party ... eventually 'neutralized' each other" such that ultimately, each party had to prove its specific allegations in response to the evidence submitted by the other party and the Panel followed the practice of other panels to weigh all the evidence before it.[654]

284. On this basis, the Panel went on to examine the consistency of Directive 2003/74/EC with the *SPS Agreement*, and found that "it has not been established that the European Communities has removed the measure found to be inconsistent with a covered agreement."[655] Consequently, the Panel concluded that the European Communities failed to demonstrate a breach of Article 22.8 of the DSU

[649]Panel Report, *US – Continued Suspension*, para. 7.411; Panel Report, *Canada – Continued Suspension*, para. 7.402.
[650]Panel Report, *US – Continued Suspension*, para. 7.383; Panel Report, *Canada – Continued Suspension*, para. 7.380. The Panel explained:

> With respect to the violation of Article 22.8 as such, the Panel considered that it had, in principle, no reason to address burden of proof any differently than any other panel established under Article 6 of the DSU. Indeed, as stated by the [European Communities] itself, this case is about a measure taken by [the United States and Canada, respectively]. The fact that this dispute takes place in the context of the [European Communities'] alleged compliance with the recommendations and rulings of the DSB in the *EC – Hormones* dispute should have no impact on the question of the burden of proof regarding the actual claim before us. This means that the principles identified by the Appellate Body above apply, and that the European Communities must prove its claim that [the United States and Canada] breach[] Article 22.8 of the DSU.

(Panel Report, *US – Continued Suspension*, para. 7.383; Panel Report, *Canada – Continued Suspension*, para. 7.380)
[651]Panel Report, *US – Continued Suspension*, para. 7.385; Panel Report, *Canada – Continued Suspension*, para. 7.382.
[652]Panel Report, *US – Continued Suspension*, para. 7.385; Panel Report, *Canada – Continued Suspension*, para. 7.382.
[653]Panel Report, *US – Continued Suspension*, para. 7.385; Panel Report, *Canada – Continued Suspension*, para. 7.382.
[654]Panel Report, *US – Continued Suspension*, para. 7.386; Panel Report, *Canada – Continued Suspension*, para. 7.383.

by the United States and Canada and thus there was no violation of Articles 23.1 and 3.7 of the DSU as a result of a breach of Article 22.8.[656]

6. The Panel's Suggestion

285. After setting out its conclusions, the Panel observed that the parties had "apparently diverging opinions as to how this report should be implemented by the respondent".[657] The Panel then noted that, although it had "performed functions similar to that of an Article 21.5 panel, this was done only in order to determine whether Article 22.8 of the DSU had been breached" and that it "was not called upon, nor [did] it have jurisdiction, to determine the compatibility of Directive 2003/74/EC with the covered agreements".[658] Thus, the Panel suggested that, "in order to implement its findings under Article 23 and in order to ensure the prompt settlement of this dispute, [the United States and Canada] should have recourse to the rules and procedures of the DSU without delay."[659]

C. *Claims and Arguments on Appeal*

1. Appeal by the European Communities

286. The European Communities raises three claims of error on appeal. First, the European Communities submits that the Panel erred by failing to find that Article 23.2(a), read together with Articles 21.5 and 23.1 of the DSU, required the United States and Canada to initiate Article 21.5 proceedings if they considered that Directive 2003/74/EC did not bring the European Communities into compliance with the DSB's recommendations and rulings in *EC – Hormones*.[660] The European Communities maintains that recourse to procedures under Article 21.5 is required in order to examine the consistency of Directive 2003/74/EC with the *SPS Agreement*, and Article 21.5 proceedings may only be initiated by the original complainants, in this case, the United States and Canada.[661] Secondly, the European Communities asserts that Article 22.8 required the termination of the suspension of concessions upon the adoption and the subsequent notification of Directive 2003/74/EC to the DSB.[662] Thus, the European Communities considers that the Panel erred in finding that its claim under Article 23.1, read together with Articles 22.8 and 3.7 of the DSU, was premised on the actual conformity of Directive 2003/74/EC with the *SPS Agreement*[663]; as a result, the Panel also erred in finding that the United States and Canada did not breach Article 22.8 of the DSU, even though they continued to suspend concessions without having recourse to Article 21.5. Thirdly, the European Communities alleges that the Panel went beyond its terms of reference and erroneously assumed the functions of an Article 21.5 panel by examining the compatibility of

[656]Panel Report, *US – Continued Suspension*, paras. 7.850 and 7.851; Panel Report, *Canada – Continued Suspension*, paras. 7.385 and 7.836. Having found a violation of Articles 23.2(a) and 23.1 of the DSU and addressed the alleged violation of Article 22.8 as part of its review of the European Communities' second main claim, the Panel considered it unnecessary to address the European Communities' conditional claim of violation of Article 22.8 of the DSU *per se* in the alternative. (Panel Report, *US – Continued Suspension*, paras. 7.855; Panel Report, *Canada – Continued Suspension*, para. 7.840)

[657]Panel Report, *US – Continued Suspension*, para. 8.3; Panel Report, *Canada – Continued Suspension*, para. 8.3.

[658]Panel Report, *US – Continued Suspension*, para. 8.3; Panel Report, *Canada – Continued Suspension*, para. 8.3.

[659]Panel Report, *US – Continued Suspension*, para. 8.3; Panel Report, *Canada – Continued Suspension*, para. 8.3.

[660]European Communities' appellant's submission, para. 94.

[661]*Ibid.*, paras. 49 and 73.

[662]*Ibid.*, para. 155.

[663]*Ibid.*, paras. 99 and 100 (referring to Panel Report, *US – Continued Suspension*, para. 7.272; and Panel Report, *Canada – Continued Suspension*, para. 7.288).

Directive 2003/74/EC with the *SPS Agreement*.[664] In addition to these three claims of error, the European Communities requests the Appellate Body to "improve"[665] the Panel's suggestion that the United States and Canada "should have recourse to the rules and procedures of the DSU without delay"[666], so as to make it clear that the United States and Canada must cease applying their suspension of concessions and have recourse to Article 21.5 of the DSU, or other dispute settlement proceedings to which the parties may agree, in order to seek multilateral resolution of any remaining disagreements over the European Communities' import ban.[667]

287. The United States maintains that the Panel correctly interpreted the phrase "recourse to dispute settlement in accordance with the rules and procedures of this Understanding" in Article 23.2(a) as encompassing all procedures under the DSU, rather than relating exclusively to Article 21.5 panel proceedings.[668] The United States further submits that Article 21.5 refers to "these dispute settlement procedures" without specifying any particular subset of the procedures provided in the DSU.[669] In addition, the United States argues that the Panel correctly interpreted Article 22.8 of the DSU when finding that the United States did not breach its obligation under that provision. The United States asserts that the European Communities "simply switched" the legal instruments underlying the import ban and, in so doing, failed to remove the ban, that is, the inconsistent measure within the meaning of Article 22.8.[670] The United States further claims that the European Communities specifically asked the Panel to review whether the United States acted inconsistently with Article 22.8. Thus, in order to adjudicate that claim, the Panel correctly interpreted and applied Article 22.8 by examining the consistency of Directive 2003/74/EC with the *SPS Agreement* and did not exceed its terms of reference.[671] Moreover, the United States argues that the Panel's suggestion does not require it to terminate the suspension of concessions. Finally, the United States observes that "improving" the suggestion, as requested by the European Communities, "is not within the purview of what the Appellate Body is called upon to do with respect to panel reports".[672]

288. Canada submits that, contrary to the European Communities' contentions, the Panel correctly found that "recourse to dispute settlement" within the meaning of Article 23.2(a) is not limited to Article 21.5 panel proceedings. Canada maintains that the European Communities' unilateral assertion of compliance regarding Directive 2003/74/EC does not compel Canada to initiate Article 21.5 proceedings, and does not require Canada to lift the suspension of concessions.[673] Canada alleges that the European Communities, as the original respondent, is not legally precluded from initiating Article 21.5 proceedings[674], and that other procedural avenues are also available to the European Communities, including new panel proceedings.[675] Canada further claims that the Panel correctly interpreted Article 22.8 by concluding that the phrase "until such time as the measure found to be inconsistent with a covered agreement has been removed" means that the inconsistency itself, and not only the originally impugned measure, has been removed.[676] Finally, Canada maintains that the Panel did not exceed its terms of reference in examining the consistency of Directive 2003/74/EC

[664]European Communities' appellant's submission, para. 175.

with the *SPS Agreement*. Rather, Canada asserts that, because the European Communities' claim that Canada breached Article 22.8 is premised on actual compliance by the European Communities, the Panel was required to review the consistency of Directive 2003/74/EC with the *SPS Agreement* to resolve the dispute.[677]

2. Other Appeals by the United States and Canada

289. The United States claims that the Panel erred in finding that the United States was "seeking the redress of a violation" within the meaning of Article 23.1 of the DSU through the continued suspension of concessions. The United States maintains that it "had extensive and lengthy recourse to multiple procedures under the DSU"[678] before obtaining the authorization of the DSB to suspend concessions on 26 July 1999, and this authorization to suspend concessions has never been revoked.[679] By finding that the United States was seeking the redress of a violation, the Panel "re-characteriz[ed]"[680], without any legal basis, the United States' suspension of concessions as directed against Directive 2003/74/EC. Furthermore, the United States takes issue with the Panel's finding that the United States' statements regarding Directive 2003/74/EC at DSB meetings constituted a "determination" within the meaning of Article 23.2(a) of the DSU. The United States maintains that such a "determination" cannot be inferred or implied, and the Panel erred in drawing such an inference from the United States' "inaction"[681] regarding the suspension of concessions. In the event that the Appellate Body upholds the Panel's findings under Articles 23.2(a) and 23.1, the United States requests reversal of the Panel's "erroneous suggestion"[682] that the United States "must have recourse to the rules and procedures of the DSU without delay". The United States contends that "recourse to the rules and procedures" of the DSU has already been achieved by the United States' participation in this dispute initiated by the European Communities.[683] The United States further submits that the Panel erred in concluding that it had no jurisdiction to rule on the compatibility of Directive 2003/74/EC with the *SPS Agreement*. Consequently, the Panel's findings regarding the inconsistency of Directive 2003/74/EC with the *SPS Agreement* should be considered "direct" findings and the conclusion that the United States needs to bring its measure into conformity with the DSU should be reversed.[684]

290. Canada alleges that the Panel erred by examining the European Communities' claim under Articles 23.2(a) and 23.1 in isolation from its analysis under Article 22.8 of the DSU. According to Canada, the Panel should have first applied the requirements of Article 22.8 to determine whether the suspension of concessions had to be terminated, and the Panel's failure to do so resulted in "contradictory findings"[685] concerning the first and second sets of claims of the European Communities. Canada conditionally appeals two other issues, in case the Appellate Body were to find that the Panel was correct in making findings in respect of Articles 23.1 and 23.2(a) without taking into account its finding in respect of Article 22.8. First, Canada contends that, even if the Panel were correct to consider Article 23 in isolation, the Panel erred in finding that Canada was "seeking the redress" of a WTO violation by continuing the suspension of concessions. Canada maintains that it has "sought and obtained"[686] the DSB's authorization to suspend concessions and that, contrary to the

[677] *Ibid.*, para. 41.
[678] United States' other appellant's submission, para. 29.
[679] *Ibid.*, para. 18.
[680] *Ibid.*, para. 31.
[681] United States' other appellant's submission, para. 98.
[682] *Ibid.*, para. 108.
[683] *Ibid.*, para. 112.
[684] *Ibid.*, para. 119. The United States clarifies that the Appellate Body need not address these last two points should it reverse the Panel's findings and conclusions concerning Articles 23.1 and 23.2(a) of the DSU. (*Ibid.*, para. 9)
[685] Canada's other appellant's submission, para. 43.
[686] *Ibid.*, para. 80.

Panel's finding, simply because Directive 2003/74/EC is a new measure does not imply that the legal basis for Canada's suspension of concessions has changed.[687] Secondly, Canada alleges that the Panel erred in finding that Canada made a unilateral determination of non-compliance regarding Directive 2003/74/EC, within the meaning of Article 23.2(a), on the basis of Canada's statements at the DSB meetings, as well as the fact that Canada continued to suspend concessions.[688] In the alternative, should the Appellate Body uphold the Panel's findings under Articles 23.2(a) and 23.1, Canada requests the Appellate Body to reverse the Panel's conclusion that it did not have jurisdiction to determine the compatibility of Directive 2003/74/EC with the *SPS Agreement*.[689] Finally, Canada claims that the Panel erred in making the suggestion that "Canada should have recourse to the rules and procedures of the DSU without delay"[690] because this conclusion, according to Canada, contradicts the Panel's own finding that Canada had not breached Article 22.8.[691]

291. The European Communities responds that Article 23 of the DSU is fully applicable in the implementation and post-suspension stage of a dispute[692], because the multilateral dispute settlement system relies on good faith compliance and the presumption of conformity with the covered agreements of measures taken by WTO Members.[693] The European Communities further contends that the adoption of a measure taken to comply, which must be presumed to be consistent with the WTO agreements, triggers the following duties on the original complainant: (i) to form a view on whether the measure that has been found to be inconsistent has been removed; (ii) to have recourse to Article 21.5 proceedings if it considers that the measure taken to comply is not consistent with the covered agreements; and (iii) to cease the suspension of concessions.[694] The European Communities disagrees with the argument of the United States and Canada that they are not seeking the redress of a violation within the meaning of Article 23.1 by maintaining the suspension of concessions, because the notification of Directive 2003/74/EC does not change the legal basis for the suspension of concessions.[695] The European Communities submits that Article 22.8 of the DSU does not specify that it is for the original respondent to show that it has removed the original measure[696], and that, in any event, the European Communities has effectively shown that the inconsistent measure, namely Directive 96/22/EC, has been removed.[697] Thus, the United States and Canada could no longer maintain their suspension of concessions once the European Communities had adopted Directive 2003/74/EC.[698]

292. The European Communities further argues that the Panel correctly found that the United States and Canada made a determination to the effect that a violation has occurred within the meaning of Article 23.2(a) of the DSU. The European Communities maintains that the statements by the United States and Canada at the DSB meetings, together with the fact that the United States and Canada have maintained their suspension of concessions, indicate that they made a "definitive" determination with sufficient "firmness or immutability" regarding the inconsistency of Directive 2003/74/EC with the covered agreements.[699] Furthermore, the European Communities disagrees with the United States' view that the Panel inferred the existence of a "determination" from inaction. According to the European Communities, the United States "actively considered" that

[687] *Ibid.*, para. 82.
[688] *Ibid.*, para. 87.
[689] Canada's other appellant's submission, para. 92.
[690] *Ibid.*, para. 96.
[691] *Ibid.*, para. 95.
[692] European Communities' appellee's submission, para. 47.
[693] *Ibid.*, para. 40.
[694] *Ibid.*, para. 62.
[695] *Ibid.*, paras. 103, 104, and 113.
[696] *Ibid.*, para. 114.
[697] *Ibid.*, para. 115.
[698] *Ibid.*, paras. 105 and 115.
[699] European Communities' appellee's submission, paras. 126 and 136-138.

Directive 2003/74/EC is not consistent with the covered agreements and "actively continued" the suspension of concessions.[700]

3. Arguments of the Third Participants

293. Australia agrees with the European Communities that the disagreement as to whether Directive 2003/74/EC has removed the measure found to be inconsistent with the WTO agreements should have been resolved through recourse to panel proceedings under Article 21.5.[701] However, Australia believes that it is open to a Member to continue the suspension of concessions pending the outcome of the Article 21.5 panel proceedings.[702] Finally, Australia underscores that no provision of the *SPS Agreement* is included in the Panel's terms of reference, and that to include claims under the *SPS Agreement* within the scope of this dispute effectively reverses the burden of proof between the parties. This "is inconsistent with a fundamental principle ... that the party asserting non-compliance with a covered agreement bears the burden of establishing a *prima facie* case."[703]

294. Brazil contends that none of the three conditions set out in Article 22.8 regarding the termination of the suspension of concessions has been fulfilled, and thus the DSB's authorization granted to the United States and Canada to suspend concessions remains in place.[704] Brazil agrees with the Panel that the removal of the measure found to be inconsistent, within the meaning of Article 22.8, must be interpreted as requiring substantive compliance. Furthermore, Brazil asserts that, in the post-suspension stage of a dispute, the original responding Member bears the burden of proving that its implementing measure is WTO-consistent.[705]

295. New Zealand submits that the Panel failed to interpret Articles 23.1 and 23.2(a) in the context of Article 22.8 of the DSU. According to New Zealand, Article 22.8 refers to situations where the original inconsistent measure has actually been removed, and not where the measure is merely claimed to have been removed.[706] Therefore, New Zealand considers that the Panel erred in finding that the European Communities' claims under Articles 23.1 and 23.2(a) were completely unrelated to whether the European Communities had implemented the DSB's recommendations and rulings in *EC – Hormones*.[707]

296. Norway maintains that Article 22.8 requires that the suspension of concessions be temporary and conditional. Thus, once compliance is achieved, be it through a simple revocation of the inconsistent measure or its replacement with another measure that ensures compliance, the right to suspend concessions "*automatically* lapses"[708] without a need for formal revocation of the authorization by the DSB. Where the parties disagree as to whether the measure taken to comply actually achieves compliance, as is the case in this dispute, both the original complainant and the original respondent can resort to Article 21.5 panel proceedings.[709]

D. *Cessation of the Suspension of Concessions – Article 22.8 of the DSU*

1. Preliminary Comments

297. The European Communities alleges that the Panel erred by failing to find that Article 23.2(a), read together with Articles 21.5 and 23.1 of the DSU, required the United States and Canada to initiate Article 21.5 proceedings if they considered that Directive 2003/74/EC did not bring the European Communities into compliance with the DSB's recommendations and rulings in *EC – Hormones*.[710] The European Communities further asserts that the Panel erred in finding that Article 22.8 of the DSU requires actual compliance with the DSB's recommendations and rulings in *EC – Hormones* before the suspension of concessions has to be terminated[711], and that the Panel exceeded its terms of reference by examining such compliance when analyzing the European Communities' claims under Articles 23.1, 22.8, and 3.7 of the DSU.[712]

298. For the sake of simplicity, we refer to the Member applying the suspension of concessions pursuant to the DSB's authorization as the "suspending Member". We refer to the Member against whom the suspension of concessions is applied as the "implementing Member".

299. The European Communities' claims raise several questions concerning the position of the suspending Member in circumstances where a measure is taken by the implementing Member to comply with the DSB's recommendations and rulings. The first question concerns whether the suspending Member is required to initiate Article 21.5 proceedings, if it considers that the implementing measure fails to bring about compliance. The second question concerns the substantive issue as to whether an obligation to lift the suspension of concessions, pursuant to Article 22.8, arises when an implementing measure replaces the impugned measure. We recall that this dispute concerns the legality of the suspension of concessions maintained by the United States and Canada subsequent to the adoption and notification of the European Communities' implementing measure. The suspension of concessions that is authorized by the DSB must be applied consistently with Article 22.8 of the DSU. Therefore, we first examine whether the Panel erred in finding that Article 22.8 requires actual compliance by the European Communities with the DSB's recommendations and rulings before the suspension of concessions must be terminated by the United States and Canada. We will then turn, in section E, to the issue of whether Article 21.5 proceedings are the proper procedures to follow and which party must initiate such proceedings.

2. When Must a WTO Member Cease to Suspend Concessions Pursuant to Article 22.8 of the DSU?

300. The European Communities submits that its claims under Article 23.1, read together with Articles 22.8 and 3.7 of the DSU, are based on its "*interpretation* of Article 22.8, according to which the words 'the measure found to be inconsistent with a covered agreement' refer to the measure identified in the recommendations of the DSB".[713] The European Communities submits that the "measure found to be inconsistent with a covered agreement" in *EC – Hormones* was Directive 96/22/EC.[714] The European Communities maintains that Directive 96/22/EC "was removed"[715], within the meaning of Article 22.8, after being replaced by Directive 2003/74/EC. Thus, by continuing the suspension of concessions, the United States and Canada made a unilateral determination that Directive 2003/74/EC was not consistent with the *SPS Agreement*, in violation of

[710] European Communities' appellant's submission, para. 94.
[711] *Ibid.*, para. 152.
[712] *Ibid.*, para. 175.
[713] European Communities' appellant's submission, para. 102. (original emphasis)
[714] *Ibid.*, para. 129.
[715] *Ibid.*, para. 146.

Article 23.1 "read in the light of Article 22.8".[716] Therefore, the European Communities asserts that, contrary to the Panel's finding, it "never argued" that the claim under Article 23.1, read together with Articles 22.8 and 3.7 of the DSU, was premised on a violation of Article 22.8 by the United States and Canada and "never argued" that this claim was premised on the conformity of the implementing measure with the *SPS Agreement*.[717]

301. The European Communities' arguments are premised on its interpretation of Article 22.8 as requiring the termination of suspension of concessions whenever an implementing measure is adopted to replace the measure found to be inconsistent in proceedings that led to the DSB's recommendations and rulings. According to this interpretation, termination is required irrespective of the content of the implementing measure. Therefore, we proceed to examine the proper interpretation of Article 22.8 and, in particular, the phrase "the measure found to be inconsistent with a covered agreement has been removed" in that provision.

302. Article 3.7 of the DSU states that "the first objective of the dispute settlement mechanism is usually to secure the withdrawal of the measures concerned if these are found to be inconsistent with ... the covered agreements." If this cannot be achieved, the "last resort" provided under the DSU "to the Member invoking the dispute settlement procedures is the possibility of suspending the application of concessions ... on a discriminatory basis vis-à-vis the other Member, subject to authorization by the DSB". Accordingly, in the event that the DSB's recommendations and rulings are not implemented within a reasonable period of time, Article 22.1 provides for the suspension of concessions as a "temporary measure" available to the Member that originally initiated the dispute settlement procedures.[718]

303. The suspension of concessions may not be maintained indefinitely. The authorization to suspend concessions is contingent and limited in time. Article 22.8 of the DSU provides that the suspension of concessions shall be "temporary" and shall only be applied until one of the three resolutive conditions set out in that provision obtains, namely, when:

> ... the measure found to be inconsistent with a covered agreement has been removed, or the Member that must implement recommendations or rulings provides a solution to the nullification or impairment of benefits, or a mutually satisfactory solution is reached.

304. The participants agree that this dispute concerns the first condition listed in Article 22.8, that is, when "the measure found to be inconsistent with a covered agreement has been removed". In most cases, the first condition in Article 22.8 will be met where the implementing Member repeals the inconsistent measure without adopting any new measure in its place. The issue that arises in this dispute, however, is whether an inconsistent measure should be considered "removed" when it is replaced by a new implementing measure. Taken literally, removal of the inconsistent measure could mean that the implementing Member has adopted an act that formally repeals the inconsistent measure and replaces it with another measure, regardless of the content of the new measure and, in particular, of its compliance with the DSB's recommendations and rulings. Such a literal interpretation of the first condition in Article 22.8, however, does not comport with the other two conditions provided in that provision. The second condition in Article 22.8 requires termination of

[716] *Ibid.*, para. 102.

[717] *Ibid.*, paras. 99 and 100 (referring to Panel Report, *US – Continued Suspension*, para. 7.272; and Panel Report, *Canada – Continued Suspension*, para. 7.288).

[718] Article 22.6 specifies that the DSB, upon a request made within 30 days of the expiry of the reasonable period of time by the Member invoking the dispute settlement procedures, shall grant authorization to suspend concessions, or decide by consensus to reject the request. In addition, an arbitration procedure is envisaged under Article 22.6 in order to determine the proper level of the suspension of concessions and/or the sectors with respect to which the suspension is authorized. As regards the level of the suspension of concessions, Article 22.4 requires that it be "equivalent to the level of the nullification or impairment".

the suspension of concessions if "the Member that must implement recommendations or rulings provides a solution to the nullification or impairment of benefits", while the third condition refers to a situation where "a mutually agreed solution is reached". The reference to "a solution to the nullification or impairment of benefits" indicates that it is the inconsistency resulting from the measure, rather than the mere existence of the measure, that must be remedied before the obligation to cease the suspension of concessions arises. Moreover, by predicating the termination of the suspension of concessions on a "solution" either provided unilaterally (in the second condition) or reached by agreement (in the third condition), the two conditions require substantive resolution of the dispute. Under these two conditions, termination of the suspension of concessions is the final step in a dispute to which there is substantive resolution of the inconsistency found by the DSB. To achieve a similar result under the first condition, Article 22.8 cannot be understood as requiring the termination of the suspension of concessions merely on the basis of a formal repeal of the measure that has been found to be inconsistent by the DSB. All three conditions in Article 22.8 concern the circumstances under which the suspension of concessions must be terminated because there has been a final and substantive resolution to the dispute.

305. Reading the first sentence of Article 22.8 as a whole, the "removal" of "the measure found to be inconsistent" should be properly understood to require nothing less than substantive removal of the inconsistent measure. Substantive removal may be achieved by repealing the inconsistent measure. Where a WTO Member adopts an implementing measure that replaces the inconsistent measure, the implementing measure must bring about substantive compliance, that is, compliance with the DSB's recommendations and rulings and consistency with the covered agreements. We recognize that the first condition in Article 22.8 may be understood more narrowly as referring only to compliance with the DSB's recommendations and rulings. However, a dispute could not be brought to its finality unless the implementing measure rectifies the inconsistencies found in the DSB's recommendations and rulings and is not in other ways inconsistent with the covered agreements. Interpreting the first condition as requiring substantive compliance, therefore, will ensure that the first condition in Article 22.8 achieves the result obtained under the other two conditions in the same provision, that is, the final and substantive resolution of a dispute. Such an interpretation is also congruent with the scope of compliance proceedings under Article 21.5 of the DSU. Pursuant to the first sentence of that provision, compliance proceedings cover the existence and consistency with the covered agreements of a measure taken to comply with the DSB's recommendations and rulings. As further discussed in section E, proceedings under Article 21.5 is the proper procedure to follow in determining whether the inconsistent measure has been removed within the meaning of Article 22.8.

306. In terms of the first condition in Article 22.8, therefore, the application of the suspension of concessions may continue until the removal of the measure found by the DSB to be inconsistent results in substantive compliance. If a disagreement arises as to whether substantive compliance is achieved, the fulfilment of the first condition in Article 22.8 cannot be confirmed unless the disagreement is resolved through multilateral dispute settlement. Thus, the suspension of concessions continues to apply pending the outcome of the dispute settlement proceedings concerning the first resolutive condition in Article 22.8. If, by recourse to a multilateral dispute settlement process, the implementing measure is found to bring about substantive compliance, the suspension of concessions may no longer be applied pursuant to the first condition in Article 22.8 and cessation of the suspension is required.

307. This interpretation is supported by the second sentence of Article 22.8, which provides:

> In accordance with paragraph 6 of Article 21, the DSB shall continue to *keep under surveillance* the implementation of adopted recommendations or rulings, including those cases where ... concessions or other obligations have been suspended *but the recommendations to bring a measure into conformity with the covered agreements have not been implemented.*

The second sentence of Article 22.8 requires surveillance by the DSB until its recommendations to bring a measure into conformity with the covered agreements have been implemented. In other words, DSB surveillance is required until substantive compliance is achieved.

308. Moreover, this interpretation of Article 22.8 is consistent with the broader context provided by other provisions of the DSU relating to implementation of the DSB's recommendations and rulings and with the object and purpose of the DSU. Article 22.1 of the DSU provides that the suspension of concessions is not to be "preferred to *full* implementation of a recommendation to bring a measure into conformity with the covered agreements".[719] The requirements in Article 21.5 to examine whether compliance measures exist and whether the measures taken to comply are consistent with the covered agreements also suggest that substantive compliance is required, rather than formal removal of the inconsistent measure. Furthermore, pursuant to Article 3.7, the suspension of concessions is the "last resort" available to the Member invoking the dispute settlement procedures when compliance with the DSB's recommendations and rulings has not been achieved within a reasonable period of time. To require the termination of suspension of concessions before substantive compliance is achieved would significantly weaken the effectiveness of the WTO dispute settlement mechanism. A Member authorized by the DSB to suspend concessions enjoys the assurance under Article 22.8 that, until substantive compliance is achieved or, in case of disagreement, multilaterally-confirmed, the suspension of concessions continues to be permitted under the DSU.

309. The European Communities contends that the three conditions in Article 22.8 concerning the termination of the suspension of concessions are alternatives to each other and that it is sufficient to only look at one condition without considering the others when determining whether the suspension of concessions must cease.[720] We agree that the three conditions in Article 22.8 are alternatives to each other. However, they are alternatives leading to the same result, that is, the termination of the suspension of concessions and final resolution of a dispute. It is difficult to envisage how a dispute could be finally resolved merely because the inconsistent measure is formally removed, regardless of whether substantive compliance has been achieved. The European Communities further submits that the second sentence of Article 22.8 contemplates that there may be situations in which "a measure has been removed" but "the matter remains under surveillance of the DSB".[721] The second sentence of Article 22.8 specifically requires surveillance by the DSB where "*concessions ... have been suspended but* the recommendations to bring a measure into conformity with the covered agreement has not been implemented". Thus, this provision clearly situates the ongoing surveillance within the context of the continued suspension of concessions, indicating that the authorization to suspend concessions does not lapse under Article 22.8 until substantive compliance is achieved. Moreover, the European Communities' position, which requires the termination of the suspension of concessions whenever an implementing measure is notified, undermines the effectiveness of the suspension of concessions in inducing full compliance. Such a position is difficult to reconcile with the DSU's objective of providing security and predictability to the multilateral trading system.

310. Although Article 22.8 sets forth the resolutive conditions under which the suspension of concessions must cease to apply, it does not identify the procedures to be followed should a dispute arise as to whether one of the conditions has been satisfied. This does not mean that Members can remain passive once concessions have been suspended pursuant to the DSB's authorization. The requirement that the suspension of concessions must be temporary indicates that the suspension of concessions, as the last resort available under the DSU when compliance is not achieved, is an abnormal state of affairs that is not meant to remain indefinitely. Members must act in a cooperative manner so that the normal state of affairs, that is, compliance with the covered agreements and

[719]Moreover, pursuant to Article 3.3, the "prompt settlement" of disputes "is essential to the effective functioning of the WTO and the maintenance of a proper balance between the rights and obligations of Members".

[720]European Communities' statement at the oral hearing.

[721]*Ibid.*

absence of the suspension of concessions, may be restored as quickly as possible. Thus, both the suspending Member and the implementing Member share the responsibility to ensure that the application of the suspension of concessions is "temporary". Moreover, the fulfilment of the first resolutive condition in Article 22.8 requires certain actions from both Members. The implementing Member is required to remove the measure found to be inconsistent with a covered agreement. At the same time, the suspending Member is required to ensure that the suspension of concessions is only applied within the limits of Article 22.8. Where, as in this dispute, an implementing measure is taken and Members disagree as to whether this measure achieves substantive compliance, both Members have a duty to engage in WTO dispute settlement in order to establish whether the conditions in Article 22.8 have been met and whether, as a consequence, the suspension of concessions must be terminated. Once substantive compliance has been confirmed through WTO dispute settlement procedures, the authorization to suspend concessions lapses by operation of law (*ipso jure*), because it has been determined that one of the resolutive conditions pursuant to Article 22.8 is fulfilled.[722] We examine in section E the procedural avenues that would be available should a disagreement arise as to whether the conditions in Article 22.8 have been satisfied.

3. The Panel's Analysis Concerning Article 22.8 of the DSU

311. The Panel found that "the phrase 'until such time as the measure found to be inconsistent with a covered agreement has been removed' [in Article 22.8] means the illegality itself, and not only the measure, has been removed."[723] The Panel considered that this interpretation is confirmed by the second sentence of Article 22.8, which refers to the DSB keeping under surveillance the situations in which concessions have been suspended but the recommendations and rulings of the DSB have not been implemented. In the Panel's view, the second sentence implied that "what is to be achieved is not the removal of the measure but the actual compliance with the recommendations and rulings of the DSB."[724] Therefore, according to the Panel, "Article 22.8 may be breached only if the European Communities has complied with the recommendations and rulings of the DSB and [the United States and Canada have] failed to immediately remove its suspension of concessions or other obligations."[725] We consider that the Panel was correct in reaching this finding. In subsection 2, we found that the terms "until such time as the inconsistent measure has been removed" in Article 22.8 require substantive compliance and that, until it is achieved, the suspension of concessions may continue.

312. The European Communities highlights the Panel's statements, made in the context of its findings of procedural violations under Articles 23.2(a) and 23.1, that Directive 2003/74/EC "shows all the signs of an implementing measure ... adopted in good faith".[726] The European Communities maintains that once a Member has adopted an implementing measure which it believes in good faith to bring about compliance, the suspension of concessions can no longer be applied.[727] The question raised by this claim, therefore, is whether the "removal" of an inconsistent measure within the meaning of Article 22.8 may be established on the sole basis of a presumption of good faith compliance by the European Communities.

[722]In contrast, where an inconsistent measure is removed without being replaced by a new measure, the objective condition in Article 22.8 would, in most cases, be met and the authority to suspend concessions would automatically lapse.

[723]Panel Report, *US – Continued Suspension*, para. 7.283; Panel Report, *Canada – Continued Suspension*, para. 7.299.

[724]Panel Report, *US – Continued Suspension*, para. 7.284; Panel Report, *Canada – Continued Suspension*, para. 7.300.

[726]Panel Report, *US – Continued Suspension*, para. 7.238; Panel Report, *Canada – Continued Suspension*, para. 7.231.

[727]European Communities' appellant's submission, para. 141.

313. The DSU makes reference to "good faith" in two provisions, namely, Article 4.3, which relates to consultations, and Article 3.10, which provides that, "if a dispute arises, all Members will engage in these procedures in good faith in an effort to resolve the dispute." These provisions require Members to act in good faith with respect to the initiation of a dispute and in their conduct during a dispute settlement proceedings. Neither provision specifically addresses the question of whether a Member enjoys a presumption of good faith compliance in respect of measures taken to implement the DSB's recommendations and rulings.

314. The Appellate Body has recognized that the principle of good faith, a principle well-recognized in international law, applies in WTO dispute settlement. As the Appellate Body stated in *EC – Sardines*:

> We must assume that Members of the WTO will abide by their treaty obligations in good faith, as required by the principle of *pacta sunt servanda* articulated in Article 26 of the *Vienna Convention*. *And, always in dispute settlement, every Member of the WTO must assume the good faith of every other Member*.[728] (emphasis added)

315. The Member required to implement the DSB's recommendations and rulings may be presumed to have acted in good faith when adopting the implementing measure. However, the presumption of good faith attaches to the actor, but not to the action itself. Thus, whilst the presumption of good faith concerns the reasons for which a Member acts, such a presumption does not answer the question whether the measure taken by the implementing Member has indeed brought about substantive compliance. Similarly, the suspending Member can also be presumed to act in good faith in maintaining the suspension of concessions, but that does not entail that the suspension of concessions is necessarily consistent with Article 22.8. When a disagreement arises as to whether the implementing measure achieves substantive compliance and whether the suspension of concessions may continue, it should be submitted for adjudication in dispute settlement proceedings. In sum, a presumption of good faith, which can be claimed by both parties, does not offer a clear answer to the question of when inconsistencies arising from the original measure should be considered to have been removed within the meaning of Article 22.8 of the DSU.

316. In the light of our understanding of the presumption of good faith, we do not agree with the European Communities that there is a contradiction between the proposition that Directive 2003/74/EC is a measure adopted in good faith and the interpretation of Article 22.8 that substantive compliance is required for the first resolutive condition to be met. Even if the European Communities should be presumed to have acted in good faith when adopting the implementing measure, that does not mean that the measure has achieved substantive compliance.

317. If the removal of a measure found to be inconsistent were to be established on the sole basis of a presumption of good faith compliance, the DSB's authorization to suspend concessions would expire upon the adoption of an implementing measure and a mere unilateral declaration of the implementing Member that it removed the inconsistent measure. As described above, the suspension of concession is the last resort available to a Member who has successfully challenged the consistency with the covered agreements of another Member's measure. The DSB's authorization to suspend concessions is necessarily preceded by a multi-stage dispute settlement process. This process may encompass: (i) consultations, (ii) panel proceedings, (iii) appellate review, (iv) the adoption of the panel and Appellate Body reports, (v) an arbitration to determine the reasonable period of time for implementation, (vi) compliance panel proceedings, (vii) compliance appellate review, and (viii) an arbitration to determine the level of suspension of concessions. The authorization to suspend concessions is thus granted following a long process of multilateral dispute settlement in which relevant adjudicative bodies, as well as the DSB, render multilateral decisions at key stages of the

[728]Appellate Body Report, *EC – Sardines*, para. 278.

process. To allow the suspension of concessions to expire as a result of the application of a presumption of good faith with respect to a unilateral declaration of compliance would create an imbalance between the rights and obligations of the complainants and the respondents enshrined in the DSU and would undermine the effectiveness of the dispute settlement mechanism in providing security and predictability. Rather, if the original respondent considers that it has implemented the DSB's recommendations and rulings such that it has achieved substantive compliance, and the complainant who has been authorized to suspend concessions disagrees, that disagreement must be resolved multilaterally through WTO dispute settlement. Thus, we share Canada's view that the interpretation proposed by the European Communities is an "overly narrow and formalistic interpretation that fails to situate Article 22.8 in its proper context within the terms of the DSU."[729]

318. Consequently, we disagree with the European Communities' assertion that "the mere *existence* of an implementing measure adopted in good faith and its subsequent notification to the DSB" requires the United States and Canada to cease the application of the suspension of concessions authorized by the DSB.[730]

319. The European Communities additionally alleges that the Panel "fundamentally erred" in the manner in which it identified the "measure found to be inconsistent with a covered agreement" in order to determine whether "it has been removed" within the meaning of Article 22.8.[731] The European Communities claims that the Panel found that Directive 96/22/EC, that is, the measure found to be inconsistent with the *SPS Agreement* in *EC – Hormones*, "was removed". Nonetheless, the Panel also held that considering Directive 96/22/EC as the measure found to be inconsistent with a covered agreement within the meaning of Article 22.8 is "unsatisfactory, as Directive 96/22/EC was replaced by Directive 2003/74/EC which also imposes an import ban".[732]

320. We recall that, in *EC – Hormones*, Directive 96/22/EC was found to be inconsistent with Article 5.1 of the *SPS Agreement* because the import ban imposed by that Directive on meat from cattle treated with the six hormones at issue was not based on a risk assessment that conformed to the requirements of the *SPS Agreement*.[733] In order to comply with the DSB's recommendations and rulings, the European Communities had to remove the import ban or ensure that the import ban had a proper justification under the *SPS Agreement* by being based on a risk assessment under Article 5.1 or as a provisional measure under Article 5.7. Thus, the replacement of Directive 96/22/EC with Directive 2003/74/EC is insufficient for the measure found to be inconsistent in *EC – Hormones* to be considered removed for purposes of Article 22.8 of the DSU.

321. The European Communities also asserts that "interpreting Article 22.8 as referring to 'actual compliance' allows the original complaining Member to make a unilateral determination of the substantive merits of the 'measure taken to comply', without recourse to the procedures of the DSU and without respecting Article 23.1 of the DSU."[734] In our view, this argument conflates the proper interpretation of Article 22.8 with the issue as to the proper procedure for resolving a dispute involving Article 22.8. As discussed, Article 22.8 sets forth the resolutive conditions under which the suspension of concessions must cease, including the condition that the suspension of concessions shall only apply until the measure found to be inconsistent has been removed. The correct interpretation of Article 22.8 is that once substantive compliance is achieved, the suspending Member is required to cease the application of the suspension of concessions. This, however, does not answer the question regarding the procedures to be followed in the event a disagreement arises as to whether substantive

[729]Canada's appellee's submission, para. 21.

[734]European Communities' appellant's submission, para. 152.

compliance has been achieved and the resolutive condition in Article 22.8 has been met. We address the available procedural avenues in section E.

4. Did the Panel Exceed Its Mandate by Addressing the Conformity of Directive 2003/74/EC with the *SPS Agreement*?

322. The European Communities claims that, in the context of reviewing the European Communities' second set of main claims under Article 23.1, read together with Articles 22.8 and 3.7 of the DSU, the Panel exceeded the scope of its mandate by examining the conformity of Directive 2003/74/EC with the *SPS Agreement*. The European Communities maintains that it made a claim under Article 22.8 of the DSU in the alternative, that is, only in the event that the Panel did not find any violation under Articles 23.1, 23.2(a), 3.7, 22.8, and 21.5 of the DSU.[735] In the alternative claim, the European Communities alleges that the United States and Canada were required to terminate the suspension of concessions pursuant to Article 22.8 because Directive 2003/74/EC achieved actual (rather than presumed) compliance with the DSB's recommendations and rulings.[736] The European Communities explains that it made the alternative claim because "it was confident that, in any event, ... Directive 2003/74/EC was fully consistent with its WTO obligations."[737] Therefore, the European Communities asserts, the Panel exceeded its terms of reference by "ignoring the sequencing order of the legal claims made by the European Communities" and by addressing the issue of actual compliance in order to determine whether the United States and Canada breached Article 22.8 of the DSU.[738]

323. We recall that, in support of its claim under Article 23.1, read together with Articles 22.8 and 3.7, the European Communities maintains that Directive 96/22/EC "was removed"[739] within the meaning of Article 22.8 after being replaced by Directive 2003/74/EC and that "the mere *existence* of an implementing measure adopted in good faith and its subsequent notification to the DSB" required the United States and Canada to cease the application of the suspension of concessions.[740] The European Communities adds that the continuation of the suspension of concessions by the United States and Canada and their failure to initiate Article 21.5 proceedings necessarily implies that they have made a unilateral determination on the inconsistency of the implementing measure with the DSB's recommendations and rulings, "in breach of Article 23.1 read together with Articles 22.8 and 3.7 of the DSU".[741] Therefore, the European Communities' assertion that the United States and Canada breached Article 23.1 in making "a unilateral determination" is premised on their alleged failure to terminate the suspension of concessions pursuant to Article 22.8 after the removal of Directive 96/22/EC, as well as their alleged failure to initiate Article 21.5 proceedings.

324. As we concluded in the previous sections, the inconsistent measure will not be considered removed within the meaning of Article 22.8 unless substantive compliance is achieved. Therefore, whether Directive 2003/74/EC brings the European Communities into compliance with the DSB's recommendations and rulings in *EC – Hormones* was an issue the Panel had to resolve in order to determine whether the United States and Canada were required to terminate the suspension of concessions pursuant to Article 22.8 and whether failing to do so constituted a violation of Article 23.1, read together with Articles 22.8, and 3.7 of the DSU. Before the Panel, the European Communities maintained that it did not have to demonstrate actual compliance with the DSB's recommendations and rulings because it should benefit from a presumption of good faith compliance

[735]European Communities' appellant's submission, para. 166.
[736]Panel Report, *US – Continued Suspension*, para. 7.156; Panel Report, *Canada – Continued Suspension*, para. 7.143.
[737]European Communities' appellant's submission, para. 103.
[738]*Ibid*., para. 175.
[739]*Ibid*., para. 146.
[740]European Communities' appellant's submission, para. 101. (original emphasis)
[741]*Ibid*., para. 101.

with respect to Directive 2003/74EC.[742] We concluded, however, that a presumption that the European Communities acted in good faith when adopting Directive 2003/74/EC is insufficient for establishing removal, within the meaning of Article 22.8, of the measure found to be inconsistent in *EC – Hormones*.

325. On appeal, the European Communities emphasizes that Directive 96/22/EC was replaced by Directive 2003/74/EC and thus the inconsistent measure has been removed. In the previous sections, we rejected the European Communities' formalistic understanding of the phrase "the measure found to be inconsistent has been removed" according to which the repeal of the original measure and its replacement with a new measure would require cessation of suspension, regardless of the content of the new measure. Therefore, the distinction drawn by the European Communities between its second set of main claims and its alternative claim is, in our view, based on an incorrect interpretation of Article 22.8. The fact that the European Communities described the question of actual compliance of Directive 2003/74/EC as an alternative claim did not preclude the Panel from evaluating whether there is substantive compliance, if doing so was necessary to adjudicate the second main claim of the European Communities under Articles 23.1, 22.8, and 3.7. On the contrary, the Panel would have failed to correctly interpret and apply Article 22.8 if it had followed the approach of the European Communities and had refrained from addressing the issue of whether the repeal of Directive 96/22/EC and its replacement by Directive 2003/74/EC resulted in substantive compliance.

326. In *EC – Hormones*, the European Communities' import ban on meat from cattle treated with oestradiol-17β, progesterone, testosterone, trenbolone acetate, zeranol, or MGA was found to be inconsistent with Article 5.1 of the *SPS Agreement* because it was not based on a proper risk assessment.[743] To implement the DSB's recommendations and rulings, the European Communities adopted Directive 2003/74/EC, which repealed Directive 96/22/EC. Directive 2003/74/EC applies a ban on the importation of meat from cattle treated with oestradiol-17β for growth-promotion purposes, while the importation of meat from cattle treated with the other five hormones is provisionally forbidden. According to the European Communities, Directive 2003/74/EC is based on a comprehensive risk assessment that "sufficiently warrants"[744] the permanent import prohibition regarding oestradiol-17β and is therefore consistent with Article 5.1 of the *SPS Agreement*. The European Communities also contends that the risk assessment provides the "available pertinent information" on the basis of which the provisional prohibition regarding the other five hormones has been enacted. Thus, in the European Communities' view, the provisional import ban is consistent with Article 5.7 of the *SPS Agreement*, which allows Members to adopt provisional SPS measures on the basis of available pertinent information in cases where "relevant scientific evidence is insufficient". On this basis, the European Communities argues that it has implemented the DSB's recommendations and rulings in *EC – Hormones*.[745]

327. The Panel addressed the consistency with Articles 5.1 and 5.7 of the *SPS Agreement* of the import ban imposed by Directive 2003/74/EC.[746] We have found that the European Communities was

[742]Panel Report, *US – Continued Suspension*, para. 7.286; Panel Report, *Canada – Continued Suspension*, para. 7.302.
[743]Appellate Body Report, *EC – Hormones*, para. 208.
[744]European Communities' first written submission to the Panel, para. 17 (quoting Appellate Body Report, *EC – Hormones*, para. 253(l)).
[745]*Ibid*., para. 17.
[746]We note that the Panel reviewed, and rejected, the United States' claim that Directive 2003/74/EC was inconsistent with Article 5.2 of the *SPS Agreement*. (Panel Report, *US – Continued Suspension*, para. 7.573) Moreover, both the United States and Canada claimed before the Panel that Directive 2003/74/EC was inconsistent with Article 3.3 of the *SPS Agreement*. The Panel found it unnecessary to examine the claims under Article 3.3, having already concluded that Directive 2003/74/EC was not consistent with Articles 5.1 and 5.7 of the *SPS Agreement*. (*Ibid*., para. 7.846; Panel Report, *Canada – Continued Suspension*, para. 7.831) The Panel's findings with respect to Articles 5.2 and 3.3 of the *SPS Agreement* were not appealed. We therefore find it unnecessary to examine whether these two provisions were properly before the Panel.

required to bring about substantive compliance for the United States and Canada to be under an obligation to terminate the suspension of concessions pursuant to Article 22.8 of the DSU. The DSB's recommendations and rulings from *EC – Hormones* included a finding that the import ban on meat from cattle treated with oestradiol-17β was inconsistent with Article 5.1 of the *SPS Agreement* because it was not based on a proper risk assessment. Thus, in order to determine whether the European Communities had complied with the DSB's recommendations and rulings, the Panel had to examine whether the European Communities had brought its import ban relating to oestradiol-17β into conformity with Article 5.1 of the *SPS Agreement* by basing the import ban in Directive 2003/74/EC relating to the same substance on a proper risk assessment.

328. We face a somewhat different situation in relation to Article 5.7 of the *SPS Agreement*. The European Communities did not invoke that provision in *EC – Hormones* to justify its import ban on meat from cattle treated with the other five hormones. Thus, the DSB's recommendations and rulings in *EC – Hormones* did not include findings under Article 5.7 of the *SPS Agreement*. Instead, the import ban relating to the other five hormones was found to be inconsistent with Article 5.1 because it was not based on a proper risk assessment. This raises the question as to whether the European Communities' changed justification precluded the Panel from examining its consistency with the *SPS Agreement*, and particularly with Article 5.7, a provision that was not part of the DSB's recommendations and rulings in *EC – Hormones*. In our view, the Panel was not precluded from assessing the consistency of Directive 2003/74/EC with Article 5.7 for the following reasons. The definitive import ban that was the subject of *EC – Hormones* and found to be inconsistent with Article 5.1 has been replaced, under Directive 2003/74/EC, by a provisional ban relating to the five other hormones. The import ban applies to the same products: meat from cattle treated with progesterone, testosterone, trenbolone acetate, zeranol, and MGA. The European Communities replaced the original definitive ban with a provisional ban and invoked Article 5.7 as an alternative justification to Article 5.1. The European Communities has characterized the import ban as a provisional one and has sought to justify it under Article 5.7 of the *SPS Agreement*:

> The new Directive provides that the use for animal growth promotion of one of the six hormones in dispute is permanently prohibited while the use of the other five is provisionally forbidden. It is based on a comprehensive risk assessment and, thus, is fully compliant with the DSB recommendations and rulings. In particular, as stipulated by the Appellate Body, the results of the risk assessment "sufficiently warrant" the definite import prohibition regarding one of the hormones (Article 5.1 of the *SPS Agreement*), and provide the "available pertinent information" on the basis of which the provisional prohibition regarding the other five hormones has been enacted (Article 5.7 of the *SPS Agreement*). Consequently, through Directive 2003/74/EC the European Communities has implemented the rulings and recommendations in the *Hormones* case.[747] (footnote omitted)

Article 22.8 demands substantive compliance with the DSB's recommendations and rulings. A change in justification, by itself, cannot be said to achieve substantive compliance. Compliance with the DSB's recommendations and rulings concerning Article 5.1 and the definitive ban on the five hormones cannot be established without reviewing the alternative justification for the provisional ban under Article 5.7. If the new justification for the ban is not consistent with the *SPS Agreement*, substantive compliance has not been achieved.

[747] European Communities' first written submission to the Panel, para. 17.

329. We recall that the Appellate Body has stated that, "pursuant to Article 7 of the DSU, the panel's terms of reference are governed by the request for the establishment of a panel."[748] We recognize that the European Communities' requests for the establishment of a panel do not list Articles 5.1 and 5.7.[749] Also, we are mindful that a panel request submitted by an original respondent in the post-suspension stage is different from a panel request in original and compliance proceedings in the pre-suspension stage. In the requests for establishment of a panel, the European Communities asserts that it has brought itself into compliance with the DSB's recommendations and rulings which included a violation of Article 5.1. It gives the following reason why the suspensions of concessions could no longer be justified:

> In the same communication [in which Directive 2003/74/EC was notified to the DSB], the European Communities explained that it considers itself to have fully implemented the recommendations and rulings of the DSB in the *EC – Hormones* dispute and that, as a consequence, it considers [the United States' and Canada's] suspension of concessions vis-à-vis the European Communities to be no longer justified.[750] (footnote omitted)

330. Directive 2003/74/EC specifies that the original definitive import ban that had been found to be inconsistent with the covered agreements was replaced by a permanent ban in respect of oestradiol-17β and a provisional ban in relation to the other five hormones. Such a provisional ban implicates Article 5.7 as explained above. Moreover, the requests for establishment of a panel acknowledge that the United States and Canada did not consider that Directive 2003/74/EC complied with the *SPS Agreement*:

> The [United States and Canada] disagreed and denied that the new Directive was based on science and that it implemented the DSB's recommendations and rulings. The [United States and Canada] formally stated in the DSB that [they] considered the new Directive to be inconsistent with the European Communities obligations under the *SPS Agreement* and that [they] would continue to impose retaliatory duties on certain products from the European Communities.[751] (footnotes omitted)

331. Finally, the European Communities claims in its request that the United States' and Canada's conduct is inconsistent with Article 22.8 of the DSU. It is evident from the panel requests that the consistency of the United States' and Canada's continued suspension with Article 22.8 was linked to the European Communities' implementation of the DSB's recommendations and rulings in *EC – Hormones*. We fail to see how the claims explicitly listed in the panel requests by the European Communities could be resolved in isolation from the question of whether Directive 2003/74/EC has brought the European Communities into compliance with these DSB's recommendations and rulings.

332. Taken together, these elements support the conclusion that the consistency of Directive 2003/74/EC with Articles 5.1 and 5.7 of the *SPS Agreement* was part of the matter to be examined by the Panel. In these circumstances, we reject the European Communities' claim that the Panel exceeded its terms of reference by addressing the consistency of Directive 2003/74/EC with Articles 5.1 and 5.7 of the *SPS Agreement*. We uphold the Panel's finding that "it has jurisdiction to consider the compatibility of the [European Communities'] implementing measure with the *SPS*

Agreement as part of its review of the claim raised by the European Communities with respect to Article 22.8 of the DSU."[752]

E. *Procedural Avenues for Resolving Disagreements as to Whether the Inconsistent Measure Has Been Removed under Article 22.8 of the DSU*

1. What Is the Appropriate Procedural Avenue to Resolve a Disagreement as to Whether the Inconsistent Measure Has Been Removed?

333. The European Communities argues that, where a WTO Member continues to suspend concessions because it considers that the implementing measure does not achieve compliance with the DSB's recommendations and rulings or is otherwise inconsistent with the covered agreements, the Member has an obligation to initiate Article 21.5 proceedings.

334. Article 21.5 provides that:

> Where there is disagreement as to the existence or consistency with a covered agreement of measures taken to comply with the recommendations and rulings such dispute shall be decided through recourse to these dispute settlement procedures, including wherever possible resort to the original panel. The panel shall circulate its report within 90 days after the date of referral of the matter to it. When the panel considers that it cannot provide its report within the time frame, it shall inform the DSB in writing of the reasons for the delay together with an estimate of the period within which it will submit its report.

335. The European Communities reads the words "shall be decided" and "including" as indicating an obligation to have recourse to an Article 21.5 panel in the sense that it constitutes a mandatory step in the process of adjudicating disagreements over the existence or consistency of measures taken to comply, even though additional procedural steps may also be available under the DSU. However, the United States and Canada read the phrase "shall be decided through recourse to these dispute settlement procedures" to mean that recourse could encompass any of the procedures available under the DSU, and not just an Article 21.5 panel procedure. The phrase "including wherever possible ... the original panel" would then be read as one of several options. This seems to be the view taken by the Panel when it read the phrase to mean resort "to the panelists that reviewed the original case, rather than to other individuals."[753] The Panel further found that several procedural means are available to the European Communities for obtaining the termination of the suspension of concessions, including good offices and consultations, arbitration under Article 25 of the DSU, panel proceedings under Article 21.5 of the DSU, and new panel proceedings involving a challenge against the continued suspension of concessions.[754]

336. The opening clause of Article 21.5 specifies the types of disputes that fall within the scope of this provision, that is, those involving a disagreement as to the existence or consistency with a covered agreement of measures taken to comply with the recommendations and rulings of the DSB. The word "shall" in Article 21.5 indicates that such disagreements must be resolved through recourse

[752]Panel Report, *US – Continued Suspension*, para. 7.379; Panel Report, *Canada – Continued Suspension*, para. 7.376.
[753]Panel Report, *US – Continued Suspension*, para. 7.351; Panel Report, *Canada – Continued Suspension*, para. 7.349.
[754]Panel Report, *US – Continued Suspension*, para. 7.350; Panel Report, *Canada – Continued Suspension*, para. 7.348.

to "these dispute settlement procedures". Read together with the second sentence of Article 21.5, "these dispute settlement procedures" do not refer generally to all proceedings under the DSU, but specifically to the panel proceedings envisaged in Article 21.5, in which the original panelists are preferred for the composition of the panel and in which the time frame of the proceedings is shortened. In other words, Article 21.5 dictates that panel proceedings pursuant to this provision are the procedures that must be followed for adjudicating the cause of action as framed in its opening clause.

337. As we see it, at the core of this dispute is a disagreement as to whether Directive 2003/74/EC, the measure taken by the European Communities to comply with the DSB's recommendations and rulings in *EC – Hormones*, achieves substantive compliance. Before the Panel, the European Communities claimed that it had removed Directive 96/22/EC, which had been found to be inconsistent in *EC – Hormones*, and that the United States and Canada breached Article 23.1, read together with Articles 22.8 and 3.7, by failing to terminate the suspension of concessions.[755] The United States and Canada disagreed that they were in breach of Article 22.8 and argued that it has not been demonstrated that the European Communities has in fact removed its WTO-inconsistent measure.[756] Because the phrase "until such time as the measure found to be inconsistent with a covered agreement has been removed" in Article 22.8 must be properly interpreted as referring to substantive compliance, the disagreement as to whether such compliance has been achieved is the central issue that must be resolved in order to assess the legality of the continued suspension.

338. Article 21.5 provides for specific procedures for adjudicating a disagreement as to the consistency with the covered agreements of measures taken by a Member to implement the DSB's recommendations and rulings. Thus, panel proceedings under Article 21.5 is the proper procedure for resolving the disagreement as to whether Directive 2003/74/EC has achieved substantive compliance and whether, consequently, the resolutive condition in Article 22.8 that requires the termination of the suspension of concessions has been met. Indeed, as the Panel pointed out, "the option naturally coming to mind when it comes to reviewing compliance is the procedure provided under Article 21.5 of the DSU."[757] The Panel also recognized that it "performed functions similar to that of an Article 21.5 panel" by addressing the consistency with the covered agreements of Directive 2003/74/EC.[758]

339. The Panel nonetheless found that Article 21.5 panel proceedings were not "the only avenue available to address a claim of compliance by a Member alleging to have complied with recommendations and rulings of the DSB".[759] Rather, as described above, the Panel found that good offices, consultations, and arbitration under Article 25 of the DSU were other procedures available to the European Communities for obtaining the termination of the suspension of concessions.

340. Certainly, parties to a dispute are not precluded from pursuing consensual or alternative means of dispute settlement foreseen in the DSU. Article 3.7 of the DSU provides that "[a] solution mutually acceptable to the parties to a dispute and consistent with the covered agreements is clearly to be preferred." To reach a mutually acceptable solution, Members can engage in consultations or resort to mediation and good offices. Moreover, Article 25 provides for arbitration as an alternative to panel proceedings for dispute resolution. Consultations, mediation, good offices, and arbitration are,

[755]Panel Report, *US – Continued Suspension*, para. 7.252; Panel Report, *Canada – Continued Suspension*, para. 7.245.
[756]Panel Report, *US – Continued Suspension*, para. 7.264; Panel Report, Canada – Continued Suspension, para. 7.261.
[757]Panel Report, *US – Continued Suspension*, para. 7.351; Panel Report, *Canada – Continued Suspension*, para. 7.349.
[758]Panel Report, *US – Continued Suspension*, para. 8.3; Panel Report, *Canada – Continued Suspension*, para. 8.3.
[759]Panel Report, *US – Continued Suspension*, para. 7.355; Panel Report, *Canada – Continued Suspension*, para. 7.353.

however, alternatives to compulsory adjudication and require the consent of the parties. In the absence of such consent, they cannot lead to a binding decision. Thus, it is important to distinguish between these consensual means of dispute resolution, which are always at the Members' disposal, and adjudication through panel proceedings, which are compulsory. It is in this sense that Article 21.5 is cast in obligatory language. In this dispute, it is clear that a mutually acceptable solution was not reached and the European Communities decided to resort to adjudication. In addition, the parties to this dispute were unable to agree on an arbitration procedure pursuant to Article 25 of the DSU.[760] The issue before us, therefore, is which procedure must be followed when parties do not avail themselves of the consensual and alternative means of dispute resolution provided in the DSU, and the dispute must proceed to the adjudication phase.

341. Another possibility the Panel identified are new panel proceedings involving a challenge against the legality of the continued suspension of concessions, such as the European Communities' initiation of the current proceedings.[761] As discussed, the legality of the continued suspension of concessions in this dispute hinges on whether Directive 2003/74/EC achieves substantive compliance, an issue that should be properly adjudicated in Article 21.5 proceedings. The Panel itself recognized that it had to "perform functions similar to that of an Article 21.5 panel".[762] By contrast, the cause of action in new panel proceedings normally does not involve the issue of whether a measure taken to comply with the DSB's recommendations and rulings is consistent with the covered agreements. The European Communities initiated the current proceedings, in part, on account of its belief that an original respondent is precluded from initiating Article 21.5 panel proceedings. We address this issue in subsection 2 below.

342. Furthermore, a disagreement under Article 22.8 concerning the removal of "a measure found to be inconsistent" in an original proceeding does not exist in the abstract but, rather, occurs in the context of a pre-existing dispute that gave rise to the DSB's recommendations and rulings. Recourse to Article 21.5 proceedings keeps the successive proceedings relating to the same dispute within "a continuum of events"[763], and is conducive to reaching a final resolution of the dispute.

343. Finally, in contrast to new panel proceedings, recourse to Article 21.5 is a more efficient use of the dispute settlement system. As the Appellate Body observed:

> First, the composition of an Article 21.5 panel is, in principle, already determined—wherever possible, it is the original panel. These individuals will be familiar with the contours of the dispute, and the experience gained from the original proceedings should enable them to deal more efficiently with matters arising in an Article 21.5 proceeding "against the background of the original proceedings". Secondly, the time-frames are shorter—an Article 21.5 panel has, in principle, 90 days in which to issue its report, as compared to the six to nine months afforded original panels.[764]

344. As discussed, underlying this dispute concerning the continued suspension of concessions lies a disagreement over the consistency with the covered agreements of Directive 2003/74/EC, a measure taken by the European Communities to comply with the DSB's recommendations and rulings in *EC – Hormones*. The individuals who served in the panel in *EC – Hormones* were familiar with the background of the dispute and the inconsistencies with the covered agreements they had found with respect to Directive 96/22/EC. Recourse to Article 21.5 panel proceedings would allow these individuals to examine whether the inconsistencies found in *EC – Hormones* have been rectified by Directive 2003/74/EC. Such proceedings would benefit from their knowledge and expertise gained from serving as panelists in *EC – Hormones*, and would be adjudicated within a shorter time frame than regular panel proceedings. Recourse to Article 21.5 proceedings under such circumstances is therefore also consistent with the objective of the dispute settlement system of achieving prompt settlement of disputes.

[760]The European Communities alleges that it proposed to the United States to submit the dispute to arbitration under Article 25 of the DSU, but the United States refused. (European Communities' appellant's submission, para. 62)

[761]Panel Report, *US – Continued Suspension*, para. 7.350; Panel Report, *Canada – Continued Suspension*, para. 7.348.

[762]Panel Report, *US – Continued Suspension*, para. 8.3; Panel Report, *Canada – Continued Suspension*, para. 8.3.

[763]Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 121.

[764]Appellate Body Report, *US – Softwood Lumber IV (Article 21.5 – Canada)*, para. 71.

345. In sum, we consider that recourse to Article 21.5 panel proceedings is the proper course of action within the procedural structure of the DSU in cases where, as in this dispute, a Member subject to the suspension of concessions has taken an implementing measure and a disagreement arises as to whether "the measure found to be inconsistent with a covered agreement has been removed" within the meaning of Article 22.8. Therefore, we share the European Communities' view that Article 21.5 panel proceedings are the procedures to be followed where there is disagreement as to whether Directive 2003/74/EC has achieved substantive compliance. We turn now to examine which party may initiate the Article 21.5 panel proceedings.

2. Is the European Communities Precluded from Initiating Article 21.5 Panel Proceedings Regarding Whether Directive 2003/74/EC Has Brought It into Compliance?

346. The European Communities argues that the Panel erred in finding that proceedings under Article 21.5 could have been initiated by the European Communities as the original responding party in *EC – Hormones*.[765] According to the European Communities, "it is inherent in the wording, context and object and purpose of the provision that it is the obligation of the complaining party to have recourse to Article 21.5."[766]

347. A "disagreement" as to the consistency with the WTO agreements of a measure taken to comply arises from the existence of conflicting views: the original complainant's view that such a measure is inconsistent with the WTO agreements or brings about only partial compliance, and the original respondent's view that a measure is consistent with the WTO agreements and brings about full compliance with the DSB's recommendations and rulings. Article 21.5 does not indicate which party may initiate proceedings under this provision. Rather, the language of the provision is neutral on this matter, and it is open to either party to refer the matter to an Article 21.5 panel to resolve this disagreement. The text of Article 21.5, therefore, leaves open the possibility that either party to the original dispute may initiate the proceedings. Thus, contrary to the European Communities' argument, the text of Article 21.5 does not preclude an original respondent from initiating proceedings under that provision to obtain confirmation of the consistency with the WTO agreements of its implementing measure.

348. Moreover, we recall that the suspension of concessions is an abnormal state of affairs because it is the last resort available under the DSU when compliance is not achieved. Pursuant to Article 22.8, this abnormal state of affairs must be "temporary" and must be brought back to normality as soon as possible. Consequently, both the suspending Member and the implementing Member share the responsibility to ensure that the suspension of concessions is not applied indefinitely. Thus, initiation of Article 21.5 proceedings by either Member, as soon as possible, to examine the consistency with the covered agreements of Directive 2003/74/EC would contribute to a

[765]Panel Report, *US – Continued Suspension*, para. 7.355; Panel Report, *Canada – Continued Suspension*, para. 7.353.

[766]European Communities' appellant's submission, para. 75.

prompt resolution of the disagreement as to whether the inconsistent measure has been removed and whether the suspension of concessions must be terminated pursuant to Article 22.8.

349. The European Communities advances several reasons why initiation of Article 21.5 panel proceedings by the original respondent is not permissible, including: (i) the adversarial nature of the WTO dispute settlement system and its inapplicability to a Member's request for an "abstract confirmation" of the consistency of a measure; (ii) the difficulty in defining the Article 21.5 panel's terms of reference; (iii) the possibility that the original complainants would refuse to participate; and (iv) the lack of recommendations and rulings directly addressing the illegality of the continued suspension of concessions should the measure taken to comply be found to be consistent with the WTO agreements. We address below each of the objections raised by the European Communities.

(a) The "Adversarial" Nature of the WTO Dispute Settlement System

350. According to the European Communities, an implementing Member cannot have recourse to Article 21.5 of the DSU to confirm the consistency with the WTO agreements of its own measures, because the dispute settlement system is based on adversarial proceedings and is not applicable to "requests for an abstract confirmation of the consistency of a measure".[767] The European Communities adds that its understanding of Article 21.5 is confirmed by the concept of a "dispute" as reflected in Article 3.3 of the DSU, which, according the European Communities, "assumes a situation where one Member challenges the measure of another Member" because the former considers that its rights are being affected.[768] The European Communities also refers to the text of Article XXIII:1 of the GATT 1994 which contains language similar to that in Article 3.3 of the DSU.

351. Article 3.3 provides that:

> The prompt settlement of situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member is essential to the effective functioning of the WTO and the maintenance of a proper balance between the rights and obligations of Members.

352. It is evident that the implementing Member would not normally consider its benefits to have been impaired by the measure it has itself taken to comply with the DSB's recommendations and rulings. In the post-suspension stage of a dispute, however, an original respondent would initiate Article 21.5 panel proceedings for a specific reason: to obtain a multilateral confirmation that its implementing measure has achieved substantive compliance, so as to render the continued application of the suspension of concessions unlawful pursuant to Article 22.8. The situation is thus one of those envisaged under Article 3.3, in that the original respondent considers that its benefits under the covered agreement are being impaired by the suspension of concessions maintained by the original complainant, which is denied by the suspending Member. The task of an Article 21.5 panel,

[767]European Communities' appellant's submission, para. 78. (emphasis omitted)
[768]*Ibid*., para. 85.

established at the request of the original respondent, is to determine whether the implementing measure brings about substantive compliance. There is nothing "abstract" about such a determination; it results in an adjudication with real consequences, including, in particular, whether the application of the suspension of concessions may continue.

(b) The Terms of Reference of an Article 21.5 Panel Requested by the Original Respondent

353. The European Communities submits that "[i]t would be manifestly impossible for the European Communities to fulfil the very basic requirements of Article 6 for the purposes of seeking confirmation of the consistency with the WTO agreements of its implementing measure since it would not be in a position to identify the provisions of the *SPS Agreement* that are violated."[769] We agree that the original respondent that has taken a measure to comply cannot be expected to speculate as to the violations that could possibly be raised against its measure by other Members, and this is not what the original respondent is expected to do if it initiates Article 21.5 panel proceedings. Rather, the original respondent will be able to identify in its panel request the measure it has taken to comply and the specific inconsistencies found in the DSB's recommendations and rulings in the original proceedings, and claim before the Article 21.5 panel that it has complied with the DSB's recommendations and rulings by rectifying those inconsistencies. It would then be for the Article 21.5 panel to determine if the measure taken to comply does, in fact, rectify the inconsistencies identified in the DSB's recommendations and rulings.

354. The original complainant may respond to the allegations of compliance made by the original respondent. If, however, the original complainant considers that the implementing measure is inconsistent with provisions of the WTO agreements not covered in the request for the establishment of a panel by the implementing Member, it may file its own request for the establishment of a panel under Article 21.5 identifying those provisions that it considers should be examined by the Article 21.5 panel. It would be for the Article 21.5 panel to determine if the implementing measure violates the WTO agreements in ways different from the original measure or whether certain claims fall outside the scope of Article 21.5 proceedings.[770] The original complainant would be expected to do so as soon as possible after adoption of an implementation measure or after the filing of the original respondent's panel request, so that both Article 21.5 panel requests may be referred to the original panel wherever possible, allowing review of all the issues relating to substantive compliance in the same Article 21.5 proceedings.[771]

355. Such an approach is consistent with the requirements of Article 22.8 of the DSU. As noted above, Article 22.8 provides certain resolutive conditions which, if met, render the suspension of concessions without legal basis. The suspending Member and the implementing Member share the responsibility to ensure that the suspension of concessions is applied only insofar as none of the conditions laid down in Article 22.8 are met. Thus, both Members have an obligation to engage in a

[769]European Communities' appellant's submission, para. 88.
[770]As the Appellate Body has explained, a complainant who had failed to make out a *prima facie* case in the original proceedings regarding an element of the measure that remains unchanged since the original proceedings may not re-litigate the same claim with respect to the unchanged element of the measure in the Article 21.5 proceedings. (Appellate Body Report, *EC – Bed Linen (Article 21.5 – India)*, paras. 87 and 96) Similarly, a complainant may not reassert the same claim against an unchanged aspect of the measure that was found to be *WTO-consistent* in the original proceedings. (Appellate Body Report, *US – Shrimp (Article 21.5 – Malaysia)*, para. 96) Moreover, a complaining Member ordinarily would not be allowed to raise claims in the Article 21.5 proceedings that it could have pursued in the original proceedings, but did not. (Appellate Body Report, *US – Upland Cotton (Article 21.5 – Brazil)*, para. 211)
[771]Even if delays between the original respondent's and original complainant's panel requests do not allow for harmonization pursuant to Article 9 of the accelerated working schedules under Article 21.5, the matter raised by the original respondent and the original complainant would nevertheless, wherever possible, be referred to the same individuals that served on the original panel.

cooperative manner in WTO dispute settlement to establish whether the suspension of concessions can continue or must be discontinued pursuant to Article 22.8. Irrespective of who initiates the Article 21.5 panel proceedings, a finding of an Article 21.5 panel that the implementing Member has removed the inconsistent measure means that one of the resolutive conditions in Article 22.8 is met. This finding, once adopted by the DSB–the same body that authorized the suspension of concessions– signifies that the inconsistency against which the suspension of concessions was authorized has now been remedied. Thus, by operation of law (*ipso jure*), the suspension of concessions may no longer be applied.

(c) The Original Complainants' Incentive to Participate in Article 21.5 Panel Proceedings Initiated by the Original Respondent

356. The European Communities further submits that it "appears that the United States and Canada as 'defending parties' would not be obliged to participate"[772] in Article 21.5 panel proceedings initiated by the European Communities. In support of this argument, the European Communities referred to the fact that in *EC – Bananas III (Article 21.5 – EC)*, one of the original complainants (the United States) refused to participate in the Article 21.5 panel proceedings that the original respondent (the European Communities) had initiated. The European Communities therefore takes issue with the Panel's reference to that dispute in finding that Article 21.5 panel proceedings may be initiated by the original respondent.

357. We note that the panel in *EC – Bananas III (Article 21.5 – EC)* did not find that it was precluded from examining the European Communities' claims because the European Communities had been the respondent in the original proceedings.[773] Moreover, the exceptional circumstances in *EC – Bananas III (Article 21.5 – EC)*, including the particular request made by the European Communities in those proceedings, could explain the lack of participation of certain original complainants and that panel's decision not to make a ruling on the consistency of the European Communities' first implementing measure. In *EC – Bananas III (Article 21.5 – EC)*, an Article 21.5 panel was established at the request of one of the original complainants, Ecuador, in which the European Communities' first implementing measure was found to be inconsistent with the WTO agreements. There was also an ongoing arbitration pursuant to Article 22.6 of the DSU between the European Communities and the United States.[774] That dispute, on its unusual facts, does not lead to the conclusion that an Article 21.5 panel would be precluded from making an objective assessment of the matter referred to it by the original respondent.

358. We recognize that it is theoretically possible for the original complainant to refuse to participate in Article 21.5 proceedings initiated by the original respondent.[775] Yet, this is not a feature that may only occur in Article 21.5 proceedings initiated by the original respondent, because the DSU does not provide the means to compel any party to participate in any dispute settlement proceedings. A defending party who refuses to participate in dispute settlement proceedings will lose the opportunity to defend its position and will risk a finding in favour of the complaining party that has established a *prima facie* case.[776] Similarly, in Article 21.5 panel proceedings initiated by the original respondent, the original complainant who refuses to participate forgoes the opportunity to explain to the Article 21.5 panel why the measure taken to comply fails to rectify the inconsistencies found in the original proceeding and, consequently, why the suspension of concessions remains justified under Article 22.8 despite the measure taken to comply. Absent any rebuttal by the original complainant, the Article 21.5 panel will make its determination on the basis of a *prima facie* case

[772]European Communities' appellant's submission, para. 90.
[773]Panel Report, *EC – Bananas III (Article 21.5 – EC)*, para. 4.18.
[774]We do not need to express a view here on whether the consistency of the implementation measure could or should have been addressed by the arbitrators acting pursuant to Article 22.6 of the DSU.
[775]European Communities' appellant's submission, para. 89.
[776]For the appellate stage, see Rule 29 of the *Working Procedures*.

presented by the original respondent that its implementing measure has brought it into compliance with the DSB's recommendations and rulings. Therefore, where the original complainant has suspended concessions according to the DSB's authorization, the original complainant would have a strong incentive to participate lest the authorization to suspend concessions lapses as a result of the adoption by the DSB of the Article 21.5 panel's finding that the original respondent has brought itself into compliance.

359. Like any other panel, an Article 21.5 panel established in the post-suspension stage, at the request of the original respondent, would be bound to make an objective assessment of the matter. The ultimate issue before such a panel is whether the measure found to be inconsistent with a covered agreement has been removed. We have interpreted "removed" to mean substantive compliance. The question is which party bears the burden of proof in respect of the issues of substantive compliance. Is the burden to be allocated according to a mechanistic rule that it is for the party initiating the proceedings to prove substantive compliance or is it the case that the burden of proof is allocated according to different principles? Much of the reluctance of the parties to secure a definitive determination in respect of Article 22.8 is the apprehension that, upon initiation, a party will attract the full burden of proof.

360. In our view, the allocation of the burden of proof, in the context of Article 22.8, should not be determined simply on the basis of a mechanistic rule that the party who initiates the proceedings bears the burden of proof. As we have indicated, in case of a disagreement, both parties are under an obligation to secure a definitive multilateral determination as to whether the suspension of concessions must be terminated. The burden of proof does not attach to a party simply because such party discharges this obligation. To hold otherwise would create a disincentive to act in a manner which we consider to be obligatory and desirable.

361. The allocation of the burden of proof in the context of claims arising under Article 22.8 is a function of the following considerations. First, what is the nature of the cause of action that is framed under Article 22.8. Second, the practical question as to which party may be expected to be in a position to prove a particular issue. Third, consideration must be given to the requirements of procedural fairness.

362. Since the suspension of concessions is a remedy of last resort imposed after an elaborate multilateral dispute settlement process, in our view, it is appropriate that the Member whose measure has brought about the suspension of concessions should make some showing that it has removed the measure found to be inconsistent by the DSB in the original proceedings, so that normality can be lawfully restored. This requires that the original respondent will have an onus to show that its implementing measure has cured the defects identified in the DSB's recommendations and rulings. The quantum of proof entailed by this is a clear description of its implementing measure, and an adequate explanation regarding how this measure rectifies the inconsistencies found in the original proceedings, so as to place the Article 21.5 panel in a position to make an objective assessment of the matter and, in the absence of rebuttal, to rule in favour of the original respondent.

363. If the original respondent initiates Article 21.5 proceedings to determine that the first resolutive condition in Article 22.8 has been fulfilled, and, consequently, that the suspension of concessions must end, and the original complainant fails to appear and answer the case, what would the original respondent need to establish to satisfy a panel that the resolutive condition has been fulfilled? The original respondent, in this situation, would be required to place evidence before the Article 21.5 panel sufficient to permit the panel, in carrying out its duty, to make an objective assessment of the matter. The quantum of evidence necessary for this purpose is the burden of proof, described above, that attaches to the original respondent.

364. In respect of all other issues, the burden of proof rests upon the original complainant. Such issues may include a claim that the implementing measure is otherwise inconsistent with the covered

agreements or that the implementing measure remains wanting for reasons not traversed by the original respondent in discharging its burden of proof.

365. This allocation of the burden of proof is also consistent with the parties' shared responsibility to ensure that the suspension of concessions is "temporary", and that the normal state of affairs, that is, conformity with the covered agreements and absence of the suspension of concessions, is restored as quickly as possible.

(d) The Lack of Recommendations and Rulings Regarding the Legality of the Continued Suspension of Concessions

366. The European Communities further states that, if it had initiated Article 21.5 panel proceedings in this case, the Article 21.5 panel could not have made recommendations addressed to the United States and Canada to cease the suspension of concessions, because an Article 21.5 panel would only have had jurisdiction to rule on the compliance of the implementing measure.[777]

367. A finding that the implementing Member has achieved substantive compliance means that the first resolutive condition in Article 22.8 has been met. Such a finding, adopted by the DSB as part of the Article 21.5 panel (and Appellate Body) report(s), would, by operation of law (*ipso jure*), result in the termination of the DSB's authorization to suspend concessions. This result obtains irrespective of whether the Article 21.5 panel was initiated by the original respondent or by the original complainant. It does not depend on which party initiates the Article 21.5 panel proceedings. Rather, the result depends on whether the Article 21.5 panel confirms that the implementing Member has brought itself into substantive compliance, thereby triggering the obligation to cease applying the suspension of concessions, as required by Article 22.8 of the DSU.

368. In sum, we are not persuaded by the European Communities' argument that an original respondent in the post-suspension stage of a dispute would be precluded from initiating Article 21.5 proceedings. Therefore, we find that the Panel did not err in stating that proceedings under Article 21.5 of the DSU may be initiated not only by the complainant, but also by the respondent in the original proceedings.

F. *Analysis of the Panel's Findings of "Procedural Violations"*

369. The United States and Canada allege that the Panel erred in finding that they breached Articles 23.2(a) and 23.1 of the DSU by continuing the suspension of concessions after the notification of Directive 2003/74/EC[778], and request the Appellate Body to reverse these findings. In particular, the United States and Canada assert that the Panel erred in finding that: (i) through the maintenance of the suspension of concessions against the European Communities, they are seeking the redress of a violation with respect to Directive 2003/74/74/EC; and (ii) they made a unilateral determination to the effect that a violation has occurred without recourse to dispute settlement under the DSU, in contravention of Article 23.2(a).

1. The Prohibition on Certain Unilateral Actions – Article 23 of the DSU

370. We begin our analysis with the interpretation of the terms of Article 23 that are relevant to this dispute. Entitled "Strengthening of the Multilateral System", Article 23 provides that:

[777]European Communities' appellant's submission, para. 92.
[778]Panel Report, *US – Continued Suspension*, paras. 7.251 and 7.856; Panel Report, *Canada – Continued Suspension*, paras. 7.244 and 7.841.

> 1. When Members seek the redress of a violation of obligations or other nullification or impairment of benefits under the covered agreements or an impediment to the attainment of any objective of the covered agreements, they shall have recourse to, and abide by, the rules and procedures of this Understanding.
>
> 2. In such cases, Members shall:
>
> (a) not make a determination to the effect that a violation has occurred, that benefits have been nullified or impaired or that the attainment of any objective of the covered agreements has been impeded, except through recourse to dispute settlement in accordance with the rules and procedures of this Understanding, and shall make any such determination consistent with the findings contained in the panel or Appellate Body report adopted by the DSB or an arbitration award rendered under this Understanding;
>
> (b) follow the procedures set forth in Article 21 to determine the reasonable period of time for the Member concerned to implement the recommendations and rulings; and
>
> (c) follow the procedures set forth in Article 22 to determine the level of suspension of concessions or other obligations and obtain DSB authorization in accordance with those procedures before suspending concessions or other obligations under the covered agreements in response to the failure of the Member concerned to implement the recommendations and rulings within that reasonable period of time.

371. As the Appellate Body has explained, Article 23.1 lays down the fundamental obligation of WTO Members to have recourse to the rules and procedures of the DSU when seeking redress of a violation of the covered agreements.[779] Article 23 restricts WTO Members' conduct in two respects. First, Article 23.1 establishes the WTO dispute settlement system as the exclusive forum for the resolution of such disputes and requires adherence to the rules of the DSU. Secondly, Article 23.2 prohibits certain unilateral action by a WTO Member. Thus, a Member cannot unilaterally: (i) determine that a violation has occurred, benefits have been nullified or impaired, or that the attainment of any objective of the covered agreements has been impeded; (ii) determine the duration of the reasonable period of time for implementation; or (iii) decide to suspend concessions and determine the level thereof.

372. The phrase "[i]n such cases, Members shall" with which Article 23.2 begins refers back to the situation described in Article 23.1, namely, when a Member is seeking the redress of, *inter alia*, a violation of obligations under the covered agreements. We share the view of the panel in *US – Section 301 Trade Act* that the terms "[i]n such cases, Members shall" used in the chapeau of Article 23.2 make clear that Article 23.2 is "explicitly linked to, and has to be read together with and subject to, Article 23.1".[780] Therefore, the specific prohibitions of unilateral actions in Article 23.2 must be understood in the context of the overarching provision of Article 23.1. In other words, the unilateral actions prohibited by Article 23.2 are those taken by a Member with a view to seeking redress of a violation. Moreover, the phrase "[i]n such cases, Members shall" at the beginning of Article 23.2 indicates that the specific obligations set forth in its subparagraphs clarify and illustrate

[779]Appellate Body Report, *US – Certain EC Products*, para. 111.
[780]Panel Report, *US – Section 301 Trade Act*, para. 7.44.

the scope of the general and ongoing obligation in Article 23.1. This does not mean, however, that the scope of Article 23.1 is exhausted by the situations described in Article 23.2.[781]

373. Seeking the redress of a violation is of course not by itself prohibited by Article 23.1 of the DSU. Rather, to be in breach of Article 23.1, a Member must be seeking redress without having recourse to, or abiding by, the rules of the DSU.

374. An initial question that arises in this case is whether the continued application of a previously authorized suspension of concessions can be said to constitute the seeking of redress. On the one hand, the authorization to suspend concessions can be said to be the result of a previous act of seeking redress that involved initiating a dispute. On the other hand, the continued application of the suspension of concessions can be said to reflect a continuous act of seeking redress for a violation found by the DSB that has not yet been rectified. In any event, the suspension of concessions that has been duly authorized by the DSB will not constitute a violation of Article 23.1, as long as it is consistent with other rules of the DSU, including paragraphs 2 through 8 of Article 22, even if the continued application of the suspension of concessions is regarded as an action or part of a process of "seeking the redress". This is because, before obtaining the DSB's authorization to suspend concessions, a Member must initiate a dispute settlement process in which it challenges the consistency with the covered agreements of a measure taken by another Member. The Member initiating the process will only be authorized to suspend concessions when the measure is found by the panel (and the Appellate Body, if appealed) to be inconsistent with the covered agreements and the Member taking the measure fails to implement the panel's (or Appellate Body's) findings within a reasonable period of time or, if it takes a measure to comply, that measure is found by the panel (and the Appellate Body) in compliance proceedings not to have brought the Member concerned into compliance. In other words, the Member will only be able to suspend concessions pursuant to the DSB's authorization after having had extensive recourse to, and abided by, the rules and procedures of the DSU, consistent with the requirements of Article 23.1.

375. This does not mean that Article 23.1 ceases to apply once the suspension of concessions has been authorized by the DSB. Article 23.2(c) specifically refers to Article 22 of the DSU. Paragraph 8 of this provision states that the suspension of concessions shall only be applied until the inconsistent measure has been removed or one of the other two conditions in Article 22.8 is met. Thus, if the Member subject to the suspension of concessions takes an implementing measure and that measure is found in WTO dispute settlement proceedings to bring this Member into substantive compliance, the suspension of concessions would no longer be consistent with Article 22.8 of the DSU, and, as a result, would become a unilateral action prohibited by Articles 23.1 and 23.2. In other words, the requirements in Article 22.8 and Article 23 apply and must be read together in the post-suspension stage of a dispute. Therefore, Article 23 must be seen as containing an ongoing obligation and continues to apply even after the suspension of concessions has been duly authorized by the DSB.

376. With this in mind, we turn to examine the issues raised by the United States and Canada on appeal.

[781] As the panel in *US – Section 301 Trade Act* pointed out, the prohibitions mentioned in Article 23.2 are examples of conduct that contradicts the rules and procedures of the DSU which, under the obligation in Article 23.1 to "abide by the rules and procedures" of the DSU, Members are obligated to follow. These rules and procedures cover more than those specifically mentioned in Article 23.2 and "[t]here is a great deal more State conduct which can violate the general obligation in Article 23.1 to have recourse to, and abide by, the rules and procedures of the DSU than the instances especially singled out in Article 23.2." (Panel Report, *US – Section 301 Trade Act*, para. 7.45) (footnote omitted)

2. The Panel's Alleged Examination of Articles 23.2(a) and 23.1 in Isolation from the Requirements in Article 22.8 of the DSU

377. The United States and Canada submit that the Panel erred by examining the European Communities' claims under Articles 23.2(a), 23.1, and 21.5 independently from the question of whether Article 22.8 required the termination of the suspension of concessions. The United States argues that the Panel ignored the fact that none of the conditions requiring the cessation of the suspension of concessions under Article 22.8 of the DSU had occurred. Thus, the United States maintains, the Panel's findings that the suspension of concessions by the United States is "without recourse to the procedures under the DSU"[782] would effectively undermine the DSB's authorization to suspend concessions, rendering it "meaningless".[783] Canada claims that the "[k]ey to this case is Article 22.8 of the DSU"[784] which, as *lex specialis* in the post-suspension phase of a dispute, sets out the three conditions that must be met in order to have the suspension of concessions terminated, one of the conditions being actual compliance with the DSB's recommendations and rulings. Canada adds that "the continuous involvement of the DSB", pursuant to the second sentence of Article 22.8, "suggests that [the DSB] retains jurisdiction over the matter until its recommendations and rulings have been fully implemented."[785] Thus, in Canada's view, the Panel should have first considered whether Canada was required to discontinue the suspension of concessions pursuant to Article 22.8.[786]

378. We note that the suspension of concessions maintained by the United States and Canada were duly authorized by the DSB subsequent to its adoption of the recommendations and rulings in *EC – Hormones* and an arbitration award resulting from proceedings under Article 22.6 regarding the level of the suspension of concessions.[787] As discussed above, where the suspension of concessions has been duly authorized by the DSB and is applied consistently with the rules of the DSU, including Article 22.8, it does not constitute a violation of Article 23.1, because it is not imposed without recourse to or without abiding by the DSU. The requirements in Article 22 and those in Article 23 must be read together, in the post-suspension stage of the dispute, to determine the legality of the continued suspension when an implementing measure has been taken. Thus, we share the view of the United States and Canada that, in order to determine whether they acted inconsistently with Article 23 by continuing the suspension of concessions subsequent to the notification of Directive 2003/74/EC, the Panel had to first determine whether the suspension of concessions was being applied consistently with Article 22.8 of the DSU.

379. The European Communities asserts that the United States and Canada "entirely ignore"[788] the fact that the European Communities' first series of main claims, alleging violations of Articles 23.1, 23.2(a), and 21.5, did not include Article 22.8 of the DSU. The European Communities further contends that the Panel's approach in examining the claims under Articles 23.1 and 23.2(a) was correct, because Directive 2003/74/EC, as a measure taken to comply, must be presumed to be compliant with the covered agreements until shown otherwise in Article 21.5 proceedings.

380. In section D above, we found that the presumption that an implementing Member acts in good faith is insufficient to establish substantive compliance. The European Communities should be presumed to have acted in good faith when adopting the implementing measure; however, this did not mean that the taking of such measure in itself establishes that the measure achieves substantive compliance. We also rejected the formalistic interpretation of Article 22.8 advanced by the European

[782] United States' other appellant's submission, para. 29.
[783] *Ibid.*, para. 30.
[784] Canada's other appellant's submission, para. 35.
[785] *Ibid.*, para. 36.
[786] *Ibid.*, paras. 60 and 61.
[787] Article 22.4 provides that "[t]he level of the suspension of concessions or other obligations authorized by the DSB shall be equivalent to the level of the nullification or impairment."
[788] European Communities' appellee's submission, para. 29.

Communities that the adoption, and notification to the DSB, of a measure taken to comply replacing the original measure is sufficient to establish the removal of the measure found to be inconsistent with a covered agreement within the meaning of Article 22.8. Rather, a proper interpretation of Article 22.8, in its context and in the light of the object and purpose of the DSU, indicates that substantive compliance is required before the suspension of concessions must be terminated. Where parties disagree as to whether there is substantive compliance, the duty to cease the suspension of concessions is not triggered until substantive compliance is determined through multilateral dispute settlement proceedings. A unilateral declaration of compliance cannot have the same effect. We note that, as the original respondent, the European Communities has the option to initiate Article 21.5 panel proceedings for purposes of determining whether the DSB's recommendations and rulings have been implemented through the adoption of Directive 2003/74/EC.

381. The European Communities further submits that, upon the adoption of Directive 2003/74/EC in good faith, the suspension of concessions would have achieved its objective and would do nothing to induce compliance. Article 22.1 of the DSU provides that the suspension of concessions is not to be "preferred to *full* implementation of a recommendation to bring a measure into conformity with the covered agreements".[789] Requiring termination of the suspension of concessions simply because a Member declares that it has removed the inconsistent measure, without a multilateral determination that substantive compliance has indeed been achieved, would undermine the important function of the suspension of concessions in inducing compliance. This would significantly weaken the effectiveness of the WTO dispute settlement system and its ability to provide security and predictability to the multilateral trading system.

382. The European Communities additionally submits that its position is consistent with the approach taken in the Articles on Responsibility of States for Internationally Wrongful Acts[790] (the "Articles on State Responsibility"), which require that countermeasures be suspended if the internationally wrongful act has ceased and the dispute is pending before a tribunal that has the authority to make decisions binding upon the parties.[791] Yet, the Articles on State Responsibility do not lend support to the European Communities' position. For example, Article 53 provides that countermeasures must be terminated as soon as the State "has complied with its obligations" in relation to the internationally wrongful act. Thus, relevant principles under international law, as reflected in the Articles on State Responsibility, support the proposition that countermeasures may continue until such time as the responsible State has ceased the wrongful act by fully complying with its obligations.

383. In sum, the suspension of concessions maintained by the United States and Canada has been duly authorized by the DSB and was obtained through recourse to the relevant rules and procedures of the DSU, consistently with Article 23.1 of the DSU. Pursuant to Article 22.8, the legality of the continued suspension of concessions depends on whether the measure found to be inconsistent in *EC – Hormones* has been removed, and this requires substantive compliance. We therefore find that the Panel erred in considering that the European Communities' claims under Articles 23.2(a), 23.1, and 21.5 may be examined "completely separately" from whether the European Communities implemented the DSB's recommendations and rulings in *EC – Hormones*.[792]

384. The DSB's authorization does not mean that Article 23 becomes irrelevant. Rather, as Article 23.2(c) specifies, the suspension of concessions is subject to Article 22, including the

[789]Moreover, pursuant to Article 3.3, the "prompt settlement" of disputes "is essential to the effective functioning of the WTO and the maintenance of a proper balance between the rights and obligations of Members".

[790]See *supra*, footnote 480.

[791]See European Communities' appellee's submission, paras. 94-96.

[792]Panel Report, *US – Continued Suspension*, para. 7.182; Panel Report, *Canada – Continued Suspension*, para. 7.164.

requirement in Article 22.8 that it shall only be applied until such time as the measure found to be inconsistent with the covered agreements has been removed. Therefore, the suspension of concessions by the United States and Canada would be in breach of Article 23.2(c), and consequently Article 23.1, if it were established in WTO dispute settlement that the inconsistent measure has indeed been removed within the meaning of Article 22.8 and the suspension is not immediately terminated. Article 22.8 thus provides relevant context for the analysis of the issues appealed under Article 23. Moreover, the application of DSB-authorized suspension of concessions is temporary and subject to the objective conditions laid down in Article 22.8. The United States, Canada, as well as the European Communities, have the shared responsibility to ensure that the suspension of concessions is not applied beyond the time foreseen in Article 22.8. Consequently, the United States and Canada have a duty to engage actively in dispute settlement proceedings concerning whether the suspension of concessions is applied consistently with such conditions. Failing to do so could be contrary to the overarching principle in Article 23.1 prohibiting Members from seeking redress without having recourse to, or abiding by the rules of, the DSU. Nonetheless, this is not currently the case, because both the United States and Canada are actively engaged in these proceedings initiated by the European Communities to determine whether the measure found to be inconsistent with a covered agreement in *EC – Hormones* has been removed within the meaning of Article 22.8.

3. Whether the Panel Erred in Finding that the United States and Canada Are "Seeking the Redress of a Violation" with Respect to Directive 2003/74/EC

385. We turn to examine the claim by the United States and Canada that the Panel erred in finding that, by continuing the suspension of concessions subsequent to the notification of Directive 2003/74/EC, they were seeking the redress of a violation without having recourse to, or abiding by, the rules and procedures of the DSU within the meaning of Article 23.1 of the DSU.

386. The Panel found that Directive 2003/74/EC, which the European Communities adopted to implement the DSB's recommendations and rulings in *EC – Hormones*, is a new measure that "has never been as such subject to recourse to the rules and procedures of the DSU".[793] The Panel stated that, although Directive 2003/74/EC, like Directive 96/22/EC (which was found to be WTO-inconsistent in *EC – Hormones*), also imposed an import ban, "it is not the ban ... but the justification for this ban which was found insufficient" in *EC – Hormones*.[794] According to the Panel, therefore, the fact that the ban remains in place does not mean that no new measure has been adopted. The Panel thus found that, through the continued suspension of concessions, the United States and Canada are seeking redress of a violation caused by Directive 2003/74/EC, a measure they had not challenged by having recourse to the DSU.[795]

387. We recall that the suspension of concessions maintained by the United States and Canada was authorized by the DSB as a result of the finding in *EC – Hormones* that Directive 96/22/EC was inconsistent with the *SPS Agreement*. The Panel correctly noted that the existence of an import ban in Directive 2003/74/EC (which replaced Directive 96/22/EC) does not mean that no implementing measure has been adopted. Yet, the Panel's analysis under Article 23 stopped short of considering whether the European Communities' implementing measure resulted in substantive compliance. As we explained earlier, such analysis is necessary to determine whether the suspension of concessions was required to be terminated pursuant to Article 22.8 of the DSU. Even if the United States and Canada could be said to continue to seek redress of the violation resulting from Directive 96/22/EC by maintaining the suspension of concessions, they are not prevented from doing so as long as the

[793]Panel Report, *US – Continued Suspension*, para. 7.206; Panel Report, *Canada – Continued Suspension*, para. 7.198.

[794]Panel Report, *US – Continued Suspension*, para. 7.207; Panel Report, *Canada – Continued Suspension*, para. 7.199.

[795]Panel Report, *US – Continued Suspension*, para. 7.215; Panel Report, *Canada – Continued Suspension*, para. 7.207.

removal of the inconsistent measure has not been established in WTO dispute settlement. In obtaining DSB authorization for that suspension, the United States and Canada abided by the DSU as required by Article 23.1. The Panel's finding that, by maintaining the suspension of concessions, the United States and Canada are seeking the redress of a violation without abiding by the rules of the DSU thus appears to presuppose what is yet to be established, that is, that the inconsistent measure against which the suspension of concessions was authorized (Directive 96/22/EC) has actually been "removed" within the meaning of Article 22.8 by Directive 2003/74/EC.[796] This finding of the Panel flows from its erroneous approach of considering Articles 23.1 and 23.2(a) completely separately from the requirements of Article 22.8, which we discussed and rejected earlier.

388. The Panel rejected the arguments by the United States and Canada that they were authorized to suspend concessions and that this authorization has not been revoked.[797] The Panel stated that the DSB's authorization to suspend concessions is "only an *authorization*, not an *obligation*".[798] According to the Panel, this meant that the United States and Canada were "free to apply" the suspension of concessions or not, and the fact that they did not lift the suspension after the notification of Directive 2003/74/EC indicated their intention to seek redress of a violation arising from Directive 2003/74/EC.[799] We fail to see the relevance of the distinction between an authorization and an obligation to suspend concessions for purposes of analyzing whether the United States and Canada are seeking the redress of a violation concerning Directive 2003/74/EC. The relevant question before the Panel was whether the authorization to suspend concessions had lapsed because one of three conditions in Article 22.8 has been met. In the absence of a finding in WTO dispute settlement that the first condition in Article 22.8 had been met, the authorization to suspend concessions did not cease to be legally valid.

389. In addition, the Panel observed that "[i]n none of the circumstances foreseen by [the first sentence of] Article 22.8 does this provision require a decision of the DSB".[800] We agree that, under the first sentence of Article 22.8, a decision of the DSB is not required if Members reach a mutually agreed solution. Similarly, a DSB decision is not required if the suspending Member does not dispute that the measure found to be inconsistent with a covered agreement has been removed. However, where a disagreement arises as to whether the measure found to be inconsistent has indeed been removed, this disagreement must be resolved through Article 21.5 proceedings to determine whether the suspension of concessions is still applied consistently with the objective conditions under Article 22.8 or must be terminated. Under such circumstances, DSB decisions are required for the dispute to proceed pursuant to the rules of the DSU, including the decision to establish a panel and the adoption of the panel or Appellate Body reports examining the implementing measure. Moreover, the second sentence of Article 22.8 requires the DSB to keep under surveillance the implementation of adopted recommendations and rulings in cases where concessions have been suspended. Article 22.8 therefore clearly contemplates an ongoing role of the DSB in reviewing the implementation of recommendation and rulings, thus confirming that a dispute concerning implementation should be

[796]In the context of addressing the European Communities' claim that the United States and Canada also breached Article 22.8, the Panel found that "it has not been established that the European Communities has removed the measure found to be inconsistent with a covered agreement." (Panel Report, *US – Continued Suspension*, para. 7.847; and Panel Report, *Canada – Continued Suspension*, para. 7.832) For this reason, the Panel concluded that the European Communities "did not demonstrate a breach of Article 22.8 of the DSU" by the United States and Canada. (Panel Report, *US – Continued Suspension*, para. 7.850; Panel Report, *Canada – Continued Suspension*, para. 7.835)

[797]Panel Report, *US – Continued Suspension*, para. 7.208; Panel Report, *Canada – Continued Suspension*, para. 7.200.

[798]Panel Report, *US – Continued Suspension*, para. 7.209; Panel Report, *Canada – Continued Suspension*, para. 7.201. (original emphasis)

[799]Panel Report, *US – Continued Suspension*, paras. 7.209 and 7.210; Panel Report, *Canada – Continued Suspension*, paras. 7.201 and 7.202.

[800]Panel Report, *US – Continued Suspension*, para. 7.211; Panel Report, *Canada – Continued Suspension*, para. 7.203.

subject to multilateral resolution and not be decided on the basis of a unilateral declaration of compliance or non-compliance.

390. We also note the Panel's statement that, "pursuant to Article XVI:4 of the [*WTO Agreement*], Members must ensure the conformity of their laws, regulations and administrative procedures with their obligations as provided" in the covered agreements, "including the DSU".[801] According to the Panel, this obligation also applies to the suspension of concessions. Article XVI:4 applies equally to all WTO Members. The European Communities was required to ensure the conformity of its implementing measure, just as it is the obligation of the United States and Canada to ensure the conformity of their continued application of suspension of concessions.[802] We do not see the relevance of this provision in the Panel's analysis under Article 23.1 of the DSU, as long as the conditions for the cessation of suspension under Article 22.8 have not been established.

391. On appeal, the European Communities submits that "the *adoption* of a measure taken to comply" that is "*different* from the original [measure] *triggers* the presumption of good faith compliance" and, consequently, the "obligation to remove the suspension of concessions".[803] The European Communities' argument is again premised on the proposition that the implementing measure should be presumed to bring about full compliance as a result of the application of the presumption of good faith, as well as its understanding of the phrase "the measure found to be inconsistent with a covered agreement has been removed" in Article 22.8 as requiring merely the formal removal of the original measure, both of which we rejected in section D.

392. The European Communities further asserts that "even the United States acknowledged that it was maintaining its suspension of concessions against the new measure", as demonstrated by the United States' statements at the DSB meetings subsequent to the notification of Directive 2003/74/EC and in its Trade Policy Agenda in 2005.[804] As will be discussed in subsection 4 below, the DSB statements referred to by the European Communities do not, in themselves, have the legal effects that the Panel attributed to them. Moreover, the Trade Policy Agenda document referred to by the European Communities states that the United States "maintains its WTO-authorized sanctions on [European Communities'] products because the United States fails to see how the revised [European Communities'] measure could be considered to implement the recommendations and rulings of the DSB in this matter".[805] Thus, contrary to the European Communities' arguments, the statements make clear that the legal basis for maintaining the suspension of concessions was not the new measure. Rather, the basis for maintaining the suspension of concessions was that the United States considered that the European Communities had failed to implement the DSB's recommendations and rulings in *EC – Hormones* flowing from the inconsistency of Directive 96/22/EC.

393. Accordingly, we find that the Panel erred in concluding that, "by maintaining the suspension of concessions even after the notification of [Directive 2003/74/EC]", the United States and Canada are "seeking redress of a violation with respect to [this Directive], within the meaning of Article 23.1 of the DSU".[806]

[801]Panel Report, *US – Continued Suspension*, para. 7.212; Panel Report, *Canada – Continued Suspension*, para. 7.204.

[802]As the United States argues, this provision "militates equally in favor of a finding that the continued suspension of concessions by the United States" after the European Communities' notification of Directive 2003/74/EC "did *not* demonstrate that the United States was 'seeking redress of a violation' within the meaning of Article 23.1 with respect to" this Directive. (United States other appellant's submission, para. 58) (original emphasis)

[804]*Ibid.*, para. 106 (referring to Panel Report, *US – Continued Suspension*, paras. 7.219-7.221).

[805]*Ibid.*

[806]Panel Report, *US – Continued Suspension*, para. 7.215; Panel Report, *Canada – Continued Suspension*, para. 7.207.

4. Whether the Panel Erred in Finding that the United States and Canada Made a Determination of Violation Without Recourse to the DSU, Within the Meaning of Article 23.2(a)

394. We turn now to review the claims by the United States and Canada that the Panel erred in finding that they made a determination of violation regarding Directive 2003/74/EC without having recourse to dispute settlement in accordance with the rules and procedures of the DSU, contrary to Article 23.2(a) of the DSU.

395. We recall that, on the basis of the statements made by Canadian and United States delegates at two DSB meetings[807] concerning Directive 2003/74/EC, the Panel concluded that the United States and Canada had reached "a more or less final decision"[808] that this Directive is inconsistent with the *SPS Agreement* and fails to implement the DSB's recommendations and rulings in *EC – Hormones*. Such statements, in the Panel's view, constitute a "determination" under Article 23.2(a) of the DSU and, because the determination was made unilaterally without recourse to the DSU, it breached Article 23.2(a).[809]

396. We share the view of the panel in *US – Section 301 Trade Act* that a "determination" within the meaning of Article 23.2(a) "implies a high degree of firmness or immutability, i.e. a more or less final decision by a Member in respect of the WTO consistency of a measure taken by another Member".[810] Moreover, preliminary opinions or views expressed without a clear intention to seek redress are not covered by Article 23.2(a).[811] The statements made by delegates of the United States and Canada, on which the Panel focused its attention, were made shortly after the European Communities notified Directive 2003/74/EC to the DSB. The statements were made at the two DSB meetings held, respectively, two weeks and five weeks from the DSB meeting at which Directive 2003/74/EC was notified by the European Communities.[812] These statements, therefore, seem no more than initial reactions to the European Communities' self-proclaimed compliance with the DSB's recommendations and rulings in *EC – Hormones*. Considering the complexity of the issues that arise with respect to the consistency of Directive 2003/74/EC (as demonstrated in sections VI and VII of the Report), it is reasonable to assume that the United States and Canada needed some time before forming a definitive view regarding whether the European Communities had brought itself into compliance. We thus share the United States' and Canada's view that the statements at the DSB meetings lack sufficient amount of "firmness or immutability" for them to constitute a determination within the meaning of Article 23.2(a).[813]

[807]See Panel Report, *US – Continued Suspension*, paras. 7.219 and 7.220 (quoting Minutes of the DSB Meetings held on 7 November and 1 December 2003, WT/DSB/M/157, paras. 29 and 30, and WT/DSB/M/159, para. 25, respectively); and Panel Report, *Canada – Continued Suspension*, paras. 7.211-7.213 (quoting Minutes of the DSB Meetings held on 7 November and 1 December 2003, WT/DSB/M/157, para. 31, and WT/DSB/M/159, para. 24, respectively).

[808]Panel Report, *US – Continued Suspension*, para. 7.222; Panel Report, *Canada – Continued Suspension* , para. 7.215 (quoting Panel Report, *US – Section 301 Trade Act*, footnote 657 to para. 750).

[809]Panel Report, *US – Continued Suspension*, paras. 7.225 and 7.226; Panel Report, *Canada – Continued Suspension*, paras. 7.219, 7.222, and 7.223.

[810]Panel Report, *US – Section 301 Trade Act*, footnote 657 to para. 7.50.

[811]See *ibid.*. See also Panel Report, *US – Certain EC Products*, para. 6.18.

[812]The European Communities notified the DSB of the adoption of Directive 2003/74/EC on 27 October 2003. See Panel Report, *US – Continued Suspension*, para. 7.219; and Panel Report, *Canada – Continued Suspension*, para. 7.211.

[813]United States' other appellant's submission, paras. 79-81; Canada's other appellant's submission, para. 89. Canada adds that the statements made at the two DSB meetings were "the equivalent of Canada reserving its rights while not acquiescing to the [European Communities'] assertions of compliance". (*Ibid.*) We consider this a proper characterization of these statements.

397. In their statements, the United States and Canada indicated that they would be willing to engage in further bilateral discussions regarding the alleged scientific justification for Directive 2003/74/EC.[814] This readiness to discuss Directive 2003/74/EC is difficult to reconcile with a finding that the DSB statements constituted a "determination" with the type of firmness and immutability required by its ordinary meaning and the relevant context of Article 23, as interpreted by the panel in *US – Section 301 Trade Act*. The Panel recognized this intention to engage in bilateral discussions evidenced in the DSB statements, but found that the consultations that took place after the notification of Directive 2003/74/EC "largely related to procedural issues".[815] Simply because subsequent consultations related largely to procedural issues does not mean that, *at the time the DSB statements were made*, the United States and Canada had made a unilateral determination without recourse to the DSU within the meaning of Article 23.2(a).

398. Moreover, DSB statements are not intended to have legal effects and do not have the legal status of a definitive determination in themselves. Rather, they are views expressed by Members and should not be considered to prejudice Members' position in the context of a dispute. As the United States rightly points out, "[s]tatements made by Members at DSB meetings, especially those expressing a view as to the WTO consistency of another Member's measures or actions, are generally diplomatic or political in nature" and "generally have no legal effect or status in and of themselves".[816]

399. The Panel's finding that DSB statements could constitute a definitive determination concerning the WTO-inconsistency of a Member's measure could adversely affect WTO Members' ability to freely express their views on the potential compatibility with the covered agreements of measures adopted by other Members.[817] This would result in a "chilling" effect on those statements[818], because Members would refrain from expressing their views at DSB meetings regarding the WTO-inconsistency of other Members' measures lest such statements be found to constitute a violation of Article 23. If this were the case, the DSB would be inhibited from properly carrying out its function, pursuant to Article 21.6 of the DSU, to keep under surveillance the implementation of its recommendations and rulings.

400. The European Communities disagrees with the United States' argument that statements made at DSB meetings have no legal effect in themselves, arguing, instead, that "those statements can be used as *evidence* of a particular position, view or determination taken by a Member."[819] The European Communities refers to the Appellate Body's observation in *US – Upland Cotton (Article 21.5 – Brazil)* that certain statements in a United States Government press release indicated

[814]Panel Report, *US – Continued Suspension*, para. 7.220; Panel Report, *Canada – Continued Suspension*, para. 7.212. The United States indicated at the meeting of 1 December 2003 that "[t]he United States would be pleased to discuss with [European Communities'] officials any outstanding issues regarding the [European Communities'] ban on certain beef produced in the United States, including their reactions to the detailed points that the United States had raised in its statement at the 7 November DSB meeting. With regard to the suggestion made by the [European Communities] at the present meeting that multilateral proceedings be initiated, the United States would be happy to discuss this suggestion with the [European Communities] along with other procedural options." (Panel Report, *US – Continued Suspension*, para. 7.220) Canada indicated at the meeting of 7 November 2003 that "Canada did not see any reason for WTO procedures at this time, but would welcome the opportunity for further discussion with the [European Communities] concerning the justification for its measures." (Panel Report, *Canada – Continued Suspension*, para. 7.211)

[815]Panel Report, *US – Continued Suspension*, para. 7.224; Panel Report, *Canada – Continued Suspension*, para. 7.222.

[816]United States' other appellant's submission, para. 93.

[817]We note the United States' concern that "[t]he Panel has thereby made the bold and novel move of transforming the minutes of DSB, other WTO committee meetings, and even Trade Policy Review meetings into a fertile source of comments that ... could constitute 'determinations' actionable under Article 23.2(a)." (*Ibid.*, para. 94)

[818]*Ibid.*, para. 95.

[819]European Communities' appellee's submission, para. 131. (original emphasis)

that it was taking a measure to comply with the DSB's recommendations and rulings.[820] The European Communities' reliance on the Appellate Body's findings in *US – Upland Cotton (Article 21.5 – Brazil)* is misplaced. In that dispute, the Appellate Body did not rely on the press release of the United States Government in making a finding on the scope of the "measure taken to comply", but only referred to the statements of the United States' officials as providing confirmation of its earlier conclusion, reached on the basis of an examination of the measure itself and the DSB's recommendations and rulings in the original dispute. In contrast, the Panel in this dispute based its finding that the United States and Canada made a determination of violation directly on the statements they made at the DSB.

401. We agree therefore with the United States and Canada that their statements at the DSB meetings did not involve the degree of firmness or immutability necessary in order to constitute a "determination" within the meaning of Article 23 of the DSU.[821]

402. The Panel went on to find that, even if the DSB statements were considered to be provisional, "the subsequent continuation of the suspension of concessions by [the United States and Canada] without alteration and without saying that [they were] still studying [Directive 2003/74/EC]" confirmed that they made such a "determination".[822] The United States and Canada submit that the Panel "inferred"[823], or "construed"[824] the existence of a determination on the basis of the mere continuation of the suspension of concessions. They argue that the Panel's reasoning is flawed because it draws an inference from the "inaction"[825], or "non-feasance"[826], of the United States and Canada in failing to terminate the suspension of concessions.

403. As we stated earlier, the DSB authorization of the suspension of concessions by the United States and Canada flowed from the inconsistency of Directive 96/22/EC and continued to be legally valid until the measure found to be inconsistent with a covered agreement in *EC – Hormones* was removed within the meaning of Article 22.8. Although the European Communities may have claimed to have removed the inconsistent measure and declared compliance, the United States and Canada disagreed that this was in fact the case. Thus, until the removal of the European Communities' inconsistent measure was determined through WTO dispute settlement, the United States' and Canada's authorization to suspend concessions did not lapse. Under these circumstances, the suspension of concessions applied pursuant to the DSB's authorization in respect of Directive 96/22/EC was maintained through recourse to, and abiding by, the rules and procedures of the DSU. Its continuation thus did not "confirm" that the United States and Canada made a unilateral determination regarding Directive 2003/74/EC, as the Panel found, in violation of Article 23.2(a) of the DSU.[827]

404. The United States further asserts that, by inferring the existence of a "determination" within the meaning of Article 23.2(a) on the basis of the continued suspension of concessions, the Panel

[820] *Ibid.* (referring to Appellate Body Report, *US – Upland Cotton (Article 21.5 – Brazil)*, para. 204).

[821] United States' other appellant's submission, para. 96; Canada's other appellant's submission, para. 89.

[822] Panel Report, *US – Continued Suspension*, para. 7.230; Panel Report, *Canada – Continued Suspension*, para. 7.224.

[823] United States' other appellant's submission, para. 98.

[824] Canada's other appellant's submission, para. 81.

[825] United States' other appellant's submission, para. 98.

[826] Canada's other appellant's submission, para. 81.

[827] Nonetheless, we do not share the view of the United States and Canada that the continued suspension of concessions should be properly characterized as inaction. Upon the authorization to suspend concessions in 1999, the United States and Canada respectively took the measures to impose tariffs on all imports of certain European Communities products at rates substantially exceeding the bound tariff rates and have continuously collected the additional tariffs since then. Thus, the continued suspension of concessions by the United States and Canada is more properly characterized as an ongoing action.

effectively read into Article 23 a deadline by which a unilateral determination inconsistent with Article 23.2(a) will be imputed to a Member, even though Article 23 contains no such deadline.[828] The European Communities contends that the Panel correctly observed that the deadline by which a Member shall have recourse to the DSU pursuant to Articles 23.1 and 23.2(a) "was not an issue before the Panel".[829] However, without a proper identification of the time at which the continued suspension of concessions would be found to constitute a unilateral determination inconsistent with the DSU, WTO Members would be unsure as to when or for how long they could properly rely on a DSB authorization to suspend concessions. Such an outcome is contrary to the DSU's objective of providing security and predictability.[830] In any event, given that we have found above that an original respondent may initiate Article 21.5 proceedings, and that the authority to suspend concessions lapses once one of the three conditions in Article 22.8 is met, we feel no need to further explore this question.

405. Thus, we conclude that the Panel erred in finding that the United States and Canada "made a 'determination' within the meaning of Article 23.2(a) in relation to Directive 2003/74/EC" on the basis of statements made at DSB meetings and the fact that the suspension of concessions continued subsequent to the notification of Directive 2003/74/EC.[831]

406. Having found that the United States and Canada made a determination of violation in relation to Directive 2003/74/EC, the Panel went on to find that, because "the authorization to suspend concessions" does not amount to "a multilateral determination of inconsistency"[832] of Directive 2003/74/EC, the United States and Canada had not made the determination through recourse to dispute settlement in accordance with the rules and procedures of the DSU.[833] However, whether Directive 2003/74/EC "removed" the inconsistencies within the meaning of Article 22.8 was disputed and had not yet been determined through WTO dispute settlement. Therefore, the DSB's authorization remained valid. The Panel's finding also contradicts its own approach, correctly taken in the context of its examination of Article 22.8, that the suspension of concessions is not required to be terminated merely on the basis of a formal removal of the inconsistent measure but, rather, is required once there is substantive compliance.

407. Because we have found that the Panel erred in concluding that the United States and Canada made a determination that a violation has occurred within the meaning of Article 23.2(a), the Panel's finding that the United States and Canada had "failed to make any such determination consistent with the findings contained in the panel or Appellate Body report adopted by the DSB or an arbitration award rendered under the DSU", in breach of Article 23.2(a)[834], also fails.

5. Conclusion

408. We concluded in the preceding sections that the Panel erred in finding that the United States and Canada were seeking the redress of a violation with respect to Directive 2003/74/EC, within the meaning of Article 23.1 of the DSU, and made a determination in relation to that Directive to the

[828] United States' other appellant's submission, para. 105.

[829] European Communities' appellee's submission, para. 134 (referring to Panel Report, *US – Continued Suspension*, para. 7.232).

[830] See Canada's other appellant's submission, para. 81.

[831] Panel Report, *US – Continued Suspension*, para. 7.239; Panel Report, *Canada – Continued Suspension*, para. 7.232.

[832] Panel Report, *US – Continued Suspension*, para. 7.242; Panel Report, *Canada – Continued Suspension*, para. 7.235.

[833] Panel Report, *US – Continued Suspension*, para. 7.243; Panel Report, *Canada – Continued Suspension*, para. 7.236.

[834] Panel Report, *US – Continued Suspension*, para. 7.244; Panel Report, *Canada – Continued Suspension*, para. 7.237.

effect that a violation has occurred, within the meaning of Article 23.2(a) of the DSU. Therefore, we reverse the Panel's finding that the United States and Canada have "violated Article[s] 23.1 and 23.2(a) of the DSU by seeking redress of violation of the WTO Agreement through a determination that the [European Communities'] implementing measure did not comply with the DSB recommendations and rulings in the *EC – Hormones* case without having recourse to dispute settlement in accordance with the rules and procedures of the DSU."[835]

409. The European Communities claims that, in order to fulfil their obligations under Articles 23.1 and 23.2(a) of the DSU to have recourse to dispute settlement in accordance with the DSU, the United States and Canada were required to initiate Article 21.5 panel proceedings if they considered that Directive 2003/74/EC fails to bring the European Communities into compliance. The European Communities submits that, upon finding that the United States and Canada breached Articles 23.2(a) and 23.1 by seeking the redress of a violation without recourse to the DSU, the Panel should have also found that the United States and Canada breached Article 21.5 by failing to initiate panel proceedings under that provision. We have reversed the Panel's finding that the United States and Canada breached Articles 23.2(a) and 23.1 by seeking the redress of a violation without recourse to the DSU. We also recall our earlier finding that the original respondent is not precluded under Article 21.5 from initiating Article 21.5 compliance proceedings. Consequently, we dismiss the European Communities' claim. This does not mean that the United States and Canada do not have an obligation to engage in the dispute settlement procedures in an cooperative manner. Rather, the United States, Canada, and the European Communities have an obligation to engage in Article 21.5 proceedings in order to obtain objective ascertainment of whether substantive compliance has been achieved in this case and whether the resolutive condition in Article 22.8 has been met.

G. *The Panel's Finding that It Had No Jurisdiction to Make Findings under the SPS Agreement*

410. The United States and Canada request that, should the Appellate Body uphold the Panel's findings that they breached Articles 23.2(a) and 23.1 of the DSU, it reverse the Panel's statement, in the last paragraph of its Report, that it had no jurisdiction to determine the compatibility of Directive 2003/74/EC with the *SPS Agreement*.[836] Because we have reversed the Panel's finding that the United States and Canada breached Articles 23.2(a) and 23.1 of the DSU, the condition upon which the United States' and Canada's requests rest is not met. We note, however, that in section D.4 above we upheld the Panel's finding that "it has jurisdiction to consider the compatibility of the [European Communities'] implementing measure with the *SPS Agreement* as part of its review of the claim raised by the European Communities with respect to Article 22.8 of the DSU."[837] In any event, in sections VI and VII below, we reverse the Panel's findings under Articles 5.1 and 5.7 of the *SPS Agreement*.

H. *The Panel's Suggestion*

411. In addition to finding that the United States and Canada committed procedural violations under Article 23 of the DSU, the Panel suggested, pursuant to Article 19.1 of the DSU, that the United States and Canada "should have recourse to the rules and procedures of the DSU without delay".[838] The European Communities, the United States, and Canada all take issue with this suggestion.

[835]Panel Report, *US – Continued Suspension*, para. 7.251; Panel Report, *Canada – Continued Suspension*, para. 7.244.

[836]United States' other appellant's submission, paras. 108 and 120; Canada's other appellant's submission, para. 92.

[837]Panel Report, *US – Continued Suspension*, para. 7.379; Panel Report, *Canada – Continued Suspension*, para. 7.376.

412. The United States and Canada request that, in the event that the Appellate Body upholds the Panel's finding that the United States and Canada committed procedural violations under Articles 23.2(a) and 23.1 of the DSU, the Appellate Body reverse the Panel's suggestion that they should have recourse to the DSU without delay.[839]

413. The European Communities contends that the Panel's suggestion, that the United States and Canada should have recourse to dispute settlement without delay, is "too vague to be of much assistance", because it is unclear to "which rules and procedures of the DSU" the United States and Canada should have recourse.[840] Therefore, the European Communities requests the Appellate Body to "improve the Panel's suggestion in order to bring it into a clear form that is also more in line with the Panel's own findings".[841] More specifically, the European Communities requests the Appellate Body to "modify" the suggestion so as to make clear that the United States and Canada should: (i) cease applying the suspension of concessions; and (ii) seek resolution of any disagreement regarding the consistency of Directive 2003/74/EC through recourse to panel proceedings under Article 21.5 of the DSU, or any other dispute settlement proceedings that the parties may agree.[842]

414. The Panel's suggestion that the United States and Canada "should have recourse to the rules and procedures of the DSU without delay" rests on its findings that the United States and Canada breached Articles 23.2(a) and 23.1 of the DSU by seeking redress of a violation of the covered agreement without having recourse to dispute settlement under the DSU. We have reversed these findings of the Panel. Thus, the Panel's suggestion cannot stand.

V. Due Process in the Panel's Consultations with the Scientific Experts

415. We now turn to the European Communities' claims that the Panel failed to respect the principle of due process and, consequently, also failed to make an objective assessment of the matter under Article 11 of the DSU, in selecting and relying upon two of the scientific experts consulted by the Panel.

A. *The Panel's Findings*

416. On 25 November 2005, following consultation with the parties, the Panel adopted Working Procedures for Consultations with Scientific and/or Technical Experts (the "Experts Working Procedures").[843] The Panel decided not to establish an expert review group as had been suggested by the European Communities, but to consult experts on an individual basis.[844] Moreover, the Panel

[838]Panel Report, *US – Continued Suspension*, para. 8.3; Panel Report, *Canada – Continued Suspension*, para. 8.3.

[839]United States' other appellant's submission, paras. 108 and 116; Canada's other appellant's submission, paras. 92 and 98.

[840]European Communities' appellant's submission, para. 479.

[841]*Ibid.*

[842]*Ibid.*, para. 480.

[843]Panel Report, *US – Continued Suspension*, para. 7.71; Panel Report, *Canada – Continued Suspension*, para. 7.69. The Experts Working Procedures are reproduced in Annex A-5 of the Panel Reports. A single expert selection process was carried out for both disputes. (Panel Report, *US – Continued Suspension*, para. 7.76; Panel Report, *Canada – Continued Suspension*, para. 7.74)

[844]Panel Report, *US – Continued Suspension*, para. 7.71; Panel Report, *Canada – Continued Suspension*, para. 7.69. The European Communities initially indicated that the Panel did not have to consult experts. (Panel Report, *US – Continued Suspension*, para. 7.56; Panel Report, *Canada – Continued Suspension*, para. 7.54)

"sought information not only from selected experts but also from three relevant international entities, the Codex Alimentarius Commission (Codex), the Joint FAO/WHO Expert Committee on Food Additives (JECFA), and the International Agency for Research on Cancer (IARC)."[845]

417. In accordance with paragraph 3 of the Experts Working Procedures, the Panel solicited suggestions for experts from the Secretariats of Codex, JECFA, and the IARC.[846] From these suggestions, the Panel provided to the parties all the information received from the 11 experts that were interested and available, and asked them to indicate any "compelling reasons" why particular experts should not be chosen.[847] The European Communities objected to the inclusion of experts that had participated in JECFA's risk assessment work, explaining that "the scientific controversy over the JECFA reports is at the heart of this case and is the reason why the Panel is now seeking advice from outside experts."[848] The European Communities added that such experts "cannot be considered to be objective and impartial in these circumstances, because this would amount to asking them to review and criticise their proper work".[849]

418. Because the parties' positions with respect to the experts "differed significantly", the Panel sought additional names of experts from the parties pursuant to paragraph 6 of the Experts Working Procedures.[850] Of the 71 experts suggested by the international organizations and the parties, 40 experts indicated that they were available, and 35 responded to the request for their *curriculum vitae* and information regarding potential conflicts of interest.[851] This information was provided to the parties for comments and objections.[852] As the Panel explained:

> One party or another submitted objections with regard to all but one of the experts by arguing either that an expert lacked sufficient expertise in the areas of the dispute identified as needing scientific or technical expertise, or was affiliated with the government of a party to this dispute; or was affiliated with JECFA; or had received funding from the pharmaceutical industry; or had been involved in the regulatory approval of any of the six hormones.[853]

419. On 24 March 2006, the Panel informed the parties of the six experts it had selected. The Panel explained its considerations in the selection process as follows:

> The Panel excluded experts with close links with governmental authorities directly involved in policy-making regarding the six hormones and experts with close links to pharmaceutical companies or involved in public advocacy activities. The Panel chose not to exclude *a priori* experts who had participated in the preparation and drafting of JECFA's risk assessments because this would deprive the Panel and the parties of the benefit of the contribution of internationally recognized specialists and because the Panel was of the opinion that experts familiar with the JECFA reports would be well-placed to assist the Panel in understanding the work of JECFA extensively referred to by the parties in their submissions, in particular by the European Communities. Moreover, the Panel, who was fully aware of the fields of competence of these experts, considered that they would be competent to answer questions with respect to risk assessment regarding the hormones at issue. The Panel also decided not to exclude *a priori* all experts who were current or past governmental employees unless a potential conflict of interests could reasonably be assumed from their official functions. In selecting the experts, the Panel also had in mind the need to choose experts with expertise to cover all the fields identified as at issue in the dispute.[854]

[845]Panel Report, *US – Continued Suspension*, para. 7.78; Panel Report, *Canada – Continued Suspension*, para. 7.76. (footnotes omitted)

[847]Panel Report, *US – Continued Suspension*, para. 7.79; Panel Report, *Canada – Continued Suspension*, para. 7.77.
[848]Letter from the European Communities to the Panel dated 16 January 2006 (quoted in European Communities' appellant's submission, para. 193).
[849]*Ibid.*
[850]Panel Report, *US – Continued Suspension*, para. 7.80; Panel Report, *Canada – Continued Suspension*, para. 7.78.
[851]Panel Report, *US – Continued Suspension*, para. 7.82; Panel Report, *Canada – Continued Suspension*, para. 7.80.
[852]Panel Report, *US – Continued Suspension*, para. 7.83; Panel Report, *Canada – Continued Suspension*, para. 7.81.
[853]Panel Report, *US – Continued Suspension*, para. 7.84; Panel Report, *Canada – Continued Suspension*, para. 7.82.

420. The European Communities asked the Panel to reconsider its decision with respect to two experts, Dr. Jacques Boisseau[855] and Dr. Alan Boobis[856], arguing that "these experts had real or perceived conflicts of interests that should disqualify them from assisting the Panel."[857] In addition to reiterating concerns about the involvement of the two selected experts "in the drafting and adoption of the JECFA reports concerning the subject matter of this dispute"[858], the European Communities advanced other reasons to exclude Drs. Boisseau and Boobis. The European Communities argued that Dr. Boisseau should be dismissed because he had not "submitted a statement of conflict of interest to the Panel", had "already taken a position on the issue at stake in this dispute" in a public hearing before the French Senate, had taken a position in a public debate "that only 'major' risks are relevant in precautionary decision making", and had neither "carried out any real scientific research" nor "written anything on the substances under consideration".[859] With regard to Dr. Boobis, the European Communities alleged that he had received funding from, and provided consultancy to, several pharmaceutical companies, some of which had not been disclosed in his statement on conflicts of interest.[860] The Panel did not consider that the European Communities' objections were "justified"[861], adding:

> The Panel found in particular that the statement that one expert had made before the French Senate in 1996 had not been made in relation to hormones used for growth promotion purposes. Rather, it had been made with respect to hormones used for medical treatment purposes.

> The Panel also found that the links of another expert with two companies involved in research and counselling were not in the area of veterinary drugs or hormonal substances. … In addition, having considered the information available about the various candidates, the Panel found that these two experts were the best choices among the very few individuals available with expertise in the area of risk assessment and would be able to provide the Panel with insight on international standards on the hormones at issue.[862]

421. At the interim review stage, and upon a request made by the European Communities for clarification of certain passages, the Panel said that it "remain[ed] however puzzled by the [European Communities'] suggestions that a scientist who worked with JECFA could be deemed to be biased in assessing the scientific evidence on which [European Communities'] Directive 2003/74/EC relies and could be assumed to defend JECFA's work".[863] The Panel explained:

> First, scientists would readily admit that science is constantly evolving and the fact that new studies are peer reviewed is evidence that assessing new ideas and findings is part of scientific work. Assuming that scientists may lack objectivity because they participated in the preparation and drafting of JECFA's risk assessments on the hormones at issue would call into question the whole principle of peer review. The Panel also notes that JECFA is the body that provides the independent scientific advice on which the work of Codex is based and Codex is expressly recognized by the *SPS Agreement* as having responsibilities for the establishment of "international standards, guidelines and recommendations". The Panel also recalls the role given to international standards, guidelines and recommendations by Article 3.1 and 3.2 of the *SPS Agreement*. It is therefore consistent with this role for the Panel to rely on experts who contributed in the preparation and drafting of JECFA's risk assessments of the substances at issue.[864]

422. The Panel elaborated further that:

> ... it was necessary for the Panel to be able to rely on the advice of experts intimately knowledgeable about the substance of JECFA's risk assessments. ... Second, the Panel recalls that JECFA is an international, independent entity composed of highly qualified experts selected by the WHO or FAO according to strict procedures. JECFA also regularly reassesses its risk assessments. ... Moreover,

[862] *Ibid.* The Panel further commented that:

> The Panel wishes to highlight the challenges it encountered in selecting experts. There was a limited number of specialists suggested and actually available in each of the fields on which the Panel needed assistance and almost always one or more of the parties objected to that specialist. For example, only six of the identified available experts were deemed to have extensive expertise in risk analysis. All of these experts were objected to by at least one party.

(Panel Report, *US – Continued Suspension*, footnote 382 to para. 7.87; Panel Report, *Canada – Continued Suspension*, footnote 374 to para. 7.85)

[863] Panel Report, *US – Continued Suspension*, para. 6.22; Panel Report, *Canada – Continued Suspension*, para. 6.21.

[864] Panel Report, *US – Continued Suspension*, para. 6.22; Panel Report, *Canada – Continued Suspension*, para. 6.21.

> JECFA reaches its conclusions by consensus. So the opinions expressed by the two experts were given with regard to the consensual view of JECFA on this matter, not just their own personal positions in the past. This does not mean, however, that JECFA's work is these particular experts' own work: it is a joint work by several experts.
>
> The experts that the European Communities claims were defending their work acknowledge that the state of knowledge can evolve. ... The experts consulted by the Panel are used to considering and peer reviewing studies that go beyond what they have published themselves or perhaps even contradict them. In other words, they are not likely to feel any need to defend their own previous work results in the light of new, convincing evidence or techniques that put such previous work into doubt.[865]

423. The Panel also rejected the European Communities' argument that "the two experts at issue should not be described as 'internationally recognized specialists'"[866]:

> The Panel recalls that they have been selected by the FAO and WHO as part of the JECFA selection process. The selection procedure has been described in JECFA's reply to question 14 to JECFA. The Panel fails to understand why the JECFA selection would not be evidence of the international reputation of the scientists at issue. The [European Communities] concerns about JECFA's work and the selection of experts to participate in that work are in contradiction with the role attributed by the *SPS Agreement* to Codex and to international standards, guidelines and recommendations. The Panel was fully aware of the area of expertise of the two scientists at issue, and believed that they would be more at liberty to comment on the content of JECFA's work than officials of the JECFA Secretariat. It also specified the reasons why those experts were selected in spite of not having carried out experiments with the substances at issue and does not see any need for further substantial elaboration.[867]

424. During the Panel proceedings, the experts provided written responses to scientific and technical questions posed by the Panel.[868] The Panel held a meeting with the scientific experts, which included the participation of the parties. At the meeting, the parties and the Panel had the opportunity "to ask questions to the experts and for the experts to clarify points that they had made in their written responses to the questions".[869]

B. *Claims and Arguments on Appeal*

425. On appeal, the European Communities asserts that "the consultation of experts by the Panel[] for the purposes of scientific and technical advice including their selection must respect general principles of law, and in particular the principle of due process."[870] The European Communities adds that "[i]t is inherent in the principle of due process that the parties to a dispute are given a fair hearing including that the experts a court, tribunal or panel hears or consults are *independent and impartial*."[871] The European Communities takes issue with the Panel's selection of Dr. Jacques Boisseau and Dr. Alan Boobis. The European Communities claims that "any 'reliance' the Panel[] [has] placed on what these two experts from JECFA said is a violation of the relevant rules on conflict of interest, of its rights of due process and of the requirement for the Panel[] to perform an 'objective assessment' of the matter before [it]"[872] as required under Article 11 of the DSU. As a result, the European Communities requests that the Appellate Body "reverse all findings of the Panel[] which depend on the advice [it] received from these experts".[873]

426. The European Communities contends that "the relevant legal test" the Panel should have applied is whether there was "likelihood or justifiable doubts" as to the experts' independence, a test that the European Communities describes as "quite simple and low", and not requiring "certainty or high probability".[874] The standard applied by the Panel, however, was "based on a very narrow definition of a perceived conflict of interest because it required an actual or almost certain conflict, not a perceived, likelihood or a justifiable doubts test".[875] The European Communities asserts that Dr. Boisseau took "a position in favour of the safety of these hormones" and that "Dr. Boobis has been receiving funding from the pharmaceutical industry in his research and counselling".[876] In addition, the European Communities alleges that, since Drs. Boisseau and Boobis were among the authors of the JECFA reports, which are criticized in Directive 2003/74/EC on scientific grounds, they should have been precluded from providing expert advice to the Panel. The European Communities observes that, as co-authors of the JECFA reports, "[t]hey cannot be considered to be independent and impartial in these circumstances, because this would amount to asking them to review and criticise reports that are their own doing."[877]

427. The European Communities also faults the Panel for "relying overwhelmingly"[878] on the opinions of Drs. Boisseau and Boobis; for failing to ensure that the self-disclosure requirement under the *Rules of Conduct* be complied with before selecting these experts[879]; for failing to "actually examine[] whether all of the experts had a potential conflict of interest"; and for accepting as experts persons whose independence and impartiality was not assured.[880] Finally, the European Communities argues that, "even if one were to take the view that the Panel[] could accept the non-independent experts provided that [it] would constantly bear in mind the potential conflicts when weighing the expert opinions, it is clear that the Panel[] refused to do so, considering the issue of the experts finally resolved when dismissing the European Communities' objections."[881] Indeed, these experts

[870]European Communities' appellant's submission, para. 188.

[873]*Ibid.*, para. 212.
[874]European Communities' appellant's submission, para. 195.
[875]*Ibid.*, para. 203.
[876]*Ibid.* The European Communities qualifies its charges against both experts. It admits, for instance, that Dr. Boisseau's position on the safety of hormones was taken "in the context of a discussion on therapeutic treatment in animals", and that the funding Dr. Boobis received from the pharmaceutical industry was "not from companies in the area of veterinary drugs or these hormones". (*Ibid.*)
[877]*Ibid.*, para. 205.
[878]*Ibid.*, para. 212.
[879]*Ibid.*, para. 192.
[880]*Ibid.*
[881]*Ibid.*, para. 211. (footnote omitted)

"dominate[d] the entire scientific examination by the Panel[] both from the point of view of how often they [were] referred to and whether the Panel[] ever question[ed] their opinions and whether their opinions go beyond science and stray into the area of the risk regulator."[882]

428. The United States argues that the Panel's conduct in the selection of experts was transparent and consultative, providing the parties with notice and opportunities to respond, express their concerns, and be heard before the Panel made its decisions. The United States further asserts that "[t]he fact of the matter is that the Panel and the parties were provided with full disclosure of the experts' professional affiliations and financial interests" and "[t]he record demonstrates that the Panel took the [European Communities'] concerns into account in concluding that the two experts in question were not disqualified from serving."[883] Moreover, the United States alleges that the European Communities provides no support for the claims regarding due process rights, arguing that the European Communities cited nothing more "than the most general statement" by the Appellate Body in *Thailand – H-Beams* and a judgment by the European Court of Human Rights that the European Communities had already relied upon in its challenge to the panel's expert selection process in *EC – Hormones*.[884] Finally, in respect of the European Communities' allegation of breach of Article 11 of the DSU, the United States argues that the Panel acted within the proper bounds of its discretion as fact-finder.[885]

429. Canada rejects the position of the European Communities that the relevant legal standard to determine independence or impartiality is "likelihood or justifiable doubt".[886] Rather, it observes that the only standard governing conflict of interest questions is found in Section II (Governing Principle) of the *Rules of Conduct*. That provision requires that all persons covered under the *Rules of Conduct*, including experts, "shall be independent and impartial" and "shall avoid direct or indirect conflicts of interest".[887] Moreover, Canada asserts that Drs. Boisseau and Boobis met the disclosure requirement in the Experts Working Procedures, and that, in particular, both complied with the requirements by disclosing their involvement in JECFA. In Canada's view, "it was up to the Panel to evaluate whether this had an impact [on] the independence and impartiality of these candidates in this case."[888]

430. Canada argues that the Panel correctly found that Drs. Boisseau and Boobis were independent and impartial. It notes that the Panel "expressly addressed" the allegation that these two experts were defending their work when it explained that the purpose of consulting them was to obtain advice about the substance of JECFA's risk assessment, and to help identify the extent to which concerns raised by the European Communities had been considered in JECFA's risk assessment.[889] Canada also points to language in the Panel Report, noting that the Panel was asking the experts about JECFA's consensual view, which may differ from the experts' personal views, and that both experts admitted to the Panel that the state of scientific knowledge can evolve.[890] In Canada's view, it is inaccurate to portray the participation by Drs. Boisseau and Boobis in JECFA panels as "giving them an (almost proprietary) interest in the outcome of the JECFA process that they would have felt compelled to defend when advising the Panel".[891] Canada cautions that the practical consequence of the Panel excluding Drs. Boisseau and Boobis as experts would have been that "the pool of eligible

[891]*Ibid.*, para. 56.

experts would have been shrunk significantly, such that it would have become very difficult for the Panel to appoint experts in all the areas of expertise that it had identified."[892]

431. Therefore, the United States and Canada request that the Appellate Body reject the European Communities' claim that the Panel acted inconsistently with the principle of due process, the requirements of the *Rules of Conduct*, and Article 11 of the DSU, in selecting Drs. Boisseau and Boobis, and to reject the request to reverse the Panel's findings that relied on the advice of these two experts.

432. Australia agrees with the European Communities' submission that panels must observe due process in selecting and consulting with experts, and considers that fundamental fairness and due process "permeate[] all aspects of the WTO dispute settlement process, including a panel's use of experts".[893]

C. *Did the Panel Infringe the European Communities' Due Process Rights and Fail to Make an Objective Assessment of the Matter in the Consultations with the Scientific Experts*

433. The Appellate Body has previously found that the obligation to afford due process is "inherent in the WTO dispute settlement system"[894] and it has described due process requirements as "fundamental to ensuring a fair and orderly conduct of dispute settlement proceedings".[895] In our view, the protection of due process is an essential feature of a rules-based system of adjudication, such as that established under the DSU. Due process protection guarantees that the proceedings are conducted with fairness and impartiality, and that one party is not unfairly disadvantaged with respect to other parties in a dispute.

434. The Appellate Body has recognized the need for panels to afford due process to the parties with respect to specific procedural issues. For instance, the Appellate Body has recognized due process as requiring that parties to proceedings be afforded an adequate opportunity to respond to claims, arguments, or evidence presented by other parties.[896] It has also referred to the principle of due process in suggesting the need for panels to have standard working procedures[897], and for panels to have discretion to allow for the enhanced participation by third parties.[898] Moreover, the Appellate Body has found that due process is required by Article 11 of the DSU. In *US – Gambling*, the Appellate Body stated:

> [A]s part of their duties, under Article 11 of the DSU, to "make an objective assessment of the matter" before them, panels must ensure that the due process rights of parties to a dispute are respected.[899]

[892] *Ibid.*, para. 57.
[893] Australia's third participant's submission, para. 48.
[894] Appellate Body Report, *Chile – Price Band System*, para. 176. See also Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 107.
[895] Appellate Body Report, *Thailand – H-Beams*, para. 88.
[896] Appellate Body Report, *US – Gambling*, paras. 269-273; Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 177; Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 47; Appellate Body Report, *Australia – Salmon*, paras. 272 and 278; and Appellate Body Report, *Brazil – Desiccated Coconut*, p. 22, DSR 1997:I, 167, at 186.
[897] Appellate Body Report, *Argentina – Textiles and Apparel*, footnote 68 to para. 79; Appellate Body Report, *India – Patents (US)*, para. 95.
[898] Appellate Body Report, *US – FSC (Article 21.5 – EC)*, para. 243; Appellate Body Report, *EC – Hormones*, para. 154.
[899] Appellate Body Report, *US – Gambling*, para. 273.

435. These due process considerations are reflected in the *Rules of Conduct*. Section II (Governing Principle) of the *Rules of Conduct* provides that all covered persons, such as panelists and experts advising panels:

> ... shall be independent and impartial, shall avoid direct or indirect conflicts of interest and shall respect the confidentiality of proceedings of bodies pursuant to the dispute settlement mechanism, so that through the observance of such standards of conduct the integrity and impartiality of that mechanism are preserved.

436. Scientific experts and the manner in which their opinions are solicited and evaluated can have a significant bearing on a panel's consideration of the evidence and its review of a domestic measure, especially in cases like this one involving highly complex scientific issues. Fairness and impartiality in the decision-making process are fundamental guarantees of due process. Those guarantees would not be respected where the decision-makers appoint and consult experts who are not independent or impartial. Such appointments and consultations compromise a panel's ability to act as an independent adjudicator. For these reasons, we agree with the view of the European Communities that the protection of due process applies to a panel's consultations with experts. This due process protection applies to the process for selecting experts and to the panel's consultations with the experts, and continues throughout the proceedings.

(a) Standard for Selection of Experts

437. The authority to seek information from individuals or to consult experts is provided to panels pursuant to Article 13 of the DSU (Right to Seek Information). Article 13.2 provides:

> Panels may seek information from any relevant source and may consult experts to obtain their opinion on certain aspects of the matter. With respect to a factual issue concerning a scientific or other technical matter raised by a party to a dispute, a panel may request an advisory report in writing from an expert review group. Rules for the establishment of such a group and its procedures are set forth in Appendix 4.

438. Article 11.2 of the *SPS Agreement* specifically addresses the consultation of experts in disputes under that Agreement.[900] It reads:

> In a dispute under this Agreement involving scientific or technical issues, a panel should seek advice from experts chosen by the panel in consultation with the parties to the dispute. To this end, the panel may, when it deems it appropriate, establish an advisory technical experts group, or consult the relevant international organizations, at the request of either party to the dispute or on its own initiative.

439. Panels are understood to have "significant investigative authority"[901] under Article 13 of the DSU and Article 11.2 of the *SPS Agreement* and broad discretion in exercising this authority. In *US – Shrimp*, the Appellate Body expounded on the comprehensive authority of panels under Article 13:

[900] Article 11.2 of the *SPS Agreement* is listed in Appendix 2 of the DSU (Special or Additional Rules and Procedures contained in the covered agreements).
[901] Appellate Body Report, *Japan – Agricultural Products II*, para. 129.

> The comprehensive nature of the authority of a panel to "seek" information and technical advice from "any individual or body" it may consider appropriate, or from "any relevant source", should be underscored. This authority embraces more than merely the choice and evaluation of the *source* of the information or advice which it may seek. A panel's authority includes the authority to decide *not to seek* such information or advice at all. We consider that a panel also has the authority to *accept or reject* any information or advice which it may have sought and received, or to *make some other appropriate disposition* thereof. It is particularly within the province and the authority of a panel to determine *the need for information and advice* in a specific case, to ascertain the *acceptability* and *relevancy* of information or advice received, and to decide *what weight to ascribe to that information or advice* or to conclude that no weight at all should be given to what has been received.[902]

440. The European Communities has not challenged on appeal the Panel's decision to consult experts *per se*, nor does it claim that the Panel failed to consult with the parties on expert selection.[903] The European Communities disagrees with the Panel's decision to consult experts individually, rather than establish an expert review group, but does not raise a claim in this respect on appeal.[904]

441. Paragraph 9 of the Experts Working Procedures adopted by the Panel prescribes that experts will be selected "on the basis of their qualification and the need for specialized scientific or technical expertise". Paragraph 11 additionally provides:

> The selected experts shall act in their individual capacities and not as representatives of any entity. They shall be subject to the *Rules of Conduct for the Understanding on Rules and Procedures Governing the Settlement of Disputes* (WT/DSB/RC1), including the self-disclosure requirement set out in Section VI of the *Rules of Conduct*.

442. As we noted earlier, experts advising panels are specifically covered by the *Rules of Conduct* and, pursuant to Section II (Governing Principle), they "shall be independent and impartial, [and] shall avoid direct or indirect conflicts of interest ... , so that through the observance of such standards of conduct the integrity and impartiality of that mechanism are preserved".

[902]Appellate Body Report, *US – Shrimp*, para. 104. (original emphasis) Given the manner in which the Appellate Body has addressed the scope of a panel's authority under Article 13 of the DSU, this discretion would seem to apply equally to the discretion of panels under Article 11.2 of the *SPS Agreement*.

[903]The Appellate Body has found that panels are free to consult experts as individuals or as part of an expert review group. (Appellate Body Report, *EC – Hormones*, para. 147)

[904]The European Communities notes that the Panel "for no good reason declined to follow the European Communities' suggestion to constitute an expert review group", and that "[i]n retrospect, this has proven disastrous in this case in view of the very different, conflicting and irreconcilable opinions it received on many crucial issues from its experts." (European Communities' appellant's submission, footnote 76 to para. 187) The Panel explained its decision to consult experts on an individual basis with the following reasons: (1) the experts' varying fields of competence would make it important, on relevant subjects, to consult experts individually on their respective field of expertise; and (2) it did not want a consensus text from an expert review group that would reflect a minimum common position, but wished to hear dissenting or minority views among the experts. (Panel Report, *US – Continued Suspension*, para. 7.71; Panel Report, *Canada – Continued Suspension*, para. 7.69)

443. Selected experts are also subject to certain self-disclosure and confidentiality obligations set out elsewhere in the *Rules of Conduct*, and procedures exist for the referral of a "material violation" of these obligations to the Chairman of the DSB for appropriate action.[905]

444. The European Communities claims that due process requires that the "experts a court, tribunal or panel hears or consults are *independent and impartial*."[906] It then asserts that the relevant legal test for evaluating whether an expert is independent and impartial is founded on the self-disclosure obligation in Section VI.2 of the *Rules of Conduct*, which requires that experts "disclose any information ... which is likely to affect or give rise to justifiable doubts as to their independence or impartiality". This is a standard the European Communities asserts is "simple and low" and "does not require certainty or high probability".[907]

445. The requirements under Section VI of the *Rules of Conduct* relate, as the title indicates, to the self-disclosure obligation of covered persons, including experts. The *Rules of Conduct* do not provide for automatic exclusion of a covered person upon the disclosure of information pursuant to Section VI and the Illustrative List of Information to be Disclosed, which is attached to the *Rules of Conduct* as Annex 2. However, we fail to see on what basis a panel, presented with information likely to affect or give rise to justifiable doubts as to the independence or impartiality of an expert, could choose to consult such an expert.

446. We do not agree, however, with the European Communities' characterization of Section VI.2 as setting out a "low" standard. On the contrary, we consider the standard set forth in Section VI.2 to be a strict one. Covered persons should be encouraged to disclose any information that may be relevant for purposes of ascertaining whether there may be justifiable doubts as to their independence or impartiality. Disclosure should not lead to automatic exclusion. Whether the disclosed information is likely to affect or give rise to justifiable doubts as to the person's independence or impartiality must be objectively determined and properly substantiated. In the case of an expert, the panel should assess the disclosed information against information submitted by the parties or other information that may be available. It should then determine whether, on the correct facts, there is a likelihood that the expert's independence and impartiality may be affected, or if justifiable doubts arise as to the expert's independent or impartiality. If this is indeed the case, the panel must not appoint such person as an expert.

(b) Disclosure of Conflicts of Interest

447. The European Communities also argues that the Panel did not enforce compliance with the self-disclosure requirement, and did not adequately explore potential conflicts of interest. The European Communities charges that the Panel "failed to require that the self-disclosure requirement be complied with"[908] for Dr. Boisseau and therefore rendered paragraph 4 of the Experts Working Procedures "a dead letter".[909]

448. Section VI.2 of the *Rules of Conduct* requires all covered persons, including experts, to "disclose any information that could reasonably be expected to be known to them at the time which, coming within the scope of the Governing Principle of these Rules, is likely to affect or give rise to justifiable doubts as to their independence or impartiality". The Illustrative List of Information to be Disclosed pursuant to Section VI includes the following examples of matters to be disclosed:

[905]*Rules of Conduct*, Sections VI (Self-Disclosure Requirements by Covered Persons), VII (Confidentiality), and VIII (Procedures Concerning Possible Material Violations).

[906]European Communities' appellant's submission, para. 188. (original emphasis)

[907]*Ibid*., para. 195.

[908]European Communities' appellant's submission, para. 192.

[909]*Ibid*., para. 197.

> (b) professional interests (e.g. a past or present relationship with private clients, or any interests the person may have in domestic or international proceedings, and their implications, where these involve issues similar to those addressed in the dispute in question);
>
> (c) other active interests (e.g. active participation in public interest groups or other organizations which may have a declared agenda relevant to the dispute in question);
>
> (d) considered statements of personal opinion on issues relevant to the dispute in question (e.g. publications, public statements).

449. Paragraph 4 of the Experts Working Procedures adopted by the Panel provides:

> The Panel will seek a *curriculum vitae*, including all relevant publications, from each individual suggested. The candidate experts will also be asked to provide information about potential conflicts of interest and indications on whether they have worked for, been funded by or provided advice to the industries concerned, or to domestic or international regulatory bodies involved in issues similar to those addressed in this dispute. A list of eligible experts, including their *curricula vitae* and declarations of interest will be provided to the parties. Parties will have sufficient time to examine them and will be given the opportunity to comment on and to make known any compelling objections to any particular expert.[910]

450. In his self-disclosure statement, Dr. Boisseau stated that "[h]aving worked as a civil servant, I have no conflict of interest which could prevent me to serve as a scientific expert to these two WTO panels."[911] The purpose of the self-disclosure statement is to reveal relevant facts that would allow the Panel to determine whether the information is likely to affect or give rise to justifiable doubts as to the expert's independence or impartiality. Instead, Dr. Boisseau's statement draws a conclusion on a matter that was for the Panel to decide. Dr. Boisseau's statement does not identify whether he has "worked for, been funded by, or provided advice to, the industries concerned, or to domestic or international regulatory bodies involved in issues similar to those addressed in this dispute". The statement does not mention his affiliation with JECFA, nor the fact that he was the Chairman or Vice-Chairman of JECFA panels that evaluated some of the hormones at issue in this dispute.[912] Also, Dr. Boisseau's position as a civil servant did not itself shield him from having a conflict of interest. Thus, we agree with the European Communities that Dr. Boisseau's statement would not appear to comply fully with the requirements of Section VI.2 of the *Rules of Conduct* or paragraph 4 of the Experts Working Procedures adopted by the Panel.

451. We note that, in Canada's view, the self-disclosure requirement was satisfied by the information provided on Dr. Boisseau's *curriculum vitae*, which it considers provided full disclosure of Dr. Boisseau's involvement with JECFA.[913] While panels should insist that self-disclosure requirements under the *Rules of Conduct* are observed by potential experts, and while parties are entitled to full self-disclosure by experts, we find that the Panel did not exceed its authority in concluding that Dr. Boisseau's brief statement, when considered together with the information contained in his *curriculum vitae*, provided sufficient disclosure in this case. Dr. Boisseau's

[910]Panel Reports, Annex A-5, p. A-10.
[911]See Panel record document, "Information on Conflict of Interest by Dr. Jacques Boisseau" (undated).

[913]Canada's appellee's submission, para. 49.

curriculum vitae provides information about his involvement with JECFA and his other professional activities.[914]

452. The European Communities also claims that the Panel "never actually examined whether all of the experts had a potential conflict of interest and whether the experts fulfilled the conditions to be truly independent and impartial".[915] We understand this claim to refer to the objections of the European Communities, also raised in its letter to the Panel dated 28 March 2006, that: (i) Dr. Boisseau stated "in a public hearing in the French Senate, in 1996 ... that the three natural hormones do not present a danger for public health"; (ii) Dr. Boisseau took the position "in a public debate ... that only 'major' risks are relevant in precautionary decision making"; and (iii) Dr. Boobis allegedly received funding from one pharmaceutical company at the time of his disclosure, and did not disclose potential funding and affiliations with two others.[916]

453. The Panel stated that it had "carefully considered the European Communities' request, including the information given regarding potential conflicts of interest".[917] Nonetheless, the Panel found that the European Communities' objections "were not justified"[918], adding:

> The Panel found in particular that the statement that one expert had made before the French Senate in 1996 had not been made in relation to hormones used for growth promotion purposes. Rather, it had been made with respect to hormones used for medical treatment purposes. The Panel also found that the links of another expert with two companies involved in research and counselling were not in the area of veterinary drugs or hormonal substances.[919]

454. The European Communities challenges the "narrow" conflict of interest definition applied by the Panel, and reiterates the "undisputed facts" that:

> ... Dr. Boisseau did take a position in favour of the safety of these hormones, albeit in the context of a discussion on therapeutic treatment in animals, and that Dr. Boobis has been receiving funding from the pharmaceutical industry in his research and counselling, albeit not from companies in the area of veterinary drugs or these hormones (although this has never been specifically verified). ... As regards the industry funding of Dr. Boobis, the Panels refrained from

[914]Dr. Boisseau's *curriculum vitae* indicates that he was a member of JECFA between 1988-2001, its Chairman in 1994, 1998, 2000, and 2002, and its Vice-Chairman in 1992, 1994, 1995, 1997, and 2001.
[915]European Communities' appellant's submission, para. 192.
[916]Letter from the European Communities to the Panel dated 28 March 2006 (quoted in European Communities' appellant's submission, para. 196).
[917]Panel Report, *US – Continued Suspension*, para. 7.87; Panel Report, *Canada – Continued Suspension*, para. 7.85.
[918]Panel Report, *US – Continued Suspension*, para. 7.87; Panel Report, *Canada – Continued Suspension*, para. 7.85.
[919]Panel Report, *US – Continued Suspension*, para. 7.87; Panel Report, *Canada – Continued Suspension*, para. 7.85. The Panel further commented that:

> The Panel wishes to highlight the challenges it encountered in selecting experts. There was a limited number of specialists suggested and actually available in each of the fields on which the Panel needed assistance and almost always one or more of the parties objected to that specialist. For example, only six of the identified available experts were deemed to have extensive expertise in risk analysis. All of these experts were objected to by at least one party.

(Panel Report, *US – Continued Suspension*, footnote 382 to para. 7.87; Panel Report, *Canada – Continued Suspension*, footnote 374 to para. 7.85)

> verifying whether there were any actual or possible links of the companies funding him with other companies producing veterinary drugs or these hormones. In fact, as far as the European Communities knows, the Panels refrained from asking any question to Dr. Boobis on this precise issue.[920]

As we have found, the standard to be applied by panels when selecting experts is whether there is an objective basis to conclude that an expert's independence or impartiality is likely to be affected or there are justifiable doubts about that expert's independence or impartiality. In this instance, the Panel explained that it "carefully considered" the objections, "including the information given regarding potential conflicts of interest", before concluding that the objections were "not justified".[921] Moreover, the Panel provided specific explanations as to why it disagreed with the objections of the European Communities.[922]

455. On appeal, the European Communities recognizes that Dr. Boisseau's statement in the French Senate did not refer to the use of the hormones for growth-promotion purposes. The European Communities does not provide argumentation explaining why Dr. Boisseau's statement concerning the use of the hormones for therapeutic purposes signifies that he would not be impartial in his views concerning the use of these hormones for growth-promotion purposes. The European Communities itself regulates the use of the hormones at issue for veterinary purposes differently from the use for growth-promotion purposes in Directive 2003/74/EC.[923] In addition, we do not consider that in this case the information about Dr. Boobis' links to certain pharmaceutical companies provided an objective basis to conclude that there were justifiable doubts as to his impartiality or independence. The European Communities did not present evidence indicating that the companies from which Dr. Boobis received funding had links with other companies producing veterinary drugs or the hormones at issue. Thus, we consider that the Panel did not exceed its authority in dismissing the European Communities' objections relating to disclosure statements given by Drs. Boisseau and Boobis pursuant to the *Rules of Conduct* and paragraph 4 of the Experts Working Procedures adopted by the Panel.

(c) Previous Affiliation with JECFA

456. The European Communities claims that the reasons provided by the Panel for declining to exclude Drs. Boisseau and Boobis never addressed the fundamental question of their affiliation with JECFA. In the view of the European Communities, the Panel disregarded its "most important objection"[924] that an expert who has participated in the drafting of JECFA reports cannot be independent and impartial because, in this case, the experts were being asked to evaluate new scientific evidence underlying reports that were directly critical of, or in conflict with, their prior contribution to the JECFA reports. The European Communities argues that as "authors of the JECFA reports"[925], Drs. Boisseau and Boobis "cannot be considered to be independent and impartial in these

[923]Directive 2003/74/EC states that "the use of certain of the [hormones at issue], where this is necessary, for therapeutic purposes or zootechnical treatment may continue to be authorised as it is not likely to constitute a hazard for public health owing to the nature and the limited duration of the treatments, the limited quantities administered and the strict conditions laid down in Directive 96/22/EC in order to prevent any possible misuse." (Directive 2003/74/EC, Recital 11)
[924]European Communities' appellant's submission, para. 203.
[925]*Ibid.*, para. 205.

circumstances, because this would amount to asking them to review and criticise reports that are their own doing".[926]

457. JECFA, which is administered jointly by the FAO and the WHO, is "an international expert scientific committee" that evaluates the safety of food additives, contaminants, naturally-occurring toxicants and residues of veterinary drugs in food.[927] JECFA "performs risk assessments and provides advice to FAO, WHO and the member countries of both organizations".[928] Some countries use information from JECFA in their national food safety control programmes.[929] Requests for scientific advice "are in general channelled through the Codex Alimentarius Commission (Codex)".[930] Codex also adopts international standards based on evaluations performed by JECFA.[931] Codex has adopted international standards for five of the hormones at issue in this case, that is, oestradiol-17β, testosterone, progesterone, trenbolone acetate, and zeranol, on the basis of evaluation performed by JECFA.[932] In addition, Codex has initiated a standard-setting process for MGA, also on the basis of JECFA's evaluation, but this process has not yet concluded.[933]

458. The risk assessments performed by JECFA in relation to oestradiol-17β, testosterone, progesterone, trenbolone acetate, and zeranol lie at the centre of the dispute between the participants in this case. In the case of oestradiol-17β, the European Communities argued that "the Codex approach has serious limitations in non-linear situations, such as with regard to these hormones", and explained that "currently available Codex guidance poorly addresses cases such as this where the risks are embedded in changes in exposure to biologically active molecules which may, with minute differences in their bioavailability, have dramatic effects, such as turning on or off complete developmental programmes of the human genome, or inducing pathological conditions."[934] The European Communities also argued that JECFA's evaluation was based on "outdated" data.[935] As for the four hormones that are subject to the provisional ban and for which there is an international standard, the European Communities asserted that the conclusions reached by JECFA in 1988 and 1999 are "no longer valid".[936] As regards MGA, which is also subject to the provisional ban, the European Communities notes that "nearly all the studies" referred to in the 2000 JECFA report evaluating MGA "date from the 1960s and 1970s".[937] The European Communities considered JECFA's assessment of these hormones to be "insufficient"[938] for purposes of conducting a risk assessment of the type required by the *SPS Agreement*, in light of the fact that the European Communities had decided to adopt a higher level of protection than that underlying JECFA's

international standards.[939] In these circumstances, the Panel should have closely scrutinized any institutional links the experts may have had with JECFA and objectively determined whether those links were likely to affect or give rise to justifiable doubts as to the experts' independence or impartiality.

459. Both Drs. Boisseau and Boobis had close institutional links with JECFA. Dr. Boisseau was a member of JECFA from 1987 to 2002.[940] Dr. Boobis was a member from 1997 to 2006. Membership of JECFA, in our view, reflects international recognition of the expertise of a particular scientist. The Panel observed, in this regard, that JECFA is an "international, independent entity composed of highly qualified experts selected by the WHO or FAO according to strict procedures".[941] We agree with the Panel that Drs. Boisseau and Boobis are highly qualified scientists. We do not see the fact that Drs. Boisseau and Boobis are qualified and knowledgeable—and thus experts—as giving rise to concerns about their impartiality and independence. On the contrary, we would expect a person who is regarded as an expert to hold views, and even very strong views, on his or her particular area of expertise. However, we agree with the European Communities that the qualifications and relevant knowledge of Drs. Boisseau and Boobis are not by themselves sufficient guarantees of their independence and impartiality.[942] An expert could be very qualified and knowledgeable and yet his or her appointment could give rise to concerns about his or her impartiality or independence, because of that expert's institutional affiliation or for other reasons. Similarly, the fact that JECFA may select its experts according to strict procedures does not in itself ensure that these experts are independent and impartial in respect of the issues that may arise in a WTO dispute.

460. Not only did Drs. Boisseau and Boobis participate in JECFA, they were directly involved in JECFA's evaluations of the six hormones at issue. Dr. Boisseau was a member of JECFA in 1987 when the Committee evaluated oestradiol-17β, progesterone, testosterone, trenbolone acetate, and zeranol.[943] Both Drs. Boisseau and Boobis were members of JECFA in 1999 when it again evaluated oestradiol-17β, progesterone, and testosterone. During its 1999 session, JECFA adopted recommended Acceptable Daily Intakes ("ADIs") for oestradiol-17β, testosterone, and

[939]By contrast, as we explain in section VII.E, the Panel considered that the existence of international standards (or, in the case of MGA, of an advanced process that could eventually lead to the adoption of an international standard) established a presumption that there was sufficient scientific evidence to conduct a risk assessment. The Panel explained its view as follows:

> The presumption of consistency of measures conforming to international standards, guidelines and recommendations with the relevant provisions of the *SPS Agreement* implies that these standards, guidelines or recommendations, particularly those referred to in this case, are based on risk assessments that meet the requirements of the *SPS Agreement*. This means, therefore, that there was sufficient evidence for JECFA to undertake the appropriate risk assessments.

(Panel Report, *US – Continued Suspension*, para. 7.644; Panel Report, *Canada – Continued Suspension*, para. 7.622) (footnote omitted)

[940]Dr. Boisseau's *curriculum vitae* indicates that he was a member of JECFA from 1988-2001. However, he is listed as a member in JECFA's 32nd Report, which corresponds to a session held in Rome on 15-23 June 1987, and also in JECFA's 58th Report, which corresponds to a session held in Rome on 21-27 February 2002. (See Exhibit US-25 submitted by the United States to the Panel; and Exhibits CDA-29 and CDA-34 submitted by Canada to the Panel)

[941]Panel Report, *US – Continued Suspension*, para. 6.62; Panel Report, *Canada – Continued Suspension*, para. 6.57.

[942]European Communities' appellant's submission, para. 196.

progesterone.[944] The report of the 1999 session lists Dr. Boisseau as the Chairman and Dr. Boobis as one of two Joint Rapporteurs. Drs. Boisseau and Boobis also participated in the evaluation of MGA in 2000.[945] On this occasion, the relevant JECFA report lists Dr. Boisseau as Vice-Chairman and Dr. Boobis as a Joint Rapporteur.[946] Thus, Dr. Boisseau was a member of JECFA when it evaluated all six hormones at issue in this dispute, while Dr. Boobis participated in the evaluation of four of the six hormones. As Chairman, Vice-Chairman, and Joint Rapporteur, they would be expected to have played a significant role in the discussions.

461. Rather than being a source of concern, the Panel considered that Drs. Boisseau's and Boobis' participation in JECFA would make them more useful as experts:

> The Panel chose not to exclude *a priori* experts who had participated in the preparation and drafting of JECFA's risk assessments because this would deprive the Panel and the parties of the benefit of the contribution of internationally recognized specialists and because the Panel was of the opinion that experts familiar with the JECFA reports would be well-placed to assist the Panel in understanding the work of JECFA extensively referred to by the parties in their submissions, in particular by the European Communities.[947]

462. The Panel also observed that "since JECFA's risk assessments were used as the reference risk assessments for purposes of the analysis under Article 5.7 of the *SPS Agreement*, it was necessary for the Panel to be able to rely on the advice of experts intimately knowledgeable about the substance of JECFA's risk assessments."[948] We are not persuaded by the Panel's reasoning. It is precisely because JECFA's risk assessments have such a prominent role in this dispute that the Panel should have exercised particular caution before appointing persons with institutional links to JECFA as experts. The Panel gave the experts wide latitude in terms of their examination of the evidence and the advice they provided. Given how the Panel framed its consultations with the experts, it would have been very difficult for it to limit the scope of the advice it received from Drs. Boisseau and Boobis to the "work of JECFA". In fact, our review of the panel record indicates that the Panel did not limit its consultations with Drs. Boisseau and Boobis to the "work of JECFA".[949] For example, as regards the

[944]JECFA, "Evaluation of Certain Drug Residues in Food", 52nd Report, 2000. The Committee did not specify MRLs for these three hormones because it found that "available data on the identity and concentration of residues of the veterinary drug in animal tissues indicate a wide margin of safety for consumption of residues in food when the drug is used according to good practice in the use of veterinary drugs". Thus, the Committee "concluded that the presence of drug residues in the named animal product does not present a health concern and that there is no need to specify a numerical MRL". (JECFA, 52nd Report, p. 101, footnote 1 (Exhibit US-5 submitted by the United States to the Panel in *US – Continued Suspension*))

[945]Dr. Boobis also participated in the evaluation of MGA in 2004 (JECFA, "Evaluation of Certain Drug Residues in Food", 62nd Report, 2004 (Exhibit CDA-20 submitted by Canada to the Panel in *Canada – Continued Suspension*)).

[946]JECFA, "Evaluation of Certain Drug Residues in Food", 54th Report, 2001 (Exhibit US-24 submitted by the United States to the Panel in *US – Continued Suspension*).

[947]Panel Report, *US – Continued Suspension*, para. 7.85; Panel Report, *Canada – Continued Suspension*, para. 7.83. (footnote omitted)

[948]Panel Report, *US – Continued Suspension*, para. 6.62; Panel Report, *Canada – Continued Suspension*, para. 6.57.

[949]The Panel posed 62 written questions to the six scientific experts. Dr. Boisseau provided responses to 59 questions and Dr. Boobis replied to 45. These stand in sharp contrast to the other experts who provided responses to far fewer questions. Dr. Brabander replied to 17 questions, Dr. Cogliano answered 12 questions, Dr. Guttenplan responded to 31 questions, and Dr. Sippel gave responses to 4 questions. (See Panel record document, *Statistics on Replies of the Scientific Experts*) We do not mean to suggest that it is problematic for an expert to answer too many questions. We refer to these numbers merely to illustrate the breadth of the advice provided by Drs. Boisseau and Boobis in this case.

European Communities' permanent ban on meat from cattle treated with oestradiol-17β, the Panel asked the experts (including Drs. Boisseau and Boobis):

> To what extent, in your view, does the [European Communities'] risk assessment identify the potential for adverse effects on human health, including the carcinogenic or genotoxic potential, of the residues of oestradiol-17β found in meat derived from cattle to which this hormone had been administered for growth promotion purposes in accordance with good veterinary practice? To what extent does the [European Communities'] risk assessment evaluate the potential occurrence of these adverse effects?[950]

463. This question goes directly to the adequacy of the European Communities' risk assessment and does not concern JECFA's work. Both Drs. Boisseau and Boobis responded to this question and their responses were relied on by the Panel in its analysis:

> Dr. Boisseau concluded that the European Communities did not demonstrate that a potential for adverse effects on human health arises from the consumption of meat from cattle treated with any of the six hormones in dispute for growth promotion purposes.[951]

> Dr. Boobis stated that, in his view, none of the information provided by the European Communities demonstrates the potential for adverse effects in humans of any of the six hormones in meat from cattle in which they are used for growth promotion purposes at the levels to which those consuming such meat would be exposed. The studies on genotoxicity provide no convincing evidence of potential for harm in consumers. The carcinogenic effects observed are entirely consistent with a hormonal mode of action that exhibits a threshold that would be well above the intake arising from consumption of meat from treated cattle.[952]

In their replies, Drs. Boisseau and Boobis directly evaluated the appropriateness of the European Communities' risk assessment.

464. The Panel also asked the experts whether the European Communities' risk assessment examined the risks arising specifically from the consumption of meat from cattle treated with the six hormones at issue:

> Do the risk assessment of the European Communities or any other scientific materials referred to by the European Communities demonstrate that a potential for adverse effects on human health arises from the consumption of meat from cattle treated with any of the six hormones in dispute for growth-promotion purposes? If yes, why? If not, what kind of evidence would be required to demonstrate such potential adverse effects? Would your response have been different at the time of adoption of the Directive in September 2003?[953]

[950]Panel Reports, Annex D, p. D-22, Question 13.

[951]Panel Report, *US – Continued Suspension*, para. 7.526; Panel Report, *Canada – Continued Suspension*, para. 7.498 (referring to replies of the scientific experts to questions posed by the Panel, Panel Reports, Annex D, para. 406).

[952]Panel Report, *US – Continued Suspension*, para. 7.527; Panel Report, *Canada – Continued Suspension*, para. 7.499 (referring to replies of the scientific experts to questions posed by the Panel, Panel Reports, Annex D, para. 408).

465. The question concerns the specificity requirement discussed by the Appellate Body in *EC – Hormones*.[954] Drs. Boisseau and Boobis both volunteered responses, and the Panel again relied on both of their replies in its examination of the consistency with the *SPS Agreement* of the European Communities' risk assessment. The Panel summarizes the response of Dr. Boisseau as follows:

> Dr. Boisseau concluded that the European Communities did not demonstrate that a potential for adverse effects on human health arises from the consumption of meat from cattle treated with any of the six hormones in dispute for growth promotion purposes. Additionally, Dr. Boisseau stated that the kind of evidence required to demonstrate such potential adverse effects should be (a) toxicological data indicating that the values of the ADIs established by JECFA are not conservative enough, and (b) data on residues in treated/non-treated cattle and on daily production of hormones in sensitive individuals [such as pre-pubertal children] indicating that the hormonal residue intake associated with the consumption of meat from treated cattle is such that the established ADIs would be exceeded in the case of use of growth promoters.[955]

466. This excerpt is a good illustration of the problems arising from Drs. Boisseau's and Boobis' involvement with JECFA's evaluation of the hormones at issue in this dispute. Dr. Boisseau's response shows that he considered JECFA and, in particular, its approach of using ADIs, as the benchmark against which to evaluate the European Communities' risk assessment.[956]

467. Another illustration of this problem can be seen in Dr. Boisseau's response to the Panel's question regarding whether the scientific evidence in the SCVPH Opinions supported the conclusion that the carcinogenic effects of the hormones at issue are related to a mechanism other than hormonal activity.[957] For each of the hormones at issue, except for oestradiol-17β (in respect of which he referred to an earlier response), Dr. Boisseau compared the European Communities' risk assessment with JECFA's conclusions. For example, Dr. Boisseau gave the following response in relation to progesterone:

> In its thirty second session, JECFA concluded that "Although equivocal results have been reported for the induction of single-strand DNA breaks and DNA adducts have been seen in vivo and in vitro in some studies, progesterone was not mutagenic … progesterone has no genotoxic potential". It concluded also that "these effects on tumour production occurred only with doses of progesterone causing obvious hormonal effects … the effects of progesterone on tumour production was directly related to its hormonal activity".

[953]Panel Reports, Annex D, p. D-84, Question 52.

[954]Appellate Body Report, *EC – Hormones*, para. 199.

[955]Panel Report, *US – Continued Suspension*, para. 7.526; Panel Report, *Canada – Continued Suspension*, para. 7.498 (referring to replies of the scientific experts to questions posed by the Panel, Panel Reports, Annex D, para. 406).

[956]This excerpt also shows that there is a problem in the standard applied by the Panel to review the European Communities' risk assessment. We discuss this in section VII.E of this Report.

[957]Panel Reports, Annex D, p. D-27, Question 16.

> In its 1999 report, SCVPH concluded, about the carcinogenicity of progesterone, that "At present, the data are insufficient to make any quantitative estimate of the risk arising from the exposure to residues in meat"[.] Therefore, the scientific evidence relied upon in the SCVPH Opinions does not support the conclusion that the carcinogenic effects of progesterone are related to a mechanism other than hormonal activity.[958]

The response in relation to testosterone is similar:

> In its thirty second session, JECFA concluded that the increase of the incidence of prostactic and uterine tumours observed in rodents treated with high doses of testosterone ["]resulted from the hormonal activity of testosterone". In its fifty second session held in 1999, JECFA concluded that "In mammalian cells, no chromosomal aberrations, mutations or DNA adducts were found following treatment with testosterone … testosterone has no genotoxic potential".
>
> In its 1999 report, SCVPH concluded, about the carcinogenicity of testosterone, that, given the limited data on genotoxicity and on carcinogenicity in humans, no conclusive quantitative estimate of the risk arising from the excess intake with meat from treated animals can be made. Therefore, the scientific evidence relied upon in the SCVPH Opinions does not support the conclusion that the carcinogenic effects of testosterone are related to a mechanism other than hormonal activity.[959]

Both of these responses are cited in the Panel's reasoning.[960] Dr. Boisseau also drew a comparison with JECFA at the end of his response, when he summarized his views as follows:

> [C]onsidering the conclusions of JECFA and the fact that SCVPH bases always its reservations on the lack of data more than on data establishing the genotoxicity and the capacity of the five other hormones (progesterone, testosterone, melengestrol, trenbolone and zeranol) to act as complete carcinogens, it can be said that the scientific evidence relied upon in the SCVPH Opinions does not support the conclusion that the carcinogenic effects of these five hormones are related to a mechanism other than hormonal activity.[961]

468. A similar problem can be seen as regards the question of the sufficiency of the evidence under Article 5.7 of the *SPS Agreement*. At the meeting with the Panel and the parties, the United States asked the experts whether they considered that the scientific evidence relied on by the European Communities in the SCVPH Opinions supported the conclusion that it is not possible to complete a

[961]Panel Reports, Annex D, para. 167.

risk assessment for the five hormones that are the subject of the provisional ban.[962] Dr. Boobis referred to his experience in JECFA, replying:

> I cannot speak for the [European Communities], and I think what has just been said is quite correct. I can speak for JECFA in which I participated, and in our view we had enough information to complete a risk assessment. I don't know if that is helpful, but that was the situation when we looked at the available data on those five other hormones.[963]

469. The European Communities, however, based much of its case before the Panel on the limitations of JECFA's approach. Given that in its own risk assessment the European Communities called into question the validity of JECFA's risk assessments, it was improper for the Panel to have asked Drs. Boisseau and Boobis, who participated directly in JECFA's evaluations, to evaluate the European Communities' risk assessment. The natural inclination of someone placed in that situation would be to compare the risk assessments, rather than to assess whether the science relied upon by the European Communities can support the conclusions it reached, and to favour or defend JECFA's approach. The manner in which the Panel used these experts does not ensure impartiality and cannot be said to ensure fairness in the consultations with the experts. Such a result is not compatible with the due process obligations that are inherent in the WTO dispute settlement system.

470. Canada argues that it is "incorrect to portray" the participation in JECFA panels by Drs. Boisseau and Boobis as "giving them an (almost proprietary) interest in the outcome of the JECFA process that they would have felt compelled to defend".[964] Canada maintains that the JECFA process "is a diffuse one, in which a number of scientists participate" and is "aimed at reaching a consensus out of what may initially be a variety of scientific views".[965] Therefore, Canada argues, "the process is very different from scientific conclusions arrived at by one individual's scientific efforts that are published under his or her name"[966], and Drs. Boisseau and Boobis were no more responsible for authoring the JECFA reports than was any other "expert participating in a JECFA meeting and subscribing to a resulting report [which] might be considered part of the collective authorship of the scientists involved."[967] At the oral hearing, Canada additionally noted that, at JECFA meetings, the experts reviewed previously prepared monographs that, in this case, did not contain the input of Drs. Boisseau and Boobis.

471. The Panel also reasoned that Drs. Boisseau and Boobis may have contributed to the development of JECFA reports, but the nature of their participation ensured that they could remain independent and impartial. In response to objections from the European Communities during the interim review, the Panel explained:

> Moreover, JECFA reaches its conclusions by consensus. So the opinions expressed by the two experts were given with regard to the consensual view of JECFA on this matter, not just their own personal positions in the past. This does not mean, however, that JECFA's work is these particular experts' own work: it is a joint work by several experts.[968]

[962]Panel Reports, Annex G, para. 770.
[963]*Ibid*., para. 774.
[964]Canada's appellee's submission, para. 56.
[965]*Ibid.*
[966]*Ibid.*
[967]*Ibid*., para. 52.
[968]Panel Report, *US – Continued Suspension*, para. 6.62; Panel Report, *Canada – Continued Suspension*, para. 6.57.

472. We recognize that JECFA involves a decision-making process based on consensus and that the outcome of the process need not necessarily reflect the views of its individual members. However, the fact that this process involves several individuals and that the outcome may be the result of a compromise does not mean that the joint outcome of the process can be disconnected from the experts that participated in the process.[969] On the contrary, one would expect that the views of the experts that participated in the process would be reflected, in various degrees, in the outcome. As noted earlier, Drs. Boisseau's and Boobis' participation was not indirect or marginal. Rather, both would be expected to have had particular influence in the process given their respective roles as Chairman and Vice-Chairman, and Joint Rapporteur. Moreover, irrespective of their degree of influence in the process, both would be expected to have a natural inclination to identify with JECFA's evaluation as participants in the consensus. Therefore, we do not consider that the fact that JECFA reaches its conclusions by consensus dispels our concerns regarding the propriety of the Panel asking Drs. Boisseau and Boobis to evaluate the European Communities' risk assessment.

473. The United States emphasizes the fact that the Panel consulted with the parties when it adopted the Experts Working Procedures and in the expert selection process.[970] We agree with the United States that consultation with the parties in the adoption of working procedures for selecting the experts and in the expert selection process is a means for ensuring that the parties' due process rights are respected. However, as we explained earlier, the obligation to afford the protection of due process to the parties is not circumscribed to the expert selection stage and does not end with the appointment of the experts. Due process protection continues to apply throughout the consultations with the experts. Thus, the fact that the Panel may have consulted with the parties in this case when preparing the Experts Working Procedures and in selecting the experts does not provide a basis for concluding that due process was also respected in the subsequent stages of the proceedings, including the consultations with the experts. Moreover, in the consultations that the Panel held with the parties, the European Communities repeatedly objected to the selection of experts affiliated with JECFA.[971]

474. The Panel additionally expressed the view that Drs. Boisseau and Boobis, by virtue of their work as scientists, could be relied upon to be objective in their assessment of critiques of their work, as well as of new scientific evidence that might require altering the conclusions of their prior work. During the interim review stage, the Panel responded to objections of the European Communities as follows:

[969]In the meeting with the Panel and the parties, Dr. Boobis suggested that JECFA had been operating since 1997 on the basis of unanimity. Dr. Boobis' description of JECFA decision-making does not support Canada's argument that JECFA reports may not necessarily reflect the views of Drs. Boisseau and Boobis. Dr. Boobis explained:

> The JECFA Committee—at least as far back as 1997—have been able to reach an agreed position on all the questions before them. In the event that there was a disagreement, there would be two possible options – one would be not to proceed further and seek further evidence, and the other would be, as has been indicated already by the secretariat, if the majority was of one view and a minority was of another view, to issue a so-called minority opinion or minority report as well, which reflects a contrary view on the interpretation of the data. As I said earlier, this has not happened, there was unanimity. Generally what happens is that there is a discussion, there may be varying interpretations of a dataset, the experts get together over the period of a meeting and explore the various possibilities, bringing new information, or new insights and reach a common position, and that has worked generally very successfully in the evaluation of the compounds over the last 10 years I have been involved in JECFA.

(Panel Reports, Annex G, para. 511)

[970]United States' appellee's submission, para. 85.

[971]Panel Report, *US – Continued Suspension*, para. 7.79; Panel Report, *Canada – Continued Suspension*, para. 7.77 (referring to the European Communities' comments on the proposed experts of 16 January 2006).

> [S]cientists would readily admit that science is constantly evolving and the fact that new studies are peer reviewed is evidence that assessing new ideas and findings is part of scientific work. Assuming that scientists may lack objectivity because they participated in the preparation and drafting of JECFA's risk assessments on the hormones at issue would call into question the whole principle of peer review.[972]

475. The Panel added:

> The experts that the European Communities claims were defending their work acknowledge that the state of knowledge can evolve. ... The experts consulted by the Panel are used to considering and peer reviewing studies that go beyond what they have published themselves or perhaps even contradict them. In other words, they are not likely to feel any need to defend their own previous work results in the light of new, convincing evidence or techniques that put such previous work into doubt.[973]

476. The European Communities argues that the principle of peer review is not found in any of the WTO agreements, and that scientific journals "require that new work submitted for publication must not be given for review by the same persons whose theories the submitted articles contest".[974] The key question, the European Communities maintains, is "whether an expert that has been the author of a given report is impartial and independent to act as a 'peer' in 'reviewing' reports that explicitly criticise the report where the 'peer' is a co-author."[975]

477. We recognize that scientists will often be asked to review studies performed by other scientists and that the scientific community must constantly reassess theories in the light of scientific progress. However, as we pointed out above, the Panel did not simply ask Drs. Boisseau and Boobis about JECFA's work and risk assessments. In the consultations with experts, the Panel asked Drs. Boisseau and Boobis to evaluate the European Communities' risk assessment and they did so using JECFA's evaluations as a benchmark. This is problematic in this case because the European Communities' risk assessment called into question the validity of JECFA's evaluations and explicitly stated that it would not follow them. In the light of this, it was improper for the Panel to consult with Drs. Boisseau and Boobis, who were directly involved in JECFA's evaluations. The concerns raised in this situation are not addressed by the fact that scientists regularly conduct "peer reviews" or may recognize that science evolves. Nor are the concerns addressed by the Panel's explanation that JECFA's work is linked to Codex, which is expressly recognized by the *SPS Agreement* as having responsibilities for the "establishment of international standards, guidelines and recommendations".[976]

478. The Panel also referred to the presumption of consistency that applies to SPS measures based on international standards under Articles 3.1 and 3.2 of the *SPS Agreement* as an additional justification for its appointment of Drs. Boisseau and Boobis because of their involvement in the risk assessments underlying the international standards at issue in this case. However, we fail to see why the appointment of such experts would be justified in a case such as this one where the WTO Member adopts a higher level of protection than that reflected in the international standards, pursuant to

[972]Panel Report, *US – Continued Suspension*, para. 6.22; Panel Report, *Canada – Continued Suspension*, para. 6.21.

[973]Panel Report, *US – Continued Suspension*, paras. 6.62 and 6.63; Panel Report, *Canada – Continued Suspension*, paras. 6.57 and 6.58.

[974]European Communities' appellant's submission, para. 199.

[975]*Ibid.*

[976]Panel Report, *US – Continued Suspension*, para. 6.22; Panel Report, *Canada – Continued Suspension*, para. 6.21.

Article 3.3. The Panel's view that it is consistent with JECFA's role in setting international standards "for the Panel to rely on experts who contributed in the preparation and drafting of JECFA's risk assessments on the substances at issue"[977] rather confirms our impression that the Panel improperly relied on Drs. Boisseau and Boobis to evaluate the European Communities' risk assessment against the evaluations conducted by JECFA.[978]

479. Accordingly, we consider that it was improper for the Panel to consult Drs. Boisseau and Boobis. We reiterate that our concerns do not relate to the qualifications of Drs. Boisseau and Boobis, who are highly recognized experts, nor do they relate to the fact that, as experts, they would have been expected to hold views on issues in their area of expertise. Rather, our concerns arise from their direct involvement in the risk assessments performed by JECFA for the hormones at issue in this dispute and from the particular role that JECFA's risk assessments, and the Codex standards adopted on the basis of those risk assessments, had in this case. As we noted earlier[979], in its case before the Panel, the European Communities argued that there were limitations in JECFA's evaluation of oestradiol-17β and that the evidence relied upon by JECFA in the evaluation of the other five hormones was outdated. The Panel, for its part, considered that the existence of an international standard established a presumption that the scientific evidence was not "insufficient" to perform a risk assessment within the meaning of Article 5.7 of the *SPS Agreement*.[980]

480. We understand that panels often face practical difficulties in selecting experts who have the required level of expertise and whose selection is not objected to by the parties.[981] We do not wish to make the expert selection process more difficult than it may already be. However, experts consulted by a panel can have a decisive role in a case, especially when it involves highly complex scientific questions such as this one. The Panel in this case said "the role of the experts was to act as an 'interface' between the scientific evidence and the Panel, so as to allow it to perform its task as the trier of fact."[982] Experts appointed by a panel can significantly influence the decision-making process. If a panel does not ensure that the requirements of independence and impartiality are respected in its consultations with the experts, this can compromise the fairness of the proceedings and the impartiality of the decision-making. In these circumstances, the practical difficulties that a panel may encounter in selecting experts cannot displace the need to ensure that the consultations with the experts respect the parties' due process rights.

481. For these reasons, we consider that there was an objective basis to conclude that the institutional affiliation with JECFA of Drs. Boisseau and Boobis, and their participation in JECFA's evaluations of the six hormones at issue, was likely to affect or give rise to justifiable doubts as to their independence or impartiality given that the evaluations conducted by JECFA lie at the heart of

[977]Panel Report, *US – Continued Suspension*, para. 6.22; Panel Report, *Canada – Continued Suspension*, para. 6.21.

[978]Panel Report, *US – Continued Suspension*, para. 6.63; Panel Report, *Canada – Continued Suspension*, para. 6.58.

[979]See *supra*, para. 458.

[980]See *supra*, para. 939.

[981]The Panel described some of the difficulties it encountered in this case:

> The Panel wishes to highlight the challenges it encountered in selecting experts. There was a limited number of specialists suggested and actually available in each of the fields on which the Panel needed assistance and almost always one or more of the parties objected to that specialist. For example, only six of the identified available experts were deemed to have extensive expertise in risk analysis. All of these experts were objected to by at least one party.

(Panel Report, *US – Continued Suspension*, footnote 382 to para. 7.87; Panel Report, *Canada – Continued Suspension*, footnote 374 to para. 7.85)

[982]Panel Report, *US – Continued Suspension*, para. 6.72; Panel Report, *Canada – Continued Suspension*, para. 6.67.)

the controversy between the parties. The appointment and consultations with Drs. Boisseau and Boobis compromised the adjudicative independence and impartiality of the Panel. Therefore, we find that the Panel infringed the European Communities' due process rights as a result of the Panel having consulted with Drs. Boisseau and Boobis as scientific experts.

482. Because the appointment and consultations with Drs. Boisseau and Boobis compromised the Panel's ability to act as an independent adjudicator, the Panel cannot be said to have made "an objective assessment of the matter" as required by Article 11 of the DSU. We recall that, in *US – Gambling*, the Appellate Body held that "as part of their duties, under Article 11 of the DSU, to 'make an objective assessment of the matter' before them, panels must ensure that the due process rights of parties to a dispute are respected."[983] Consequently, we find that the Panel failed to comply with its duties under Article 11 of the DSU, as a result of the appointment and consultations with Drs. Boisseau and Boobis in the circumstances of this case.

483. The European Communities argues that, if we were to find that the Panel erred in relying on the advice of Drs. Boisseau and Boobis, we would have to reverse all of the Panel's findings under the *SPS Agreement*.[984] At the oral hearing, the United States and Canada disagreed that this would be the necessary consequence of our making the finding requested by the European Communities.

484. Where a panel's ability to act as an independent adjudicator has been compromised, as we have found in this case, this raises serious issues as to whether the panel's findings may be sustained. We recall, moreover, that Drs. Boisseau and Boobis provided responses to the majority of questions posed by the Panel and the Panel relied extensively on their responses in its assessment of the consistency of Directive 2003/74/EC with Articles 5.1 and 5.7 of the *SPS Agreement*.[985] Thus, the Panel's findings on Articles 5.1 and 5.7 of the *SPS Agreement* would be difficult to sustain upon exclusion of the testimony of Drs. Boisseau and Boobis, assuming that disentangling their testimony from the other elements of the Panel's analysis was possible. Although our finding on this issue could, by itself, lead to the invalidation of the Panel's findings under Articles 5.1 and 5.7 of the *SPS Agreement*, we nevertheless proceed to examine the other claims of error raised by the European Communities in respect of the Panel's assessment of the consistency of Directive 2003/74/EC with the *SPS Agreement*. The significance to the Panel's analysis of the testimony of Drs. Boisseau and Boobis will become more evident from our review of the Panel's findings under Articles 5.1 and 5.7 of the *SPS Agreement*.

VI. The Consistency with Article 5.1 of the *SPS Agreement* of the European Communities' Import Ban on Meat from Cattle Treated with Oestradiol-17β for Growth-Promotion Purposes

A. *Introduction*

485. We turn next to the European Communities' appeal of the Panel's finding that the permanent ban on meat and meat products from cattle treated with oestradiol-17β for growth-promotion purposes provided for in Directive 2003/74/EC does not meet the requirements of Article 5.1 of the *SPS Agreement*. Section B provides a summary of the European Communities' risk assessment in relation to oestradiol-17β, which the European Communities contends brought it into compliance with the recommendations and rulings of the DSB in *EC – Hormones*. This is followed by a summary of the Panel's findings under Article 5.1 of the *SPS Agreement* in section C and of the claims and arguments raised on appeal in section D. We then analyze in section E the specific issues raised by

[983]Appellate Body Report, *US – Gambling*, para. 273.

[984]European Communities' appellant's submission, paras. 181, 182, and 212.

[985]See *supra*, footnote 949.

the European Communities' appeal against the Panel's assessment of Directive 2003/74/EC under Article 5.1 of the *SPS Agreement*. Finally, our conclusions are set out in section F.

486. We recall that the Panel found that the European Communities' claim under Article 23.1, read together with Articles 22.8 and 3.7 of the DSU, was premised on the "*conformity* (presumed or actual) with the *SPS Agreement*"[986] of Directive 2003/74/EC. This is because, in the Panel's view, the phrase "until such time as the measure found to be inconsistent ... has been removed" in Article 22.8 implies that what is to be achieved is not the removal of the measure, but actual compliance with the DSB's recommendations and rulings.[987] For this reason, the Panel considered that it had to address the consistency of Directive 2003/74/EC with Articles 5.1 and 5.7 of the *SPS Agreement*.

B. *The European Communities' Risk Assessment for Meat from Cattle Treated with Oestradiol-17β*

487. We recall that, in *EC – Hormones*, the European Communities' import ban on meat and meat products from cattle treated with six hormones—oestradiol-17β, testosterone, progesterone, trenbolone acetate, zeranol, and MGA—was found to be inconsistent with Article 5.1 of the *SPS Agreement*. The Appellate Body found that the scientific studies submitted by the European Communities in that dispute were not "sufficiently specific to the case at hand"[988], because they were "general studies which do indeed show the existence of a general risk of cancer; but they do not focus on and do not address the particular kind of risk here at stake—the carcinogenic or genotoxic potential of the residues of those hormones found in meat derived from cattle to which the hormones had been administered for growth promotion purposes."[989] For this reason, the Appellate Body concluded that "no risk assessment that reasonably support[ed] or warrant[ed] the import prohibition embodied in the [European Communities'] Directives was furnished to the Panel"[990], and accordingly found that the European Communities' import ban, imposed under Directive 96/22/EC, was not "based on" a risk assessment within the meaning of Article 5.1.

488. Following the adoption by the DSB of the Panel and Appellate Body Reports in *EC – Hormones*, the European Commission initiated and funded 17 scientific studies to evaluate the potential for adverse effects to human health from residues in bovine meat and meat products resulting from the use of oestradiol-17β, progesterone, testosterone, zeranol, trenbolone acetate, and MGA in cattle for growth-promotion purposes. The results of these studies, as well as other publicly available information and data collected from international organizations such as Codex and JECFA were reviewed by the SCVPH.[991]

489. On 30 April 1999, the SCVPH published an Opinion entitled "Assessment of Potential Risks to Human Health from Hormone Residues in Bovine Meat and Meat Products"[992] (the "1999 Opinion"). The 1999 Opinion found that "consumption of beef from hormone-treated non-pregnant cattle can result in excess exposure to oestrogens"[993] and that the "toxicological issues of concern" arising from such excess exposure include "endocrine, developmental, immunological,

[992]See *supra*, footnote 20.
[993]1999 Opinion, p. 36.

neurobiological, immunotoxic, genotoxic and carcinogenic effects."[994] The 1999 Opinion reached the following conclusions in relation to the potential risks to human health from residues of oestradiol-17β in bovine meat:

> - In summary, 17 β-oestradiol has genotoxic[995] potential. Evidence is building that oestrogens, most likely through oxidative metabolism to catechols and beyond to semiquinones and quinones, are DNA reactive and mutagenic.[996]
>
> - ... in consideration of the recent data on the formation of genotoxic metabolites of oestradiol, suggesting that 17 β-oestradiol acts as complete carcinogen, by exerting tumour initiating and promoting effects, it has to be concluded, that no quantitative estimate of the risk related to residues in meat could be presented.[997]
>
> - These observations strongly suggest that environmental 17 β-oestradiol can, even when administered at very low doses, modulate growth of children of both sexes and decrease the age when final height is achieved and puberty is reached.[998]
>
> - ... it is suggested that environmental 17 β-oestradiol could exert deleterious effects on fertility in men and women, by acting through various, direct and indirect, mechanisms.[999]
>
> - ... at relatively high doses oestradiol does produce a number of adverse effects on the immune system in humans e.g. allergy to topical oestradiol (Boehnke and Gall, 1996). The above findings while indicating a possible concern are insufficient to identify whether immune effects could occur in consumers from the ingestion of meat or meat products containing 17 β-oestradiol residues.[1000]

490. The 1999 Opinion also reached the following conclusions as to the relevant risks to human health posed by the six hormones, and in particular by oestradiol-17β:

> - As concerns excess intake of hormone residues and their metabolites, and in view of the intrinsic properties of hormones and epidemiological findings, a risk to the consumer has been identified with different levels of conclusive evidence for the [six] hormones in question.
>
> - In the case of oestradiol-17β, there was a substantial body of recent evidence suggesting that it had to be considered as a complete carcinogen, as it exerted both tumour initiating and tumour promoting effects. The data available did not, however, allow a quantitative estimate of the risk.

[994]1999 Opinion, p. 39.
[995]See *supra*, footnote 155.
[996]1999 Opinion, p. 41. Mutagenicity is the ability of a physical, chemical, or biological agent to induce heritable changes (mutations) in the genetic material in a cell as a consequence of alterations or loss of genes or chromosomes (or parts thereof). Panel Report, *US – Continued Suspension*, footnote 673 to para. 7.549; Panel Report, *Canada – Continued Suspension*, footnote 623 to para. 7.517 (referring to replies of the experts to Question 2 posed by the Panel to the scientific experts, Panel Reports, Annex D, paras. 34 and 55).
[997]1999 Opinion, p. 43.
[998]*Ibid.*
[999]*Ibid.*, p. 44.
[1000]*Ibid.*, p. 45.

...

- For all six hormones endocrine, developmental, immunological, neurobiological, immunotoxic, genotoxic and carcinogenic effects could be envisaged. Of the various susceptible risk groups, pre-pubertal children was the group of greatest concern. Again the available data did not enable a quantitative estimate of the risk.

- In view of the intrinsic properties of the hormones and in consideration of epidemiological findings, no threshold levels could be defined for any of the six substances.[1001]

491. Subsequent to the adoption of the 1999 Opinion, additional scientific information was made available to the European Commission, in the form of a report by the Committee for Veterinary Medicinal Products ("CVMP") of the European Union (a subcommittee of the European Medicines Agency (EMEA)), and a report by the United Kingdom's Veterinary Products Committee sub-group on the 1999 Opinion. At the request of the European Commission, the SCVPH examined this scientific information and, on 3 May 2000, issued a review of its 1999 Opinion in which it declined to alter the conclusions contained therein[1002] (the "2000 Opinion"). The SCVPH observed that "particularly in regards to the subject of estrogenic effects during [various stages of] development, there is no compelling evidence suggesting that these effects do not also occur at low doses."[1003] The 2000 Opinion concluded that recent scientific information "did not provide convincing data and arguments demanding revision of the conclusions drawn in the [1999 Opinion] on the potential risks to human health from hormone residues in bovine meat and meat products".[1004]

492. On 10 April 2002, a second review of the 1999 Opinion was issued by the SCVPH[1005] (the "2002 Opinion"), on the basis of scientific data collected since the previous review. The scientific data reviewed by the SCVPH included the final results of all 17 studies that had been commissioned by the European Commission, as well as scientific data from relevant international organizations and other sources. The SCVPH considered that the data from the 17 scientific studies and recent scientific literature confirmed the validity of the 1999 Opinion, as reviewed in 2000, and that no amendments to those Opinions were justified.[1006] The 2002 Opinion also drew the following conclusions about the potential health risks posed by residues of oestradiol-17β in meat:

- Ultra-sensitive methods to detect residues of hormones in animal tissues have become available, but need further validation.

- Studies on the metabolism of oestradiol-17β in bovine species indicated the formation of lipoidal esters, disposed particularly in body fat. These lipoidal esters showed a high oral bioavailability[1007] in rodent experiments. Thus, the consequence of their consumption needed to be considered in a risk assessment.

- Experiments with heifers, one of the major target animal groups for the use of hormones, indicated a dose-dependent increase in residue levels of all hormones, particularly at the implantation sites. Misplaced implants and repeated implanting, which seemed to occur frequently, represented a considerable risk that highly contaminated meats could enter the food chain. ...

- Convincing data had been published confirming the mutagenic and genotoxic potential of oestradiol-17β as a consequence of metabolic activation to reactive quinones. *In vitro*[1008] experiments indicated that oestrogenic compounds might alter the expression of an array of genes. Considering that endogenous oestrogens also exert these effects, the data highlighted the diverse biological effects of this class of hormones.

...

- Epidemiological studies with opposite-sexed twins, suggest that the exposure of the female co-twin *in utero* to hormones results in an increased birth weight and consequently an increased adult breast cancer risk.[1009]

493. In light of the conclusions of the 1999, 2000, and 2002 Opinions, the European Communities adopted Directive 2003/74/EC on 22 September 2003[1010], which amended Directive 96/22/EC. Directive 2003/74/EC provides for the *permanent* prohibition on the importation of meat and meat products from animals treated with oestradiol-17β for growth-promotion purposes, on the basis of the SCVPH assessment that "recent evidence suggests that [oestradiol-17β] has to be considered as a complete carcinogen, as it exerts both tumour-initiating and tumour-promoting effects and that the data currently available do not make it possible to give a quantitative estimate of the risk."[1011] Directive 2003/74/EC also provides for a *provisional* ban on meat and meat products from cattle treated with progesterone, testosterone, zeranol, trenbolone acetate and MGA for growth-promoting purposes.

494. Before the Panel, the European Communities argued that the 1999, 2000, and 2002 Opinions, supported by the 17 studies conducted between 1998 and 2001, constitute the risk assessment upon which Directive 2003/74/EC is based.[1012]

C. *The Panel's Findings*

495. As noted earlier in section IV of this Report, the European Communities has challenged in these proceedings the continued application of the suspension of concessions by the United States and

[1001]Panel Report, *US – Continued Suspension*, para. 7.391; Panel Report, *Canada – Continued Suspension*, para. 7.388 (quoting 1999 Opinion, p. 73).

[1003]2000 Opinion, p. 2.
[1004]Panel Report, *US – Continued Suspension*, para. 7.392; Panel Report, *Canada – Continued Suspension*, para. 7.389 (quoting 2000 Opinion, p. 4).
[1005]See *supra*, footnote 22.
[1006]Panel Report, *US – Continued Suspension*, para. 7.394; and Panel Report, *Canada – Continued Suspension*, para. 7.391 (referring to 2002 Opinion, pp. 21 and 22).

[1007]Bioavailability refers to the capacity of a substance to enter the general blood circulation and to diffuse into the human or animal body, or the fraction of a dose of a substance that is available for systemic circulation. See Panel Report, *US – Continued Suspension*, footnote 508 to para. 7.393; and Panel Report, *Canada – Continued Suspension*, footnote 499 to para. 7.390 (referring to replies of the experts to Question 43 posed by the Panel to the scientific experts, Panel Reports, Annex D, paras. 344-357).
[1008]See *supra*, footnote 364.
[1009]Panel Report, *US – Continued Suspension*, para. 7.393; Panel Report, *Canada – Continued Suspension*, para. 7.390.
[1010]See *supra*, footnote 5.
[1011]Panel Report, *US – Continued Suspension*, para. 7.395; Panel Report, *Canada – Continued Suspension*, para. 7.392 (referring to Directive 2003/74/EC).
[1012]Panel Report, *US – Continued Suspension*, para. 7.389; Panel Report, *Canada – Continued Suspension*, para. 7.386.

Canada subsequent to the notification of Directive 2003/74/EC. The European Communities argued, *inter alia*, that Article 22.8 of the DSU permits the application of the suspension of concessions and other obligations only until such time as the measure found to be inconsistent with a covered agreement has been removed, a condition that it claims was met with the adoption and notification of Directive 2003/74/EC.[1013] According to the European Communities, the United States and Canada acted inconsistently with Article 23.1, read together with Articles 22.8 and 3.7 of the DSU, by failing to have recourse to, and abide by, the rules and procedures of the DSU subsequent to the adoption and notification to the DSB of Directive 2003/74/EC.

496. The Panel observed that the European Communities' claim under Article 22.8 of the DSU was premised on the European Communities' contention that Directive 2003/74/EC has brought its import ban on meat and meat products from cattle treated with hormones for growth-promotion purposes into compliance with the *SPS Agreement*. For this reason, the Panel considered that it had jurisdiction to "address the compatibility" of Directive 2003/74/EC with the *SPS Agreement* to the extent necessary to determine whether the "'measure found to be inconsistent' in the *EC – Hormones* case has been removed".[1014]

497. Turning to the allocation of the burden of proof, the Panel observed, first, that it was incumbent upon the European Communities as the complaining party to establish a *prima facie* case of a violation of Article 22.8 of the DSU. The Panel found that the European Communities had met this burden because of the presumption of good faith compliance that the Panel had previously found to apply in relation to the European Communities' implementing measure.[1015] As a result, the burden shifted to the responding parties. The Panel found that the United States and Canada had sufficiently refuted, "in [their] first written submission[s] through positive evidence of breach of the *SPS Agreement*"[1016] the European Communities' allegation that its implementing measure complied with the *SPS Agreement*. The Panel further stated that, "[i]n its subsequent submissions before the Panel, the European Communities responded to the allegations of violation made by [the United States and Canada]".[1017] The Panel added that "[w]hile the presumptions based on good faith enjoyed by each party may have played a role in the burden of proof in the early stage of the Panel proceedings, it is the opinion of the Panel that they eventually 'neutralized' each other since each party also submitted evidence in support of its allegations."[1018] The Panel ultimately concluded that "each party had to prove its specific allegations in response to evidence submitted by the other party", and that it had "weigh[ed] all the evidence before it"[1019] in reaching its findings.

498. The Panel then explained that it needed to review Directive 2003/74/EC against: (a) the recommendations and rulings of the DSB in the *EC – Hormones* case and (b) the provisions with which the European Communities purports to comply as part of its claim of violation of Article 22.8 by the United States and Canada.[1020] The Panel acknowledged that in a case such as this it would be difficult for the complainant to identify all the potential problems of incompatibility. At the same time, the Panel recognized that, in this case, where a finding of violation is conditional on the compliance of a measure of the complainant with the WTO agreements, difficulties could arise if the

[1016]*Ibid.*

[1017]*Ibid.*

[1018]Panel Report, *US – Continued Suspension*, para. 7.386; Panel Report, *Canada – Continued Suspension*, para. 7.383.

[1019]Panel Report, *US – Continued Suspension*, para. 7.386; Panel Report, *Canada – Continued Suspension*, para. 7.383.

[1020]Panel Report, *US – Continued Suspension*, para. 7.402; Panel Report, *Canada – Continued Suspension*, para. 7.399.

scope of review of that measure is defined only by the complainant. Indeed, the complainant could limit the scope of the panel's review to provisions with which it believes that its measure is most likely to be found compatible.[1021] Under these circumstances, the Panel found it preferable, both from a legal and a practical point of view, to consider *all* the allegations and arguments raised by each party, as long as the other party had the opportunity to comment on those allegations and arguments. Accordingly, the Panel sought to "circumscribe" the scope of its review under the *SPS Agreement*[1022], on the basis of the claims and arguments raised by each party, and determined that it would review, to the extent necessary for assessing the European Communities' Article 22.8 claim, the "compatibility"[1023] of Directive 2003/74/EC with Articles 5.1, 5.2[1024], 5.7, and 3.3 of the *SPS Agreement*.

499. The Panel next outlined the standard that it would apply in reviewing the compatibility of Directive 2003/74/EC with those provisions. The Panel noted that the standard of review applicable to legal and factual issues regarding measures reviewed under the *SPS Agreement* is found in Article 11 of the DSU and explained that, as regards the assessment of the facts, this standard has been understood as requiring "neither *de novo review* as such, nor 'total deference', but rather the 'objective assessment of the facts'".[1025] According to the Panel, this corresponds to a duty to "consider the evidence presented to us and to make factual findings on the basis of that evidence".[1026] However, the Panel retained the discretion to "decide which evidence [it chose] to utilise in making findings"[1027] and to decide "which [experts'] statements [were] useful to refer to explicitly as long as [it did] not deliberately disregard or distort evidence."[1028]

500. The Panel recalled that it had consulted six scientific experts individually, "in order to obtain a more complete picture both of mainstream scientific opinion and of any divergent views."[1029] The Panel explained that, while it generally followed the opinion of a majority of experts that had expressed concurrent views on the scientific questions before it, sometimes divergences of views rendered this approach impracticable. In these circumstances, the Panel accepted the position(s) that it considered most specific to the question at issue, or best supported by arguments and evidence. The experts were also made aware of their role—which was, *inter alia*, to present scientific issues to the members of the Panel in a way that could be understood by them—and of the role of the Panel in the WTO dispute settlement system—which includes being the trier of facts. In assessing the scientific advice received from the experts, the Panel said it fully took into account the comments of the parties, when appropriate. The Panel also recalled the approach followed by the Appellate Body in *Japan – Apples*, which required it to address the compatibility of Directive 2003/74/EC with respect to each of

[1021]Panel Report, *US – Continued Suspension*, para. 7.403; Panel Report, *Canada – Continued Suspension*, para. 7.400.

[1022]Panel Report, *US – Continued Suspension*, para. 7.398; Panel Report, *Canada – Continued Suspension*, para. 7.395.

[1023]Panel Report, *US – Continued Suspension*, para. 7.411; Panel Report, *Canada – Continued Suspension*, para. 7.402.

[1024]Only the United States argued that Directive 2003/74/EC was inconsistent with Article 5.2 of the *SPS Agreement*. Accordingly, the Panel Report in *Canada – Continued Suspension* does not address the consistency of Directive 2003/74/EC with this provision.

[1025]Panel Report, *US – Continued Suspension*, para. 7.414; Panel Report, *Canada – Continued Suspension*, para. 7.405 (quoting Appellate Body Report, *EC – Hormones*, para. 117).

[1026]Panel Report, *US – Continued Suspension*, para. 7.416; Panel Report, *Canada – Continued Suspension*, para. 7.407.

[1027]*Ibid.* (referring to Appellate Body Report, *EC – Hormones*, para. 135).

[1028]*Ibid.* (referring to Appellate Body Report, *EC – Hormones*, para. 138).

[1029]Panel Report, *US – Continued Suspension*, para. 7.418; Panel Report, *Canada – Continued Suspension*, para. 7.409. The Panel noted that, in some circumstances, only one or two experts have expressed their views on an issue. Sometimes these views were similar or complemented each other. (Panel Report, *US – Continued Suspension*, para. 7.420; Panel Report, *Canada – Continued Suspension*, para. 7.411) In other circumstances, a larger number of experts expressed opinions and, sometimes, they expressed diverging opinions.

the six hormones covered by the measure. Nevertheless, where the evidence was similar for all hormones, or where information was not provided in relation to each hormone, the Panel addressed the hormones collectively.[1030]

501. Next, the Panel found that Directive 2003/74/EC is an SPS measure within the meaning of paragraph 1 of Annex A to the *SPS Agreement*, and particularly item (b).[1031] The Panel then sought to determine whether the permanent ban on meat and meat products treated with oestradiol-17β for growth-promoting purposes provided by Directive 2003/74/EC was based on a risk assessment within the meaning of Articles 5.1 of the *SPS Agreement*. The European Communities argued that the three Opinions issued by the SCVPH, supported by the 17 studies conducted between 1998-2001, constituted a risk assessment within the meaning of Article 5.1, and that the permanent ban on meat and meat products from cattle treated with oestradiol-17β was "based on" such risk assessment.

502. At the outset of its analysis, the Panel noted that, in order to determine whether the SCVPH Opinions constituted a risk assessment within the meaning of Article 5.1 of the *SPS Agreement*, it would have to examine whether the SCVPH Opinions: (1) took into account risk assessment techniques of the relevant international organizations; (2) took into account the factors listed in Article 5.2 of the *SPS Agreement*[1032]; (3) satisfied the definition of "risk assessment" contained in Annex A, paragraph 4, of the *SPS Agreement*; and (4) whether the conclusions in the SCVPH Opinions are supported by the scientific evidence evaluated.[1033]

503. Relying on the reasoning of the panel in *Japan – Apples*, the Panel found that Article 5.1 of the *SPS Agreement* does not require compliance with the risk assessment techniques developed by international organizations, insofar as it requires that such techniques are "taken into account" by the risk assessor. The Panel observed that, although the SCVPH Opinions did not strictly follow the CODEX and JECFA risk assessment guidelines, the European Communities "was aware of" and

[1030]Panel Report, *US – Continued Suspension*, paras. 7.420-7.422; Panel Report, *Canada – Continued Suspension*, paras. 7.411-7.413.

[1031]Panel Report, *US – Continued Suspension*, para. 7.434; Panel Report, *Canada – Continued Suspension*, para. 7.425. Annex A(1)(b) of the *SPS Agreement* reads:

> 1. Sanitary or phytosanitary measure – Any measure applied:
>
> ...
>
> (b) to protect human or animal life or health within the territory of the Member from risks arising from additives, contaminants, toxins or disease-causing organisms in foods, beverages or feedstuffs[.]
>
> ...
>
> Sanitary or phytosanitary measures include all relevant laws, decrees, regulations, requirements and procedures including *inter alia* end product criteria; processes and production methods; testing, inspection, certification and approval procedures; quarantine treatments including relevant requirements associated with the transport of animals or plants, or with the materials necessary for their survival during transport; provisions on relevant statistical methods, sampling procedures and methods of risk assessment; and packaging and labelling requirements directly related to food safety.

None of the parties has argued that Directive 2003/74/EC is not an SPS measure.

[1032]Canada did not allege that Directive 2003/74/EC was inconsistent with Article 5.2 of the *SPS Agreement*, and therefore this element was only examined in the case involving the United States. (See *supra*, footnote 1024)

[1033]Panel Report, *US – Continued Suspension*, para. 7.445; Panel Report, *Canada – Continued Suspension*, para. 7.434.

"considered" such guidelines when preparing the SCVPH Opinions, and therefore had taken them into account within the meaning of Article 5.1.[1034]

504. The Panel in the case involving the United States also examined whether the SCVPH Opinions took into account the factors listed in Article 5.2.[1035] The Panel noted that the United States alleged that the European Communities had failed to take into account two of the specific elements listed in Article 5.2, namely: (i) the available scientific information; and (ii) the relevant inspection, sampling, and testing methods.[1036] In relation to the first element, the Panel concluded that the SCVPH Opinions had specifically addressed evidence available with respect to bioavailability, susceptibility of sensitive populations, and DNA adducts and DNA damages, and took into account the very scientific studies that the United States alleged were not considered.[1037] Regarding the second element, the Panel found that the European Communities had compiled a "Working Document"[1038] recording visits to United States' regulatory agencies, on-site inspections, and data concerning failures in the United States' inspection regime. The Panel also observed that a lengthy section of the 1999 Opinion is dedicated to discussing the relevant inspection, sampling, and testing methods. For these reasons, the Panel concluded that the European Communities had taken into account both the available scientific information and the relevant inspection, sampling and testing methods in preparing the SCVPH Opinions, as required by Article 5.2 of the *SPS Agreement*.[1039]

505. Next, the Panel examined whether the SCVPH Opinions satisfied the definition of "risk assessment" contained in paragraph 4 of Annex A of the *SPS Agreement*.[1040] Recalling the Appellate Body's jurisprudence from *EC – Hormones* and *Australia – Salmon*, the Panel stated that the definition of a risk assessment in paragraph 4 of Annex A required WTO Members to: (a) identify the additives, contaminants, toxins or disease-causing organisms in food, beverages or feedstuffs; (b) identify any possible adverse effect on human or animal health; and (c) evaluate the potential for that adverse effect to arise from the presence of the identified additives, contaminants, toxins or disease-causing organisms in food, beverages or feedstuffs.[1041]

506. The Panel found that the SCVPH Opinions satisfied the first and second requirements of the definition of risk assessment because they sufficiently identified both the contaminant (oestradiol-17β) and the food (meat and meat products) at issue, as well as the possible adverse effects on human or animal health (neurobiological, developmental, reproductive, and immunological effects; and immunotoxicity, genotoxicity and carcinogenicity).[1042] However, the Panel found that the European Communities failed to evaluate specifically the third requirement, that is, the possibility that the identified adverse effects "came into being, originated, or resulted"[1043] from the presence of residues of oestradiol-17β in meat or meat products as a result of the administration of that hormone to cattle for growth-promoting purposes. The Panel gave the following reasons for its decision.

[1034]Panel Report, *US – Continued Suspension*, para. 7.469; Panel Report, *Canada – Continued Suspension*, para. 7.459.

[1035]This section does not appear in the Panel Report in the case against Canada because Canada did not raise Article 5.2. (See *supra*, footnote 1024)

[1036]Panel Report, *US – Continued Suspension*, para. 7.479.

[1037]*Ibid.*, para. 7.482.

[1038]*Ibid.*, para. 7.483.

[1039]*Ibid.*, paras. 7.483 and 7.484.

[1040]See *infra*, para. 525.

[1041]Panel Report, *US – Continued Suspension*, para. 7.507; Panel Report, *Canada – Continued Suspension*, para. 7.479.

[1042]Panel Report, *US – Continued Suspension*, para. 7.508; Panel Report, *Canada – Continued Suspension*, para. 7.480.

[1043]Panel Report, *US – Continued Suspension*, para. 7.513; Panel Report, *Canada – Continued Suspension*, para. 7.485.

507. First, the Panel rejected the European Communities' argument that the definition of "risk assessment" in Article 5 and Annex A of the *SPS Agreement* also included a "risk management" component, in which the WTO Member concerned "weigh[ed] policy alternatives in the light of the results of the risk assessment and, if required, select[ed] and implement[ed] appropriate control options, including regulatory measures."[1044] The Panel took note of the Appellate Body's finding that a risk assessment can take into account "matters not susceptible of quantitative analysis by the empirical or experimental laboratory methods commonly associated with the physical sciences".[1045] After discussing the Appellate Body's decision in *EC – Hormones*, the Panel reasoned that there is no textual basis in the *SPS Agreement* to support the inclusion of a "risk management" component in the definition of risk assessment.[1046]

508. Secondly, the Panel "asked the experts whether the [SCVPH] Opinions identified the potential for adverse effects on human health, including the carcinogenic or genotoxic potential, of the residues of oestradiol-17β found in meat derived from cattle to which this hormone had been administered for growth promotion purposes in accordance with good veterinary practice and to what extent the Opinions evaluated the potential occurrence of these adverse effects."[1047] The Panel observed, in this regard, that four of the experts concurred that the scientific evidence adduced in relation to the possibility that carcinogenic or genotoxic effects would result from consumption of meat treated with oestradiol-17β was either missing or insufficient.[1048] To the extent that the European Communities argued that the relevant risk from hormones is an "additive risk", the experts concluded that the European Communities did not assess the extent to which residues of hormones in meat and meat products as a result of the cattle being treated with the hormones for growth-promoting purposes contribute to additive risks arising from the cumulative exposures of humans to multiple hazards, in addition to the endogenous production of some of these hormones by animals and human beings.[1049] The Panel then itself "looked at the Opinions and found statements that indicate that specific studies on the potential for the adverse health effects identified by the European Communities to arise from consumption of meat and meat products from cattle treated with oestradiol-17β for growth promotion purposes were not conducted."[1050]

509. The Panel concluded:

> All of the statements of the experts, and indeed statements from the Opinions, indicate that the European Communities has evaluated the potential for the identified adverse effects to be associated with oestrogens in general, but has not provided analysis of the potential for these effects to arise from consumption of meat and meat products which contain residues of oestradiol-17β as a result of the cattle they are derived from being treated with the hormone for growth promotion purposes. The Panel, therefore, concludes that although the European Communities has evaluated the association between excess hormones and neurobiological, developmental, reproductive and immunological effects, as well as immunotoxicity, genotoxicity, and carcinogenicity, it has not satisfied the requirements of the definition of a risk assessment contained in Annex A(4) because it has not evaluated specifically the possibility that these adverse effects come into being, originate, or result from the consumption of meat or meat products which contain veterinary residues of oestradiol-17β as a result of the cattle being treated with the hormone for growth promotion purposes.[1051]

Boobis, Guttenplan, Boisseau, and Cogliano to Questions posed by the Panel to the scientific experts, Panel Reports, Annex D, paras. 144, 145, 132, and 180, respectively).

[1049]Panel Report, *US – Continued Suspension*, para. 7.529; Panel Report, *Canada – Continued Suspension*, para. 7.501 (referring to replies to Question 56 posed by the Panel to the scientific experts, Panel Reports, Annex D, paras. 422-431).

[1050]Panel Report, *US – Continued Suspension*, para. 7.531; Panel Report, *Canada – Continued Suspension*, para. 7.503. The Panel noted that the 1999 Opinion looked at three main areas of potential adverse effects: developmental effects on different stages of life; the relationship between oestrogens and cancer; and the effect of sex hormones on the immune system. (Panel Report, *US – Continued Suspension*, para. 7.532; Panel Report, *Canada – Continued Suspension*, para. 7.504)

510. Despite its finding, the Panel proceeded to examine the fourth element of the test that it had set out to determine whether the SCVPH met the definition of "risk assessment", that is, whether the conclusions of the SCVPH Opinions were sufficiently supported by the scientific evidence evaluated. On the basis of the opinions of the experts consulted and its own review of the SCVPH Opinions, the Panel found that the scientific evidence referred to in the SCVPH Opinions did not support the conclusion that the genotoxicity of oestradiol-17β has been demonstrated and that residues of oestradiol-17β in meat and meat products lead to increased risk of cancer or adverse immunological and developmental effects.[1052]

511. Accordingly, the Panel concluded that the "[SCVPH] Opinions do not constitute a risk assessment because the Opinions do not satisfy the definition of a risk assessment contained in Annex A(4) second sentence and because the scientific evidence referred to in the Opinions does not support the conclusions therein".[1053] As a consequence of this finding, the Panel also found that the permanent ban on meat and meat products treated with oestradiol-17β for growth-promoting purposes is not a measure "based on" a risk assessment within the meaning of Article 5.1 of the *SPS Agreement*.[1054] Therefore, the Panel concluded that "the [European Communities'] implementing measure on oestradiol-17β is not compatible with Article 5.1 of the *SPS Agreement*."[1055]

D. *Claims and Arguments on Appeal*

512. The European Communities challenges on appeal several aspects of the Panel's assessment of Directive 2003/74/EC under Article 5.1 of the *SPS Agreement*. First, the European Communities argues that the Panel erred in its interpretation of Article 5.1, as informed by Article 5.2, of the *SPS Agreement*, by excluding from the scope of its analysis arguments and evidence concerning the abusive use and difficulties of control in the administration of hormones to cattle for growth promotion.[1056] Secondly, the European Communities submits that the Panel erred in finding that the

[1051]Panel Report, *US – Continued Suspension*, para. 7.537; Panel Report, *Canada – Continued Suspension*, para. 7.509.

[1052]Panel Report, *US – Continued Suspension*, para. 7.572; Panel Report, *Canada – Continued Suspension*, para. 7.540.

[1054]*Ibid.*

[1055]Panel Report, *US – Continued Suspension*, para. 7.579; Panel Report, *Canada – Continued Suspension*, para. 7.549.

[1056]European Communities' appellant's submission, paras. 331 and 332.

European Communities failed to evaluate specifically the risks arising from residues of oestradiol-17β in bovine meat treated with this hormone for growth-promoting purposes.[1057] Thirdly, the European Communities alleges that the Panel erred in interpreting the definition of a risk assessment in paragraph 4 of Annex A of the *SPS Agreement* as requiring the quantification of the risks arising from the consumption of residues of oestradiol-17β in bovine meat.[1058]

513. The European Communities also argues that the Panel erroneously allocated the burden of proof under Article 5.1 of the *SPS Agreement*, when it "shift[ed] the burden of proof to the European Communities without first examining, provision by provision under the *SPS Agreement* as required by the Appellate Body, whether the arguments of the United States and Canada had sufficient merits to shift the burden of proof back to the European Communities."[1059]

514. Finally, the European Communities charges the Panel with failing to conduct an objective assessment of the facts of the case, as required by Article 11 of the DSU, in reaching its finding under Article 5.1 of the *SPS Agreement*. According to the European Communities, the Panel applied an improper standard of review to the evidence before it, by seeking to determine "the correct scientific conclusions"[1060] as to the risks arising from the hormones at issue, even though Members are entitled to rely on divergent opinions coming from qualified and respected sources. Instead, the appropriate standard of review required the Panel to determine whether there was any "reasonable scientific basis"[1061] for the European Communities' measure, while respecting the "important and autonomous" right of Members to set their level of SPS protection.[1062] The European Communities submits that a panel should not substitute its scientific judgement for that of the Member taking the measure and should recognize the significance of "genuine and legitimate scientific controversy".[1063] The European Communities challenges the Panel's examination of three distinct aspects of the European Communities' risk assessment of oestradiol-17β: (i) the risks arising from exposure to hormones from multiple endogenous and exogenous sources[1064]; (ii) actual or potential genotoxicity of oestradiol-17β[1065]; and (iii) specificity or direct causality in the demonstration of risks arising from the consumption of bovine meat containing residues of oestradiol-17β as a result of cattle being treated with this substance for growth promotion.[1066]

515. The United States considers that the Panel did not err in finding that the European Communities' permanent ban on oestradiol-17β was not based on a risk assessment within the meaning of Article 5.1 of the *SPS Agreement*. According to the United States, the Panel did not misinterpret Article 5.1 by excluding from its analysis evidence regarding misuse or abuse in the administration of oestradiol-17β. Rather, the Panel "fully appreciated"[1067] the significance of the European Communities' assertion that misuse or abuse in the administration of oestradiol-17β could add to the particular risk identified, but correctly held that those risks would only be relevant had the European Communities succeeded in demonstrating that a specific risk arose from residues of oestradiol-17β in meat. With respect to the European Communities' allegation that the Panel erred in finding that it had failed to evaluate specifically the particular risks at issue, the United States maintains that the Panel's specificity requirement is based on a "careful tracing"[1068] of the Appellate Body's jurisprudence on Article 5.1, and that the evidentiary record before the Panel supported its

[1066] *Ibid.*, paras. 259-270.
[1067] United States' appellee's submission, para. 54.
[1068] *Ibid.*, para. 57.

conclusion that the European Communities "identified only 'general risks' and failed to address the specific risk required by the *SPS Agreement*."[1069] The United States argues that "one expert's statement, divorced from the rest of the evidentiary record"[1070] is not sufficient to demonstrate that the European Communities evaluated the specific risk at issue. The United States also dismisses the European Communities' allegation that the Panel required the quantification of risks, because the Panel did not preclude a qualitative demonstration of risks. The Panel's reference to the potential occurrence of adverse effects focused instead on "whether the [European Communities'] purported risk assessment appeared to be 'sufficiently specific to the case at hand.'"[1071]

516. Furthermore, the United States maintains that the Panel did not err in its allocation of the burden of proof under Article 5.1. The Panel was correct in allocating the initial burden of proving consistency with Article 5.1 to the European Communities, because its claim under Article 22.8 of the DSU was premised on an allegation of consistency of Directive 2003/74/EC. Having found that the European Communities had met this burden, the Panel shifted the burden of proof to the United States, and correctly found that the United States had rebutted the European Communities' allegation of consistency "by submitting positive evidence that demonstrated a breach of the *SPS Agreement* by the [European Communities]."[1072] As a result, the burden of proof "shifted back and forth between the parties"[1073] and the Panel rightly "followed the practice of other panels to weigh all the evidence before it."[1074]

517. Finally, the United States rejects the European Communities' contention that the Panel failed to conduct an objective assessment of the matter in its appreciation of the evidence. The United States submits that the more deferential "reasonableness" standard articulated by the European Communities for disputes under Article 5.1 has been rejected by the Appellate Body in *EC – Hormones* because it finds no support in the text of the *SPS Agreement* and "conflates the concept of 'standard of review' and the application of law to facts."[1075] Under the "objective assessment of the facts" standard that applies to disputes under the *SPS Agreement*, panels retain a margin of discretion as the triers of facts, and may properly "determine that certain elements of evidence should be accorded more weight than other elements."[1076] For the United States, the Panel's exercise of judgement in evaluating the evidence was "part and parcel"[1077] of its duty to make an objective assessment of the facts. Therefore, the Panel's findings in relation to the risks arising from exposure to hormone residues from multiple sources, the actual or potential genotoxicity of oestradiol-17β, the specificity of the risk assessment, and the relevance of misuse and abuse in a risk assessment, were all within the bounds of the Panel's discretion as the trier of facts.

518. Canada submits that the Panel did not err in its interpretation of Article 5.1, as informed by Article 5.2, of the *SPS Agreement*. Canada argues that the Panel did not ignore evidence related to misuse and abuse in the administration of hormones in its analysis, but rather correctly considered that such evidence was not "material"[1078] to its analysis, having found earlier that the European Communities had failed to demonstrate specifically the possibility of adverse effects arising from the consumption of bovine meat containing residues of oestradiol-17β. Canada additionally asserts that the Panel correctly held that the European Communities' risk assessment was not sufficiently specific to the particular risks at issue. The European Communities' assertion that the genotoxicity of oestradiol-17β did not make it possible to perform a quantitative risk assessment is unsubstantiated by

[1078] Canada's appellee's submission, para. 88.

the evidence, because "the fact that a hormone may be an *in vitro* genotoxin does not mean that it is an *in vivo* genotoxin."[1079] Canada considers that the Panel had a "solid basis" for finding that the risk assessment was not sufficiently specific to the risk, because the scientific experts assisting the Panel "indicat[ed] very clearly that the [European Communities] did not have scientific evidence to support the assertion of the specific risk."[1080] Canada also rejects the European Communities' allegation that the Panel erred in requiring a quantitative analysis of risk. According to Canada, the evidence upon which the European Communities' risk assessment relies does not contain either a qualitative or a quantitative analysis of risk, because the European Communities has offered no evidence demonstrating the genotoxicity of oestradiol-17β *in vivo*.

519. Canada contends, moreover, that the Panel did not fail to conduct an objective assessment of the matter in reaching its finding under Article 5.1 of the *SPS Agreement*. As the trier of facts, the Panel retained the discretion "to give greater weight to advice of certain experts over that of others" and was not required to "treat all advice received from the experts on an equal footing."[1081] Canada submits that the European Communities has failed to demonstrate that the Panel exceeded the bounds of its discretion in its analysis of the evidence on multiple exposure, genotoxicity, and specificity or direct causality.

520. Australia agrees with the European Communities' argument that the Panel erred in the standard of review that it applied in its assessment under Article 5.1 of the *SPS Agreement*. Australia submits that the standard of review applicable under Article 5.1 required the Panel to accord "considerable deference (but not total deference)"[1082] to a Member's risk assessment, and therefore the Panel should have focused on "whether the European Communities' risk assessment represented an objective and credible view"[1083] from a qualified and respected source.

521. New Zealand disagrees with the European Communities' claims that the Panel erred in its assessment of Directive 2003/74/EC under Article 5.1 of the *SPS Agreement.* In New Zealand's view, the Panel's conclusion that the permanent ban on oestradiol-17β provided in Directive 2003/74/EC was not based on a risk assessment under Article 5.1 was supported by an exhaustive review of all the scientific evidence, drawing upon the expertise and knowledge of a group of eminent scientific and technical experts.[1084]

E. *The Panel's Assessment of Directive 2003/74/EC under Article 5.1 of the SPS Agreement*

1. General Disciplines Applicable to the Adoption of an SPS Measure

522. The *SPS Agreement* recognizes the right of WTO Members to take measures necessary to protect human, animal or plant life or health. The right to take a protective measure must be exercised consistently with a series of obligations that are set forth in that Agreement, and that seek to ensure that such measures are properly justified.[1085]

[1079] *Ibid.*, para. 95.
[1080] *Ibid.*, para. 99.
[1081] Canada's appellee's submission, para. 73.
[1082] Australia's third participant's submission, para. 36.
[1083] *Ibid.*, para. 42.
[1084] New Zealand's third participant's submission, para. 3.47.
[1085] See the first Recital of the Preamble of the *SPS Agreement.* Article 2.3 of the *SPS Agreement* also provides that "Members shall ensure that their sanitary and phytosanitary measures do not arbitrarily or unjustifiably discriminate between Members where identical or similar conditions prevail, including between their own territory and that of other Members" and that SPS measures "shall not be applied in a manner which would constitute a disguised restriction on international trade."

523. There are several concepts that are defined in the *SPS Agreement* and that describe aspects of a WTO Member's decision-making process when taking an SPS measure. The "appropriate level of protection" is defined in paragraph 5 of Annex A to the *SPS Agreement* as "[t]he level of protection deemed appropriate by the Member establishing a sanitary or phytosanitary measure to protect human, animal or plant life or health within its territory." It is the "prerogative"[1086] of a WTO Member to determine the level of protection that it deems appropriate.[1087] The SPS measure is the "instrument" chosen by the WTO Member to implement its sanitary or phytosanitary objective.[1088] Based on the wording of Article 5.6 of the *SPS Agreement*, the Appellate Body has explained that the "determination of the level of protection is an element in the decision-making process which logically precedes and is separate from the establishment or maintenance of the SPS measure".[1089] In other words, the appropriate level of protection determines the SPS measure to be introduced or maintained, rather than the appropriate level of protection being determined by the SPS measure.[1090] The Appellate Body has also found that "the *SPS Agreement* contains an implicit obligation to determine the appropriate level of protection."[1091] Although it need not be determined in quantitative terms, the level of protection cannot be determined "with such vagueness or equivocation that the application of the relevant provisions of the *SPS Agreement* ... becomes impossible".[1092]

524. Another important aspect of the decision-making process is the "risk assessment". Pursuant to Article 5.1 of the *SPS Agreement*, an SPS measure must be "based on an assessment, as appropriate to the circumstances, of the risks to human, animal or plant life or health". Under Article 5.7 of the *SPS Agreement*, WTO Members are also allowed to take an SPS measure, on a provisional basis, where certain conditions are fulfilled, including where the relevant scientific evidence is insufficient to perform a risk assessment. We examine Article 5.7 in more detail in section VII.

525. A "risk assessment" is defined in paragraph 4 of Annex A to the *SPS Agreement* as:

> The evaluation of the likelihood of entry, establishment or spread of a pest or disease within the territory of an importing Member according to the sanitary or phytosanitary measures which might be applied, and of the associated potential biological and economic consequences; or the evaluation of the potential for adverse effects on human or animal health arising from the presence of additives, contaminants, toxins or disease-causing organisms in food, beverages or feedstuffs.

[1086] Appellate Body Report, *Australia – Salmon*, para. 199. (emphasis omitted)
[1087] Although it is for a WTO Member to choose its level of protection, the *SPS Agreement* provides for disciplines that a Member must respect when it has done so. Pursuant to Article 5.5, a WTO Member "shall avoid arbitrary or unjustifiable distinctions in the levels it considers to be appropriate in different situations, if such distinctions result in discrimination or a disguised restriction on international trade." Article 5.6 states that Members "shall ensure that [SPS] measures are not more trade-restrictive than required to achieve their appropriate level of sanitary or phytosanitary protection, taking into account technical and economic feasibility". In addition, Article 5.4 provides that "Members should, when determining the appropriate level of sanitary or phytosanitary protection, take into account the objective of minimizing negative trade effects."
[1088] Appellate Body Report, *Australia – Salmon*, para. 200. (emphasis omitted)
[1089] *Ibid.*, para. 203. (emphasis omitted)
[1090] *Ibid.*, para. 206.
[1091] *Ibid.*
[1092] *Ibid.*, para. 203.

526. Article 5.1 is a "specific application of the basic obligations contained in Article 2.2 of the *SPS Agreement*."[1093] Article 2.2 focuses on the need for an SPS measure to be based on scientific principles and sufficient scientific evidence. It provides:

> Members shall ensure that any sanitary or phytosanitary measure is applied only to the extent necessary to protect human, animal or plant life or health, is based on scientific principles and is not maintained without sufficient scientific evidence, except as provided for in paragraph 7 of Article 5.

The Appellate Body has observed that "Articles 2.2 and 5.1 should constantly be read together" because "Article 2.2 informs Articles 5.1: the elements that define the basic obligation set out in Article 2.2 impart meaning to Article 5.1."[1094]

527. A list of factors that must be taken into account in a risk assessment is provided in Article 5.2. The list begins with "available scientific evidence" and also includes: "relevant processes and production methods; relevant inspection, sampling and testing methods; prevalence of specific diseases or pests; existence of pest- or disease-free areas; relevant ecological and environmental conditions; and quarantine or other treatment." In *EC – Hormones*, the panel described a "risk assessment" as a "scientific process aimed at establishing the scientific basis" for the SPS measure.[1095] The Appellate Body understood the panel to refer to "a process characterized by systematic, disciplined and objective enquiry and analysis, that is, a mode of studying and sorting out facts and opinions".[1096] Science therefore plays a central role in a risk assessment. However, the Appellate Body has cautioned against taking too narrow an approach to a risk assessment:

> It is essential to bear in mind that the risk that is to be evaluated in a risk assessment under Article 5.1 is not only risk ascertainable in a science laboratory operating under strictly controlled conditions, but also risk in human societies as they actually exist, in other words, the actual potential for adverse effects on human health in the real world where people live and work and die.[1097]

528. As we noted earlier, Article 5.1 requires that SPS measures be "based on" a risk assessment. This does not mean that the SPS measures have to "conform to" the risk assessment. Instead, "the results of the risk assessment must sufficiently warrant—that is to say, reasonably support—the SPS measure at stake".[1098] Put differently, there must be a "rational relationship" between the SPS measure and the risk assessment.[1099]

529. Moreover, the risk assessment need not "come to a monolithic conclusion that coincides with the scientific conclusion or view implicit in the SPS measure", nor does the risk assessment have to "embody only the view of a majority of the relevant scientific community."[1100] While recognizing that, in most cases, WTO Members "tend to base their legislative and administrative measures on 'mainstream' scientific opinion", the Appellate Body has observed that, "[i]n other cases, equally responsible and representative governments may act in good faith on the basis of what, at a given

[1096]*Ibid.*, para. 187.
[1097]Appellate Body Report, *EC – Hormones*, para. 187.
[1098]*Ibid.*, para. 193.
[1099]*Ibid.*
[1100]*Ibid.*, para. 194.

time, may be a divergent opinion coming from qualified and respected sources."[1101] The Appellate Body added that an approach based on a divergent opinion from a qualified and respected source, "does not necessarily signal the absence of a reasonable relationship between the SPS measure and the risk assessment, especially where the risk involved is life-threatening in character and is perceived to constitute a clear and imminent threat to public health and safety."[1102]

530. An SPS measure need not be based on a risk assessment performed by the WTO Member taking the measure. It can be based on a risk assessment performed by a relevant international organization or by another WTO Member.[1103] The risk assessment can be quantitative or qualitative in nature.[1104] Nevertheless, the Appellate Body has noted that "theoretical uncertainty"[1105] is not the kind of risk to be assessed under Article 5.1; instead, the risk to be assessed must be an "ascertainable" risk.[1106] In addition, the risk assessment must have the requisite degree of specificity. The assessment must be "sufficiently specific"[1107] in terms of the harm concerned and the precise agent that may possibly cause the harm.[1108]

531. Whilst WTO Members have the right to take SPS measures, they are not required to do so. The risk assessment may conclude that there is no ascertainable risk, in which case no SPS measure can be taken. Alternatively, a WTO Member may conclude that an SPS measure is not necessary in the light of the risks determined in the risk assessment and the acceptable level of protection determined by that WTO Member.

532. International standards are given a prominent role under the *SPS Agreement*, particularly in furthering the objective of promoting the harmonization of sanitary and phytosanitary standards between WTO Members.[1109] This is to be achieved by encouraging WTO Members to base their SPS measures on international standards, guidelines or recommendations, where they exist.[1110] There is a rebuttable presumption that SPS measures that conform to international standards, guidelines or recommendations are "necessary to protect human, animal or plant life or health, and ... [are] consistent with the relevant provisions of this Agreement and of GATT 1994".[1111] While use of international standards is encouraged, the *SPS Agreement* recognizes the right of WTO Members to introduce or maintain an SPS measure which results in a higher level of protection than would be achieved by measures based on such international standards. Where a Member exercises its right to adopt an SPS measure that results in a higher level of protection, that right is qualified in that the SPS measure must comply with the other requirements of the *SPS Agreement*[1112], including the requirement to perform a risk assessment.[1113] However, the Appellate Body has found that the adoption of an SPS measure that does not conform to an international standard and results in a higher level of protection does not give rise to a more exacting burden of proof under the *SPS Agreement*:

> The presumption of consistency with relevant provisions of the *SPS Agreement* that arises under Article 3.2 in respect of measures that conform to international standards may well be an *incentive* for Members so to conform their SPS measures with such standards. It

> is clear, however, that a decision of a Member not to conform a particular measure with an international standard does not authorize imposition of a special or generalized burden of proof upon that Member, which may, more often than not, amount to a *penalty*.[1114] (original emphasis)

533. At the oral hearing, we explored the relationship between the appropriate level of protection and the risk assessment. The European Communities considers that the appropriate level of protection can clearly be taken into account in a risk assessment and may, in some cases, be reflected in the mandate and parameters given to the risk assessors. The United States and Canada recognize that the acceptable level of risk may sometimes play a role, albeit a limited one, in respect of the risk assessment. The United States and Canada, however, caution about the need to maintain the objectivity of the risk assessment process and reject the notion that subjective policy choices have a role to play in a risk assessment. In their view, these policy choices may be taken into account by a WTO Member in determining its appropriate level of risk and in selecting the SPS measure, but should not be part of the risk assessment process, which must remain an objective and scientific evaluation.

534. The risk assessment cannot be entirely isolated from the appropriate level of protection. There may be circumstances in which the appropriate level of protection chosen by a Member affects the scope or method of the risk assessment. This may be the case where a WTO Member decides not to adopt an SPS measure based on an international standard because it seeks to achieve a higher level of protection. In such a situation, the fact that the WTO Member has chosen to set a higher level of protection may require it to perform certain research as part of its risk assessment that is different from the parameters considered and the research carried out in the risk assessment underlying the international standard. However, the chosen level of protection must not affect the rigour or objective nature of the risk assessment, which must remain, in its essence, a process in which possible adverse effects are evaluated using scientific methods.[1115] Likewise, whatever the level of protection a Member chooses does not pre-determine the results of the risk assessment. Otherwise, the purpose of performing the risk assessment would be defeated.[1116]

535. We understand that Codex draws a distinction between "risk assessment" and "risk management".[1117] It defines "risk management" as "the process, *distinct from risk assessment*, of weighing policy alternatives ... considering risk assessment and other factors relevant for the health

[1114] *Ibid.*, para. 102.

[1115] We recall, however, that the scientific process must not be understood narrowly as being confined to matters that are "susceptible of quantitative analysis by the empirical or experimental laboratory methods commonly associated with the physical sciences." Instead, the risk to be evaluated also includes the "risk in human societies as they actually exist, in other words, the actual potential for adverse effects on human health in the real world where people live and work and die". (Appellate Body Report, *EC – Hormones*, para. 187)

[1116] This is consistent with the Appellate Body's views about the relationship between the risk assessment and the SPS measure:

> We understand this phrase to imply that a risk assessment should not be limited to an examination of the measure already in place or favoured by the importing Member. In other words, the evaluation contemplated in paragraph 4 of Annex A to the *SPS Agreement* should not be distorted by preconceived views on the nature and the content of the measure to be taken; nor should it develop into an exercise tailored to and carried out for the purpose of justifying decisions *ex post facto*.

(Appellate Body Report, *Japan – Apples*, para. 208)

[1117] Codex Alimentarius Commission, Procedural Manual, 15th edition, p. 44. See also Panel Report, *US – Continued Suspension*, para. 7.515; and Panel Report, *Canada – Continued Suspension*, para. 7.487.

protection of consumers and for the promotion of fair trade practices, and, if needed, selecting appropriate prevention and control options."[1118] In *EC – Hormones*, the Appellate Body noted that the *SPS Agreement* does not refer to the concept of "risk management" and it rejected the panel's restrictive interpretation of a "risk assessment" based on that distinction.[1119] The Appellate Body has not provided a clear demarcation of the factors that may be considered in a "risk assessment" under the *SPS Agreement*, but it has held that the list of factors provided in Article 5.2 is not a closed list and, in particular, that abuse or misuse and difficulties of control in the administration of hormones may be considered in the context of a risk assessment.[1120]

536. Before we proceed to examine the European Communities' claims, we briefly summarize some of the relevant facts of this case. We note that Codex has adopted an international standard for oestradiol-17β, based on evaluations carried out by JECFA.[1121] The European Communities asserts that it has determined a higher level of protection than that which would be achieved under Codex's standard. According to the European Communities, its level of protection is "no (avoidable) risk, that is a level of protection that does not allow any unnecessary addition from exposure to genotoxic chemical substances that are intended to be added deliberately to food."[1122] The European Communities also notes that it has performed a risk assessment for meat from cattle treated with oestradiol-17β for growth-promotion purposes. This risk assessment consists of the 1999, 2000, and 2002 Opinions, as supported by 17 studies conducted between 1998 and 2001. The European Communities further explains that its SPS measure—that is, the import and marketing ban applied pursuant to Directive 2003/74/EC—was taken in the light of the higher level of protection that it determined for itself and is properly based on its risk assessment.[1123]

2. The Panel's Interpretation and Application of Articles 5.1 and 5.2 of the *SPS Agreement*

537. We examine, first, the European Communities' claim that the Panel erred by adopting "an extremely narrow and consequently erroneous interpretation of Article 5.1 and failed to take into account that risk assessment and risk management partly overlap in the *SPS Agreement*".[1124] The European Communities argues that the Panel's restrictive interpretation of risk assessment led it to wrongfully exclude from the scope of its analysis under Article 5.1 evidence concerning misuse or abuse and difficulties of control in the administration of hormones to cattle for growth promotion.

538. We begin by reviewing the Panel's understanding of the Appellate Body's interpretation of Article 5.1 in *EC – Hormones* and particularly its discussion of the relevance of risk management factors for the purposes of a risk assessment within the meaning of Annex A and Article 5.1 of the *SPS Agreement*. The Panel in this case interpreted the Appellate Body's ruling in *EC – Hormones* as follows:

> Although the Appellate Body disapproved of the original panel's distinction between "risk assessment" and "risk management" because it had no textual basis in the Agreement, this Panel can find no statement by the Appellate Body confirming that what the

[1120] *Ibid.*, paras. 187 and 206.

[1121] See *supra*, footnote 932.

[1122] Panel Report, *US – Continued Suspension*, para. 7.607; Panel Report, *Canada – Continued Suspension*, para. 7.585 (referring to replies of the European Communities to questions posed by the Panel after the second substantive meeting, Panel Reports, Annex C-1, para. 69). See also 1999 Opinion, section I.2.

[1123] Panel Report, *US – Continued Suspension*, para. 7.390; Panel Report, *Canada – Continued Suspension*, para. 7.387.

[1124] European Communities' appellant's submission, para. 308.

> European Communities describes as risk management is included within the definition of a risk assessment as set forth in Annex A(4) of the *SPS Agreement*. In fact, the Appellate Body stressed that Article 5 and Annex A speak of *risk assessment* only and that the term *risk management* is not to be found either in Article 5 or in any other provision of the *SPS Agreement*.
>
> The Panel agrees with the Appellate Body that its role as a treaty interpreter is to "read and interpret the words actually used by the agreement under examination, and not words which the interpreter may feel should have been used." The Panel takes note of the Appellate Body's finding that a risk assessment can take into account "matters not susceptible of quantitative analysis by the empirical or experimental laboratory methods commonly associated with the physical sciences." However, the Panel finds that neither that finding nor the text of the Agreement includes within the definition of a risk assessment the concepts put forward by the European Communities as "risk management."[1125] (footnote omitted)

539. Therefore, the Panel stated that it would ask questions of the experts relating to whether the SCVPH Opinions identified the potential for adverse effects on human health of residues of oestradiol-17β in the meat of cattle treated with this hormone when applied in accordance with good veterinary practice.[1126]

540. At the interim review stage, the European Communities asserted that the Panel "misinterpret[ed]" what the Appellate Body had said in *EC – Hormones*.[1127] In response, the Panel explained:

> The Appellate Body disapproved of the panel's use in the original *EC – Hormones* dispute of the distinction between "risk assessment" and "risk management" because it had no textual basis. However, this did not mean that the Appellate Body endorsed an interpretation of Article 5.1 or Annex A(4) of the *SPS Agreement* that included a risk management stage. In fact, it emphatically stated that the term "risk management" is not to be found in Article 5 or any other provision of the *SPS Agreement*. The Panel, therefore, finds no basis for the European Communities' assertion that the Appellate Body "confirmed that a risk assessment within the meaning of Article 5.1 includes a risk management stage which is the responsibility of the regulator to carry out and not of the scientific bodies."[1128] (footnote omitted)

[1125]Panel Report, *US – Continued Suspension*, paras. 7.519 and 7.520; Panel Report, *Canada – Continued Suspension*, paras. 7.491 and 7.492.

[1126]Panel Report, *US – Continued Suspension*, para. 7.521; Panel Report, *Canada – Continued Suspension*, para. 7.493.

[1127]Panel Report, *US – Continued Suspension*, para. 6.97; Panel Report, *Canada – Continued Suspension*, para. 6.89.

[1128]Panel Report, *US – Continued Suspension*, para. 6.99; Panel Report, *Canada – Continued Suspension*, para. 6.91. The Panel added:

> Nowhere in the texts of Article 5.1 and Annex A(4) does the Panel find support for the European Communities' contention that a risk assessment within the meaning of the *SPS Agreement* includes "weighing policy alternatives in light of the results of risk assessment and, if required, selecting and implementing appropriate control options, including regulatory measures." What the European Communities seems to be describing is how a government chooses an appropriate SPS measure based on a risk assessment. The Panel does not find that this is contemplated by the texts of Article 5.1 and Annex A(4) of the *SPS Agreement*.

(Panel Report, *US – Continued Suspension*, para. 6.102; Panel Report, *Canada – Continued Suspension*, para. 6.94. (footnote omitted)) Similarly, the Panel did not address evidence on misuse or abuse in the administration of the hormones in its analysis under Article 5.7 of the *SPS Agreement*. The Panel reasoned that:

> ... Article 5.7 is applicable when relevant scientific evidence is not sufficient to undertake a risk assessment in conformity with Article 5.1. Whether instances of misuse or abuse in the administration of hormones exist or not is not as such a scientific issue likely to make a risk assessment within the meaning of Article 5.1 and Annex A(4) of the *SPS Agreement* impossible.

(Panel Report, *US – Continued Suspension*, para. 7.603; Panel Report, *Canada – Continued Suspension*, para. 7.578)

[1129]Appellate Body Report, *EC – Hormones*, para. 181.

[1130]*Ibid.*, para. 206. (emphasis added) The Appellate Body considered that the language in Article 5.2 ("relevant processes and production methods; relevant inspection, sampling and testing methods"), Article 8, and Annex C ("control, inspection and approval procedures") "is amply sufficient to authorize the taking into account of risks arising from failure to comply with the requirements of good veterinary practice in the administration of hormones for growth promotion purposes, as well as risks arising from difficulties of control, inspection and enforcement of the requirements of good veterinary practice." (*Ibid.*, para. 205)

[1131]*Ibid.*, para. 181.

541. We find it difficult to reconcile the Panel's understanding of *EC – Hormones* with what the Appellate Body held in that Report. As we noted above, in that case, the Appellate Body rejected the rigid distinction drawn by the panel between "risk assessment" and "risk management", explaining:

> We must stress, in this connection, that Article 5 and Annex A of the *SPS Agreement* speak of "risk assessment" only and that the term "risk management" is not to be found either in Article 5 or in any other provision of the *SPS Agreement*. Thus, the Panel's distinction, which it apparently employs to achieve or support what appears to be a restrictive notion of risk assessment, has no textual basis.[1129]

Subsequently in the same Report, the Appellate Body reiterated its view that "the concept of 'risk management' is not mentioned in any provision of the *SPS Agreement* and, as such, cannot be used to sustain a more *restrictive* interpretation of 'risk assessment' than is justified by the actual terms of Article 5.2, Article 8 and Annex C of the *SPS Agreement*".[1130]

542. Therefore, in our view, the Panel's interpretation of "risk assessment" resulted in the same "restrictive notion of risk assessment"[1131] that the Appellate Body found to be erroneous in *EC – Hormones*. The Panel sought in this case to rewrite the Appellate Body Report in *EC – Hormones* and to re-establish the rigid distinction between "risk assessment" and "risk management" that the Appellate Body had rejected in that case.

543. We set out above our understanding of the Appellate Body's finding in *EC – Hormones* in so far as the distinction between "risk assessment" and "risk management" is concerned. We now turn to the European Communities' argument that the distinction that the Panel drew between "risk assessment" and "risk management" resulted in the exclusion of certain factors from the Panel's analysis under Article 5.1 of the *SPS Agreement*. In particular, the European Communities asserts

that the Panel improperly excluded the evidence concerning misuse or abuse and difficulties of control in the administration of hormones to cattle for growth promotion.[1132]

544. The relevance of the risks relating to abuse or misuse in the administration of hormones was also addressed in *EC – Hormones*. In that case, the Appellate Body noted that "[s]ome of the kinds of factors listed in Article 5.2 such as 'relevant processes and production methods' and 'relevant inspection, sampling and testing methods' are not necessarily or wholly susceptible of investigation according to laboratory methods of, for example, biochemistry or pharmacology" and that "there is nothing to indicate that the listing of factors that may be taken into account in a risk assessment of Article 5.2 was intended to be a closed list."[1133] It then specifically examined whether risks relating to misuse or abuse in the administration of the hormones could be considered as part of the "risk assessment":

> Where the condition of observance of good veterinary practice (which is much the same condition attached to the standards, guidelines and recommendations of Codex with respect to the use of the five hormones for growth promotion) is *not* followed, the logical inference is that the use of such hormones for growth promotion purposes may or may not be "safe". The *SPS Agreement* requires assessment of the potential for adverse effects on human health arising from the presence of contaminants and toxins in food. We consider that the object and purpose of the *SPS Agreement* justify the examination and evaluation of all such risks for human health whatever their precise and immediate origin may be. We do not mean to suggest that risks arising from potential abuse in the administration of controlled substances and from control problems need to be, or should be, evaluated by risk assessors in each and every case. When and if risks of these types do in fact arise, risk assessors may examine and evaluate them. Clearly, the necessity or propriety of examination and evaluation of such risks would have to be addressed on a case-by-case basis. What, in our view, is a fundamental legal error is to exclude, on an *a priori* basis, any such risks from the scope of application of Articles 5.1 and 5.2. We disagree with the Panel's suggestion that exclusion of risks resulting from the combination of potential abuse and difficulties of control is justified by distinguishing between "risk assessment" and "risk management". As earlier noted, the concept of "risk management" is not mentioned in any provision of the *SPS Agreement* and, as such, cannot be used to sustain a more restrictive interpretation of "risk assessment" than is justified by the actual terms of Article 5.2, Article 8 and Annex C of the *SPS Agreement*.[1134] (original emphasis; footnote omitted)

545. Thus, the risks arising from the abuse or misuse in the administration of hormones can properly be considered as part of a risk assessment. Where a WTO Member has taken such risks into account, they must be considered by a panel reviewing that Member's risk assessment. Any suggestion that such risks cannot form part of a risk assessment would constitute legal error.

[1132]European Communities' appellant's submission, para. 325. At the oral hearing, the European Communities confirmed that its appeal focuses on misuse and abuse in the administration of hormones only, and that it is not claiming that the Panel erroneously excluded other factors on the basis of its general distinction between "risk assessment" and "risk management".

[1133]Appellate Body Report, *EC – Hormones*, para. 187.

[1134]Appellate Body Report, *EC – Hormones*, para. 206.

546. At the interim review stage, the Panel dismissed the relevance of the evidence concerning misuse or abuse in the administration of hormones under Article 5.1 for the following reasons[1135]:

> The Panel agrees with the European Communities that the question of misuse and abuse in the administration of hormones may apply to all six hormones at issue and is an element that can be taken into account in risk assessment, as set forth in Article 5.2 of the *SPS Agreement* and confirmed by the Appellate Body in *EC – Hormones*. However, the Panel did not deem it necessary to address this question in the section regarding the conformity with Article 5.1 of the definitive ban on oestradiol-17β, to the extent that the question whether misuse or abuse exists in the administration of hormones did not have an impact on the issues addressed by the Panel under Article 5.1. Indeed, the question of misuse or abuse in the administration of hormones is relevant to the extent that it can lead to higher concentrations of hormone residues in meat and meat products than would occur if good veterinary practices were applied. As stated by the 1999 Opinion, it is an aspect of exposure assessment. In this case, the Panel found that the European Communities had not evaluated specifically the possibility that the adverse effect[s] that it had identified in its risk assessment come into being, originate, or result from the consumption of meat or meat products which contain veterinary residues of oestradiol-17β as a result of the cattle being treated with this hormone for growth promotion purposes. Therefore, whether the concentrations of hormone residues in meat and meat products could be higher as a result of misuse or abuse did not have to be addressed. The Panel does not deem it necessary to move this section to another part of its findings.[1136] (footnote omitted)

547. The United States and Canada consider that this statement indicates that the Panel did address the European Communities' arguments relating to misuse or abuse.[1137] We note that in this statement, the Panel acknowledges that those risks are "an element that can be taken into account in risk assessment, as set forth in Article 5.2 of the *SPS Agreement* and confirmed by the Appellate Body in *EC – Hormones*." Although the Panel does not seem to reject *a priori* the relevance of the potential risks of misuse or abuse, it then states that it was not necessary to address this question in its analysis, to the extent that it did not have an impact on the issues addressed by the Panel under Article 5.1. However, some of the scientific experts consulted by the Panel indicated that risks arising from residues of oestradiol-17β in bovine meat are likely to increase where good veterinary practices in the administration of this hormone are not followed. Indeed, these experts agreed that their conclusions in relation to the risks posed by oestradiol-17β were predicated on good veterinary practices being followed. Accordingly, the abuse or misuse in the administration of oestradiol-17β has a bearing on the particular risks being assessed by the European Communities. The Panel's conclusion was thus premature because the Panel could not have decided whether the European Communities failed to

[1135]At the interim review stage, the European Communities criticized the Panel for referring to misuse or abuse only in the analysis of whether the European Communities had taken account of the factors listed under Article 5.2, which the Panel examined at the request of the United States. The European Communities asserted "that the Panel's discussion of the potential misuse and abuse in the administration of hormones is in the wrong place, to the extent that this is an aspect of risk assessment, in the sense of Article 5.1 to 5.3 of the *SPS Agreement*, that is applicable across all identified potential risks and for all six hormones." (Panel Report, *US – Continued Suspension*, para. 6.164; Panel Report, *Canada – Continued Suspension*, para. 6.154)

[1136]Panel Report, *US – Continued Suspension*, para. 6.164; Panel Report, *Canada – Continued Suspension*, para. 6.154.

[1137]United States' appellee's submission, para. 54; and Canada's response to questioning at the oral hearing.

evaluate specifically the possible adverse effects of residues of oestradiol-17β in meat before considering the evidence on abuse or misuse. The Panel's summary dismissal of the relevance of the evidence on misuse or abuse at the interim review stage gives the appearance of being an *ex post* rationalization of an earlier decision to exclude such risks from consideration.

548. The risks of abuse or misuse of the hormones at issue were examined by the European Communities as part of its risk assessment. The 1999 Opinion examines the risks arising from misplaced implants and the consumption of meat from implantation sites, off-label use of the hormones (such as in animals for which the implant or feed pre-mix is not approved), possible uses of non-authorized pharmaceutical formulations, and secondary risks for residues of other drugs.[1138] The 1999 Opinion concludes:

> it has to be noted that misplaced implants and black market drugs comprise the risk that extremely high levels of residues of hormones remain in edible tissues of animals. In addition, it has to be noted that the contemporaneous use of growth promoting hormones and veterinary therapeutics drugs increases the prevalence of undesirable r[e]sidues in edible tissues of bovines.[1139]

549. The 2002 Opinion also addresses the risks of abuse or misuse.[1140] It refers to a study that simulated the disregard of good veterinary practices and to two studies relating to MGA. The 2002 Opinion concludes:

> ... these experiments clearly identify a risk for excessive exposure of consumers to residues from misplaced or off-label used implants and incorrect dose regimes. In these cases, levels of oestradiol and its metabolites in muscle, fat, liver and kidney from hormone treated cattle may be 2-fold up to several hundred folds higher as compared to untreated meat. The level of increase depends on the treatment regime and the actual hormone levels in the implants used.[1141]

550. In its consultations with the scientific experts, the Panel explored the relevance of the failure to observe good veterinary practices. The Panel asked the experts whether identification of oestradiol-17β as a human carcinogen indicates that there are potential adverse effects on human health when it is consumed in meat from cattle treated with hormones for growth-promotion purposes. The experts were also asked whether their answer would depend on whether good veterinary practices are followed.[1142] Dr. Guttenplan responded:

> If potential is taken to mean possible, then an adverse effect cannot be ruled out, but it is unlikely if good veterinary practices are followed. If good veterinary practices are not followed, the potential for adverse effects may be significant.[1143]

[1138]1999 Opinion, pp. 30-32.

[1139]*Ibid.*, p. 32.

[1140]2002 Opinion, pp. 11 and 12. The 2002 Opinion also concludes that "[MGA] applied in concentrations exceeding the licensed doses by a factor of 3 would result in a violation of the tolerance levels as proposed by US-FDA." (2002 Opinion, p. 11) Similarly, the 2002 Opinion found that "[m]odel calculations indicated that, depending on the actual implanted total dose, processing of such injection sites can contaminate tons of (minced) meat or meat products with hormone concentrations violating the ADI/MRL levels as proposed by JECFA and other regulatory bodies." (*Ibid.*, p. 11)

[1141]*Ibid.*, pp. 11 and 12.

[1142]Panel Reports, Annex D, p. D-26, Question 15.

In response to another question on the subject posed by the Panel, Dr. De Brabander recognized that "[i]mproper administration of implants or misplaced implants create potential hazards to human health".[1144]

551. The European Communities also submitted to the Panel the final reports of two missions carried out in the United States and Canada to evaluate their control procedures.[1145] The Panel asked the scientific experts whether this evidence "call[ed] into question the potential applicability of Codex standards with regard to imports of meat from cattle treated with hormones from the United States and Canada.[1146] Dr. De Brabander agreed that this evidence was relevant:

> The material put forth by the European Communities regarding misuse or abuse of the hormones at issue in the United States and Canada calls indeed into question the potential applicability of Codex standards with regard to imports of meat from cattle treated with hormones from the United States and Canada.[1147]

552. As noted earlier, the relevance of abuse or misuse in the administration of the hormones at issue was recognized by the Appellate Body in *EC – Hormones*. The Appellate Body observed that, "[w]here the condition of observance of good veterinary practice (which is much the same condition attached to the standards, guidelines and recommendations of Codex with respect to the use of the five hormones for growth promotion) is *not* followed, the logical inference is that the use of such hormones for growth promotion purposes may or may not be 'safe'."[1148]

553. The Panel does not address the evidence on misuse or abuse referred to in the 1999 and 2002 Opinions in its analysis under Article 5.1 of the *SPS Agreement*. Neither does the Panel discuss the testimony of the scientific experts that recognized the relevance of this evidence and the potential adverse effects of the misuse or abuse in the administration of the hormones. The Panel summarily dismissed the relevance of the evidence on misuse or abuse stating that it relates to exposure

[1143]*Ibid.*, para. 155. Dr. Cogliano disagreed. In his view, the "answer does not depend on whether good veterinary practices are followed. It depends on the presence of the hormone in the meat that people consume". (*Ibid.*, para. 154)

[1144]*Ibid.*, para. 393. Dr. Boobis also recognized the potential hazards arising form abuse or misuse, although his response was qualified:

> In my view, the potential hazards from the use of large quantities of the six hormones in dispute are those dependent on their endocrine activity, including cancer in hormonally responsive tissues. However, I should stress that this is their potential hazard. The potential risk, i.e. the probability that effects would occur, would depend on a number of factors. These include the magnitude of the exposure, the duration of the exposure and the life stage of the exposed individual. From the range of exposures likely from anticipated misuse or abuse the risks are likely to be very low (see Question 62).

(*Ibid.*, para. 392)

[1145]See Final Report of a mission carried out in the United States from 19-30 June 2000 in order to review the systems in place for approval, control and supervision of cold stores and the certification of fresh meat and meat products, DG(Sanco)/1176/2000-MR Final, and Final Report of a mission carried out in Canada from 19-29 September 2000 in order to evaluate the control of residues in live animals and animal products, DG(Sanco)/1188/2000-MR final (Exhibits EC-67 and EC-68 submitted by the European Communities to the Panel).

[1146]Panel Reports, Annex D, p. D-83, Question 51.

[1147]*Ibid.*, para. 403.

[1148]Appellate Body Report, *EC – Hormones*, para. 206. (original emphasis; footnote omitted)

assessment and adding that it is not necessary to address it given the finding that the European Communities had not evaluated *specifically* the possibility that the adverse effects arise from the consumption of meat from cattle treated with oestradiol-17β for growth-promotion purposes. We recognize that the 1999 Opinion examines the risks of misuse or abuse under the heading "Exposure considerations upon misuse".[1149] After discussing the evidence on misuse and abuse, the 2002 Opinion states that "these data have to be considered in any quantitative exposure assessment exercise."[1150] This, however, cannot justify the Panel's failure to address the evidence on misuse or abuse. The European Communities made it clear that the risks of abuse or misuse were a relevant consideration in its risk assessment. This is confirmed in the 1999 and 2002 Opinions. At least two of the scientific experts consulted by the Panel recognized that the misuse or abuse in the administration of the hormones could give rise to adverse effects. The Panel had a duty to engage with this evidence and with the discussion of this evidence in the SCVPH Opinions. By summarily dismissing the evidence on the misuse or abuse in the administration of the hormones and the consequent conclusions in the SCVPH Opinions in the manner that it did, the Panel incorrectly applied Article 5.1 and the definition of "risk assessment" in Annex A of the *SPS Agreement*, as interpreted by the Appellate Body.

554. The United States and Canada submit that there are no economic incentives to fail to observe good veterinary practices by, for example, giving higher doses of hormones to the cattle.[1151] This is something the Panel could have examined, but it did not. Therefore, it cannot justify the Panel's inadequate treatment of the issue.

555. Accordingly, we find that the Panel erred in its interpretation and application of Article 5.1 of the *SPS Agreement* in relation to risks of misuse and abuse in the administration of hormones to cattle for growth-promoting purposes.

3. The Panel's Specificity Requirement

556. The European Communities claims that the Panel erred in finding that the European Communities had acted inconsistently with Article 5.1 of the *SPS Agreement* by failing to evaluate specifically the risks arising from residues of oestradiol-17β in meat from cattle treated with this hormone for growth promotion. The European Communities argues that "[a]t no stage did the Panel[] correctly identify what the Appellate Body found to be wanting in the risk assessments carried out for the purposes of Directive 96/22/EC in the original hormones dispute."[1152]

557. Relying on the Appellate Body's findings in *EC – Hormones*, the Panel observed that "a risk assessment in this instance required not a general evaluation of the carcinogenic potential of entire categories of hormones, but rather should include an examination of residues of those hormones found in meat derived from cattle to which the hormones had been administered for growth promotion purposes."[1153] The Panel also noted the Appellate Body's finding in *Japan – Apples* that "a risk assessment should refer in general to the harm concerned as well as to the precise agent that may

[1149]1999 Opinion, p. 30.

[1152]European Communities' appellant's submission, para. 341.
[1153]Panel Report, *US – Continued Suspension*, para. 7.511; Panel Report, *Canada – Continued Suspension*, para. 7.483 (referring to Appellate Body Report, *EC – Hormones*, para. 200).

possibly cause the harm"[1154], and its explanation that "an evaluation of risk must connect the possibility of adverse effects with an antecedent or cause."[1155] The Panel concluded:

> [T]he European Communities was required to evaluate the possibility that the identified adverse effect came into being, originated, or resulted from the presence of residues of oestradiol-17β in meat or meat products as a result of the cattle being treated with the hormone for growth promoting purposes.[1156]

558. The European Communities alleges that the Panel improperly required demonstration of *actual* effects while the Appellate Body had required mere demonstration of the *possibility of adverse effects*.[1157] The European Communities' allegation is unfounded. In the statement quoted above, the Panel focused on the *possibility* that the adverse effects could arise from the consumption of meat from cattle treated with oestradiol-17β. The test articulated by the Panel is compatible with the definition of the term "risk assessment" in paragraph 4 of Annex A of the *SPS Agreement* and with the interpretation developed by the Appellate Body in *EC – Hormones*. In that dispute, the European Communities presented a number of scientific studies and opinions of individual scientists indicating that the hormones at issue in that case had "carcinogenic potential".[1158] Yet, the Appellate Body found that those studies fell short of the requirements of paragraph 4 of Annex A of the *SPS Agreement*, because:

> The 1987 IARC Monographs and the articles and opinions of individual scientists submitted by the European Communities constitute general studies which do indeed show the existence of a general risk of cancer; but they do not focus on and do not address the particular kind of risk here at stake—the carcinogenic or genotoxic potential of the residues of those hormones found in meat derived from cattle to which the hormones had been administered for growth promotion purposes—as is required by paragraph 4 of Annex A of the *SPS Agreement*. Those general studies, are in other words, relevant but do not appear to be sufficiently specific to the case at hand.[1159]

559. The definition of a risk assessment in paragraph 4 of Annex A, as interpreted by the Appellate Body, required the European Communities to conduct a risk assessment that addresses the specific risk at issue. The particular risk being evaluated by the European Communities in this case was the potential for neurobiological, developmental, reproductive, and immunological effects, as well as immunotoxic, genotoxic and carcinogenic effects[1160] from the residues of oestradiol-17β found in meat derived from cattle to which this hormone was administered for growth-promoting purposes. Although the European Communities is correct in arguing that it was not required to demonstrate that these adverse health effects would actually arise, it was nevertheless required to demonstrate that these adverse effects could arise from the presence of residues of oestradiol-17β in meat from treated cattle. In our view, this is what the Panel required when it examined whether the European Communities had "evaluate[d] the possibility that the identified adverse effect ... resulted from the

[1154]Panel Report, *US – Continued Suspension*, para. 7.512; Panel Report, *Canada – Continued Suspension*, para. 7.484 (referring to Appellate Body Report, *Japan – Apples*, para. 202). (emphasis omitted)

[1160]Panel Report, *US – Continued Suspension*, para. 7.508; *Canada – Continued Suspension*, para. 7.480 (referring to 1999 Opinion, p. 72).

presence of residues of oestradiol-17β in meat or meat products as a result of the cattle being treated with the hormone for growth promoting purposes."[1161]

560. The European Communities also argues that the Panel erred by requiring a demonstration of "direct causality", which the European Communities posits constitutes "a very narrow reading" by the Panel of the definition of risk assessment in paragraph 4 of Annex A.[1162]

561. The Appellate Body explained in *Japan – Apples* that:

> Indeed, we are of the view that, as a general matter, "risk" cannot usually be understood only in terms of the disease or adverse effects that may result. Rather, an evaluation of risk must connect the possibility of adverse effects with an antecedent or cause. For example, the abstract reference to the "risk of cancer" has no significance, in and of itself, under the *SPS Agreement*; but when one refers to the "risk of cancer from smoking cigarettes", the particular risk is given content.[1163]

562. The particular risk being assessed by the European Communities is the possibility of adverse health effects from the consumption of residues of oestradiol-17β in meat treated with this hormone for growth promotion. In *EC – Hormones*, the Appellate Body required evaluation of "the carcinogenic or genotoxic potential of the residues of [the] hormones"[1164] at issue found in meat from treated cattle. In this case, the European Communities had to evaluate whether a causal connection exists between the consumption of meat from cattle treated with oestradiol-17β and the possibility of adverse health effects. This does not mean that the European Communities was required to establish a direct causal relationship between the possibility of adverse health effects and the residues of oestradiol-17β in bovine meat. In order to meet the requirements of Article 5.1 and Annex A of the *SPS Agreement*, it was sufficient for the European Communities to demonstrate that the additional human exposure to residues of oestradiol-17β in meat from treated cattle is one of the factors contributing to the possible adverse health effects. The European Communities was not required to isolate the contribution made by residues of oestradiol-17β in meat from cattle treated with the hormone for growth promotion from the contributions made by other sources.[1165] Where multiple factors may contribute to a particular risk, a risk assessor is not required to differentiate the individual contribution made by each factor. Article 5.1 requires that SPS measures be based on a risk assessment "as appropriate to the circumstances", which suggests that the scientific inquiry involved in a risk assessment must take due account of particular methodological difficulties posed by the nature and characteristics of the particular substance and risk being evaluated. However, that does not excuse the risk assessor from evaluating whether there is a connection between the particular substance being evaluated and the possibility that adverse health effects may arise.

563. Finally, we are not persuaded by the European Communities suggestion that the Panel required testing in humans in order to specifically evaluate the risks associated with the consumption of meat from cattle treated with oestradiol-17β.[1166] We do not see this as a necessary implication of

[1161]Panel Report, *US – Continued Suspension*, para. 7.513; *Canada – Continued Suspension*, para. 7.485.

[1162]European Communities' appellant's submission, para. 260.

[1163]Appellate Body Report, *Japan – Apples*, footnote 372 to para. 202.

[1164]Appellate Body Report, *EC – Hormones*, para. 200.

[1165]In this respect, we recall that in *EC – Hormones*, the Appellate Body considered that "there is a fundamental distinction between added hormones (natural or synthetic) and naturally-occurring hormones in meat and other foods." (*Ibid.*, para. 221) It also noted that regulatory action in respect of the latter would "entail[] such a comprehensive and massive governmental intervention in nature and in the ordinary lives of people" as to reduce the comparison between these types of hormones "to an absurdity". (*Ibid.*)

[1166]European Communities' appellant's submission, para. 263.

the Panel's analysis. There is no indication in the Panel Report to suggest that the evaluation could not proceed on the basis of experimentation in laboratory animals and extrapolating the results to humans, or by other means. Certainly, where a substance may be potentially toxic, requiring a WTO Member to evaluate specifically the risks through actual human consumption of the substance would be unethical and would not be "appropriate to the circumstances" within the meaning of Article 5.1.

564. For these reasons, we find that the Panel did not err in requiring a specific evaluation of the risks arising from the presence of residues of oestradiol-17β in meat or meat products from cattle treated with the hormone for growth-promoting purposes.[1167]

565. The European Communities makes two additional arguments relating to the specificity requirement. First, the European Communities asserts that the Panel's analysis and the legal test it used "are simply a cover for allowing the Panel[] to decide *what the correct science in* [*its*] *view is*, not on assessing whether the scientific evidence evaluated in the Opinions of the SCVPH *focussed on and addressed* 'the particular kind of risk here at stake—carcinogenic or genotoxic potential of the residues of those hormones found in meat derived from cattle to which [17β-oestradiol] had been administered for growth promotion purposes', as identified by the Appellate Body in the original case."[1168] Second, the European Communities argues that, because the SCVPH Opinions demonstrated that oestradiol-17β is a "complete carcinogen by exerting tumour initiating and promoting effects", "it has to be concluded that no quantitative estimate of risk related to residues in meat could be presented".[1169] According to the European Communities, "[t]his conclusion alone demonstrates that the Opinions focussed on and addressed very specifically the particular kind of risk here at stake—carcinogenic and genotoxic potential of the residues of those hormones found in meat derived from cattle to which [17β-oestradiol] had been administered for growth promotion purposes as identified by the Appellate Body."[1170] In our view, both of these arguments relate to the standard of review applied by the Panel and to the Panel's evaluation of the evidence before it. We address this aspect of the European Communities' appeal in section VI.D.6.

4. Quantification of Risk

566. Next, we turn to the European Communities' claim that the Panel erred in requiring the quantification of the risks arising from the consumption of meat containing residues of oestradiol-17β. The European Communities asserts that, by referring to "potential occurrence"[1171] of adverse effects when asking questions to the experts, the Panel incorrectly "imposed a quantitative method of risk assessment on the European Communities borrowed from Codex Alimentarius and JECFA."[1172]

567. In *EC – Hormones*, the Appellate Body held that:

> What needs to be pointed out at this stage is that the Panel's use of "probability" as an alternative term for "potential" creates a significant concern. The ordinary meaning of "potential" relates to "possibility" and is different from the ordinary meaning of "probability". "Probability" implies a higher degree or a threshold of potentiality or possibility. It thus appears that here the Panel

[1167]Panel Report, *US – Continued Suspension*, para. 7.513; Panel Report, *Canada – Continued Suspension*, para. 7.485.

[1168]European Communities' appellant's submission, para. 341. (original emphasis).

[1169]*Ibid.*, para. 337.

[1170]*Ibid.* (original emphasis and footnote omitted)

[1171]European Communities' appellant's submission, para. 346.

[1172]*Ibid.*, para. 308.

introduces a quantitative dimension to the notion of risk.[1173] (footnote omitted)

568. The Appellate Body further stated that:

> It is not clear in what sense the Panel uses the term "scientifically identified risk." The Panel also frequently uses the term "identifiable risk", and does not define this term either. The Panel might arguably have used the terms "scientifically identified risk" and "identifiable risk" simply to refer to an ascertainable risk: if a risk is not ascertainable, how does a Member ever know or demonstrate that it exists? In one part of its Reports, the Panel opposes a requirement of an "identifiable risk" to the uncertainty that theoretically always remains since science can *never* provide *absolute* certainty that a given substance will not *ever* have adverse health effects. We agree with the Panel that this theoretical uncertainty is not the kind of risk which, under Article 5.1, is to be assessed. In another part of its Reports, however, the Panel appeared to be using the term scientifically identified risk" to prescribe implicitly that a certain *magnitude* or threshold level of risk be demonstrated in a risk assessment if an SPS measure based thereon is to be regarded as consistent with Article 5.1. To the extent that the Panel purported to require a risk assessment to establish a minimum magnitude of risk, we must note that imposition of such a quantitative requirement finds no basis in the *SPS Agreement*.[1174] (original emphasis; footnotes omitted;)

569. Although the definition of a risk assessment does not require WTO Members to establish a minimum magnitude of risk, it is nevertheless difficult to understand the concept of risk as being devoid of any indication of potentiality. A risk assessment is intended to identify adverse effects and evaluate the possibility that such adverse effects might arise. This distinguishes an ascertainable risk from theoretical uncertainty. However, the assessment of risk need not be expressed in numerical terms or as a minimum quantification of the level of risk. We are also mindful that the risk assessment at issue in this case concerns the *potential* for adverse effects under the second sentence of paragraph 4 of Annex A and not an evaluation of likelihood under the first sentence of paragraph 4.[1175]

570. The European Communities' challenge in this case is directed at the following question that the Panel posed to the scientific experts:

> The Panel specifically asked the experts whether the [European Communities] Opinions identified the potential for adverse effects on human health, including the carcinogenic or genotoxic potential, of the residues of oestradiol-17β found in meat derived from cattle to which this hormone had been administered for growth promotion purposes in accordance with good veterinary practice and to what extent the Opinions evaluated the potential occurrence of these adverse effects.[1176]

[1173]Appellate Body Report, *EC – Hormones*, para. 184.

[1174]Appellate Body Report, *EC – Hormones*, para. 186. Similarly, in *Australia – Salmon*, the Appellate Body referred to the first sentence of the definition of a "risk assessment" in paragraph 4 of Annex A of the *SPS Agreement*, and noted that the *SPS Agreement* "does not require that the evaluation of the likelihood needs to be done quantitatively. The likelihood may be expressed either quantitatively or qualitatively." (Appellate Body Report, *Australia – Salmon*, para. 124)

[1175]The Appellate Body found in *EC – Hormones* that the term "potential" in the second sentence of paragraph 4 of Annex A refers to the "possibility" of occurrence of adverse effects, which implies a lower degree of potentiality than "probability". (Appellate Body Report, *EC – Hormones*, para. 184).

571. The European Communities does not consider this formulation to be "problematic" as such. The European Communities argues, however, that if this formulation is understood as requiring a Member to specify in quantitative terms "to what extent [it] evaluated *the potential occurrence* of these adverse effects"[1177], it would lead to an error in law. The European Communities submits that this is precisely how the Panel addressed the issue and how it invited the experts to analyse the SCVPH Opinions.[1178]

572. As the European Communities acknowledges, "a quantitative dimension may not be immediately evident from the ordinary meaning of the words 'potential occurrence'."[1179] The terms "potential occurrence of adverse effects" can be understood as referring to the possibility that the adverse effects might occur, without necessarily requiring that this be expressed in numerical terms. This would be consistent with the definition of "risk assessment" in paragraph 4 of Annex A of the *SPS Agreement*, as interpreted by the Appellate Body. Moreover, it would be consistent with the Appellate Body's view that "theoretical uncertainty"[1180] is not the kind of risk to be assessed under Article 5.1, but rather the risk to be assessed must be an "ascertainable" risk.[1181] In this sense, we agree with Canada that "to examine the 'potential' for adverse effects is to ask whether those adverse effects could ever occur".[1182]

573. Other statements by the Panel confirm that it did not require that the possibility of the risks arising be expressed in numerical terms. For example, the Panel took note of the Appellate Body's finding that a risk assessment can take into account "matters not susceptible of quantitative analysis by the empirical or experimental laboratory methods commonly associated with the physical sciences."[1183] The Panel also stated that "it must determine whether the European Communities evaluated the *possibility* that the identified adverse effects came into being, originated, or resulted from the presence of residues of oestradiol-17β in meat or meat products as a result of the cattle being treated with the hormone for growth promotion purposes."[1184]

574. The European Communities additionally draws attention to the Panel's use of the term "magnitude" in the following statement:

> Indeed, whether a Member considers that its population should be exposed or not to a particular risk, or at what level, is not relevant to determining whether a risk exists and what its magnitude is. *A fortiori*, it should have no effect on whether there is sufficient evidence of the existence and magnitude of this risk.

[1184]Panel Report *US – Continued Suspension*, para. 7.520; Panel Report, *Canada – Continued Suspension*, para. 7.492. (emphasis added)

> A risk-averse Member may be inclined to take a protective position when considering the measure to be adopted. However, the determination of whether scientific evidence is sufficient to assess the existence and *magnitude* of a risk must be disconnected from the intended level of protection.[1185] (emphasis added)

We note that these statements were made by the Panel in its discussion of the consistency of the European Communities' provisional ban in respect of the other fives hormones and, therefore, was not made in the context of the Panel's examination of the European Communities' import ban on meat from cattle treated with oestradiol-17β. However, we recall that a "risk assessment" involves an indication of potentiality, even though this need not be expressed in numerical terms or as a minimum quantification of the level of risk. In this sense, the Panel's reference to "magnitude" is in our view not sufficient to establish that the Panel incorrectly interpreted Article 5.1 and paragraph 4 of Annex A as requiring a quantitative risk assessment.

575. For these reasons, we consider that the Panel's reference to "potential occurrence" of adverse health effects could be read consistently with the definition of a risk assessment in paragraph 4 of Annex A of the *SPS Agreement*, as interpreted by the Appellate Body. Accordingly, we dismiss the European Communities' claim that the Panel incorrectly interpreted Article 5.1 and paragraph 4 of Annex A of the *SPS Agreement* as requiring quantification of risk.

5. Burden of Proof

576. We now examine the European Communities' claim that the Panel erred by incorrectly allocating the burden of proof. The European Communities argues that the fact that it is the complaining party in this case "does not change the basic standard on the burden of proof under the *SPS Agreement*."[1186] According to the European Communities, the Panel "erred in law in shifting the burden of proof to the European Communities without first examining, provision by provision under the *SPS Agreement* as required by Appellate Body, whether the arguments of the United States and Canada had sufficient merits to shift the burden of proof back to the European Communities".[1187]

577. The United States argues that the Panel was correct in initially allocating to the European Communities the burden of proving its claim that the United States acted inconsistently with Article 22.8 of the DSU. The United States considers that the Panel properly found that the European Communities' claim was premised on an assertion by the European Communities that it had brought itself into conformity with the *SPS Agreement* through Directive 2003/74/EC. For this reason, the Panel was justified in allocating to the European Communities the burden of establishing a *prima facie* case of conformity with the *SPS Agreement*, including Article 5.1. The United States accepts that, once the Panel found that the European Communities had established such *prima facie* case, the burden of proof shifted to the United States. However, the Panel then rightly found that the United States had rebutted the European Communities' *prima facie* case of consistency through positive evidence of breach of the *SPS Agreement*. On this basis, the United States suggests that "the burden shifted back and forth between the parties and eventually 'neutralized' each other since each party also submitted evidence in support of its allegations."[1188]

578. Canada agrees with the United States that the European Communities has the burden of proving that it has removed the inconsistent measure within the meaning of Article 22.8 of the

[1185]Panel Report, *US – Continued Suspension*, paras. 7.611 and 7.612; Panel Report, *Canada – Continued Suspension*, paras. 7.589 and 7.590.

[1186]European Communities' appellant's submission, para. 286.

[1187]*Ibid.*, para. 294.

[1188]United States' appellee's submission, para. 94 (referring to Panel Report, *US – Continued Suspension*, para. 7.386).

DSU.[1189] Canada asserts that, in order to demonstrate that the suspension of concessions is no longer justified, the European Communities must establish that it has brought its measure into compliance with Article 5.1 of the *SPS Agreement*.

579. The Panel explained how it would allocate the burden of proof as follows:

> With respect to the violation of Article 22.8 as such, the Panel considered that it had, in principle, no reason to address [the] burden of proof any differently than any other panel established under Article 6 of the DSU. Indeed, as stated by the Complainant itself, this case is about a measure taken by [the United States and Canada]. The fact that this dispute takes place in the context of the [European Communities'] alleged compliance with the recommendations and rulings of the DSB in the *EC – Hormones* dispute should have no impact on the question of the burden of proof regarding the actual *claim* before us. This means that the principles identified by the Appellate Body above apply, and that the European Communities must prove its claim that [the United States and Canada] breach[] Article 22.8 of the DSU.
>
> Yet, one of the particularities of this case is that the [European Communities'] claim of violation of Article 22.8 of the DSU by [the United States and Canada] is premised on the removal of the European Communities' measure found to be inconsistent with the *SPS Agreement*. In other words, in order to demonstrate that [the United States and Canada have] breached Article 22.8, the European Communities also alleges that its implementing measure is itself in conformity with the *SPS Agreement*.
>
> In theory, this should not raise any difficulty in terms of burden of proof since it is well established that each party has to prove its own allegations. We agree, however, with the European Communities that in a case like this one, this could generate for the complainant at the beginning of the proceedings a situation equivalent to having to "prove a negative", since the spectrum of provisions against which the legality of the [European Communities'] measure may have to be reviewed remains very broad as long as the respondent has not made its own allegations of inconsistency of the implementing measure. However, we recall that we found above that the European Communities enjoyed a presumption of good faith compliance, even though that presumption was rebuttable before this Panel. As soon as the European Communities established a prima facie case thanks to the presumption of good faith compliance, the burden shifted on the [the United States and Canada] to rebut that presumption. We recall that "... a prima facie case is one which, in the absence of effective refutation by the defending party, requires a panel, as a matter of law, to rule in favour of the complaining party presenting the prima facie case." We believe that the [United States and Canada] sufficiently refuted the [European Communities'] allegation of compliance in [their] first written submission through positive evidence of breach of the *SPS Agreement* by the European Communities. In its subsequent submissions before the Panel, the European Communities responded

[1189]Canada's responses to questioning at the oral hearing.

> to the allegations of violation made by [the United States and Canada]. Thus, the European Communities never actually had to "prove a negative" in this case.
>
> While the presumptions based on good faith enjoyed by each party may have played a role in the burden of proof in the early stage of the Panel proceedings, it is the opinion of the Panel that they eventually "neutralized" each other since each party also submitted evidence in support of its allegations. Ultimately, each party had to prove its specific allegations in response to the evidence submitted by the other party. Thereafter, when considering whether an allegation had been proven or not, the Panel followed the practice of other panels to weigh all the evidence before it.[1190] (original emphasis: footnotes omitted)

580. In section IV, we explained that this case involves a disagreement as to the consistency of a measure taken to comply and, therefore, should have properly been brought under Article 21.5 of the DSU. We also explained how the burden of proof should have been allocated had the dispute been brought under Article 21.5. Although these proceedings were not brought under Article 21.5, the Panel said that it "perform[ed] functions similar to those of an Article 21.5 panel".[1191] The European Communities had to provide a clear description of its implementing measure, and an adequate explanation regarding how this measure rectifies the inconsistencies found in the original proceedings, so as to have placed the Panel in a position to make an objective assessment of the matter and, in the absence of rebuttal, to rule in favour of the original respondent. Therefore, to the extent the Panel did not allocate the burden of proof in its analysis of whether Directive 2003/74/EC met the requirements of Article 5.1 of the *SPS Agreement* according to the principles outlined above, we find that the Panel has erred.

581. We have, moreover, several additional concerns with the Panel's analysis. First, as we indicated in section IV, we do not believe that it was sufficient for the European Communities to have based its case under Article 22.8 on a presumption of good faith. The European Communities may be presumed to have acted in good faith in adopting Directive 2003/74/EC, but this does not respond to the question as to whether Directive 2003/74/EC achieved substantive compliance. Thus, it was incorrect for the Panel to have relied on a presumption of good faith compliance for purposes of determining the allocation of the burden of proof and finding that the European Communities established a *prima facie* case.

582. Secondly, we have difficulty following the reasoning behind the Panel's conclusion that the presumptions of good faith enjoyed by each party "eventually 'neutralized' each other" and that "[u]ltimately, each party had to prove its specific allegations in response to the evidence submitted by the other party."[1192] The statement is ambiguous about which party made which allegation and how the burden of proof was allocated. In the section in which the Panel describes the scope of its review and circumscribes its terms of reference, the Panel states that, in submissions subsequent to the first written submission, "the European Communities has argued the compatibility of its implementing measure with the provisions referred to in the quotation above (i.e. Article[s] 5.1 and 5.7 of the *SPS Agreement*)".[1193] However, a few paragraphs later, the Panel refers to the allegation of incompatibility with Article 5.1 of the *SPS Agreement* as an allegation made by the United States and Canada.[1194] Thus, it is difficult to understand which party had the burden of proving which allegation.

[1190]Panel Report, *US – Continued Suspension*, paras. 7.383-7.386; Panel Report, *Canada – Continued Suspension*, paras. 7.380-7.383.
[1191]Panel Report, *US – Continued Suspension*, para. 7.376; Panel Report, *Canada – Continued Suspension*, para. 7.373.
[1192]Panel Report, *US – Continued Suspension*, para. 7.386; Panel Report, *Canada – Continued Suspension*, para. 7.383.

583. Thirdly, we note the Panel's statement that the United States and Canada "sufficiently refuted the [European Communities'] allegation of compliance in [their] first written submission through positive evidence of breach of the *SPS Agreement* by the European Communities".[1195] This statement is made before the Panel has undertaken any analysis of the conformity of Directive 2003/74/EC with Article 5.1 of the *SPS Agreement*. In its appellant's submission, the European Communities takes issue with this statement and argues that the Panel should have first examined "provision by provision ... whether the arguments of the United States and Canada had sufficient merits to shift the burden of proof back to the European Communities".[1196] We agree that it was premature for the Panel to have stated that the United States and Canada had succeeded in refuting the European Communities' allegation of compliance before the Panel had addressed the consistency of Directive 2003/74/EC with the *SPS Agreement*.

584. Accordingly, we find that the Panel erred in the allocation of the burden of proof in its assessment of the consistency of Directive 2003/74/EC with Article 5.1 of the *SPS Agreement*. We discuss the consequences of this error in section E below.

6. The Panel's Articulation and Application of the Standard of Review under Article 5.1 of the *SPS Agreement*

585. We turn next to the European Communities' claim that the Panel erred in the standard that it applied to review whether Directive 2003/74/EC was based on a risk assessment within the meaning of Article 5.1 of the *SPS Agreement*. The European Communities argues that the Panel sought to determine "what the correct scientific conclusions are"[1197] in relation to the hormones at issue. The European Communities adds that, instead of determining whether "there was any reputable support within the relevant scientific community for the determination made by the European Communities in the light of its chosen level of protection"[1198], the Panel decided "to become the jury on the correct science ... by picking and choosing between conflicting and contradictory opinions of the experts in an arbitrary manner."[1199] As a result, the Panel impermissibly engaged in a *de novo* review of the European Communities' risk assessment, and failed to take into account diverging views among the experts reflecting a "genuine and legitimate scientific controversy"[1200] concerning three particular issues: exposure of humans to hormones from multiple endogenous and exogenous sources; genotoxicity of oestradiol-17β; and specificity or direct causality.[1201]

586. The United States and Canada consider that the Panel identified and applied the correct standard of review to the facts before it, and maintain that the Panel did not exceed the bounds of its discretion as the trier of facts when assessing the weight and determining the credibility to be attributed to the opinions of the scientific experts.

[1193]Panel Report, *US – Continued Suspension*, para. 7.400; Panel Report, *Canada – Continued Suspension*, para. 7.397.
[1194]Panel Report, *US – Continued Suspension*, para. 7.405; Panel Report, *Canada – Continued Suspension*, para. 7.398.
[1195]Panel Report, *US – Continued Suspension*, para. 7.385; Panel Report, *Canada – Continued Suspension*, para. 7.382.
[1196]European Communities' appellant's submission, para. 294.
[1197]*Ibid.*, para. 240.
[1198]*Ibid.*
[1199]*Ibid.*, para. 239. (emphasis added)
[1200]*Ibid.*, para. 248.
[1201]*Ibid.*

587. We discuss our views on the applicable standard of review before turning to our examination of the Panel's assessment of Directive 2003/74/EC. The European Communities claims that the appropriate standard of review is one which limits a panel's mandate to determining whether there is any "reasonable scientific basis" for the SPS measure.[1202] The United States and Canada object to such a standard. We recall that in *EC – Hormones*, the Appellate Body rejected the European Communities' argument that a "deferential 'reasonableness' standard" is applicable under the *SPS Agreement* to "all highly complex factual situations, including the assessment of the risks to human health arising from toxins and contaminants".[1203] The Appellate Body cautioned that the applicable standard of review "must reflect the balance established in [the *SPS Agreement*] between the jurisdictional competences conceded by the Members to the WTO and the jurisdictional competences retained by the Members for themselves" and concluded that Article 11 of the DSU "articulates with great succinctness but with sufficient clarity the appropriate standard of review for panels"[1204] reviewing the assessment of facts under the *SPS Agreement*.

588. Article 11 of the DSU states, in relevant part:

> [A] panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements.

589. The Appellate Body has observed that, so far as fact-finding by panels is concerned, the applicable standard is "neither *de novo* review as such, nor 'total deference', but rather the 'objective assessment of facts'".[1205] It further explained that, while panels are "poorly suited to engage in [a *de novo*] review", "'total deference to the findings of the national authorities' ... 'could not ensure an "objective assessment" as foreseen by Article 11 of the DSU'."[1206]

590. A panel reviewing the consistency of an SPS measure with Article 5.1 must determine whether that SPS measure is "based on" a risk assessment. It is the WTO Member's task to perform the risk assessment. The panel's task is to review that risk assessment. Where a panel goes beyond this limited mandate and acts as a risk assessor, it would be substituting its own scientific judgement for that of the risk assessor and making a *de novo* review and, consequently, would exceed its functions under Article 11 of the DSU. Therefore, the review power of a panel is not to determine whether the risk assessment undertaken by a WTO Member is correct, but rather to determine whether that risk assessment is supported by coherent reasoning and respectable scientific evidence and is, in this sense, objectively justifiable.

591. The Appellate Body has observed that a WTO Member may properly base an SPS measure on divergent or minority views, as long as these views are from qualified and respected sources.[1207] This must be taken into account in defining a panel's standard of review. Accordingly, a panel reviewing the consistency of an SPS measure with Article 5.1 of the *SPS Agreement* must, first, identify the scientific basis upon which the SPS measure was adopted. This scientific basis need not reflect the majority view within the scientific community but may reflect divergent or minority views. Having identified the scientific basis underlying the SPS measure, the panel must then verify that the scientific basis comes from a respected and qualified source. Although the scientific basis need not represent the majority view within the scientific community, it must nevertheless have the necessary scientific and methodological rigour to be considered reputable science. In other words, while the correctness of the views need not have been accepted by the broader scientific community, the views

[1202]European Communities' appellant's submission, para. 243.
[1203]Appellate Body Report, *EC – Hormones*, paras. 113 and 114.
[1204]*Ibid.*, paras. 115 and 116.
[1205]*Ibid.*, para. 117.
[1206]*Ibid.* (quoting Panel Report, *US – Underwear*, para. 7.10).
[1207]Appellate Body Report, *EC – Hormones*, para. 194.

must be considered to be legitimate science according to the standards of the relevant scientific community. A panel should also assess whether the reasoning articulated on the basis of the scientific evidence is objective and coherent. In other words, a panel should review whether the particular conclusions drawn by the Member assessing the risk find sufficient support in the scientific evidence relied upon. Finally, the panel must determine whether the results of the risk assessment "sufficiently warrant" the SPS measure at issue.[1208] Here, again, the scientific basis cited as warranting the SPS measure need not reflect the majority view of the scientific community provided that it comes from a qualified and respected source.

592. A panel may and should rely on the advice of experts in reviewing a WTO Member's SPS measure, in accordance with Article 11.2 of the *SPS Agreement* and Article 13.1 of the DSU. In doing so, however, a panel must respect the due process rights of the parties.[1209] Moreover, a panel may not rely on the experts to go beyond its limited mandate of review. The purpose of a panel consulting with experts is not to perform its own risk assessment. The role of the experts must reflect the limited task of a panel. The panel may seek the experts' assistance in order to identify the scientific basis of the SPS measure and to verify that this scientific basis comes from a qualified and respected source, irrespective of whether it represents minority or majority scientific views. It may also rely on the experts to review whether the reasoning articulated on the basis of the scientific evidence is objective and coherent, and whether the particular conclusions drawn by the Member assessing the risk find sufficient support in the evidence. The experts may also be consulted on the relationship between the risk assessment and the SPS measure in order to assist the panel in determining whether the risk assessment "sufficiently warrants" the SPS measure. The consultations with the experts, however, should not seek to test whether the experts would have done a risk assessment in the same way and would have reached the same conclusions as the risk assessor. In other words, the assistance of the experts is constrained by the kind of review that the panel is required to undertake.

593. In this case, the Panel correctly identified Article 11 of the DSU as setting out the standard of review applicable to its examination of the consistency of the European Communities' risk assessment with Article 5.1 of the *SPS Agreement*.[1210] The Panel also referred to the guidance provided by the Appellate Body in *EC – Hormones* concerning the standard of review.[1211] Moreover, the Panel made reference to the interpretation of Article 5.1 of the *SPS Agreement* developed by the Appellate Body in *EC – Hormones* and acknowledged that a risk assessment may be based on divergent or minority views.[1212]

594. Next, the Panel referred to its consultations with scientific experts, noting that it had consulted six scientific experts individually, and not as an expert review group. The Panel stated that:

> Although the Panel is not carrying out its own risk assessment, its situation is similar in that it may benefit from hearing the full spectrum of experts' views and thus obtain a more complete picture both of the mainstream scientific opinion and of any divergent views.[1213]

[1208]*Ibid.*, para. 193.
[1209]See *supra*, section V.
[1210]Panel Report, *US – Continued Suspension*, para. 7.413; Panel Report, *Canada – Continued Suspension*, para. 7.404.
[1211]Panel Report, *US – Continued Suspension*, paras. 7.414-7.416; Panel Report, *Canada – Continued Suspension*, paras. 7.405-7.407.
[1212]Panel Report, *US – Continued Suspension*, para. 7.417; Panel Report, *Canada – Continued Suspension*, para. 7.408 (quoting Appellate Body Report, *EC – Hormones*, para. 194).
[1213]Panel Report, *US – Continued Suspension*, para. 7.418; Panel Report, *Canada – Continued Suspension*, para. 7.409.

595. The analogy that the Panel draws between its situation and that of a risk assessor is unfortunate, but is not in itself a sufficient indication that the Panel incorrectly understood the applicable standard of review. We do not think that the Panel meant to suggest that it saw its task under Article 5.1 as requiring it to perform a risk assessment. At the beginning of the statement, the Panel expressly recognizes that it "is not carrying out its own risk assessment".

596. The Panel then elaborated on the approach it would take in respect of the testimony of the experts:

> We note that, in some circumstances, only one or two experts have expressed their views on an issue. Sometimes these views were similar or complemented each other. In other circumstances, a larger number of experts expressed opinions and, sometimes, they expressed diverging opinions. While, on some occasions, we followed the majority of experts expressing concurrent views, in some others the divergence of views were such that we could not follow that approach and decided to accept the position(s) which appeared, in our view, to be the most specific in relation to the question at issue and to be best supported by arguments and evidence.[1214] (footnotes omitted)

597. The European Communities submits that "the majority view is not probative simply because it represents the majority".[1215] We agree that automatically giving more weight to the testimony of the majority of experts would be too rigid an approach. The fact that a majority in the spectrum of the scientific experts consulted by the Panel had a particular view is not a proper basis for determining whether a WTO Member's risk assessment complies with the requirements of Article 5.1 and Annex A of the *SPS Agreement*.

598. Looking at the Panel's analysis of whether the European Communities specifically assessed the risks arising from the consumption of meat from cattle treated with oestradiol-17β, we note that a significant portion of the Panel's reasoning consists of summaries of the responses of the experts. It is only after summarizing the experts' responses that the Panel describes some of the issues discussed in the 1999 Opinion. Given the applicable standard of review and the role of the Panel that is determined by it, the Panel's analysis should have proceeded differently. The Panel should have first looked at the European Communities' risk assessment. It should then have determined whether the scientific basis relied upon in that risk assessment came from a respected and qualified source. The Panel should have sought assistance from the scientific experts in confirming that it had properly identified the scientific basis underlying the European Communities' risk assessment or to determine whether that scientific basis originated in a respected and qualified source. The Panel should also have sought the experts' assistance in determining whether the reasoning articulated by the European Communities on the basis of the scientific evidence is objective and coherent, so that the conclusions reached in the risk assessment sufficiently warrant the SPS measure. Instead, the Panel seems to have conducted a survey of the advice presented by the scientific experts and based its decisions on whether the majority of the experts, or the opinion that was most thoroughly reasoned or specific to the question at issue, agreed with the conclusion drawn in the European Communities' risk

[1214]Panel Report, *US – Continued Suspension*, para. 7.420; Panel Report, *Canada – Continued Suspension*, para. 7.411. At the interim stage, the Panel further explained that "in case of divergence of opinions between the experts, and having due regard to the comments of the parties and the clarifications provided by the experts at the meeting with the Panel, it was a sound approach to take into account, in forming its own opinion, the opinions that were the most precise and elaborate." (Panel Report, *US – Continued Suspension*, para. 6.72; Panel Report, *Canada – Continued Suspension*, para. 6.67).

[1215]European Communities' appellant's submission, para. 240.

assessment. This approach is not consistent with the applicable standard of review under the *SPS Agreement*.

599. The Panel's flawed approach is evident in its analysis of the genotoxicity of oestradiol-17β, one of the central issues in the European Communities' risk assessment.[1216] The 1999 Opinion refers to several studies that investigated the genotoxicity of oestradiol.[1217] It also states that certain metabolites of oestradiol-17β "have been found to be directly or indirectly genotoxic" and that "[t]his implies that 17-β oestradiol may act as tumor initiator as well as tumor promoter".[1218] The 1999 Opinion goes on to state that "[t]his implies that any excess exposure towards 17-β oestradiol and its metabolites resulting from the consumption of meat and meat products presents a potential risk to public health in particular to those groups of the population which have been identified as particularly sensitive such as prepubertal children".[1219] Finally, the 1999 Opinion explains that a threshold cannot be established for these genotoxic metabolites.[1220] The European Communities explained that a "threshold" is the "level below which intakes from residue should be considered to be safe."[1221]

600. The genotoxicity of oestradiol-17β is also examined in the 2002 Opinion, which concludes:

> Convincing data have been published confirming the mutagenic and genotoxic potential of 17β-oestradiol as a consequence of metabolic activation to reactive quinines. *In vitro* experiments indicated that oestrogenic compounds *might* alter the expression of an array of genes.[1222] (original emphasis)

601. Following the approach that we outlined earlier regarding the applicable standard of review, the first step in the Panel's analysis should have been to identify what in the European Communities' risk assessment was the scientific basis for the conclusions on the genotoxicity of oestradiol-17β; verify whether this scientific basis came from a respected and qualified source; and determine whether the reasoning articulated on the basis of that scientific evidence is objective and coherent. As a second step, the Panel should have pursued a similar inquiry concerning the conclusion that the genotoxicity of oestradiol-17β did not permit the establishment of a threshold, as the European Communities submits. In that context, the Panel would have sought the experts' view as to whether the conclusions reached by the European Communities can find support in the scientific evidence relied upon by the European Communities (even if the expert in question was of a different scientific view).

602. Rather than turning first to the European Communities' risk assessment in order to identify the scientific basis for the conclusions on the genotoxicity of oestradiol-17β, the Panel begins with a survey of the views of the scientific experts on this issue in general. The Panel tries to justify its approach on its inability to evaluate the evidence itself:

> The Panel is not in a position to evaluate the scientific data the SCVPH reviewed in drawing its conclusions. For this reason, the Panel consulted a group of scientific experts and asked them to

[1216]The United States characterizes the issue of genotoxicity as a "central underpinning" of the European Communities' risk assessment relating to oestradiol-17β. (Panel Report, *US – Continued Suspension*, para. 7.543)

[1217]1999 Opinion, pp. 39-41.

[1222]2002 Opinion, p. 21.

> evaluate the [European Communities'] Opinions as well as the underlying science.[1223]

However, under the applicable standard of review, neither the Panel nor the experts it consulted were called upon to evaluate the correctness of the European Communities' risk assessment. The Panel's role was more limited and consisted, as we explained earlier, of identifying the scientific basis and evidence relied upon in the risk assessment; verifying that the scientific evidence comes from respected and qualified sources; and determining whether the reasoning articulated by the European Communities on the basis of the scientific evidence is objective and coherent.

603. The summary of the experts' opinions, which constitutes the lengthiest portion of the Panel's reasoning, often appears to be a general discussion as to whether the genotoxicity of oestradiol-17β is widely accepted by the broader scientific community, rather than a discussion of the evidence relied upon in the European Communities' risk assessment. The Panel concludes that the "scientific evidence referred to in the Opinions does not support the European Communities' conclusion that for oestradiol-17β genotoxicity had already been demonstrated explicitly."[1224] The Panel's conclusion appropriately focuses on the scientific evidence in the SCVPH Opinions. Yet, the Panel's reasoning reveals several flaws. First, some of the experts seemed to accept the European Communities' position on the genotoxicity of oestradiol-17β. For example, the Panel quotes the following opinion of Dr. Cogliano in its reasoning:

> Dr. Cogliano explained that "the [European Communities'] statement that a threshold cannot be identified reflects their view of genotoxic mechanisms, just as the contrary statement that there is a threshold and that this threshold is above the levels found in meat residues reflects how Canada and the [United States] view genotoxic mechanisms. Neither statement has been demonstrated by the scientific evidence, rather, they are different assumptions that each party uses in their interpretation of the available evidence."[1225]

604. The Panel also refers to the following testimony of Dr. Cogliano:

> Dr. Cogliano stated in his written responses that the identification of oestradiol-17β as a human carcinogen indicates that there are potential adverse effects on human health when oestrodiol-17β is consumed in meat from cattle treated with hormones for growth promotion purposes. At the meeting with the Panel, Dr. Cogliano clarified that the IARC has classified oestradiol-17β as possibly carcinogenic based on sufficient evidence in experimental animals. The agents that are known to be carcinogenic in humans are the steroidal oestrogens, non-steroidal oestrogens, and various oestrogen-progestin combinations as used either as birth-control pills or menopausal therapy.[1226]

[1223]Panel Report, *US – Continued Suspension*, para. 7.553; Panel Report, *Canada – Continued Suspension*, para. 7.521.

[1224]Panel Report, *US – Continued Suspension*, para. 7.572; Panel Report, *Canada – Continued Suspension*, para. 7.540 (referring to 1999 Opinion, p. 75).

[1225]Panel Report, *US – Continued Suspension*, para. 7.559; Panel Report, *Canada – Continued Suspension*, para. 7.527 (referring to replies of the scientific experts to questions posed by the Panel, Panel Reports, Annex D, para. 186).

605. The Panel should have addressed whether Dr. Cogliano's statements provided evidence that the European Communities' position on the genotoxicity of oestradiol-17β had some acceptance in the scientific community, even if it did not constitute the majority view. At the interim review, the Panel rejected the relevance of Dr. Cogliano's statement, explaining that "the *SPS Agreement* requires an analysis that goes beyond the identification of a potential adverse effect".[1227] According to the Panel, "[t]he analysis must include an examination of the potential for that adverse affect to come into being, originate, or result from the presence of the specific substance under review in food, beverages, or feedstuffs, in this case oestradiol-17β in meat and meat products derived from cattle treated with the hormone for growth promotion purposes."

606. There is no indication in the Panel's reasoning about how to reconcile Dr. Cogliano's statements with the Panel's conclusion that the scientific evidence in the SCVPH Opinions do not support the European Communities' conclusions that "for oestradiol-17β genotoxicity had already been demonstrated explicitly" or that the "presence of residues of oestradiol-17β in meat and meat products as a result of the cattle being treated with the hormone for growth promotion purposes leads to increased cancer risk."[1228]

607. The genotoxicity of oestradiol-17β also comes up in connection with the European Communities' conclusion that a threshold could not be established for oestradiol-17β. As with genotoxicity, the risk assessment would need to provide a scientific basis for the conclusion that a threshold could not be established for oestradiol-17β. The Panel does not identify what was the scientific basis for this conclusion, as it should have done. Rather, the Panel's reasoning reproduces the views of the experts on the issue of genotoxicity, with some of them mentioning the distinction between *in vivo* and *in vitro* genotoxicity. The discussion seeks to establish whether the genotoxicity *in vivo* of oestradiol-17β had been accepted by the general scientific community, rather than whether the European Communities' risk assessment provided scientific evidence of the genotoxicity *in vivo* of oestradiol-17β and whether this evidence came from a respected and qualified source. For example, the Panel relies on the following opinion provided by Dr. Boobis:

> Dr. Boobis concluded that there is no good evidence that oestradiol is genotoxic *in vivo* or that it causes cancer by a genotoxic mechanism. Indeed the evidence is against this. Hence, the scientific evidence does not support the European Communities' position that the levels of the hormones in meat from treated cattle are not of relevance.[1229]

608. Dr. Boisseau's response also goes beyond a verification of whether the European Communities' evidence on genotoxicity came from a respected and qualified source, into an examination of the general acceptance of the scientific basis of the European Communities' risk assessment:

[1226]Panel Report, *US – Continued Suspension*, para. 7.561; Panel Report, *Canada – Continued Suspension*, para. 7.529 (referring to replies of the scientific experts to questions posed by the Panel, Panel Reports, Annex D, para. 154, and transcript of the Panel meeting with the scientific experts, Panel Reports, Annex G, para. 327).

[1227]Panel Report, *US – Continued Suspension*, para. 6.118; Panel Report, *Canada – Continued Suspension*, para. 6.110.

[1228]Panel Report, *US – Continued Suspension*, para. 7.572; Panel Report, *Canada – Continued Suspension*, para. 7.540. (footnote omitted)

[1229]Panel Report, *US – Continued Suspension*, para. 7.562; Panel Report, *Canada – Continued Suspension*, para. 7.530 (referring to replies of the scientific experts to questions posed by the Panel, Panel Reports, Annex D, para. 184).

> In a review of the scientific literature and the 1999 report of the Committee for Veterinary Medicinal Products of the European Medicine Agency, Dr. Boisseau concluded that the demonstration remains to be made that the observed indicator effects are representative of mutagenesis at the gene or chromosome level and also occur in somatic cells *in vivo*. This is not likely in the view of the following: earlier studies had mostly indicated that hormones do not induce micronuclei or other chromosomes aberration types *in vivo*. With the exception of the study reported by Dhillon and Dhillon, the recent data confirm the earlier findings and clearly indicate that hormones and/or their synthetic analogues are not associated with genotoxicity properties in the bone marrow micronucleas assay *in vivo*.[1230]

609. At the same time, the Panel fails to explain how it reconciled its conclusion with the testimony of other experts that appear to acknowledge that the European Communities' risk assessment was based on evidence of genotoxicity *in vivo* of oestradiol-17β. In his written responses to questions by the Panel, Dr. Guttenplan referred to a study, cited by the European Communities, allegedly indicating that the reactive metabolite oestradiol-3, 4-quinone induces mutations in mice skin *in vivo*.[1231] Dr. Guttenplan testified that "[t]he catechol oestrogen-quinone form DNA adducts in cultured cells and in mouse skin", and concluded that "[t]his evidence was stronger compared to previous reports" , adding that "the evidence now is much stronger."[1232] The Panel further explained, in the interim review, that it did "not read this statement as implying that the residues of oestradiol-17β in meat from treated cattle are definitely genotoxic".[1233] The Panel added that, "even if this were the case, the issue of genotoxicity is only relevant to the issue of whether a threshold could be determined for this substance."[1234]

610. We reiterate that the Panel was not called upon to determine whether there is general acceptance that oestradiol-17β is genotoxic *in vivo* or that it causes cancer by a genotoxic mechanism. Instead, the focus should have been on the evidence relied upon by the European Communities in its risk assessment. As we noted earlier, the 1999 Opinion refers to several studies on the genotoxicity of oestradiol-17β.[1235] Additional studies are discussed in the 2002 Opinion.[1236] These studies should have been the focus of the Panel's analysis, yet they are not mentioned in the Panel's analysis. The Panel does not give any reasons why it did not consider them relevant.

611. The European Communities' risk assessment also focused on the endogenous levels of hormones in pre-pubertal children and observed that these levels were lower than previously thought.[1237] Dr. Guttenplan seemed to accept the European Communities' position on this issue:

> Dr. Guttenplan found that the levels in meat could result in bioavailable oestrogen exceeding the daily production rate of oestradiol in pre-pubertal children. "For pre-pubertal children, even with the low bioavailabilty of estrogen ... and its low levels in meats,

[1230]Panel Report, *US – Continued Suspension*, para. 7.563; Panel Report, *Canada – Continued Suspension*, para. 7.531 (referring to replies of the scientific experts to questions posed by the Panel, Panel Reports, Annex D, para. 136).
[1231]Replies of the scientific experts to questions posed by the Panel, Panel Reports, Annex D, para. 181.
[1232]*Ibid*.

[1234]*Ibid*.
[1235]1999 Opinion, pp. 39-41.
[1236]2002 Opinion, pp. 13 and 14.
[1237]1999 Opinion, p. 38.

> it appears possible that intake levels would be within an order of magnitude of those of the daily production rate. This is greater than FDA's [(Food and Drug Administration of the United States)] ADI and suggests some risk to this population. If there [are] genotoxic effects of estradiol in children, they may be reflected over a lifetime, as mutations arising from DNA damage are permanent. It seems the more accurate methods of analysis could now be used to measure the effect of eating hormone-treated beef on blood levels of estrogen in children and post-menopausal women. If practical, this experiment would be important in establishing or refuting the arguments of the [European Communities]."[1238]

The Panel does not address this statement further nor does the Panel explain how Dr. Guttenplan's conclusion should be reconciled with the Panel's conclusion that the European Communities' risk assessment did not examine the specific risks arising from the consumption of meat from cattle treated with oestradiol-17β.

612. We have identified above how the Panel approached its task without proper regard to the standard of review and the limitations this places upon the appraisal of expert testimony. Ultimately, the Panel reviewed the scientific experts' opinions and somewhat peremptorily decided what it considered to be the best science, rather than following the more limited exercise that its mandate required. In addition, the European Communities has drawn our attention to the following response provided by Dr. Guttenplan to the Panel's question on the specificity of the European Communities' risk analysis:

> I believe the [European Communities] has done a thorough job in identifying the potential for adverse effects on human health of oestradiol-17β found in meat derived from cattle to which this hormone had been administered. They have identified a number of potential adverse effects of oestradiol-17β in humans. They have established metabolic pathways relevant to these effects, and have examined mechanisms of these effects. In addition they have performed thorough studies of residue levels in cattle, and the environment. The evidence evaluating the occurrence of adverse effects is weak. Animal models are very limited and the target organs do not coincide well with the target organs in humans. There are basically no epidemiological studies comparing matched populations consuming meat from untreated and hormone-treated cattle. Thus, little can be inferred about the potential occurrence of the adverse effects, the potential for adverse effects seems reasonable.[1239]

613. In his response, Dr. Guttenplan seems to recognize that the European Communities' risk assessment did specifically examine the potential for adverse effects from the consumption of meat from cattle treated with oestradiol-17β. Dr. Guttenplan's response is summarized in the Panel's reasoning.[1240] Yet, the Panel does not address that response any further. Given that the European

[1238]Panel Report, *US – Continued* Suspension, para. 7.528; Panel Report, *Canada – Continued Suspension*, para. 7.500 (quoting replies of the scientific experts to Question 52 posed by the Panel, Panel Reports, Annex D, para. 413.
[1239]Replies of the scientific experts to questions posed by the Panel, Panel Reports, Annex D, para. 145).
[1240]Panel Report, *US – Continued Suspension*, para. 7.523; Panel Report, *Canada – Continued Suspension*, para. 7.495.

Communities was entitled to rely on minority views, the Panel was required to explain why it did not consider that Dr. Guttenplan's testimony supported the European Communities' position.

614. An additional flaw in the Panel's reasoning relates to the following remark at the end of Panel's summary of the experts' responses:

> Additionally, in response to direct questioning during the Panel meeting with the experts, Drs. Boobis, Boisseau, and Guttenplan all agreed that there is no appreciable risk of cancer from residues of oestradiol-17β in meat and meat products from cattle treated with the hormone for growth promotion purposes. While all the experts who responded to the question agreed that a zero risk could not be guaranteed, the actual level of risk was in their view so small as to not be calculable.[1241]

It was not the Panel's task, much less that of the experts that the Panel consulted, to determine whether there is an appreciable risk of cancer arising from the consumption of meat from cattle treated with oestradiol-17β. Instead, the Panel was called upon to review the European Communities' risk assessment.

615. The United States and Canada argue that the Panel properly exercised its discretion as the trier of facts.[1242] We have found that the Panel did not apply the proper standard of review. This is a legal error and does not fall within the authority of the Panel as the trier of facts. Moreover, we have found instances in which the Panel exceeded its authority in the assessment of the testimony of the scientific experts. By merely reproducing testimony of some experts that would appear to be favourable to the European Communities' position, without addressing its significance, the Panel effectively disregarded evidence that was potentially relevant for the European Communities' case. This cannot be reconciled with the Panel's duty to make an "objective assessment of the facts of the case" pursuant to Article 11 of the DSU.

616. For these reasons, we find that the Panel failed to conduct an objective assessment of the facts of the case, as required by Article 11 of the DSU, in determining whether the European Communities' risk assessment satisfied the requirements of Article 5.1 and Annex A of the *SPS Agreement*.

F. *Conclusion*

617. We recall that we have found above that the Panel erred in its interpretation and application of Article 5.1 in relation to risks of misuse and abuse in the administration of hormones to cattle for growth-promoting purposes. We have also found that the Panel misallocated the burden of proof, and failed to conduct an objective assessment of the facts, in its analysis of whether the European Communities' risk assessment met the requirements of Article 5.1 of the *SPS Agreement*.

618. In addition, we found earlier that the Panel has infringed the European Communities' due process rights by inappropriately relying on the testimony of Drs. Boisseau and Boobis in its evaluation of the consistency with Article 5.1 of the *SPS Agreement* of the European Communities' risk assessment relating to oestradiol-17β. Thus, the Panel's conclusions rest, to a large extent, on an improper evidentiary basis.

[1241]Panel Report, *US – Continued Suspension*, para. 7.569; Panel Report, *Canada – Continued Suspension*, para. 7.537 (referring to the transcript of the Panel meeting with the scientific experts, Panel Reports, Annex G, paras. 707-742).

[1242]United States' appellee's submission, para. 47; Canada's appellee's submission, para. 73.

619. Accordingly, we reverse the Panel's finding that the European Communities has not satisfied the requirements of Article 5.1 and Annex A, paragraph 4, of the *SPS Agreement*. As a consequence, we also reverse the Panel's findings that Directive 2003/74/EC was not based on a risk assessment within the meaning of Article 5.1 of the *SPS Agreement* and that the European Communities' "implementing measure on oestradiol-17β is not compatible with Article 5.1 of the *SPS Agreement*."[1243]

620. Having reversed the Panel, we must now determine whether we can complete the analysis by reviewing ourselves the consistency of the European Communities' risk assessment relating to oestradiol-17β with Article 5.1 of the *SPS Agreement*. In the past, the Appellate Body has completed the analysis when there were sufficient factual findings by the panel or undisputed facts on the Panel record to enable it to do so.[1244] In light of the numerous flaws we have found in the Panel's analysis, and the highly contested nature of the facts, we do not consider it possible to complete the analysis in this case. Thus, we make no findings on the consistency or inconsistency of the European Communities' import ban relating to oestradiol-17β.

VII. The Consistency with Article 5.7 of the *SPS Agreement* of the European Communities' Provisional Import Ban on Meat from Cattle Treated with Testosterone, Progesterone, Trenbolone Acetate, Zeranol, and MGA for Growth-Promotion Purposes

A. *Introduction*

621. We turn finally to the European Communities' appeal of the Panel's finding that the European Communities' provisional ban on meat from cattle treated with testosterone, progesterone, trenbolone acetate, zeranol, and MGA failed to meet the requirements of Article 5.7 of the *SPS Agreement* because the relevant scientific evidence was not "insufficient" within the meaning of that provision. Section B describes the conclusions of the European Communities' evaluation of the potential adverse health effects of the five hormones, and section C summarizes the Panel's findings under Article 5.7 of the *SPS Agreement*. Section D provides an overview of the claims and arguments raised on appeal. In section E, we review the Panel's findings that the relevant scientific evidence in relation to the five hormones was not "insufficient" within the meaning of Article 5.7. Our conclusions are set out in section F.

B. *The European Communities' Evaluation of the Five Hormones Subject to the Provisional Ban*

622. As we noted above[1245], following the adoption of the DSB's recommendations and rulings in *EC – Hormones*, the European Communities initiated 17 scientific studies aimed at evaluating, *inter alia*, the potential for adverse effects to human health from residues in bovine meat and meat products resulting from the use of oestradiol-17β, testosterone, progesterone, zeranol, trenbolone acetate, and MGA. The results of these studies, as well as other publicly available information, were reviewed by the SCVPH. On 30 April 1999, the SCVPH issued the "1999 Opinion, in which it concluded that "in view of the intrinsic properties of hormones and epidemiological findings, a risk to the consumer has been identified with different levels of conclusive evidence for the six hormones in question."[1246] As regards the five hormones, the 1999 Opinion further provided that "in spite of the individual toxicological and epidemiological data described in the report, the current state of knowledge did not

[1243]Panel Report, *US – Continued Suspension*, para. 7.579; Panel Report, *Canada – Continued Suspension*, para. 7.549.

[1245]See *supra*, sections I and IV.B.

[1246]1999 Opinion, p. 73.

allow a quantitative estimate of the risk."[1247] The European Communities concluded that "the currently available information for testosterone, progesterone and the synthetic hormones zeranol, trenbolone and particularly MGA has been considered inadequate to complete [a risk] assessment."[1248] The 1999 Opinion also states that "no final conclusions can be drawn with respect to the safety" of the five hormones.[1249]

623. The SCVPH subsequently reviewed the 1999 Opinion in 2000 and 2002, in the light of additional scientific information it received, but did not find it necessary to amend the conclusions originally reached in the 1999 Opinion. The 2000 Opinion emphasized "the obvious gaps in the present knowledge on target animal metabolism and residue disposition of the hormones under consideration, including the synthetic hormones", and stated that it expected "that the on-going [European Communities'] research programs will provide additional data on both topics".[1250] The 2002 Opinion arrived at the following specific conclusions in relation to potential risks arising from residues of the five hormones in bovine meat:

> (e) No new data regarding testosterone and progesterone relevant to bovine meat or meat products were available. However, it was emphasized that these natural hormones were used only in combination with oestradiol-17β or other oestrogenic compounds in commercial preparations.
>
> (f) Experiments with zeranol and trenbolone acetate suggested a more complex oxidative metabolism than previously assumed. These data needed further clarification as they might influence a risk assessment related to tissue residues of these compounds.
>
> (g) Zeranol and trenbolone acetate had been tested for their mutagenic and genotoxic potential in various systems with different endpoints. Both compounds exhibited only very weak effects.
>
> (h) Data on the genotoxicity of [MGA] indicated only weak effects. However, pro-apoptotic effects were noted in some cell-based assays, which were attributed to the impurities in commercial formulation. Further experiments should clarify the toxicological significance of these impurities.
>
> (i) Model experiments with rabbits treated with zeranol, trenbolone acetate or [MGA], mirroring their use in bovines, were designed to study the consequences of pre- and perinatal exposure to exogenous hormones. All compounds crossed the placental barrier easily and influenced to varying degrees the development of the foetus, at the doses used in the experiments.

[1247]Panel Report, *US – Continued Suspension*, para. 7.391 (quoting 1999 Opinion (Exhibit US-4 submitted by the United States to the Panel), p. 73); Panel Report, *Canada – Continued Suspension*, para. 7.388 (quoting 1999 Opinion (Exhibit CDA-2 submitted by Canada to the Panel), p. 73). The 1999 Opinion also concludes that "endocrine, developmental, immunological, neurobiological, immunotoxic, genotoxic and carcinogenic effects could be envisaged" for the five hormones, but "[i]n view of the intrinsic properties of the hormones and in consideration of epidemiological findings, no threshold levels could be defined". (See *ibid.*)

[1248]1999 Opinion, p. 75.

[1249]*Ibid.*

[1250]Panel Report, *US – Continued Suspension*, para. 7.392 (quoting 2000 Opinion (Exhibit US-17 submitted by the United States to the Panel), p. 4); Panel Report, *Canada – Continued Suspension*, para. 7.389 (quoting 2000 Opinion (Exhibit CDA-4 submitted by Canada to the Panel), p. 4).

> ...
>
> (k) Several studies were devoted to the potential impact of the extensive use of hormones on the environment. Convincing data were presented indicating the high stability of trenbolone acetate and [MGA] in the environment, whereas preliminary data were provided on the potential detrimental effects of hormonal compounds in surface water.[1251]

624. The European Communities enacted Directive 2003/74/EC, which provides for a *provisional* ban on meat and meat products from cattle treated with progesterone, testosterone, zeranol, trenbolone acetate and MGA for growth-promotion purposes. Before the Panel, the European Communities argued that the SCVPH Opinions and supporting studies provided the "available pertinent information" within the meaning of Article 5.7 on the basis of which the provisional ban on the five hormones had been enacted.[1252]

C. *The Panel's Findings*

625. At the outset of its analysis, the Panel recalled its earlier conclusion that the measure at issue, to the extent that it provisionally bans the importation of meat from cattle treated with the hormones progesterone, testosterone, zeranol, trenbolone acetate, and MGA, is an SPS measure within the meaning of Article 1 and paragraph 1 of Annex A to the *SPS Agreement*.[1253] The Panel, furthermore, observed that the "parties address the issue of the compatibility of the provisional ban on the above-mentioned five hormones with the provisions of Article 5.7 of the *SPS Agreement*" and that "[n]one ... discussed the compatibility of the ban imposed with respect to these five hormones with Article 5.1".[1254] Therefore, the Panel stated that it would "limit its review to the conformity of the [European Communities'] ban on the five hormones with the requirements of Article 5.7".[1255]

626. Having identified Article 5.7 as the relevant provision, the Panel referred to the Appellate Body's interpretation of this provision as setting out the following four cumulative requirements that must be satisfied in order to adopt and maintain a provisional measure under the *SPS Agreement*:

> (a) the measure is imposed in respect to a situation where "relevant scientific evidence is insufficient";
>
> (b) the measure is adopted "on the basis of available pertinent information";
>
> (c) the WTO Member which adopted the measure must "seek to obtain the additional information necessary for a more objective assessment of risk"; and

[1251]Panel Report, *US – Continued Suspension*, para. 7.393 (quoting 2002 Opinion (Exhibit US-1 submitted by the United States to the Panel), pp. 21 and 22); Panel Report, *Canada – Continued Suspension*, para. 7.390 (quoting 2002 Opinion (Exhibit CDA-7 submitted by Canada to the Panel), pp. 21 and 22).

[1252]Panel Report, *US – Continued Suspension*, para. 7.581; Panel Report, *Canada – Continued Suspension*, para. 7.551.

[1254]Panel Report, *US – Continued Suspension*, para. 7.591; Panel Report, *Canada – Continued Suspension*, para. 7.566. (footnote omitted)

[1255]*Ibid.*

(d) the Member which adopted the measure must "review the ... measure accordingly within a reasonable period of time".[1256]

627. Turning to the first requirement, the Panel referred to the Appellate Body's statement in *Japan – Apples* that scientific evidence will be insufficient for purposes of Article 5.7 if the body of available scientific evidence does not allow, in quantitative or qualitative terms, the performance of an adequate risk assessment.[1257] Recalling the approach it had adopted under Articles 5.1 and 5.2, the Panel dismissed the relevance of instances of misuse or abuse and difficulties of control in the administration of the five hormones for the purposes of its determination of whether the relevant scientific evidence on the five hormones was insufficient under Article 5.7. The Panel reasoned that instances of misuse and abuse are not, as such, a scientific issue likely to make a risk assessment impossible, and concluded that:

> In our opinion, the scientific issue is related to the effect of the ingestion of high doses of hormones residues, not to potential or actual misuse or abuse in the administration of hormones. Therefore, we will not address the issue of non compliance with good veterinary practices in our analysis under Article 5.7 of the *SPS Agreement*.[1258]

628. The Panel then addressed the European Communities' argument that the appropriate level of protection is relevant for the purposes of determining whether the scientific evidence is insufficient.[1259] The Panel rejected the European Communities' argument on the basis of the following reasoning:

> We note that sufficient scientific evidence is what is needed to make a risk assessment. The assessment whether there is sufficient scientific evidence or not to perform a risk assessment should be an objective process. The level of protection defined by each Member may be relevant to determine the measure to be selected to address the assessed risk, but it should not influence the performance of the risk assessment as such.
>
> Indeed, whether a Member considers that its population should be exposed or not to a particular risk, or at what level, is not relevant to determining whether a risk exists and what its magnitude is. *A fortiori*, it should have no effect on whether there is sufficient evidence of the existence and magnitude of this risk.
>
> A risk-averse Member may be inclined to take a protective position when considering the measure to be adopted. However, the determination of whether scientific evidence is sufficient to assess

[1256]Panel Report, *US – Continued Suspension*, para. 7.593; Panel Report, *Canada – Continued Suspension*, para. 7.568 (quoting Appellate Body Report, *Japan – Agricultural Products II*, para. 89).

[1257]Panel Report, *US – Continued Suspension*, para. 7.608; Panel Report, *Canada – Continued Suspension*, para. 7.586.

[1258]Panel Report, *US – Continued Suspension*, para. 7.603; Panel Report, *Canada – Continued Suspension*, para. 7.578.

[1259]The Panel described the European Communities' level of protection as:

> no (avoidable) risk, that is a level of protection that does not allow any unnecessary addition from exposure to genotoxic chemical substances that are intended to be added deliberately to food.

(Panel Report, *US – Continued Suspension*, para. 7.607; Panel Report, *Canada – Continued Suspension*, para. 7.585 (quoting replies of the European Communities to questions posed by the Panel after the second Panel meeting, Panel Reports, Annex C-1, para. 69))

> the existence and magnitude of a risk must be disconnected from the intended level of protection.[1260]

629. The Panel next observed that the United States and Canada argued that JECFA and several national regulatory bodies have determined that the scientific evidence regarding these hormones is adequate or sufficient to conduct a risk assessment. The Panel, however, agreed with the parties that scientific evidence which was previously deemed to be sufficient could subsequently become insufficient.[1261] On this basis, the Panel sought to determine under what circumstances could relevant, previously sufficient, scientific evidence become insufficient within the meaning of Article 5.7.

630. Recalling the Appellate Body's decision in *Japan – Apples*, the Panel reasoned that "Article 5.7 will apply in situations where, in substance, the relevant scientific evidence does not allow the completion of an objective evaluation of the potential for adverse effects on human or animal health arising from the presence of additives, contaminants, toxins or disease-causing organisms in food, beverages, or feedstuffs."[1262] Also referring to the Appellate Body's decision in *Japan – Apples*, the Panel stated that "the existence of scientific uncertainty does not automatically amount to a situation of insufficiency of relevant scientific evidence".[1263] The Panel added that, although it agreed that "under certain circumstances what was previously sufficient evidence could become insufficient", it did not "believe that the existence of scientific uncertainty means that previously sufficient evidence has in fact become insufficient nor should it *ipso facto* justify the applicability of Article 5.7 of the *SPS Agreement*".[1264]

631. The Panel then turned to examine the relationship between insufficiency of the evidence and the existence of an international standard. According to the Panel, "[t]he presumption of consistency of measures conforming to international standards, guidelines and recommendations with the relevant provisions of the *SPS Agreement* implies that these standards, guidelines or recommendations, particularly those referred to in this case, are based on risk assessments that meet the requirements of the *SPS Agreement*."[1265] The Panel recognized that "science continuously evolves", and that it "cannot be excluded that new scientific evidence or information calls into question existing evidence" or that "different risk assessments reach different interpretations of the same scientific evidence".[1266] For the Panel, the existence of international standards meant "that there was sufficient evidence for JECFA to undertake the appropriate risk assessments".[1267] The Panel added:

> As a result, we consider that, in order to properly take into account the existence of international standards, guidelines and recommendations in this case, our approach should be to assess

[1260]Panel Report, *US – Continued Suspension*, paras. 7.610-7.612; Panel Report, *Canada – Continued Suspension*, paras. 7.588-7.590.

[1261]Panel Report, *US – Continued Suspension*, para. 7.620; Panel Report, *Canada – Continued Suspension*, para. 7.598.

[1262]Panel Report, *US – Continued Suspension*, para. 7.628; Panel Report, *Canada – Continued Suspension*, para. 7.606 (referring to Appellate Body Report, *Japan – Apples*, para. 179).

[1263]Panel Report, *US – Continued Suspension*, para. 7.631; Panel Report, *Canada – Continued Suspension*, para. 7.609 (referring to Appellate Body Report, *Japan – Apples*, para. 184).

[1264]Panel Report, *US – Continued Suspension*, para. 7.637; Panel Report, *Canada – Continued Suspension*, para. 7.615. In this respect, the Panel referred to the comments of Drs. Boisseau and Boobis on how scientific uncertainty is addressed in risk assessment. (Panel Report, *US – Continued Suspension*, para. 7.635; Panel Report, *Canada – Continued Suspension*, para. 7.613)

[1265]Panel Report, *US – Continued Suspension*, para. 7.644; Panel Report, *Canada – Continued Suspension*, para. 7.622.

[1266]Panel Report, *US – Continued Suspension*, para. 7.645; Panel Report, *Canada – Continued Suspension*, para. 7.623.

[1267]Panel Report, *US – Continued Suspension*, para. 7.644; Panel Report, *Canada – Continued Suspension*, para. 7.622.

> whether scientific evidence has become insufficient by determining whether the European Communities has produced any evidence of some sufficient change in the scientific knowledge so that what was once sufficient to perform an adequate risk assessment has now become insufficient (i.e., "deficient in force, quality or amount"). In this respect, suggesting hypothetical correlations or merely arguing that there could be more evidence on one concern or another should not be deemed sufficient to successfully claim that relevant scientific evidence has become *insufficient*.[1268] (original emphasis; footnote omitted)

632. The Panel concluded:

> ... if relevant evidence already exists, not any degree of insufficiency will satisfy the criterion under Article 5.7 that "relevant scientific evidence is insufficient". Having regard to our reasoning above, particularly with respect to scientific uncertainty and the existence of international standards, we consider that, depending on the existing relevant evidence, there must be a *critical mass* of new evidence and/or information that calls into question the fundamental precepts of previous knowledge and evidence so as to make relevant, previously sufficient, evidence now insufficient. In the present case where risk assessments have been performed and a large body of quality evidence has been accumulated, this would be possible only if it put into question existing relevant evidence *to the point that* this evidence is no longer sufficient to support the conclusions of existing risks assessments. We therefore need to determine whether this is the case here.[1269] (original emphasis; footnote omitted)

633. Next, the Panel sought to identify the alleged insufficiencies in the scientific evidence that it would have to address. The Panel observed that, "[w]hereas, in application of the burden of proof in relation to Article 5.7 of the *SPS Agreement*, it should be for the party challenging the applicability of Article 5.7 to make a *prima facie* case that the relevant scientific evidence regarding the five hormones is sufficient, it is also for the European Communities, in application of the principle that it is for each party to prove its allegations, to support its own allegations with appropriate evidence."[1270] The Panel further noted that "even though in this case the European Communities is the complainant, it also argues as part of its allegations under Article 22.8 of the DSU that its implementing measure complies with Article 5.7 of the *SPS Agreement*."[1271] The Panel also recalled "the consequence of the presumption of consistency with the *SPS Agreement* and the GATT 1994 of measures which conform to international standards, guidelines and recommendations on the risk assessments on which such measures are based."[1272] From this, the Panel reasoned that, "[s]ince, in that context, the European Communities argues that the relevant scientific evidence is insufficient, we consider that it is for the European Communities to identify the issues for which such evidence is insufficient."[1273]

[1268]Panel Report, *US – Continued Suspension*, para. 7.647; Panel Report, *Canada – Continued Suspension*, para. 7.625.

[1271]*Ibid.*

[1272]*Ibid.*

[1273]*Ibid.*

Thus, the Panel did "not consider that, as Panel, we have any obligation to go beyond the insufficiencies identified by the European Communities."[1274]

634. Before turning to the alleged insufficiencies of the scientific evidence, however, the Panel noted that arguments and information presented to it were sometimes general and did not permit the Panel to address each insufficiency on a hormone-specific basis. For this reason, the Panel decided to address separately, on the basis of the insufficiencies discussed and identified by the European Communities: (i) the insufficiencies commonly identified for all of the five hormones at issue, "to the extent that information was not submitted on a hormone-specific basis, or to the extent an issue was raised with respect to all hormones, but evidence submitted only for one or two of them"[1275]; and (ii) the insufficiencies alleged for each hormone on the basis of the information that was specific for that hormone.

635. The Panel stated that the following insufficiencies in the relevant scientific evidence were identified and discussed by the European Communities in relation to all the five hormones at issue: (a) effects of hormones on certain categories of the population, such as pre-pubertal children; (b) dose response; (c) bioavailability; (d) long latency period for cancer; (e) the impact of the five hormones on the immune system; and (f) the impact of the five hormones at issue on development and reproduction.[1276]

636. With regard to the effects of the hormones on certain categories of the population, the Panel referred to the conclusions in the European Communities' risk assessment that individuals that have the lowest endogenous levels of sex hormones, particularly prepubescent children and post-menopausal women, might be at an increased risk of adverse health effects associated with exposure to exogenous sources of both oestrogens and testosterone.[1277] The Panel noted that the European Communities' risk assessment made reference to the development of new detection methods that had identified considerably lower levels of oestradiol endogenously produced by pre-pubertal children than the levels previously identified using traditional detection methods. The Panel also observed the European Communities' statement in the 1999 Opinion that "this is a critical area requiring additional study".[1278]

637. The Panel recalled the "critical mass" standard that it had developed to assess the insufficiency of the relevant scientific evidence under Article 5.7, and concluded that its task was to

[1274]Panel Report, *US – Continued Suspension*, para. 7.653; Panel Report, *Canada – Continued Suspension*, para. 7.630. The Panel also stated its view "that it is incumbent upon a party making a particular allegation to identify in its submissions the *relevance* of the evidence on which it relies to support its arguments". (Panel Report, *US – Continued Suspension*, para. 7.658; Panel Report, *Canada – Continued Suspension*, para. 7.635) (original emphasis) The Panel observed that, "in light of its functions under the DSU, it should limit its review of alleged insufficiencies in the relevant scientific evidence to those specifically discussed by the European Communities in its submissions", and would "only address the issues identified in the Opinions to the extent they are sufficiently related to an issue *discussed* by the European Communities." (Panel Report, *US – Continued Suspension*, para. 7.659; Panel Report, *Canada – Continued Suspension*, para. 7.636) (original emphasis)

[1275]Panel Report, *US – Continued Suspension*, para. 7.661; Panel Report, *Canada – Continued Suspension*, para. 7.638.

[1276]Panel Report, *US – Continued Suspension*, para. 7.663; Panel Report, *Canada – Continued Suspension*, para. 7.640. The European Communities also referred to "misuse and abuse (unspecified implants, off-label use, black market drugs, etc." in its first submission to the Panel. The Panel believed that this issue was not relevant to the insufficiency of the relevant scientific evidence under Article 5.7. (Panel Report, *US – Continued Suspension*, footnote 787 to para. 7.654, and para. 7.483; Panel Report, *Canada – Continued Suspension*, footnote 734 to para. 7.631)

[1277]See Panel Report, *US – Continued Suspension*, para. 7.664; and Panel Report, *Canada – Continued Suspension*, para. 7.641.

examine "whether the more sensitive detection methods which identified lower hormonal levels in prepubertal children than thought until now are such as to call into question the range of physiological levels of the sex hormones in humans currently believed to exist".[1279]

638. The Panel concluded that:

> We note that the evidence presented relates only to oestradiol, but that the claim we are examining with regard to the insufficiencies of the evidence are with respect to the five other hormones at issue, not oestradiol. We note furthermore that the 2002 Opinion concludes that these more sensitive detection methods have not yet been validated.
>
> ... we are not convinced that the studies discussed by the experts call into question the fundamental precepts of previous knowledge and evidence so as to make relevant, previously sufficient evidence now insufficient in relation to the effect of the five hormones on pre-pubertal children. Particularly, it has not been established that the data regarding the effects of hormones on which the JECFA assessments are based are insufficient in light of new evidence relating to the other five hormones at issue.[1280]

639. Regarding dose response, the Panel noted that the European Communities questioned JECFA's findings on dose response, in the light of new detection methods that called into question previous knowledge about the endogenous production levels of hormones in pre-pubertal children. The Panel then observed that JECFA could identify a dose response for the five hormones at issue. It also noted that the European Communities' argument was premised on the notion that endogenous production of natural hormones was lower than previously thought, and recalled its previous conclusion that scientific studies in support of this notion were not yet validated and applied exclusively to oestradiol. The Panel found that "it has not been established that new evidence was such as to put into question existing data on dose response and prevent the performance of a risk assessment."[1281]

640. With respect to bioavailability, the Panel observed that the new studies performed by the European Communities related exclusively to the bioavailability of oestradiol-17β, and that it was unclear whether their findings would be relevant to hormones other than oestrogens.[1282] The Panel then stated that "bioavailability would be an issue if the new evidence suggested that bioavailability in the case of ingestion of meat treated for growth promotion purposes is higher than previously thought."[1283] However, the Panel noted that, in the absence of data, JECFA appears to have assumed 100 per cent bioavailability. The Panel referred to the testimony of Drs. Boisseau and Boobis, which confirmed that the bioavailability of the synthetic hormones in humans has not been determined, and

[1279]Panel Report, *US – Continued Suspension*, para. 7.666; Panel Report, *Canada – Continued Suspension*, para. 7.643.

[1280]Panel Report, *US – Continued Suspension*, paras. 7.670 and 7.671; Panel Report, *Canada – Continued Suspension*, paras. 7.647 and 7.648.

[1281]Panel Report, *US – Continued Suspension*, para. 7.675; Panel Report, *Canada – Continued Suspension*, para. 7.652.

[1282]Panel Report, *US – Continued Suspension*, para. 7.677; Panel Report, *Canada – Continued Suspension*, para. 7.654 (referring to European Communities' second written submission to the Panel, paras. 123 and 124). These paragraphs describe excerpts contained in the 1999 and 2002 Opinions, which call into question NOEL (no-observed effect level) studies conducted by JECFA. (See 1999 Opinion, pp. 36 and 37, and 2002 Opinion, p. 12)

[1283]Panel Report, *US – Continued Suspension*, para. 7.679; Panel Report, *Canada – Continued Suspension*, para. 7.656.

for this reason JECFA assumed 100 per cent bioavailability.[1284] For these reasons, the Panel concluded that it was not established that "any new evidence on bioavailability has been developed regarding specifically the five hormones at issue, which would affect the current knowledge on the subject."[1285]

641. Regarding the long latency period[1286] of cancer and confounding factors[1287], the Panel noted the European Communities' allegation that "it may not be in a position to demonstrate the existence of a clear harm in case of cancer because of the long latency period and the numerous confounding factors that play a role in the development of cancer."[1288] The Panel then observed that Drs. Boobis, Cogliano, and Guttenplan agreed that it was important to take account of the long latency period of cancer in conducting a risk assessment.[1289] The Panel noted further Drs. Boisseau's and Boobis' opinions that epidemiological studies, even if taking into account long latency periods for cancer, might not be able to identify the specific agent that has caused the disease, by virtue of the many confounding factors.[1290] In this respect, the Panel referred to Dr. Cogliano's statement that "it was generally possible to identify confounding factors in epidemiological studies" but it was often difficult to "determine whether the observed tumours can be attributed to the agent under study or to a confounding factor".[1291] The Panel observed that Drs. Cogliano, Guttenplan, and Boobis expressed the view that the epidemiological studies submitted by the European Communities did not establish a link or correlation between higher incidence of cancer and the consumption of residues of hormones in treated meat[1292], and found that:

> On the one hand, the comments of the experts suggest that epidemiological studies have not been able to single out residues of hormones in meat treated for growth promotion purposes as a cause of cancer, and that this would be difficult. On the other hand, the Panel notes that it is possible to assess long term effects through long term studies of experimental animals, even if they involve much higher doses than would be encountered in consumption of meat from animals treated with growth promoting hormones. It has also been possible to take into account the risk attached to latency through the setting of ADI. The European Communities has not identified

[1284]Panel Report, *US – Continued Suspension*, paras. 7.680 and 7.682; Panel Report, *Canada – Continued Suspension*, para. 7.657 and 7.659 (quoting replies of the scientific experts to Question 43 posed by the Panel, Panel Reports, Annex D, paras. 347 and 351).

> any evidence quantitatively and qualitatively sufficient to call into question the fundamental precepts of existing knowledge and evidence and the approach followed so far in order to integrate the long latency period of cancer in risk assessment.[1293]

642. Turning to the effects of the hormones on the immune system, the Panel noted the conclusion contained in the 1999 Opinion that there is insufficient evidence as to the effects of the hormones on the immune system. The Panel rejected the European Communities' contention that it was for the responding parties to present evidence that adverse immune effects could not occur from residues of hormone-treated meat, because all the responding parties had to prove was their assertion that the relevant scientific evidence on these particular risks was sufficient to perform an adequate risk assessment.[1294] Next, the Panel observed that the experts identified potential adverse effects on the immune system arising exclusively from oestrogens[1295], and that there was no evidence to suggest that those risks could not be addressed through a dose-response approach.[1296] The Panel also concluded that the 1999 Opinion itself does not provide evidence of impact of any of the five hormones on the immune system.[1297] For these reasons, the Panel found that "it is not established that there exists a critical mass of new evidence and/or information that calls into question the fundamental precepts of previous knowledge and evidence so as to make relevant, previously sufficient, evidence on hormone effects on the immune system now insufficient."[1298]

643. Finally, as regards the effects on growth and reproduction, the Panel initially observed that the European Communities had advanced no specific argument in relation to the insufficiency of the evidence of adverse effects of the five hormones on growth and reproduction. Nevertheless, the Panel decided to address this issue in light of the European Communities' contention that the new data revealed "important gaps, insufficiencies and contradictions"[1299] in the relevant scientific evidence. The Panel observed that Dr. Guttenplan initially identified a number of gaps in the scientific evidence that could relate to growth and reproduction, but subsequently declared that it was possible to conduct a risk assessment of the five hormones.[1300] Dr. Boobis, in turn, expressed the view that the scientific studies do not "support the contention that they have identified important new gaps, insufficiencies and contradictions in the scientific information" and that additional information obtained "was often not definitive, sometimes it was not relevant, in some instances it confirmed or expanded on previous knowledge".[1301] Next, the Panel dismissed the opinions of Drs. Sippell and Guttenplan about potential developmental effects of hormones in children on the basis that these statements reflected

"doubts" but did not constitute "evidence of risks".[1302] Finally, the Panel considered that the evidence referred to by the European Communities related only to oestradiol-17β, and that the European Communities had not substantiated its assertion that the scientific evidence was insufficient to conduct a risk assessment with respect to the other five hormones. On this basis, the Panel concluded that "it has not been established that there is a critical mass of new evidence ... so as to make relevant, previously sufficient evidence now insufficient in relation to the growth and reproduction effects".[1303]

644. Next, the Panel turned to the specific insufficiencies alleged in relation to each of the five hormones individually.

645. In relation to progesterone, the Panel focused on the European Communities' allegation that the relevant scientific evidence on carcinogenic or genotoxic potential of this hormone was insufficient, because the other insufficiencies identified by the European Communities had already been addressed by the Panel in its analysis of the insufficiencies common to the five hormones.[1304] The Panel noted that the 2002 Opinion concluded that "[t]here is no evidence that progesterone or testosterone have genotoxic potential".[1305] The Panel observed that Drs. Boisseau, Boobis, and Guttenplan agreed that there was no evidence that progesterone was genotoxic. The Panel also referred to Dr. Boisseau's opinion that the scientific evidence submitted by the European Communities did not support the conclusion that carcinogenic effects of progesterone are related to a mechanism other than hormonal activity.[1306] The Panel noted further that IARC opinions had not evaluated the carcinogenicity of residues of progesterone in beef, and quoted the opinions of Drs. Boobis and Guttenplan that the relevant scientific evidence on progesterone was sufficient to conduct a risk assessment.[1307] The Panel concluded that it had not been established that the relevant scientific evidence with respect to progesterone was insufficient within the meaning of Article 5.7 of the *SPS Agreement*.

646. Turning to testosterone, the Panel noted that many of the insufficiencies in the relevant scientific evidence had been addressed in common with the other four hormones.[1308] The Panel's analysis therefore focused on the evidence of genotoxicity and carcinogenicity of testosterone. The Panel observed that the 1999 Opinion stated that no information was available on DNA damage induced by testosterone or its metabolites, and that "[w]hereas the evidence in favour of carcinogenicity was considered sufficient for testosterone in experimental animals, data in humans are limited".[1309] According to the Panel, this statement had to be read in conjunction with the conclusion that "the evidence regarding the role of testosterone in prostate cancer is currently weak".[1310] In the

[1302]Panel Report, *US – Continued Suspension*, para. 7.719; Panel Report, *Canada – Continued Suspension*, para. 7.696 (quoting transcript of the Panel's joint meeting with scientific experts on 27-28 September 2006, Panel Reports, Annex G, paras. 1061 and 1063).

[1305]Panel Report, *US – Continued Suspension*, para. 7.731; Panel Report, *Canada – Continued Suspension*, para. 7.708 (quoting 2002 Opinion, section 4.3, p. 15).
[1306]Panel Report, *US – Continued Suspension*, paras. 7.738; Panel Report, *Canada – Continued Suspension*, para. 7.715 (quoting replies of the scientific experts to Question 16 posed by the Panel, Panel Reports, Annex D, para. 158).
[1307]Panel Report, *US – Continued Suspension*, paras. 7.740 and 7.741; Panel Report, *Canada – Continued Suspension*, paras. 7.717 and 7.718.
[1308]Panel Report, *US – Continued Suspension*, para. 7.746; Panel Report, *Canada – Continued Suspension*, para. 7.726.
[1309]Panel Report, *US – Continued Suspension*, para. 7.749; Panel Report, *Canada – Continued Suspension*, para. 7.729 (quoting 1999 Opinion, p. 49).
[1310]Panel Report, *US – Continued Suspension*, para. 7.749; Panel Report, *Canada – Continued Suspension*, para. 7.729.

Panel's view, this evidence did not meet the "critical mass" test that it articulated to assess insufficiency within the meaning of Article 5.7. The Panel noted, moreover, Dr. Boisseau's opinion that the scientific evidence submitted by the European Communities did not support the conclusion that carcinogenic effects of testosterone are related to a mechanism other than hormonal activity.[1311] The Panel therefore found that it had not been established that the relevant scientific evidence with respect to testosterone was insufficient within the meaning of Article 5.7 of the *SPS Agreement*.

647. The Panel limited its analysis concerning trenbolone acetate to two distinct "insufficiencies" that were identified by the European Communities in the scientific evidence: (i) the metabolism of trenbolone acetate; and (ii) inadequate evidence of carcinogenicity in humans.[1312] Regarding the metabolism of trenbolone, the Panel contrasted the statement in the 2002 Opinion that "experiments with ... trenbolone acetate suggested a more complex oxidative metabolism than previously assumed"[1313] with Dr. Boobis' opinion that "these data do not affect the risk assessment of trenbolone acetate."[1314] In relation to the evidence on carcinogenicity of trenbolone, the Panel referred to Dr. Boobis' opinion that "[t]hese data are insufficient ... to alter the conclusion that ... trenbolone acetate has genotoxic potential in vivo"[1315]; Dr. Guttenplan's view that "[t]renbolone is either negative or marginally active in *in vitro* genotoxic assays"[1316]; and Dr. Boisseau's statement that "the scientific evidence relied upon in the SCVPH Opinions does not support the conclusion that the carcinogenic effects of trenbolone are related to a mechanism other than hormonal activity."[1317] The Panel also noted Dr. Boobis' opinion that the information available was sufficient for the European Communities to conduct a risk assessment in relation to the six hormones. In addition, the Panel observed that, although Dr. Guttenplan stated that no "accurate ADIs can be established [for trenbolone] at this point"[1318], he later clarified that this "does not mean that you can't make a risk assessment, it just means that the accuracy of the risk assessment is different."[1319] Thus, the Panel concluded that the relevant scientific evidence on trenbolone was not insufficient within the meaning of Article 5.7.

648. As regards zeranol, the Panel began by recalling the 1999 Opinion's conclusion that the scientific evidence "gave equivocal results insufficient for an evaluation of the mutagenic/genotoxic properties of zeranol" and that, as far as carcinogenicity of zeranol was concerned, "there is clear

[1319]Panel Report, *US – Continued Suspension*, para. 7.780; Panel Report, *Canada – Continued Suspension*, para. 7.762 (quoting transcript of the Panel's joint meeting with scientific experts on 27-28 September 2006, Panel Reports, Annex G, para. 983).

evidence for the induction of liver adenomas and carcinomas in one animal species, but no assessment of the possible carcinogenicity of zeranol can be made."[1320] The Panel then analyzed the views expressed by the experts on the scientific evidence relating to the mutagenic, genotoxic and carcinogenic properties of zeranol, in particular Dr. Boisseau's remark that JECFA "concluded that the 'tumorigenic effect of zeranol was associated with its oestrogenic properties'"[1321] and the statement in the 2002 Opinion that an *in vitro* study of zeranol in which it "did not induce genotoxicity or mutagenicity."[1322] Dr. Sippell opined that zeranol and its metabolites "have been shown to be as potent as [oestradiol] ... in increasing the expression of estrogen-related genes in human breast cancer cells."[1323] However, referring to the same evidence, Dr. Boobis noted that *in vitro* studies have limited relevance "to the situation *in vivo*, where kinetic and metabolic factors will influence the magnitude of the response".[1324] Therefore, according to Dr. Boobis, "[t]hese data are insufficient to support the conclusion that these hormones have genotoxic potential in vivo."[1325] Dr. Guttenplan also noted that "[z]eranol can induce transformation of breast epithelial cells in culture with efficiency similar to that of oestradiol, but the mechanism is now known, and it is negative or marginally active in other assays."[1326] Dr. Boisseau opined that "the scientific evidence relied upon in the SCVPH Opinions does not support the conclusion that the carcinogenic effects of zeranol are related to a mechanism other than hormonal activity."[1327] Finally, the Panel also referred to Dr. Guttenplan's opinion that a more recent study suggested a risk from zeranol, but "the results were obtained in cultured cells and the relevance to human exposure to hormone-treated [meat] cannot be extrapolated from this study because of a myriad of uncertainties in such extrapolation. The study does suggest that additional tests of zeranol should be carried out."[1328] On this basis, the Panel concluded that "it is not established that relevant scientific evidence is insufficient in relation to the carcinogenicity of zeranol, within the meaning of Article 5.7 of the *SPS Agreement*."[1329]

649. Finally, in relation to MGA, the Panel focused on two distinct "insufficiencies" in the scientific evidence: (i) whether only limited data were available on residues of MGA in treated cattle; and (ii) whether the evidence for carcinogenicity of MGA in humans was inadequate.[1330] As a

preliminary remark, however, the Panel noted that no international standards for MGA existed, but "intensive work" had been performed on MGA at the international level, particularly two risk assessments by JECFA.[1331] The Panel observed that MGA was on Codex's priority list for recalculation of Maximum Residue Levels ("MRLs"), and that the draft MRL for MGA was at Step 7 of the Codex elaboration procedure. The Panel stated that "the role of JECFA in the international risk assessment process is such that some degree of relevance should be given to that work"[1332], and, on this basis, concluded that the existence of assessments by JECFA "suggests that evidence has been at one point sufficient."[1333]

650. As for the data on residues of MGA, which the European Communities suggested were outdated, the Panel noted that both Drs. Boisseau and De Brabander recognized that nearly all studies used by JECFA dated back to the 1960s and 1970s. Neither of them, however, stated that those studies were no longer valid. The Panel also recalled its earlier conclusion that the fact that a study is old does not *per se* put in doubt the validity of the study.[1334] The Panel, furthermore, quoted opinions by Drs. Boisseau and Boobis to the effect that new scientific studies did not undermine the MRLs for MGA calculated by JECFA, because the latter were based on very conservative assumptions.[1335]

651. Turning to the evidence on the carcinogenicity in humans of MGA, the Panel noted that the statement in the 2002 Opinion that "[t]he results [for genotoxicity of MGA] were negative in several experiments"[1336] seemed to confirm JECFA's conclusions. The Panel also made reference to Dr. Boobis' opinion that "[MGA was] negative in a range of tests for genotoxicity"[1337], and Dr. Guttenplan's statement that "MGA is negative in genotoxic assays".[1338] On the potential carcinogenicity of MGA, the Panel stressed that IARC has not assessed the specific risks of cancer arising from the consumption of meat treated with MGA, and recalled Dr. Boisseau's view that "the scientific evidence relied upon in the SCVPH Opinions does not support the conclusion that the carcinogenic effects of [MGA] are related to a mechanism other than hormonal activity."[1339] The Panel also referred to Dr. Boobis' opinion that the evidence was sufficient to conduct a risk assessment in relation to all six hormones at issue, and Dr. Guttenplan's statements that "[JECFA's] assessment for [MGA] seems sound" and that "[t]horough metabolic and estrogenic studies have been

carried out."[1340] The Panel concluded that the relevant evidence for MGA was not insufficient within the meaning of Article 5.7.[1341]

652. At the end of its analysis, the Panel said that it had asked the scientific experts whether the scientific evidence relied upon by the European Communities supported the European Communities' contention that the scientific studies initiated since 1997 had identified new important gaps, insufficiencies and contradictions in the scientific information and knowledge available on these hormones such that more scientific studies are necessary before the risk to human health from the consumption of meat from cattle treated with these hormones for growth-promotion purposes can be assessed. The Panel recalled its test that there must be a critical mass of new evidence and/or information that calls into question the fundamental precepts of previous knowledge and evidence so as to make relevant, previously sufficient evidence now insufficient and noted that the experts who expressed themselves in detail on this matter confirmed, both in general and for each of the five hormones subject to a provisional ban, that such critical mass had not been reached.[1342]

653. Thus, the Panel found:

> For all these reasons, we conclude that it has not been demonstrated that relevant scientific evidence was insufficient, within the meaning of Article 5.7 of the *SPS Agreement*, in relation to any of the five hormones with respect to which the European Communities applies a provisional ban.[1343]

654. Having made this finding, the Panel recalled that the four requirements outlined by the Appellate Body in *Japan – Agricultural Products II* applied cumulatively.[1344] The Panel added that, "[s]ince we found that the first requirement (the measure is imposed in respect to a situation where 'relevant scientific evidence is insufficient') has not been satisfied, we do not find it necessary to address any of the three other requirements."[1345] The Panel concluded:

> We therefore conclude that the [European Communities'] compliance measure does not meet the requirements of Article 5.7 of the *SPS Agreement* as far as the provisional ban on progesterone, testosterone, zeranol, trenbolone acetate and melengestrol acetate is concerned.[1346]

655. After setting out its conclusion, the Panel made the following clarification of its implications:

> Having reached that conclusion, we want to make clear that we only determined that it had not been established that the existing relevant scientific evidence was insufficient. This does not mean that no measure can be imposed by the European Communities under the

> *SPS Agreement* in relation to the five hormones at issue. Indeed, our determinations are without prejudice to the legality of any [European Communities'] measure regarding these hormones, should the European Communities decide to complete its risk assessments pursuant to Article 5.1 of the *SPS Agreement*.[1347]

D. *Claims and Arguments on Appeal*

656. The European Communities claims that the Panel erred in finding that the relevant scientific evidence on the five hormones was not "insufficient" within the meaning of Article 5.7 of the *SPS Agreement* and that, consequently, the provisional ban on the importation and marketing of meat from cattle treated with the five hormones does not meet the requirements of that provision.

657. First, the European Communities argues that the Panel erred in finding that the European Communities' chosen level of protection was not relevant for the determination of whether the relevant scientific evidence on the five hormones was "insufficient" within the meaning of Article 5.7. The European Communities emphasizes that Article 3.3 of the *SPS Agreement* permits it to adopt SPS measures that result in a higher level of protection than the one "implie[d] or encapsulate[d]"[1348] in the relevant international standards, and for this reason its intended level of protection must be relevant for determining whether the scientific evidence is "insufficient" within the meaning of Article 5.7.

658. Secondly, the European Communities challenges the Panel's finding that the presumption of consistency that applies under Article 3.2 of the *SPS Agreement* to measures that conform to international standards "implies that these standards ... are based on risk assessments that meet the requirements of the *SPS Agreement*" and that therefore "there was sufficient evidence for JECFA to undertake the appropriate risk assessments."[1349] According to the European Communities, the presumption that applies to measures that conform to international standards does not necessarily mean that the international standards themselves are based on a risk assessment within the meaning of Article 5.1 because the international standard may not be based on a risk assessment, or it may be based on an assessment that takes into account different factors or outdated scientific opinions.

659. Thirdly, the European Communities argues that the Panel erred in allocating to the European Communities the burden of demonstrating that the provisional ban on meat and meat products treated with the five hormones met the requirements of Article 5.7 of the *SPS Agreement.* In doing so, the Panel erroneously interpreted Article 5.7 to be an exception to Article 5.1. The European Communities maintains that Article 5.7 confers on WTO Members a "qualified right"[1350] to take provisional SPS measures in cases where they consider that the relevant scientific evidence is insufficient. Therefore, the United States and Canada bore the burden of demonstrating that this condition had not been fulfilled by the European Communities. The European Communities asserts that the Panel mistakenly shifted the burden of proof under Article 5.7 to the European Communities by limiting its review exclusively to the "insufficiencies" in the scientific evidence that were identified by the European Communities in its submissions.[1351]

[1347]Panel Report, *US – Continued Suspension*, para. 7.837; Panel Report, *Canada – Continued Suspension*, para. 7.823.

[1348]European Communities' appellant's submission, para. 397.

[1349]European Communities' appellant's submission, para. 387 (quoting Panel Report, *US – Continued Suspension*, para. 7.644; and Panel Report, *Canada – Continued Suspension*, para. 7.622).

[1350]European Communities' appellant's submission, para. 368.

[1351]European Communities' appellant's submission, para. 380 (referring to Panel Report, *US – Continued Suspension*, para. 7.653; and Panel Report, *Canada – Continued Suspension*, para. 7.630).

660. Fourthly, the European Communities argues that the Panel erred in finding that, where international standards for a substance exist, a "critical mass" of new scientific evidence that calls into question the fundamental precepts of previous knowledge is required to render the relevant scientific evidence "insufficient" within the meaning of Article 5.7.[1352] The European Communities suggests that, if a Member may legitimately follow a "respectable minority view" in its risk assessment, "it must be incorrect and entirely disproportionate to exclude *a priori* that a respectable minority could not make the available scientific evidence insufficient."[1353] Thus, the Panel's "critical mass" standard imposed an excessively "high quantitative and qualitative threshold"[1354] with respect to the new scientific evidence that is required to render the relevant scientific evidence insufficient. According to the European Communities, the quality of the scientific evidence is more important that the quantity, and even a single study made by qualified and respectable scientists could be *a priori* sufficient to conclude that the scientific relevant scientific evidence is insufficient, provided that its merits are particularly relevant for the circumstances of the risk assessment.[1355] The European Communities also submits that the Panel's "critical mass" standard effectively "preclude[d] [the] application"[1356] of the precautionary principle in the interpretation of Articles 5.1 and 5.7, because it implies that the relevant scientific evidence passes immediately from a state of insufficiency under Article 5.7 to a state of complete knowledge under Article 5.1; there will be no transitional period in which Article 5.7 could apply.[1357] Furthermore, the European Communities submits that the application of the "critical mass" standard led the Panel to "ignore highly relevant scientific evidence"[1358], which demonstrated that the relevant scientific evidence was insufficient to perform a risk assessment. According to the European Communities, the relevant scientific evidence was insufficient to perform a risk assessment in the areas of: (i) effects of hormones on certain population groups; (ii) dose response; (iii) long latency periods for cancer and confounding factors; and (iv) adverse effects of the five hormones on growth and reproduction. The European Communities also asserts that the relevant scientific evidence was insufficient in relation to each of the five hormones assessed individually.

661. Finally, the European Communities asserts that the Panel failed to make an objective assessment of the facts, as required by Article 11 of the DSU, in reaching its findings under Article 5.7 of the *SPS Agreement*. The European Communities charges the Panel with ignoring Dr. Cogliano's statement that "the data are not sufficient" to conduct a "low-dose prediction of risk at levels you might find in hormone-treated meat."[1359] The European Communities adds that the Panel "arbitrarily chose between different scientific opinions" instead of determining whether the European Communities had "followed a scientifically plausible alternative"[1360] when adopting Directive 2003/74/EC. Therefore, the Panel impermissibly engaged in a *de novo* review of the scientific evidence in relation to the five hormones, in violation of Article 11of the DSU.

662. The United States responds that the Panel correctly found that the relevant scientific evidence on the five hormones subject to the provisional ban was not "insufficient" within the meaning of Article 5.7 of the *SPS Agreement*.

663. The United States submits that the Panel correctly interpreted Article 5.7, taking into account the context provided by Articles 3.2 and 3.3 of the *SPS Agreement*. This is because, in light of the

[1360]*Ibid*., para. 281.

presumption of consistency with the *SPS Agreement* that applies to measures which conform to international standards under Article 3.2, the Panel was justified in finding that the existence of such standards indicated that there had been sufficient scientific evidence to conduct a risk assessment within the meaning of Article 5.1 for the five hormones at issue.[1361] The United States also argues that the Panel correctly concluded that the European Communities' desired level of protection was irrelevant for the determination of whether the relevant scientific evidence on the five hormones was "insufficient" within the meaning of Article 5.7. The United States suggests that the European Communities failed to demonstrate that its chosen level of protection is different from the level of protection that the Codex standards for the hormones at issue are designed to achieve.[1362] The United States adds that a risk assessment is a scientific process aimed at identifying whether a risk exists and, for this reason, risk assessors "need not have any particular level of protection in mind in conducting the risk assessment."[1363]

664. The United States also rejects the European Communities' assertion that the Panel misallocated the burden of proof in its analysis under Article 5.7. The United States argues that the Panel correctly noted that "one of the particularities of this case"[1364] was that the European Communities' claim that the United States breached Article 22.8 of the DSU was premised on an assertion that the European Communities had brought itself into conformity with the *SPS Agreement*. Taking into account the European Communities' concern that it should not be required to "prove a negative", all the Panel initially required was that the European Communities established a *prima facie* case of conformity with the *SPS Agreement*.[1365] According to the United States, the Panel only shifted the burden of proof to the United States once it had found that the European Communities had established such a *prima facie* case, and subsequently found that the United States had rebutted the European Communities' *prima facie* case of conformity with the *SPS Agreement* "by submitting positive evidence that demonstrated a breach of the *SPS Agreement*".[1366] The United States agrees with the Panel that "the burden [of proof] shifted back and forth between the parties and eventually 'neutralized' each other since each party also submitted evidence in support of its allegations".[1367] The United States further notes that "the Panel never described or treated Article 5.7 as an exception to Article 5.1"[1368], and for this reason the European Communities' allegation that the Panel interpreted Article 5.7 to be an exception to Article 5.1 is "speculation".[1369]

665. The United States maintains that the Panel did not err in finding that "a critical mass of new evidence" is required to render previously sufficient scientific evidence "insufficient" within the meaning of Article 5.7. In the United States' view, the Panel's "critical mass" standard did not impose a minimum quantitative requirement, because it refers to situations where "evidence becomes so quantitatively and qualitatively sufficient to call into question the fundamental precepts of previous knowledge and evidence", such that new scientific information is "at the origin of a change in the understanding of a scientific issue."[1370] The United States considers that it was "appropriate" for the Panel to focus on the question of "whether the relevant scientific evidence had *become* insufficient"[1371], because the five hormones at issue had been studied intensively for decades, international standards for four of them had existed for over 20 years, and because the European Communities itself had argued in *EC – Hormones* that the relevant scientific evidence on the five hormones was sufficient for it to conduct a risk assessment. Thus, there was "plentiful" evidence on

[1371]*Ibid.*, para. 80. (original emphasis)

record demonstrating that the relevant scientific evidence "[was] and remains sufficient" to conduct a risk assessment for the five hormones.[1372]

666. Finally, the United States argues that the Panel did not fail to make an objective assessment of the facts as required by Article 11 of the DSU in reaching its findings under Article 5.7 of the *SPS Agreement*. The United States asserts that the Panel acted within the bounds of its discretion as the trier of the facts by attributing to the different pieces of evidence a different weight and significance than the one attributed by the European Communities. The United States reiterates that "there was plentiful evidence in the record demonstrating that the relevant scientific evidence"[1373] remains sufficient to conduct a risk assessment for these five hormones, and therefore the Panel's consideration of whether there was a "'critical mass of new evidence' was proper and well-supported."[1374]

667. Canada also argues that the Panel properly found that the relevant scientific evidence on the five hormones subject to the provisional ban was not "insufficient" within the meaning of Article 5.7 of the *SPS Agreement*.

668. Canada submits that the Panel correctly found that the existence of international standards "implies" that sufficient evidence has existed to complete a risk assessment, in light of the presumption of compliance that applies to measures that conform with international standards under Article 3.2.[1375] According to Canada, the Panel accepted that this presumption could be rebutted, as it subsequently recognized that previously sufficient evidence could subsequently become "insufficient" within the meaning of Article 5.7 when it is "unsettled"[1376] by new studies. Canada considers that the Panel properly excluded from the scope of its analysis under Article 5.7 the level of protection chosen by the European Communities. Canada asserts that the European Communities' argument that the "sufficiency" of scientific evidence depends on the acceptable level of risk adopted by a Member[1377] undermines the "basic logic" of the *SPS Agreement*, according to which Article 5.7 operates as a "temporary 'safety valve'"[1378] in situations where there is insufficient scientific evidence to allow a Member to conduct a risk assessment that fulfils the requirements of Articles 2.2 and 5.1.

669. Canada maintains that the Panel did not err in allocating to the European Communities the burden of proving the insufficiency of the scientific evidence under Article 5.7. Canada additionally considers that the Panel correctly characterized Article 5.7 as a "qualified exemption"[1379] from the obligation under Article 2.2 not to maintain SPS measures without sufficient scientific evidence and only shifted the burden of proof under Article 5.7 to the European Communities once it was satisfied that Canada had sufficiently refuted the European Communities' allegation of compliance through positive evidence of a breach of Article 5.7. Canada posits further that this allocation of the burden of proof is consistent with the Appellate Body's ruling in *US – Wool Shirts and Blouses*, because it was for the European Communities, as the party alleging a breach of Article 22.8 of the DSU, to demonstrate that its implementing measure complied with Article 5.7 of the *SPS Agreement*.[1380]

[1372]United States' appellee's submission, para. 81.
[1373]*Ibid.* (referring to comments by the United States on the replies of the scientific experts, Codex, JECFA, and the IARC to questions posed by the Panel, Panel Reports, Annex F, paras. 47 and 48).

[1375]Canada's appellee's submission, para. 118 (quoting Panel Report, *Canada – Continued Suspension*, para. 7.622).
[1376]*Ibid.*, para. 119 (quoting Panel Report, *Canada – Continued Suspension*, para. 7.598).
[1377]*Ibid.*, para. 121 (referring to European Communities' appellant's submission, para. 397.
[1378]Canada's appellee's submission, para. 122.
[1379]*Ibid.*, para. 114 (quoting Appellate Body Report, *Japan – Agricultural Products II*, para. 80).
[1380]*Ibid.*, para. 115 (referring to Appellate Body Report, *US – Wool Shirts and Blouses*, p. 14, DSR 1997:I, 323, at 335).

670. Moreover, Canada argues that the Panel did not err in finding that, in situations where international risk assessments have been conducted for the substances at issue, a "critical mass" of new evidence would be required to render the relevant scientific evidence "insufficient" for the purposes of Article 5.7. Canada dismisses the European Communities' argument that the "critical mass" standard excludes *a priori* the possibility that a WTO Member base its risk assessment on respectable minority views, because in such situations there is "inherently"[1381] sufficient evidence to perform a risk assessment that provides a basis for the SPS measure. Canada asserts that Article 5.7 only applies to situations where there is insufficient scientific evidence so that it is not possible to conduct a risk assessment "at all", regardless of whether a measure is based on minority or mainstream scientific opinions.[1382] Canada adds that the notion of "critical mass" used by the Panel does not specify how much evidence would be needed to make insufficient scientific evidence that was previously sufficient, and does not "exclude the possibility that a new study or series of studies could call into question the scientific assumptions underpinning the current understanding of a scientific issue."[1383] Thus, Canada submits, the Panel's "critical mass" standard "correctly sets a high threshold"[1384] reflecting the presumption in this dispute that the available scientific evidence had been sufficient to adopt the relevant international standards.

671. Canada also asserts that the Panel did not fail to conduct an objective assessment of the facts under Article 11 of the DSU in reaching its findings under Article 5.7 of the *SPS Agreement*. Canada observes that, as the trier of facts, the Panel had the discretion to determine what weight to attach to the statements made by the experts in the course of the proceedings, and assess their expertise and credibility. Canada rejects the European Communities' allegations that the Panel "systematically downplay[ed]"[1385] the expert opinions indicating that the scientific evidence was insufficient to carry out a risk assessment. Such allegations fail to take into account the fact that, in addition to reviewing the written answers by the experts to the Panel's questions, the Panel was able to "observe these experts" during the meetings with them and was able to "arrive at an assessment of their respective expertise and their credibility in particular areas".[1386] Therefore, Canada considers that the Panel's reliance on the views of these experts was commensurate with its function as the trier of facts, and consequently was consistent with Article 11 of the DSU.

672. Australia agrees with the European Communities that the existence of international standards cannot be determinative of whether there is sufficient evidence to conduct a risk assessment under the first requirement of Article 5.7 of the *SPS Agreement*.[1387] Australia also considers that the Panel's interpretation of Article 5.7 failed to attribute significance to a Member's right under Article 3.3 of the *SPS Agreement* to adopt measures that result in a higher level of protection than would be achieved by measures based on the relevant international standards.[1388]

673. New Zealand disagrees with the European Communities' claims that the Panel erred in its assessment of Directive 2003/74/EC under Article 5.7 of the *SPS Agreement*. New Zealand argues that it was incumbent upon the European Communities, as the Member invoking Article 5.7, to demonstrate that the requirements of that provision have been met.[1389] New Zealand submits that the Panel correctly concluded that the European Communities has failed to meet this burden.[1390]

E. *The Panel's Finding that the Relevant Scientific Evidence in Relation to the Five Hormones Was Not "Insufficient" Within the Meaning of Article 5.7 of the SPS Agreement*

674. Under Article 2.2 of the *SPS Agreement*, WTO Members are required to "ensure that any sanitary or phytosanitary measure is applied only to the extent necessary to protect human, animal or plant life or health, is based on scientific principles and is not maintained without sufficient scientific evidence, except as provided for in paragraph 7 of Article 5." This requirement is made operative in other provisions of the *SPS Agreement*, including Article 5.1, which requires SPS measures to be "based on" a risk assessment. At the same time, Article 2.2 excludes from its scope of application situations in which the relevant scientific evidence is insufficient. In such situations, the applicable provision is Article 5.7 of the *SPS Agreement*. Thus, the applicability of Articles 2.2 and 5.1, on the one hand, and of Article 5.7, on the other hand, will depend on the sufficiency of the scientific evidence. The Appellate Body has explained that the relevant scientific evidence will be considered "insufficient" for purposes of Article 5.7 "if the body of available scientific evidence does not allow, in quantitative or qualitative terms, the performance of an adequate assessment of risks as required under Article 5.1 and as defined in Annex A to the *SPS Agreement*."[1391] This means that where the relevant scientific evidence is sufficient to perform a risk assessment, as defined in Annex A of the *SPS Agreement*, a WTO Member may take an SPS measure only if it is "based on" a risk assessment in accordance with Article 5.1 and that SPS measure is also subject to the obligations in Article 2.2. If the relevant scientific evidence is insufficient to perform a risk assessment, a WTO Member may take a provisional SPS measure on the basis provided in Article 5.7, but that Member must meet the obligations set out in that provision.

675. Having discussed the relationship between Articles 2.2, 5.1 and 5.7, we now focus on the conditions for the application of a provisional SPS measure pursuant to the latter provision. Article 5.7 provides:

> In cases where relevant scientific evidence is insufficient, a Member may provisionally adopt sanitary or phytosanitary measures on the basis of available pertinent information, including that from the relevant international organizations as well as from sanitary or phytosanitary measures applied by other Members. In such circumstances, Members shall seek to obtain the additional information necessary for a more objective assessment of risk and review the sanitary or phytosanitary measure accordingly within a reasonable period of time.

676. The Appellate Body has explained that Article 5.7 sets out four obligations. Two of these obligations set conditions that must be met before a provisional SPS measure is adopted. The other two obligations are conditions for maintaining the provisional SPS measure once it has been taken. These four obligations are:

> (1) [the measure is] imposed in respect of a situation where "relevant scientific information is insufficient";
>
> (2) [the measure is] adopted "on the basis of available pertinent information";

[1391] Appellate Body Report, *Japan – Apples*, para. 179.

> (3) [the Member that adopted the measure] "seek[s] to obtain the additional information necessary for a more objective assessment of risk"; and
>
> (4) [the Member that adopted the measure] "review[s] the ... measure accordingly within a reasonable period of time."[1392]

677. Article 5.7 begins with the requirement that the "relevant scientific evidence" be "insufficient". As explained earlier, the relevant scientific evidence is "insufficient" where "the body of available scientific evidence does not allow, in quantitative or qualitative terms, the performance of an adequate assessment of risks as required under Article 5.1 and as defined in Annex A to the *SPS Agreement*."[1393] Under Article 5.1, WTO Members are allowed to base SPS measures on divergent or minority views provided they are from a respected and qualified source.[1394] Thus the existence of scientific controversy in itself is not enough to conclude that the relevant scientific evidence is "insufficient". It may be possible to perform a risk assessment that meets the requirements of Article 5.1 even when there are divergent views in the scientific community in relation to a particular risk. By contrast, Article 5.7 is concerned with situations where deficiencies in the body of scientific evidence do not allow a WTO Member to arrive at a sufficiently objective conclusion in relation to risk. When determining whether such deficiencies exist, a Member must not exclude from consideration relevant scientific evidence from any qualified and respected source. Where there is, among other opinions, a qualified and respected scientific view that puts into question the relationship between the relevant scientific evidence and the conclusions in relation to risk, thereby not permitting the performance of a sufficiently objective assessment of risk on the basis of the existing scientific evidence, then a Member may adopt provisional measures under Article 5.7 on the basis of that qualified and respected view.

678. WTO Members' right to take provisional measures in circumstances where the relevant scientific information is "insufficient" is also subject to the requirement that such measures be adopted "on the basis of available pertinent information". Such information may include information from "the relevant international organizations" or deriving from SPS measures applied by other WTO Members. Thus, Article 5.7 contemplates situations where there is some evidentiary basis indicating the possible existence of a risk, but not enough to permit the performance of a risk assessment. Moreover, there must be a rational and objective relationship between the information concerning a certain risk and a Member's provisional SPS measure. In this sense, Article 5.7 provides a "temporary 'safety valve' in situations where some evidence of a risk exists but not enough to complete a full risk assessment, thus making it impossible to meet the more rigorous standards set by Articles 2.2 and 5.1."[1395]

679. The second sentence of Article 5.7 requires that the available pertinent information which provides a basis for a Member's provisional SPS measure be supplemented with "the additional information necessary for a more objective assessment of risk" within a "reasonable period of time". As the Appellate Body noted, these two conditions "relate to the *maintenance* of a provisional [SPS] measure and highlight the *provisional* nature of measures adopted pursuant to Article 5.7."[1396] The requirement that the WTO Member "shall seek to obtain the additional information necessary for a more objective assessment of risk" implies that, as of the adoption of the provisional measure, a WTO Member must make best efforts to remedy the insufficiencies in the relevant scientific evidence with additional scientific research or by gathering information from relevant international organizations or

[1392]Appellate Body Report, *Japan – Agricultural Products II*, para. 89.
[1393]Appellate Body Report, *Japan – Apples*, para. 179.
[1394]See *supra*, section VI.E.
[1395]Canada's appellee's submission, para. 114.
[1396]Appellate Body Report, *Japan – Apples*, footnote 318 to para. 176. (original emphasis)

other sources.[1397] Otherwise, the provisional nature of measures taken pursuant to Article 5.7 would lose meaning. The "insufficiency" of the scientific evidence is not a perennial state, but rather a transitory one, which lasts only until such time as the imposing Member procures the additional scientific evidence which allows the performance of a more objective assessment of risk. The Appellate Body has noted that Article 5.7 does not set out "explicit prerequisites regarding the additional information to be collected or a specific collection procedure".[1398] Nevertheless, the WTO Member adopting a provisional SPS measure should be able to identify the insufficiencies in the relevant scientific evidence, and the steps that it intends to take to obtain the additional information that will be necessary to address these deficiencies in order to make a more objective assessment and review the provisional measure within a reasonable period of time. The additional information to be collected must be "germane" to conducting the assessment of the specific risk.[1399] A Member is required under Article 5.7 to seek to obtain additional information but is not expected to guarantee specific results. Nor is it expected to predict the actual results of its efforts to collect additional information at the time when it adopts the SPS measure. Finally, the Member taking the provisional SPS measure must review it within a reasonable period of time.[1400]

680. These four conditions set out in Article 5.7, however, must be interpreted keeping in mind that the precautionary principle finds reflection in this provision.[1401] As the Appellate Body has emphasized:

> a panel charged with determining, for instance, whether "sufficient scientific evidence" exists to warrant the maintenance by a Member of a particular SPS measure may, of course, and should, bear in mind that responsible, representative governments commonly act from the perspectives of prudence and precaution where risks of irreversible, e.g. life-terminating, damage to human health are concerned.[1402]

In emergency situations, for example, a WTO Member will take a provisional SPS measure on the basis of limited information and the steps it takes to comply with its obligations to seek to obtain additional information and review the measure will be assessed in the light of the exigencies of the emergency.

681. The European Communities argues that SPS measures are either "based on" a risk assessment under Article 5.1, or otherwise the relevant scientific evidence will be "insufficient" within the meaning of Article 5.7, so that provisional SPS measures may be justified. We do not agree. There may be situations where the relevant scientific evidence is sufficient to perform a risk assessment, a WTO Member performs such a risk assessment, but does not adopt an SPS measure either because the risk assessment did not confirm the risk, or the risk identified did not exceed that Member's chosen level of protection. Also, there may be situations where there is no pertinent scientific information available indicating a risk such that an SPS measure would be unwarranted even on a provisional basis.

[1397]Pursuant to Article 10.1 of the *SPS Agreement*, due account shall be taken of the special needs of developing country Members in respect of their ability to procure the additional information for a more objective assessment of risk.
[1398]Appellate Body Report *Japan – Agricultural Products II*, para. 92.
[1399]*Ibid.*
[1400]"[W]hat constitutes a 'reasonable period of time' ... depends on the specific circumstances of each case, including the difficulty of obtaining additional information necessary for the review *and* the characteristics of the provisional SPS measure." (*Ibid.*, para. 93) (original emphasis)
[1401]Appellate Body Report, *EC – Hormones*, para. 124.
[1402]*Ibid.*

1. Insufficiency and the Acceptable Level of Protection

682. The European Communities argues that the Panel failed to take into account that the European Communities had chosen a higher level of protection when determining whether the relevant scientific evidence is "insufficient" within the meaning of Article 5.7 of the *SPS Agreement*.[1403] According to the European Communities, the context provided by Article 3.3 of the *SPS* Agreement, and the cross-reference to Article 5 contained therein, compels a panel to consider a Member's chosen level of protection in examining whether the requirements of Article 5.7 have been met. As we noted earlier, Article 3.3 permits that WTO Members adopt measures which result in a higher level of protection than the one achieved by measures based on the relevant international standards.

683. In their appellee's submissions, both the United States and Canada emphasize that risk assessment is an "objective" process aimed at identifying and evaluating a certain risk, and that a Member's appropriate level of protection is therefore entirely separate from the question of whether scientific evidence is "insufficient" to perform a risk assessment.[1404] At the oral hearing, however, the United States and Canada recognized that the chosen level of protection may have a role to play in framing the scope and methods of a risk assessment in the particular circumstances where a WTO Member chooses a higher level of protection than that which would be achieved by a measure based on the international standard.

684. The Panel noted that the terms of Article 5.1 and Annex A of the *SPS Agreement* "do not indicate that a Member's level of protection is pertinent to determine whether a risk assessment can be performed or not."[1405] The Panel quoted approvingly the reasoning of the panel in *EC – Approval and Marketing of Biotech Products*, which stated that "[t]he protection goals of a legislator may have a bearing on the question of which risks a Member decides to assess .... [a]nd are certainly relevant to the determination of the measure ... to be taken for achieving a Member's level of protection against risk. Yet there is no apparent link between a legislator's protection goals and the task of assessing the existence and magnitude of potential risks."[1406] The Panel concluded that:

> The assessment [of] whether there is sufficient scientific evidence or not to perform a risk assessment should be an objective process. The level of protection defined by each Member may be relevant to determine the measure to be selected to address the assessed risk, but it should not influence the performance of the risk assessment as such.
>
> Indeed, whether a Member considers that its population should be exposed or not to a particular risk, or at what level, is not relevant to determining whether a risk exists and what its magnitude is. *A fortiori*, it should have no effect on whether there is sufficient evidence of the existence and magnitude of this risk.
>
> A risk-averse Member may be inclined to take a protective position when considering the measure to be adopted. However, the determination of whether scientific evidence is sufficient to assess the existence and magnitude of a risk must be disconnected from the intended level of protection.[1407]

[1403]See European Communities' appellant's submission, paras. 397 and 398.

[1404]See United States' appellee's submission, paras. 72 and 73; and Canada's appellee's submission, paras. 121 and 122.

[1405]Panel Report, *US – Continued Suspension*, para. 7.609; Panel Report, *Canada – Continued Suspension*, para. 7.587.

[1406]*Ibid.* (quoting Panel Report, *EC – Approval and Marketing of Biotech Products*, para. 7.3238).

685. A WTO Member that adopts an SPS measure resulting in a higher level of protection than would be achieved by measures based on international standards must nevertheless ensure that its SPS measure complies with the other requirements of the *SPS Agreement*, in particular Article 5.[1408] This includes the requirement to perform a risk assessment.[1409] At the same time, we recognize that, in order to perform a risk assessment, a WTO Member may need scientific information that was not examined in the process leading to the adoption of the international standard. We see no basis in Articles 3.3 and 5.1 of the *SPS Agreement* to conclude that WTO Members choosing a higher level of protection than would be achieved by a measure based on an international standard must frame the scope and methods of its risk assessment, including the scientific information to be examined, in the same manner as the international body that performed the risk assessment underlying the international standard. Thus, where the chosen level of protection is higher than would be achieved by a measure based on an international standard, this may have some bearing on the scope or method of the risk assessment.[1410] In such a situation, the fact that the WTO Member has chosen to set a higher level of protection may require it to perform certain research as part of its risk assessment that is different from the parameters considered and the research carried out in the risk assessment underlying the international standard.

686. For these reasons, we disagree with the Panel's finding that "the determination of whether scientific evidence is sufficient to assess the existence and magnitude of a risk must be disconnected from the intended level of protection."[1411] We emphasize, however, that whatever level of protection a WTO Member chooses does not pre-determine the outcome of its determination of the sufficiency of the relevant scientific evidence. The determination as to whether available scientific evidence is sufficient to perform a risk assessment must remain, in essence, a rigorous and objective process.[1412]

687. The European Communities refers to the chosen level of protection to support its argument that the existence of JECFA risk assessments for the five hormones does not necessarily mean that the relevant scientific evidence was sufficient for the European Communities to perform its own risk assessment. Before the Panel, the European Communities explained that "the evidence which served as the basis for the 1988 and 1999-2000 JECFA evaluations is not sufficient 'to perform a definitive risk assessment within the meaning of Article 5.7, in particular by the WTO Members applying a high level of health protection of no risk from exposure to unnecessary additional residues in meat of animals treated with hormones for growth promotion'."[1413] We turn to this issue next.

[1407]Panel Report, *US – Continued Suspension*, paras. 7.610-7.612; Panel Report, *Canada – Continued Suspension*, paras. 7.588-7.590.

[1408]Article 3.3 of the *SPS Agreement*.

[1409]Appellate Body Report, *EC – Hormones*, paras. 176 and 177.

[1410]We noted earlier that, at the oral hearing, the United States and Canada recognized that the acceptable level of risk may sometimes play a role, albeit a limited one, in respect of the risk assessment.

[1411]Panel Report, *US – Continued Suspension*, para. 7.612; Panel Report, *Canada – Continued Suspension*, para. 7.590.

[1412]The Appellate Body has held in relation to risk assessments under Article 5.1 that the assessment "should not be distorted by preconceived views on the nature and the content of the measure to be taken; nor should it develop into an exercise tailored to and carried out for the purpose of justifying decisions *ex post facto*." (Appellate Body Report, *Japan – Apples*, para. 208)

[1413]Panel Report, *US – Continued Suspension*, para. 7.604; Panel Report, *Canada – Continued Suspension*, para. 7.579 (quoting European Communities' second written submission, para. 149, and reply of the European Communities to Question 31 posed by the Panel after the first substantive meeting, Panel Reports, Annex B-1, paras. 167-172).

2. Relevance of International Standards under Article 5.7 of the *SPS Agreement*

688. The European Communities claims that the Panel erred in finding that the existence of international standards demonstrates "sufficiency" of scientific evidence to perform a risk assessment within the meaning of Article 5.1 of the *SPS Agreement*, and thereby precludes adoption of provisional measures under Article 5.7. According to the European Communities, the Panel considered that the existence of international standards established an "irrebuttable presumption"[1414] that the relevant scientific evidence in this case is not "insufficient" for the purposes of Article 5.7.

689. After recalling that international standards, guidelines or recommendations existed with respect to progesterone, testosterone, trenbolone acetate, and zeranol, the Panel observed "the important role given"[1415] to international standards by the *SPS Agreement*, and recalled that Article 3.2 of the *SPS Agreement* provides that measures which conform to international standards, guidelines or recommendations shall be presumed to be consistent with the relevant provisions of the *SPS Agreement*. On this basis, the Panel concluded that:

> The presumption of consistency of measures conforming to international standards, guidelines and recommendations with the relevant provisions of the *SPS Agreement* implies that these standards, guidelines or recommendations, particularly those referred to in this case, are based on risk assessments that meet the requirements of the *SPS Agreement*. This means, therefore, that there was sufficient evidence for JECFA to undertake the appropriate risk assessments.[1416]

690. In relation to MGA, the Panel noted that, even though Codex has not adopted a standard for this substance, "intensive work"[1417] has been performed at the international level. The Panel observed that JECFA has conducted two risk assessments of MGA in 2000 and 2004, and that MGA is currently at Step 7 of the Codex international standards elaboration procedure. The Panel concluded that "the role of JECFA in the international risk assessment process is such that some degree of relevance should be given to that work."[1418]

691. On appeal, the European Communities argues that, under the Panel's interpretation, "the mere existence of an international standard would *ipso jure* make it impossible for a Member to adopt measures under Article 5.7 of the *SPS Agreement*."[1419] According to the European Communities, the presumption of consistency that applies to measures that conform to international standards under Article 3.2 of the *SPS Agreement*[1420] does not necessarily lead to the conclusion that the risk assessment underlying the international standards is consistent with the *SPS Agreement*; nor does this

[1414]European Communities' appellant's submission, para. 406.

[1416]Panel Report, *US – Continued Suspension*, para. 7.644; Panel Report, *Canada – Continued Suspension*, para. 7.622.
[1417]Panel Report, *US – Continued Suspension*, para. 7.813; Panel Report, *Canada – Continued Suspension*, para. 7.799.
[1418]Panel Report, *US – Continued Suspension*, para. 7.813; Panel Report, *Canada – Continued Suspension*, para. 7.799.
[1419]European Communities' appellant's submission, para. 393.
[1420]Article 3.2 provides:

> Sanitary or phytosanitary measures which conform to international standards, guidelines or recommendations shall be deemed to be necessary to protect human, animal or plant life or health, and presumed to be consistent with the relevant provisions of this Agreement and of GATT 1994.

presumption establish that scientific evidence underlying the international standards is sufficient to conduct a risk assessment under Article 5.1. This is so particularly where a Member chooses not to conform to such international standards pursuant to Article 3.2 and introduces measures that result in a higher level of SPS protection than would be achieved by measures based on international standards pursuant to Article 3.3.

692. As the preamble of the *SPS Agreement* recognizes, one of the primary objectives of the *SPS Agreement* is to "further the use of harmonized sanitary and phytosanitary measures between Members, on the basis of international standards, guidelines and recommendations developed by the relevant international organizations".[1421] This objective finds reflection in Article 3 of the *SPS Agreement*, which encourages the harmonization of SPS measures on the basis of international standards, while at the same time recognizing the WTO Members' right to determine their appropriate level of protection.[1422] Article 3.1 of the *SPS Agreement* establishes that Members shall "base their [SPS] measures on international standards, guidelines or recommendations, where they exist, except as otherwise provided in this Agreement, and in particular in paragraph 3."

693. The relevant "international standards, guidelines or recommendations" that are referred to in Articles 3.1 and 3.2 are those set by the international organizations listed in Annex A, paragraph 3 of the *SPS Agreement*, which includes Codex as the relevant standard-setting organization for matters of food safety.[1423] As we noted above, Codex adopts international standards for veterinary drug residues based on evaluations performed by JECFA. In this case, Codex has adopted international standards for testosterone, progesterone, trenbolone acetate, and zeranol, on the basis of evaluation performed by JECFA.[1424] In addition, Codex has initiated a standard-setting process for MGA, also on the basis of JECFA's evaluation, but this process has not yet been concluded.

694. It is therefore undisputed that JECFA has performed risk assessments for the six hormones at issue and that Codex has adopted international standards for five of these hormones on the basis of JECFA's risk assessments. The fact that JECFA has performed risk assessments for all six hormones means that the relevant scientific evidence was in its estimation sufficient to do so. Article 3.2 provides that SPS measures which conform to international standards shall be deemed necessary to protect human, animal or plant life or health, and shall be presumed to be consistent with the relevant provisions of the *SPS Agreement* and of the GATT 1994. This presumption, however, does not apply where a Member has not adopted a measure that conforms with an international standard. Article 3.2 is inapplicable where a Member chooses a level of protection that is higher than would be achieved by a measure based on an international standard. The presumption in Article 3.2 cannot be

[1421]See also Appellate Body Report, *EC – Hormones*, para. 165.
[1422]As the Appellate Body explained in *EC – Hormones*:

> In generalized terms, the object and purpose of Article 3 is to promote the harmonization of the SPS measures of Members on as wide a basis as possible, while recognizing and safeguarding, at the same time, the right and duty of Members to protect the life and health of their people. The ultimate goal of the harmonization of SPS measures is to prevent the use of such measures for arbitrary or unjustifiable discrimination between Members or a disguised restriction on international trade, without preventing Members from adopting or enforcing measures which are both "necessary to protect" human life or health and "based on scientific principles", and without requiring them to change their appropriate level of protection.

(*Ibid.*, para. 177)
[1423]Paragraph 3(a) of Annex A of the *SPS Agreement* reads:

> ... for food safety, the standards, guidelines and recommendations established by the Codex Alimentarius Commission relating to food additives, veterinary drug and pesticide residues, contaminants, methods of analysis and sampling, and codes and guidelines of hygienic practice.

[1424]See *supra*, footnote 932.

interpreted to imply that there is sufficient scientific evidence to perform a risk assessment where a Member chooses a higher level of protection.

695. This is borne out by Article 5.7, which provides that WTO Members may adopt provisional SPS measures "on the basis of available pertinent information, including that from the relevant international organizations as well as from sanitary or phytosanitary measures applied by other Members". There is no indication in Article 5.7 that a WTO Member may not take a provisional SPS measure wherever a relevant international organization or another Member has performed a risk assessment. Information from relevant international organizations may not necessarily be considered "sufficient" to perform a risk assessment, as it may be part of the "available pertinent information" which provides the basis for a provisional SPS measure under Article 5.7. Moreover, scientific evidence that may have been relied upon by an international body when performing the risk assessment that led to the adoption of an international standard at a certain point in time may no longer be valid, or may become insufficient in the light of subsequent scientific developments. Therefore, the existence of a risk assessment performed by JECFA does not mean that scientific evidence underlying it must be considered to be sufficient within the meaning of Article 5.7.

696. In our view, it is reasonable for a WTO Member challenging the consistency with Article 5.7 of a provisional SPS measure adopted by another Member to submit JECFA's risk assessments and supporting studies leading to the adoption of international standards as evidence that the scientific evidence is not insufficient to perform a risk assessment. However, such evidence is not dispositive and may be rebutted by the Member taking the provisional SPS measure.

697. The European Communities argues that the Panel considered the existence of international standards as establishing an "irrebuttable presumption"[1425] that the relevant scientific evidence in this case is not "insufficient" for the purposes of Article 5.7. As we pointed out above, the existence of an international standard does not create a legal presumption of sufficiency for purposes of Article 5.7. The Panel recognized that "[i]t cannot be excluded that new scientific evidence or information call into question existing evidence", and acknowledged the possibility that "different risk assessments reach different interpretations of the same scientific evidence."[1426] The Panel examined the specific points raised by the European Communities concerning the insufficiencies it saw in the scientific evidence considered in JECFA's risk assessment. There would not have been a need for the Panel to undertake such an assessment if it had considered that the existence of international standards established an irrebuttable presumption that the relevant scientific evidence was not insufficient within the meaning of Article 5.7. Thus we find no fault with the Panel to the extent that it treated the evidence underlying JECFA's risk assessment as having probative value for determining whether the relevant scientific evidence was insufficient. In our view, the existence of risk assessments conducted by JECFA in relation to the five hormones at issue has probative value, but is not dispositive, of the question of whether the relevant scientific evidence on those hormones is "insufficient" within the meaning of Article 5.7.

698. The Panel relied on the existence of international standards to adopt a "critical mass" test for determining when scientific information that was previously considered sufficient becomes insufficient for purposes of Article 5.7 of the *SPS Agreement*. The European Communities also challenges this test on appeal. We examine this issue in the section that follows.

[1425]European Communities' appellant's submission, para. 406.

[1426]Panel Report, *US – Continued Suspension*, para. 7.645; Panel Report, *Canada – Continued Suspension*, para. 7.623.

3. The Panel's "Critical Mass" Standard for Determining "Insufficiency" under Article 5.7 of the *SPS Agreement*

699. The European Communities asserts that the Panel's "critical mass" standard imposed an excessively "high quantitative and qualitative threshold" with respect to the new evidence that is required to render "insufficient" scientific evidence that was previously considered sufficient.[1427] According to the European Communities, the quality of the scientific evidence is more important than the quantity, and therefore even a single study could be considered *a priori* sufficient to question the sufficiency of previous scientific evidence.[1428] The European Communities adds that the Panel's "critical mass" standard effectively precluded the application of the precautionary principle in the interpretation of Articles 5.1 and 5.7, because the scientific evidence would pass immediately from a state of insufficiency under Article 5.7 to a state of sufficiency under Article 5.1.[1429]

700. Both the United States and Canada accept that evidence which at some point in time was sufficient to perform a risk assessment could become insufficient at a later point in time.[1430] The United States said this could happen, for example, if there was new pathway for a risk for which the information was insufficient.[1431] Canada gave as an example the situation in which there is new scientific data that identifies new adverse effects or adverse effects at lower exposure levels.[1432] Another example given by Canada is the identification of new sources of exposure.[1433] The Panel also recognized that:

> ... there could be situations where existing scientific evidence can be put in question by new studies and information. There could even be situations where evidence which supported a risk assessment is unsettled by new studies which do not constitute sufficient relevant scientific evidence as such to support a risk assessment but are sufficient to make the existing, previously relevant scientific evidence insufficient.[1434] (footnote omitted)

701. We agree that scientific progress may lead a WTO Member and international organizations to reconsider the risk assessment underlying an SPS measure. In some cases, new scientific developments will permit a WTO Member to conduct a new risk assessment with the sufficient degree of objectivity. There may be situations, however, where the new scientific developments themselves do not permit the performance of a new risk assessment that is sufficiently objective. Such a situation would fall within the scope of Article 5.7 of the *SPS Agreement*.

702. The Appellate Body has explained that "'relevant scientific evidence' will be 'insufficient' within the meaning of Article 5.7 if the body of available scientific evidence does not allow, in quantitative or qualitative terms, the performance of an adequate assessment of risks as required under Article 5.1 and as defined in Annex A to the *SPS Agreement*."[1435] The body of scientific evidence

[1427]European Communities' appellant's submission, para. 412.

[1428]*Ibid.*, para. 413.

[1429]*Ibid.*, para. 427.

[1430]Panel Report, *US – Continued Suspension*, para. 7.617; Panel Report, *Canada – Continued Suspension*, para. 7.593.

[1431]Panel Report, *US – Continued Suspension*, para. 7.617.

[1432]Panel Report, *Canada – Continued Suspension*, para. 7.593.

[1433]In addition, Canada mentioned the situation where there is a change in the basic understanding of a biological event that is triggered by the chemical under assessment. (Panel Report, *Canada – Continued Suspension*, para. 7.593)

[1434]Panel Report, *US – Continued Suspension*, para. 7.620; Panel Report, *Canada – Continued Suspension*, para. 7.598.

[1435]Appellate Body Report, *Japan – Apples*, para. 179.

underlying a risk assessment can always be supplemented with additional information. Indeed, the nature of scientific inquiry is such that it is always possible to conduct more research or obtain additional information. The possibility of conducting further research or of analyzing additional information, by itself, should not mean that the relevant scientific evidence is or becomes insufficient.

703. Moreover, as the Panel noted, science continuously evolves.[1436] It may be useful to think of the degree of change as a spectrum. On one extreme of this spectrum lies the incremental advance of science. Where these scientific advances are at the margins, they would not support the conclusion that previously sufficient evidence has become insufficient. At the other extreme lie the more radical scientific changes that lead to a paradigm shift. Such radical change is not frequent. Limiting the application of Article 5.7 to situations where scientific advances lead to a paradigm shift would be too inflexible an approach. WTO Members should be permitted to take a provisional measure where new evidence from a qualified and respected source puts into question the relationship between the pre-existing body of scientific evidence and the conclusions regarding the risks. We are referring to circumstances where new scientific evidence casts doubts as to whether the previously existing body of scientific evidence still permits of a sufficiently objective assessment of risk.

704. The Panel next discussed its understanding of "insufficiency" in the specific circumstances where international standards exist for the particular substance. It concluded:

> We therefore conclude that if relevant evidence already exists, not any degree of insufficiency will satisfy the criterion under Article 5.7 that "relevant scientific evidence is insufficient". Having regard to our reasoning above, particularly with respect to scientific uncertainty and the existence of international standards, we consider that, depending on the existing relevant evidence, there must be a *critical mass* of new evidence and/or information that calls into question the fundamental precepts of previous knowledge and evidence so as to make relevant, previously sufficient, evidence now insufficient. In the present case where risk assessments have been performed and a large body of quality evidence has been accumulated, this would be possible only if it put into question existing relevant evidence *to the point that* this evidence is no longer sufficient to support the conclusions of existing risks assessments.[1437] (original emphasis; footnote omitted)

705. The Panel's statement that "there must be a *critical mass* of new evidence and/or information that calls into question the fundamental precepts of previous knowledge and evidence so as to make relevant, previously sufficient, evidence now insufficient" could be understood as requiring that the new scientific evidence lead to a paradigm shift. As we have said, such an approach is too inflexible. Although the new evidence must call into question the relationship between the body of scientific evidence and the conclusions concerning risk, it need not rise to the level of a paradigm shift.

706. Some of the Panel's statements intended to explain what it meant by "critical mass" similarly can be understood as requiring a paradigm shift, which is too high a threshold. At the interim review stage, the European Communities requested that the Panel identify the provenance of the "critical mass" standard and explain how it should be reconciled with the Appellate Body's findings in *EC – Hormones*. The Panel responded as follows:

[1436]Panel Report, *US – Continued Suspension*, para. 7.645; Panel Report, *Canada – Continued Suspension*, para. 7.623.

[1437]Panel Report, *US – Continued Suspension*, para. 7.648; Panel Report, *Canada – Continued Suspension*, para. 7.626.

> The Panel used the term "critical mass" in full knowledge of its meaning.[294] It used it in the sense of a situation where evidence becomes quantitatively and qualitatively sufficient to call into question the fundamental precepts of previous knowledge and evidence. The Panel does not mean that there must be sufficient evidence to perform a new risk assessment. Otherwise, Article 5.7 of the *SPS Agreement* would become meaningless. It used the term "critical mass" very much in its common scientific usage, i.e. the new scientific information and evidence must be such that they are *at the origin* of a change in the understanding of a scientific issue. We do not see in what respect this approach by the Panel, which applies to the specific situation in this case (i.e. one where a party alleges that previously sufficient scientific evidence has become insufficient) would be contrary to the findings of the Appellate Body in *EC – Hormones*.[1438] (original emphasis)
>
> [294]In mathematics and physics "critical" is defined as "constituting or relating to a point of transition from one state, etc. to another". "Critical size" or "critical mass" are defined as the minimum size or mass of a body of a given fissile material which is capable of sustaining a nuclear chain reaction (Shorter Oxford English Dictionary, 5th edition (1993), p. 558). In other words, the Panel assessed whether it had been provided with the minimum evidence necessary to conclude that knowledge has become quantitatively and qualitatively sufficient to call into question the fundamental precepts of previous knowledge and evidence.

707. In the reasoning quoted above, the Panel again required that the scientific evidence be "sufficient to call into question the fundamental precepts of previous knowledge and evidence". The Panel's explanation that "the new scientific information and evidence must be such that they are *at the origin* of a change in the understanding of a scientific issue" also connotes a paradigm shift.

708. We earlier observed that the existence of an international standard for which a risk assessment was conducted could be offered as evidence in support of an assertion that the relevant scientific evidence is not insufficient within the meaning of Article 5.7 of the *SPS Agreement*. It is an evidentiary issue in the sense that the scientific information underlying the international standard has probative value as to the sufficiency of the scientific evidence needed for conducting a risk assessment at a discrete point in time. However, in circumstances where a Member adopts a higher level of protection than that reflected in the international standard, the legal test that applies to the "insufficiency" of the evidence under Article 5.7 is not made stricter. Thus, it is incorrect to use JECFA's risk assessments as a legal benchmark for assessing insufficiency as the Panel did in this case.

709. In the interim review, the Panel expressly recognized that it used JECFA's risk assessments as a "benchmark":

> [I]t is correct that the Panel considered that, in order to determine whether relevant scientific evidence was insufficient within the meaning of Article 5.7 of the *SPS Agreement*, it had to take the results of the risk assessments made by JECFA as a "benchmark" of the existence of sufficient scientific evidence. This is in line with the findings of the Appellate Body in *Japan – Apples* that the relevant scientific evidence will be insufficient within the meaning of

[1438]Panel Report, *US – Continued Suspension*, para. 6.141; Panel Report, *Canada – Continued Suspension*, para. 6.133.

> Article 5.7 if the body of available scientific evidence does not allow, in quantitative or qualitative terms, the performance of an adequate assessment of risks as required under Article 5.1 and as defined in Annex A to the *SPS Agreement*, as well as with the presumption of compliance under Article 3.2 of the *SPS Agreement*.[1439] (footnote omitted)

710. We recall that the presumption in Article 3.2 is inapplicable where a WTO Member adopts an SPS measure that results in a higher level of protection than that reflected in an international standard. For this reason, Article 3.2 did not provide a basis for the Panel's use of the JECFA risk assessments as the legal benchmark against which the insufficiencies in the relevant scientific evidence identified by the European Communities had to be evaluated. As the Appellate Body explained in *EC – Hormones*:

> The presumption of consistency with relevant provisions of the *SPS Agreement* that arises under Article 3.2 in respect of measures that conform to international standards may well be an *incentive* for Members so to conform their SPS measures with such standards. It is clear, however, that a decision of a Member not to conform a particular measure with an international standard does not authorize imposition of a special or generalized burden of proof upon that Member, which may, more often than not, amount to a *penalty*.[1440] (original emphasis)

711. The particular insufficiencies in the relevant scientific evidence identified by the European Communities had to be evaluated on their own terms. As indicated earlier, the scientific evidence underlying the risk assessments conducted by JECFA has probative value as to the sufficiency of the scientific evidence needed to perform an assessment of risks in relation to the five hormones; however, it was by no means dispositive of that question, in particular where a WTO Member has elected to adopt an SPS measure that does not conform to the international standard.

712. For these reasons, we reverse the Panel's finding that, where international standards exist, "there must be a *critical mass* of new evidence and/or information that calls into question the fundamental precepts of previous knowledge and evidence so as to make relevant, previously sufficient, evidence now insufficient" within the meaning of Article 5.7.[1441]

4. The Panel's Allocation of the Burden of Proof under Article 5.7 of the *SPS Agreement*

713. We turn now to the European Communities' claim that the Panel erred by allocating to the European Communities the burden of demonstrating that Directive 2003/74/EC met the requirements of Article 5.7 of the *SPS Agreement* in relation to the provisional ban on the five hormones at issue. The European Communities argues that, by limiting its review to the "insufficiencies" in the scientific evidence identified by the European Communities, the Panel erroneously shifted to the European Communities the burden of proof under Article 5.7 of the *SPS Agreement*.[1442] In doing so, the

[1439]Panel Report, *US – Continued Suspension*, para. 6.60; Panel Report, *Canada – Continued Suspension*, para. 6.55.
[1440]Appellate Body Report, *EC – Hormones*, para. 102.
[1441]Panel Report, *US – Continued Suspension*, para. 7.648; Panel Report, *Canada – Continued Suspension*, para. 7.626. (original emphasis)
[1442]European Communities' appellant's submission, paras. 380-382.

European Communities submits that the Panel misconstrued Articles 5.1 and 5.7 to stand on a rule-exception relationship[1443], even though Article 5.7 confers to WTO Members a "qualified right"[1444] to take provisional measures under certain conditions. In such circumstances, the United States and Canada should have borne the onus of demonstrating that the conditions provided under Article 5.7 had not been met.[1445]

714. In particular, the European Communities challenges the following statement by the Panel:

> Whereas, in the application of the burden of proof in relation to Article 5.7 of the *SPS Agreement*, it should be for the party challenging the applicability of Article 5.7 to make a prima facie case that the relevant scientific evidence regarding the five hormones is sufficient, it is also for the European Communities, in application of the principle that it is for each party to prove its allegations, to support its own allegations with appropriate evidence. This also has to be considered in the light of the fact that, even though in this case the European Communities is the complainant, it also argues as part of its allegations under Article 22.8 of the DSU that its implementing measure complies with Article 5.7 of the *SPS Agreement.* Moreover, we recall the consequence of the presumption of consistency with the *SPS Agreement* and GATT 1994 of measures which conform to international standards, guidelines and recommendations on the risk assessments on which such measures are based. Since, in that context, the European Communities argues that the relevant scientific evidence is insufficient, we consider that it is for the European Communities to identify the issues for which such evidence is insufficient.
>
> Therefore, we do not consider that, as Panel, we have any obligation to go beyond the insufficiencies identified by the European Communities. ... we deem it appropriate to limit our review exclusively to the "insufficiencies" expressly identified by the European Communities in its submissions to the Panel.[1446] (footnotes omitted)

715. The United States and Canada assert that the Panel correctly allocated the burden of proof under Article 5.7 of the *SPS Agreement*.[1447] The United States and Canada point out that the Panel only shifted the burden of proof to the European Communities once it was satisfied that the United States and Canada had sufficiently refuted the European Communities' allegation of compliance through positive evidence of a breach of Article 5.7.[1448] Canada argues that the Panel correctly identified Article 5.7 as a "qualified exemption" to Article 2.2[1449], while the United States dismisses as speculative the European Communities' contention that the Panel treated Article 5.7 as an exception to Article 5.1.[1450]

716. In section IV.E, we explained how we see the allocation of the burden of proof in a post-suspension situation in which the parties disagree as to whether an implementing measure brings about substantive compliance. The European Communities had to provide a clear description of its implementing measure, and an adequate explanation regarding how this measure rectifies the inconsistencies found in the original proceedings. We recall that the definitive import ban that was the subject of *EC – Hormones* and found to be inconsistent with Article 5.1 has been replaced, under Directive 2003/74/EC, by a provisional ban relating to the five other hormones. The import ban applies to the same products: meat from cattle treated with progesterone, testosterone, trenbolone acetate, zeranol and MGA. The European Communities replaced the original definitive ban with a provisional ban and invoked Article 5.7 as an alternative justification to Article 5.1. Thus, the European Communities had to provide an adequate explanation of how the provisional ban taken under Article 5.7 rectifies the inconsistencies found in *EC – Hormones*. Such explanation had to include, *inter alia*, an identification of the insufficiencies in the relevant scientific evidence that precluded the European Communities from performing a sufficiently objective risk assessment. Accordingly, we do not consider that the Panel erred by limiting its review to the insufficiencies identified by the European Communities.

717. Having said that, we referred above[1451] to the Panel's discussion of how it would allocate the burden of proof for purposes of its analysis under Articles 5.1 and 5.7 of the *SPS Agreement* and we identified several flaws in the Panel's approach, which we need not repeat here. We also explained how the Panel should have allocated the burden of proof in relation to the European Communities' contention that Directive 2003/74/EC meets the requirements of Articles 5.1 and 5.7 of the *SPS Agreement*. To the extent that the Panel did not allocate the burden of proof in its analysis of whether Directive 2003/74/EC met the requirements of Article 5.7 of the *SPS Agreement* according to the principles outlined above, we find that the Panel has erred.

718. Accordingly, we find that the Panel erred in the allocation of the burden of proof in its examination of the consistency of Directive 2003/74/EC with Article 5.7 of the *SPS Agreement.*

5. The Panel's Application of Article 5.7 of the *SPS Agreement*

719. We turn finally to the European Communities' claim that the Panel incorrectly applied Article 5.7 of the *SPS Agreement.* On appeal, the European Communities asserts that the Panel "systematically downplay[ed]"[1452] and ignored "highly relevant scientific evidence"[1453] which "go[es] against the evaluations of the JECFA or support the position of the European Communities and that in fact the scientific evidence was indeed insufficient"[1454] to perform a risk assessment, particularly in the following areas: (a) effects of hormones on certain population groups; (b) dose response; (c) bioavailability; (d) long latency periods for cancer and confounding factors; and (e) adverse effects on growth and reproduction.[1455] The European Communities also points to several errors committed by the Panel when determining whether the evidence concerning the risks posed by each of the five hormones individually was insufficient to conduct a risk assessment under Article 5.7.[1456]

720. The United States responds that the scientific evidence on record, including the statements of the experts, support the conclusion that the relevant scientific evidence on the five hormones is and remains sufficient to conduct a risk assessment.[1457] Canada argues that the European Communities'

[1451]See *supra*, para. 579.

allegations are without merit, and considers that the Panel properly weighed the scientific evidence before it.[1458]

721. As we noted in subsection 3, the Panel's "critical mass" test imposed an excessively high threshold in terms of the change in the scientific evidence that would make previously sufficient evidence insufficient. Rather than requiring that the new evidence call into question the relationship between the body of scientific evidence and the conclusions concerning risk, the Panel's test required a paradigm shift to the extent the evidence needed to call into question the "fundamental precepts of previous knowledge and evidence" on the five hormones. This erroneous threshold led the Panel to fail to attribute significance to evidence that could cast doubt as to whether the relevant scientific evidence still permits of a sufficiently objective assessment of risk. One such example is the Panel's analysis of the European Communities' contention that the relevant scientific evidence concerning the effects of the hormones on certain categories of the population, in particular pre-pubertal children, was "insufficient" within the meaning of Article 5.7 of the *SPS Agreement.*

722. Before the Panel, the European Communities argued that the development of more sensitive detection methods had identified lower endogenous levels of oestradiol in pre-pubertal children than previously assumed by the detection method referred to in JECFA's risk assessments. According to the European Communities, this suggested that individuals that have the lowest endogenous levels of sex hormones, such as pre-pubertal children and post-menopausal women, might be at an increased risk for adverse health effects that might be associated with exposure to exogenous sources of both oestrogens and testosterone.[1459]

723. The new detection method was examined in a scientific study conducted by Klein et al. (1994), and was reviewed by the European Communities in the 1999 Opinion. The Panel described the Klein study, and the conclusions the European Communities derived from it, as follows:

> The 1999 Opinion specifies that the hormone levels on which it relies were determined by radio-immunoassays (RIA) and that the use of these assays has frequently been associated with production of variable results, particularly when used to detect low levels of endogenous hormones. The 1999 Opinion notes that Klein et al. (1994) developed an ultrasensitive assay (100-fold more sensitive than RIAs) which identified values of oestradiol considerably lower than the range of oestradiol levels found through RIAs for prepubertal children.[1460] (footnote omitted)

724. In its analysis, the Panel recalled its earlier finding that, in order to determine that the evidence on the five hormones was "insufficient" within the meaning of Article 5.7, there must be "a critical mass of new evidence and/or information that calls into question the fundamental precepts of knowledge and evidence so as to make relevant, previously sufficient, evidence now insufficient."[1461] On this basis the Panel concluded that its task was to examine "whether the more sensitive detection methods which identified lower hormonal levels in prepubertal children than thought until now are such as to call into question the range of physiological levels of the sex hormones in humans currently believed to exist."[1462] The Panel referred to Dr. Sippell's testimony, which characterized the development of ultra-sensitive detection methods as a "quantum leap in [oestrogen] assay

[1458]Canada's appellee's submission, para. 130.

[1462]*Ibid.*

methodology"[1463] The Panel noted Dr. Sippell's statement that "[t]he risk to children arising from hormones that are naturally present in meat as compared to residues of hormonal growth promoters has, to my knowledge, been estimated for [oestradiol-17β] only".[1464] The Panel then observed that the 2000 Opinion stated that such new detection methods had not been validated[1465], and quoted Dr. Boobis' opinion questioning the validity of the new study presented by the European Communities.[1466] On this basis, the Panel concluded that:

> We note that the evidence presented relates only to oestradiol, but that the claim we are examining with regard to the insufficiencies of the evidence are with respect to the five other hormones at issue, not oestradiol. We note furthermore that the 2002 Opinion concludes that these more sensitive detection methods have not yet been validated.
>
> On the basis of the above, we are not convinced that the studies discussed by the experts call into question the fundamental precepts of previous knowledge and evidence so as to make relevant, previously sufficient evidence now insufficient in relation to the effect of the five hormones on pre-pubertal children. Particularly, it has not been established that the data regarding the effects of hormones on which the JECFA assessments are based are insufficient in light of new evidence relating to the other five hormones at issue.[1467]

725. In concluding that it is "not convinced" that the ultra-sensitive assay study referred to by the European Communities "call[s] into question the fundamental precepts of previous knowledge" in relation to the effect of the five hormones on pre-pubertal children, the Panel applied an excessively high threshold in relation to the new scientific evidence which is required to render previously sufficient scientific evidence "insufficient" within the meaning of Article 5.7. Irrespective of whether the Panel was itself persuaded by the Klein study, the Panel erred to the extent that it considered that a paradigmatic shift in the scientific knowledge was required in order to render the scientific evidence relied by JECFA now "insufficient" within the meaning of Article 5.7. The "insufficiency" requirement in Article 5.7 does not imply that new scientific evidence must entirely displace the scientific evidence upon which an international standard relies. It suffices that new scientific developments call into question whether the body of scientific evidence still permits of a sufficiently objective assessment of risk.

726. The Panel seemed to rely on two pieces of evidence in coming to the conclusion that the ultra-sensitive detection method discussed in the Klein study had not yet been validated: a statement to that effect in the 2002 Opinion[1468], and the testimony of Dr. Boobis, who questioned the validity of the

Klein study.[1469] However, the Panel record shows that at least some of the scientific experts considered that the Klein study could possibly cast doubt as to whether the body of scientific evidence relied on by JECFA still permitted of a sufficiently objective assessment of risks posed by the five hormones in relation to pre-pubertal children.

727. Dr. Sippell seemed to agree with the European Communities' position that the relevant scientific evidence on the effects of hormones in pre-pubertal children was not "sufficient" to conduct a risk assessment under Article 5.1. Dr. Sippell observed that "[w]e just don't have yet everywhere where it would be necessary the methodology, the analytical tools to measure as sensitively as we should do it, and therefore I think that the data available are insufficient."[1470] Dr. Sippell also explained that:

> ... it is difficult to calculate the exact [hormone] production rates in prepubertal children. ... [JECFA values] have been based on the, so to speak, traditional levels measured by radio immuno assays, and usually by radio immuno assays without prior extraction. We all know that the sensitivity of such procedures is not enough compared with more modern techniques ... the extractive procedures involving radio immuno assays, but even more modern molecular base techniques like recombinant cell bioassays, of oestrogen, oestradiol or oestrogen activity. And these ... are significantly below the levels previously thought, and by that the production rate is now significantly lower. And this of course implies that any risk from exogenous sources, for example, beef treated with hormones, treated with oestradiol-17β, is much higher.[1471]

728. Dr. De Brabander concurred, stating that "I cannot say that the [JECFA] data are bad ... I just say you don't know that they are good, and you have to check them with modern analytical methods."[1472] Dr. Guttenplan espoused a similar view, noting that "more accurate methods of analysis could now be used to measure the effect of eating hormone-treated beef on blood levels of estrogen in children and post-menopausal women."[1473] He also observed that "in boys the [oestrogen] levels are even lower, and there I think we have to worry about developmental effects ... I still think that these could be investigated epidemiologically or in or some type of study. We might ... need a surrogate, perhaps saliva or urine, but I think it is perhaps the most important issue to address is the sensitivity of children."[1474]

729. Dr. Boobis, who as the Panel noted questioned the validity of the ultra-sensitive recombinant assay used in the Klein study, also testified that the levels of oestradiol endogenously produced in pre-pubertal children may be lower than previously thought. In response to direct questioning by the United States, Dr. Boobis explained that:

> .... having looked at these data is that, first of all, the recombinant assay has not yet been validated adequately, but secondly there is

> evidence, when one looks at these data, to suggest that the circulating levels of oestradiol in male children are lower than previously thought, I would accept that, but I would not think they are as low as in the original publication by Klein *et al*, because there have been numerous publications since then using a variety of assays which suggest that the levels are certainly higher than those very low levels first reported.[1475]

730. Although the Panel was correct in observing that the Klein study only examined endogenous levels of oestradiol, lower levels of endogenous production of hormones in humans played a key role in the European Communities' conclusion that no safe threshold level or ADI could be established for any of the six hormones assessed. The 1999 Opinion states that, in the light of "uncertainties in the estimates of endogenous hormone production rates and metabolic clearance capacity, particularly in prepubertal children, no threshold level and therefore no ADI can be established for any of the [six] hormones."[1476] For this reason, the Panel should have explored further the question of what relevance, if any, the study relied on by the European Communities examining endogenous levels of oestradiol could have in relation to potential adverse health effects relating to the other five hormones. During the course of the oral hearing, the European Communities argued that some scientists agree with its position that measurements of the endogenous levels of natural hormones are relevant for synthetic hormones that share similar toxicological properties and effects.

731. In sum, the Panel erred in its interpretation and application of Article 5.7 of the *SPS Agreement* by adopting an incorrect legal test to assess the European Communities' explanations concerning the insufficiencies in the relevant scientific evidence.

732. The European Communities argues further that the Panel failed to conduct an objective assessment of the facts of the case, as required by Article 11 of the DSU, in its analysis under Article 5.7. Having determined that the Panel incorrectly interpreted and applied Article 5.7 of the *SPS Agreement*, we do not find it necessary to address the European Communities' claim that the Panel acted inconsistently with Article 11 of the DSU.

F. *Conclusions*

733. We found above that the Panel drew too rigid a distinction between the chosen level of protection and the "insufficiency" of the relevant scientific evidence under Article 5.7 of the *SPS Agreement*.[1477] We also reversed the Panel's finding that, where international standards exist, a "critical mass of new evidence and/or information that calls into question the fundamental precepts of previous knowledge and evidence" is required to render the relevant scientific evidence "insufficient" within the meaning of Article 5.7.[1478] We found, moreover, that the Panel erred in the allocation of the burden of proof.[1479] Finally, we found that the Panel incorrectly interpreted and applied Article 5.7 in determining whether the relevant scientific evidence in relation to the five hormones was "insufficient" within the meaning of that provision.[1480] In addition, we have found that the

[1475] *Ibid*., para. 572.
[1476] 1999 Opinion, pp. 72 and 73. The 1999 Opinion also concludes that: "For all six hormones endocrine, developmental, immunological, neurobioloical, immunotoxic, genotoxic, and carcinogenic effects could be envisaged. Of the various susceptible risk groups, prepubertal children is the group of greatest concern. Again the available data do not enable a quantitative estimate of the risk".
[1477] See *supra*, para. 686.
[1478] See *supra*, para. 712.
[1479] See *supra*, para. 718.
[1480] See *supra*, para. 731.

Panel's analysis was compromised because its consultations with Drs. Boisseau and Boobis infringed the European Communities' due process rights.[1481]

734. In the light of these errors, we reverse the Panel's finding that "it has not been demonstrated that relevant scientific evidence was insufficient, within the meaning of Article 5.7 of the *SPS Agreement*, in relation to any of the five hormones with respect to which the European Communities applies a provisional ban."[1482] As a consequence of its finding, the Panel also concluded that "the [European Communities'] compliance measure does not meet the requirements of Article 5.7 of the *SPS Agreement* as far as the provisional ban on progesterone, testosterone, zeranol, trenbolone acetate and melengestrol acetate is concerned."[1483] Because it is premised on the Panel's earlier finding concerning the "insufficiency" of the relevant scientific information, which we have reversed, the Panel's conclusion cannot stand.

735. Given the numerous flaws that we identified in the Panel's analysis, and the highly contested nature of the facts, we do not consider it possible to complete the analysis. Thus, we make no findings on the consistency or inconsistency of the European Communities' provisional SPS measure relating to progesterone, testosterone, zeranol, trenbolone acetate and MGA.

VIII. Findings and Conclusions

736. For the reasons set out in this Report, the Appellate Body:

(a) As regards the DSU:

(i) finds that the Panel did not err in stating that proceedings under Article 21.5 of the DSU are open to not only the original complainant[1484], because they may be initiated by original complainants and original respondents;

(ii) upholds the Panel's finding that "it has jurisdiction to consider the compatibility of the [European Communities'] implementing measure with the *SPS Agreement* as part of its review of the claim raised by the European Communities with respect to Article 22.8 of the DSU"[1485];

(iii) because it has not been established that the measure found to be inconsistent with the *SPS Agreement* in the *EC – Hormones* dispute has been removed[1486], upholds the Panel's finding that "the European Communities has not established a violation of Articles 23.1 and 3.7 of the DSU *as a result of a breach of Article 22.8*"[1487];

(iv) reverses the Panel's finding that, "by maintaining its suspension of concessions even after the notification of [Directive 2003/74/EC]", the

[1481] See *supra*, section V.
[1482] Panel Report, *US – Continued Suspension*, para. 7.835; Panel Report, *Canada – Continued Suspension*, para. 7.821.
[1483] Panel Report, *US – Continued Suspension*, para. 7.836; Panel Report, *Canada – Continued Suspension*, para. 7.822.
[1484] Panel Report, *US – Continued Suspension*, para. 7.355.
[1485] *Ibid*., para. 7.379.
[1486] See subparagraphs (c) and (d) *infra*.
[1487] Panel Report, *US – Continued Suspension*, para. 7.857(b). (original emphasis)

United States is "seeking redress of a violation with respect to [this Directive], within the meaning of Article 23.1 of the DSU"[1488]; and

(v) reverses the Panel's findings that the United States "made a 'determination' within the meaning of Article 23.2(a) in relation to Directive 2003/74/EC" on the basis of statements made at DSB meetings and the fact that the suspension of concessions continued subsequent to the notification of Directive 2003/74/EC[1489], and that the United States "failed to make any such determination consistent with the findings contained in the panel or Appellate Body report adopted by the DSB or an arbitration award rendered under the DSU", in breach of Article 23.2(a).[1490]

(b) As regards the Panel's consultations with the scientific experts, finds that the Panel infringed the European Communities' due process rights, because the institutional affiliation of Drs. Boisseau and Boobis compromised their appointment and thereby the adjudicative independence and impartiality of the Panel. Accordingly, the Panel failed to comply with its duties under Article 11 of the DSU.

(c) As regards the consistency with Article 5.1 of the *SPS Agreement* of the European Communities' import ban on meat from cattle treated with oestradiol-17β for growth-promotion purposes, which is applied pursuant to Directive 2003/74/EC:

(i) finds that the Panel erred in its interpretation and application of Article 5.1 in relation to risks of misuse and abuse in the administration of hormones to cattle for growth-promotion purposes;

(ii) finds that the Panel did not err in requiring the European Communities to evaluate specifically the risks arising from the presence of residues of oestradiol-17β in meat or meat products from cattle treated with the hormone for growth-promotion purposes;

(iii) finds that the Panel did not err in its interpretation of Article 5.1 and paragraph 4 of Annex A of the *SPS Agreement* as regards quantification of risk;

(iv) finds that the Panel erred in the allocation of the burden of proof in its assessment of the consistency of Directive 2003/74/EC with Article 5.1 of the *SPS Agreement*;

(v) finds that the Panel applied an incorrect standard of review in examining whether the European Communities' risk assessment satisfied the requirements of Article 5.1 and paragraph 4 of Annex A of the *SPS Agreement*, and thereby failed to comply with its duties under Article 11 of the DSU; and

(vi) reverses the Panel's finding that the European Communities' import ban relating to oestradiol-17β is not based on a risk assessment as required by Article 5.1 of the *SPS Agreement*[1491]; however, the Appellate Body is unable to complete the analysis and therefore makes no findings as to the consistency or inconsistency of the import ban relating to oestradiol-17β with Article 5.1 of the *SPS Agreement*.

[1488] *Ibid.*, para. 7.215. See also *ibid.*, para. 7.856(a).
[1489] Panel Report, *US – Continued* Suspension, para. 7.239. See also *ibid.*, para. 7.856(b).
[1490] *Ibid.*, para. 7.244. (emphasis omitted) See also *ibid.*, para. 7.856(b).
[1491] Panel Report, *US – Continued Suspension*, paras. 7.573, 7.578, and 7.579.

(d) As regards the consistency with Article 5.7 of the *SPS Agreement* of the European Communities' provisional import ban on meat from cattle treated with testosterone, progesterone, trenbolone acetate, zeranol, and MGA, for growth-promotion purposes, which is applied pursuant to Directive 2003/74/EC:

(i) reverses the Panel's finding that "the determination of whether scientific evidence is sufficient to assess the existence and magnitude of a risk must be disconnected from the intended level of protection"[1492];

(ii) reverses the Panel's finding that, where international standards exist, "there must be a *critical mass* of new evidence and/or information that calls into question the fundamental precepts of previous knowledge and evidence so as to make relevant, previously sufficient, evidence now insufficient"[1493];

(iii) finds that the Panel erred in the allocation of the burden of proof in its examination of the consistency of Directive 2003/74/EC with Article 5.7 of the *SPS Agreement*;

(iv) finds that the Panel erred in its interpretation and application of Article 5.7 of the *SPS Agreement* by adopting an incorrect legal test in determining whether the relevant scientific evidence was "insufficient";

(v) does not find it necessary to address the European Communities' claim that the Panel acted inconsistently with Article 11 of the DSU; and

(vi) reverses the Panel's finding that the provisional import ban relating to testosterone, progesterone, trenbolone acetate, zeranol, and MGA does not meet the requirements of Article 5.7 of the *SPS Agreement*[1494]; however, the Appellate Body is unable to complete the analysis and therefore makes no findings as to the consistency or inconsistency of the European Communities' provisional import ban with Article 5.7 of the *SPS Agreement*.

737. Because we have been unable to complete the analysis as to whether Directive 2003/74/EC has brought the European Communities into substantive compliance within the meaning of Article 22.8 of the DSU, the recommendations and rulings adopted by the DSB in *EC – Hormones* remain operative. In the light of the obligations arising under Article 22.8 of the DSU, we recommend that the Dispute Settlement Body request the United States and the European Communities to initiate Article 21.5 proceedings without delay in order to resolve their disagreement as to whether the European Communities has removed the measure found to be inconsistent in *EC – Hormones* and whether the application of the suspension of concessions by the United States remains legally valid.

UNITED STATES – CONTINUED SUSPENSION OF OBLIGATIONS IN THE EC – HORMONES DISPUTE

CANADA – CONTINUED SUSPENSION OF OBLIGATIONS IN THE EC – HORMONES DISPUTE

Notification of an Appeal by the European Communities under Article 16.4 and Article 17 of the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU), and under Rule 20(1) of the *Working Procedures for Appellate Review*

The following notification, dated 29 May 2008, from the Delegation of the European Commission, is being circulated to Members.

Notification of an Appeal by the European Communities under Article 16.4 and Article 17 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (DSU), and under Rule 20.1 of the *Working Procedures for Appellate Review*.

1. Pursuant to Article 16.4 and Article 17 of the DSU and to Rule 20.1 of the *Working Procedures for Appellate Review*, the European Communities submits its Notice of Appeal on certain issues of law covered in the Reports of the Panels in DS320, *United States – Continued Suspension of Obligations in the EC – Hormones Dispute* and DS321, *Canada – Continued Suspension of Obligations in the EC – Hormones Dispute* and certain legal interpretations developed by the Panels in those Reports.

2. The European Communities seeks review by the Appellate Body of the following errors of law and legal interpretation contained in the Reports of the Panels:

(a) The Panels incorrectly interpreted and applied the words "recourse to dispute settlement in accordance with the rules and procedures of this Understanding" in Article 23.2(a) of the DSU in the presence of an implementation measure in a post-retaliation situation. This is due principally to the Panels' incorrect interpretation of Article 21.5 of the DSU. The Panels' errors are contained in particular in paragraphs 7.246 to 7.249 and 7.346 to 7.359 of the Panel Report in DS320 and paragraphs 7.239 to 7.242 and 7.344 to 7.357 of the Panel Report in DS321.

(b) The Panels erred in failing to make a proper finding of violation of Article 23.1 read together with Article 22.8 and 3.7 of the DSU when stating that "to the extent the measure found to be

inconsistent with the *SPS Agreement* in the *EC – Hormones* dispute … has not been removed by the European Communities, [the United States and Canada] have not breached Article 22.8 of the DSU; and to the extent that Article 22.8 has not been breached, the European Communities has not established a violation of Articles 23.1 and 3.7 of the DSU as a result of a breach of Article 22.8". This error is due to the Panels' incorrect interpretation of Article 22.8 of the DSU and in particular the words "the measure found to be inconsistent with a covered agreement has been removed" therein. The Panels' conclusion and the corresponding reasoning are contained in paragraphs 7.857 and 7.252 to 7.386 of the Panel Report in DS320 and paragraphs 7.842 and 7.245 to 7.383 of the Panel Report in DS321.

(c) The Panels went beyond their terms of reference and assumed the function of Article 21.5 DSU panels contrary to Articles 7 and 21.5 of the DSU. This appears in particular in paragraph 8.3 of the two Panel Reports and paragraphs 7.150 to 7.182, 7.270 to 7.291 and 7.360 to 7.379 of the Panel Report in DS320 and paragraphs 7.137 to 7.164, 7.286 to 7.307 and 7.358 to 7.376 of the Panel Report in DS321.

(d) The Panels failed to respect the fundamental principle of due process when selecting and taking the advice of scientific experts under Articles 13.2 of the DSU and 11.2 of the *SPS Agreement* with the result that the Panels failed to make an objective assessment of the matter before them in breach of Article 11 of the DSU. This appears in particular in paragraphs 7.55 to 7.99 and 6.21 to 6.25 and the subsequent analysis of the Panel under the *SPS Agreement* in paragraphs 7.387 to 7.846 of the Panel Report in DS320 and paragraphs 7.53 to 7.96 and the subsequent analysis of the Panel under the *SPS Agreement* in paragraphs 7.384 to 7.831 of the Panel Report in DS321.

(e) The Panels failed to correctly determine and apply the standard of review under in particular Articles 5.1 and 5.7 of the *SPS Agreement* in breach thereof and in breach of Article 11 of the DSU. The Panels seriously mischaracterised and misinterpreted the evidence on which the European Communities based itself and conducted a *de novo* review of the matter before them and *inter alia* failed to take into account or properly evaluate the scientific basis of the European Communities' measure. They also failed to attach proper legal relevance to genuine uncertainties and scientific controversies on the matter before them and arbitrarily chose between the opinions of their experts and those presented by the other parties to the disputes. The Panels also relied incorrectly on the opinions of Codex Alimentarius and JECFA. This appears *inter alia* in paragraphs 7.412 to 7.427 and paragraphs 7.435 to 7.846 of the Panel Report in DS320 and paragraphs 7.403 to 7.418 and paragraphs 7.426 to 7.831 of the Panel Report in DS321.

(f) The Panels failed to correctly determine and apply the burden of proof under the *SPS Agreement* and in particular Articles 5.1 and 5.7 thereof. The Panels imposed the burden of proof on the European Communities to prove the consistency of its measure with the *SPS Agreement* and in particular Articles 5.1 and 5.7 thereof. This appears in particular in paragraphs 7.380 to 7.386 and paragraphs 7.435 to 7.846 of the Panel Report in DS320 and paragraphs 7.377 to 7.383 and paragraphs 7.426 to 7.831 of the Panel Report in DS321.

(g) The Panels incorrectly interpreted and applied Article 5.1 of the *SPS Agreement* and failed to make an objective assessment of the matter before them in breach of Article 11 of the DSU. The Panels erroneously adopted an overly restrictive notion of "an assessment, as appropriate to the circumstances, of the risk" under Article 5.1 of the *SPS Agreement* as informed by Article 5.2 thereof, ignored that the EC risk assessments had focussed on and addressed the particular risk at stake and required that the risk be quantified. The Panels' erroneous assessments arose out of its application of an inappropriate standard of review, as set out in paragraph (e) above. In particular, it arbitrarily chose between the opinions of their scientific experts in their review of the matter before them. This appears in particular in

paragraphs 7.435 to 7.579 of the Panel Report in DS320 and paragraphs 7.426 to 7.549 of the Panel Report in DS321.

(h) The Panels incorrectly interpreted and applied Article 5.7 of the *SPS Agreement* and failed to make an objective assessment of the matter before them in breach of Article 11 of the DSU. The Panels incorrectly interpreted the relationship of Article 5.7 with the other provisions of the *SPS Agreement* and in particular Articles 3.2, 3.3 and 5.1 thereof and adopted and applied an erroneous criterion of critical mass of new scientific evidence and/or information for the purposes of applying Article 5.7. The Panels' erroneous assessments arose out of its application of an inappropriate standard of review, as set out in paragraph (e) above. In particular, it arbitrarily chose between the opinions of its scientific experts in their review of the matter before them. This appears in particular in paragraphs 7.580 to 7.837 of the Panel Report in DS320 and paragraphs 7.550 to 7.823 of the Panel Report in DS321.

(i) The Panels erred in making a suggestion that insufficiently clarifies the implications of their findings contrary to Article 3.7 and 19.1 of the DSU. This appears in particular in paragraphs 8.2 and 8.3 of the Panel Reports.

UNITED STATES – CONTINUED SUSPENSION OF OBLIGATIONS IN THE EC – HORMONES DISPUTE

Notification of an Other Appeal by the United States
under Article 16.4 and Article 17 of the Understanding on Rules
and Procedures Governing the Settlement of Disputes (DSU),
and under Rule 23(1) of the *Working Procedures for Appellate Review*

The following notification, dated 10 June 2008, from the Delegation of the United States, is being circulated to Members.

Pursuant to Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU") and Rule 23 of the *Working Procedures for Appellate Review*, the United States hereby notifies its decision to appeal to the Appellate Body certain issues of law covered in the Report of the Panel on *United States – Continued Suspension of Obligations in the EC – Hormones Dispute* (WT/DS320/R) ("Panel Report") and certain legal interpretations developed by the Panel.

1. The United States seeks review by the Appellate Body of the Panel's legal conclusion that the United States breached Article 23.1 of the DSU (e.g., Panel Report, paras. 7.250, 7.856(a)). This conclusion is in error and is based on erroneous findings on issues of law and legal interpretations, including the Panel's findings that, by maintaining its suspension of concessions after the notification by the European Communities ("EC") of Directive 2003/74/EC, the United States was seeking the redress of a violation of obligations under a covered agreement without having recourse to, and abiding by, the rules and procedures of the DSU (e.g., Panel Report, paras. 7.215, 7.856(a)), and the Panel's interpretation and understanding of the legal basis for the U.S. suspension of concessions (e.g., Panel Report, paras. 7.209-7.214).

2. The United States also seeks review of the Panel's conclusion that the United States breached DSU Article 23.2(a) (e.g., Panel Report, paras. 7.245, 7.856(b)). This conclusion is in error and is based on erroneous findings on issues of law and legal interpretations, including the Panel's findings that the United States made a determination to the effect that a violation had occurred without recourse to dispute settlement in accordance with the rules and procedures of the DSU (e.g., Panel Report, paras. 7.239, 7.856(b)), on the basis of U.S. statements made at the meetings of the Dispute Settlement Body on November 1 and December 7, 2003 (e.g., Panel Report paras. 7.223-7.230) and/or the continuation of the U.S. suspension of concessions after the EC's notification of Directive 2003/74/EC (e.g., Panel Report paras. 7.226, 7.230, 7.232).

3. The United States seeks review of the Panel's suggestion that the United States should have recourse to the rules and procedures of the DSU without delay (e.g., Panel Report paras. 6.45, 8.3)

and the Panel's conclusion that it was restricted from a direct determination of the compatibility of Directive 2003/74/EC with the covered agreements (e.g., Panel Report paras. 7.162-7.164, 7.360, 7.855, 8.3). The suggestion and conclusion are in error and based on erroneous findings on issues of law and related legal interpretations. However, the Appellate Body would not need to review the suggestion and conclusion if it reverses the Panel's findings and conclusions on DSU Articles 23.1 and 23.2(a).

CANADA – CONTINUED SUSPENSION OF OBLIGATIONS IN THE EC – HORMONES DISPUTE

Notification of an Other Appeal by Canada
under Article 16.4 and Article 17 of the Understanding on Rules
and Procedures Governing the Settlement of Disputes (DSU),
and under Rule 23(1) of the *Working Procedures for Appellate Review*

The following notification, dated 10 June 2008, from the Delegation of Canada, is being circulated to Members.

Pursuant to paragraph 4 of Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU") and paragraph 1 of Rule 23 of the *Working Procedures for Appellate Review*, the Government of Canada hereby submits its Notice of Other Appeal concerning certain other issues of law covered in the Panel Report on *Canada – Continued Suspension of Obligations in the EC – Hormones Dispute* (WT/DS321/R) and certain legal interpretations developed by the Panel.

In the view of the Government of Canada, the Panel erred in interpreting Article 23 of the DSU in isolation from Article 22.8 of the DSU and committed an error in law by applying, in particular, Article 23.1 and 23.2(a) of the DSU to the situation of post-retaliation in this case. These errors are contained in paragraphs 7.162 to 7.164, 7.189 to 7.244 and 7.841 of the Panel Report.

The Government of Canada is also of the view that the Panel erred in finding that by continuing to suspend concessions *vis-à-vis* the European Communities following its notification to the Dispute Settlement Body of Directive 2003/74/EC Canada was: (i) seeking the redress of a violation of obligations under a covered agreement without having recourse to, and abiding by, the rules and procedures of the DSU in violation of Article 23.1 of the DSU; and (ii) making a determination to the effect that a violation had occurred without having recourse to dispute settlement in accordance with the rules and procedures of the DSU, in violation of Article 23.2(a) of the DSU. These errors are due to the Panel's misinterpretation of the legal basis for Canada's suspension of concessions. The Panel's findings and corresponding reasoning are contained in paragraphs 7.841 and 7.189 to 7.244 of its report.

In the alternative, should the Appellate Body confirm the findings of the Panel in respect of DSU Article 23.1 and 23.2(a) in relation to Canada, the Government of Canada submits that the Panel erred in stating that it did not have jurisdiction to determine the compatibility of Directive 2003/74/EC with the covered agreements and by making the suggestion that Canada should have recourse to the rules and procedures of the DSU without delay in order to implement its findings under Article 23 of

the DSU. These statements are contained in paragraph 8.3 of the Panel Report and are contrary to Articles 3.3, 3.7, 19.2 and 22.8 of the DSU.

The Government of Canada respectfully requests the Appellate Body to reverse the findings and conclusions of the Panel referred to above and to modify accordingly the recommendations of the Panel.

ANNEX IV –

PROCEDURAL RULING OF 10 JULY TO ALLOW
PUBLIC OBSERVATION OF THE ORAL HEARING

10 July 2008

United States – Continued Suspension of Obligations in the EC – Hormones Dispute

AB-2008-5

Canada – Continued Suspension of Obligations in the EC – Hormones Dispute

AB-2008-6

Procedural Ruling

1. On 3 June 2008, Canada, the European Communities, and the United States each filed a request to allow public observation of the oral hearing in these proceedings.[1] The participants argued that nothing in the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU") or the *Working Procedures for Appellate Review* (the "*Working Procedures*") precludes the Appellate Body from authorizing public observation of the oral hearing. On 4 June 2008, we invited the third participants to comment in writing on the requests of Canada, the European Communities, and the United States. In particular, we asked third parties to provide their views on the permissibility of opening the hearing under the DSU and the Working Procedures, and, if they so wished, on the specific logistical arrangements proposed in the requests. We received comments on 12 June 2008 from Australia, Brazil, China, India, Mexico, New Zealand, Norway, and the Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu. Australia, New Zealand, Norway, and the Separate Customs Territory of Taiwan, Penghu, Kinmen, and Matsu expressed their support for the request of the participants. Brazil, China, India, and Mexico requested the Appellate Body to deny the participants' request. According to these third participants, the oral hearing forms part of the proceedings of the Appellate Body and, therefore, is subject to the requirement of Article 17.10 of the DSU that "[t]he proceedings of the Appellate Body shall be confidential." On 16 June 2008, we invited Canada, the European Communities, and the United States to comment on the submissions made by the third participants. We also invited third participants who wished to do so to submit comments on the submissions made by the other third participants. Additional comments from Canada, the European Communities, and the United States were received on 23 June 2008. We held an oral hearing with the participants and third participants on 7 July 2008 exclusively dedicated to exploring the issues raised by the request of the participants. The participants and third participants were invited to submit by close of business, 8 July 2008, additional comments relating specifically to the technical modalities proposed by the participants for public observation. Comments were received from Brazil, China, India, and Mexico, as well as Canada, the European Communities, and the United States.

2. We consider it necessary that a ruling is made by us on the request of the participants without delay. Accordingly, we give a ruling with concise reasons. These reasons may be further elaborated in the Appellate Body report.

[1]The participants expressed a preference for simultaneous, closed-circuit television broadcast to another room. As alternatives, they mentioned delayed television broadcast and having a separate session for the third participants who elect not to participate in the open hearing.

3. The participants have different views on the scope of the term "proceedings" in Article 17.10 of the DSU. The European Communities argues that the term "proceedings" in Article 17.10 should be interpreted narrowly as referring to the Appellate Body's internal work and does not include its oral hearing.[2] The United States refers to the Recommendations by the Preparatory Committee for the WTO. The United States contends that the Preparatory Committee viewed Article 17.10 as focused on the deliberations of the Appellate Body.[3] Canada concedes that the term "proceedings" covers the oral hearing. A similar view has been put forward by Brazil, China, India, and Mexico. We consider the term "proceedings" to mean the entire process by which an appeal is prosecuted, from the initiation of an appeal to the circulation of the Appellate Body report, including the oral hearing. This is also how the Appellate Body understood the term in *Canada – Aircraft*.[4] Having agreed with this broad interpretation of the term "proceedings", we now consider the precise meaning and scope of the confidentiality requirement in Article 17.10.

4. The third participants that object to the request to allow public observation argue that the confidentiality requirement in Article 17.10 is absolute and permits of no derogation. We disagree with this interpretation because Article 17.10 must be read in context, particularly in relation to Article 18.2 of the DSU. The second sentence of Article 18.2 expressly provides that "[n]othing in this Understanding shall preclude a party to a dispute from disclosing statements of its own positions to the public". Thus, under Article 18.2, the parties may decide to forego confidentiality protection in respect of their statements of position. With the exception of India, the participants and third participants agreed that the term "statements of its own positions" in Article 18.2 extends beyond the written submissions referred to in the first sentence of Article 18.2, and includes oral statements and responses to questions posed by the Appellate Body at the oral hearing. The third sentence of Article 18.2 states that "Members shall treat as confidential information submitted by another Member to the panel or the Appellate Body which that Member has designated as confidential." This provision would be redundant if Article 17.10 were interpreted to require absolute confidentiality in respect of all elements of appellate proceedings. There would be no need to require, pursuant to Article 18.2, that a Member designate certain information as confidential. The last sentence of Article 18.2 ensures that even such designation by a Member does not put an end to the right of another Member to make disclosure to the public. Upon request, a Member must provide a non-confidential summary of the information contained in its written submissions that it designated as confidential, which can then be disclosed to the public. Thus, Article 18.2 provides contextual support for the view that the confidentiality rule in Article 17.10 is not absolute. Otherwise, no disclosure of written submissions or other statements would be permitted during any stage of the proceedings.

5. In practice, the confidentiality requirement in Article 17.10 has its limits. Notices of Appeal and Appellate Body reports are disclosed to the public. Appellate Body reports contain summaries of the participants' and third participants' written and oral submissions and frequently quote directly from them. Public disclosure of Appellate Body reports is an inherent and necessary feature of our rules-based system of adjudication. Consequently, under the DSU, confidentiality is relative and time-bound.

[2]European Communities' request for an open hearing, para. 9. Norway also argued for a narrower understanding of the term "proceedings".

[3]United States' comments on the third participants' submissions regarding open hearings, paras. 5 and 6 (referring to Establishment of the Appellate Body: Recommendations by the Preparatory Committee for the WTO approved by the Dispute Settlement Body on 10 February 1995 (WT/DSB/1), para. 9).

[4]Appellate Body Report, *Canada – Aircraft*, para. 143. However, we note that that case did not involve a request to lift confidentiality; rather, that dispute concerned a request for additional confidentiality protection for business confidential information.

6. In our view, the confidentiality requirement in Article 17.10 is more properly understood as operating in a relational manner.[5] There are different sets of relationships that are implicated in appellate proceedings. Among them are the following relationships. First, a relationship between the participants and the Appellate Body. Secondly, a relationship between the third participants and the Appellate Body. The requirement that the proceedings of the Appellate Body are confidential affords protection to these separate relationships and is intended to safeguard the interests of the participants and third participants and the adjudicative function of the Appellate Body, so as to foster the system of dispute settlement under conditions of fairness, impartiality, independence and integrity. In this case, the participants have jointly requested authorization to forego confidentiality protection for their communications with the Appellate Body at the oral hearing. The request of the participants does not extend to any communications, nor touches upon the relationship, between the third participants and the Appellate Body. The right to confidentiality of third participants vis-à-vis the Appellate Body is not implicated by the joint request. The question is thus whether the request of the participants to forego confidentiality protection satisfies the requirements of fairness and integrity that are the essential attributes of the appellate process and define the relationship between the Appellate Body and the participants. If the request meets these standards, then the Appellate Body would incline towards authorizing such a joint request.

7. We note that the DSU does not specifically provide for an oral hearing at the appellate stage. The oral hearing was instituted by the Appellate Body in its *Working Procedures*, which were drawn up pursuant to Article 17.9 of the DSU. The conduct and organization of the oral hearing falls within the authority of the Appellate Body (*compétence de la compétence*) pursuant to Rule 27 of the *Working Procedures*. Thus, the Appellate Body has the power to exercise control over the conduct of the oral hearing, including authorizing the lifting of confidentiality at the joint request of the participants as long as this does not adversely affect the rights and interests of the third participants or the integrity of the appellate process. As we observed earlier, Article 17.10 also applies to the relationship between third participants and the Appellate Body. Nevertheless, in our view, the third participants cannot invoke Article 17.10, as it applies to their relationship with the Appellate Body, so as to bar the lifting of confidentiality protection in the relationship between the participants and the Appellate Body. Likewise, authorizing the participants' request to forego confidentiality, does not affect the rights of third participants to preserve the confidentiality of their communications with the Appellate Body.

8. Some of the third participants argued that the Appellate Body is itself constrained by Article 17.10 in its power to authorize the lifting of confidentiality. We agree that the powers of the Appellate Body are themselves circumscribed in that certain aspects of confidentiality are incapable of derogation—even by the Appellate Body—where derogation may undermine the exercise and integrity of the Appellate Body's adjudicative function. This includes the situation contemplated in the second sentence of Article 17.10, which provides that "[t]he reports of the Appellate Body shall be drafted without the presence of the parties to the dispute and in the light of the information provided and the statements made." As noted by the participants, the confidentiality of the deliberations is necessary to protect the integrity, impartiality, and independence of the appellate process. In our view, such concerns do not arise in a situation where, following a joint request of the participants, the Appellate Body authorizes the lifting of the confidentiality of the participants' statements at the oral hearing.

9. The Appellate Body has fostered the active participation of third parties in the appellate process in drawing up the *Working Procedures* and in appeal practice. Article 17.4 provides that third participants "may make written submissions to, and be given an opportunity to be heard by, the Appellate Body." In its *Working Procedures*, the Appellate Body has given full effect to this right by providing for participation of third participants during the entirety of the oral hearing, while third

[5]This relational view of rights and obligations of confidentiality is consistent with the approach followed in domestic jurisdictions with respect to similar issues, such as privilege.

parties meet with panels only in a separate session at the first substantive meeting. Third participants, however, are not the main parties to a dispute. Rather, they have a systemic interest in the interpretation of the provisions of the covered agreements that may be at issue in an appeal. Although their views on the questions of legal interpretation that come before the Appellate Body are always valuable and thoroughly considered, these issues of legal interpretation are not inherently confidential. Nor is it a matter for the third participants to determine how the protection of confidentiality in the relationship between the participants and the Appellate Body is best dealt with. In order to sustain their objections to public observation of the oral hearing, third participants would have to identify a specific interest in their relationship with the Appellate Body that would be adversely affected if we were to authorize the participants' request—in this case, we can discern no such interests.

10. The request for public observation of the oral hearing has been made jointly by the three participants, Canada, the European Communities, and the United States. As we explained earlier, the Appellate Body has the power to authorize a joint request by the participants to lift confidentiality, provided that this does not affect the confidentiality of the relationship between the third participants and the Appellate Body, or impair the integrity of the appellate process. The participants have suggested alternative modalities that allow for public observation of the oral hearing, while safeguarding the confidentiality protection enjoyed by the third participants. The modalities include simultaneous or delayed closed-circuit television broadcasting in a room separate from the room used for the oral hearing. Finally, we do not see the public observation of the oral hearing, using the means described above, as having an adverse impact on the integrity of the adjudicative functions performed by the Appellate Body.

11. For these reasons, the Division authorizes the public observation of the oral hearing in these proceedings on the terms set out below. Accordingly, pursuant to Rule 16(1) of the *Working Procedures*, we adopt the following additional procedures for the purposes of these appeals:

(a) The oral hearing will be open to public observation by means of simultaneous closed-circuit television. The closed-circuit television signal will be shown in a separate room to which duly-registered delegates of WTO Members and members of the general public will have access.

(b) Oral statements and responses to questions by third participants wishing to maintain the confidentiality of their submissions will not be subject to public observation.

(c) Any third participant that has not already done so may request authorization to disclose its oral statements and responses to questions on the basis of paragraph (a), set out above. Such requests must be received by the Appellate Body Secretariat no later than 5:30 p.m. on 18 July 2008.

(d) An appropriate number of seats will be reserved for delegates of WTO Members in the room where the closed-circuit broadcast will be shown.

(e) Notice of the oral hearing will be provided to the general public through the WTO website. WTO delegates and members of the general public wishing to observe the oral hearing will be required to register in advance with the WTO Secretariat.

(f) Should practical considerations not allow simultaneous broadcast of the oral hearing, deferred showing of the video recording will be used in the alternative.

Report of the Appellate Body, *Argentina – Safeguard Measures on Imports of Footwear*, WT/DS121/AB/R, adopted 14 December 1999

ARGENTINA – SAFEGUARD MEASURES ON IMPORTS OF FOOTWEAR

AB-1999-7

Report of the Appellate Body

WORLD TRADE ORGANIZATION
APPELLATE BODY

Argentina – Safeguard Measures on Imports of Footwear

Argentina, *Appellant/Appellee*
European Communities, *Appellant/Appellee*

Indonesia, *Third Participant*
United States, *Third Participant*

AB-1999-7

Present:

Bacchus, Presiding Member
Beeby, Member
Matsushita, Member

I. Introduction

1. Argentina and the European Communities appeal certain issues of law and legal interpretation in the Panel Report, *Argentina – Safeguard Measures on Imports of Footwear* (the "Panel Report").[1] The Panel was established to consider a complaint by the European Communities with respect to the application by Argentina of certain safeguard measures on imports of footwear.

2. On 14 February 1997, Argentina initiated a safeguard investigation and adopted Resolution 226/97, which imposed provisional measures in the form of minimum specific duties on imports of certain footwear.[2] On the same day, the Argentine Ministry of Economy and Public Works repealed the minimum specific duties on imports of footwear ("DIEMs") that had been maintained by Argentina since 31 December 1993.[3] The opening of the safeguard investigation and the implementation of a provisional safeguard measure were notified to the Committee on Safeguards by Argentina in a communication dated 21 February 1997[4] and, by further communication dated 5 March 1997, Argentina transmitted a copy of the provisional duty resolution to the Committee on Safeguards.[5]

3. On 25 July 1997, Argentina notified the Committee on Safeguards of the determination of serious injury made by its competent authorities, the Comisión Nacional de Comercio Exterior ("CNCE").[6] Attached to this notification was Act 338, the report of the CNCE on serious injury. Act 338 incorporates by reference the Technical Report, a summary by CNCE staff of the factual data gathered during the safeguard investigation.[7] On 1 September 1997, Argentina notified the Committee on Safeguards of its intention to impose a definitive safeguard measure.[8] On 12 September 1997, Argentina adopted Resolution 987/97, which imposed, effective 13 September 1997, a definitive safeguard measure in the form of minimum specific duties on certain imports of footwear. On 26 September 1997, Argentina transmitted a copy of this Resolution to the

Committee on Safeguards[9], and Uruguay, as Pro Tempore President of the Mercado Común del Sur ("MERCOSUR")[10] notified the definitive safeguard measure imposed by that Resolution.[11] On 28 April 1998, Argentina published Resolution 512/98 modifying Resolution 987/97.[12] On 26 November 1998, Argentina published Resolution 1506/98, further modifying Resolution 987/97, and, on 7 December 1998, the Argentine Secretariat of Industry, Commerce and Mines published Resolution 837/98 implementing Resolution 1506/98.[13] The relevant factual aspects of this dispute are set out in further detail at paragraphs 2.1–2.6 and 8.1–8.20 of the Panel Report.

4. The Panel considered claims made by the European Communities that Argentina's safeguard measures are inconsistent with Articles 2, 4, 5, 6 and 12 of the *Agreement on Safeguards*, and with Article XIX:1(a) of the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994"). The Panel Report was circulated to the Members of the World Trade Organization (the "WTO") on 25 June 1999.

5. The Panel concluded that "the definitive safeguard measure on footwear based on Argentina's investigation and determination is inconsistent with Articles 2 and 4 of the Agreement on Safeguards" and, therefore, "that there is nullification or impairment of the benefits accruing to the European Communities under the Agreement on Safeguards within the meaning of Article 3.8 of the DSU."[14] The Panel found "no basis to address the [European Communities'] claims under Article XIX of GATT separately and in isolation from those under the Safeguards Agreement."[15] The Panel rejected the claims of the European Communities under Article 12 of the *Agreement on Safeguards*[16] and, in light of its determination that the definitive safeguard measure is inconsistent with Articles 2 and 4 of the *Agreement on Safeguards*, the Panel did not consider it necessary to make findings with respect to the claims of the European Communities under Articles 5 and 6 of that Agreement.[17]

6. On 15 September 1999, Argentina notified the Dispute Settlement Body (the "DSB") of its intention to appeal certain issues of law covered in the Panel Report and certain legal interpretations developed by the Panel, pursuant to paragraph 4 of Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU"), and filed a Notice of Appeal pursuant to Rule 20 of the *Working Procedures for Appellate Review* (the "*Working Procedures*"). On 27 September 1999, Argentina filed its appellant's submission.[18] On 30 September 1999, the European Communities filed its own appellant's submission.[19] On 11 October 1999, Argentina[20] and

[18]Pursuant to Rule 21(1) of the *Working Procedures*.

[19]Pursuant to Rule 23(1) of the *Working Procedures*.

[20]Pursuant to Rule 23(3) of the *Working Procedures*.

the European Communities[21] each filed an appellee's submission. On the same day, Indonesia and the United States each filed a third participant's submission.[22]

7. On 19 October 1999, the Appellate Body received a letter from the Government of Paraguay indicating its interest "in attending" the oral hearing in this appeal. On 25 October 1999, the Appellate Body received a second letter from Paraguay clarifying that it was not requesting an opportunity to "make oral arguments or presentations at the oral hearing" as set forth in Rule 27.3 of the *Working Procedures*. Rather, Paraguay maintained that, as a third party which had notified its interest to the Dispute Settlement Body under Article 10.2 of the DSU, it had the right to "participate passively" in the oral hearing before the Appellate Body in the present dispute. No participant or third participant objected to the participation of Paraguay on a "passive" basis. On 26 October 1999, the Members of the Division hearing this appeal informed Paraguay, the participants and third participants that, having regard to the provisions of Articles 10.2 and 17.4 of the DSU as well as the provisions of Rules 24 and 27 of the *Working Procedures*, Paraguay would be allowed to attend the oral hearing as a "passive observer".

8. The oral hearing in the appeal was held on 29 October 1999. The participants and third participants presented oral arguments and responded to questions put to them by the Members of the Division hearing the appeal.

II. Arguments of the Participants

A. *Claims of Error by Argentina – Appellant*

1. Terms of Reference

9. Argentina argues that the Panel violated Article 7.2 of the DSU and exceeded its jurisdiction because the Panel not only considered, but relied on[23], alleged violations of Article 3 of the *Agreement on Safeguards* even though the European Communities' request for the establishment of a panel and the Panel's terms of reference mentioned alleged violations of only Articles 2 and 4 of the *Agreement on Safeguards*.

10. Argentina notes that Articles 3 and 4 of the *Agreement on Safeguards* are separate provisions, each of which sets out distinct requirements. In Argentina's view, Members intended with these provisions to allow national authorities to separate the Article 3 "*findings and conclusions*" requirement from the Article 4 requirement of a "*detailed analysis*", as is done in practice in Argentina. In this case, the "findings and conclusions" to which Article 3 refers are contained exclusively in Act 338 (on which the Panel relied), but no claim of a violation of Article 3 was before the Panel.

11. Argentina emphasizes that due process concerns underlie the rule that a Panel's jurisdiction is limited by its terms of reference, as recognized in the Appellate Body Reports in *Brazil – Measures Affecting Desiccated Coconut* ("*Brazil – Desiccated Coconut*")[24] and *India – Patent Protection for Pharmaceutical and Agricultural Chemical Products* ("*India – Patents*").[25] Argentina concludes that, by excluding Article 3 from its panel request, the European Communities essentially notified Argentina that it would not have to defend itself against Article 3 allegations. Argentina adds that

[21]Pursuant to Rule 22 of the *Working Procedures*.

[22]Pursuant to Rule 24 of the *Working Procedures*.

[23]In paras. 8.126, 8.127, 8.205, 8.207, 8.218 and 8.238 of the Panel Report.

[24]Appellate Body Report, WT/DS22/AB/R, adopted 20 March 1997, p. 22.

[25]Appellate Body Report, WT/DS50/AB/R, adopted 16 January 1998, para. 92.

since Article 3 is central to the Panel's decision-making, the Panel's statements about Article 3 cannot be considered harmless error, "*purely gratuitous comment*" or not "*a legal finding or conclusion.*"[26]

2. Imposition of Safeguard Measures by a Member of a Customs Union

12. Argentina argues that the Panel erred in its legal reasoning and interpretation of the *Agreement on Safeguards* with respect to Argentina's right to exclude its partners in MERCOSUR from the application of safeguard measures. In Argentina's view, the Panel misinterpreted footnote 1 to Article 2.1 of the *Agreement on Safeguards*, and imposed an obligation to apply safeguard measures to customs union members when imports from all sources are taken into account for the injury determination, as well as a "parallelism requirement". Argentina maintains that neither of these supposed obligations has any basis in the *Agreement on Safeguards*.

13. Argentina contends that the footnote to Article 2.1 addresses comprehensively the conditions applicable to a safeguard investigation when a Member is part of a customs union. The fourth sentence of the footnote reflects the fact that Members could not agree on how to reconcile the requirements of Article XXIV:8 of the GATT 1994 with the most-favoured-nation requirement in Article 2.2 of the *Agreement on Safeguards*. Thus, in the last sentence of the footnote, Members specifically acknowledged that there was no resolution of this conflict in the *Agreement on Safeguards*. Argentina notes that the drafting history of footnote 1 shows that the Members deleted the very provisions that the Panel has attempted to "read in" to the existing text of the footnote.[27]

14. Argentina alleges as well that the Panel erred in law by imposing a "parallelism requirement" between the determination of injury and the application of the safeguard measure that is not found in the *Agreement on Safeguards*. Article 5, which sets out the requirements for the *application* of safeguard measures, makes no reference to any requirement of "parallelism", except to the extent that a measure may not exceed what is necessary to remedy the injury. Similarly, Article 9, which exempts developing countries from the *application* of safeguard measures in certain circumstances, does not impose a requirement that parallel modifications be made as part of the injury determination. In Argentina's view, the only "parallelism" on which the Members agreed is that only the market where injury is found can apply safeguard measures.

3. Claims Under Articles 2 and 4 of the *Agreement on Safeguards*

15. Argentina argues that, despite articulating a standard of review which essentially requires that a decision be "reasoned" and the decision-making process "explained", the Panel committed "significant legal error" by engaging in a "wholesale exercise of *de novo* review".[28] In its appellant's submission, Argentina referred to the standard of review applied by the panel in *United States – Imposition of Antidumping Duties on Imports of Fresh and Chilled Atlantic Salmon from Norway*

[26]Appellate Body Report, *Australia – Measures Affecting Importation of Salmon* ("*Australia – Salmon*"), WT/DS18/AB/R, adopted 6 November 1998, para. 110.

[27]Argentina cites a text tabled on 31 October 1990 by the Chairman of the Negotiating Group on Safeguards (MTN.GNG/NG9/W/25/Rev.3), which included the following proposal for the last sentence of the footnote:

> It is understood that when a safeguard measure is applied by a customs union on behalf of a member state, [any injury attributable to competition from producers established in other member states in the customs union shall not be attributed to increased imports, in conformity with the provisions of sub-paragraph 7(b)] [such a measure shall be applied to imports from other member states of the customs union]. (emphasis added by Argentina)

[28]Argentina's appellant's submission, p. 25.

("*United States – Salmon*")[29], as well as certain national rules of judicial review, for example, in the United States Court of Appeals for the Federal Circuit. Argentina clarified during the oral hearing that it accepts that the appropriate standard of review is found in Article 11 of the DSU, and that the Panel correctly identified this standard of review. Argentina's position is, rather, that having identified the proper standard of review, the Panel did not apply it correctly. Instead, Argentina contends, the Panel erred in conducting a "*de facto de novo*" review of the findings and conclusions of the Argentine investigating authority.

16. In Argentina's view, the Panel's approach demonstrates confusion about the meaning of *de novo* review.[30] The Panel repeatedly substituted its judgment for that of the Argentine authorities and set out its own view of the correct analysis to be made and the conclusions to be drawn. The Panel's analysis went far beyond the approach used in the cases to which to the Panel referred.[31] The Panel read methodologies into the *Agreement on Safeguards* where that Agreement itself is silent, and it did so despite the fact that the Members have reached no agreement on such methodologies. Argentina also contests the Panel's characterization of the object and purpose of the *Agreement on Safeguards* as focused on limiting trade restrictions, and its reliance on this characterization in its reasoning and decision making. Argentina argues that the *Agreement on Safeguards* was in fact intended *both* to increase discipline and transparency in safeguards cases *and* to liberalize some of the rules relating to Article XIX in order to encourage Members to eliminate grey-area measures.

17. With respect to the Panel's analysis of Argentina's determination that imports had increased, Argentina argues that the Panel collapsed the "increased imports" requirement with other requirements of Article 2, and wrongly treated it as a qualitative, rather than a quantitative requirement. In Argentina's view, the ordinary meaning of increased imports is that imports have become greater, and, contrary to the position of the European Communities, there is no factual or contextual support for any additional requirements in the *Agreement on Safeguards*.

18. Argentina emphasizes that the Panel took a very specific view of how the "increase" in imports must be calculated and compared. Even though the Panel recognized that the five-year base period selected was not inappropriate and that, on the basis of such review period, imports increased, the Panel nevertheless continued its inquiry and imposed a number of methodological hurdles which must be overcome before a finding of "increased imports" can be justified. The Panel misdefined the word "rate" in Article 4 to include "direction", and found that there could only be "increased imports" in this case if: (i) a change in the base year from 1991 to 1992 would still result in an increase; (ii) the analysis of end points and interim periods were mutually reinforcing; and (iii) it was found that the decrease in imports in 1994 and 1995 was temporary.

19. Argentina argues that, in its attempt to arrive at the "correct" result, the Panel ignored the following: (i) 1991 was an appropriate starting point to measure any increase because 1991 was the year in which market reforms were completed in Argentina; (ii) the "mutually reinforcing" requirement means that virtually any decrease in imports during a review period could prevent a finding of increased imports; and (iii) the Argentine decision in Act 338 specifically notes that the decline in imports was due to the specific duties that had been placed on footwear imports.

[29]Panel Report, ADP/87, adopted 27 April 1994, BISD 41S/229, para. 406.

[30]Argentina notes that "*de novo* review" has been defined as "trying the matter anew – as if it had not been heard before." *Black's Law Dictionary* (West Publishing Co., 5th ed., 1979) p. 392.

[31]Panel Report, *United States – Restrictions on Imports of Cotton and Man-made Fibre Underwear* ("*United States – Underwear*"), WT/DS24/R, adopted 25 February 1997, as modified by the Appellate Body Report WT/DS24/AB/R; Panel Report, *United States – Measure Affecting Imports of Woven Wool Shirts and Blouses* ("*United States – Shirts and Blouses*"), WT/DS33/R, adopted 23 May 1997, as upheld by the Appellate Body Report WT/DS33/AB/R.

20. Argentina contends that, in effect, the Panel did not object to the *analysis* made by the Argentine authorities, but to their *conclusion* that imports increased absolutely. The Panel erred because the effect of its approach was to redetermine the weight to be assigned to each fact. Such an approach does not meet the requirement of Article 11 of the DSU that an objective assessment be provided. The Panel also violated Article 11 of the DSU by referring to the *preliminary*, rather than the *final* determination of the Argentine authorities, in support of its findings. In addition, the Panel violated Article 3.2 of the DSU by imposing obligations on Argentina that are not found in the *Agreement on Safeguards*.

21. Argentina submits also that the Panel erred in its analysis of Argentina's determination of "serious injury". In Argentina's view, Article 4.2(c) of the *Agreement on Safeguards* only requires a demonstration of the relevance of the factors examined, and not an examination of whether all factors are relevant. The Panel wrongly found that Argentina had not properly considered the factors of capacity utilization and productivity, despite the fact that productivity is explicitly mentioned in Act 338 and the data to calculate capacity utilization was available to the Argentine authorities.

22. Argentina argues further that the Panel misinterpreted the evidence on "serious injury" and then found it to be legally deficient. The Panel improperly "required" Argentina to consider 1996 data as part of its injury determination, and erred in dismissing Argentina's argument that it could not have relied on 1996 data, as the record clearly shows that the data for 1996 was incomplete. Argentina submits that it was appropriate and reasonable to use a single review period for which all data was available as the basis for its consideration of all injury factors.

23. Despite certain statements made by the Panel, Argentina argues that the record is clear about the data used for each injury factor. Accordingly, the Panel erred in: (i) finding that Argentina violated the *Agreement on Safeguards* because the questionnaire results did not match such public industry-wide data; (ii) criticizing the Argentine authorities' treatment of interested party data which differed from questionnaire results; (iii) criticizing as inconsistent the data on overall firm profitability and its break-even point analysis; and (iv) finding that Argentina did not explain how a shift to higher-value production was a sign of injury.

24. Argentina argues that the Panel further erred in its findings with respect to causation. The Argentine authorities concluded that imports took market share from the domestic industry, and that this led to a fall in domestic production that caused financial and economic indicators to fall for the companies investigated. The Panel criticized this analysis and set out three of its own "standards". First, the Panel required that an upward trend in imports *coincide* with a *downward* trend in the injury factors. Argentina notes that Article 4.2(c) of the *Agreement on Safeguards* refers to "changes", not "downward trends", so there is no requirement that there be a *downward* trend in each year of the period of review. Moreover, the Panel's requirement of "coincidence" in time is not implied by the term "cause". Second, the Panel used the phrase "under such conditions" to develop a requirement that the "conditions of competition" between imported and domestic footwear in the Argentine footwear market demonstrate a "causal link" between increased imports and injury. Argentina asserts that there is no basis in the *Agreement on Safeguards* for this requirement. Third, the Panel required the Argentine authorities to establish that other relevant factors have been analyzed, and that injury caused by factors other than imports has not been attributed to imports. Argentina maintains that this requirement goes far beyond those actually contained in the *Agreement on Safeguards*, and fails to acknowledge the approach of the Argentine authorities, which ensured that general macroeconomic factors were not attributed to imports.

25. Finally, Argentina believes that the Panel violated Article 12.7 of the DSU, which requires that a panel report include the "basic rationale" behind any findings and recommendations that a panel makes. For example, Act 338 specifically notes that the decline in imports was due to the specific duties placed on footwear imports in 1993. Argentina contends that the Panel ignored this in its insistence that the *Agreement on Safeguards* requires an analysis of intervening trends and its

criticism of Argentina for failing to take such trends into account. Argentina contends also that the Panel misinterpreted the evidence before it on "serious injury" and then found that evidence to be legally deficient. In Argentina's opinion, therefore, the Panel's conclusions "are not rational and do not follow logically from the evidence".[32]

B. *Arguments by the European Communities – Appellee*

1. Terms of Reference

26. The European Communities does not agree with Argentina that the Panel erred in considering or relying, in its reasoning, on Article 3 of the *Agreement on Safeguards* and, accordingly asks the Appellate Body to affirm the Panel's conclusions in that respect. The European Communities notes that the Panel has not found a violation of Article 3 of the *Agreement on Safeguards as such*. Instead the Panel legitimately referred to the requirements contained in Article 3.1 when considering the violation of Article 4.2(c) (which the European Communities did invoke), because Article 4.2(c) contains a cross-reference to Article 3. Moreover, the European Communities argues that, even in the absence of a specific cross-reference, panels and the Appellate Body may, in their reasoning, legitimately rely on a provision that was not mentioned in the request for the establishment of a panel. The European Communities notes also that it made no claim of a violation of Article 3.

2. Imposition of Safeguard Measures by a Member of a Customs Union

27. The European Communities agrees with the Panel that the *Agreement on Safeguards* contains a "parallelism" requirement. By taking into consideration imports from MERCOSUR countries for the purposes of making its injury determination, even though it never intended to impose measures on those imports, Argentina violated its obligations under the *Agreement on Safeguards* and Article XIX of the GATT 1994. During the oral hearing, the European Communities emphasized, however, that the Panel's interpretation of Article XXIV of the GATT 1994 and Article 2.2 of the *Agreement on Safeguards* was not necessary to support its conclusion that a parallelism requirement exists, that no claim relating to the legal status of MERCOSUR was made before the Panel, and that neither party to this dispute has appealed the Panel's apparent assumption that Article XXIV is applicable.

28. The European Communities points out that the text of Article 2.1 of the *Agreement on Safeguards* sets out the *requirements* which should be fulfilled before a Member may apply a *safeguard measure*. This provision therefore underscores the inherent link between the *requirements* and the *measure*. Article 5 of the *Agreement on Safeguards* reinforces such a link by providing that "[a] Member shall apply safeguard measures only *to the extent necessary* to prevent or remedy serious injury" and that "Members should choose measures *most suitable* for the achievement of these objectives." In the view of the European Communities, Article 9 of the *Agreement on Safeguards* does not support Argentina's position that there is no "parallelism requirement" in the *Agreement on Safeguards*. Article 9 contains an express exception to the concept of "parallelism", but no similar express exception is foreseen for members of customs unions.

29. The European Communities argues that Article XIX of the GATT 1994 also requires parallelism. A liberalization obligation must give rise to increased imports, which in turn must cause serious injury. Under Article XIX, the authorized remedy for that serious injury can only be the suspension of the relevant GATT or WTO liberalization obligation. Accordingly, obligations incurred by Argentina *within the framework of its customs union* cannot justify a safeguard measure, and imports subject to such obligations must be excluded from the analysis. The European

[32]Argentina's appellant's submission, p. 61.

Communities notes in this context that there is no WTO obligation on Argentina not to impose safeguard measures on its MERCOSUR partners, only an internal MERCOSUR commitment.

3. Claims Under Articles 2 and 4 of the *Agreement on Safeguards*

30. The European Communities maintains that the Panel correctly interpreted and applied the standard of review contained in Article 11 of the DSU, and did not engage in a *de novo* review.

31. The European Communities requests the Appellate Body to uphold the Panel's findings on "increased imports". The European Communities submits that the requirement of "increased imports" in Article 2.1 of the *Agreement on Safeguards* "should now be read in the light of the new package of rights and obligations,"[33] including Article XIX of the GATT 1994, and the *Agreement on Safeguards*, as well as on the basis of the object and purpose of these agreements. Given the content of the new "package", the determination of "increased imports" necessarily contains more than it did under the safeguard regime governed by Article XIX of the GATT 1947. The European Communities concludes that a strictly quantitative interpretation of the "increased imports" requirement (assuming *arguendo* that such an interpretation existed under Article XIX of the GATT 1947) can no longer be reconciled with the functioning of the safeguard mechanism under the WTO.

32. In the view of the European Communities, the Panel did not, as Argentina claims, require that both the end point to end point analysis and the intervening periods *must be* mutually reinforcing. Rather, the Panel concluded that the Member taking a safeguard measure should determine whether or not imports increased by examining the issue from more than just one angle. If one analysis goes in a different direction from the other, then, as the Panel says, this "raises doubts" as to whether the conclusion that "imports increased" is justified, and a proper explanation is required. The European Communities also highlights the fact that the Panel has based its reasoning on the "increased imports" requirement on the import figures for *all* countries, that is, *including* MERCOSUR countries. The European Communities argues that Argentina's non-fulfilment of the requirement of "increased imports" is even more striking when third-country imports are separated out.

33. The European Communities submits that the Panel correctly analysed Argentina's serious injury determination as required by Article 11 of the DSU and was justified in concluding that this determination did not comply with the *Agreement on Safeguards*. In the view of the European Communities, the ordinary meaning of the requirement contained in Article 4.2(a) of the *Agreement on Safeguards* that "the competent authorities shall evaluate all relevant factors" is that such authorities are required to: (i) evaluate *at least* all of the factors mentioned in Article 4.2(a), and possibly more, if necessary; and (ii) on the basis of this examination demonstrate – and publish – the relevance of the factors considered. The European Communities submits that the Panel correctly concluded that Argentina failed to undertake these legally required steps with regard to capacity utilization and productivity.

34. The European Communities also requests the Appellate Body to uphold the Panel's analysis of Argentina's treatment of 1996 data. Article 4.2(a) of the *Agreement on Safeguards* requires "*all relevant factors*" to be considered, and the most *relevant* information is the most *recent*. The European Communities rejects Argentina's claim that, since it could consider 1996 data for some but not for all factors, it was reasonable to use a single review period for which all data are available. The *Agreement on Safeguards* does not oblige Members to base their determinations on a complete set of data for *all* factors for a *fixed* time-frame. By deliberately ignoring the 1996 information for those factors for which it *had* collected the information, Argentina made conclusions which were not reasonably supported by the facts.

[33]European Communities' appellee's submission, para. 71.

35. The European Communities submits that the Panel correctly analysed Argentina's causation determination, as required by Article 11 of the DSU, and was justified in concluding that this determination did not meet the requirements set out in Article 4 of the *Agreement on Safeguards*. In the view of the European Communities, the ordinary meaning of the term causation is "the act of causing or producing an effect".[34] One event (the increase in imports) must *produce* the other event (serious injury). If the two events take place simultaneously, then the probability that the events are linked is greater than if they happen many years apart. The longer the time between the two events, the more a compelling analysis is required of why causation is still present.

36. The European Communities considers that the Panel correctly interpreted the "under such conditions" requirement in Article 2.1 of the *Agreement on Safeguards* as indicating the need to analyse the conditions of competition between the imported product and the domestic like or directly competitive products as part of the causation analysis required by Article 4.2(a) and (b).[35] The European Communities disputes Argentina's claim that Article 4.2(b) of the *Agreement on Safeguards* does not require a separate analysis of possible "other" factors. In order to conclude that no "other" factor had caused the serious injury, the European Communities submits that it is necessary to examine whether there were such other factors present and to examine their impact on the domestic industry. In the view of the European Communities, by not providing such an analysis, in particular of the "tequila effect", Argentina violated Article 4.2(b) and (c) of the *Agreement on Safeguards*.

37. With respect to Argentina's claim of a violation of Article 12.7 of the DSU, the European Communities submits that, as the Appellate Body found in *Korea – Taxes on Alcoholic Beverages* ("*Korea – Alcoholic Beverages*")[36], the Panel has set out a detailed and thorough rationale for its findings and recommendations in this case, as required by Article 12.7 of the DSU, and, therefore, there is no violation.

C. *Claims of Error by the European Communities – Appellant*

1. Relationship Between Article XIX of the GATT 1994 and the *Agreement on Safeguards*

38. The European Communities appeals and requests the Appellate Body to reverse the Panel's conclusion that safeguard measures imposed after the entry into force of the WTO agreements which meet the requirements of the new *Agreement on Safeguards* also thereby satisfy the requirements of Article XIX of the GATT 1994, as well as the Panel's consequent refusal to rule on the European Communities' Article XIX claim. The European Communities further requests the Appellate Body to reverse the legal interpretations and findings made in support of this conclusion, notably the Panel's erroneous reference to the "*express omission* of the criterion of unforeseen developments" in the *Agreement on Safeguards*. The European Communities requests the Appellate Body to complete the Panel's reasoning and find, on the basis of the uncontested facts, that Argentina did not comply with the requirement contained in Article XIX:1(a) of the GATT 1994 to take safeguard measures only where the alleged increase in imports is "*as a result of unforeseen developments*".

39. The European Communities asserts that the requirement that increased imports result from "unforeseen developments" is a fundamental characteristic of safeguard measures, and lies at the beginning of the "logical continuum" of events justifying the invocation of the safeguard mechanism. This starts with a WTO Member incurring an obligation under the GATT 1994. After this obligation is implemented, an unforeseen development occurs, resulting in increased imports, which occur under

[34]European Communities' appellee's submission, para. 121.

[35]Panel Report, para. 8.250.

[36]Appellate Body Report, WT/DS75/AB/R, WT/DS84/AB/R, adopted 17 February 1999, para. 168.

conditions such that serious injury (or a threat thereof) is caused. In the view of the European Communities, if this chain of events has occurred, then a WTO Member may take a safeguard measure.

40. The European Communities is convinced that the WTO agreements are a "single undertaking" which constitutes an "integrated system". The requirement that increased imports must result from "unforeseen developments" and the other fundamental characteristics of safeguard measures were not expressly repeated in the *Agreement on Safeguards* because they did not need to be clarified, added to or modified.

41. The European Communities submits that there are four possible relationships between a provision of the GATT 1994 and an Agreement in Annex 1A of the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*"), namely: a *conflict* between provisions of the two texts; an *overlap* of provisions of the two texts[37]; *an express derogation* in an Agreement in Annex 1A of the *WTO Agreement* that allows for a violation of the GATT 1994; and provisions that are *complementary*. The European Communities argues that the fourth option, i.e, *complementary* provisions, describes the relationship between Article XIX:1(a) and Article 2.1 of the *Agreement on Safeguards*, and should have formed the basis for the Panel's reasoning. The Appellate Body has confirmed in *Brazil – Desiccated Coconut*[38] and *Guatemala – Antidumping Investigation Regarding Grey Portland Cement from Mexico* ("*Guatemala – Cement*")[39] that provisions of the GATT 1994 and the relevant Agreement in Annex 1A of the *WTO Agreement* represent a package of rights and disciplines that must be considered in conjunction. Applying this to the present case, the European Communities argues that the *Agreement on Safeguards* does not supersede or replace the GATT 1994, and that it is possible to apply the conditions in the GATT 1994 and the *Agreement on Safeguards* together, because there is no formal *conflict* between them.

42. The European Communities argues that the ordinary meaning of the term "*as a result of unforeseen developments*" is "as a consequence of a sudden change in a course of action or events or in conditions that has not been foreseen".[40] The European Communities agrees that the opening phrase of Article XIX:1(a) of the GATT 1994 is relevant context for the "*as a result of unforeseen developments*" requirement, but comes to a conclusion opposite to that reached by the Panel. This phrase makes clear that there are two pre-conditions which need to be present before a safeguard action can be taken. Imports should increase *as a result of* unforeseen developments, and also *as a result of* the effect of tariff concessions or any other obligations under the GATT 1994.

43. The European Communities rejects the reasoning of the Panel on the object and purpose of the *Agreement on Safeguards*. In the view of the European Communities, the object and purpose of the *Agreement on Safeguards* is inherently linked with Article XIX of the GATT 1994, entitled "*Emergency Action* on Imports of Particular Products". (emphasis added) Therefore, safeguard measures are by definition a mechanism based on "emergencies": the very nature of a safeguard measure is to tackle an *urgent* situation which was *not expected*.

[37]See e.g., Panel Report, *European Communities – Regime for the Importation, Sale and Distribution of Bananas* ("*European Communities – Bananas*"), WT/DS27/R/USA, adopted 25 September 1997, as modified by the Appellate Body Report, WT/DS27/AB/R, para. 203.

[38]*Supra,* footnote 24.

[39]Appellate Body Report, WT/DS60/AB/R, adopted 25 November 1998.

[40]European Communities' appellant's submission, para. 24.

44. The European Communities is of the view also that the Panel mis-interpreted the 1951 *Hatters' Fur* case[41] by stating that it "made it easier" to meet the "*unforeseen developments*" condition, and that the Panel wrongly gave credit to the view of one legal scholar that this case "essentially read the unforeseen developments condition out of the text of Article XIX:1(a) of GATT 1947".[42] In fact, the *Hatters' Fur* Working Party confirmed the validity and relevance of the "*as a result of unforeseen developments*" requirement. The European Communities adds that further support for the continuing validity of the "*as a result of unforeseen developments*" requirement is found in recent texts of national legislation notified by WTO Members. Korea, Costa Rica, Norway, Panama and Japan have all incorporated the phrase in their national laws.

D. *Arguments by Argentina – Appellee*

1. Relationship Between Article XIX of the GATT 1994 and the *Agreement on Safeguards*

45. Argentina requests the Appellate Body to affirm the Panel's finding that "safeguard measures imposed after the entry into force of the WTO agreements which meet the requirements of the new Safeguards Agreement satisfy the requirements of Article XIX of GATT"[43] and to decline to consider the claims of the European Communities under Article XIX separately. Argentina maintains that the "unforeseen developments" requirement in Article XIX has not been included in the *Agreement on Safeguards*, and that this significant omission can only be attributed to the intention of Members to eliminate that requirement *as a condition separate from and independent of the provisions of the Agreement on Safeguards*.

46. Argentina finds no legal text or other element that supports the reasoning of the European Communities that there is a "logical continuum of events" that conditions the application of a safeguard measure and that begins with the condition that "unforeseen developments" must occur. To Argentina, it is clear that the Uruguay Round undertook to recast the disciplines governing the application of safeguard measures by clarifying, developing and, where appropriate, modifying some aspects of those disciplines. If the entire content of Article XIX were perfectly consistent with the *Agreement on Safeguards*, there would have been no need to include in Article 11.1(a) the reference to "provisions of that Article applied in accordance with this Agreement".

47. In Argentina's view, the fact that certain Article XIX provisions are not expressly incorporated in the *Agreement on Safeguards* does not support the position of the European Communities. For example, the concept of "emergency action" is incorporated *by reference* in Article 11.1(a), with the clarification that any measure of this kind must be applied in conformity both with the *Agreement on Safeguards* and with Article XIX, and the provision that safeguard measures consist of the suspension of the relevant GATT obligation or the withdrawal or modification of the relevant concession appears in Article 8 of the *Agreement on Safeguards*. Similarly, the concept of "unforeseen developments" is now fully met once the conditions under Article 2 of the *Agreement on Safeguards* have been satisfied. Consequently, Argentina submits that it is clear that a situation in which a product is being imported "in such increased quantities" and "under such conditions" as to cause or threaten serious injury is now, by definition, an instance of "unforeseen developments" within the meaning of Article XIX and Article 2 of the *Agreement on Safeguards*.

[41] *Report of the Intersessional Working Party on the Complaint of Czechoslovakia Concerning the Withdrawal by the United States of a Tariff Concession under the Terms of Article XIX*, ("*Hatters' Fur*"), GATT/CP/106, adopted 22 October 1951.

[42] Panel Report, para. 8.65, footnote 470.

[43] Panel Report, para. 8.69.

48. Argentina argues that none of the four possible interpretations put forward by the European Communities constitutes the proper analytical approach based on *Brazil - Desiccated Coconut*. The panel in *Brazil – Desiccated Coconut* specifically rejected the notion that the *Agreement on Subsidies and Countervailing Measures* (the "*SCM Agreement*") merely imposed *additional* substantive and procedural obligations[44] or that a measure imposed under that Agreement and under Article VI of the GATT 1994 would necessarily be consistent with Article VI in isolation.[45] Argentina interprets this case to mean that Article VI in and of itself can no longer have an independent, separate meaning, and that both agreements must be considered in conjunction.[46]

49. Argentina refers to the negotiating history of the *Agreement on Safeguards* in support of its position, noting that the June 1989 draft of that Agreement contained the concept of an "unforeseen increase … " in imports.[47] By mid-1990, though, all references to measures taken as a result of unforeseen or emergency situations had disappeared from the drafts of the *Agreement on Safeguards*.[48] Thus, in Argentina's view, the requirement that the increase in imports should result from unforeseen circumstances was expressly considered during the negotiation and intentionally left out of the text.

50. Argentina highlights the fact that the European Communities eliminated the "unforeseen developments" requirements from its domestic legislation on safeguards.[49] Argentina considers this to be proof that the European Communities did not itself consider that the requirement existed in the context of the new rights and obligations defined and interpreted in the *Agreement on Safeguards*.

51. Argentina requests that if the Appellate Body does not accept the Panel's interpretation, then, in the alternative, the Appellate Body should find that there is a "conflict" between the *Agreement on Safeguards* and Article XIX, and confirm that the *Agreement on Safeguards* takes precedence over Article XIX in accordance with the General Interpretative Note to Annex 1A. Finally, in the event that the Appellate Body finds that there is a separate obligation to verify the existence of unforeseen developments, Argentina requests, in the further alternative, that the Appellate Body find that Argentina did verify such unforeseen developments in its investigation. Argentina stated in its decision that "the pressure of imports was unforeseen on account of its rapid pace of increase at a time when the national economy was facing macroeconomic problems".[50]

E. *Arguments by the Third Participants*

1. Indonesia

52. Indonesia agrees with the European Communities that Argentina's safeguard measure was "fatally flawed" because it was not imposed in response to "unforeseen developments" as required by Article XIX of the GATT 1994. Indonesia also joins the European Communities in its request that the Appellate Body complete the Panel's analysis and hold that Argentina acted in violation of Article XIX. In Indonesia's view, the Panel's treatment of Article XIX and the *Agreement on Safeguards* is in direct conflict with the construction of the relationship between the GATT 1994 and the Annex 1A Agreements by previous panels and by the Appellate Body. Referring to the panel

[44] Panel Report, WT/DS22/R, adopted 20 March 1997, as upheld by the Appellate Body Report, WT/DS22/AB/R, para. 246.

[45] *Ibid.*, para. 247.

[46] Appellate Body Report, *Brazil – Desiccated Coconut*, *supra*, footnote 24, p. 16

[47] MTN.GNG/NG9/W/25, 27 June 1989.

[48] MTN.GNG/NG9/W/25/Rev.2, 13 July 1990.

[49] EC Regulation 3285/94, OJ 1994 L349/53.

[50] Act 338, folio 5350.

report in *European Communities – Bananas*[51], as well as to the Appellate Body reports in *Brazil – Desiccated Coconut*[52] and *Guatemala – Cement*[53], Indonesia submits that the Panel erred in law when it refused to apply Article XIX and the *Agreement on Safeguards* together, giving meaning to *all* terms in *both* agreements. Indonesia adds that, by reading the "unforeseen developments" requirement out of the WTO system altogether, the Panel removed an important protection against abuse of the safeguard mechanism.

53. Indonesia submits that Argentina's interpretation of footnote 1 to Article 2.1 of the *Agreement on Safeguards* is incorrect. Footnote 1 relates to the imposition of a safeguard measure by a customs union. Here, however, no action was taken *by a customs union*. Rather, Argentina independently investigated and imposed the safeguard measure on its own behalf. Footnote 1 says *nothing* about the obligations of, or any conditions affecting, a member of a customs union *acting individually*. For the same reason, even assuming *arguendo* that Argentina's interpretation of the negotiating history of footnote 1 is correct, it does not support Argentina's argument, because the language on which the parties allegedly could not reach agreement would not have applied to Argentina's actions in this case, i.e., to where a safeguard measure is applied *by a state acting independently*. Indonesia also questions whether Article XXIV is applicable to MERCOSUR, as the members of MERCOSUR did not notify the customs union under Article XXIV of either the GATT 1947 or the GATT 1994.

54. Indonesia adds that even if footnote 1 were somehow applicable to Argentina's action by virtue of its MERCOSUR membership, that footnote would only permit a derogation from the obligations contained in *Article 2.1* of the *Agreement on Safeguards*. However, Argentina's independent imposition of a safeguard against only non-MERCOSUR countries violates *Article 2.2*, which obliges Members to apply safeguard measures in a nondiscriminatory fashion.

55. Indonesia maintains that the Panel's analysis of the "parallelism requirement" is best understood, not as an interpretation of the terms of the *Agreement on Safeguards* as such, but as an explanation of how – in practical terms – a Member can reconcile its WTO obligations under the *Agreement* with commitments that it may have made separately to members of its customs union. Argentina agreed with its fellow MERCOSUR members to refrain from applying safeguard measures against one another. That "extra-WTO" agreement, however, cannot exempt Argentina from its obligations *vis-à-vis* all other WTO Members under the *Agreement on Safeguards*.

56. Indonesia submits that the Panel properly refrained from conducting a *de novo* review of the determinations by Argentine authorities. In Indonesia's view, it was well within the scope of the Panel's authority to assess whether those determinations were reasonably supported by the results of the investigation. Moreover, Indonesia believes that, because Argentina failed to demonstrate "increased imports", failed to demonstrate "serious injury", and failed to demonstrate causation, the Panel correctly concluded that Argentina violated Articles 2 and 4 of the *Agreement on Safeguards*.

57. With respect to "increased imports", Indonesia characterizes Argentina's principal complaint as a belief that the Panel imposed new obligations on Members to use specific methodologies. In Indonesia's view, however, the Panel Report merely points out analytical flaws in Argentina's analysis; it is *not* fairly read as imposing specific requirements. Indonesia contends that Argentina ignored the "tense" of Article 2 of the *Agreement on Safeguards* – its focus on present and future rather than past events. In this respect, Indonesia points out that Argentina's failure to consult 1996 data did not itself constitute a violation of Article 2 and also that the Panel did not characterize it as

[51]*Supra*, footnote 37, para. 7.160.

[52]See *Brazil – Desiccated Coconut*, *supra*, footnote 24, p. 14.

[53]*Supra*, footnote 39, para. 65.

such. The Panel simply found fault with Argentina's failure to weigh *all* the available data, particularly where the missing data would tend to contradict Argentina's finding of an "increase."

58. With respect to "serious injury", Indonesia underlines that Argentina failed to consider two factors that it was specifically required to evaluate under Article 4.2(a) – productivity and capacity utilization. Indonesia rejects Argentina's claim that it may pick and choose *a priori* the factors that it wishes to examine, and explain the relevance of those selected factors after the fact. Indonesia is also of the view that the Panel correctly held that Argentina relied on inadequate evidence even for those "serious injury" factors that it did choose to consider.

59. Indonesia submits that the Panel's conclusion that Argentina had not identified evidence or analysis on which it could reasonably base a determination of causation should also be upheld. Argentina failed to separate out the effects of other economic factors – such as the "tequila effect" – from the effects of footwear imports on the domestic industry. Indonesia agrees with the Panel that it is not enough simply to juxtapose the imports and the injury, and then to assert that there must be a link between them. If Argentina did not or cannot explain *how* the alleged increase in imports caused the alleged harm to its domestic manufacturers, then, Indonesia submits, the mere correspondence of these events in time will not support the imposition of a safeguard measure.

2. United States

60. The United States submits that the Panel correctly found that safeguard investigations conducted and safeguard measures imposed since the entry into force of the WTO agreements which meet the requirements of the *Agreement on Safeguards* also thereby satisfy the requirements of Article XIX of the GATT 1994. The United States requests the Appellate Body to uphold this ruling, as well as the Panel's consequent decision to decline to rule on the Article XIX claim by the European Communities.

61. The United States notes that while the *Agreement on Safeguards* defines "safeguard measures" as "those measures provided for in Article XIX", a number of the provisions of the Agreement, including Articles 2, 3, 4, 5, 7, 8.3, 9 and 10, either limit the rights provided in Article XIX or provide rights ruled out by Article XIX. In addition, the United States observes that the preamble of the Agreement refers to a "comprehensive agreement, applicable to all Members", and notes the need to re-establish control over safeguards measures and to eliminate grey-area measures. These objectives were achieved through an agreement that imposed new procedural requirements, enhanced transparency and consultation requirements, but loosened in some respects the strict requirements of Article XIX, while explicitly prohibiting grey-area measures. If it were possible for Members to pick and choose between the rights and obligations in the original package of Article XIX, and the rights and obligations in the *Agreement on Safeguards*, then the entire project represented by that Agreement would be revised *post hoc*, and the negotiated balance would be fundamentally upset.

62. The United States argues that the rebalancing of Article XIX was a fundamental premise of the negotiations on safeguards. Because of the problem of grey-area measures, the agreement had to be comprehensive and had to apply to all contracting parties. That rebalancing included the removal of the "unforeseen developments" condition for safeguard measures. Therefore, the text of Article XIX now cannot be read outside the context of the *Agreement on Safeguards*, and that Agreement now completely occupies the field of regulation of safeguard measures in the WTO system. The United States concludes that the omission of "unforeseen developments" from the Agreement was intentional, and that this express omission must be given meaning.

63. The United States notes that legal scholars agree that under the *Agreement on Safeguards*, "unforeseen developments" are no longer a prerequisite for a safeguard action[54], and that state practice has also treated the question of "unforeseen developments" as "marginal, legally nonbinding or subsumed by other aspects of the safeguards process".[55] The United States underlines that the great majority of safeguards legislation notified to the WTO (including that of the European Communities) does not even refer to "unforeseen developments". With respect to the *Hatters' Fur* case of 1951[56], the United States considers that, while this case cannot contradict the substantive rebalancing that took place in the Uruguay Round, it does help to clarify the legal interpretation of "unforeseen developments" under the GATT 1947, the reasons why negotiators were willing to omit this concept from the Uruguay Round results, and how a determination which fully satisfies the requirements of Article 2.1 may also satisfy the "unforeseen developments" requirement.

64. With respect to the Panel's interpretation of footnote 1 to Article 2.1 of the *Agreement on Safeguards*, the United States refers to its view of the negotiating history of the footnote, as set out *in extenso* in paragraph 6.32 of the Panel Report and in footnote 396 to that paragraph. The United States emphasizes the reason why this footnote follows the word "Member": due to the unique status of the European Communities in the GATT, and to the fact that the European Communities did take safeguards measures, a special provision was needed to deal with the application of safeguards by the European Communities.

65. The United States also notes that Argentina and the Panel have wrongly referred to Article XXIV of the GATT 1994. In the view of the United States, MERCOSUR has never been notified under Article XXIV. The parties to MERCOSUR have chosen to notify it instead exclusively under the Decision on Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries[57] (the "Enabling Clause"). The United States contends that, having made this legal choice, Argentina is now precluded from basing its arguments on the assumption that MERCOSUR is an Article XXIV agreement, and that, therefore, the fourth sentence of footnote 1 to Article 2.1 of the *Agreement on Safeguards* is legally irrelevant in this case.

66. The United States submits that the Panel identified and applied the proper standard of review. A fair reading of the Panel Report demonstrates that the Panel did not, as Argentina alleges, engage in *de novo* review or construct alternate methodologies that it then concluded Argentina had failed to satisfy. Rather, the Panel properly examined whether Argentina had evaluated the relevant evidence, reached conclusions that were reasonably supported by the evidence, and adequately explained the reasoning set forth in its findings and conclusions. On this basis, and in keeping with the applicable standard of review, the Panel properly concluded that Argentina's actions were inconsistent with Articles 2 and 4 of the *Agreement on Safeguards*.

67. With respect to "increased imports", the United States emphasizes that the Panel *did not* re-evaluate the facts or impose a specific methodology for collecting or evaluating the evidence. The Panel did not conclude that an end point analysis is *per se* inconsistent with the *Agreement on Safeguards*. Rather, the United States believes, the contrary evidence on interim periods was so significant that, in the absence of an explanation in Argentina's determination concerning how it had evaluated that contrary evidence, the Panel could not conclude that Argentina's determination that imports had increased constituted an objective evaluation of the record as a whole.

[54]M.C.E.J. Bronckers, "Voluntary Export Restraints and the GATT 1994 Agreement on Safeguards," in J.H.J. Bourgeois, F. Berrod and E.Fournier (eds.), *The Uruguay Round Results: A European Lawyers' Perspective*" (European University Press, 1995), p. 275; M. Trebilcock and R. Howse, *The Regulation of International Trade* (2nd ed., 1999), p. 228.

[55]United States' third participant's submission, para. 22.

[56]*Supra*, footnote 41.

[57]L/4903, adopted 28 November 1979, BISD 26S/203.

68. The United States argues also that the Panel properly found that Argentina's conclusions with respect to "serious injury" were not adequately supported by the evidence. The Panel's determination that, under Article 4.2(a), a Member must evaluate *all* relevant factors is consistent with past panel practice, including *United States – Underwear* and *United States – Shirts and Blouses*.[58] The United States also rejects as without merit Argentina's attacks on the Panel's determination that Argentina's findings and conclusions were not adequately explained and supported by the evidence.

69. On the question of causation, the United States notes that Argentina alleges *inter alia* that the Panel articulated a series of "new standards" that Argentina had to satisfy, rather than analyzing the adequacy of Argentina's actual decision. However, the United States asserts that the Panel's determination makes clear that what is at issue is Argentina's failure to provide sufficient evidence to justify its decision. The United States concludes that the Panel correctly found that Argentina's measure cannot be sustained where the underlying decision does not demonstrate that Argentina considered the relevant evidence and provided a reasoned explanation of its conclusions.

III. Issues Raised In This Appeal

70. This appeal raises the following issues:

(a) whether the Panel exceeded its terms of reference in its consideration of Article 3 of the *Agreement on Safeguards*;

(b) whether the Panel erred: in concluding that "safeguard investigations conducted and safeguard measures imposed after the entry into force of the WTO agreements which meet the requirements of the new Safeguards Agreement satisfy the requirements of Article XIX of GATT"; in its consequent refusal to consider the EC's claims under Article XIX of the GATT 1994; and in its conclusion that the phrase "as a result of unforeseen developments" in Article XIX:1(a) of the GATT 1994 was "*expressly omitted*" from the *Agreement on Safeguards* and, therefore, has no relevance for a safeguard measure imposed under the *Agreement on Safeguards*;

(c) whether the Panel erred in its interpretation and application of Article 2 of the *Agreement on Safeguards* and Article XXIV of the GATT 1994 as these provisions relate to the application of the safeguard measure at issue in this case;

(d) whether the Panel: enunciated and applied the correct standard of review in this case; erred in its interpretation and application of the conditions for imposing a safeguard measure set forth in Articles 2 and 4 of the *Agreement on Safeguards*, in particular, increased imports, serious injury and causation; and set out a "basic rationale" for its findings as required by Article 12.7 of the DSU.

IV. Terms of Reference

71. Argentina argues, on appeal, that the Panel violated Article 7.2 of the DSU and exceeded its terms of reference, because the Panel not only considered, but also relied on, alleged violations of Article 3 of the *Agreement on Safeguards* even though the request for the establishment of a Panel submitted by the European Communities only alleged violations of Articles 2 and 4 of the *Agreement on Safeguards*. Argentina maintains, in particular, that the Panel's references to Article 3 contained in

[58]*Supra*, footnote 31.

paragraphs 8.205, 8.207, 8.218 and 8.238 of the Panel Report[59] demonstrate that the Panel relied on obligations contained in Article 3 in reaching its conclusion that Argentina did not act in compliance with its obligations under Article 4.2(c) of the *Agreement on Safeguards*.

72. Article 4.2(c) of the *Agreement on Safeguards* provides as follows:

> The competent authorities shall publish promptly, *in accordance with the provisions of Article 3*, a detailed analysis of the case under investigation as well as a demonstration of the relevance of the factors examined. (emphasis added)

Article 3 provides, in relevant part:

> 1. … The competent authorities shall publish a report setting forth their findings and reasoned conclusions reached on all pertinent issues of fact and law.

73. We have examined the specific paragraphs in the Panel Report cited by Argentina, and we see no *finding* by the Panel that Argentina acted inconsistently with Article 3 of the *Agreement on Safeguards*. In one instance[60], the Panel referred to Article 3 parenthetically in support of its reasoning on Article 4.2(a) of the *Agreement on Safeguards*. Every other reference to Article 3 cited by Argentina was made by the Panel in conjunction with the Panel's reasoning and findings relating to Article 4.2(c) of the *Agreement on Safeguards*. None of these references constitutes a legal finding or conclusion by the Panel regarding Article 3 itself.

74. We note that the very terms of Article 4.2(c) of the *Agreement on Safeguards* expressly incorporate the provisions of Article 3. Thus, we find it difficult to see how a panel could examine whether a Member had complied with Article 4.2(c) without also referring to the provisions of Article 3 of the *Agreement on Safeguards*. More particularly, given the express language of Article 4.2(c), we do not see how a panel could ignore the publication requirement set out in Article 3.1 when examining the publication requirement in Article 4.2(c) of the *Agreement on Safeguards*. And, generally, we fail to see how the Panel could have interpreted the requirements of Article 4.2(c) *without* taking into account in some way the provisions of Article 3. What is more, we fail to see how any panel could be expected to make an "objective assessment of the matter", as required by Article 11 of the DSU, if it could only refer in its reasoning to the specific provisions cited by the parties in their claims.

75. Consequently, we conclude that the Panel did not exceed its terms of reference by referring in its reasoning to the provisions of Article 3 of the *Agreement on Safeguards*. On the contrary, we find that the Panel was *obliged* by the terms of Article 4.2(c) to take the provisions of Article 3 into account. Thus, we do not believe that the Panel erred in its reasoning relating to the provisions of Article 3 of the *Agreement on Safeguards* in making its findings under Article 4.2(c) of that Agreement.

[59] At page 1 of its appellant's submission, Argentina also referred to the Panel's reasoning in paragraphs 8.126 and 8.127 of the Panel Report. During the oral hearing, however, Argentina limited its arguments to paragraphs 8.205, 8.207, 8.218 and 8.238 of the Panel Report.

[60] Panel Report, para. 8.238.

V. Article XIX of the GATT 1994 and "Unforeseen Developments"

76. The European Communities appeals the Panel's conclusion "that safeguard investigations conducted and safeguard measures imposed after the entry into force of the WTO agreements which meet the requirements of the new Safeguards Agreement satisfy the requirements of Article XIX of GATT."[61] The European Communities appeals as well the Panel's consequent refusal to rule on the European Communities' Article XIX claim, and asks the Appellate Body to reverse the legal interpretations and findings of the Panel made in support of this conclusion, notably the "fundamental error" made by the Panel when it referred to the "*express omission* of the criterion of unforeseen developments" in the *Agreement on Safeguards*.[62] The European Communities argues that the requirement of increased imports resulting from "unforeseen developments" is a fundamental characteristic of a safeguard measure because it lies at the beginning of a "logical continuum" of events justifying the invocation of a safeguard measure.[63] The European Communities requests the Appellate Body to find, on the basis of uncontested facts in the Panel Report, that Argentina did not comply with the requirement in Article XIX:1(a) of the GATT 1994 that safeguard measures may only be taken when the alleged increase in imports is "a result of unforeseen developments".[64]

77. In concluding that safeguard investigations and safeguard measures imposed after the entry into force of the *Agreement on Safeguards* which meet the requirements of that Agreement also thereby "*satisfy*" the requirements of Article XIX of the GATT 1994, the Panel made the following observations about the relationship between Article XIX of the GATT 1994 and the *Agreement on Safeguards*:

> … the application of safeguard measures in the meaning of Article XIX requires - since the entry into force of the Safeguards Agreement - conformity with the requirements and conditions of the latter agreement. Although all the provisions of Article XIX of GATT continue to legally co-exist with the Safeguards Agreement in the framework of the single undertaking of the Uruguay Round agreements, any implementation of safeguard measures in the meaning of Article XIX presupposes the application of and thus compliance with the provisions of the Safeguards Agreement.[65]
>
> …
>
> … While the Safeguards Agreement does not supersede or replace Article XIX, which continues to remain in force as part of the GATT, the original conditions contained in Article XIX have to be read in the light of the subsequently negotiated and much more specific provisions of the Safeguards Agreement. Those provisions of the Safeguards Agreement place the original rule of Article XIX within the entire package of the new WTO legal system and make it operational in practice.[66]
>
> …

[61] Panel Report, para. 8.69.

[62] European Communities' appellant's submission, para. 5.

[63] *Ibid.*, para. 17.

[64] *Ibid.*, para. 138.

[65] Panel Report, para. 8.55.

[66] *Ibid.*, para. 8.56.

> … Given the reasoning developed by the panel and the Appellate Body in the *Brazil - Desiccated Coconut* case, it is our view that Article XIX of GATT and the Safeguards Agreement must *a fortiori* be read as representing an *inseparable package* of rights and disciplines which have to be considered in conjunction. Therefore, we conclude that Article XIX of GATT cannot be understood to represent the total rights and obligations of WTO Members, but that rather the Safeguards Agreement as applying the disciplines of Article XIX of GATT, reflects the latest statement of WTO Members concerning their rights and obligations concerning safeguards. Thus the Safeguards Agreement should be understood as *defining, clarifying, and in some cases modifying* the whole package of rights and obligations of Members with respect to safeguard measures as they currently exist. By the same token, and in the light of the principle of effective treaty interpretation, the *express omission* of the criterion of unforeseen developments in the new agreement (which otherwise transposes, reflects and refines in great detail the essential conditions for the imposition of safeguard measures provided for in Article XIX of GATT) must, in our view, have meaning.[67]
>
> …
>
> … it is our conclusion that safeguard investigations conducted and safeguard measures imposed after the entry into force of the WTO agreements which meet the requirements of the new Safeguards Agreement satisfy the requirements of Article XIX of GATT. Therefore, we see no basis to address the EC's claims under Article XIX of GATT separately and in isolation from those under the Safeguards Agreement.[68]

78. In addressing this issue, we will examine, first, whether the Panel is correct in its conclusion about the relationship between the *Agreement on Safeguards* and Article XIX of the GATT 1994, and, second, whether the clause – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " in Article XIX:1(a) of the GATT 1994 continues to have any meaning and legal effect.

79. With respect to the relationship between the *Agreement on Safeguards* and Article XIX of the GATT 1994, we begin with Article II of the *WTO Agreement*. Paragraph 2 of that Article stipulates:

> The agreements and associated legal instruments included in Annexes 1, 2 and 3 (hereinafter referred to as "Multilateral Trade Agreements") are *integral parts* of this Agreement, *binding on all Members*. (emphasis added)

Paragraph 4 of that Article provides:

> The General Agreement on Tariffs and Trade 1994 as specified in Annex 1A (hereinafter referred to as "GATT 1994") is *legally distinct* from the General Agreement on Tariffs and Trade, dated 30 October 1947 … (hereinafter referred to as "GATT 1947"). (emphasis added)

[67] *Ibid.*, para. 8.58.

[68] Panel Report, para. 8.69.

80. We note that the GATT 1994 is the first agreement that appears in Annex 1A to the *WTO Agreement*, and that it consists of: the provisions of the GATT 1947, as rectified, amended or modified by the terms of legal instruments that entered into force before the entry into force of the *WTO Agreement*; the provisions of certain legal instruments, such as protocols and certifications, decisions on waivers and other decisions of the CONTRACTING PARTIES to the GATT 1947, that entered into force under the GATT 1947 before the entry into force of the *WTO Agreement*; certain Uruguay Round Understandings relating to specific GATT articles; and the Marrakesh Protocol to the GATT 1994 containing Members' Schedules of Concessions.[69]

81. Thus, the GATT 1994 is *not* the GATT 1947. It is "legally distinct" from the GATT 1947. The GATT 1994 and the *Agreement on Safeguards* are *both* Multilateral Agreements on Trade in Goods contained in Annex 1A of the *WTO Agreement*, and, as such, are *both* "integral parts" of the same treaty, the *WTO Agreement*, that are "binding on all Members".[70] Therefore, the provisions of Article XIX of the GATT 1994 *and* the provisions of the *Agreement on Safeguards* are *all* provisions of one treaty, the *WTO Agreement*. They entered into force as part of that treaty at the same time. They apply equally and are equally binding on all WTO Members. And, as these provisions relate to the same thing, namely the application by Members of safeguard measures, the Panel was correct in saying that "Article XIX of GATT and the Safeguards Agreement must *a fortiori* be read as representing an *inseparable package* of rights and disciplines which have to be considered in conjunction."[71] Yet a treaty interpreter must read all applicable provisions of a treaty in a way that gives meaning to *all* of them, harmoniously.[72] And, an appropriate reading of this "inseparable package of rights and disciplines" must, accordingly, be one that gives meaning to *all* the relevant provisions of these two equally binding agreements.

82. The drafters of the *WTO Agreement* addressed this issue specifically. The precise nature of the relationship between Article XIX of the GATT 1994 and the *Agreement on Safeguards* within the *WTO Agreement* is described in Articles 1 and 11.1(a) of the *Agreement on Safeguards* as follows:

> *Article 1*
>
> *General Provision*
>
> This Agreement establishes rules for the application of *safeguard measures* which shall be understood to mean *those measures provided for in Article XIX of GATT 1994*. (emphasis added)
>
> *Article 11*

[69] See paragraph 1 of the language incorporating the GATT 1994 into Annex 1A of the *WTO Agreement*.

[70] *WTO Agreement*, Article II:2.

[71] Panel Report, para. 8.58.

[72] We have recently confirmed this principle in our Report in *Korea – Definitive Safeguard Measure on Imports of Certain Dairy Products*, WT/DS98/AB/R, circulated 14 December 1999, para. 81. See also Appellate Body Report, *United States – Standards for Reformulated and Conventional Gasoline* ("*United States – Gasoline*"), WT/DS2/AB/R, adopted 20 May 1996, p. 23; Appellate Body Report, *Japan – Taxes on Alcoholic Beverages* ("*Japan – Alcoholic Beverages*"), WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, adopted 1 November 1996, p. 12; Appellate Body Report, *India – Patents*, *supra*, footnote 25, para. 45.

Prohibition and Elimination of Certain Measures

> 1. (a) A Member shall not take or seek any *emergency action* on imports of particular products *as set forth in Article XIX of GATT 1994 unless such action conforms with the provisions of that Article applied in accordance with this Agreement*. (emphasis added)

83. We see nothing in the language of either Article 1 or Article 11.1(a) of the *Agreement on Safeguards* that suggests an intention by the Uruguay Round negotiators to *subsume* the requirements of Article XIX of the GATT 1994 within the *Agreement on Safeguards* and thus to render those requirements no longer applicable. Article 1 states that the purpose of the *Agreement on Safeguards* is to establish "rules for the application of safeguard measures which shall be understood to mean *those measures provided for* in Article XIX of GATT 1994." (emphasis added) This suggests that Article XIX continues in full force and effect, and, in fact, establishes certain prerequisites for the imposition of safeguard measures. Furthermore, in Article 11.1(a), the ordinary meaning of the language "unless such action *conforms with the provisions of that Article applied in accordance with this Agreement*" (emphasis added) clearly is that any safeguard action must *conform with* the provisions of Article XIX of the GATT 1994 *as well as* with the provisions of the *Agreement on Safeguards*. Neither of these provisions states that any safeguard action taken after the entry into force of the *WTO Agreement* need only conform with the provisions of the *Agreement on Safeguards*.[73]

84. Thus, we conclude that any safeguard measure[74] imposed after the entry into force of the *WTO Agreement* must comply with the provisions of *both* the *Agreement on Safeguards and* Article XIX of the GATT 1994.

85. As a consequence, we must examine the claims of the European Communities under Article XIX of the GATT 1994, and, specifically, its claim on appeal that the clause – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " – in Article XIX:1(a) of the GATT 1994 is a requirement that must be satisfied in order for a safeguard measure to be imposed.

86. The provisions of Article XIX:1(a) of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards*, which together set out the conditions for applying a safeguard measure under the *WTO Agreement*, read as follows:

[73]We note that the provisions of Article 11.1(a) of the *Agreement on Safeguards* are significantly different from the provisions of Article 2.4 of the *Agreement on the Application of Sanitary and Phytosanitary Measures*, which state:

> Sanitary or phytosanitary measures *which conform to* the relevant provisions of this Agreement *shall be presumed to be in accordance with* the obligations of the Members under the provisions of GATT 1994 which relate to the use of sanitary or phytosanitary measures, in particular the provisions of Article XX(b). (emphasis added)

[74]With the exception of special safeguard measures taken pursuant to Article 5 of the *Agreement on Agriculture* or Article 6 of the *Agreement on Textiles and Clothing*.

GATT 1994

Article XIX

Emergency Action on Imports of Particular Products

> 1. (*a*) If, *as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions*, any product is being imported into the territory of that Member in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers in that territory of like or directly competitive products, the Member shall be free, in respect of such product, and to the extent and for such time as may be necessary to prevent or remedy such injury, to suspend the obligation in whole or in part or to withdraw or modify the concession. (emphasis added)

Agreement on Safeguards

Article 2

Conditions

> 1. A Member may apply a safeguard measure to a product only if that Member has determined, pursuant to the provisions set out below, that such product is being imported into its territory in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products. (footnote omitted)

87. In comparing the language of Article XIX:1(a) of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards*, we observe that although much of the language in the two provisions is very similar, and, in fact, identical, the initial clause in Article XIX:1(a) – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " – does not appear in Article 2.1 of the *Agreement on Safeguards*. After making this same observation, the Panel concluded that the "unforeseen developments" clause was "expressly omitted" by the Uruguay Round negotiators. And, although the Panel conceded at one point in its reasoning that Article XIX and the *Agreement on Safeguards* "legally co-exist"[75] as part of the *WTO Agreement*, the Panel concluded from this supposedly "*express omission*" that the "omitted" phrase has no meaning.

88. We believe that, with this conclusion, the Panel failed to give meaning and legal effect to *all* the relevant terms of the *WTO Agreement*, contrary to the principle of effectiveness (*ut res magis valeat quam pereat*) in the interpretation of treaties.[76] The Panel states that the "*express omission* of

[75]Panel Report, para. 8.55.

[76]We note that in our Report *United States – Gasoline*, (*supra,* footnote 72, p. 23), we emphasized that:

> … One of the corollaries of the "general rule of interpretation" in the *Vienna Convention* is that interpretation must give meaning and effect to all the terms of a treaty. An interpreter is not free to adopt a reading that would result in reducing whole clauses or paragraphs of a treaty to redundancy or inutility.

the criterion of unforeseen developments" in Article XIX:1(a) from the *Agreement on Safeguards* "must, in our view, have meaning."[77] On the contrary, in our view, if they had intended to *expressly omit* this clause, the Uruguay Round negotiators would and could have said so in the *Agreement on Safeguards*. They did not.

89. Furthermore, it is clear from Articles 1 and 11.1(a) of the *Agreement on Safeguards* that the Uruguay Round negotiators did not intend that the *Agreement on Safeguards* would entirely replace Article XIX. Instead, the ordinary meaning of Articles 1 and 11.1(a) of the *Agreement on Safeguards* confirms that the intention of the negotiators was that the provisions of Article XIX of the GATT 1994 and of the *Agreement on Safeguards* would apply *cumulatively*, except to the extent of a conflict between specific provisions.[78] We do not see this as an issue involving a conflict between specific provisions of two Multilateral Agreements on Trade in Goods. Thus, we are obliged to apply the provisions of Article 2.1 of the *Agreement on Safeguards* and Article XIX:1(a) of the GATT 1994 *cumulatively*, in order to give meaning, by giving legal effect, to all the applicable provisions relating to safeguard measures.

90. Having concluded that the clause – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " – in Article XIX:1(a) of the GATT 1994 does have meaning, we are obliged by virtue of that conclusion to consider what that meaning *is*. Toward this end, we refer again to the language of Article XIX:1(a), in its entirety:

> If, *as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement*, *including tariff concessions*, *any product is being imported* into the territory of that Member in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers in that territory of like or directly competitive products, the Member shall be free, in respect of such product, and to the extent and for such time as may be necessary to prevent or remedy such injury, to suspend the obligation in whole or in part or to withdraw or modify the concession. (emphasis added)

91. To determine the meaning of the clause – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " – in sub-paragraph (a) of Article XIX:1, we must examine these words in their ordinary meaning, in their context and in light of the object and purpose of Article XIX.[79] We look first to the ordinary meaning of these words. As to the meaning of "unforeseen developments", we note that the dictionary definition of "unforeseen", particularly as it relates to the word "developments", is synonymous with

See also Appellate Body Report, *Japan – Alcoholic Beverages*, *supra,* footnote 72, p. 12; and Appellate Body Report, *Canada – Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, WT/DS103/AB/R, WT/DS113/AB/R, adopted 27 October 1999, para. 133.

[77]Panel Report, para. 8.58.

[78]As set out in the General Interpretative Note to Annex 1A of the *WTO Agreement.*

[79]As we have said in Appellate Body Report, *United States – Gasoline*, *supra*, footnote 72, p.17; Appellate Body Report, *Japan – Alcoholic Beverages*, *supra*, footnote 72, p. 11; Appellate Body Report, *India – Patents*, *supra*, footnote 25, para. 46; Appellate Body Report, *Argentina – Measures Affecting Imports of Footwear, Textiles, Apparel and Other Items*, WT/DS56/AB/R, adopted 22 April 1998, para. 47; Appellate Body Report, *European Communities – Customs Classification of Certain Computer Equipment*, WT/DS62/AB/R, adopted 22 June 1998, para. 84; Appellate Body Report, *United States – Import Prohibition of Certain Shrimp and Shrimp Products*, WT/DS58/AB/R, adopted 6 November 1998, para. 114.

"unexpected".[80] "Unforeseeable", on the other hand, is defined in the dictionaries as meaning "unpredictable" or "incapable of being foreseen, foretold or anticipated".[81] Thus, it seems to us that the ordinary meaning of the phrase "as a result of unforeseen developments" requires that the developments which led to a product being imported in such increased quantities and under such conditions as to cause or threaten to cause serious injury to domestic producers must have been "unexpected". With respect to the phrase "of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … ", we believe that this phrase simply means that it must be demonstrated, as a matter of fact, that the importing Member has incurred obligations under the GATT 1994, including tariff concessions. Here, we note that the Schedules annexed to the GATT 1994 are made an integral part of Part I of that Agreement, pursuant to paragraph 7 of Article II of the GATT 1994. Therefore, any concession or commitment in a Member's Schedule is subject to the obligations contained in Article II of the GATT 1994.

92. When we examine this clause – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " – in its immediate context in Article XIX:1(a), we see that it relates directly to the second clause in that paragraph – "If, … , any product is being imported into the territory of that Member in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers in that territory of like or directly competitive products …". The latter, or second, clause in Article XIX:1(a) contains the three *conditions* for the application of safeguard measures. These *conditions*, which are reiterated in Article 2.1 of the *Agreement on Safeguards*[82], are that: (1) a product is being imported "in such quantities and under such conditions"; (2) "as to cause"; (3) serious injury or the threat of serious injury to domestic producers. The first clause in Article XIX:1(a) – "as a result of unforeseen developments and of the obligations incurred by a Member under the Agreement, including tariff concessions … " – is a dependent clause which, in our view, is linked grammatically to the verb phrase "is being imported" in the second clause of that paragraph. Although we do not view the first clause in Article XIX:1(a) as establishing independent *conditions* for the application of a safeguard measure, additional to the *conditions* set forth in the second clause of that paragraph, we do believe that the first clause describes certain *circumstances* which must be demonstrated as a matter of fact in order for a safeguard measure to be applied consistently with the provisions of Article XIX of the GATT 1994. In this sense, we believe that there is a logical connection between the circumstances described in the first clause – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " – and the conditions set forth in the second clause of Article XIX:1(a) for the imposition of a safeguard measure.

93. Our reading is supported by the context of these provisions. As part of the context of paragraph 1(a) of Article XIX, we note that the title of Article XIX is: "*Emergency Action on Imports of Particular Products*". The words "emergency action" also appear in Article 11.1(a) of the *Agreement on Safeguards*. We note once again, that Article XIX:1(a) requires that a product be imported "*in such increased quantities* and *under such conditions* as *to cause or threaten serious injury* to domestic producers". (emphasis added) Clearly, this is not the language of ordinary events in routine commerce. In our view, the text of Article XIX:1(a) of the GATT 1994, read in its ordinary meaning and in its context, demonstrates that safeguard measures were intended by the drafters of the GATT to be matters out of the ordinary, to be matters of urgency, to be, in short, "emergency actions." And, such "emergency actions" are to be invoked only in situations when, as a result of obligations incurred under the GATT 1994, a Member finds itself confronted with developments it had not "foreseen" or "expected" when it incurred that obligation. The remedy that Article XIX:1(a) allows in

[80]See *Webster's Third New International Dictionary*, (Encyclopaedia Britannica Inc., 1966) Vol. 3, p. 2496; and *Black's Law Dictionary*, 6th ed., (West Publishing Company, 1990) p. 1530.

[81]*Ibid.*

[82]We note that the title of Article 2 of the *Agreement on Safeguards* is: "*Conditions*".

this situation is temporarily to "suspend the obligation in whole or in part or to withdraw or modify the concession". Thus, Article XIX is clearly, and in every way, an extraordinary remedy.

94. This reading of these phrases is also confirmed by the object and purpose of Article XIX of the GATT 1994. The object and purpose of Article XIX is, quite simply, to allow a Member to re-adjust temporarily the balance in the level of concessions between that Member and other exporting Members when it is faced with "unexpected" and, thus, "unforeseen" circumstances which lead to the product "being imported" in "such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers of like or directly competitive products". In perceiving and applying this object and purpose to the interpretation of this provision of the *WTO Agreement*, it is essential to keep in mind that a safeguard action is a "fair" trade remedy. The application of a safeguard measure does not depend upon "unfair" trade actions, as is the case with anti-dumping or countervailing measures. Thus, the import restrictions that are imposed on products of exporting Members when a safeguard action is taken must be seen, as we have said, as extraordinary. And, when construing the prerequisites for taking such actions, their extraordinary nature must be taken into account.

95. Our reading of these prerequisites does precisely this, by making certain that *all* the relevant provisions of the *Agreement on Safeguards* and Article XIX of the GATT 1994 relating to safeguard measures are given their full meaning and their full legal effect. Our reading, too, is consistent with the desire expressed by the Uruguay Round negotiators in the Preamble to the *Agreement on Safeguards* "to clarify and *reinforce* the disciplines of GATT 1994, and *specifically those of its Article XIX* …, to re-establish *multilateral control* over safeguards and eliminate measures that escape such control …".[83] In furthering this statement of the object and purpose of the *Agreement on Safeguards*, it must always be remembered that safeguard measures result in the temporary suspension of concessions or withdrawal of obligations, such as those in Article II and Article XI of the GATT 1994, which are fundamental to the *WTO Agreement*. As such, safeguard measures may be applied only when *all* the provisions of the *Agreement on Safeguards* and Article XIX of the GATT 1994 are clearly demonstrated.

96. In addition, we note that our reading of the clause – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " – in Article XIX:1(a) is also consistent with the one GATT 1947 case that involved Article XIX, the so-called "*Hatters' Fur*" case.[84] Members of the Working Party in that case, in 1951, stated:

> … "unforeseen developments" should be interpreted to mean developments occurring after the negotiation of the relevant tariff concession which it would not be reasonable to expect that the negotiators of the country making the concession could and should have foreseen at the time when the concession was negotiated.[85]

97. In the light of all of this, we do not agree with the Panel that any safeguard investigations conducted or safeguard measures imposed after the entry into force of the *WTO Agreement* "which meet the requirements of the new Safeguards Agreement *satisfy* the requirements of Article XIX of GATT." (emphasis added) Therefore, we reverse the Panel's conclusion in paragraph 8.69 of the

[83] *Agreement on Safeguards*, Preamble.

[84] *Report of the Intersessional Working Party on the Complaint of Czechoslovakia Concerning the Withdrawal by the United States of a Tariff Concession under the Terms of Article XIX*, ("*Hatters' Fur*"), GATT/CP/106, adopted 22 October 1951.

[85] *Supra*, footnote 84, para. 9. This interpretation was proposed by the representative of Czechoslovakia, and was accepted by the majority of the Working Party with the exception of the United States.

Panel Report that safeguard measures imposed after entry into force of the *WTO Agreement* which meet the requirements of the *Agreement on Safeguards* necessarily "satisfy" the requirements of Article XIX of the GATT 1994, as well as the Panel's finding that the Uruguay Round negotiators "expressly omitted" the clause – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " – from Article 2 of the *Agreement on Safeguards*.

98. As will be seen, in the final section of this Report, we uphold the conclusions of the Panel that Argentina's investigation in this case was inconsistent with the requirements of Articles 2 and 4 of the *Agreement on Safeguards*. As a consequence, there is *no legal basis* for the safeguard measures imposed by Argentina. For this reason, we do not believe that it is necessary to complete the analysis of the Panel relating to the claim made by the European Communities under Article XIX of the GATT 1994 by ruling on whether the Argentine authorities have, in their investigation, demonstrated that the increased imports in this case occurred "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … ".

VI. Imposition of Safeguard Measures by a Member of a Customs Union

99. Argentina claims on appeal that the Panel misinterpreted footnote 1 to Article 2.1 of the *Agreement on Safeguards* and erred by "imposing an obligation" on a member of a customs union to apply any safeguard measure on other members of that customs union whenever imports from all sources are taken into account in a safeguards investigation.

100. The Panel described the issue before it as follows:

> … the essential question is whether Argentina was permitted under the Safeguards Agreement to take MERCOSUR imports into account in the analysis of injury factors and of a causal link between increased imports and the alleged (threat of) serious injury, and was at the same time permitted to exclude MERCOSUR countries from the application of the safeguard measure imposed.[86]

101. Article 2 of the *Agreement on Safeguards* provides as follows:

> *Conditions*
>
> 1. A Member[1] may apply a safeguard measure to a product only if that Member has determined, pursuant to the provisions set out below, that such product is being imported into its territory in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products.
>
> 2. Safeguard measures shall be applied to a product being imported irrespective of its source.

[1] A customs union may apply a safeguard measure as a single unit or on behalf of a member State. When a customs union applies a safeguard measure as a single unit, all the requirements for the determination of serious injury or threat thereof under this Agreement shall be based on the conditions existing in the customs union as a whole.

[86] Panel Report, para. 8.75.

> When a safeguard measure is applied on behalf of a member State, all the requirements for the determination of serious injury or threat thereof shall be based on the conditions existing in that member State and the measure shall be limited to that member State. Nothing in this Agreement prejudges the interpretation of the relationship between Article XIX and paragraph 8 of Article XXIV of GATT 1994.

102. The Panel examined the ordinary meaning of footnote 1 to Article 2.1, and stated that "*in the case of measures imposed by a customs union* there are two options for imposing safeguard measures, i.e., (i) as a single unit or (ii) on behalf of a member State."[87] (emphasis added) The Panel assumed that it was dealing with a safeguard measure imposed by a customs union "on behalf of a member State" within the meaning of the first and third sentences of footnote 1, and concluded that the "footnote does not concern *to whom* but rather *by whom* a safeguard measure may be applied."[88] The Panel then proceeded to examine the context of Article 2.1 and the footnote thereto. The Panel declared this context to be Article 2.2, which provides that "[s]afeguard measures shall be applied to a product being imported irrespective of its source."[89] The Panel then stated that:

> The ordinary meaning of Article 2.2 would appear to imply that, as a result of a member-State-specific investigation, safeguard measures have to be imposed on a non-discriminatory basis against products from all sources of supply, regardless of whether they originate from within or from outside of the customs union.[90]

103. On the basis of this reasoning, the Panel stated its interpretation that:

> … the two options offered by the footnote to Article 2.1 read in conjunction with Article 2.2 imply a *parallelism* between the scope of a safeguard *investigation* and the scope of the *application* of safeguard measures. Thus, in the light of the context of the footnote to Article 2.1, a member-state-specific investigation in which serious injury or threat thereof is found based on imports from all sources could only lead to the imposition of safeguard measures on a MFN-basis against all sources of intra-regional as well as extra-regional supply of a customs union.[91]

The Panel concluded, on the basis of its reasoning relating to Article 2, that "a member-state-specific investigation that finds serious injury or threat thereof caused by imports from all sources cannot serve as a basis for imposing a safeguard measure on imports only from third-country sources of supply."[92]

104. The Panel then turned its attention to Article XXIV of the GATT 1994, in response to an argument by Argentina that Article XXIV of the GATT 1994 and certain MERCOSUR regulations prohibited Argentina from imposing safeguard measures on other MERCOSUR countries. After a lengthy analysis of Article XXIV:8 of the GATT 1994, the Panel stated:

[87] *Ibid.*, para. 8.78.

[88] *Ibid.*, para. 8.83.

[89] *Ibid.*, para. 8.84.

[90] Panel Report, para. 8.84.

[91] *Ibid.*, para. 8.87.

[92] *Ibid.*, para. 8.91.

> … we do not agree with the argument that in the case before us Argentina is prevented by Article XXIV:8 of GATT from applying safeguard measures to all sources of supply, i.e., third countries as well as other member States of MERCOSUR.[93]

105. Finally, the Panel concluded as follows:

> … in the light of Article 2 of the Safeguards Agreement and Article XXIV of GATT, we conclude that in the case of a customs union the imposition of a safeguard measure only on third-country sources of supply cannot be justified on the basis of a member-state-specific investigation that finds serious injury or threat thereof caused by imports from all sources of supply from within and outside a customs union.[94]

106. We question the Panel's implicit assumption that footnote 1 to Article 2.1 of the *Agreement on Safeguards* applies to the facts of this case. The ordinary meaning of the first sentence of footnote 1 appears to us to be that the footnote only applies when a customs union applies a safeguard measure "as a single unit or on behalf of a member State".[95] On the facts of this case, Argentina applied the safeguard measures at issue after an investigation by Argentine authorities of the effects of imports from all sources on the Argentine domestic industry.

107. MERCOSUR did not apply these safeguard measures, either as a single unit or on behalf of Argentina.[96] When the safeguard measures at issue in this case were adopted by the government of Argentina, the transitional provisions in Chapter XII of the Regulation on the Application of Safeguard Measures to Imports from Non-Members of MERCOSUR (the "Regulation"), approved by Common Market Decision No. 17/96, were in effect among the State Parties of MERCOSUR.[97] According to these transitional provisions, the investigation procedure for the adoption of safeguard measures was to be conducted by the competent authorities of the State Party in question, applying relevant national legislation.[98]

[93] *Ibid.*, para. 8.101.

[94] Panel Report, para. 8.102.

[95] We also note that footnote 1 relates to the word "Member" in Article 2.1, which is commonly understood to mean a Member of the WTO.

[96] It is true that on 26 September 1997, Uruguay, as Pro Tempore President of MERCOSUR and on behalf of Argentina, notified the definitive safeguard measure imposed by Argentina. (G/SG/N/10/ARG/1/Suppl.2, G/SG/N/11/ARG/1/Supp.2, G/SG/14/Suppl.1 and G/L/195/Suppl.1, 22 October 1997). However, all relevant resolutions were adopted by Argentina alone, pursuant to Argentine national laws. We further note that that all other notifications relating to the measures at issue in this case were made by Argentina acting on its own behalf. In particular, on 26 September 1997 – the same day as Uruguay notified the measure on behalf of Argentina – Argentina itself transmitted a copy of Resolution 987/87 to the Committee on Safeguards (G/SG/N/10/ARG/1/Suppl.1, G/SG/N/11/ARG/1/Suppl.1, 10 October 1997).

[97] Adopted by the Council of Ministers of MERCOSUR in December 1996. See Panel Report, para. 5.103.

[98] In response to questions during the oral hearing, Argentina confirmed that:

> … until 31 December 1998, the common safeguards regime of MERCOSUR provided for this modality of application of a measure which would permit a state member of the customs union to apply the measure uniquely and that it would be notified by MERCOSUR. That is why the measure was applied by Argentina within its regulatory framework.

108. Therefore, at the time the safeguard measures at issue in this case were imposed by the Government of Argentina, these measures were not applied by MERCOSUR "on behalf of" Argentina, but rather, they were applied by Argentina. It is Argentina that is a Member of the WTO for the purposes of Article 2 of the *Agreement on Safeguards*, and it is Argentina that applied the safeguard measures after conducting an investigation of products being imported into *its* territory and the effects of those imports on *its* domestic industry. For these reasons, we do not believe that footnote 1 to Article 2.1 applies to the safeguard measures imposed by Argentina in this case. As a result, we find that the Panel erred in assuming that footnote 1 applied, and we, therefore, reverse the legal reasoning and findings of the Panel relating to footnote 1 to Article 2.1 of the *Agreement on Safeguards*.

109. Having found that footnote 1 to Article 2.1 is not applicable in this case, we also are not persuaded that an analysis of Article XXIV of the GATT 1994 was relevant to the specific issue that was before the Panel. This issue, as the Panel itself observed, is whether Argentina, after including imports from all sources in its investigation of "increased imports" of footwear products into its territory and the consequent effects of such imports on its domestic footwear industry, was justified in excluding other MERCOSUR member States from the application of the safeguard measures. In our Report in *Turkey – Restrictions on Imports of Textile and Clothing Products*, we stated that under certain conditions, "Article XXIV may justify a measure which is inconsistent with certain other GATT provisions."[99] We indicated, however, that this defence is available only when it is demonstrated by the Member imposing the measure that "the measure at issue is introduced upon the formation of a customs union that fully meets the requirements of sub-paragraphs 8(a) and 5(a) of Article XXIV" and "that the formation of that customs union would be prevented if it were not allowed to introduce the measure at issue."[100]

110. In this case, we note that Argentina did not argue before the Panel that Article XXIV of the GATT 1994 provided it with a defence to a finding of violation of a provision of the GATT 1994. As Argentina did not argue that Article XXIV provided it with a defence against a finding of violation of a provision of the GATT 1994, and as the Panel did not consider whether the safeguard measures at issue were introduced upon the formation of a customs union that fully meets the requirements of sub-paragraphs 8(a) and 5(a) of Article XXIV, we believe that the Panel erred in deciding that an examination of Article XXIV:8 of the GATT 1994 was relevant to its analysis of whether the safeguard measures at issue in this case were consistent with the provisions of Articles 2 and 4 of the *Agreement on Safeguards*. Accordingly, as we have found that the Panel's analysis of Article XXIV of the GATT 1994 was not relevant in this case, we reverse the Panel's legal findings and conclusions relating to Article XXIV of the GATT 1994.[101]

111. We now turn to examine whether the Panel was correct in its interpretation that there is an implied "*parallelism* between the scope of a safeguard *investigation* and the scope of the *application* of safeguard measures."[102] Article 2.1 provides that:

> A *Member may* apply a safeguard measures … *only* if *that Member* has determined … that such product is being imported into *its territory* in such increased quantities … and under such conditions as to cause or threaten to cause serious injury to the domestic industry … (emphasis added)

[99]Appellate Body Report, WT/DS34/AB/R, adopted 19 November 1999, para. 58.

[100]*Ibid.*

[101]Panel Report, paras. 8.93-8.102.

[102]*Ibid.*, para. 8.87.

Article 4.1(c) defines "domestic industry" as meaning "the producers as a whole of the like or directly competitive products operating *within the territory of a Member* …". (emphasis added) Taken together, the provisions of Articles 2.1 and 4.1(c) of the *Agreement on Safeguards* demonstrate that a Member of the WTO may only apply a safeguard measure after that Member has determined that a product is being imported *into its territory* in such increased quantities and under such conditions as to cause or threaten to cause serious injury to *its* domestic industry *within its territory*. According to Articles 2.1 and 4.1(c), therefore, all of the relevant aspects of a safeguard investigation must be conducted by the Member that ultimately applies the safeguard measure, on the basis of increased imports entering its territory and causing or threatening to cause serious injury to the domestic industry within its territory.

112. While Articles 2.1 and 4.1(c) set out the conditions for imposing a safeguard measure and the requirements for the scope of a safeguard *investigation*, these provisions do not resolve the matter of the scope of *application* of a safeguard measure. In that context, Article 2.2 of the *Agreement on Safeguards* provides:

> Safeguard measures shall be applied to a product being imported irrespective of its source.

As we have noted, in this case, Argentina applied the safeguard measures at issue after conducting an investigation of products being imported into Argentine territory and the effects of those imports on Argentina's domestic industry. In applying safeguard measures on the basis of this investigation in this case, Argentina was also required under Article 2.2 to apply those measures to imports from all sources, including from other MERCOSUR member States.

113. On the basis of this reasoning, and on the facts of this case, we find that Argentina's investigation, which evaluated whether serious injury or the threat thereof was caused by imports from *all* sources, could only lead to the imposition of safeguard measures on imports from *all* sources. Therefore, we conclude that Argentina's investigation, in this case, cannot serve as a basis for excluding imports from other MERCOSUR member States from the application of the safeguard measures.

114. For all the above reasons, we reverse the Panel's legal findings and conclusions relating to footnote 1 to Article 2.1 of the *Agreement on Safeguards* and Article XXIV of the GATT 1994. We conclude that Argentina, on the facts of this case, cannot justify the imposition of its safeguard measures only on non-MERCOSUR third country sources of supply on the basis of an investigation that found serious injury or threat thereof caused by imports from all sources, including imports from other MERCOSUR member States. However, as we have stated, we do not agree that the Panel was dealing, on the facts of this case, with a safeguard measure applied by a customs union *on behalf of* a member State. And we wish to underscore that, as the issue is not raised in this appeal, we make no ruling on whether, as a general principle, a member of a customs union can exclude other members of that customs union from the application of a safeguard measure.

VII. Claims under Articles 2 and 4 of the *Agreement on Safeguards*

115. Although Argentina acknowledges that the Panel correctly articulated the proper standard of review based on Article 11 of the DSU, Argentina alleges that the Panel erred in *applying* that standard of review, by conducting a "*de facto de novo* review"[103] of the findings and conclusions of the Argentine authorities. As a consequence, Argentina maintains that the Panel read certain methodologies into the *Agreement on Safeguards* where that Agreement itself is silent, and thereby added to the rights and obligations of Members under that Agreement in violation of Article 3.2 of the

[103]Argentina's appellant's submission, p. 26.

DSU.[104] The *Agreement on Safeguards*, in Argentina's view, allows Members discretion in the way it is implemented; however, the Panel, in its reasoning, created new requirements that are not contained in the *Agreement on Safeguards*. Argentina also claims that the Panel made several legal errors in its analysis of the requirements of Articles 2 and 4 of the *Agreement on Safeguards*, in particular, relating to the conditions of increased imports, serious injury and causation that must be satisfied before a safeguard measure may be applied.[105] Finally, Argentina submits that the Panel Report was not adequately reasoned because the Panel failed to reach reasonable conclusions based on the totality of the evidence before the Argentine authorities, and that the Panel has therefore not fulfilled the requirement of Article 12.7 of the DSU that it provide a "basic rationale" for its ruling.[106]

A. *Standard of Review*

116. The Panel stated its approach to the standard of review as follows:

> In our view, we have no mandate to conduct a *de novo* review of the safeguard investigation conducted by the national authority. Rather, we must determine whether Argentina has abided by its multilateral obligations under the Agreement on Safeguards … in reaching its affirmative finding of injury and causation in the footwear investigation.[107]
>
> …
>
> … our review will be limited to an objective assessment, pursuant to Article 11 of the DSU, of whether the domestic authority has considered all relevant facts, including an examination of each factor listed in Article 4.2(a), of whether the published report on the investigation contains adequate explanation of how the facts support the determination made, and consequently of whether the determination made is consistent with Argentina's obligations under the Safeguards Agreement. We note that this was the standard of review applied by the Panel in *United States – Underwear*, with which we agree.[108]

117. Although the Panel ultimately stated the standard of review correctly, we are surprised that the Panel based its approach on several reports by previous panels reviewing domestic investigations in the context of two Tokyo Round Agreements: the *Agreement on Implementation of Article VI of GATT* and the *Agreement on Interpretation and Application of Article VI, XVI and XXIII of GATT*[109] as well as two previous WTO panels in *United States – Underwear* and *United States – Shirts and Blouses*.[110]

[104]*Ibid.*, p. 43.

[105]*Ibid.*, pp. 43-66.

[109]Panel Report, *New Zealand – Imports of Electrical Transformers from Finland*, adopted on 18 July 1985, BISD 32S/55; Panel Report, *United States – Salmon*, *supra*, footnote 29, para. 494.

[110]*Supra*, footnote 31.

118. We have stated, on more than one occasion, that, for all but one of the covered agreements, Article 11 of the DSU sets forth the appropriate standard of review for panels.[111] The only exception is the *Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994*, in which a specific provision, Article 17.6, sets out a special standard of review for disputes arising under that Agreement.

119. In our report in *European Communities – Hormones*, we stated that:

> Article 11 of the DSU bears directly on this matter and, in effect, articulates with great succinctness but with sufficient clarity the appropriate standard of review for panels in respect of both the ascertainment of facts and the legal characterization of such facts under the relevant agreements. …[112]
>
> …
>
> So far as fact-finding by panels is concerned, their activities are always constrained by the mandate of Article 11 of the DSU: the applicable standard is neither *de novo* review as such, nor "total deference", but rather the "objective assessment of the facts".[113]

120. Although that case dealt with the panel's assessment of the facts, and this case deals with the Panel's assessment of the matter, more generally, the same reasoning applies here. The *Agreement on Safeguards*, like the *Agreement on the Application of Sanitary and Phytosanitary Measures*, is silent as to the appropriate standard of review. Therefore, Article 11 of the DSU, and, in particular, its requirement that "… a panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements", sets forth the appropriate standard of review for examining the consistency of a safeguard measure with the provisions of the *Agreement on Safeguards*.

121. Based on our review of the Panel's reasoning, we find that the Panel correctly stated the appropriate standard of review, as set forth in Article 11 of the DSU. And, with respect to its *application* of the standard of review, we do not believe that the Panel conducted a *de novo* review of the evidence, or that it substituted its analysis and judgement for that of the Argentine authorities. Rather, the Panel examined whether, as required by Article 4 of the *Agreement on Safeguards*, the Argentine authorities had considered all the relevant facts and had adequately explained how the facts supported the determinations that were made. Indeed, far from departing from its responsibility, in our view, the Panel was simply fulfilling its responsibility under Article 11 of the DSU in taking the approach it did. To determine whether the safeguard investigation and the resulting safeguard measure applied by Argentina were consistent with Article 4 of the *Agreement on Safeguards*, the Panel was obliged, by the very terms of Article 4, to assess whether the Argentine authorities had examined all the relevant facts and had provided a reasoned explanation of how the facts supported their determination.

122. In addition to "an objective assessment of the facts ", we note, too, that part of the "objective assessment of the matter" required of a panel by Article 11 of the DSU is an assessment of "the applicability of and conformity with the relevant covered agreements". Consequently, we must also

[111]See e.g., Appellate Body Report, *EC Measures Concerning Meat and Meat Products* ("*European Communities – Hormones*"), WT/DS26/AB/R, WT/DS48/AB/R, adopted 13 February 1998, paras. 114-119; *Australia – Salmon*, *supra*, footnote 26, para. 2.67.

[112]Appellate Body Report, *European Communities – Hormones*, *supra*, footnote 111, para. 116.

[113]*Ibid.*, para. 117.

examine whether the Panel correctly interpreted and applied the substantive provisions of Articles 2 and 4 of the *Agreement on Safeguards*, in particular, those relating to the requirements of imports "in such increased quantities", "serious injury" to the domestic industry, and causation.

B. *Interpretation and Application of Articles 2 and 4 of the Agreement on Safeguards*

123. Articles 2.1 and 4.2 of the *Agreement on Safeguards* provide as follows:

> *Article 2*
>
> *Conditions*
>
> 1. A Member may apply a safeguard measure to a product only if that Member has determined, pursuant to the provisions set out below, that such product is being imported into its territory in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products. (footnote omitted)
>
> *Article 4*
>
> *Determination of Serious Injury or Threat Thereof*
>
> 2. (a) In the investigation to determine whether increased imports have caused or are threatening to cause serious injury to a domestic industry under the terms of this Agreement, the competent authorities shall evaluate all relevant factors of an objective and quantifiable nature having a bearing on the situation of that industry, in particular, the rate and amount of the increase in imports of the product concerned in absolute and relative terms, the share of the domestic market taken by increased imports, changes in the level of sales, production, productivity, capacity utilization, profits and losses, and employment.
>
> (b) The determination referred to in subparagraph (a) shall not be made unless this investigation demonstrates, on the basis of objective evidence, the existence of the causal link between increased imports of the product concerned and serious injury or threat thereof. When factors other than increased imports are causing injury to the domestic industry at the same time, such injury shall not be attributed to increased imports.
>
> (c) The competent authorities shall publish promptly, in accordance with the provisions of Article 3, a detailed analysis of the case under investigation as well as a demonstration of the relevance of the factors examined.

124. We recall the Panel's ultimate conclusions on Articles 2.1 and 4.2:

> For the foregoing reasons, we conclude that Argentina's investigation did not demonstrate that there were increased imports within the meaning of Articles 2.1 and 4.2(a); that the investigation did not evaluate all relevant factors of an objective and quantifiable nature having a bearing on the situation of the domestic industry within the meaning of Article 4.2(a); that the investigation did not demonstrate on the basis of objective evidence the existence of a causal link between increased imports and serious injury within the meaning of Article 2.1 and 4.2(b); that the investigation did not adequately take into account factors other than increased imports within the meaning of Article 4.2(b); and that the published report concerning the investigation did not set forth a complete analysis of the case under investigation as well as a demonstration of the relevance of the factors examined within the meaning of Article 4.2(c).
>
> Therefore, we find that Argentina's investigation and determinations of increased imports, serious injury and causation are inconsistent with Articles 2 and 4 of the Safeguards Agreement. As such, we find that Argentina's investigation provides *no* legal basis for the application of the definitive safeguard measure at issue, or any safeguard measure.[114]

1. Increased Imports

125. With respect to the requirement relating to "increased imports", the Panel stated as follows:

> The Agreement on Safeguards requires an increase in imports as a basic prerequisite for the application of a safeguard measure. The relevant provisions are in Articles 2.1 and 4.2(a).[115]
>
> …
>
> Thus, to determine whether imports have increased in "such quantities" for purposes of applying a safeguard measure, these two provisions require an analysis of the rate and amount of the increase in imports, in absolute terms and as a percentage of domestic production.[116]

126. In its evaluation of whether the investigation by the Argentine authorities demonstrated the required increase in imports under Articles 2.1 and 4.2(a), the Panel stated the following:

> *… the Agreement requires not just an increase (i.e., any increase) in imports, but an increase in "such…quantities" as to cause or threaten to cause serious injury*. The Agreement provides no numerical guidance as to how this is to be judged, nor in our view could it do so. But this does not mean that this requirement is meaningless. To the contrary, we believe that it means that the increase in imports must be judged in its full context, in particular with regard to its "rate and amount" as required by Article 4.2(a). Thus, considering the changes in import levels over the entire period of investigation, as discussed above, seems unavoidable when making a determination of whether

[114]Panel Report, paras. 8.279 and 8.280.

[115]*Ibid.*, para. 8.138.

[116]*Ibid.*, para. 8.141.

> there has been an increase in imports "in such quantities" in the sense of Article 2.1.[117] (emphasis added)

127. The Panel concluded that Argentina did not adequately consider the "intervening trends in imports, in particular the steady and significant declines in imports beginning in 1994, as well as the sensitivity of the analysis to the particular end points of the investigation period used."[118] For these reasons, the Panel concluded that "Argentina's investigation did not demonstrate that there were increased imports within the meaning of Articles 2.1 and 4.2(a)".[119] The Panel, though, rejected an argument made by the European Communities "that only a 'sharply increasing' trend in imports at the end of the investigation period can satisfy this requirement."[120]

128. Argentina maintains that, in its interpretation and application of the requirement of "increased imports" in Articles 2.1 and 4.2 of the *Agreement on Safeguards*, the Panel "impose[d] a variety of methodological hurdles which must be overcome before a finding of 'increased imports' can be justified."[121] In particular, Argentina argues that the Panel misinterpreted the word "rate" in Article 4.2(a) to include "direction", and found that there could only be "increased imports" if: (i) a change in the base year from 1991 to 1992 would still result in an increase; (ii) the analysis of end points and interim periods is mutually reinforcing; and (iii) it is found that the decrease in imports in 1994 and 1995 was temporary.[122] Argentina also asserts that the Panel "collapsed" the "increased imports" requirement "with the other qualitative requirements of Article 2" and wrongly treated it as a "qualitative, rather than a separate quantitative requirement."[123] The ordinary meaning of "increased imports", in Argentina's view, is that imports have become greater, and Argentina argues that there is no factual or contextual support for any additional requirements in the *Agreement on Safeguards*.[124]

129. We agree with the Panel that Articles 2.1 and 4.2(a) of the *Agreement on Safeguards* require a demonstration not merely of *any* increase in imports, but, instead, of imports "in such increased quantities … and under such conditions as to cause or threaten to cause serious injury."[125] In addition, we agree with the Panel that the specific provisions of Article 4.2(a) require that "the *rate* and *amount* of the increase in imports … in absolute and relative terms" (emphasis added) must be evaluated.[126] Thus, we do not dispute the Panel's view and ultimate conclusion that the competent authorities are required to consider the *trends* in imports over the period of investigation (rather than just comparing the end points) under Article 4.2(a).[127] As a result, we agree with the Panel's conclusion that "Argentina did not adequately consider the intervening trends in imports, in particular the steady and significant declines in imports beginning in 1994, as well as the sensitivity of the analysis to the particular end points of the investigation period used."[128]

[126]Panel Report, paras. 8.140-8.141.

[127]*Ibid.*, para. 8.276.

[128]*Ibid.*

130. All the same, while we do not find that the Panel erred in its application of the requirement in Article 2.1 of the *Agreement in Safeguards* that the "product *is being imported* … in such increased quantities", we do find the Panel's interpretation of that requirement somewhat lacking. We note that the Panel characterized this condition in Article 2.1 on several occasions in the Panel Report simply as "increased imports". However, the actual requirement, and we emphasize that this requirement is found in *both* Article 2.1 of the *Agreement on Safeguards* and Article XIX:1(a) of the GATT 1994, is that "such product *is being imported* … in such increased quantities"[129], "and under such conditions as to cause or threaten to cause serious injury to the domestic industry". (emphasis added) Although we agree with the Panel that the "increased quantities" of imports cannot be just *any* increase, we do not agree with the Panel that it is reasonable to examine the trend in imports over a five-year historical period. In our view, the use of the present tense of the verb phrase "is being imported" in both Article 2.1 of the *Agreement on Safeguards* and Article XIX:1(a) of the GATT 1994 indicates that it is necessary for the competent authorities to examine recent imports, and not simply trends in imports during the past five years – or, for that matter, during any other period of several years.[130] In our view, the phrase "is being imported" implies that the increase in imports must have been sudden and recent.

131. We recall here our reasoning and conclusions above on the meaning of the phrase "as a result of unforeseen developments" in Article XIX:1(a) of the GATT 1994. We concluded there that the increased quantities of imports should have been "unforeseen" or "unexpected".[131] We also believe that the phrase "in *such* increased quantities" in Article 2.1 of the *Agreement on Safeguards* and Article XIX:1(a) of the GATT 1994 is meaningful to this determination. In our view, the determination of whether the requirement of imports "in such increased quantities" is met is not a merely mathematical or technical determination. In other words, it is not enough for an investigation to show simply that imports of the product this year were more than last year – or five years ago. Again, and it bears repeating, not just *any* increased quantities of imports will suffice. There must be "*such* increased quantities" as to cause or threaten to cause serious injury to the domestic industry in order to fulfil this requirement for applying a safeguard measure. And this language in both Article 2.1 of the *Agreement on Safeguards* and Article XIX:1(a) of the GATT 1994, we believe, requires that the increase in imports must have been recent enough, sudden enough, sharp enough, and significant enough, both quantitatively and qualitatively, to cause or threaten to cause "serious injury".

2. Serious Injury

132. With respect to the requirement relating to "serious injury", Article 4.2(a) of the *Agreement on Safeguards* provides, in relevant part:

> In the investigation to determine whether increased imports have caused or are threatening to cause serious injury to a domestic industry under the terms of this Agreement, the competent authorities *shall evaluate all relevant factors* of an objective and quantifiable nature *having a bearing on the situation of that industry*, *in particular*, … the share of the domestic market taken by increased imports,

[129]Article 2.1 of the *Agreement on Safeguards* contains the additional words "absolute or relative to domestic production".

[130]The Panel, in footnote 530 to para. 8.166 of the Panel Report, recognizes that the present tense is being used, which it states "would seem to indicate that, whatever the starting-point of an investigation period, it has to *end* no later than the very recent past." (emphasis added) Here, we disagree with the Panel. We believe that the relevant investigation period should not only *end* in the very recent past, the investigation period should *be* the recent past.

[131]*Supra*, paras. 91-98.

> changes in the level of sales, production, productivity, capacity utilization, profits and losses, and employment.

133. The Panel stated that the requirements of Article 4.2(a) obliged it to:

> … consider, first, whether all injury factors listed in the Agreement were considered by Argentina, as the text of Article 4.2(a) of the Agreement ("all relevant factors … including … changes in the level of sales, production, productivity, capacity utilisation, profits and losses, and employment") is unambiguous that at a minimum each of the factors listed, in addition to all other factors that are "relevant", must be considered.[132]

The Panel also concluded that, pursuant to the provisions of Article 4.2(c) and, by reference, Article 3 of the *Agreement on Safeguards*, it was required to examine whether Argentina's findings and conclusions on "serious injury" were supported by the evidence before the Argentine authorities.

134. The Panel read Article 4.2(a) literally to mean that all the listed factors: "changes in the level of sales, production, productivity, capacity utilisation, profits and losses, and employment" – must be evaluated in every investigation. In addition, the Panel stated that all other relevant factors having a bearing on the situation of the industry must also be evaluated. As the Panel found that Argentina had not evaluated two of the listed factors, capacity utilization and productivity, the Panel concluded that Argentina's investigation was not consistent with the requirements of Article 4.2(a).[133]

135. Argentina submits that the Panel erred in its analysis of Argentina's determination of "serious injury". According to Argentina, Article 4.2(c) of the *Agreement on Safeguards* requires only a demonstration of the relevance of the factors examined, rather than an examination of all the listed factors as relevant.[134] In response to the Panel's finding that Argentina had not properly evaluated the factors of capacity utilization and productivity, Argentina replies by maintaining that the factor of productivity is explicitly mentioned in Act 338 and that data sufficient to calculate capacity utilization was available to the Argentine authorities.[135] Furthermore, Argentina argues that neither capacity utilization nor productivity was a principal or a significant issue in the investigation.[136] Argentina also takes issue with the Panel's view that the available data for 1996 should have been examined by Argentina in its investigation of "serious injury". Here, Argentina responds that the record clearly shows that the data for 1996 was incomplete, and Argentina submits that it was appropriate and reasonable to use a single review period for which all the data was available as a basis for its determination of "serious injury". In addition, Argentina argues that the Panel erred in several aspects of its examination of the evidence considered by the Argentine authorities.

136. We agree with the Panel's interpretation that Article 4.2(a) of the *Agreement on Safeguards* requires a demonstration that the competent authorities evaluated, at a minimum, each of the factors listed in Article 4.2(a) as well as all other factors that are relevant to the situation of the industry concerned. Furthermore, we do not dispute the Panel's finding that Argentina did not evaluate all of the listed factors, in particular, capacity utilization and productivity. We consider the other points that Argentina has raised in this appeal, relating to the availability of data for 1996 and to the Panel's

[132]Panel Report, para. 8.206.

[133]*Ibid.*, para. 8.277.

[134]Argentina's appellant's submission, p. 60.

[135]*Ibid.*, p. 59.

[136]*Ibid.*, p. 60.

evaluation of the evidence considered by the Argentine authorities, to relate to matters of fact which are not within our mandate, under Article 17.6 of the DSU, to examine on appeal.

137. For these reasons, we uphold the Panel's conclusion that Argentina did not evaluate "all relevant factors of an objective and quantifiable nature having a bearing on the situation of that industry" as required by Article 4.2(a) of the *Agreement on Safeguards*.

138. However, although it was not necessary for the Panel to go beyond where it did in this case, as the Panel found that Argentina had *not* evaluated all of the required listed factors, we do not believe that an evaluation of the listed factors in Article 4.2(a) is all that is required to justify a determination of "serious injury" under the *Agreement on Safeguards*. We note, in this respect, that there is a definition of "serious injury" in Article 4.1(a) of the *Agreement on Safeguards*, which reads as follows:

> "serious injury" shall be understood to mean a *significant overall impairment* in the position of a domestic industry. (emphasis added)

And we note that, in its legal analysis of "serious injury" under Article 4.2(a), the Panel made no use whatsoever of this definition.

139. In our view, it is only when the *overall position* of the domestic industry is evaluated, in light of all the relevant factors having a bearing on a situation of that industry, that it can be determined whether there is "a significant overall impairment" in the position of that industry. Although Article 4.2(a) technically requires that certain listed factors must be evaluated, and that all other relevant factors must be evaluated, that provision does not specify what such an evaluation must demonstrate. Obviously, any such evaluation will be different for different industries in different cases, depending on the facts of the particular case and the situation of the industry concerned. An evaluation of each listed factor will not necessarily have to show that each such factor is "declining". In one case, for example, there may be significant declines in sales, employment and productivity that will show "significant overall impairment" in the position of the industry, and therefore will justify a finding of serious injury. In another case, a certain factor may not be declining, but the overall picture may nevertheless demonstrate "significant overall impairment" of the industry. Thus, in addition to a technical examination of whether the competent authorities in a particular case have evaluated all the listed factors and any other relevant factors, we believe that it is essential for a panel to take the definition of "serious injury" in Article 4.1(a) of the *Agreement on Safeguards* into account in its review of any determination of "serious injury".

3. Causation

140. With respect to the requirement of causation, Article 4.2(b) of the *Agreement on Safeguards* provides that a determination of serious injury:

> … shall not be made unless this investigation demonstrates, on the basis of objective evidence, the existence of the causal link between increased imports of the product concerned and serious injury or threat thereof. When factors other than increased imports are causing injury to the domestic industry at the same time, such injury shall not be attributed to increased imports.

141. The Panel interpreted the requirements of Article 4.2(b) as follows:

> … we will consider whether Argentina's causation analysis meets these requirements on the basis of (i) whether an upward trend in

> imports coincides with downward trends in the injury factors, and if not, whether a reasoned explanation is provided as to why nevertheless the data show causation; (ii) whether the conditions of competition in the Argentine footwear market between imported and domestic footwear as analysed demonstrate, on the basis of objective evidence, a causal link of the imports to any injury; and (iii) whether other relevant factors have been analysed and whether it is established that injury caused by factors other than imports has not been attributed to imports.[137]

142. On causation, the Panel stated:

> … the *trends* -- in both the injury factors and the imports -- matter as much as their absolute levels. In the particular context of a causation analysis, we also believe that this provision means that it is the *relationship* between the movements in imports (volume and market share) and the movements in injury factors that must be central to a causation analysis and determination.
>
> In practical terms, we believe therefore that this provision means that if causation is present, an increase in imports normally should coincide with a decline in the relevant injury factors. While such a coincidence by itself cannot *prove* causation (because, *inter alia*, Article 3 requires an explanation – i.e., "findings and reasoned conclusions"), its absence would create serious doubts as to the existence of a causal link, and would require a *very* compelling analysis of why causation still is present.[138]

143. Argentina argues on appeal that the Panel erred in establishing and applying three "standards" in its analysis of causation. First, Argentina maintains that the Panel required that an upward trend in imports must *coincide* with a *downward* trend in the injury factors. On this point, Argentina maintains that Article 4.2(c) of the *Agreement on Safeguards* refers to "changes" and not to "downward trends", so that there is no requirement that there be a "downward trend" in each year of the period of investigation. Moreover, Argentina maintains that the Panel's requirement of "coincidence" in time is not implied by the term "cause". Second, Argentina asserts that the Panel used the phrase "under such conditions" to develop a requirement that the "conditions of competition" between imported and domestic footwear in the Argentine market demonstrate a causal link between the increased imports and injury. Argentina asserts that there is no basis in the *Agreement on Safeguards* for this requirement. Third, Argentina maintains that the Panel required the Argentine authorities to establish that other relevant factors had been analyzed, and that injury caused by factors other than imports is not evidence of serious injury caused by imports. In Argentina's opinion, this requirement goes far beyond what is actually required in Article 4.2(b) of the *Agreement on Safeguards*.

144. We note that Article 4.2(a) requires the competent authorities to evaluate "the rate and amount of the increase in imports", "the share of the domestic market taken by increased imports", as well as the "changes" in the level of factors such as sales, production, productivity, capacity utilization, and others. We see no reason to disagree with the Panel's interpretation that the words "rate and amount" and "changes" in Article 4.2(a) mean that "the *trends* -- in both the injury factors

[137]Panel Report, para. 8.229.

[138]Panel Report, paras. 8.237 and 8.238.

and the imports -- matter as much as their absolute levels."[139] We also agree with the Panel that, in an analysis of causation, "it is the *relationship* between the *movements* in imports (volume and market share) and the *movements* in injury factors that must be central to a causation analysis and determination."[140] (emphasis added) Furthermore, with respect to a "coincidence" between an increase in imports and a decline in the relevant injury factors, we note that the Panel simply said that this should "normally" occur if causation is present.[141] The Panel qualified this statement, however, in the following sentence:

> While such a coincidence by itself cannot *prove* causation (because, *inter alia*, Article 3 requires an explanation – i.e., "findings and reasoned conclusions"), its absence would create serious doubts as to the existence of a causal link, and would require a *very* compelling analysis of why causation still is present.[142]

145. We are somewhat surprised that the Panel, having determined that there were no "increased imports", and having determined that there was no "serious injury", for some reason went on to make an assessment of causation. It would be difficult, indeed, to demonstrate a "causal link" between "increased imports" that did not occur and "serious injury" that did not exist. Nevertheless, we see no error in the Panel's interpretation of the causation requirements, or in its interpretation of Article 4.2(b) of the *Agreement on Safeguards*. Rather, we believe that Argentina has mischaracterized the Panel's interpretation and reasoning. Furthermore, we agree with the Panel's conclusions that "the conditions of competition between the imports and the domestic product were not analysed or adequately explained (in particular price); and that 'other factors' identified by the CNCE in the investigation were not sufficiently evaluated, in particular, the tequila effect."[143]

146. For all these reasons, we uphold the Panel's conclusion that "Argentina's findings and conclusions regarding causation were not adequately explained and supported by the evidence."[144]

147. And, on the basis of all of the above reasoning, we uphold the Panel's findings and conclusions in paragraph 8.279 and paragraph 8.280 of the Panel Report, including the conclusions that "Argentina's investigation and determinations of increased imports, serious injury and causation are inconsistent with Articles 2 and 4 of the Safeguards Agreement."[145] We also uphold the Panel's ultimate conclusion that "Argentina's investigation provides *no* legal basis for the application of the definitive safeguard measure at issue, or any safeguard measure."[146]

C. *Article 12.7 of the DSU*

148. Argentina also contends that the Panel violated Article 12.7 of the DSU by failing to provide "a basic rationale" for its findings and conclusions. Article 12.7 of the DSU reads, in relevant part:

> … the report of a panel shall set out the findings of fact, the applicability of relevant provisions and the *basic rationale* behind any findings and recommendations that it makes. (emphasis added)

149. In our reports in *Korea – Alcoholic Beverages* [147] and *Chile – Taxes on Alcoholic Beverages* [148], we found that the panels in those cases had provided sufficient reasons for their findings and recommendations, and that, therefore, the requirements of Article 12.7 of the DSU were fulfilled. In this case, the Panel conducted *extensive* factual and legal analyses of the competing claims made by the parties, set out numerous factual findings based on detailed consideration of the evidence before the Argentine authorities as well as other evidence presented to the Panel, and provided extensive explanations of how and why it reached its factual and legal conclusions. Although Argentina may not agree with the rationale provided by the Panel, and we do not ourselves agree with all of its reasoning, we have no doubt that the Panel set out, in its Report, a "basic rationale" consistent with the requirements of Article 12.7 of the DSU.

150. For these reasons, we reject Argentina's appeal under Article 12.7 of the DSU. Indeed, we cannot help but note that, in this appeal, Argentina seems to be arguing that the Panel said and did both too much and too little.

VIII. Findings and Conclusions

151. For the reasons set out in this Report, the Appellate Body:

(a) concludes that the Panel did not exceed its terms of reference by referring in its reasoning to Article 3 of the *Agreement on Safeguards*;

(b) reverses the Panel's conclusion in paragraph 8.69 of the Panel Report that "safeguard investigations conducted and safeguard measures imposed after the entry into force of the WTO agreements which meet the requirements of the new Safeguards Agreement satisfy the requirements of Article XIX of GATT", and also reverses the Panel's finding that the Uruguay Round negotiators "*expressly omitted*" the phrase "as a result of unforeseen developments" from Article 2 of the *Agreement on Safeguards*;

(c) declines to make a finding with respect to the European Communities' claim under Article XIX of the GATT 1994 since, in light of the findings in paragraph (f) below, there is, in any event, no legal basis for the safeguard measures imposed by Argentina;

(d) reverses the Panel's findings and conclusions relating to footnote 1 to Article 2.1 of the *Agreement on Safeguards* and Article XXIV of the GATT 1994, and concludes that Argentina, on the facts of this case, cannot justify the imposition of its safeguard measures only on non-MERCOSUR third country sources of supply on the basis of an investigation that found serious injury or threat thereof caused by imports from all sources, including imports from other MERCOSUR member States;

[147] *Supra*, footnote 36, para. 168.

[148] Appellate Body Report, circulated 13 December 1999, WT/DS87/AB/R, WT/DS110/AB/R, para. 78.

(e) concludes that the Panel correctly stated and applied the appropriate standard of review, as set forth in Article 11 of the DSU;

(f) upholds the Panel's findings and conclusions that Argentina's investigation and determinations of increased imports, serious injury and causation are inconsistent with Articles 2 and 4 of the *Agreement on Safeguards*, and that, accordingly, Argentina's investigation provides no legal basis for the application of the definitive safeguard measure at issue or any safeguard measure; and

(g) concludes that the Panel did not fail to set out the "basic rationale" behind its findings and recommendations as required by Article 12.7 of the DSU.

152. The Appellate Body *recommends* that the DSB request that Argentina bring its safeguard measures found in this Report, and in the Panel Report as modified by this Report, to be inconsistent with the *Agreement on Safeguards*, into conformity with its obligations under that Agreement.

I. Introduction

1. The United States appeals certain issues of law and legal interpretations developed in the Panel Reports, *United States – Definitive Safeguard Measures on Imports of Certain Steel Products* (the "Panel Reports").[1]

2. The Panel was established by the DSB on 3 June 2002, pursuant to a request by the European Communities, to examine the consistency of ten safeguard measures applied by the United States on 20 March 2002 on imports of certain steel products.[2] On 14 June 2002, pursuant to Article 9.1 of the DSU, the DSB referred to the Panel complaints on the same matter brought by Japan and Korea. On 24 June 2002, the DSB, pursuant to Article 9.1 of the DSU, also referred to this single Panel complaints on the same matter submitted by China, Norway, and Switzerland. On 8 July 2002, the DSB, pursuant to Article 9.1 of the DSU, also referred to this single Panel a complaint on the same matter submitted by New Zealand. On 29 July 2002, the DSB, pursuant to Article 9.1 of the DSU, also referred to this single Panel a complaint on the same matter submitted by Brazil.

3. In their requests for the establishment of a panel, the Complaining Parties claimed that the ten safeguard measures applied by the United States on imports of certain steel products were inconsistent with the obligations of the United States contained in Articles 2, 3, 4, 5, 7, 8, 9, and 12 of the *Agreement on Safeguards*, Articles I, II, X, XIII, and XIX of the GATT 1994, as well as Article XVI of the *WTO Agreement*.[3]

4. The Panel issued eight Panel Reports—in the form of one document—that were circulated to the Members of the WTO on 11 July 2003. The Panel concluded, in all of the Panel Reports, that all ten safeguard measures imposed by the United States were inconsistent with the *Agreement on Safeguards* and the GATT 1994.

5. In particular, the Panel found that:

(a) the application of safeguard measures by the United States on imports of CCFRS, hot-rolled bar, and stainless steel rod was inconsistent with Articles 2.1 and 3.1 of the *Agreement on Safeguards*, because "the United States failed to provide a reasoned and adequate explanation of how the facts supported its determination with respect to 'increased imports'"[4];

(b) the application of safeguard measures by the United States on imports of CCFRS, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar was inconsistent with Articles 2.1, 3.1, and 4.2(b) of the *Agreement on Safeguards*, because "the United States failed to provide a reasoned and adequate explanation that a 'causal link' existed between any increased imports and serious injury to the relevant domestic producers"[5];

(c) the application of safeguard measures by the United States on imports of tin mill products and stainless steel wire was inconsistent with Articles 2.1, 3.1, and 4.2(b) of the *Agreement on Safeguards*, because "the United States failed to provide a reasoned and adequate explanation of how the facts supported its determinations with respect to 'increased imports'" and the existence of a "causal link" between any increased imports and serious injury, "since the explanation given consisted of alternative explanations partly departing from each other, which given the different product bases, cannot be reconciled as a matter of substance"[6]; and

(d) the application of safeguard measures by the United States on imports of CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, stainless steel rod, and stainless steel wire was inconsistent with Articles 2.1 and 4.2 of the *Agreement on Safeguards*, because "the United States failed to comply with the requirement of 'parallelism' between the products for which the conditions for safeguard measures had been established, and the products which were subjected to the safeguard measure".[7]

6. In addition, the Panel concluded, in the Panel Reports concerning the complaints of China, the European Communities, New Zealand, Norway, and Switzerland, that:

> the application of safeguard measures by the United States on imports of CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, stainless steel rod, and stainless steel wire was inconsistent with Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards*, because "the United States failed to provide a reasoned and adequate explanation demonstrating that 'unforeseen developments' had resulted in increased imports causing serious injury to the relevant domestic producers".[8]

7. The Panel concluded that, to the extent that the United States had acted inconsistently with the provisions of the *Agreement on Safeguards* and the GATT 1994 set out above, it had nullified or impaired the benefits accruing to the Complaining Parties under the *Agreement on Safeguards* and the GATT 1994.[9] The Panel recommended that the DSB request the United States to bring all the safeguard measures into conformity with its obligations under the *Agreement on Safeguards* and the GATT 1994.[10]

8. On 11 August 2003, the United States notified the DSB of its intention to appeal certain issues of law covered in the Panel Reports and certain legal interpretations developed by the Panel, pursuant to paragraph 4 of Article 16 of the DSU, and filed a Notice of Appeal pursuant to Rule 20 of

[1] WT/DS248/R, WT/DS249/R, WT/DS251/R, WT/DS252/R, WT/DS253/R, WT/DS254/R, WT/DS258/R, WT/DS259/R and Corr.1, 11 July 2003. China, the European Communities, New Zealand, Norway, Switzerland, as well as Brazil, Japan and Korea acting jointly, submit conditional appeals on certain issues not addressed by the Panel.

[2] Safeguard measures were applied on imports of CCFRS; tin mill products; hot-rolled bar; cold-finished bar; rebar; welded pipe; FFTJ; stainless steel bar; stainless steel rod; and stainless steel wire.

[3] Panel Reports, paras. 3.1–3.8.

[10] *Ibid.*, para. 11.4.

the *Working Procedures*.[11] On 21 August 2003, the United States filed its appellant's submission.[12] On 26 August 2003, China, the European Communities, New Zealand, Norway, and Switzerland each filed an other appellant's submission.[13] Further, on the same day, Brazil, Japan and Korea filed a joint other appellants' submission.[14] On 5 September 2003, Brazil, China, the European Communities, Japan, Korea, New Zealand, Norway, Switzerland, and the United States each filed an appellee's submission.[15] On the same day, Canada filed a third participant's submission.[16] Cuba, Mexico, the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu, Thailand, Turkey, and Venezuela notified the Appellate Body of their intention to appear at the oral hearing as third participants.[17]

9. On 16 September 2003, the Appellate Body received an *amicus curiae* brief from the American Institute for International Steel. The European Communities, in a letter dated 23 September 2003, requested the Appellate Body to inform the parties whether the Appellate Body intended to accept and take account of the *amicus curiae* brief. In a letter dated 24 September 2003, Brazil requested that the *amicus curiae* brief be disregarded.

10. The Appellate Body responded to the requests of the European Communities and Brazil on 24 September 2003, stating that a determination on whether it would accept the brief or take account of it would be made after the Division had considered all submissions to be made by the participants in this appeal, including submissions to be made at the oral hearing.[18]

11. The oral hearing was held on 29 and 30 September 2003.[19] The participants and third participants presented oral arguments and responded to questions put to them by the Members of the Appellate Body Division hearing the appeal.

II. Factual Background

12. On 28 June 2001, the USITC initiated a safeguard investigation at the request of the USTR, in order to determine whether certain steel products were being imported into the United States in such increased quantities as to cause or threaten to cause serious injury to the domestic industry producing like or directly competitive products.[20] Pursuant to this investigation, the USITC made affirmative determinations of serious injury to the domestic industry with respect to imports of: CCFRS; hot-rolled bar; cold-finished bar; rebar; FFTJ; stainless steel bar; stainless steel rod; and a

[20]USITC, Investigation No. TA-201-73, Institution and Scheduling of an Investigation under Section 202 of the Trade Act of 1974, United States Federal Register, 3 July 2001 (Volume 66, Number 128), pp. 35267-35268. (Exhibit CC-2 submitted by the Complaining Parties to the Panel)

determination of threat of serious injury with respect to imports of welded pipe.[21] The USITC made divided determinations with respect to tin mill products; stainless steel wire; stainless steel fittings and flanges; and tool steel.[22] The USITC recommended that tariffs and tariff-rate quotas be imposed for the products for which it made affirmative determinations.[23] Subsequently, following a request from the USTR, the USITC issued supplementary information on the economic analysis of remedy options[24], on unforeseen developments, and an injury determination for imports from all sources other than Canada and Mexico.[25]

13. Based on the USITC determination, the President of the United States imposed definitive safeguard measures on imports of certain steel products pursuant to Proclamation 7529 of 5 March 2002. The Proclamation imposed tariffs ranging from 30 percent to 8 percent on imports of certain carbon flat-rolled steel, hot-rolled bar, cold-finished bar, rebar, welded pipe, fittings, flanges and tool joints, stainless steel bar, stainless steel rod, tin mill products, and stainless steel wire.[26] The products subject to these safeguard measures were products for which the USITC had made affirmative determinations; with respect to tin mill products and stainless steel wire, for which the USITC had made divided determinations, the President decided to consider the determinations of the groups of commissioners voting in the affirmative with regard to each of these products to be the determination of the USITC.[27] Imports from Canada, Israel, Jordan, and Mexico were excluded from the application of the measures.[28] The measures were imposed for a period of three years and one day[29], and became effective on 20 March 2002.[30]

III. Arguments of the Participants and the Third Participants

A. *Claims of Error by the United States – Appellant*

1. Unforeseen Developments, Article 3.1 of the *Agreement on Safeguards*, and Article 12.7 of the DSU

14. The United States requests that the Appellate Body reverse the Panel's findings that the USITC failed to provide a reasoned and adequate explanation demonstrating that "unforeseen

[30]*Ibid.*, clause (8).

developments" had resulted in increased imports causing serious injury to the relevant domestic industry.

15. According to the United States, in articulating the applicable standard of review, the Panel mistakenly reflected concerns relevant to Article 4.2 of the *Agreement on Safeguards*, and disregarded concerns relevant to the requirement of unforeseen developments, under Article XIX:1(a) of the GATT 1994. The United States submits that the appropriate standard of review is "not one derived from Article 4.2, but from Article XIX:1(a)".[31] According to the United States, "Article 4.2 indicates factors the competent authorities must evaluate and outlines the causation analysis. In contrast … 'Article XIX provides no express guidance' on when, where or how that demonstration [of unforeseen developments] should occur."[32] In response to questioning at the oral hearing, the United States clarified that it was not requesting a specific ruling from the Appellate Body under Article 11 of the DSU in respect of the Panel's findings on unforeseen developments.

16. The United States takes issue with the statement of the Panel that "[t]he timing of the explanation [relating to unforeseen developments], its extent and its quality are all factors that can affect whether [that] explanation is reasoned and adequate."[33] According to the United States, there is no basis in the *Agreement on Safeguards* for finding that "timing" and/or "extent" are relevant to determining whether the competent authorities' explanations are reasoned and adequate.[34] With regard to the term "explanation" and the term "adequate", the United States submits that because the *Agreement on Safeguards* does not explicitly require an "explanation" and does not employ the term "adequate", those terms can only be understood as a shorthand for the obligations that are in the Agreement. Those obligations are that the published report contain "reasoned conclusions" on "all pertinent issues" and "a detailed analysis of the case", including "a demonstration of the relevance of the factors examined".[35] The United States stresses that "the key consideration [under Article 3.1] is whether the authorities present a logical basis for their conclusion."[36]

17. The United States refers to the finding of the Appellate Body in *US - Line Pipe* which states that "to fulfill the requirement of Article 4.2(b), last sentence, the competent authorities must establish explicitly, through a reasoned and adequate explanation, that injury caused by factors other than increased imports is not attributed to increased imports."[37] As it did for the terms "explanation" and "adequate", the United States emphasizes that the term "explicit" does not appear in the *Agreement on Safeguards*. As the *Agreement on Safeguards* "does not expressly require that the competent authorities' determination, findings, or conclusions be 'explicit,' that term can only be understood as a shorthand for the obligations that *are* in the Agreement – that the published report contain 'reasoned conclusions' on 'all pertinent issues' and 'a detailed analysis of the case,' including 'a demonstration of the relevance of the factors examined.'"[38]

18. The United States submits that, because "the Panel based many of its findings against the United States on its conclusions that the USITC report failed to provide a 'reasoned and adequate explanation' of certain findings"[39], it follows that there can only be a violation of Article 3.1 and not of Articles 2 and 4 of the *Agreement on Safeguards*. The United States argues that a failure to explain a finding does not automatically prove that the USITC had not performed the analysis necessary to make the finding.[40]

19. The United States contends that the Panel concluded that the USITC failed to distinguish the impact the alleged unforeseen developments had on the different product categories subject to the various safeguard measures. According to the United States, this conclusion of the Panel reflects two misconceptions. First, Article XIX of the GATT 1994 does not specify a particular type of analysis to demonstrate unforeseen developments, nor does it require the competent authorities to differentiate their respective impact on particular imports. Second, the Panel did not point to any facts suggesting that the USITC's general conclusions as to unforeseen developments were in any way unrepresentative of the specific steel industries and imports covered by the various measures. In addition, the United States contends that the Panel erred by requiring that the impact of various unforeseen developments be differentiated with respect to the individual industries, and even economies, of other countries.

20. The United States also argues that the Panel erred in finding that data and analysis contained in the USITC report, but outside the section of the report addressing unforeseen developments, were not relevant to an evaluation of the USITC's findings on unforeseen developments. Although the Panel, according to the United States, asserted that the USITC provided no data to support a conclusion that imports increased in the wake of the unforeseen developments, it nevertheless recognized that the USITC report cited to data tables showing imports into the United States for each country and for each product over the entire period of investigation. In the United States' view, the Panel was "required"[41] to consider this information. According to the United States, in *EC – Tube or Pipe Fittings*, the fact that the investigating authority had failed to mention one of the factors specifically listed in the *Anti-Dumping Agreement* did not prevent the Appellate Body from finding, after a close reading of the investigating authority's report, that the investigating authority had in fact considered the enumerated factor.[42]

21. The United States also contends that in some instances the Panel acted inconsistently with Article 12.7 of the DSU by failing to undertake the requisite analysis and failing to articulate why it considered that the USITC did not provide the requisite reasoned conclusions.[43] The United States submits that the Panel cited no evidence that contradicted the USITC's conclusions, did not find an explanation alternative to the one provided by the USITC, and failed to set forth explanations and reasons sufficient to justify its findings and recommendations.

[43]In response to questioning at the oral hearing, the United States clarified that it was seeking a specific ruling on Article 12.7 of the DSU only with respect to the Panel's findings on "unforeseen developments".

2. Increased Imports

(a) General

22. The United States requests the Appellate Body to reverse the Panel's findings regarding increased imports with respect to the product categories CCFRS, tin mill products, hot-rolled bar, stainless steel wire and stainless steel rod.

23. The United States contends that the Panel's finding that a determination of increased imports can be made only when there is a "certain degree of recentness, suddenness, sharpness and significance" cannot be justified by the *Agreement on Safeguards* or Article XIX of the GATT 1994.[44] According to the United States, the phrase "in such increased quantities" "simply states the requirement that, in general, the level of imports at (or reasonably near to) the end of the period of investigation must be higher than at some unspecified earlier point in time."[45] The United States submits that the text of Article 2.1 of the *Agreement on Safeguards* can support only an interpretation that an increase in imports must be "recent" in the sense of the ability of imports to cause or threaten to cause serious injury.

24. With regard to the requirement that the increase in imports must be "sudden", the United States notes that the Panel based this requirement on the reference to "unforeseen developments" in Article XIX of the GATT 1994. The United States contends that the Panel read into Article XIX a requirement that it does not contain, thus violating customary rules of treaty interpretation. The United States further argues that the "suddenness" requirement is in opposition with the manner in which serious injury often occurs. The United States finds support for this argument in the Appellate Body's observation in *US – Line Pipe* that "[s]erious injury does not generally occur suddenly".[46]

25. The United States submits that the Appellate Body's finding in *Argentina – Footwear (EC)* referred to by the Panel stands for the proposition that the "attributes of recentness, suddenness, sharpness and significance are inexorably linked to the ability of imports to cause or threaten to cause serious injury".[47] In the United States' view, because Article 2.1 of the *Agreement on Safeguards* encompasses the entire investigative authority of the competent authority, the issue of whether the increase was recent, sudden, sharp and significant enough should be considered as competent authorities proceed with the remainder of their investigation, that is, with their consideration of serious injury or threat of serious injury.

(b) Specific Arguments with respect to CCFRS

26. The United States maintains that the Panel erred in finding that the USITC did not provide a reasoned and adequate explanation of increased imports because it did not account for the decrease in imports from interim 2000 to interim 2001. The United States argues that there is no provision in the WTO Agreements requiring the USITC to address interim 2001 imports as part of its increased imports analysis, or to give the change in the levels of imports between interim periods dispositive weight. The Panel also erred in finding that the increase in imports until 1998 was no longer recent

[44]United States' appellant's submission, para. 100, referring to Panel Reports, para. 10.167.

[45]United States' appellant's submission, para. 102.

[46]United States' appellant's submission, para. 105, referring to Appellate Body Report, *US – Line Pipe*, para. 168.

[47]United States' appellant's submission, para. 24.

enough at the time of the determination to support a finding of increased imports. In the United States' view, the Panel failed to consider that the effects of the 1998 import surge were still occurring at the time of the determination and that the imports remained at significantly higher levels in 1999 and 2000 than in 1996.

(c) Specific Arguments with respect to Hot-Rolled Bar

27. The United States contends that the Panel erred in finding that this requirement was not met. According to the United States, the Panel focused almost exclusively on the decrease in imports in interim 2001, while improperly disregarding the increases in imports over the five preceding years of the investigation.

(d) Specific Arguments with respect to Stainless Steel Rod

28. The United States argues that the Panel erred in finding that the increased imports requirement was not met for stainless steel rod. According to the United States, the Panel placed too much weight on the decline in import volumes in interim 2001, and improperly rejected the USITC's analysis of this decline. The United States argues that the USITC acknowledged the decrease in imports in interim 2001, but explained that, despite this decrease, the market share of imports remained essentially stable in interim 2001. Thus, the United States argues that the USITC was correct in concluding that the decline in imports in interim 2001 was not so significant as to outweigh the increases of the previous years.

(e) Specific Arguments with respect to Tin Mill Products and Stainless Steel Wire[48]

29. The United States argues that the Panel erred in asserting that there is an inconsistency in the increased imports findings of those Commissioners who defined the like product in different ways. The United States argues that it is not necessary to reconcile the increased imports findings of each Commissioner or group of Commissioners. The United States also argues that there is "nothing intrinsically irreconcilable" about findings based on different product groupings and that the findings of the three Commissioners under each determination are not "mutually exclusive".[49] The United States contends that the issue of whether the USITC satisfied the increased imports requirement should be addressed by examining separately the findings of the individual Commissioners. In the United States' view, had the Panel done so, it would have found that each Commissioner separately satisfied the conditions of Article 2.1.

30. In the United States' view, neither the text of Articles 2.1 and 3.1, nor the object and purpose of the *Agreement on Safeguards*, supports the Panel's interpretation of a requirement of uniform like product definition among Commissioners making affirmative determinations. In addition, according to the United States, the Appellate Body Report in *US – Line Pipe* supports the USITC's practice of aggregating mixed votes of individual Commissioners. Finally, the United States argues that, by construing the *Agreement on Safeguards* to require uniformity in the like product definition by a

[48]The United States notes that the Panel cross-referenced its conclusions with respect to the increased imports requirement for tin mill products in its analysis of causation for both tin mill products and stainless steel wire. United States' appellant's submission, para. 46.

[49]United States' appellant's submission, paras. 372 and 374.

multi-member competent authority, the Panel is infringing unnecessarily upon the manner in which a Member may structure the decision-making process of its competent authority.

3. Parallelism

31. The United States requests that the Appellate Body reverse the Panel's findings that the United States' safeguard measures are inconsistent with Articles 2.1 and 4.2 of the *Agreement on Safeguards*, because the United States did not, with respect to any of the product categories at issue, establish explicitly that imports from the sources included in the relevant safeguard measures satisfied, alone, the conditions for the application of a safeguard measure.

32. The United States argues that the Panel based its product-specific analysis on two general conclusions. First, the United States argues, the Panel rejected nine of the ten safeguard measures on the grounds that the USITC had failed to account for the effects of imports from excluded sources. The United States acknowledges that the Appellate Body has stated that parallelism requires authorities to focus separately on imports from sources that are not excluded from the safeguard measure. However, the United States argues that the Appellate Body has not set conditions on *how* an authority must conduct its parallelism analysis. According to the United States, the Panel required a separate analysis of imports from those sources not subject to the safeguards measure, a requirement without a textual basis in the *Agreement on Safeguards*.

33. Second, the United States contends that the Panel incorrectly interpreted the requirement that the competent authorities must establish "explicitly" that imports covered by the measure satisfy the conditions for the application of the measure. The United States points to what it considers to be low import levels from Israel and Jordan, as well as to the USITC's finding that "exclusion of imports from Israel and Jordan would not change the conclusion of the Commission or of individual Commissioners."[50] The United States believes that, in the context in which this statement appears, its meaning was that imports from Israel and Jordan were either non-existent or so small that the Commission's conclusions for imports from sources other than Canada and Mexico were also applicable to imports from sources other than Canada, Mexico, Israel, and Jordan. In the view of the United States, the Panel required that the USITC repeat its findings on non-NAFTA imports "word for word in a section specifically addressing non-FTA imports"[51]. In the United States' view, there is no basis in the *Agreement on Safeguards* for requiring an authority to make redundant or unnecessary findings.

34. The United States further contends that if the Appellate Body reverses the Panel's findings, the Appellate Body will not be able to complete the analysis, because there is insufficient factual basis in the Panel Reports. The United States argues that should the Appellate Body nevertheless decide to complete this analysis, it should find that the USITC's parallelism analysis was in compliance with Article 2.1 of the *Agreement on Safeguards*.

[50]United States' appellant's submission, para. 338.

[51]United States' appellant's submission, para. 343.

4. Causation

(a) General

35. The United States requests the Appellate Body to reverse the Panel's finding on causation for CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, and stainless steel wire. As a general matter, the United States emphasizes that, as recognized by the Panel, there is nothing in the "substantial cause" test applied by the USITC that would necessarily mean that the WTO obligation to separate and distinguish the effects of other causes of injury on the state of the industry cannot be fulfilled.

36. The United States next submits that the Panel incorrectly concluded that Article 4.2(b) requires the competent authorities to perform a collective assessment of the injurious effects of other factors. The United States argues that this interpretation is inconsistent with the text of Article 4.2(b) and with the Appellate Body's findings under the *Agreement on Safeguards* as well as in *EC – Tube or Pipe Fittings*; moreover, the United States argues that a collective analysis of the effects of "other" factors is not any more accurate than an individual analysis. A competent authority is furthermore, in the United States' view, not bound to assess whether the effects of all "other" factors "outweigh" the effects of imports.[52]

(b) Specific Arguments with respect to CCFRS

37. The United States disagrees with the Panel's finding that the USITC did not establish a "coincidence in trends" between increases in imports and declines in the industry's condition. The Panel conducted an impermissible *de novo* review by not addressing the USITC's reasoned conclusions and instead "prepar[ing] its own data set"[53] so as to assess whether a coincidence of trends existed. This analysis of the Panel, moreover, did not address certain other factors which, according to the United States, "clearly had a bearing on the situation of the CCFRS industry [ ]."[54]

38. The United States further contends that the Panel misunderstood the USITC's underselling analysis. The fact that the USITC did not specifically discuss the price comparisons for the other constituent items of CCFRS does not mean that the USITC was "conveniently selective"[55] and failed to evaluate the data for these items. The Panel also incorrectly characterized the USITC's AUV analysis.

39. The United States disputes the Panel's finding that the USITC's definition of the CCFRS product category was so broad that it prevented the USITC from properly performing its pricing analysis. The United States relies on the panel report in *Argentina – Footwear (EC)*, as well as on the Appellate Body Report in *US – Lamb*, to argue that, when reviewing an authority's causation findings, a panel must assume that the authorities' findings on the definition of "like product" and "domestic industry" were proper.

40. The United States also submits that the USITC adequately distinguished the injurious effects of demand declines from those of imports. In the United States' view, the Panel appears to

[52]*Ibid.*, para. 173.

[53]United States' appellant's submission, para. 187.

[54]*Ibid.*, para. 192.

[55]United States' appellant's submission, para. 202, referring to the Panel Reports, para. 10.379.

erroneously require a valid non-attribution analysis for "each and every moment" during the period of investigation.[56] The USITC, according to the United States, adequately distinguished the effects of capacity increases, as well as of the effects of minimill competition; the USITC reasonably concluded that there was no change in the minimills' relative cost advantage that would have caused them to drive prices down and, therefore, correctly rejected the cost advantage as a significant factor in domestic price decline. Finally, the United States argues that the USITC evaluated whether legacy costs had increased the industry's costs and correctly noted that the industry's legacy costs predated the period of investigation. The USITC, therefore, did not find that legacy costs were a source of injury during the period of investigation.

(c) Specific Arguments with respect to Hot-Rolled Bar

41. The United States argues that the Panel erred in rejecting the USITC's finding—that increases in the industry's COGS had not been a source of serious injury to the industry during the period of investigation—as not being reasoned and adequate. The USITC evaluated all the record evidence and correctly concluded that the evidence showed that COGS increases in 2000 were not a cause of injury to the industry. In the United States' view, the Panel's conclusion is based on the mistaken assumption that the USITC did not examine whether the industry's profitability and pricing declines coincided with increases in its costs.

(d) Specific Arguments with respect to Cold-Finished Bar

42. The United States contends that the Panel erred in rejecting the USITC's finding that aggressive underselling by imports caused the industry to lose market share in 2000 and 2001 and to suffer corresponding declines in its production, shipment, and sales revenue levels. In the United States' view, the Panel failed to recognize that the declines in 2000 and 2001 were caused by separate events, namely demand declines in 1999, and a surge in import volume in 2000.

43. Furthermore, the United States argues that the Panel mistakenly rejected the USITC's finding of aggressive underselling by imports in 1999 and 2000 because of the USITC's reliance on quarterly price comparison data, rather than annual AUV data. The Panel's findings are an improper attempt to question the USITC's choice of methodology. Further, the USITC, contrary to the Panel's finding, separated and distinguished the effects of demand declines from those of imports by examining whether the industry's profitability and revenue declines correlated with demand declines during 1999 and 2000.

(e) Specific Arguments with respect to Rebar

44. The United States argues that the USITC adequately distinguished the injurious effects of changes in the industry's COGS. Contrary to the Panel's findings, the USITC provided a detailed and reasoned assessment of the manner in which changes in the industry's costs had an impact on the industry's price and profitability levels in 1999 and 2000. Moreover, the United States submits, the USITC's analysis showed clearly that rising input costs were not a cause of injury to the industry.

[56]United States' appellant's submission, para. 227.

(f) Specific Arguments with respect to Welded Pipe

45. In the United States' view, the USITC was not obliged to distinguish and separate the effects of the industry's capacity increases because the USITC found that the effects of these increases were minimal. According to the United States, the Appellate Body findings in *EC – Tube or Pipe Fittings* support the view that a competent authority is not required to distinguish the effects of an "other" factor if that factor is found to contribute to injury in a "minimal", "minor" or "not significant" way. The USITC, furthermore, adequately explained why it found the allegedly "aberrant" performance of one member of the welded pipe industry not to be a source of injury for the industry during the period. According to the United States, Article 4.2(b) does not preclude a competent authority from making "subjective" judgements about the meaning of that evidence or from describing its assessment of that evidence in a "subjective" way.

(g) Specific Arguments with respect to FFTJ

46. The United States submits that the USITC bore no obligation to assess the nature and extent of capacity increases on the industry because the USITC found that capacity increases by the FFTJ industry would not place substantial pressure on domestic prices. The United States relies on the Appellate Body Report in *EC – Tube or Pipe Fittings* in arguing that an authority need not "separate and distinguish" the effects of an "other" known factor, if the factor contributes only "minimally" to the injury being suffered by an industry.[57] With respect to the factor "purchaser consolidation", the United States submits that the USITC properly assessed the nature and extent of any injury caused by this factor by correctly noting that the serious injury was associated with factors not directly affected by declines in price.

(h) Specific Arguments with respect to Stainless Steel Bar

47. The United States argues that the USITC adequately distinguished the injurious effects of late period demand declines by evaluating whether declines in the industry's condition correlated more closely with imports than demand declines during the period. The USITC thereby performed the very analysis by which, according to the Panel itself, the USITC could have satisfied the non-attribution requirement. The United States also argues that the USITC also separated and distinguished, in a reasoned and adequate manner, the effects of increased energy costs from those of increased imports by evaluating whether declines in the industry's condition correlated more closely with imports than energy cost increases.

B. *Arguments of Brazil – Appellee*

1. Article 3.1 of the *Agreement on Safeguards* and Article 12.7 of the DSU

48. Brazil submits that the articulation by the Panel of the applicable standard of review is consistent with the *Agreement on Safeguards* and previous findings of the Appellate Body.

49. Referring to the phrase "reasoned and adequate explanation", Brazil notes that although, as the United States pointed out, "adequate" and "explanation", are not explicitly found in the text of the *Agreement on Safeguards*, both terms "are easily discerned"[58] from what is in the Agreement, and

[57]United States' appellant's submission, para. 297.

[58]Brazil's appellee's submission, paras. 11 and 13.

particularly the language found in Article 3.1 and Article 4.2(c) of the *Agreement on Safeguards* (that is, "reasoned conclusions" and "detailed analysis" and "demonstration of the relevance of factors").

50. With respect to the United States' argument that explanations do not need to be "explicit," Brazil stresses that the need for an explicit determination "is clearly embedded in the requirement under Article 3.1 that an authority 'set forth' its findings and reasoned conclusions reached on all pertinent issues of fact and law."[59]

51. Brazil also does not agree with the United States that the Panel "improperly merged" the substantive requirements for establishing the right to take a safeguard measure with the procedural requirements set out in Articles 3.1 and 4.2(c) of the *Agreement on Safeguards* by presuming that a failure to explain a finding automatically proved that the USITC Commissioners had not performed the analysis necessary to make a finding.[60] Brazil argues that the position of the United States that the substantive obligations of Articles 2.1, 4.1 and 4.2 "do not require that the reasoning supporting [the determinations of competent authorities] expressly appear in [their] written report"[61], is "tantamount to relieving authorities of their substantive obligations".[62] According to Brazil, the United States is "essentially arguing that we should trust that the USITC performed the appropriate analyses even if there is no clear basis for discerning what it did."[63] Under this rationale, Brazil asserts, "one could never move beyond arguments centered on a failure to provide a reasoned and adequate explanation, since arguments attacking the underlying analyses almost always rely on whatever explanation the authority actually did provide."[64]

52. Finally, according to Brazil, the Panel complied with Article 12.7 of the DSU, as it performed the requisite factual and legal analyses of the parties' competing claims, set out numerous factual findings, and provided extensive explanation of how and why it reached its factual and legal conclusions. Brazil argues that the fact that the United States may not agree with the Panel's rationale does not imply that the Panel did not comply with Article 12.7.

2. Increased Imports

(a) General

53. Brazil requests that the Appellate Body dismiss the United States' appeal from the Panel's conclusions concerning increased imports. Brazil submits that the Panel correctly interpreted and applied the increased imports requirement. Brazil notes that the Panel correctly found that the increased imports requirement represents both a quantitative and qualitative standard, independent of the causation analysis. According to Brazil, the requirement is that increased imports must be recent enough, sudden enough, sharp enough and significant enough to cause injury, based on an

[59] *Ibid.*, para. 17.

[60] *Ibid.*, para. 22, referring to the United States' appellant's submission, paras. 73–76.

[61] Brazil's appellee's submission, para. 22, referring to the United States' appellant's submission, para. 76.

[63] Brazil's appellee's submission, para. 23.

[64] *Ibid.*

examination of trends over the entire period of investigation, with an emphasis on the most recent period.

54. Brazil agrees with the Panel's conclusion that a finding that imports have increased pursuant to Article 2.1 can be made when the increase evidences a certain degree of recentness, suddenness, sharpness and significance, and believes that this conclusion is fully supported by the Appellate Body jurisprudence. Specifically, Brazil alleges that the requirement of "recentness" has been construed by the Appellate Body based on a sound understanding of the relationship between Article 2.1 and Article 4.2(a) of the *Agreement on Safeguards* and Article XIX:1(a) of the GATT 1994, and that the Panel was correct in adopting this interpretation. Moreover, Brazil submits that the element of suddenness was recognized as inherent in Article XIX of the GATT 1994 by the Panel and, previously, the Appellate Body. In addition, Brazil argues that the increase in imports cannot be confirmed by an analysis of end points since, in *Argentina – Footwear (EC)*, the Appellate Body specifically repudiated such an approach.

(b) Specific Arguments with respect to CCFRS

55. Brazil further contends that the Panel correctly found that the USITC did not meet the increased imports requirement with respect to CCFRS. In Brazil's view, the USITC performed the same type of analysis that the Appellate Body rejected in *Argentina – Footwear (EC)*—an end-point-to-end-point analysis—without considering trends, and mentioned the decline at the end of the investigation period "only in passing", adopting a "any increase will do" approach.[65]

3. Parallelism

56. Brazil submits that the Panel's findings on parallelism are fully consistent with the Appellate Body jurisprudence, as set out in *US – Wheat Gluten* and *US – Line Pipe*, and requests that the Appellate Body dismiss the United States' appeal on parallelism.

57. Brazil agrees with the Panel's conclusion that the USITC failed to account for the different effects of non-FTA imports of CCFRS as compared to the effects of all imports of CCFRS. In Brazil's view, the USITC's parallelism analysis in its Second Supplementary Report was based on its finding that the statements made on all imports as regards AUVs could also be made with respect to non-NAFTA imports. The Panel did not read into the *Agreement on Safeguards* a new requirement that the effects of NAFTA imports be considered on their own or as an alternative cause, or that an authority must specifically analyze the effects of excluded products; rather, the Panel, in Brazil's view, stated what was necessary to ensure a proper assessment of the effects of included products.

58. As regards the exclusion of imports from Israel and Jordan, Brazil is of the view that the United States essentially argues that because imports from these countries were so small, they need not be part of a parallelism analysis. However, in Brazil's view, in order to establish that imports from sources covered by the measure satisfy all the conditions for imposing a safeguard measure, a Member must determine whether its conclusions on causation would change if imports from excluded sources, taken together, were removed from the equation. In Brazil's view, there is no second standard for excluded sources of small volumes of imports.

[65] Brazil's appellee's submission, para. 49.

4. Causation

59. Brazil requests the Appellate Body to uphold the Panel's finding on causation. Brazil claims that there was no coincidence between import trends and domestic industry performance. The Panel neither ignored the USITC's report, nor engaged in a *de novo* review; rather, the Panel "did little more than compile and republish information that was before the USITC."[66] Brazil also disagrees with the United States that the Panel did not analyze relevant factors and failed to include an analysis of import pricing in its coincidence analysis.

60. Brazil next submits that the USITC's treatment of import underselling failed to meet the requirement to provide a "compelling analysis". Brazil agrees with the Panel that the existence of underselling does not, by itself, demonstrate that imports were driving prices down and cannot demonstrate even the presence of competition between imports and domestic products. In Brazil's view, underselling by imports, combined with a declining import market share and the absence of coincidence between import trends and industry performance, does not provide a compelling explanation of a causal link between increased imports and serious injury.

61. Further, according to Brazil, the Panel did not misunderstand the USITC's analysis, but rather identified a "serious problem" often inherent in the use of AUVs. Brazil submits that, contrary to the United States' assertion, the USITC did not fully consider the reliability of aggregate AUVs for CCFRS. Brazil also points out that United States courts have on occasions reversed the USITC's findings for "excessive reliance" on AUVs.[67] The USITC, in Brazil's view, did not establish why it considered the aggregate AUV data to be reliable.

62. According to Brazil, the Panel was also correct to address the CCFRS like product definition in the context of its causation analysis. Brazil submits that like products must be defined in such a way as to permit the analysis required by the *Agreement on Safeguards*. A like product that is too broadly defined will yield data that is too aggregated to offer an accurate depiction of the market. The reliance of the United States on the panel report in *Argentina – Footwear (EC)* in this respect is, in Brazil's opinion, incorrect. The panel in that dispute stated that "statistics for the industry and imports as a whole will only show averages, and therefore will not … provide sufficiently specific information on the locus of competition in the market."[68] That panel did not subsequently explore this issue further, because no party had challenged the like product definition.

63. Brazil contends that the Panel in the present case was not required to make specific findings on the like product definition for CCFRS before discussing the "analytical problems" with respect to causation inherent in the USITC's CCFRS definition.[69] However, in the event that the Appellate Body should find fault with this aspect of the Panel's causation analysis, Brazil refers to its conditional appeal, contained in its other appellant's submission.

64. Furthermore, Brazil submits that the Panel correctly concluded that the United States failed to ensure that it did not attribute to imports of CCFRS the injurious effects of other factors. Brazil emphasizes that panels need not accept the conclusions of authorities if those conclusions are

[66]Brazil's appellee's submission, para. 62.

[67]*Ibid.*, para. 72.

[68]Brazil's appellee's submission, para. 80, referring to Panel Report, *Argentina – Footwear (EC)*, para. 8.261 and footnote 557 thereto.

[69]Brazil's appellee's submission, para. 81.

demonstrably wrong or insufficient in the light of the facts. With respect to capacity increases, Brazil submits that the Panel correctly found that the USITC failed to perform an adequate non-attribution analysis. Brazil contends that the USITC itself found that capacity increases had an effect on pricing, but subsequently failed to distinguish the effect of capacity increases from the effect of imports.

65. Brazil argues further that the USITC acknowledged that declining demand played a role in the injury suffered by the industry, but then dismissed the role of declining demand on the grounds that this decline manifested itself late in the period of investigation. Brazil submits that such analysis does not actually separate and distinguish the effect of declining demand during the period for which the USITC "found the condition of the domestic industry [to be] most dire".[70] Brazil submits further that the operating performance of the CCFRS industry deteriorated most sharply in 2000 and 2001, thereby showing correlation only with declining demand, and not also with increased imports.

66. Brazil submits that the Panel also correctly found that the USITC failed to distinguish the effects of intra-industry competition from the effects of imports. The USITC, according to Brazil, acknowledged that a greater volume of lower-cost minimill capacity and output did have an effect on prices, but subsequently dismissed this factor "without any serious analysis".[71] With respect to the USITC's pricing analysis, Brazil submits that the relevant question is not the existence or the extent of underselling, but rather whether there is a correlation between underselling and injury to the domestic industry; the USITC never examined this question. Moreover, Brazil points out that, even as the prices for minimills' products fell, these minimills nevertheless enjoyed stronger financial performance than the integrated producers. In the light of this fact, according to Brazil, the USITC could not satisfy the non-attribution requirement by means of "a few cursory comments on relative costs of production and import pricing".[72]

67. With respect to legacy costs, Brazil argues that the USITC did acknowledge that this factor was a source of injury, but subsequently dismissed legacy costs on the basis that they predated the injury and did not increase during the period of investigation; Brazil considers this explanation insufficient and contends that in circumstances where an increasing portion of production is undertaken by companies without legacy costs, companies with legacy costs will be at a competitive disadvantage, which will ultimately affect their performance.

68. Finally, Brazil agrees with the Panel that Article 4.2(b) requires an overall assessment of "other factors". Brazil submits that, for instance, declining demand cannot be evaluated in isolation from the fact that capacity was increasing at the same time. The USITC never analyzed the relationship of various non-import factors and did not enquire how one of these factors might "compound the effect of the other".[73] In Brazil's view, the Appellate Body in *US – Line Pipe* recognized that a proper non-attribution analysis must include an "overall assessment", and in *EC – Tube or Pipe Fittings* "recognized that circumstances may require an assessment of how factors interact".[74] In Brazil's view, the facts of this case require such an assessment. In any event, in Brazil's view, since the USITC failed to separate and distinguish other facts even on an individual basis, the USITC's report does not meet the requirements of the *Agreement on Safeguards*.

[70]*Ibid.*, para. 93.

[73]*Ibid.*, para. 111.

[74]*Ibid.*, para. 113.

C. *Arguments of China – Appellee*

1. Unforeseen Developments, Article 3.1 of the *Agreement on Safeguards*, and Article 12.7 of the DSU

69. China requests that the Appellate Body reject the United States' appeal of the Panel's conclusions concerning unforeseen developments. China argues that the Panel applied the correct standard in requiring that a report must contain a coherent and logical explanation with respect to unforeseen developments. The Panel did not apply the standard set out in relation to Article 4.2; rather, China argues, the Panel referred to the standard derived by the Appellate Body from an interpretation of Article 3.1 of the *Agreement on Safeguards* in the context of claims arising under Articles 2 and 4 of that Agreement. In China's view, this standard uses a "general formula" that "stems" from Article 3.1[75] and that can be applied to all relevant conditions for applying safeguard measures.

70. China argues that, pursuant to Article XIX of the GATT 1994 and the Appellate Body decision in *US – Lamb*, safeguard measures are imposed on imports of "particular" products. Contrary to the United States' arguments, the Panel did not suggest that the USITC was required to determine to what extent each unforeseen development affected each product and each country. Rather, the Panel correctly applied the requirement that the USITC demonstrate a logical connection between unforeseen developments and increased imports for each safeguard measure. In China's view, this requirement ensures that such measures are not applied to products having no connection to the unforeseen developments.

71. China submits that the Panel did not act inconsistently with Article 12.7 of the DSU. That provision requires the Panel to provide a basic rationale behind its findings; China notes in this respect that the Panel identified the legal standard, specified its approach for the application of this standard, examined all relevant facts and assessed them in the light of the standard as well as the applicable provisions, and, finally, provided reasons for its conclusions. In China's view, this is sufficient, in the light of the Appellate Body's standard, to satisfy the requirements under Article 12.7 of the DSU.

2. Increased Imports

(a) General

72. China argues that the Panel was correct in finding that the United States acted inconsistently with Articles 2.1 and 3.1 of the *Agreement on Safeguards* by failing to provide a reasoned and adequate explanation of how the facts supported its determination with respect to "increased imports". China considers that, in order to satisfy the "increased imports" requirement, the rate and amount of the increase in imports must be evaluated; a comparison of the end points of the period of investigation is not sufficient. The competent authorities must furthermore examine recent imports, and recent data should not be considered in isolation from the data pertaining to the entire period of investigation. China further submits that the increase in imports must, furthermore, be sudden and recent. The increase in imports must also have been recent enough, sudden enough, sharp enough and significant enough, both quantitatively and qualitatively, to cause or threaten to cause "serious injury". Moreover, since safeguard measures are of an extraordinary nature, the increase cannot have been

[75]China's appellee's submission, para. 37.

steady and gradual. China adds that, if there is a decrease in imports during the period of investigation, the competent authority must explain in a reasoned and adequate manner why such a decrease does—or does not—invalidate a finding on increased imports.

73. Finally, China disagrees with what it sees as the United States' claim that the analysis of increased imports is not distinct from the analysis of serious injury and causation. In China's view, the United States' arguments in this respect are contrary to previous findings of the Appellate Body.

(b) Specific Arguments with respect to CCFRS

74. China believes that the USITC "failed to provide any explanation as to why the decrease in imports occurring since 1998 could not offset the previous increase occurring three years ago."[76] In China's view, such a "gap" cannot be "completed" by a "re-explanation" of the facts by the United States before the Appellate Body.[77] China considers that to follow the United States' arguments with respect to CCFRS would mean that a simple end-point to end-point comparison would be sufficient to fulfil the "increased imports" requirement of the *Agreement on Safeguards*, an interpretation clearly rejected by the Appellate Body in *Argentina – Footwear (EC)*. China submits that the Panel did not give undue weight to interim 2001 imports, but rather applied the findings of the Appellate Body which require the competent authority to focus specifically on the most recent imports. Finally, China argues that the finding that the 1998 surge in imports "was no longer recent enough at the time of the determination" is "fully in line" with the requirements of the *Agreement on Safeguards* and their interpretation by the Appellate Body.[78]

(c) Specific Arguments with respect to Hot-Rolled Bar

75. China agrees with the Panel that the USITC failed to provide a reasoned and adequate explanation as to why the most recent decrease in imports in interim 2001 had no impact on the USITC's conclusion that hot-rolled bar was being imported in "increased quantities". China asserts that it was for the USITC to explain why that decrease had no impact on its final conclusion. Furthermore, China disagrees with the United States that the Panel failed to place the data for the end of the investigation period in the context of the data from the earlier part of the period of investigation.

(d) Specific Arguments with respect to Stainless Steel Rod

76. China agrees with the Panel's findings on stainless steel rod. The USITC, in China's view, failed to provide a reasoned and adequate explanation of why the most recent decrease in imports in interim 2001 had no impact on the USITC's conclusion that stainless steel rod was being imported in "increased quantities". China believes that, contrary to the United States' arguments, the Panel appropriately placed the data for the end of the investigation period in the context of the data from the earlier part of the period of investigation. In any event, the USITC failed to explain why it found an increase in imports in absolute numbers, while the decrease between interim 2000 and interim 2001 was 31.3 percent.

[76]China's appellee's submission, para. 117.

[77]*Ibid.*

[78]*Ibid.*, para. 125.

(e) Specific Arguments with respect to Tin Mill Products and Stainless Steel Wire

77. China argues that decisions of the Appellate Body demonstrate that the USITC was free to rely on the findings made by three Commissioners and that the findings of those Commissioners may constitute the determination required under Article 2.1 of the *Agreement on Safeguards*. However, these findings must be reconcilable in order to provide a reasoned and adequate explanation as to how the facts support the determination on increased imports. There is no such explanation in the present case, because the Commissioners' findings departed from each other and were based on different product groupings. Although findings based on these different groupings might sometimes be reconcilable, this would merely be by coincidence and is certainly not always the case. China also believes that the Appellate Body's decision in *US – Line Pipe* addressed the correct interpretation of Article 2.1; the present case, however, concerns the number of Commissioners making determinations or the differences between such determinations. Moreover, China argues that in *US – Line Pipe*, unlike in the present case, the Commissioners at issue had made affirmative injury determinations. China submits that the United States was free to decide that a singular act results from decisions by six Commissioners; however, according to China, the United States is not free to rely on these decisions when the decisions by these Commissioners cannot be reconciled one with another as a matter of substance.[79]

3. Parallelism

78. China argues that the Panel was correct in finding that the United States acted inconsistently with Articles 2.1 and 4.2 of the *Agreement on Safeguards* by failing to establish that imports from sources not excluded from the scope of the measures alone satisfy the conditions required for the application of the measures.

79. China contends that Articles 2.1 and 4.2 of the *Agreement on Safeguards*, as interpreted by panels and the Appellate Body, require authorities to justify explicitly any gap between imports covered by the investigation and imports falling within the scope of the measure. The competent authority must provide a reasoned and adequate explanation as to why imports falling within the scope of the safeguard measure alone satisfy the conditions of Article 2.1, as elaborated in Article 4.2. In doing so, according to China, the USITC was required to "establish explicitly that non-FTA imports are able to cause serious injury distinctively from injury possibly caused, at the same time, by other sources of imports."[80]

80. China also claims that the United States made only implicit findings with respect to imports from sources other than Canada and Mexico. Moreover, according to China, the United States is incorrect in arguing that, "when the volume of FTA imports is extremely small, the authority's conclusions with respect to all imports are applicable to imports from all sources other than FTA sources, with no need for additional explanation."[81] China argues that, even if imports from Israel and Jordan were small—or sometimes even "quasi-inexistent"—this fact does not "release" the United States from conducting a proper parallelism analysis.[82] China believes that there "cannot be a double

[79]China's appellee's submission, para. 409.

[80]China's appellee's submission, para. 357.

[81]*Ibid*.., para. 335.

[82]*Ibid*., para. 359.

standard", depending on the level of imports.[83] According to China, although a small volume of imports from FTA sources may make it easier to explain why non-FTA imports satisfy the conditions of Article 2.1, the authorities must still provide such an explanation.

4. Causation

81. China argues that the Panel was correct in finding that the United States acted inconsistently with Articles 2.1, 3.1 and 4.2(b) of the *Agreement on Safeguards* by failing to demonstrate a causal link between increased imports and serious injury.

82. China maintains that the Panel found, with respect to two specific products, that the USITC should have assessed the cumulative effect of factors other than increased imports. Contrary to the United States' arguments, the Panel did not suggest that authorities must conduct such an assessment in all cases and its interpretation of the non-attribution requirement is supported by previous decisions of the Appellate Body. In particular, the Appellate Body in *EC – Tube or Pipe Fittings* recognized that an authority may need to conduct a collective analysis in certain factual circumstances. Although the USITC's approach to non-attribution was not inherently flawed, the USITC failed to complete its non-attribution analysis because it disregarded other factors once it had established that they did not individually cause injury equal to or greater than that caused by increased imports. The United States is incorrect in suggesting that the USITC need not conduct a non-attribution analysis regarding factors making only a "minor" contribution to injury. Furthermore, even if this were correct, the Panel correctly found that the USITC had not provided a reasoned and adequate explanation that these factors made only a minor contribution. In any case, China maintains that most of the United States' arguments regarding the Panel's findings on causation relate to the Panel's consideration of facts.

(a) Specific Arguments with respect to CCFRS

83. China notes that the United States challenges the Panel's finding that the USITC failed to explain why it relied on annual AUV data. However, this finding is consistent with the USITC's own acknowledgement that some combined data may involve double counting. The Panel did not specifically conclude that the CCFRS product grouping was improper. However, the Panel did make an independent determination that the USITC's pricing analysis was not reasoned and adequate due to flaws in the data and the USITC's selective reliance on the data. On the question of non-attribution, the Panel did not require the USITC to distinguish the effects of imports from those of other factors at every moment during the investigation. Rather, it required an explanation of why injury caused by other factors was not attributed to increased imports. The need for such an explanation was particularly important given that the USITC itself acknowledged the potential injurious impact of declining demand, increased capacity, intra-industry competition, and legacy costs.

(b) Specific Arguments with respect to Cold-Finished Bar

84. According to China, the United States is improperly challenging on appeal the Panel's findings of fact. China states that the Panel determined that the USITC could not simply dismiss declining demand as a possible injury factor, because the Panel found that another plausible interpretation of the data was that this factor could contribute significantly to injury.

[83]*Ibid*., para. 373.

(c) Specific Arguments with respect to Rebar

85. China claims that the United States is improperly challenging, on appeal, the Panel's findings of fact. In particular, the United States challenges the Panel's finding that the USITC had not provided a reasoned and adequate explanation that capacity increases and the aberrant performance of one domestic producer were insignificant causes of serious injury. China also maintains that the United States is improperly disputing the Panel's choice of the relevant facts on which to base its analysis.

(d) Specific Arguments with respect to Welded Pipe

86. China argues that, despite the USITC's view that capacity increases or the aberrant performance of one domestic producers were minor factors, the USITC was nevertheless required to explain this view and provide evidence to support it. However, the USITC made only a subjective assertion that did not satisfy the non-attribution test. The Panel did not find that subjective judgements are prohibited under Article 4.2(b) of the *Agreement on Safeguards*. However, China maintains that the Panel considered that a subjective judgement without further explanation, of the kind made by the USITC, did not constitute a reasoned conclusion.

(e) Specific Arguments with respect to FFTJ

87. China asserts that the Panel did not confirm the factual findings underlying the USITC's determination that capacity increases did not have a substantial injurious impact. The United States' arguments distort the Panel Reports in suggesting otherwise. In addition, the USITC itself recognized that purchaser consolidation played a role in causing injury, but then dismissed this factor without further explanation. In any case, China maintains that the United States' arguments improperly challenge factual findings of the Panel.

(f) Specific Arguments with respect to Stainless Steel Bar

88. China argues that the United States is improperly challenging the Panel's findings of fact regarding the factors of declining demand and increases in energy costs. In particular, the Panel found that the USITC dismissed declining demand as an injury factor despite acknowledging that this factor did play a role in causing injury. Contrary to the United States' arguments, the Panel did not enunciate any standard regarding the second sentence of Article 4.2(b). According to China, the Panel simply provided an example of what could have been a reasoned and adequate explanation that this factor was not causing injury to the domestic industry.

D. *Arguments of European Communities – Appellee*

1. Unforeseen Developments, Article 3.1 of the *Agreement on Safeguards*, and Article 12.7 of the DSU

89. The European Communities requests that the Appellate Body reject the United States' appeal of the Panel's conclusions concerning unforeseen developments. The European Communities recalls that, as the Appellate Body found in *US – Lamb*, the existence of unforeseen developments is a "pertinent issue of fact and law" within the meaning of Article 3.1 of the *Agreement on Safeguards*

and, therefore, the "report of the competent authorities, … must contain a 'finding' or 'reasoned conclusion' on 'unforeseen developments'."[84]

90. The European Communities further recalls that Article XIX:1(a) of the GATT 1994 requires that increased imports must result from unforeseen developments. The relevant "unforeseen developments" must, therefore, be linked to increased imports of each specific product that may be subject to a safeguard measure. According to the European Communities, the USITC failed to make that link for each product.

91. The European Communities also submits that data not used by the USITC in its unforeseen developments analysis, but used elsewhere in the USITC's report, is not relevant for the Panel's analysis. A reasoned conclusion is one that links the pertinent facts to the conclusion reached, not one where "key elements of the analysis are left to guess work and supposition".[85] It was not for the Panel, as the United States suggests, to undertake a *de novo* review of the USITC record and provide the analysis and reasoning that the USITC failed to disclose.

92. The European Communities argues that the United States' challenge to the Panel's finding that "[t]he timing of the explanation, its extent and its quality are all factors that can affect whether an explanation is reasoned and adequate" is unsupported. According to the European Communities, the United States misconstrues the word "extent" as signifying "length". The European Communities considers that the Panel did not demand that the USITC report be longer, but that it contain a more reasoned and adequate explanation of the findings.

93. The European Communities argues that the United States wrongly focuses only on the word "reasoned" in Article 3.1 of the *Agreement on Safeguards* to question the obligation to provide an "explanation" for the conclusions reached in the investigation. In the European Communities' view, the meaning of Article 3.1 must be established taking into consideration all the terms used; the two terms "setting forth" and "reasoned" suggest the same meaning, that is, that a reasoned and adequate explanation must be contained in the report. The European Communities contends that the United States' interpretation of the term "reasoned conclusion"—that the report need only provide a "logical basis" for a conclusion—would fail to give meaning and effect to all the terms of the treaty.

94. As for the United States' argument that the word "explicit" is not contained in Article 3.1 of the *Agreement on Safeguards*, the European Communities refers to the term "set forth" in that Article and argues that it would be "difficult to conceive of how an account can be given *distinctly* or *in detail* in an implicit manner or how an *exposition*, a *narrative*, or a *description* can be other than explicit."[86]

95. The European Communities agrees with the United States' argument that competent authorities may choose any structure, any order of analysis, and any format for explanation that they see fit, as long as the report complies with Articles 3.1 and 4.2(c). However, the European Communities argues, Members imposing safeguard measures are still required to set forth a reasoned and adequate explanation and not leave it to the Panel or other Members to deduce it from the raw data.

---

[84]European Communities' appellee's submission, para. 87, referring to Appellate Body Report, *US – Lamb*, para. 76.

[85]European Communities' appellee's submission, para. 100.

[86]European Communities' appellee's submission, para. 57. (original emphasis)

96. With respect to the United States' contention that the Panel's findings on the lack of a reasoned and adequate explanation should be restricted to Article 3.1 of the *Agreement on Safeguards*, the European Communities submits that the Appellate Body has explained in previous safeguards cases that the failure to provide a reasoned and adequate explanation is not only a violation of Article 3.1, but also of the substantive obligations of the *Agreement on Safeguards*.

97. With respect to Article 12.7 of the DSU, the European Communities considers that the United States is in fact reproaching the Panel for making more findings than were needed. The European Communities submits that, in stating that a certain explanation provided by the USITC was "plausible", the Panel had engaged in a speculation that went "beyond its mandate"[87] and that, had the Panel developed alternative explanations, it would have conducted a *de novo* examination.

2. Increased Imports

(a) General

98. The European Communities requests that the Appellate Body dismiss the United States' appeal of the Panel's conclusions concerning increased imports. According to the European Communities, the United States' challenge to the standard applied by the Panel is based on an attempt to collapse the increased import requirement with the causation analysis. This argument is contrary to the ordinary meaning of Article 2.1 of the *Agreement on Safeguards* and the Appellate Body jurisprudence. In the European Communities' view, the condition relating to increased imports is separate from the question of causation and injury. Moreover, the European Communities submits that the use of the present tense in the phrase "is being imported" explicitly limits the right to adopt a safeguard measure to situations where increased imports continue and can still be found to cause or threaten to cause injury. The European Communities further contends that the United States' assertion that the analysis of increased imports must take account of long-term effects of previous increases cannot be justified by the *Agreement on Safeguards*, because the safeguard measures are not intended to provide compensation for effects of previous increases.

99. In addition, the European Communities argues that the requirement to analyze trends over the entire period of investigation and to focus particularly on the most recent data is derived directly from the phrase "is being imported". This requirement has been clarified in *Argentina – Footwear (EC)*, where, according to the European Communities, the Appellate Body found that the relevant investigation period must be the "recent past", and also that it must "end in the very recent past".[88] The European Communities argues that in the event of a more than very slight and brief decrease at the end of the period of investigation, the competent authorities must establish why, despite that decrease, the facts of the case support the determination that the product continues to be imported at increased levels.

100. The European Communities agrees with the Panel's finding that increased imports must exhibit a "certain degree of recentness, suddenness, sharpness and significance".[89] This interpretation is fully supported by the Appellate Body's finding in *Argentina – Footwear (EC)*, which, in turn, is based on a contextual reading of Article XIX of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards*.

[87]European Communities' appellee's submission, para. 106.

[88]*Ibid.*, para. 123, referring to Appellate Body Report, *Argentina – Footwear (EC)*, footnote 130 to para. 130.

[89]European Communities' appellee's submission, paras. 133 and 137, referring to Panel Reports, para. 10.167.

(b) Specific Arguments with respect to CCFRS

101. According to the European Communities, the United States criticizes the Panel for not carrying out a concrete evaluation of the USITC's explanations of the long-term effects of the 1998 import increases. The European Communities contends that this argument is an attempt by the United States to collapse the analysis of the effects of the imports with the requirement of increased imports.

(c) Specific Arguments with respect to Hot-Rolled Bar

102. The European Communities considers that the Panel, contrary to the United States' arguments, did not fail to analyze interim 2001 data in context and did not fail to consider the alleged "limited" duration of the decrease in interim 2001, but rather found that the USITC had failed to address and explain the interim 2001 data.

(d) Specific Arguments with respect to Stainless Steel Rod

103. The European Communities submits that the Panel did not, as alleged by the United States, fail to consider duration and magnitude of the respective increases and decreases in imports. Rather, the Panel found that the USITC did not explain why it found, despite the decline between interim 2000 and interim 2001, that there was an increase of imports in absolute numbers. In the European Communities' view, the Panel also correctly found that the market share of imports was not pertinent for the determination that absolute imports increased. Finally, the European Communities submits that even if the Appellate Body were to reverse the Panel's finding on this product category, the Appellate Body should still uphold the Panel's ultimate conclusion that the USITC had not demonstrated the existence of increased imports. The European Communities refers, for this purpose, to its arguments before the Panel and the relevant arguments in China's appellee's submission.

(e) Specific Arguments with respect to Tin Mill Products and Stainless Steel Wire

104. The European Communities submits that the Panel did not create a new requirement that the internal opinions of individual Commissioners must be based on the same product groupings. Rather, the Panel's reasoning was based on the requirement that a safeguard measure must be based on the determination and the underlying investigation, as published in the report. The European Communities agrees with the Panel that different product definitions lead to findings which are impossible to reconcile, because, for instance, import numbers of differently defined products are not the same, and will lead to different evaluations of trends, different explanations, and different conclusions.

105. In the European Communities' view, in *US – Line Pipe*, the Appellate Body addressed a situation where three affirmative votes, considered as the determination of the USITC, found different forms of injury which are written as alternatives into the *Agreement on Safeguards*; however, there is no alternative requirement concerning a "product" or "group of products that include the product" written into the *Agreement on Safeguards*. The Panel also did not improperly infringe upon a Member's right to structure the decision-making process of its competent authority, but rather tried to review all three individual determinations together, because the United States "insisted" that these

three findings together formed the USITC's determination.[90] Should the Appellate Body nevertheless consider that the Panel erred in law and choose to complete the legal analysis, the European Communities submits that none of the individual findings separately fulfils the requirements of the *Agreement on Safeguards*, and refers to its arguments before the Panel on this matter.

3. Parallelism

106. The European Communities submits that there is no reason for the Appellate Body to disturb the Panel's findings on parallelism. The European Communities disagrees with the United States' assertion that the Panel created a new requirement of a separate analysis of imports from sources not subject to the safeguard measures. Article 2.1 of the *Agreement on Safeguards* has been interpreted as limiting the product basis of the determination to imports covered by the measures. According to the European Communities, the phrase in Article 4 "factor other than imports" must be read as "factors other than covered imports". Therefore, in the view of the European Communities, in requiring that the effects of imports not covered by the measure be accounted for and not be attributed to covered imports, the Panel was simply applying Article 4.2(b), second sentence, to the proper product scope. Moreover, Article 4.2(b), by referring to "other factors", does not establish a closed list and the competent authorities have a duty to investigate even beyond the listed injury factors.

107. The European Communities disagrees with the United States' contention that, because imports from Israel and Jordan were non-existent or infinitesimal, the discussion of non-NAFTA imports also provides the requisite explicit findings with respect to imports from all sources other than Canada, Mexico, Israel, and Jordan. The United States is, in effect, invoking a non-existent *de minimis* exception. Finally, the European Communities submits that, in the event the Appellate Body reverses the Panel's findings, there is sufficient factual basis for the Appellate Body to complete the analysis.

4. Causation

(a) General Statements

108. The European Communities requests that the Appellate Body uphold the Panel's findings on causation with respect to all product categories subject to appeal. The Panel did not suggest that a causation methodology needs to provide for a non-attribution analysis of the cumulative effects of other factors in each and every case; rather, the cases requiring a cumulative assessment are where an assessment on an individual relative basis is insufficient to ensure that the injurious effects of other factors are not attributed to increased imports. The European Communities finds support for its reasoning in the Appellate Body's findings in *US – Lamb* and *US – Line Pipe*.

109. Further, in the European Communities' view, the Appellate Body found in *EC – Tube or Pipe Fittings* that a factor which has *no injurious effect*, rather than *minimal effects*, does not have to be subject to a non-attribution analysis. Permitting a competent authority to ignore causal factors considered to have only "minimal" effects would create a *de minimis* exception to the non-attribution requirement not contemplated in Article 4.2(b). Accordingly, the European Communities requests the Appellate Body to uphold the Panel's finding for welded pipe and FFTJ with respect to this matter.

[90]European Communities' appellee's submission, para. 415.

(b) Specific Arguments with respect to CCFRS [91]

110. The European Communities submits that the Panel did not conduct a *de novo* review. The Panel's detailed analysis permitted the Panel to verify whether the USITC's conclusions were reasoned and adequate; the Panel did not have to examine other factors. Similarly, the Panel was correct in concluding that the finding of underselling by imports did not represent a "compelling explanation" by the USITC. There is no discussion in the USITC's report of the AUV for CCFRS as a whole.

111. The European Communities further submits that, in the context of declining demand, a factor can be a cause of serious injury even if its effects appear late in the period of investigation. The Panel also correctly concluded that the USITC's analysis of capacity increases was "simplistic", and that the statement that minimill cost advantages did not change during the period of investigation did not amount to a proper non-attribution analysis. According to the European Communities, the USITC also failed to examine legacy costs in the light of the operating margin of the industry.

(c) Specific Arguments with respect to Hot-Rolled Bar

112. The European Communities argues that the USITC dismissed cost increases as an other causal factor on the basis of the "unsubstantiated claim"[92] that the domestic industry should have been able to increase its prices to cover increased costs. The European Communities submits that had the domestic industry kept its costs constant, it would have actually had a higher operating margin, even with the decrease in sales prices.

(d) Specific Arguments with respect to Cold-Finished Bar

113. The European Communities agrees with the Panel that the USITC had not explained how increased imports could be linked to declines in certain factors, if these declines had been apparent for some time before there were any increased imports. Furthermore, the Panel was correct in finding that the USITC had not provided adequate justification for its use of quarterly, rather than yearly, data. The European Communities argues that the USITC, furthermore, performed its analysis on a sub-product, without providing information on whether this product was representative.

(e) Specific Arguments with respect to Rebar

114. The European Communities disagrees with the United States' argument that the Panel failed to take account of the USITC's entire analysis of increased costs. The United States' position is moreover premised on the assertion that a domestic industry must be able to increase prices to cover its costs, which does not represent a reasoned and adequate explanation.

[91]The European Communities incorporates, by reference, the submissions of the other Complaining Parties, "some of whom have provided more detailed arguments in respect of certain product bundles". (European Communities' appellee's submission, para. 235)

For all of its product-specific arguments, the European Communities submits that, in the event the Appellate Body should reverse the Panel's findings on any of the product categories, the Panel's ultimate conclusion should nevertheless be upheld; the European Communities refers, for this purpose, to arguments it made before the Panel.

[92]European Communities' appellee's submission, para. 256.

(f) Specific Arguments with respect to Welded Pipe

115. The European Communities agrees with the Panel that the USITC's analysis of domestic capacity increases was deficient. The European Communities also agrees that the USITC's analysis of the non-import related poor performance of a significant domestic producer was deficient. The Panel did not find that the USITC was "subjective", but rather found that the USITC had failed to properly examine the effects of certain factors. The Panel also did not suggest that the USITC must perform a complete causation analysis for one producer, but rather reviewed the USITC's causation analysis relying on the USITC's own description of this producer as a "significant domestic producer".

(g) Specific Arguments with respect to FFTJ

116. In the European Communities' view, the Panel properly determined that the USITC had not ensured that it had not attributed the effects of increased capacity to increased imports. The Panel also properly determined that the USITC had not ensured that it had not attributed the effects of purchaser consolidation to increased imports; the United States' argument is premised on the notion that the USITC determined that the FFTJ industry was affected only via declines in market share and other indicators, and that purchaser consolidation was unrelated to this and rather affected prices. The European Communities states that the USITC's report itself suggests that price was an important element in the USITC's analysis in this respect.

(h) Specific Arguments with respect to Stainless Steel Bar

117. According to the European Communities, the USITC did not ensure non-attribution with respect to decline in demand. The United States' arguments alleging complexity of the USITC's analysis with respect to energy cost increases are identical to those the United States submits with respect to demand declines. Moreover, the European Communities believes that the Panel was correct in finding that the USITC should have undertaken a collective analysis of other causal factors.

E. *Arguments of Japan – Appellee*

1. Article 3.1 of the *Agreement on Safeguards* and Article 12.7 of the DSU

118. Japan considers that the Panel was correct in finding that the United States acted inconsistently with Article 3.1 of the *Agreement on Safeguards*, because the USITC did not provide a "reasoned and adequate explanation" for its findings. According to Japan, whether an explanation is "reasoned and adequate" depends on a number of factors, including the complexity of the issue and the timing, extent and quality of the explanation. In any case, Japan contends that a reasoned and adequate explanation must be organized, logical, and explicit in the sense of being "set forth" in the report; the explanation must also be substantiated by evidence. Although the *Agreement on Safeguards* does not dictate the structure of an authority's report, the *Agreement on Safeguards* also does not exempt an authority from the need to provide a reasoned and adequate explanation. According to Japan, the USITC's determination did not meet these requirements.

119. Japan also does not agree with the United States' claim that the Panel "incorrectly merged" obligations under Articles 3.1 and 4.2 of the *Agreement on Safeguards* in addressing the USITC report. Japan submits that "[t]he obligation to explain is textually and inherently intertwined with the obligation to perform."[93] Hence, the substantive and procedural obligations of the *Agreement on Safeguards* "exist side-by-side"[94], and the violation of one may lead to a violation of another. Japan further asserts that the text of the *Agreement on Safeguards* "reflects the reality that the only basis on which to evaluate what the authority did is to review what the authority said [in its report]. Otherwise, any meaningful review of the actions of the competent authority would become impossible."[95]

120. With respect to Article 12.7 of the DSU, Japan considers that the Panel fully complied with Article 12.7 as the Panel "applied the law to the facts while also ensuring that it did not replace reasonable conclusions reached by the USITC with its own conclusions".[96]

2. Increased Imports

(a) General

121. In Japan's view, the Panel correctly found that the United States failed to meet the increased imports requirement. The Panel correctly found that the increased imports requirement represents both a quantitative and qualitative standard, independent of the causation analysis required by Article 4.2 of the *Agreement on Safeguards*. The Panel's articulation of the standard for "increased imports" and its analysis "echo the Appellate Body's own careful review of the relevant provisions."[97] In Japan's view, the Panel's finding that the increase in imports must be "recent" is based on the phrase "is being imported" in both Article 2.1 of the *Agreement on Safeguards*, as well as Article XIX:1(a) of the GATT 1994, and on the Appellate Body's findings in *Argentina – Footwear (EC)*. The requirement in Article 4.2(a) that the competent authority consider the rate and amount of the increase in imports in absolute and relative terms means that, as correctly recognized by the Panel, the competent authorities must consider trends in imports over the period of investigation. Japan submits that the United States is "attempt[ing] to resurrect its simplistic end points analysis", an approach that was expressly rejected by the Appellate Body in *Argentina – Footwear (EC)*.[98]

122. Japan furthermore agrees with the Panel that the increase in imports must be "sudden". The Panel's approach rests upon the Appellate Body's ruling in *Argentina – Footwear (EC)* and is, moreover, derived from Article XIX:1(a) of the GATT 1994, which is entitled "Emergency Action" and requires safeguard measures to be imposed only in response to unforeseen developments. Japan further believes that, in its arguments, the United States continues to "confuse" issues of serious injury, as well as causation, with the distinct requirement of increased imports. Japan argues that under a proper analysis of increased imports, an increase in imports can be sudden, independently of the "onset of serious injury".[99]

[93] Japan's appellee's submission, para. 28.

[94] *Ibid.*

[95] *Ibid.* (original underlining)

[96] Japan's appellee's submission, para. 23.

[97] Japan's appellee's submission, para. 36.

[98] *Ibid.*, para. 43.

[99] *Ibid.*, para. 47.

(b) Specific Arguments with respect to CCFRS [100]

123. Japan contends that the Panel correctly applied the relevant standards articulated by the Appellate Body in *Argentina – Footwear (EC)* and the panel in *US – Line Pipe*, which require the authority to determine, on a case-by-case basis, whether imports increased in absolute and relative terms and whether the increase was sufficiently sudden and recent within a relevant period of time. In the present case, there is no dispute that imports of CCFRS first increased and then declined significantly, in absolute and relative terms, before falling more dramatically in mid-2001 to levels below those in 1998 and 1996. The USITC performed an end-point to end-point analysis and found that imports of CCFRS had increased. In Japan's view, the USITC should have instead considered the trends over the entire period of investigation and especially the end of that period. Japan further disputes what it considers to be the United States' characterization of the Appellate Body's treatment of increased imports in *Argentina – Footwear (EC)* as relating primarily to causation.

(c) Specific Arguments with respect to Tin Mill Products and Stainless Steel Wire [101]

124. Japan refers the Appellate Body to its submissions to the Panel. Japan further submits that the Panel did not challenge the right of the President of the United States to rely "on whatever number of commissioner votes he wanted". [102] Rather, the Panel found, because the President relied on the affirmative votes of three Commissioners who had performed their analysis on different product definitions, there was no reasoned and adequate explanation to justify the imposition of a measure on the respective individual product.

125. In Japan's view, there must be a "one-to-one relationship" between the injury determination and the like product definition. [103] This requirement was not fulfilled in respect of tin mill products and stainless steel wire because the USITC Commissioners, on whose determinations the President of the United States relied, did not make their findings of increased imports based on the same like product definitions or data sets. Thus, according to Japan, there was no coherent set of findings of increased imports to support the measures. Finally, Japan believes that the Panel's decision does not depart from the findings of the Appellate Body in *US – Line Pipe*, which involved the "aggregation of affirmative decisions" based on different kinds of injury [104]; the present case, however, in Japan's view, involves aggregating votes based on different "like product" definitions. Japan also submits that the Panel's findings do not encroach upon a Member's right to lay down the decision-making process of its competent authority.

[100] With respect to the Panel's findings on hot-rolled bar and stainless steel rod, Japan incorporates, by reference, the relevant arguments put forward by the other Complaining Parties. (Japan's appellee's submission, para. 58)

[101] Japan submits these arguments also with respect to the Panel's causation and parallelism analysis for these two products. (Japan's appellee's submission, paras. 126 and 152)

[102] Japan's appellee's submission, para. 139.

[103] *Ibid.*, para. 164.

[104] Japan's appellee's submission, para. 166.

3. Parallelism

126. Japan argues that the Panel was correct in finding that the United States acted inconsistently with Articles 2.1 and 4.2 of the *Agreement on Safeguards* by failing to establish that imports from sources subject to the safeguard measures satisfied the conditions for the application of such measures.

127. In Japan's view, the Panel correctly applied existing Appellate Body jurisprudence concerning how authorities must conduct their analysis and explain their findings in imposing safeguard measures on a non-MFN basis. In imposing such measures, authorities must analyze the causal relationship between imports that are subject to the measure and domestic industry performance. Rather than treating excluded imports as an other factor under the non-attribution requirement in Article 4.2(b) of the *Agreement on Safeguards*, the competent authority must ensure that the effects of non-import factors are not attributed to the imports subject to the measure, as opposed to all imports. The USITC did not make a specific causation finding for non-NAFTA imports of CCFRS or any other product. Thus, the USITC failed to ensure that its NAFTA-inclusive causation findings were consistent with the NAFTA-exclusive scope of the safeguard measures.

128. In Japan's view, the United States' arguments concerning Israel and Jordan essentially state that imports from these countries were so small that it was self-evident that, if they were removed from total imports, the effect on the United States' industry of the remaining imports would be the same. However, the point is not the quantity of the imports, but whether the USITC performed the required analysis. Japan submits that the USITC did not do so.

4. Causation

(a) Specific Arguments with respect to CCFRS [105]

129. Japan maintains that the Panel was correct in finding that the United States acted inconsistently with Articles 2.1, 3.1 and 4.2(b) of the *Agreement on Safeguards* by failing to establish that a causal link existed between any increased imports and serious injury to the relevant domestic producers.

130. According to Japan, the United States ignored the importance of the relationship between domestic industry performance and increased imports. The Panel correctly conducted an analysis of how import trends related to the various injury factors, and concluded that the analysis performed by the USITC was not reasonable; in so doing, the Panel did not conduct, as the United States contends, a *de novo* review. Japan submits that the Panel correctly found that, because imports began a sustained decline from 1998 through to the end of the period of investigation, there was no support for the USITC's finding that imports were the primary cause of the industry's price and profitability declines at the end of the period. Japan also submits that the Panel was not required to include an analysis of import pricing in its coincidence analysis—import pricing is the focus of the "conditions of competition" analysis performed by the Panel.

131. Japan further submits that the USITC's underselling analysis failed to meet the "compelling explanation" requirement because the underselling by imports was not shown to have an impact in the

[105] Japan does not submit arguments with respect to other product categories. However, with respect to hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar, Japan incorporates, by reference, the arguments of the other Complaining Parties. (Japan's appellee's submission, para. 126)

market. In other words, import pricing did not appear to have taken sales away from domestic companies. Japan submits that the Panel was correct to criticize the USITC's use of AUVs; the USITC's determination does not reveal an evaluation or discussion of AUVs for the overall CCFRS category—where a competent authority merely includes a number in the determination, this does not establish that the authority actually relied on that fact. The USITC also did not explain why AUVs were appropriate surrogates, even though it specifically acknowledged that the reliability of this data could be compromised as a result of the underlying product mix.

132. Japan next argues that the USITC's product grouping of CCFRS was arbitrary and too broad to allow meaningful comparisons of aggregated volume, price, cost or production data. The Panel's findings on coincidence and conditions of competition are not dependent on its criticisms of the CCFRS product grouping. However, if the Appellate Body finds that the Panel was required to make a specific finding regarding the WTO-consistency of the USITC's like product definition in order to assess the USITC's causation analysis, Japan refers the Appellate Body to the arguments on this topic contained in the other appellant's submission by Brazil, Japan, and Korea.

133. Japan contends that the Panel was correct in finding that the United States failed to comply with the non-attribution requirement and in examining all the relevant facts in reaching this finding. With respect to capacity increases, Japan argues that the USITC did find that capacity increases were affecting prices but did not attempt to separate and distinguish these effects. Japan argues that the USITC also failed to consider capacity utilization rates assuming capacity had remained stable over the period rather than increased, as required by the Appellate Body decision in *US – Wheat Gluten*.

134. With respect to declining demand, Japan submits that the USITC did not explain why this factor was not responsible for the injury to the domestic industry, despite the fact that the most severe injury occurred at the end of the period, when imports and demand were both falling. With respect to intra-industry competition, Japan contends that the USITC did not fully analyze this factor and did not respond to specific evidence that customers viewed minimills, rather than imports, as the price leaders in the cold-rolled market. Finally, with respect to legacy costs, Japan submits that the USITC's discussion of this factor implicitly recognizes that these costs weighed heavily on the performance of the industry and compromised the competitive position of certain domestic producers; in particular, Japan maintains that the USITC acknowledged that, even with import relief, the viability and health of the industry could only be ensured by addressing legacy costs.

135. Japan also agrees with the Panel's finding that the USITC failed to consider the collective effects of other factors as required by Article 4.2(b), although this finding was not necessary to the Panel's overall finding regarding non-attribution. The Appellate Body Reports in *US – Line Pipe*, *US – Hot-Rolled Steel*, and *EC – Tube or Pipe Fittings* allow for an overall consideration of the effects of other factors, given the interaction between such factors. Specifically, Japan argues that the Panel is not precluded from determining that such a consideration was required in particular factual circumstances such as the present case, in which several factors intertwine.

F. *Arguments of Korea – Appellee*[106]

1. Article 3.1 of the *Agreement on Safeguards* and Article 12.7 of the DSU

136. Korea considers that the Panel correctly applied Article 3.1 of the *Agreement on Safeguards*. According to Korea, the United States seeks to re-argue the appropriate standard that is required pursuant to Articles 3.1 and 4.2(b) of the *Agreement on Safeguards* "as if [that] standard had not been fully set out in prior Appellate Body reports."[107] The United States does this by arguing that competent authorities are not required to provide explanations for their determinations[108] or that explanations—even if required—need not be adequate[109] nor explicit.[110]

137. Korea takes issue with the United States' argument that the word "explicit" is not contained in Article 3.1 of the *Agreement on Safeguards*. Korea considers that it is "difficult to imagine"[111] how the requirements to provide a "detailed analysis" pursuant to Article 4.2(c) of the *Agreement on Safeguards* and to "set forth" findings and reasoned conclusions pursuant to Article 3.1 could be satisfied by anything other than an "explicit" explanation.

138. As for the United States' contention that the Panel's findings should be restricted to Article 3.1 of the *Agreement on Safeguards*, Korea argues that the failure to provide a reasoned and adequate explanation is not only a violation of Article 3.1, but also of the substantive obligations of the *Agreement on Safeguards*. Korea emphasizes that "[c]learly, in a case where the substantive obligation is not met, the analysis cannot be 'reasoned and adequate'."[112]

139. Korea further considers that the Appellate Body should dismiss the claim of the United States that the Panel acted inconsistently with Article 12.7 of the DSU. The Panel Reports set forth explanations and reasons sufficient to disclose the essential, or fundamental, justification for those findings and recommendations in compliance with Article 12.7.

2. Increased Imports

(a) General

140. Korea maintains that the Panel properly determined that the USITC's findings of increased imports were not in compliance with the *Agreement on Safeguards*. Korea agrees with the Panel that the increase in imports must have been "sudden" and "recent". In Korea's view, the Panel, in this

[106]Korea endorses the views of the other Complaining Parties with respect to products and issues other than those on which Korea focuses in its appellee's submission. (Korea's appellee's submission, para. 41)

[107]Korea's appellee's submission, para. 46.

[108]*Ibid.*, referring to the United States' appellant's submission, para. 59.

[109]Korea's appellee's submission, para. 46, referring to the United States' appellant's submission, para. 62.

[110]Korea's appellee's submission, para. 46, referring to the United States' appellant's submission, paras. 63–64.

[111]Korea's appellee's submission, para. 48.

[112]*Ibid.*, para. 57.

respect, "synthesized" the prior decisions of the Appellate Body in *Argentina – Footwear (EC)* and *US – Lamb*.[113]

141. Korea considers that the United States incorrectly "dismisses" the significance of the "emergency nature" of safeguard measures.[114] Korea believes that if there were no increase in imports in the recent past, then the conditions for the application of a safeguard measure would not be met because emergency action would no longer be necessary. Only where an unforeseen and sudden increase in imports is present will the need for emergency action exist.

142. Korea also recalls the Appellate Body's findings in *Argentina – Footwear (EC)* that the increased imports requirement is both a quantitative as well as a qualitative requirement. Therefore, in Korea's view, the increase in imports must be recent, sudden, sharp and significant, and that end-of-period trends must be analyzed in the context of trends occurring over the entire period of investigation.

(b) Specific Arguments with respect to CCFRS

143. Korea disagrees with the United States that the Panel focused exclusively on the period between interim 2001 and interim 2002. The Panel did not give the interim period dispositive weight. The Panel also correctly found that it was not possible to reconcile the USITC's statement that imports relative to production were still significantly higher at the end of the period with the interim data that "clearly contradicted" that statement.[115]

144. Korea moreover argues that the Panel properly considered the effect of import declines since 1998. The Panel did not reach "an abstract conclusion concerning a mid-period alone"[116], but rather examined that mid-period increase in the context of the subsequent decrease. Korea considers that the Panel rejected the USITC's findings for reasons similar to those articulated by the Appellate Body in *Argentina – Footwear (EC)*.

(c) Specific Arguments with respect to Tin Mill Products[117]

145. In Korea's view, the United States attempts to recast the issues of increased imports and causation with respect to tin mill products as a question of national sovereignty and as a debate over the rights of a country to structure its administering authority and decision-making process in safeguard investigations. Korea argues that the United States continues to make this argument, even though the Panel carefully followed the reasoning of the Appellate Body in *US – Line Pipe* to the effect that it was not reviewing the nature of administrative decision-making.

146. Korea submits that the United States relied on determinations of three Commissioners as the basis for the measure on tin mill products. The Panel correctly determined that the determinations of the three Commissioners did not meet the requirements of Articles 2.1, 3.1, and 4.2(b) of the *Agreement on Safeguards*, because these three findings are based on differently-defined like products.

147. Korea contends that the United States incorrectly invokes the Appellate Body's findings in *US – Line Pipe*. In that case, according to Korea, the Appellate Body held that a determination of both serious injury and threat of serious injury could establish the basis for safeguard action because both represented a continuum of injury; each was sufficient individually, or together, to meet the requirements of Article 2.1 of the *Agreement on Safeguards*. However, according to Korea, when employing this same analysis to the present case, the answer must be different. A determination that finds that the like product is CCFRS cannot support the right to take a safeguard action on tin mill products. Korea submits that it is true that all three Commissioners found serious injury—but not to the same industry and not from the same imports.

148. Korea considers that the United States is wrong to state that affirmative determinations under United States law are sufficient to satisfy the requirements of Articles 2 and 4 of the *Agreement on Safeguards*. The Panel, according to Korea, properly determined that the *Agreement on Safeguards* does not permit a WTO Member to base a safeguard measure on a determination supported by a set of explanations each of which is based on different facts and different conclusions which are inherently inconsistent with each other.

3. Parallelism

149. Korea submits that the Panel properly found that the USITC's report failed to provide an adequate parallelism analysis for CCFRS, welded pipe, and tin mill products and, therefore, does not conform to the requirements of Articles 2, 4 and 3.1 of the *Agreement on Safeguards*.

150. Korea maintains that, contrary to the United States' assertion, the Panel did not state that the USITC must also conduct a full analysis of the effects of the excluded imports. Korea notes that the Panel did not resolve the issue of whether non-covered imports themselves must be considered and analyzed as an "other factor" of injury. Korea submits that imports from excluded sources should be analyzed as an "other factor" in order to ensure that the effects of injury from those imports are not improperly attributed to covered imports. In addition, Korea argues that the United States did not establish explicitly that increased imports from non-NAFTA countries alone caused serious injury. According to Korea, the USITC's conclusion that its findings would have been the same if imports from Canada and Mexico were excluded from the analysis does not fulfill the conditions of Articles 2.1 and 4.2(b).

151. Finally, as regards the exclusion of imports from Israel and Jordan, Korea argues that the United States did not comply with the requirements of the *Agreement on Safeguards*. Korea submits that in order to establish explicitly that imports from sources covered satisfy alone the conditions for the application of a safeguard measure, a Member must determine whether its conclusions on causation would change if imports from exempt sources, taken together, were excluded from the analysis. Moreover, in Korea's view, there is no second standard for sources of small volumes of imports.

---

[113]Korea's appellee's submission, para. 73.

[114]*Ibid.*, heading IV.B.3.

[115]*Ibid.*, para. 90.

[116]*Ibid.*, para. 91.

[117]Korea submits the same arguments with respect to the Panel's findings on causation concerning tin mill products.

4. Causation

(a) Specific Arguments with respect to CCFRS and Welded Pipe

152. Korea agrees with the Panel that the USITC did not establish a causal link between increased imports and serious injury for CCFRS. The Panel recognized that the *Agreement on Safeguards* does not establish the method for establishing a causal link and specifically recalled that the USITC's analysis had to be analyzed on its substance, not on the basis of labels. The Panel, in Korea's view, properly found that the United States did not establish a causal link between increased imports and serious injury for CCFRS.

153. Korea argues that, after setting out its approach in a manner consistent with the prior holding of the Appellate Body on this issue, the Panel analyzed whether the USITC could have concluded that there was a coincidence of trends between the various factors of injury and the increase in imports. In sum, the Panel proceeded through each injury factor to determine whether there was a coincidence of trends with respect to each.

154. According to Korea, the United States mistakenly criticizes the Panel for preparing charts summarizing the USITC data with a view to checking whether coincidence existed. In Korea's view, the Panel could not have reviewed the findings of the USITC if it had not first examined in some fashion the movements in imports and in injury factors. Korea contends that the United States is arguing that the Panel should have considered whether coincidence existed between increased imports and other injury factors such as market share. According to Korea, the Panel, however, concluded that there was no coincidence between net commercial sales and imports, which is a different way of analyzing market share.

155. In addition, Korea argues that, in the absence of coincidence, the United States failed to provide evidence that the USITC's analysis was a "compelling explanation" of why causation existed. Korea notes that the Panel examined whether the USITC's findings of build-up of import inventories and declining import prices provided a compelling explanation of causation after imports declined in 1998. The Panel rejected the USITC's "compelling analysis" as it related to importer inventories and, Korea notes, the United States does not appeal that finding. Korea contends that the United States incorrectly maintains that the Panel did not analyze the USITC's findings regarding pricing trends. Moreover, Korea submits that the USITC's pricing analysis was intended to show that imports led prices down. Therefore, Korea contends that, presumably, the trends in prices and overselling would be the most relevant to that question. However, according to Korea, the USITC made no reference to import pricing trends. Finally, Korea argues that the United States responds to the Panel's analysis strictly by pointing to new evidence. According to Korea, the data referred to was not relied upon by the USITC because they were never cited by the USITC, nor would they have been, because they contained prices only for non-NAFTA imports and the USITC analysis of pricing was with respect to all imports.

156. Korea argues that the United States misinterprets the Panel's finding with respect to CCFRS as rejecting the USITC's analysis of causation on the basis of the like product definition. In Korea's view, the Panel simply recognized that the broad like product definition of CCFRS added complexities to the analysis of conditions of competition. This, according to Korea, is legally distinct from a finding regarding the proper definition of the like product, a finding that the Panel did not make.

157. Korea contends that the Panel correctly found that the USITC's non-attribution analysis with respect to CCFRS and welded pipe was "fatally flawed".[118] Korea notes that the United States, in its appellant's submission, puts emphasis on the requirement that the other factors "simultaneously" cause injury. However, Korea argues that, with the exception of welded pipe, the USITC does not identify injury from imports as occurring at any particular time in the period. Moreover, Korea disagrees with the United States' position that if the effect of a factor is minor, it does not have to be separated and distinguished. In Korea's view, *EC – Tube or Pipe Fittings* does not stand for the proposition that the mere assertion that a factor is minor satisfies the non-attribution standard.

158. Korea submits that, on the one hand, the United States maintains that no analysis of cumulative causes is required in order to adequately separate and distinguish the effects of other factors of injury, and, on the other, the United States acknowledges that the cumulative assessment of factors could lead to different results. For example, the United States argued that it was not possible for legacy costs, standing alone, to cause price declines. Furthermore, Korea contends that the United States overstates the findings of the Appellate Body in *EC – Tube or Pipe Fittings*, because in that case, the Appellate Body specifically left open the possibility that a cumulative analysis might be required in certain factual circumstances.

159. In addition, in Korea's view, the United States incorrectly interprets the Panel's findings as requiring a "weighing" of factors versus imports. The Panel, according to Korea, did not require a weighing, but rather commented on the importance of an overall assessment in the context of the USITC methodology whereby causal factors are completely disregarded if they are not more important than increased imports and regardless of whether such factors are found to be causing some of the injury.

G. *Arguments of New Zealand – Appellee*

1. Unforeseen Developments, Article 3.1 of the *Agreement on Safeguards*, and Article 12.7 of the DSU

160. New Zealand requests the Appellate Body to uphold the finding of the Panel that the United States acted inconsistently with Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards*. In New Zealand's view, the Panel applied the correct standard of review in the application of Article XIX of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards*. In *US – Lamb*, the Appellate Body did not establish a standard of review for Article 4.2 different from the standard applicable to other provisions of the *Agreement on Safeguards* or to Article XIX of the GATT 1994. Accordingly, the Panel applied the standard of review set out in Article 11 of the DSU and did not allow its examination to reflect concerns relevant to Article 4.2 or disregard concerns relevant to Article XIX of GATT 1994.

161. New Zealand considers that the Panel was correct in requiring the USITC to establish that unforeseen developments resulted in increased imports in respect of each specific product subject to a safeguard measure. If there were no such requirement, a Member could impose a safeguard measure on a range of products even if unforeseen developments had led to an increase in imports of only one of them.

162. New Zealand further maintains that the Panel was correct in finding that the USITC's conclusions were not supported by data linking those developments to specific increased imports.

[118]Korea's appellee's submission, heading V.B.

The logic of the United States' position is that a competent authority need only collect information in a report and make a determination without providing any reasoning. Article 3.1 of the *Agreement on Safeguards* requires, however, that the report of the competent authorities set forth "reasoned conclusions on all pertinent issues of fact and law". A "reasoned conclusion" is one "that links the pertinent facts to the conclusion reached. It is not one where key elements of the analysis are left to guesswork and supposition".[119] New Zealand submits that the United States' argument that there is no requirement for competent authorities to provide a "reasoned and adequate explanation" as long as there is a "logical basis" for their conclusions undermines the disciplines of the *Agreement on Safeguards*.

2. Increased Imports

163. In New Zealand's view, the Panel applied the correct standard in determining whether there are increased imports for purposes of Article 2.1 of the *Agreement on Safeguards*. New Zealand rejects the United States' suggestion that the enquiry whether an increase in imports was "recent", "sudden", "sharp", and "significant" should be "deferred" until the phase in which serious injury and causation are determined. New Zealand also contests the United States' interpretation of the phrase "in such increased quantities" to mean that the level of imports at, or reasonably near to, the end of a period of investigation be higher than at some unspecified point in time; such an interpretation would "remove an essential discipline"[120] from the *Agreement on Safeguards* and establish a standard that would allow "the arbitrary imposition of safeguards measures just because imports have increased at some stage in the past".[121] New Zealand also submits that, in determining whether imports have increased, the Panel applied a standard which is "well established in the law"[122], and properly found that the USITC had failed to provide a reasoned and adequate explanation for its determination.

164. New Zealand emphasizes that the Panel's analysis of increased imports of CCFRS was correct. The Appellate Body found in *Argentina – Footwear (EC)* that a consideration of trends is required for determining whether there are increased imports for purposes of Article 2.1 and that it is not sufficient to merely compare import levels as they stood at the end points of the period of investigation.[123] According to New Zealand, the USITC "ignored these requirements"[124] by not considering trends in imports over the entire period of the investigation.

3. Parallelism

165. New Zealand requests that the Appellate Body uphold the Panel's finding that the United States acted inconsistently with Articles 2.1 and 4.2 of the *Agreement on Safeguards* by failing to comply with the requirement of "parallelism". New Zealand first submits that, contrary to what the United States' argues, the Panel did not suggest that the USITC was required to conduct a separate analysis of imports from sources not subject to the measure. Rather, the Panel merely pointed out that increased imports of products excluded from the application of a measure cannot be used to support a

[119]New Zealand's appellee's submission, para. 4.13.

[120]New Zealand's appellee's submission, para. 5.9.

[121]*Ibid.*

[122]*Ibid.*, para. 5.12.

[123]New Zealand's appellee's submission, para. 5.17, referring to Appellate Body Report, *Argentina – Footwear (EC)*, para. 129.

[124]New Zealand's appellee's submission, para. 5.17.

determination that the product is being imported in such increased quantities as to cause serious injury. The Panel's statement that it is necessary "to account for the fact that excluded imports may have some injurious impact on the domestic industry" is a "purely descriptive alternative way of saying that excluded imports cannot be used to support a determination of increased imports".[125] In New Zealand's view, the competent authority need not conduct a separate analysis, or make separate findings for excluded products, but it does have to account for the effects of such products in making findings regarding the products subject to the safeguards measure. This, in New Zealand's view, is "central to the logic of the parallelism requirement".[126]

166. With respect to the United States' argument concerning the exclusion of imports from Israel and Jordan, New Zealand argues that the United States has "misconstrued the Panel's finding".[127] New Zealand submits that, with respect to imports from Israel and Jordan, the Panel was "making the point that the USITC did not ask itself the right question."[128] The USITC enquired, first, whether increased imports from all sources other than Canada and Mexico were a substantial cause of serious injury; and it then enquired, second, into whether the exclusion of imports from Israel and Jordan would change this conclusion. However, the correct enquiry was whether imports covered by the measure—that is, imports other than those from Canada, Mexico, Israel, and Jordan—were a substantial cause of serious injury. With respect to the United States' presentation of import statistics for Israel and Jordan, New Zealand argues that the issue before the Panel was not whether a reasoned and adequate explanation *could* be provided demonstrating that imports covered by the measure were a cause of serious injury. According to New Zealand, the issue was whether the USITC *had* in fact provided such an explanation explicitly in its report.

4. Causation

(a) General

167. New Zealand argues that the Panel was correct in finding that the United States acted inconsistently with Articles 2.1, 3.1 and 4.2(b) of the *Agreement on Safeguards* by failing to provide a reasoned and adequate explanation establishing a causal link between "increased imports" of CCFRS, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar and "serious injury" to the relevant domestic producers.

168. New Zealand submits that the Panel was correct in concluding that the USITC should have provided a collective analysis of the injurious effects of factors other than increased imports. In *EC – Tube or Pipe Fittings*, the Appellate Body found that in the context of a causation analysis under the *Anti-Dumping Agreement*, a collective assessment of the injurious effects of all other factors was not required in all cases, but may be required in specific circumstances where the lack of a collective assessment would lead to injury caused by other factors being attributed to imports. In New Zealand's view, the practice of the USITC of assessing the injurious effects of other factors individually "runs the risk of a finding of causation … even though the other factors cumulatively had a greater effect on serious injury than increased imports".[129] Furthermore, the USITC found, in the present case, that other factors causing serious injury (decline in demand, domestic capacity increases,

[125]New Zealand's appellee's submission, para. 7.4.

[126]*Ibid.*, para. 7.5.

[127]*Ibid.*, para. 7.9.

[128]*Ibid.*, para. 7.10.

[129]New Zealand's appellee's submission, para. 6.10.

legacy costs and intra-industry competition) did contribute significantly to the alleged serious injury. An individual assessment of those factors, in New Zealand's view—particularly when these factors are "linked and intertwined"—does not make clear what their full impact on serious injury has been.[130] New Zealand argues that the Appellate Body's reference in *US – Lamb* to the need to assess the nature and the extent of the injury caused implies a collective assessment of that injury.

169. New Zealand furthermore disagrees with the United States' contention that the Panel misunderstood the USITC's causation analysis and frequently failed to take into account all of the findings of the USITC on particular issues.

(b) Specific Arguments with respect to CCFRS

170. In New Zealand's view, the Panel was correct in concluding that the USITC had failed to provide a reasoned and adequate explanation demonstrating a causal link between increased CCFRS imports and serious injury. Contrary to the United States' contention, the Panel did not conduct a *de novo* review; the "data set" prepared by the Panel consisted of graphs made on the basis of data contained in the USITC's record.

171. According to New Zealand, the Panel also did not substitute its own conclusions on coincidence for those of the USITC, but rather looked for the reasoned and adequate explanation of the USITC's determination. The Panel correctly found a lack of coincidence between import trends and trends in injury factors. Furthermore, the Panel did not ignore the effects of import prices, as alleged by the United States, but rather examined the USITC's pricing analysis after it found an absence of coincidence. New Zealand also argues that the Panel did not fail to consider the overall situation of the domestic industry; rather, the USITC itself essentially considered only two indicators. In New Zealand's view, the United States is, in reality, criticizing the Panel for not conducting a *de novo* review.

172. New Zealand further submits that the Panel was correct in finding, in its consideration of "conditions of competition", that the USITC's pricing analysis was not reasoned and adequate. Contrary to the United States' assertions, the Panel did not suggest that it was necessary for the USITC to show underselling for each product at every point in time to justify a finding of underselling. Rather, New Zealand submits, the Panel—correctly—found fault with the USITC's pricing analysis because the USITC did not provide a reasoned and adequate explanation of how the facts supported the USITC's "general thesis" that "imports were priced below domestically produced steel."[131]

173. New Zealand also argues that the Panel was correct in insisting that the USITC "justify its reliance" on AUV pricing data when conducting its pricing analysis. The Panel noted the reservations expressed by the USITC itself about using aggregate, as opposed to individual, product data. The Panel made "the perfectly reasonable observation"[132] that, having expressed qualifications and reservations about the pricing data on which it was relying, the USITC had to justify its reliance on that data. New Zealand recalls that the Panel also found that even this data did not support the conclusions that the USITC had drawn.

[130] *Ibid.*, para. 6.11.

[131] New Zealand's appellee's submission, para. 6.33.

[132] *Ibid.*, para. 6.39.

174. New Zealand next submits that the Panel was correct in concluding that the broad product definition of CCFRS made it difficult for the competent authority to identify the proper locus of competition while undertaking a conditions of competition analysis. In the case of a broad product definition, the statistics for the industry and imports will only show averages and will not provide sufficiently specific information about the locus of competition in the market. In New Zealand's view, the Panel was not addressing the "like product" issue; rather, the Panel made the point that, regardless of whether the "like product" determination is or is not consistent with Article 2.1, a broad product definition has implications for a causation determination. Contrary to the United States' allegations, the Panel did not misconstrue the findings of the panel in *Argentina – Footwear (EC)* in this respect.

175. New Zealand finally contends that the Panel was correct in concluding that the USITC had failed to separate and distinguish the injurious effects of the following factors from those of increased imports. With respect to declining demand, New Zealand argues that the United States' objection to the Panel's findings involves a disagreement with the Panel's factual conclusions; at the end of the period of investigation, there was a strong coincidence between declining demand and injury, while imports were declining. With respect to domestic capacity increases, according to New Zealand, the USITC acknowledged that such increases likely played a role in domestic price declines; however, the USITC then dismissed this factor without assessing its nature and extent, although the facts indicate that the domestic industry used excess capacity in a manner that caused or contributed to declining prices.

176. With respect to intra-industry competition, New Zealand argues that the USITC itself acknowledged the role played by intra-industry competition in causing injury, but subsequently failed to explain how it ensured the non-attribution of the injurious effects of this factor. The United States suggests that the cost advantages of minimills did not change during the period of investigation; however, as the Panel recognized, the existence of a factor throughout the period does not mean it cannot play a role in causing serious injury. New Zealand also objects to the United States' introduction of previously undisclosed data in support of its arguments.

177. With respect to legacy costs, New Zealand contends that the findings of the USITC, as well as the data considered by the Panel, show that legacy costs imposed a significant burden on integrated producers. New Zealand argues that the USITC itself recognized the problems caused to the industry by these costs, but then dismissed this factor—"in half a sentence"[133]—on the basis of the assertion that these costs did not contribute to declining prices.

H. *Arguments of Norway – Appellee*

1. Unforeseen Developments, Article 3.1 of the *Agreement on Safeguards*, and Article 12.7 of the DSU

178. Norway requests the Appellate Body to reject the United States' appeal of the Panel's conclusions concerning unforeseen developments. Norway recalls that the Appellate Body found in *US – Lamb* that the existence of unforeseen developments is a "pertinent issue of fact and law" within the meaning of Article 3.1 of the *Agreement on Safeguards*, and that, therefore, the report of the competent authorities must contain a finding or a reasoned conclusion on unforeseen developments. Norway further refers to the Appellate Body's statement that a panel can assess whether the competent authorities' explanation for its determination is reasoned and adequate "only if the panel critically

[133] New Zealand's appellee's submission, para. 6.72.

examines that explanation, in depth and in the light of the facts before the panel."[134] Consequently, according to Norway, a panel must examine whether the competent authorities considered all the relevant facts and adequately explained how the facts support their determinations. In Norway's view, it is obvious that a demonstration of unforeseen developments must be integrated with, and must be logically connected to, the explanation of the other requirements, and must also be reasoned and adequate.

179. Norway contends that Article XIX of the GATT 1994 requires that unforeseen developments be linked to the product which is being imported in increased quantities. The United States, in Norway's view, seems to suggest that the USITC concluded that the effects of certain macroeconomic developments were fairly consistent across the respective steel industries. According to Norway, there is no such conclusion in the USITC report and, moreover, the conclusion is incorrect.

180. Norway further submits that data not used by the USITC in its analysis of unforeseen developments, but used elsewhere in the USITC's report, are not relevant for the Panel's review. In Norway's view, a reasoned conclusion is one that links the pertinent facts to the conclusion reached, not one where "key elements of the analysis are left to guesswork and supposition".[135] According to Norway, the United States' position appears to be that a competent authority need only collect information in a report and make a determination—without providing any reasoning to support the determination.

181. As for the United States' contention that the Panel's findings on the lack of a reasoned and adequate explanation imply only a violation of Article 3.1 and not of Articles 2 and 4 of the *Agreement on Safeguards*, Norway submits that the Appellate Body has explained in previous safeguards cases that the failure to provide a reasoned and adequate explanation is not only a violation of Article 3.1, but also of the substantive obligations of the *Agreement on Safeguards*.[136] According to Norway, "[i]t is inherent in the notion of 'determination', which underlies both Articles 2 and 4 of the *Agreement on Safeguards*, that there be full consideration of all the facts and arguments and a reasoned and adequate explanation of how all the requirements for imposing the measure have been met."[137]

182. With respect to Article 12.7 of the DSU, Norway submits that the United States is in fact reproaching the Panel for making more findings than were needed. The Panel was called upon to examine whether the USITC had provided reasoned and adequate explanations to support its determinations. Once the Panel had decided that there were no such explanations, its analysis should have ended. It was, therefore, not for the Panel to develop alternative explanations or to examine whether there was evidence to come to a different conclusion than the USITC.

2. Increased Imports

183. Norway submits that the United States' appeal of the Panel's findings on increased imports rests on two grounds. First, the United States challenges the standard applied by the Panel as not being supported by the text of the *Agreement on Safeguards*. Second, the United States asserts that the Panel erred in its analysis of the import data for CCFRS, hot-rolled bar and stainless steel rod. In its submission, Norway addresses only the general legal standard for increased imports and, with respect to the product-specific arguments for CCFRS, hot-rolled bar and stainless steel rod, incorporates by reference the relevant arguments of the other Complaining Parties.[138]

184. Norway understands the United States to argue that the requirement, set out in *Argentina – Footwear (EC)*, that increases in imports be "recent enough, sudden enough, sharp enough and significant enough", applies to the phase in which serious injury or causation are determined. This argument, in Norway's view, "simply ignores"[139] what was said in *Argentina – Footwear (EC)* and the way in which the requirements set out there have been applied more generally in WTO dispute settlement. The Appellate Body was not making a statement about the entire investigative process. The Appellate Body, in Norway's view, was not seeking to defer the requirement that increases be recent, sudden, sharp and significant to the phase in which serious injury or causation are determined.

[134]Norway's appellee's submission, para. 118, referring to Appellate Body Report, *US – Lamb*, para. 106.

[135]Norway's appellee's submission, para. 132.

[136]*Ibid.*, para. 98.

[137]Norway's appellee's submission, para. 100.

[138]*Ibid.*, para. 141.

[139]*Ibid.*, para. 145.

185. Norway submits that, in assessing increased imports, the USITC was required to examine the recent past. Given the extraordinary or abnormal nature of safeguard measures, as recognized by the Appellate Body, it is not enough for the competent authorities to determine simply that the level of imports at or near the end of the period was higher than at some unspecified earlier point. In particular circumstances, a decrease in imports at the end of the period of investigation may preclude a finding of increased imports pursuant to Article 2.1 of the *Agreement on Safeguards*. Norway contends that the United States' argument that "any increase will do" would allow authorities to ignore trends throughout the investigation period and would undermine the disciplines of the Agreement.

186. Norway argues that the effect of the United States' approach is to try to move from a standard that is consistent with the objectives of the *Agreement on Safeguards*, namely, to provide relief from import surges, to a standard that allows the arbitrary imposition of safeguards measures just because imports have increased at some stage in the past. The United States, according to Norway, wants the Appellate Body to reverse its previous case law to allow the United States to continue its practice whereby a mere increase or "any increase" is sufficient; this test would allow a determination that imports have increased to be made on the basis of a peak in imports at some time during the period of investigation and would ignore trends throughout that period. Norway concludes that this test has no basis in law and must therefore be rejected.

(a) Specific Arguments with respect to Tin Mill Products and Stainless Steel Wire

187. Norway argues that the Panel correctly found that the USITC's determination relating to tin mill products and stainless steel wire did not comply with the requirements under Articles 2.1, 3.1 and 4.2(c) of the *Agreement on Safeguards*. According to Norway, the specific legal problem arising in this case is that not all the three Commissioners, who, according to the United States, voted in the affirmative in respect of tin mill products and stainless steel wire, related their findings to tin mill products and stainless steel wire. The Panel examined whether the United States had established, through a proper determination supported by a report setting out reasoned and adequate explanations, that it had a right to apply a safeguard measure on tin mill products and stainless steel wire. Norway submits that the Panel correctly found that there was no such determination supported by a reasoned and adequate explanation because the Presidential Proclamation refers to three irreconcilable determinations based on different products.

188. The Panel's reasoning was based on the requirement that the measure ultimately imposed must be based on a determination, and the underlying investigation, as published in the report. This obligation, in Norway's view, has two aspects. First, there must be a determination, supported by a report setting out reasoned and adequate explanations; second, that determination must relate to the products on which safeguard measures are imposed.

189. Both of these aspects are well set out in the text of the *Agreement on Safeguards* and have long been clarified by the Appellate Body. Thus, the determination required by WTO Members under the *Agreement on Safeguards* must be a singular act for which a WTO Member is accountable. The Panel did not depart from the Appellate Body's findings in *US – Line Pipe*; rather, the Panel followed these Appellate Body findings by asking whether a single legal act in the form of a determination supported by a report with reasoned and adequate explanations existed. Norway argues that the Panel correctly found that there was none.

190. Norway argues that, contrary to what the United States argues, divergent findings that are based on differently-defined products are intrinsically irreconcilable. Norway is furthermore of the

view that the question before the Panel was not whether there was a match between the product coverage of the determinations reached by Commissioners Bragg, Devaney, and Miller. As the Panel clarified, it examined whether these opinions were reconcilable for purposes of the *Agreement on Safeguards*. Norway argues that, in order to reconcile the different analyses and findings of the three Commissioners that are based on different import volumes, the Panel would have had to examine *ex post* all the data on which the three different Commissioners based their analyses and determine whether the increased imports requirement was fulfilled. Norway submits that it is not for the Panel to reconcile, to re-assess or to re-write the measure by looking at data somewhere in the report. The Panel's task, according to Norway, is to evaluate whether the United States fulfilled its obligations under the *Agreement on Safeguards.*

191. Norway also disagrees with the United States' argument that the Panel Reports improperly impinge on the manner in which a Member structures the decision-making process of its competent authority. In Norway's view, the Panel "fully followed"[140] the Appellate Body in recognizing the sovereign discretion of the United States to structure its internal decision-making process as an exercise of its sovereignty. Norway is of the view that the Panel did not impose any requirement on how the United States structures its internal decision-making in safeguard investigations.

192. Finally, Norway contends that the Panel did not have to address the arguments of the Complaining Parties that each of the individual opinions analyzed separately also fails to fulfil the requirements set by Articles 2.1 and 4 of the *Agreement on Safeguards*. However, Norway submits that, should the Appellate Body consider it necessary to do so, there are sufficient findings, arguments and undisputed facts on the record to show that the assertion of the United States is incorrect.

3. Parallelism

193. Norway submits that there is no reason for the Appellate Body to disturb the Panel's findings on parallelism. Norway disagrees with the United States' assertion that the Panel created a new requirement of a separate analysis of imports from sources not subject to the safeguard measures. Norway submits that Article 2.1 has been interpreted to refer only to imports from covered sources and limits the product basis of the determination to imports covered by the measures. The term "imports" in Article 4 must have the same meaning, and thus the phrase "factor other than imports" must be read "factors other than covered imports". Therefore, in the view of Norway, in requiring that the effects of imports not covered by the measure be accounted for and not be attributed to covered imports, the Panel was simply applying Article 4.2(b), second sentence, to the proper product scope. Moreover, Article 4.2(b), by referring to "other factors", does not establish a closed list and the competent authorities have a duty to investigate even beyond the listed injury factors. Norway argues that the United States never explains how a competent authority could demonstrate, other than by conducting a non-attribution analysis with respect to excluded imports, that there is a causal link between imports actually covered by the relevant measures and serious injury.

194. In this regard, Norway also notes that a failure, by the competent authority, to proceed properly may well have significant consequences for its conclusion. For some product groups, imports from Mexico and Canada taken together were 40 percent of imports from all other sources. Indeed, for some products, the United States' authorities themselves concluded that imports from such sources, even taken individually, were contributing importantly to serious injury.

[140]Norway's appellee's submission, para. 286.

195. According to Norway, the United States contends that because imports from Israel and Jordan were non-existent or infinitesimal, the discussion of non-NAFTA imports also provides the requisite explicit findings with respect to imports from all sources other than Canada, Mexico, Israel, and Jordan. Norway submits that the United States is actually invoking a *de minimis* exception which does not exist. Norway further submits that the United States' contention that the Panel's requirement imposes the obligation to make redundant findings is also erroneous. By requiring the United States to make specific findings for non-FTA imports, Norway believes, the Panel is making it possible for the competent authorities to make a proper determination, based only on the covered imports, that is fully consistent with WTO requirements.

4. Causation

196. Norway requests the Appellate Body to uphold the Panel's findings that the USITC failed to meet the necessary causation standard for CCFRS, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, tin mill products, and stainless steel wire.

197. Norway notes that there is no basis for the United States' claims that the Panel misinterpreted the causation standard and "consistently read into the ITC's analysis findings the ITC did not make, misstated or ignored critical findings of the ITC [ ] and even substituted its own views of the record for that of the ITC."[141]

198. Norway argues that, contrary to the United States' arguments, the Panel did not substitute the USITC's *reasonable* conclusions on causation with its own conclusions. Rather, it reviewed the evidence that was before the USITC and recognized the obvious lack of coincidence between increased imports and domestic industry performance. Because of the lack of coincidence, the Panel sought out the USITC's analysis as to why a causal link between increased imports and serious injury to the domestic industry still existed. Norway contends that, based on the evidence before the Panel, there was no analysis offered by the USITC that could meet the standard.

199. Norway contends that, by stopping its investigation of individual factors after it had established that they were not a cause of injury equal to or greater than increased imports, the USITC did not comply with the requirement of Article 4.2(b). This approach is, in Norway's view, clearly not a correct one, as it does not comply with Article 4.2(b) of the *Agreement on Safeguards* that, according to Appellate Body practice, requires a competent authority to separate and distinguish the injurious effects of the increased imports from the injurious effects of other factors.

200. According to Norway, the United States is also mistaking a critical review by the Panel for a *de novo* review of the facts. In Norway's view, the Panel correctly applied the standard of review and examined whether the USITC assessed all relevant factors and provided a reasoned and adequate explanation of how the facts supported its determination of a causal link as well as its non-attribution analysis.

201. Norway furthermore associates itself with the product-specific arguments made by the other appellees. In particular, as regards the standard of review issue and the details of the CCFRS analysis, Norway specifically refers to Brazil's appellee's submission.

[141]Norway's appellee's submission, para. 164, referring to the United States' appellant's submission, para. 168.

I. *Arguments of Switzerland – Appellee*

1. Unforeseen Developments, Article 3.1 of the *Agreement on Safeguards*, and Article 12.7 of the DSU

202. Switzerland requests that the Appellate Body uphold the Panel's conclusions concerning unforeseen developments.

203. As for the United States' argument that the word "explicit" is not contained in the *Agreement on Safeguards*, Switzerland submits that the need for an explicit determination is simply a clarification of the requirement contained in Article 3.1 that the published report must contain "reasoned conclusions" and the requirement under Article 4.2(c) to provide a "detailed analysis", including a "demonstration of the relevance of the factors examined."

204. Switzerland submits that the Panel applied the correct standard of review in examining the issue of unforeseen developments under Article XIX:1(a) of the GATT 1994. In stating that it had to examine whether the competent authorities had "considered all the relevant facts and had adequately explained how the facts supported the determinations that were made"[142], the Panel was simply articulating what its responsibilities were in applying the standard of review set out in Article 11 of the DSU. Switzerland asserts that the Panel was not allowing its approach, in this respect, to reflect concerns relevant to Article 4.2 of the *Agreement on Safeguards*.

205. Switzerland argues that Article XIX:1(a) of the GATT 1994 requires that there must be a link between the relevant unforeseen developments and increased imports of each of the specific products that may be subject to a safeguard measure. According to Switzerland, it is not sufficient, therefore, to link the unforeseen developments to only one of those products.

206. Switzerland further maintains that the Panel was correct in finding that the USITC's conclusions were not supported by data linking those developments to specific increased imports. A "reasoned conclusion" under Article 3.1 of the *Agreement on Safeguards* is one that links the pertinent facts to the conclusion reached, not one where "key elements of the analysis are left to guesswork and supposition".[143] Switzerland submits that the United States' position appears to be that a competent authority only needs to collect information in a report and make a determination without being under an obligation to provide sound reasoning to support its conclusion. In Switzerland's view, such a result makes a "mockery"[144] of the requirement in Article 3.1 that the competent authority must publish a report of its "findings and reasoned conclusions on all pertinent issues of fact and law."

207. With respect to Article 12.7 of the DSU, Switzerland argues that the Panel fully considered all the facts and arguments of the United States and properly stated the basic rationale for its findings.

[142]Switzerland's appellee's submission, para. 72, referring to Appellate Body Report, *Argentina – Footwear (EC)*, para. 121.

[143]Switzerland's appellee's submission, para. 81.

[144]*Ibid.*, para. 81.

2. Increased Imports

(a) General

208. Switzerland submits that the Panel correctly concluded that the increase in imports must have been recent. According to Switzerland, this conclusion "tracks precisely" the Appellate Body's finding in *Argentina – Footwear (EC)*[145], and follows from the use of the present tense in the phrase "is being imported" in Article 2.1 of the *Agreement on Safeguards*.

209. Switzerland also agrees with the Panel's finding that the increase in imports must be sudden. According to Switzerland, this interpretation is fully supported by the Appellate Body's finding in *Argentina – Footwear (EC)*, which, in turn, is based on a contextual reading of Article XIX of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards*.

210. Finally, Switzerland disagrees with the Unites States' position that "the phrase 'in such increased quantities' simply states the requirement that, in general, the level of imports at (or reasonably near) the end of the [period of investigation] be higher than at some unspecified earlier point in time."[146] Switzerland sees this argument as endorsing the "simplistic"[147] end-points analysis that was rejected by the Appellate Body in *Argentina – Footwear (EC)*.[148]

(b) Specific Arguments with respect to CCFRS[149]

211. According to Switzerland, the United States seeks to "rehabilitate"[150] the USITC report by comparing the level of imports between 1996 and 2000 and without addressing the level of imports at the end of the period of investigation. Switzerland sees this approach as "patently wrong".[151]

(c) Specific Arguments with Respect to Tin Mill Products and Stainless Steel Wire

212. Switzerland asserts that the Panel's findings are correct and completely in line with prior panel and Appellate Body practice. The Panel's concern was not with how the United Sates law functions, but that by function of United States law—which required the President to rely on the decision of at least three Commissioners—there needed to be consistent treatment of the like product. Otherwise, the analysis of these Commissioners could not support the measures on these individual products.

[145]Switzerland's appellee's submission, para. 90, referring to Appellate Body Report, *Argentina – Footwear (EC)*, para. 130.

[146]Switzerland's appellee's submission, para. 94, referring to the United States' appellant's submission, para. 102.

[147]Switzerland's appellee's submission, para. 94.

[148]*Ibid.*, referring to Appellate Body Report, *Argentina – Footwear (EC)*, paras. 129 and 131.

[149]For hot-rolled bar and stainless steel rod, Switzerland refers to the arguments of the other Complaining Parties and incorporates them by reference. (Switzerland's appellee's submission, para. 100)

[150]Switzerland's appellee's submission, para. 104.

[151]*Ibid.*

213. Switzerland argues that the United States is incorrect in claiming that the Panel's findings "provide[] no insight into the Panel's reasoning". The Panel expressed its reasoning well. Switzerland fails to understand how the United States can recognize the fact that the three Commissioners based their findings on data for two different product groupings, but then claim that the disparate findings based on the data for those groupings both support a measure on only one grouping. The findings cannot possibly be reconciled because they address entirely different issues. The Panel found simply that, to comply with the provisions of the *Agreement on Safeguards*, a Member's authority may not reach an affirmative finding (however that is defined) and impose a measure that is based on multiple, inconsistent like product definitions. This is not a far-reaching finding.

214. According to Switzerland, the United States erroneously claims that the "something beyond" language derived from the Appellate Body Report in *US – Line Pipe* applies in the present case. Rather, the language is a statement by the Appellate Body that, in hierarchical terms, a showing of threat is easier to make than a showing of actual injury, which is "something beyond" threat. Therefore, the Appellate Body appears to have reasoned, if three threat of injury votes would suffice, so would a combination of three threat and injury votes. Lastly, in Switzerland's view, the Panel's decision does not improperly infringe on a Member's right to structure the decision-making process of its competent authority.

3. Parallelism

215. According to Switzerland, the Appellate Body established unequivocally—based on the identity of the language in Article 2.1 and Article 2.2—that imports included in the determinations made under Articles 2.1 and 4.2 should correspond to the imports included in the application of the measure under Article 2.2 of the *Agreement on Safeguards*. This is crucial for the present case. It does not mean that a "gap" may not exist between imports covered under the investigation and imports falling within the scope of the measure. However, according to Switzerland, such a gap can only be justified—as stated by the Appellate Body—if it is explicitly established that increased imports from non-FTA sources *alone* caused serious injury or threat of serious injury.

216. The United States, in Switzerland's view, obviously failed to meet this standard. Equally invalid is the United States' criticism of the Panel for inserting an allegedly incorrect additional analytical step. The approach followed by the Panel, again, is based on consistent panel and Appellate Body practice. Switzerland also disagrees with the United States' argument that, if the volume of FTA imports is extremely small, the competent authority's conclusions with respect to all imports are also applicable to imports from all sources other than the excluded FTA sources. Switzerland contends that, even though imports from Israel and Jordan were small, or sometimes even quasi-non-existent, this does not release the United States from establishing explicitly, with a reasoned and adequate explanation, that imports from sources covered by the measure alone do satisfy the conditions for the application of a safeguard measure.

4. Causation

(a) General

217. Switzerland requests that the Appellate Body uphold the Panel's findings on causation. For the United States, the central element of the Panel's alleged errors with respect to causation relates to its establishment of the facts and its weighing and appreciation of the evidence. Yet, nowhere in its arguments on causation does the United States allege that the Panel has infringed Article 11 of the

DSU. All the United States has alleged, in its detailed product-by-product arguments, is that the Appellate Body should reach a different factual finding to that reached by the Panel. Since the United States has not pleaded before the Appellate Body that Article 11 has been infringed, it cannot have the Panel's fact-finding and weighing of the evidence reversed. The situation is similar to the situation faced by the Appellate Body in *US – Countervailing Measures on Certain EC Products*.[152]

218. Switzerland further argues that the United States' submission erroneously suggests that the Panel allegedly failed to meet an undefined "burden of proof" before it could conclude that the USITC's findings were WTO-inconsistent. The Panel was required to make an "objective assessment of the matter before it" pursuant to Article 11 of the DSU. This involves the Panel determining, in the words of the Appellate Body, whether the USITC provided a reasoned and adequate explanation. The United States has not alleged, however, that the Panel infringed its obligations under Article 11 of the DSU. According to Switzerland, the United States furthermore erroneously assumes that merely by reversing the Panel's findings on specific issues, the Appellate Body could uphold the USITC's causation analysis.

219. Switzerland contends that there are at least two general methodological faults committed by the USITC. First, in the instances where the USITC has determined that there is more than one alternative cause of injury, the USITC failed to assess, separate and distinguish the collective effects of the other causes from the effects allegedly caused by increased imports. Second, the USITC continues to consider that merely determining that increased imports are a cause "equal or greater than" any alternative cause of injury satisfies the non-attribution requirement of Article 4.2(b) of the *Agreement on Safeguards*; this is the same approach that was found inconsistent by the Appellate Body in *US – Lamb*.

220. Switzerland submits that the Panel's general analytical framework is "unobjectionable". Switzerland notes that the Panel "compartmentalised"[153] the "coincidence" and "conditions of competition" analysis and submits that, after the Panel found an absence of coincidence, did not conduct a sufficiently critical analysis of whether the USITC had nevertheless demonstrated the existence of a causal link. Switzerland submits that in the absence of coincidence, the facts established by the USITC do not establish a compelling explanation that a causal link exists. However, even on the basis of an "uncritical and unduly deferential examination"[154], the Panel concluded in nine out of ten cases that there was no reasoned and adequate explanation.

221. Switzerland agrees with the Panel's finding that where several factors are causing injury, a competent authority must assess their effects collectively in order to ensure that it does not attribute any injury caused by other factors to increased imports. Indeed, the Panel could have found every one of the USITC's causation determinations inconsistent with the *Agreement on Safeguards* on these grounds. The Panel did not suggest that a causation methodology needs to provide for a non-attribution analysis of the cumulative effects of other factors in each and every case; rather, the cases requiring a cumulative assessment are where an assessment on an individual relative basis is insufficient to ensure that the injurious effects of other factors are not attributed to increased imports. Switzerland finds support for its reasoning in the Appellate Body's findings in *US – Lamb* and *US – Line Pipe*.

[152]Appellate Body Report, *US – Countervailing Measures on Certain EC Products*, paras. 51–75.

[153]Switzerland's appellee's submission, para. 133.

[154]*Ibid.*, para. 136.

222. Further, in Switzerland's view, the Appellate Body in *EC – Tube or Pipe Fittings* found that a factor which has *no injurious effect*, rather than *minimal effects*, does not have to be subject to a non-attribution analysis. Permitting a competent authority to ignore causal factors considered to have only "minimal" effects would create a *de minimis* exception to the non-attribution requirement not contemplated in Article 4.2(b). Accordingly, Switzerland requests the Appellate Body to uphold the Panel's finding for welded pipe and FFTJ with respect to this matter.

(b) Specific Arguments with respect to Welded Pipe[155]

223. Switzerland submits that the Panel correctly found the USITC's analysis of domestic capacity increases to be insufficient in order to satisfy the non-attribution requirement. The Panel also correctly found the USITC's analysis of non-import related poor performance of a significant domestic producer to be deficient; Switzerland contends that the Panel was correct to find that even factors which have a minor effect should be subject to a non-attribution analysis. Even if the Appellate Body reverses the Panel's findings, Switzerland argues that the Appellate Body should still uphold the Panel's ultimate conclusion; for this purpose, Switzerland refers the Appellate Body to its and other Complaining Parties' arguments before the Panel on which the Panel did not decide.

J. *Conditional Appeals*

1. Arguments of Brazil, Japan, and Korea – *Joint Appellants*

224. Brazil, Japan, and Korea request the Appellate Body conditionally to address their claims with respect to the definition of the like product and the domestic industry under Articles 2.1 and 4.1(c), as well as their claims with respect to Article 5.1 of the *Agreement on Safeguards*.

(a) Definition of the like product and the domestic industry

225. In their joint conditional appeal, Brazil, Japan, and Korea request the Appellate Body to rule on whether the grouping by the USITC of CCRFS products into a single like product was consistent with Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*, in the event that the Appellate Body: (i) disagrees with the Panel's finding that the safeguard measures are "deprived of a legal basis"; (ii) reverses an aspect of any of the Panel's findings against the United States with respect to CCFRS; or (iii) concludes that the Panel should have issued a like product ruling to support its CCFRS causation finding.

226. According to Brazil, Japan, and Korea, the parties agree that the products composing the CCFRS product category are distinct, since "they have different physical properties, end uses, consumer tastes and habits, customs treatment, and production processes."[156] In addition, Brazil, Japan, and Korea argue that the USITC declined to group CCFRS products together in prior trade remedy cases.

227. According to Brazil, Japan, and Korea, each of the domestic products within a grouping must be "like" all of the subject imports within that grouping. It is not enough to find that the grouping of the domestic products is like that of the imported products. Moreover, Brazil, Japan, and Korea argue

[155]Switzerland incorporates, by reference, the arguments of the other Complaining Parties with respect to the other product categories in dispute. (Switzerland's appellee's submission, para. 162)

[156]Brazil's, Japan's, and Korea's other appellants' submission, para. 25.

that the Appellate Body explained in *US – Lamb* "that a continuous line of production between products—a characteristic heavily relied upon by the United States in the case of flat rolled steel products—is insufficient to overcome their lack of 'likeness'."[157]

228. In Brazil, Japan, and Korea's view, the domestic industry should be defined on the basis of the competitive relationship between the imported product and the like domestic product. Finally, Brazil Japan, and Korea submit that the product definition of CCFRS is inconsistent with Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*, because CCFRS products are not a single product and do not compose one authentic market.

(b) Article 5.1 of the *Agreement on Safeguards*

229. In the event the Appellate Body upholds or modifies the Panel's findings on causation, Brazil, Japan, and Korea request the Appellate Body to complete the analysis "regarding the failure of the United States to adequately analyze causation and to find that the United States failed to ensure that its safeguard measures were limited to the extent necessary, as required by Article 5.1".[158] Alternatively, in the event the Appellate Body reverses the Panel's findings with respect to increased imports and causation, Brazil, Japan, and Korea request the Appellate Body to examine whether the safeguard measures, as explained by the United States in its *ex post facto* economic model, comply with Article 5 of the *Agreement on Safeguards*.

230. Brazil, Japan, and Korea argue that, in accordance with the Appellate Body findings in *US – Line Pipe,* the Complaining Parties established a *prima facie* case that the United States violated Article 5.1, because the Panel found that the United States failed to comply with the causation requirements of Article 4.2(b) of the *Agreement on Safeguards*. According to Brazil, Japan, and Korea, the United States failed to rebut the Complaining Parties' *prima facie* case. Brazil, Japan, and Korea argue that the United States' *ex post facto* analysis is not in accordance with the requirements of Article 5.1 of the *Agreement on Safeguards*, because the United States failed to account for the effects of decreasing demand, domestic capacity increases, intra-industry competition, as well as legacy costs on the domestic industry's performance.

2. Arguments of China – *Appellant*

231. In the event the Appellate Body should reverse sufficient of the Panel's findings to undermine the Panel's conclusion that the safeguard measures were deprived of legal basis, China requests the Appellate Body to address its claim with respect to the definition of the imported product, the like product and the domestic industry under Articles 2.1 and 4.1(c), as well as its claims with respect to Articles 5.1, 9.1 and 3.1 of the *Agreement on Safeguards*.

(a) Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*

232. China argues that the United States acted inconsistently with Articles 2.1 and 4.1(c) of the *Agreement on Safeguards* because the United States failed to properly define the imported product, the like product, and the domestic industry. According to China, the United States' approach of bundling together products in arbitrary groups failed to allow for an examination of the competitive dynamics amongst the various products. China submits that in the absence of such a competitive

[157] *Ibid*., para. 31.

[158] Brazil's, Japan's, and Korea's other appellants' submission, 2.

analysis, an industry not suffering injury could benefit from the imposed relief on a broader group of imported products, some of which might not have even increased. In addition, China alleges that it has demonstrated, along with the remaining other appellants, that even on the basis of the flawed product groupings, the United States was not entitled to impose the safeguard measures.

(b) Article 5.1 of the *Agreement on Safeguards*

233. China argues that the United States violated Article 5.1 of the *Agreement on Safeguards* because the United States' safeguard measures were not limited to remedying or preventing the serious injury caused by imports. China submits that the other appellants have demonstrated that the USITC failed to properly segregate the injurious effects of other factors from the injurious effects of increased imports. In addition, according to China, the *ex post facto* analysis submitted by the United States does not separate and distinguish the effects of factors other than imports on the domestic industry.

(c) Article 9.1 of the *Agreement on Safeguards*

234. China further claims that the United States acted inconsistently with Articles 9.1 and 3.1 of the *Agreement on Safeguards*. China alleges, first, that the United States' approach of linking developing country status under Article 9.1 with the United States' GSP is erroneous. China notes that the United States exercises discretion in deciding the list of beneficiaries within the context of its GSP, and that a number of the eligibility criteria for this list are not related to a country's development status. China contends that this approach is inconsistent with Article 9.1, which expressly requires a link between the special and differential treatment granted under this provision and the developing status of a Member.

235. China submits furthermore that the United States violated Articles 9.1 and 3.1 of the *Agreement on Safeguards* because it failed to provide a reasoned and adequate explanation for China's exclusion from the treatment set forth under Article 9.1. China maintains that its Protocol of Accession lays down China's status as a developing country, and that this status applies for the purposes of the *Agreement on Safeguards*. Despite these non-ambiguous circumstances, the United States, in China's view, has failed to provide an explanation for China's exclusion from the special and differential treatment provisions of the *Agreement on Safeguards*. Moreover, China alleges that the United States failed to provide an explanation as to why Chinese imports did not meet the *de minimis* test of Article 9.1. In China's view, based on the preliminary calculations and the USITC statistics, China had, for a large number of products, a share of imports into the United States accounting for less than three percent, with the exporting developing countries collectively accounting for no more than nine percent of total imports.

3. Arguments of the European Communities – *Appellant*

236. In the event the Appellate Body should reverse sufficient of the Panel's findings as to undermine its conclusion that there was no legal basis for the safeguard measures imposed by the United States, the European Communities requests the Appellate Body to address its claim with respect to the definition of the imported product, the like product, and the domestic industry under Articles 2.1 and 4.1(c), as well as its claim with respect to Article 5.1 of the *Agreement on Safeguards*.

(a) Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*

237. The European Communities first alleges that the United States acted inconsistently with its obligations to properly define the product groupings and the domestic industry as required by Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*. The European Communities submits that the bundling of products into what it considers to be arbitrary groups is incompatible with the *Agreement on Safeguards*. First, the USITC failed to identify the "imported product", contrary to the requirement under Article 2.1, which, according to the Appellate Body's finding in *US – Lamb*, must be a specific product. Second, in order to be considered a "specific product", a group of products must be coherent and may not contain gaps. Consequently, according to the European Communities, separate investigations should be conducted for each definable or specific product for which a Member is considering to impose safeguard measures. Third, the European Communities argues that, since the domestic product must be "like" the imported product, it is necessary for products contained in a specific product definition to be "like" each other. Therefore, in the European Communities' view, an analysis of the competitive dynamics among the various products is required.

238. In addition, the European Communities submits that the other appellants have otherwise demonstrated that the United States was not entitled to impose the safeguard measures even on the basis of the flawed product groupings. According to the European Communities, the Panel "upheld that view in deciding not to address these claims, although it recognized the problem … in several instances."[159]

(b) Article 5.1 of the *Agreement on Safeguards*

239. The European Communities argues that the United States' safeguard measures exceed what is necessary to remedy or prevent serious injury and facilitate adjustment. The European Communities contends that, contrary to the United States assertion, the two conditions set out in Article 5.1 of the *Agreement on Safeguards* are cumulative, rather than alternative. Thus, according to the European Communities, a Member may only impose a safeguard measure to the lesser of the extent necessary to prevent or remedy serious injury or to the extent necessary to facilitate adjustment.

240. Finally, the European Communities argues that the *ex post facto* analysis submitted by the United States does not separate and distinguish the effects of factors other than imports on the domestic industry. In the European Communities' view, the United States' *ex post facto* analysis repeated the errors manifest in the USITC report, because it failed to account for factors improperly found to be non-injurious, such as the legacy costs in respect of CCFRS. Moreover, according to the European Communities, the United States did not model the proper product in its *ex post facto* analysis for the measure on slab. Thus, the European Communities submits that the United States improperly included data on slabs to calculate the measure for CCFRS and subsequently excluded slab from the safeguard measure imposed on CCFRS. Consequently, according to the European Communities, the United States *ex post facto* justification that includes slab cannot justify a measure on CCFRS that excludes slab. Therefore, the European Communities argues that the *ex post facto* analysis cannot demonstrate that the measure is limited to the extent necessary.

4. Arguments of New Zealand – *Appellant*

241. If the Appellate Body were to reverse sufficient of the Panel's findings to undermine the conclusion that there was no legal basis for the safeguard measures imposed by the United States, New Zealand requests the Appellate Body to address its claim that the United States failed to define "the domestic industry that produces like … products", under Articles 2.1 and 4.1(c), as well as its

[159]European Communities' other appellant's submission, para. 17.

claim with respect to Article 5.1 of the *Agreement on Safeguards*. In addition, in the event the Appellate Body upholds the causation findings of the Panel, New Zealand associates itself with the first conditional claim of Brazil, Japan, and Korea[160] and the related arguments, and requests the Appellate Body to address the claim under Article 5.1 of the *Agreement on Safeguards*.

(a) Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*

242. New Zealand alleges that the United States has failed to define the domestic industry in accordance with Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*. With respect to the legal standard for determining the like product, New Zealand argues that the like product in the *Agreement on Safeguards* has a narrow meaning, derived from its juxtaposition with the term "directly competitive products". In addition, the analysis of competitive relationships is central to determining whether products are "like". New Zealand's view is that a proper consideration of the likeness of products is product, and not producer, oriented and that production processes are not relevant in this respect. The United States failed to meet the requirements of the *Agreement on Safeguards* in its determination of the domestic industry producing CCFRS, because it improperly bundled together unlike products. The United States' approach of focusing on commonalities within the industry producing CCFRS was erroneous.

243. New Zealand further argues that the bundling of unlike products is impermissible, because it would allow a competent authority to define the domestic product that is "like" the imported product in a way that predetermines a finding that increased imports are causing serious injury. Finally, New Zealand submits that if different products are bundled into one product category, the *Agreement on Safeguards* requires that likeness be established between each of the imported products in that category, as well as each of the products in the domestic products category.

(b) Article 5.1 of the *Agreement on Safeguards*

244. New Zealand claims that the United States failed to comply with the requirements of Article 5.1 of the *Agreement on Safeguards*. First, New Zealand argues that the President of the United States, without any justification, imposed safeguard measures on CCFRS that are more restrictive than the USITC's recommendations. Second, a less restrictive remedy was placed on slab as compared to the remedy imposed on the other products in the CCFRS category, even though there was no corresponding difference in the injury alleged to be caused by the increased imports of these products. Third, New Zealand argues that the safeguard measures were applied to a greater extent than necessary to facilitate the adjustment of the United States' domestic industry. Fourth, the *ex post facto* analysis submitted by the United States is fundamentally flawed, because the United States' methodology has the effect of overestimating the tariff required to restore the domestic industry to profitability. Specifically, New Zealand notes, in relation to CCFRS, that the United States included data on slabs to calculate the permissible extent of the measure, despite the fact that slabs were excluded from the remedy imposed by the President. Finally, according to New Zealand, the United States' methodology attributes to imports serious injury caused by other factors.

[160]This first conditional appeal of Brazil, Japan, and Korea is set forth in Brazil's, Japan's, and Korea's other appellants' submission, para. 2.

5. Arguments of Norway – *Appellant*

245. If the Appellate Body should reverse sufficient of the Panel's findings as to undermine its conclusion that there was no legal basis for the safeguard measures imposed by the United States, Norway requests the Appellate Body to address its claim with respect to the definition of the imported product, the like product, and the domestic industry under Articles 2.1 and 4.1(c), as well as its claim with respect to Articles 5.1 and 3.1 of the *Agreement on Safeguards*.

(a) Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*

246. According to Norway, the United States incorrectly defined the "like product" and the "imported product" and failed to apply the appropriate standard for determining the "domestic industry that produces like or directly competitive products". Norway argues that the USITC bundled together a broad range of distinct products, notwithstanding the fact that the products within that range were not like each other. For example, the USITC grouped together several unlike imported products as "certain carbon flat-rolled steel products", and then bundled the same unlike domestic products. In Norway's view, the failure of the USITC to define the "like product" correctly undermines all of its other findings on matters such as increased imports, causation, serious injury, and remedy.

247. Norway further submits that the United States incorrectly argues that it is permissible for competent authorities to first identify the domestic industry, and only thereafter to enquire whether there were any imports that injured that industry. Furthermore, the USITC defined the relevant "domestic industry" as the producers of a broad range of bundled, but distinct, products, notwithstanding the fact that the products within that range were not like each other. Norway argues that products compete with each other only if they are properly grouped together, whether in the context of Article III of the GATT 1994 or in the context of trade remedies. Norway is of the view that, where there is no competitive nexus between the products involved, the analyses to establish injury and to choose an appropriate remedy become meaningless.

(b) Articles 3.1 and 5.1 of the *Agreement on Safeguards*

248. According to Norway, the United States did not apply its safeguard measures only to the extent necessary to prevent or remedy serious injury and to facilitate adjustment within the meaning of Article 5.1, first sentence, of the *Agreement on Safeguards*. Norway incorporates by reference the arguments developed before the Panel either by Norway alone or together with the remaining other appellants. Norway argues that Article 5.1 requires that a safeguard measure be proportional to the injury caused by increased imports, and no additional relief can be imposed over and above what is necessary to remedy the serious injury attributed to increased imports. In Norway's view, a justification for the extent of the measure is necessary so as to enable a Member to make a correct decision regarding the measures to be imposed and serves the purpose of avoiding disputes. Norway submits that the *ex post facto* justification argued before the Panel is not in accordance with Article 5.1, first sentence, and Article 3.1 of the *Agreement on Safeguards*. Norway further argues that the measures imposed by the United States go beyond what is necessary to prevent or remedy serious injury, because the *ex post* analysis fails both to isolate and separate the effects of other factors and, therefore, attributes serious injury caused by other factors to imports.

6. Arguments of Switzerland – *Appellant*

249. If the Appellate Body should reverse sufficient of the Panel's findings as to undermine its conclusion that there was no legal basis for the safeguard measures imposed by the United States, Switzerland requests the Appellate Body to address its claim with respect to the definition of the imported product, the like product, and the domestic industry under Articles 2.1 and 4.1(c), as well as its claim with respect to Article 5.1 of the *Agreement on Safeguards*.

(a) Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*

250. Switzerland alleges that the USITC's bundling of products in arbitrary groups is incompatible with the *Agreement on Safeguards*. Switzerland's claims are based on three main arguments. First, Switzerland argues that the USITC failed to identify the "imported product" pursuant to the requirement under Article 2.1 to base a determination on "a product", which, according to the Appellate Body in *US – Lamb*, must be a "specific product". Second, in order to be considered a "specific product", a group of products must be coherent and may not contain gaps. Consequently, according to Switzerland, separate investigations should be conducted for each specific product for which a Member is considering imposing safeguard measures. Third, the domestic product must be "like" the imported product, and it is also necessary for products contained in a specific product definition to be "like" each other. If an analysis of the competitive dynamics amongst the various products were not required, WTO Members could protect an entire industry by grouping together all products produced by that industry.

251. In Switzerland's view, in order to determine the scope of the imported product, a competent authority should rely on the four criteria developed by GATT practice as well as the Appellate Body to establish likeness—physical characteristics, end uses, consumer preferences and tariffs classifications. Switzerland submits that it has demonstrated in its submissions before the Panel, along with the other Complaining Parties, that the United States did not properly apply these criteria in determining the likeness of domestic and imported steel products.

(b) Article 5.1 of the *Agreement on Safeguards*

252. Switzerland argues that the United States did not limit its safeguard measures to the extent necessary to prevent or remedy serious injury and to facilitate adjustment, as required by Article 5.1 of the *Agreement on Safeguards*. Switzerland argues that, in accordance with the Appellate Body ruling in *US – Line Pipe*, because the Panel found that the United States failed to comply with the causation requirements of Article 4.2(b) of the *Agreement on Safeguards*, the Complaining Parties before the Panel established a *prima facie* case that the United States violated Article 5.1.

253. Moreover, according to Switzerland, the United States failed to rebut the other appellants' *prima facie* case because its *ex post facto* analysis does not isolate the effects of other factors of injury from the injury caused by increased imports. In Switzerland's view, the United States' *ex post facto* analysis repeats the errors manifest in the USITC report, because it fails to account for factors improperly found to be non-injurious, such as the legacy costs of the domestic industry. Moreover, according to Switzerland, the United States did not model the proper product in its *ex post facto* analysis with respect to CCFRS. Thus, Switzerland submits that the United States improperly included data on slabs to calculate the measure for CCFRS and subsequently excluded slab from the safeguard measure imposed on CCFRS. Consequently, according to Switzerland, the United States' *ex post facto* justification that includes slab cannot justify a measure on CCFRS that excludes slab. Finally, Switzerland argues that, although the USITC recognized that domestic

capacity increases likely played a role in causing injury, the *ex post facto* analysis contains no discussion on the effect of domestic capacity increases and does not attempt to isolate the injurious effect of this other factor.

7. Arguments of the United States – *Appellee*

(a) Product definition – Articles 2.1 and 4.1(c) of the *Agreement on Safeguards*

254. The United States maintains that the Appellate Body cannot complete the analysis of this issue due to the absence of factual findings by the Panel or undisputed facts in the Panel record on which it could base such an analysis. According to the United States, this conclusion flows from Article 17.6 of the DSU, as interpreted by the Appellate Body.

255. In the United States' view, the other appellants' submissions confirm that the Appellate Body is being asked to address factual matters, such as identifying whether the product definition was coherent (which requires facts about the relevant merchandise) and determining the likeness of particular products. The United States' arguments before the Panel, as reflected in the Panel Reports, also demonstrate the fact-based nature of the USITC's like product analysis. In addressing these issues, the Appellate Body would need to rely on findings by the Panel (which are not available due to the Panel's exercise of judicial economy) or undisputed facts in the Panel record, which do not exist. In this regard, the United States disputes the suggestion by Brazil, Japan, and Korea that the parties agree that the products composing the USITC's product grouping for CCFRS are distinct. The United States contends that the findings of the USITC and the arguments of the United States before the Panel demonstrate that this is not the case.

(b) Extent of Measures – Article 5.1 of the *Agreement on Safeguards*

256. The United States maintains that the Appellate Body cannot complete the analysis of this issue due to the absence of factual findings by the Panel or undisputed facts in the Panel record on which it could base such an analysis. According to the United States, this conclusion flows from Article 17.6 of the DSU, as interpreted by the Appellate Body.

257. The United States contends that the other appellants have not met their burden of proof regarding Article 5.1. However, even if this were not the case, the Appellate Body could not make a finding regarding Article 5.1 without evaluating several factual matters. For example, in assessing the United States' numerical exercise and modelling exercise, the Appellate Body would need to identify data indicating the industry's condition in the absence of the injury attributable to increased imports, data relevant to ensuring that the injurious effects of other factors are not attributed to increased imports, and data estimating the effect of the safeguard measures. According to the United States, the parties disagreed about these issues so there are no undisputed facts in the Panel record, and the Panel did not make any relevant factual findings on which the Appellate Body could rely.

258. The United States argues that several of the other appellants' arguments do not have a valid foundation. For example, arguments of the other appellants regarding Article 5.1 are frequently based on their allegations of inconsistency with Article 4.2(b). This basis would be removed if the Appellate Body reversed the Panel's findings on Article 4.2(b). The other appellants also frequently maintain that the USITC or the President of the United States failed to provide an explanation when imposing the measures of how the measures complied with Article 5.1. However, the Panel found that the *Agreement on Safeguards* does not require any such explanation before the dispute settlement process. According to the United States, the Panel has therefore disposed of this issue and this finding has not been appealed.

(c) China – Article 9.1 of the *Agreement on Safeguards*

259. The United States maintains that the Appellate Body cannot address this claim because it does not involve any issues of law or legal interpretations that could be reviewed under Article 17.6 of the DSU. According to the United States, this is a novel and complex issue that is not resolved by the *Agreement on Safeguards* and on which WTO Members have not reached agreement, making it even more inappropriate for the Appellate Body to determine it in the absence of relevant Panel findings.

260. If the Appellate Body nevertheless decides to address this claim, the United States argues (with reference to its arguments before the Panel) that it should find that China failed to establish that the United States acted inconsistently with Article 9.1 of the *Agreement on Safeguards*. China did not present any facts to the Panel to establish that it is a developing country Member. It therefore failed to met its burden of proof. The statements of individual WTO Members that China referred to do not reflect a general understanding that China is a developing country. Rather, they demonstrate that Members advocated a "pragmatic approach" to this question, which may differ between the covered agreements. The United States argues that this approach does not require Members to treat China as a developing country Member under Article 9.1.

261. Finally, the United States maintains that the Panel did not exercise judicial economy in respect of China's claim that Article 3.1 obliged the United States to provide an adequate and reasoned explanation at the time of imposing the safeguard measures, for not excluding China pursuant to Article 9.1. Contrary to China's arguments, the United States contends that the Panel found that a Member is only required to respond to allegations regarding the level and extent of safeguard measures pursuant to Article 9.1 during the dispute settlement process.

K. *Arguments of the Third Participants*

1. Canada

262. Canada maintains that it is fully supportive of the United States in its appeal of the Panel's findings regarding the exclusion of imports from FTA partners from the application of the safeguard measures. Canada submits that the Panel erred in finding that the competent authority is under an obligation to account for the fact that excluded FTA imports contributed to the serious injury, in establishing whether imports from sources covered by the measure satisfy the requirements for imposing the safeguard measure. The "excluded sources accounting requirement", established by the Panel, is a new requirement that lacks any textual basis in the *Agreement on Safeguards*. Moreover, the Appellate Body in *US – Wheat Gluten* only stated the nature of the parallelism requirement and did not purport to set conditions on how an authority must conduct its parallelism analysis. Canada also agrees with the United States that in *US – Line Pipe* the Appellate Body's explanation of the parallelism requirement was the same as in *US – Wheat Gluten*. The Panel erred in reading *US – Line Pipe* to mean that parallelism necessarily requires the competent authority to account for the fact that excluded imports may have some injurious effect on the domestic industry. Thus, according to Canada, this requirement has no basis in prior Appellate Body reports or in the language of Articles 2.1 or 4.2 of the *Agreement on Safeguards*.

263. Canada submits that the Panel's finding on parallelism is contrary to Article 3.2 of the DSU, because the Panel created a new requirement that adds to a Member's obligations under the *Agreement on Safeguards*. Moreover, Canada argues that if the Panel had applied the correct standards, it would have concluded that the USITC's parallelism analysis was consistent with the *Agreement on Safeguards*. In Canada's view, the United States fully satisfied the requirements actually contained in the *Agreement on Safeguards*. The Appellate Body should therefore reverse the Panel's findings on parallelism.

IV. Issues Raised In This Appeal

264. Members of the WTO have agreed in the *Agreement on Safeguards* that Members may suspend their trade concessions temporarily by applying import restrictions as safeguard measures if certain prerequisites are met. These prerequisites are set forth in Article XIX of the GATT 1994, dealing with "Emergency Action on Imports of Particular Products", and in the *Agreement on Safeguards*, which, by its terms, clarifies and reinforces the disciplines of Article XIX. Together, Article XIX and the *Agreement on Safeguards* confirm the right of WTO Members to apply safeguard measures when, as a result of unforeseen developments and of the effect of obligations incurred, including tariff concessions, a product is being imported in such increased quantities and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products. However, as Article 2.1 of the *Agreement on Safeguards* makes clear, the right to apply such measures arises "*only*" if these prerequisites are shown to exist.

265. In this case, we will address the issues raised on appeal with respect to the ten safeguard measures applied by the United States to imports of certain steel products, in the following order:

(a) whether the Panel erred in finding that the United States acted inconsistently with Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards* by failing to provide a reasoned and adequate explanation demonstrating that unforeseen developments resulted in increased imports causing serious injury to the domestic producers of CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, stainless steel rod, and stainless steel wire;

(b) whether the Panel erred in finding that the United States acted inconsistently with Articles 2.1 and 3.1 of the *Agreement on Safeguards* by failing to provide a reasoned and adequate explanation of how the facts supported its determinations that imports of CCFRS, tin mill products, hot-rolled bar, stainless steel rod and stainless steel wire increased;

(c) whether the Panel erred in finding that the United States acted inconsistently with Articles 2.1 and 4.2 of the *Agreement on Safeguards* by failing to provide a reasoned and adequate explanation establishing explicitly that imports from sources not excluded from the scope of the measure satisfy, *alone*, the conditions required for the application of safeguard measures on imports of CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, stainless steel rod, and stainless steel wire;

(d) whether the Panel erred in finding that the United States acted inconsistently with Articles 2.1, 3.1, and 4.2(b) of the *Agreement on Safeguards* by failing to provide a reasoned and adequate explanation demonstrating the existence of a causal link between increased imports of CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, and stainless steel wire, and serious injury or threat of serious injury to the relevant domestic industry;

(e) whether the Panel acted inconsistently with Article 11 of the DSU by failing to make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the GATT 1994 and the *Agreement on Safeguards*; and

(f) whether the Panel acted inconsistently with Article 12.7 of the DSU by failing to provide the "basic rationale" behind certain of its findings and conclusions.

266. There are also some conditional appeals the consideration of which depends upon our findings on some of the issues otherwise raised in this appeal. We will address them in the following order:

(a) if we reverse "sufficient of the Panel's findings"[161] to undermine the conclusion that the safeguard measures were "deprived of a legal basis"[162]:

  (i) whether the United States acted inconsistently with Articles 2.1 and 4.1(c) of the *Agreement on Safeguards* by failing to define properly the imported product, the like product, and the domestic industry with respect to the product groups covered by the safeguard measures;

  (ii) whether the United States acted inconsistently with Article 5.1 of the *Agreement on Safeguards* by imposing safeguard measures beyond the extent necessary to remedy or prevent serious injury and to facilitate adjustment;

  (iii) whether the United States acted inconsistently with Articles 3.1 and 9.1 of the *Agreement on Safeguards* by using the rules of its Generalised System of Preferences to identify developing country Members, and by failing to provide a reasoned and adequate explanation as to why China did not qualify for the exemption under Article 9.1;

(b) if we reverse an aspect of any of the Panel's findings on CCFRS, or if we conclude that the Panel should have made a finding on the correct definition of the like product with respect to CCFRS, whether the United States acted inconsistently with Articles 2.1 and 4.1(c) of the *Agreement on Safeguards* by failing to define properly the like product with respect to CCFRS;

(c) if we uphold or modify the Panel's findings on causation, whether we should complete the analysis with respect to causation, and determine whether the United States failed to ensure that its safeguard measures are limited to the extent necessary

[161]China's other appellant's submission, para. 3; European Communities' other appellant's submission, para. 6; New Zealand's other appellant's submission, para. 1.1; Norway's other appellant's submission, para. 3; Switzerland's other appellant's submission, para. 3.

[162]Panel Reports, para. 10.705.

to remedy or prevent serious injury and to facilitate adjustment as required by Article 5.1 of the *Agreement on Safeguards*;

(d) if we reverse the Panel's findings on increased imports and causation, whether the safeguard measures are limited to the extent necessary to remedy or prevent serious injury and to facilitate adjustment and, therefore, comply with Article 5 of the *Agreement on Safeguards*.

267. In response to our questioning at the oral hearing, all parties agreed that this dispute concerns only the *specific* safeguard measures as applied by the United States. Consequently, there is no United States law, regulation, or methodology that is challenged, *as such*, in this dispute.

268. Before turning to the substantive issues, we note that an *amicus curiae* brief was received from an industry association, the American Institute for International Steel, in the course of this appeal. As we mentioned earlier[163], the European Communities inquired by letter of 23 September 2003 whether we would accept the brief and take it into account, and Brazil requested by letter of 24 September 2003 that we disregard the brief. At the oral hearing, Brazil requested that we disregard the brief "for legal and systemic concerns".[164] Likewise, Mexico stated at the oral hearing that it opposed the acceptance of the *amicus curiae* brief.[165] Cuba and Thailand agreed with Brazil and Mexico that the *amicus curiae* brief should be disregarded.[166] We note that the brief was directed primarily to a question that was not part of any of the claims. We did not find the brief to be of assistance in deciding this appeal.

V. Unforeseen Developments and Article 3.1 of the *Agreement on Safeguards*

269. The United States appeals the Panel's finding that the United States acted inconsistently with Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards* because the USITC failed to demonstrate, through a reasoned and adequate explanation, that "unforeseen developments"[167] had *resulted* in increased imports of *each of the products* on which the United States imposed safeguard measures on 20 March 2002. In examining this issue on appeal, we are mindful of the precise scope of the issue before us. We observe that the United States' appeal does not raise the issue whether the "unforeseen developments" identified as such by the United States—that is, "the Russian crisis, the Asian crisis and the continued strength of the United States' market together with the persistent appreciation of the US dollar"[168] as well as the "confluence"[169] of those events—actually amounted to "unforeseen developments" within the meaning of Article XIX:1(a). In

[163] *Supra*, paras. 9–10.

[164] Brazil's statement at the oral hearing.

[165] Mexico's statement at the oral hearing.

[166] Cuba's and Thailand's statements at the oral hearing.

[167] We use the term "unforeseen developments" as shorthand to describe the prerequisites set forth in the first clause of Article XIX:1(a) of the GATT 1994, that is, "[i]f, as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions".

[168] Panel Reports, para. 10.72.

[169] *Ibid.*

response to our questions at the oral hearing, none of the participants disagreed with this formulation of the issue before us.[170]

270. Our analysis examines, first, the arguments advanced by the United States that relate to the Panel's identification and application of the appropriate standard of review for claims arising under Article XIX:1(a) of the GATT 1994. Secondly, we examine the appropriate interpretation of Article 3.1 of the *Agreement on Safeguards*, both in general terms and, in particular, as it relates to "unforeseen developments". Thirdly, we examine whether Article XIX:1(a) of the GATT 1994 requires a demonstration that "unforeseen developments" *resulted* in increased imports for *each specific* safeguard measure at issue. Finally, we look at whether the Panel was "required" to consider data to which the USITC referred in certain parts of the USITC report, other than those dealing with "unforeseen developments", to support the USITC's finding that "unforeseen developments" had *resulted* in increased imports.

271. We will examine separately, in another section of this Report, the United States' claim that the Panel acted inconsistently with its obligation under Article 12.7 of the DSU by failing to provide the "basic rationale behind [its] findings and recommendations" as they relate to "unforeseen developments".

272. This said, we turn first to examine the United States' claim concerning the appropriate standard of review for claims arising under Article XIX:1(a) of the GATT.

A. *Appropriate Standard of Review for Claims Under Article XIX:1(a) of the GATT 1994*

273. At the outset of its analysis, the Panel considered the standard of review that was appropriate for the examination of the claims made by the Complaining Parties relating to "unforeseen developments". After citing our Reports in *Argentina – Footwear (EC)* and in *US – Lamb*, the Panel articulated the standard in the following terms:

> … the role of this Panel in the present dispute is not to conduct a *de novo* review of the USITC's determination. Rather, the Panel must examine whether the United States respected the provisions of Article XIX of GATT 1994 and of the Agreement on Safeguards, including Article 3.1. As further developed below, the Panel must examine whether the United States demonstrated in its published report, through a reasoned and adequate explanation, that unforeseen developments and the effects of tariff concessions resulted in increased imports causing or threatening to cause serious injury to the relevant domestic producers.

[170] At the oral hearing, the European Communities requested, however, that, should we reverse the Panel's finding that the USITC failed to demonstrate, through a reasoned and adequate explanation, that "unforeseen developments" resulted in increased imports of each of the relevant products on which the United States imposed safeguard measures, we address other arguments that were raised by the Complaining Parties before the Panel concerning "unforeseen developments". The European Communities refers, for instance, to its argument that "unforeseen developments" that occurred several years ago and may have caused increased imports then but the effects of which have now ceased, cannot be considered as "unforeseen developments" justifying the imposition of safeguard measures. (European Communities' appellee's submission, para. 84)

> In considering whether the United States demonstrated as a matter of fact that unforeseen developments resulted in increased imports causing serious injury, the Panel will also examine, in application of its standard of review, whether the competent authorities "considered all the relevant facts and had adequately explained how the facts supported the determinations that were made. [171] (underlining added; footnotes omitted)

The United States objects to the Panel's reliance on this standard, and argues that, in applying this standard to examine the USITC's conclusions on "unforeseen developments", the Panel "failed to take into account the differences between the unforeseen developments requirement and the Article 2 and 4 conditions for applying a safeguard measure". [172]

274. The United States asserts that we made clear in *Korea – Dairy*, *Argentina – Footwear (EC)*, and *US – Lamb* that the "unforeseen developments" language of Article XIX:1(a) constitutes a "distinct obligation [that] is different from obligations" [173] under Articles 2 and 4 of the *Agreement on Safeguards*. The United States maintains that the Panel "paid no heed" [174] to these differences when it relied on statements in *Argentina – Footwear (EC)* and in *US – Lamb* on the standard of review applicable to Article 4 of the *Agreement on Safeguards*. [175] According to the United States, "the standard adopted by the Panel … mistakenly reflects concerns relevant to Article 4.2, and disregards concerns relevant to the 'unforeseen developments' requirement under Article XIX:1(a)." [176] The United States thus argues that the "reasoned and adequate explanation test" is "inappropriate" for claims arising under Article XIX of the GATT 1994. [177]

275. We explained in *Argentina – Footwear (EC)* that Article XIX of the GATT 1994 and the *Agreement on Safeguards* "relate to the same thing, namely the application by Members of safeguard measures". [178] We also indicated there our agreement with the statement by the panel in that case that "Article XIX of GATT and the Safeguards Agreement must *a fortiori* be read as representing an *inseparable package* of rights and disciplines which have to be considered in conjunction." [179] In our view, this inseparable relationship between Article XIX of the GATT 1994 and the *Agreement on*

[171] Panel Reports, paras. 10.38–10.39.

[172] United States' appellant's submission, para 15. We note that the United States' challenge is to the Panel's *application* of the relevant standard of review. The United States is not, therefore, alleging that the standard of review, as articulated by the Panel, was, in itself, incorrect. The United States confirmed this understanding in response to questioning at the oral hearing. In addition, the United States stated—for instance, in paragraph 54 of its appellant's submission—that the "Panel correctly noted in its standard of review section that the Appellate Body has found 'that a panel must assess whether a reasoned and adequate explanation has been provided as to how the facts support the determination.'" In paragraph 55 of its appellant's submission, the United States further stated that "the Panel also emphasized correctly that with regard to Articles 2, 3, and 4 and Article XIX, 'the role of the Panel is to 'review' determinations and demonstrations made and reported by an investigating authority,' and not to be the initial fact finder." (footnote omitted)

[173] United States' appellant's submission, para. 77.

[174] *Ibid.*, para. 78.

[175] *Ibid.*, paras. 78–79.

[176] *Ibid.*, para. 78.

[177] United States' response to questioning at the oral hearing.

[178] Appellate Body Report, *Argentina – Footwear (EC)*, para. 81.

[179] *Ibid.* (original emphasis)

Safeguards suggests that the United States' call for a different and separate standard of review for Article XIX is unfounded.

276. We explained in *US – Lamb*, in the context of a claim under Article 4.2(a) of the *Agreement on Safeguards*, that the competent authorities must provide a "*reasoned and adequate explanation* of how the facts support their determination". [180] More recently, in *US – Line Pipe*, in the context of a claim under Article 4.2(b) of the *Agreement on Safeguards*, we said that the competent authorities must, similarly, provide a "*reasoned and adequate explanation*, that injury caused by factors other than increased imports is not attributed to increased imports". [181] Our findings in those cases did not purport to address *solely* the standard of review that is appropriate for claims arising under Article 4.2 of the *Agreement on Safeguards*. We see no reason not to apply the same standard generally to the obligations under the *Agreement on Safeguards* as well as to the obligations in Article XIX of the GATT 1994.

277. Moreover, as we said in *US – Lamb*, the existence of "unforeseen developments" is a "pertinent issue of fact and law" under Article 3.1, and "it follows that the published report of the competent authorities, under that Article, must contain a 'finding' or 'reasoned conclusion' on unforeseen developments." [182] Thus, the Panel in the current dispute correctly noted that "the circumstances of unforeseen developments within the meaning of Article XIX:1(a) of GATT 1994 must be demonstrated as a matter of *fact*, together with the conditions mentioned in Article 2.1 of the Agreement on Safeguards, in the report of the competent authority and before a safeguard measure can be applied." [183]

278. In any event, the objection of the United States to the Panel's requirement that competent authorities provide a "reasoned and adequate explanation" for their findings on "unforeseen developments" cannot be reconciled with the obligations of a panel under Article 11 of the DSU, which requires a panel to "make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements". As we said in *Argentina – Footwear (EC)*:

> … for all but one of the covered agreements, Article 11 of the DSU sets forth the appropriate standard of review for panels. The only exception is the *Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994*, in which a specific provision, Article 17.6, sets out a special standard of review for disputes arising under that Agreement. [184]

279. We do not see how a panel could examine objectively the consistency of a determination with Article XIX of the GATT 1994 if the competent authority had not set out an explanation supporting its conclusions on "unforeseen developments". Indeed, to enable a panel to determine whether there was compliance with the prerequisites that must be demonstrated before the application of a safeguard measure, the competent authority must provide a "reasoned and adequate explanation" of how the

[180] Appellate Body Report, *US – Lamb*, para. 103. (original emphasis)

[181] Appellate Body Report, *US – Line Pipe*, para. 217. (emphasis added)

[182] Appellate Body Report, *US – Lamb*, para. 76.

[184] Appellate Body Report, *Argentina – Footwear (EC)*, para. 118.

facts support its determination for those prerequisites, including "unforeseen developments" under Article XIX:1(a) of the GATT 1994.

280. For these reasons, we find that the Panel applied the proper standard of review in determining how it should assess the matter before it under Article XIX of the GATT 1994.

281. We turn next to examine the United States' arguments under Article 3.1 of the *Agreement on Safeguards*.[185]

B. *Article 3.1 of the Agreement on Safeguards*

282. Article 3.1 of the *Agreement on Safeguards* provides, in relevant part, that:

> The competent authorities shall publish a report setting forth their findings and *reasoned* conclusions reached on all pertinent issues of fact and law. (emphasis added)

283. To begin, we note that the United States sets out its arguments concerning Article 3.1 in Section III of its appellant's submission, which is entitled "General Errors in the Panel's Findings Under Article 3.1 of the Agreement on Safeguards".[186] Thus, the United States' argument concerning the correct interpretation of Article 3.1 of the *Agreement on Safeguards* is not confined to the Panel's findings on "unforeseen developments". Indeed, we note that the Panel, in addition to finding that the United States acted inconsistently with Article 3.1 with respect to the determination by the competent authority of "unforeseen developments"[187], also found that certain of the USITC's findings on increased imports and causation were inconsistent with Article 3.1.[188]

284. We begin our analysis with an examination of the interpretation by the United States of Article 3.1, last sentence, which underlies its submissions regarding the Panel's alleged errors under Article 3.1. The United States argues that "the key consideration [under Article 3.1 of the *Agreement on Safeguards*] is whether the authorities present a logical basis for their conclusion."[189] According to the United States, "the Safeguards Agreement does not explicitly require an 'explanation'."[190] The

[185]The United States refers in its arguments also to the requirement contained in Article 4.2(c) of the *Agreement on Safeguards* for competent authorities to provide a "detailed analysis of the case" and "a demonstration of the relevance of the factors examined." The United States notes, however, that the Panel found that "Article 4.2(c) was not extensively addressed by the parties as a discrete basis for violation", and, accordingly, the Panel "d[id] not consider that an additional reference to Article 4.2(c) in relation to the Panel's findings on increased imports and causation would enhance the complainants' rights." (United States' appellant's submission, footnote 15 to para. 54, referring to Panel Reports, paras. 9.31–9.32).

[186]In addition to addressing findings that the Panel made in the context of its analysis of "unforeseen developments" (United States' appellant's submission, paras. 58–63), the United States also suggests that the Panel's conclusions on "increased imports" are inconsistent with Article 3.1 in that the Panel required the competent authority to do more than to "present a logical basis for [its] conclusions". (United States' appellant's submission, paras. 59–60)

[187]Panel Reports, paras. 10.150 and 11.2.

[188]*Ibid.*, paras. 10.200, 10.262, 10.419, 10.422, 10.445, 10.469, 10.487, 10.503, 10.536, 10.569, 10.573, and 11.2.

[189]United States' appellant's submission, para. 60.

[190]*Ibid.*, para. 59.

United States rather argues that Article 3.1 of the *Agreement on Safeguards* "implies an explanation only in requiring 'reasoned conclusions on all pertinent issues of fact and law'."[191] To support its interpretation, the United States submits that the "ordinary meaning of the verb 'reason' is to '[t]hink in a connected or logical manner; use one's reason in forming conclusions ... [a]rrange the thought of in a logical manner, embody reason in; express in a logical form.'"[192]

285. As we understand it, this is the basis for the United States argument that Article 3.1 requires a competent authority to present a "logical basis" for its determination in its published report. The United States did not explain what it meant by a "logical basis" in its written submissions. However, in response to our questioning at the oral hearing, the United States clarified that a "logical basis describes the underpinning to the conclusion."[193] The United States affirmed, further, in the oral hearing, that the United States sees it as possible to have "a 'reasoned conclusion' without a 'reasoned and adequate explanation'."[194]

286. We have misgivings about the approach of the United States to ascertaining the meaning of the last sentence of Article 3.1. The requirement of Article 3.1 is that "competent authorities shall publish a report setting forth their findings and reasoned conclusions reached on all pertinent issues of fact and law." The meaning of Article 3.1 must be established through an examination of the ordinary meaning of the terms of Article 3.1, read in their context and in the light of the object and purpose of the *Agreement on Safeguards*.[195] Thus, instead of basing an interpretation of Article 3.1—as the United States does—entirely on the meaning of *one* word—"reasoned"—in that provision, it is, in our view, appropriate to interpret Article 3.1 by examining the ordinary meaning of *all* of the words that together prescribe the relevant obligation in that Article.

287. In doing so, we note that the definition of "conclusion" is "the result of a discussion or an examination of an issue" or a "judgement or statement arrived at by reasoning: an inference; a deduction".[196] Thus, the "conclusion" required by Article 3.1 is a "judgement or statement arrived at by reasoning". We further note that the word "reasoned", which the United States defines in terms of the verb "to reason", is, in fact, used in Article 3.1, last sentence, as an adjective to qualify the term "conclusion". The relevant definition of the intransitive verb "to reason" is "to think in a connected or logical manner; use one's reason in forming conclusions".[197] The definition of the transitive verb "to reason" is "to arrange the thought of in a logical manner, embody reason in; express in a logical form".[198] Thus, to be a "reasoned" conclusion, the "judgement or statement" must be one which is reached in a connected or logical manner or expressed in a logical form. Article 3.1 further requires that competent authorities must "set forth" the "reasoned conclusion" in their report. The definition of the phrase "set forth" is "give an account of, esp. in order, distinctly, or in detail; expound, relate,

[198]*Ibid.*

narrate, state, describe".[199] Thus, the competent authorities are required by Article 3.1, last sentence, to "give an account of" a "judgement or statement which is reached in a connected or logical manner or expressed in a logical form", "distinctly, or in detail."

288. Panels have a responsibility in WTO dispute settlement to assess whether a competent authority has complied with its obligation under Article 3.1 of the *Agreement on Safeguards* to "set forth" "findings and reasoned conclusions" for their determinations. The European Communities and Norway argue that panels could not fulfill this responsibility if they were left to "deduce for themselves" from the report of that competent authority the "rationale for the determinations from the facts and data contained in the report of the competent authority."[200] We agree.

289. We note further, as context, that Article 4.2(c) of the *Agreement on Safeguards* requires the competent authorities to:

> ... publish promptly, *in accordance with the provisions of Article 3*, a detailed analysis of the case under investigation as well as a demonstration of the relevance of the factors examined. (emphasis added)

We observe that this requirement is expressed as being "in accordance with" Article 3, and not "in addition" thereto. Thus, we see Article 4.2(c) as an elaboration of the requirement set out in Article 3.1, last sentence, to provide a "reasoned conclusion" in a published report.

290. The United States argued at the oral hearing that "Article 4.2(c) does not apply to the competent authorities' demonstration of unforeseen developments"[201] under Article XIX:1(a) of the GATT 1994. We disagree. Article 4.2(c) is an elaboration of Article 3; moreover "unforeseen developments" under Article XIX:1(a) of the GATT 1994 is one of the "pertinent issues of fact and law" to which the last sentence of Article 3.1 refers. It follows that Article 4.2(c) also applies to the competent authorities' demonstration of "unforeseen developments" under Article XIX:1(a).

291. For these reasons, we conclude that the "present[ation of] a logical basis"[202] as understood by the United States, for the conclusions of the competent authorities, does not fulfill the requirements of Article 3.1, last sentence. They must "set forth" a "reasoned conclusion".

292. We turn now to address the arguments the United States advances, under Article 3.1, that relate to the Panel's findings on "unforeseen developments".

293. The Panel stated that "[t]he nature of the facts, including their complexity, will dictate the extent to which the relationship between the unforeseen developments and increased imports causing injury needs to be explained. The timing of the explanation [relating to unforeseen developments], its extent and its quality are all factors that can affect whether [that] explanation is reasoned and adequate."[203] According to the United States, there is no basis in the *Agreement on Safeguards* "for

[199] *Ibid.*, p. 2773.

[203] Panel Reports, para. 10.115.

finding that 'timing' or 'extent' are relevant to whether the competent authorities' explanations are reasoned and adequate."[204]

294. As we see it, the United States appears to equate the word "extent" to the word "length" with a view to implying that the Panel would have required that the competent authority's explanation be of a certain length.[205] Based on our understanding of the relevant section of the Panel Reports, the Panel required no such thing. Rather than requiring that the USITC provide a "longer" explanation, the Panel was, in our view, simply stating that the USITC had not provided a reasoned and adequate explanation of how the "unforeseen developments" resulted in increased imports of the products on which the United States imposed the safeguard measures. In other words, the Panel was merely requiring that the competent authorities—to use our clarification of the requirement in Article 3.1—"give an account of" a "judgement or statement which is reached in a connected or logical manner or expressed in a logical form" on *unforeseen developments* "distinctly, or in detail".

295. The United States further argues that the *Agreement on Safeguards* "do[es] not obligate the competent authorities to present their report in any particular form."[206] As we see it, the United States understands the Panel to have imposed such a requirement by finding that "the USITC failed to provide a reasoned and adequate explanation because the USITC Report did not cite specifically to data or reasoning in another section of the report that supported a particular conclusion."[207] Although we agree with the United States that competent authorities "may choose any structure, any order of analysis, and any format for [the] explanation that they see fit, as long as the report complies"[208] with Article 3.1, we do not agree that the Panel was requiring that a report be in a certain form. Again, the Panel was assessing whether the USITC had provided a reasoned and adequate explanation of how the facts supported the USITC's determination, and was not requiring that the explanation of facts be provided in any particular form in the report.

296. We see no error in the Panel's approach. In our view, it is consistent with our understanding of Article 3.1, last sentence. Further, the Panel's approach is in line with the standard of review for panels that we discussed earlier. As we said in *US – Line Pipe* and in *US – Lamb*, competent authorities must provide a "reasoned and adequate explanation" of how the facts support their determination.[209] In *US – Line Pipe*, we found, further, in clarifying the obligations of WTO Members under the *Agreement on Safeguards*, that:

> … the competent authorities must establish explicitly, through a reasoned and adequate explanation, that injury caused by factors other than increased imports is not attributed to increased imports. This explanation must be clear and unambiguous. It must not merely

imply or suggest an explanation. It must be a straightforward explanation in express terms.[210]

297. This was a clarification of the obligation under Article 4.2(b), last sentence, of the *Agreement on Safeguards*. However, as we mentioned earlier, our articulation of this standard of review should not be read as limited to claims under Article 4 of the *Agreement on Safeguards*. Thus, to the extent that the Panel looked for a "reasoned and adequate explanation" that was "explicit" in the sense that it was "clear and unambiguous" and "did not merely imply or suggest an explanation", the Panel was, in our view, correctly articulating the appropriate standard of review to be applied in assessing compliance with Article XIX of the GATT 1994 and the *Agreement on Safeguards*.

298. It bears repeating that a panel will not be in a position to assess objectively, as it is required to do under Article 11 of the DSU, whether there has been compliance with the prerequisites that must be present before a safeguard measure can be applied, if a competent authority is not required to provide a "reasoned and adequate explanation" of how the facts support its determination of those prerequisites, including "unforeseen developments" under Article XIX:1(a) of the GATT 1994. A panel must not be left to *wonder* why a safeguard measure has been applied.

299. It is precisely by "setting forth findings and reasoned conclusions on all pertinent issues of fact and law", under Article 3.1, and by providing "a detailed analysis of the case under investigation as well as a demonstration of the relevance of the factors examined", under Article 4.2(c), that competent authorities provide panels with the basis to "make an objective assessment of the matter before it" in accordance with Article 11. As we have said before, a panel may not conduct a *de novo* review of the evidence or substitute its judgement for that of the competent authorities.[211] Therefore, the "reasoned conclusions" and "detailed analysis" as well as "a demonstration of the relevance of the factors examined" that are contained in the report of a competent authority, are the only bases on which a panel may assess whether a competent authority has complied with its obligations under the *Agreement on Safeguards* and Article XIX:1(a) of the GATT 1994. This is all the more reason why they must be made explicit by a competent authority.

300. In the final analysis, the United States seems to agree with this approach. The United States argues that the *Agreement on Safeguards* does not require an "explanation" and does not employ the terms "adequate" and "explicit". All the same, the United States acknowledges that those terms can be understood as "a shorthand" for the obligations that "*are* in the Agreement", that is, that the published report of the competent authorities must, pursuant to Article 3.1, contain "reasoned conclusions" on "all pertinent issues of fact and law" and, under Article 4.2(c), it must also contain "a detailed analysis of the case", including "a demonstration of the relevance of the factors examined."[212]

301. We turn now to the United States' argument that, since "the Panel based many of its findings against the United States on its conclusions that the USITC Report failed to provide a 'reasoned and adequate explanation' of certain findings"[213], it follows that there can only be a violation of Article 3.1, and not also of Articles 2 and 4 of the *Agreement on Safeguards*. The United States adds

[210]Appellate Body Report, *US – Line Pipe*, para. 217.

[211]Appellate Body Report, *Argentina – Footwear (EC)*, para. 121.

[212]United States' appellant's submission, paras. 59 and 64, and footnote 29 to para. 62, referring to the obligations set out in Articles 3.1 and 4.2(c) of the *Agreement on Safeguards*. (original emphasis)

[213]United States' appellant's submission, para. 73.

that a failure to explain a finding does not automatically prove that the USITC had not performed the analysis necessary to make the finding.[214]

302. We recall again our earlier statements on the appropriate standard of review for panels in disputes that arise under the *Agreement on Safeguards*. When the Panel found that the USITC report failed to provide a "reasoned and adequate explanation" of certain findings, the Panel was assessing compliance with the obligations contained in Articles 2 and 4 of the *Agreement on Safeguards* and Article XIX:1(a) of the GATT 1994. As we said in *US – Lamb*, "[i]f a panel concludes that competent authorities, in a particular case, have not provided a reasoned or adequate explanation for their determination … [that] panel has … reached a conclusion that the determination is inconsistent with the specific requirements of [the relevant provision] of the *Agreement on Safeguards*."[215] Thus, we do not agree with the United States that the lack of a reasoned and adequate explanation does not imply a violation of Articles 2 and 4 of the *Agreement on Safeguards*.

303. Moreover, we cannot accept the United States' interpretation that a failure to explain a finding does not support the conclusion that the USITC "did not actually *perform* the analysis correctly, thereby breaching Article 2.1, 4.2, or 4.2(b) [of the *Agreement on Safeguards*]".[216] As we stated above, because a panel may not conduct a *de novo* review of the evidence before the competent authority, it is the *explanation* given by the competent authority for its determination that alone enables panels to determine whether there has been compliance with the requirements of Article XIX of the GATT 1994 and of Articles 2 and 4 of the *Agreement on Safeguards*. It may well be that, as the United States argues, the competent authorities have performed the appropriate analysis correctly. However, where a competent authority has not provided a reasoned and adequate explanation to support its determination, the panel is not in a position to conclude that the relevant requirement for applying a safeguard measure has been fulfilled by that competent authority. Thus, in such a situation, the panel has no option but to find that the competent authority has not performed the analysis correctly.

304. In sum, Members may suspend trade concessions temporarily by applying safeguard measures "*only*" in accordance with Article XIX of the GATT 1994 and with the *Agreement on Safeguards*, including Article 3.1 of that Agreement. The last sentence of the latter provision, as elaborated by Article 4.2(c) of that Agreement, requires that:

(a) the "competent authorities … publish a report";

(b) the report contain "a detailed analysis of the case";

(c) the report "demonstrat[e] … the relevance of the factors examined";

(d) the report "set[ ] forth findings and reasoned conclusions"; and

(e) the "findings and reasoned conclusions" cover "all pertinent issues of fact and law" prescribed in Article XIX of the GATT 1994 and the relevant provisions of the *Agreement on Safeguards*.

[214]*Ibid.*, para. 74.

[215]Appellate Body Report, *US – Lamb*, para. 107.

[216]United States' appellant's submission, para. 73. (original emphasis)

305. We examine next the United States' claim that the Panel erred in requiring a demonstration of "unforeseen developments" for each of the safeguard measures at issue.

C. *Is it Necessary to Demonstrate for Each Safeguard Measure at Issue that Unforeseen Developments Resulted in Increased Imports?*

306. The Panel found that, because Article XIX of the GATT 1994 requires a demonstration that "unforeseen developments" have *resulted* in "increased imports", the report of the investigating authorities must "contain *specific* factual demonstrations of unforeseen developments identified to have resulted in increased imports causing or threatening to cause serious injury to the relevant domestic producers for each safeguard measure at issue."[217]

307. It is useful to set out the relevant reasoning and findings of the Panel on this issue before analyzing the argument made by the United States. The Panel found first that:

> … at no point in the initial USITC Report is the issue of "unforeseen developments" *per se* mentioned, except, as the complainants have pointed out, in a footnote in the separate view of one commissioner explaining that although such a demonstration is required in WTO law, it is not required by US law. There is otherwise no discussion of the effects of unforeseen developments for the specific safeguard measures at issue.[218] (footnote omitted)

308. Turning to the Second Supplementary Report provided by the USITC, the Panel observed that "the USITC insists on the *overall effects* of the Asian and Russian financial crisis together with the strong US dollar and economy to displace steel to other markets."[219] The Panel found that "although it describes a plausible set of unforeseen developments that may have resulted in increased imports to the United States from various sources, it falls short of demonstrating that such developments actually resulted in increased imports into the United States causing serious injury to the relevant domestic producers."[220]

309. The Panel went on to find that, even if, as the USITC had found, "large volumes of foreign steel production were displaced from foreign consumption,"[221] this did not, in itself, imply that imports *to the United States* increased as a result of "unforeseen developments". The Panel further found that "the USITC did not provide any data to support its general assertion that the confluence of unforeseen developments resulted in the *specific* increased imports at issue in this dispute,"[222] and agreed with the Complaining Parties that "the USITC's explanation relates to steel production in general and does not describe how the unforeseen developments resulted in increased imports in respect of the *specific* steel products at issue."[223]

[222]*Ibid.*, para. 10.125. (original emphasis; underlining added)

[223]Panel Reports, para. 10.126. (original emphasis)

310. The Panel noted also that the United States referred, in its first written submission to the Panel, "to parts of the USITC Report, which contain footnote references to tables that show imports by country and by product for the entire period of investigation."[224] The Panel found that, although "these tables contained data that *could* have been used to explain how unforeseen developments resulted in increased imports that caused injury … the competent authority did no such thing."[225] The Panel added that "[i]n fact, the text to which the footnotes correspond is either totally unrelated to an explanation of unforeseen developments, or it deals generally with imports without specifying from where those imports came."[226] On that basis, the Panel concluded that:

> … the explanation provided by the USITC [on] how unforeseen developments resulted in increased imports causing serious injury is not reasoned and adequate. Moreover, it is not supported by relevant data and it does not demonstrate, as a matter of fact, that such unforeseen developments resulted in increased imports into the United States of the *specific* steel products that are the subject of the safeguard measures at issue.[227] (emphasis added)

311. The Panel found, therefore, that the United States acted inconsistently with Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards* by failing to provide a reasoned and adequate explanation demonstrating that "unforeseen developments" had *resulted* in increased imports of the *specific* steel products subject to the safeguard measure at issue.[228]

312. The United States objects to this finding by arguing that Article XIX does not specify a particular type of analysis, nor does it require any differentiation by the competent authority of the impact of various "unforeseen developments" on *each* product that is subject to the relevant safeguard measures. The United States submits that "[t]o perform such an analysis, the competent authorities would have to identify the effects of each unforeseen development on subsequent increases in imports of a product"[229] and thus "obligate the competent authorities to evaluate unforeseen developments in the same way as imports themselves".[230] According to the United States, this is "manifestly incorrect" because "[w]hile Article XIX:1(a) requires that increased imports be a 'result of' unforeseen developments, in contrast, it requires that those imports 'cause' serious injury."[231]

[224]Panel Reports, para. 10.133.

[229]United States' appellant's submission, para. 81.

[230]*Ibid.*

[231]*Ibid.*

313. In considering this argument, we turn first to the text of Article XIX:1(a):

> If, as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions, any product is being imported into the territory of that Member in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers in that territory of like or directly competitive products, the Member shall be free, in respect of such product, and to the extent and for such time as may be necessary to prevent or remedy such injury, to suspend the obligation in whole or in part or to withdraw or modify the concession. (underlining added)

314. The term "such product" in Article XIX:1(a) refers to the product that may be subject to a safeguard measure. That product is, necessarily, *the product* that "is being imported in such increased quantities". Read in its entirety, Article XIX:1(a) clearly requires that safeguard measures be applied to the product that "is being imported in such increased quantities", and that those "increased quantities" are being imported "as a result" of "unforeseen developments".

315. Turning to the term "as a result of" that is also found in Article XIX:1(a), we note that the ordinary meaning of "result" is, as defined in the dictionary, "an effect, issue, or outcome *from* some action, process or design".[232] The increased imports to which this provision refers must therefore be an "effect, or outcome" of the "unforeseen developments". Put differently, the "unforeseen developments" must "result" in increased imports of the product ("such product") that is subject to a safeguard measure.

316. It is evident, therefore, that not just any development that is "unforeseen" will do. To trigger the right to apply a safeguard measure, the development must be such as to *result* in increased imports of *the product* ("such product") that is subject to the safeguard measure. Moreover, *any* product, as Article XIX:1(a) provides, may, potentially, be subject to that safeguard measure, provided that the alleged "unforeseen developments" *result* in increased imports of that *specific product* ("such product"). We, therefore, agree with the Panel that, with respect to the specific products subject to the respective determinations, the competent authorities are required by Article XIX:1(a) of the GATT 1994 to demonstrate that the "unforeseen developments identified … have resulted in increased imports [of the specific products subject to] … each safeguard measure at issue."[233]

317. We find further support for this conclusion in our rulings in *Argentina – Footwear (EC)* and in *Korea – Dairy*. In those appeals, we characterized the term "as a result of" as implying that there should be a "logical connection" between "unforeseen developments" and the conditions set forth in the second clause of Article XIX:1(a). We found that there must be:

[232] *Shorter Oxford English Dictionary*, 5th ed. W.R. Trumble, A. Stevenson (eds.) (Oxford University Press, 2002), Vol. II, p. 2555.

[233] Panel Reports, para. 10.44. (underlining added) In the same vein, we further note that, as China argues in paragraph 49 of its appellee's submission, the USTR had, in fact, asked the USITC in its letter dated 3 January 2002, to identify "for each affirmative determination … any unforeseen developments that led to the relevant steel products being imported into the United States in such increased quantities as to be a substantial cause of serious injury." (Letter of the USTR to the USITC dated 3 January 2002, question 1). (underlining added)

> … a logical connection between the circumstances described in the first clause – "as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions … " – and the conditions [regarding increased imports] set forth in the second clause of Article XIX:1(a) for the imposition of a safeguard measure.[234]

318. There must, therefore, be a "logical connection" linking the "unforeseen developments" and an increase in imports of the product that is causing, or threatening to cause, serious injury. Without such a "logical connection" between the "unforeseen developments" and *the product* on which safeguard measures may be applied, it could not be determined, as Article XIX:1(a) requires, that the increased imports of "such product" were "a result of" the relevant "unforeseen development". Consequently, the right to apply a safeguard measure to *that product* would not arise.

319. For this reason, when an importing Member wishes to apply safeguard measures on imports of several products, it is not sufficient merely to demonstrate that "unforeseen developments" resulted in increased imports of a broad category of products that included the specific products subject to the respective determinations by the competent authority. If that could be done, a Member could make a determination and apply a safeguard measure to a broad category of products even if imports of one or more of those products did not increase and did not result from the "unforeseen developments" at issue. Accordingly, we agree with the Panel that such an approach does not meet the requirements of Article XIX:1(a), and that the demonstration of "unforeseen developments" must be performed for *each* product subject to a safeguard measure.[235]

320. The United States suggests that:

> [t]he Panel may have felt that the ITC ought to have issued multiple demonstrations [of unforeseen developments], specific to each product subject to a separate measure, but that did not mean that the Panel could make an across-the-board dismissal of the "plausible" explanation that the ITC provided.[236]

321. However, the Panel did not make an "across-the-board dismissal" of the USITC's "plausible explanations" regarding "unforeseen developments", as the United States claims. Rather, the Panel Reports reveal that the Panel considered whether the "unforeseen developments", on which the

[234] Appellate Body Report, *Argentina – Footwear (EC)*, para. 92; Appellate Body Report, *Korea – Dairy*, para. 85.

[235] We note that the United States also alleges that the Panel "mistakenly indicated that a competent authority had to 'differentiate the impact' of various unforeseen developments on the individual industries and even economies of other countries." (United States' appellant's submission, para. 85, referring to Panel Reports, paras. 10.127–10.128). Based on our review of the Panel Reports, we do not understand the Panel to have imposed such a requirement. Instead, as we see it, the Panel merely observed, in paragraph 10.127, that the Asian and Russian crises affected some countries more than others, to support its view that the USITC was required to "explain how the increased imports of the specific steel products subject to the investigation *were linked to and resulted from* the confluence of unforeseen developments." (emphasis added) Previously, in paragraph 10.123 of the Panel Reports, the Panel had stated that "even if 'large volumes of foreign steel production were displaced from foreign consumption', this [did] not, in itself, imply that *imports to the United States* increased as a result of unforeseen developments." (emphasis added)

[236] United States' appellant's submission, para. 83.

USITC's determination relied, resulted in increased imports of the products on which the safeguard measures at issue were applied. The Panel found that the USITC Second Supplementary Report[237] "falls short"[238] in its explanation of how the Asian and Russian financial crises together with the strong United States dollar and economy resulted in increased imports into the United States. The Panel also said that the USITC failed to draw necessary links between market displacements and increased imports to the United States.[239] Furthermore, the Panel pointed out where supporting discussion and data were lacking.[240] The Panel also stated that the USITC's explanation was faulty because it referred to steel production in general and because the explanation did not address how the "unforeseen developments" resulted in increased imports in respect of the specific steel products at issue.[241] In sum, the Panel was of the view that "the complexity of the unforeseen developments pointed to by USITC called for a more elaborate demonstration and supporting data than that provided by the USITC."[242]

322. We also agree with the European Communities that "[i]n the present case where the ITC relied upon macroeconomic events having effects across a number of industries, it was for the ITC to demonstrate the 'logical connection' between the alleged unforeseen development[s] and the increase in imports in relation to each measure, not for the Panel to read into the report linkages that the ITC failed to make."[243] Consequently, we do not find error in the Panel's finding that the USITC was required to provide a reasoned and adequate explanation demonstrating that the alleged "unforeseen developments" resulted in increased imports for *each* product subject to a safeguard measure.

323. Moreover, since the USITC did not provide a "reasoned conclusion" that the "unforeseen developments" resulted in increased imports for each specific safeguard measure at issue, we find no error in the Panel's conclusions, in paragraph 10.150 and the relevant sections of paragraph 11.2 of the Panel Reports, that the application of each of those safeguard measures was inconsistent with Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards*.

D. *Alleged Failure by the Panel to "Link" Certain Data to the USITC's Demonstration of how "Unforeseen Developments" Resulted in Increased Imports*

324. Before the Panel, the United States argued that there were data to support the USITC's finding that "unforeseen developments" had resulted in increased imports of the relevant products which "extended beyond consumption data for the most severely affected countries in south east Asia and production and consumption data for the former USSR republics".[244] The United States referred, *inter alia*, to the section of the USITC report dealing with increased imports, which contains footnote

[237]It will be recalled that the issue of whether the relevant "unforeseen developments" resulted in increased imports of the products on which the safeguard measures were applied was not addressed in the initial USITC report.

[238]Panel Reports, para. 10.122.

[239]*Ibid.*, 10.123, 10.127 and 10.131.

references to tables that show imports by country and by product for the entire period of investigation.[245]

325. As we mentioned earlier, the Panel found that those "tables contained data that *could* have been used to explain how unforeseen developments resulted in increased imports … However, the competent authority did no such thing."[246] The Panel explained that "the text to which the footnotes correspond is either totally unrelated to an explanation of unforeseen developments, or it deals generally with imports without specifying from where those imports came."[247] The United States acknowledges that the USITC itself did not cite these data in connection with its demonstration of "unforeseen developments", but, nevertheless, it argues that the Panel "was *required* to consider [those data] in evaluating whether the unforeseen developments finding was consistent with Article 3.1 [of the *Agreement on Safeguards*]".[248]

326. Article 3.1 of the *Agreement on Safeguards* requires that the competent authority set out "reasoned conclusions" on all "pertinent issues of fact and law". One of those "issues of law" is the requirement to demonstrate the existence of "unforeseen developments" that have resulted in increased imports causing serious injury. In our view, therefore, it was for the USITC to provide a "reasoned conclusion" on "unforeseen developments". A "reasoned conclusion" is not one where the conclusion does not even refer to the facts that may support that conclusion. As the United States itself acknowledges, "Article 3.1 thus assigns the competent authorities—not the panel—the obligation to 'publish a report setting forth *their* findings and reasoned conclusions reached on all pertinent issues of fact and law.'"[249] A competent authority has an obligation under Article 3.1 to provide reasoned conclusions; it is not for panels to find support for such conclusions by cobbling together disjointed references scattered throughout a competent authority's report.

327. The United States argues that our findings in *EC – Tube or Pipe Fittings* support its view that the Panel was "required" to consider the relevant data to which the USITC refers in other sections of the USITC report to support the USITC's finding that "unforeseen developments" had resulted in increased imports. The United States explains that "[i]n that dispute, the report of the investigating authority failed to mention one of the factors specifically listed in the Antidumping Agreement at all in its discussion."[250] In that dispute, according to the United States, despite that omission, "the Appellate Body determined, by virtue of a close reading of the remainder of the report, that the investigating authority had in fact 'considered' the enumerated factor."[251] The United States concludes from this that "[i]f this is a permissible analysis of whether the necessary evaluation was

[245]According to footnote 5009 under paragraph 10.133 of the Panel Reports, the sections of the USITC Report which the United States brought to the attention of the Panel were "pp. 65-66 (CCFRS), 99-100 (hot-rolled bar), 107-108 (cold-finished bar), 115-116 (rebar), 168-170 (certain welded pipe), 178-180 (FFTJ), 213-214 (stainless steel bar), 222-223 (stainless steel rod), 259-260 (stainless steel wire, Commissioner Koplan), 303-305 (carbon flat products and stainless steel wire and wire rope, Commissioner Bragg), 309-310 (tin mill products, Commissioner Miller), 347 (stainless steel wire and wire rope, Commissioner Devaney)."

[246]Panel Reports, para. 10.133. (emphasis added)

performed by national authorities, then the ITC's reliance on data tables actually referenced in the Report (although not in the unforeseen development section) is surely also permissible."[252]

328. The issue in *EC – Tube or Pipe Fittings* was not the obligation contained in Article 3.1 of the *Agreement on Safeguards*. The issue there was, as the United States explains, whether a particular injury factor listed in Article 3.4 of the *Anti-Dumping Agreement* "ha[d] been evaluated, even though a separate record of the evaluation of that factor ha[d] not been made."[253] We found in that appeal that "under the particular facts of [that] case, it was reasonable for the Panel to have concluded that the [competent authorities had] addressed and evaluated"[254] the relevant factor.

329. Unlike the United States, we do not see the two cases as the same. The issue in this case is not whether certain data referred to in the USITC report had, in fact, been "considered" by the USITC. The USITC may indeed have "considered" all the relevant data contained in its report or referred to in the footnotes thereto. However, it did not use those data to *explain* how "unforeseen developments" resulted in increased imports. Rather, as the Panel found, "the text to which the footnotes correspond is either totally unrelated to an explanation of unforeseen developments, or it deals generally with imports without specifying from where those imports came."[255] Hence, what is wanting here is not the data, but the reasoning that uses those data to support the conclusion. The USITC did not, in our view, provide a conclusion that is supported by facts and reasoning, in short, a "reasoned conclusion", as required by Article 3.1. Moreover, as we have stated previously, it was for the USITC, and not the Panel, to provide "reasoned conclusions". It is not for the Panel to do the reasoning for, or instead of, the competent authority, but rather to assess the adequacy of that reasoning to satisfy the relevant requirement. In consequence, we cannot agree with the United States that the Panel was "required" to consider the relevant data to which the USITC referred in other sections of its report to support the USITC's finding that "unforeseen developments" had resulted in increased imports; and, for the reasons mentioned, we do not see how our findings in *EC – Tube or Pipe Fittings* support the United States' view to that effect.

330. We, therefore, uphold the Panel's findings, in paragraph 10.150 and the relevant sections of paragraph 11.2 of the Panel Reports, that the ten safeguard measures at issue are inconsistent with Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards* because the USITC's report failed to demonstrate, through a reasoned and adequate explanation, that "unforeseen developments" had resulted in increased imports of CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, stainless steel rod, and stainless steel wire, causing serious injury to the relevant domestic producers.[256]

VI. Increased Imports

331. As we stated at the outset, under Article 2.1 of the *Agreement on Safeguards*, safeguard measures can be justified "*only*" when, as a result of unforeseen developments and of the effect of obligations incurred, including tariff concessions, a product is being imported in such increased quantities and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products. It is "*only*" if these prerequisites set

[252]United States' appellant's submission, para. 93.

[253]Appellate Body Report, *EC – Tube or Pipe Fittings*, para. 161.

[254]*Ibid.*

[255]Panel Reports, para. 10.133.

[256]Panel Reports, paras. 10.150 and 11.2.

forth in Article XIX:1(a) of the GATT 1994 and the *Agreement on Safeguards* are shown to exist that the right to apply a safeguard measure arises. The fulfilment of each of these prerequisites is a "pertinent issue[ ] of fact and law" for which "finding[s] and reasoned conclusion[s]" must be included in the published report of the competent authorities, as required by Article 3.1 of the *Agreement on Safeguards*. With this in mind, we consider next the Panel's findings relating to one of these prerequisites, namely, the existence of "increased imports".[257]

332. The United States appeals the Panel's finding that the USITC failed to provide a reasoned and adequate explanation of how the facts supported its findings that imports of CCFRS, stainless steel rod, hot-rolled bar, tin mill products, and stainless steel wire "increased" within the meaning of Article XIX:1(a) of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards*.[258]

333. With respect to the first three product categories—CCFRS, hot-rolled bar and stainless steel rod—the United States challenges two aspects of the Panel's findings. First, the United States challenges the Panel's general interpretation of the requirement relating to increased imports in Article 2.1 of the *Agreement on Safeguards*. Secondly, the United States argues that the Panel "erred in its analysis of the import data" for those three product categories.[259]

334. With respect to the other two product categories—tin mill products and stainless steel wire—the United States takes issue with the Panel's finding that the USITC failed to provide a reasoned and adequate explanation because the USITC based its determinations on two sets of explanations which, according to the Panel, could not be reconciled.[260]

335. We will deal with these separate claims in turn, and will first address the Panel's findings with respect to CCFRS, hot-rolled bar, and stainless steel rod.

A. *CCFRS, Hot-Rolled Bar, and Stainless Steel Rod*

336. As we explained previously, with respect to CCFRS, hot-rolled bar, and stainless steel rod, the United States challenges two aspects of the Panel's findings. We examine first the United States' argument concerning the appropriate legal standard to be used to determine whether the requirement in Article 2.1 of the *Agreement on Safeguards* relating to "increased imports" has been met.

[257]We use the term "increased imports" as shorthand to describe the prerequisite set forth in Article XIX:1(a) of the GATT 1994 and in Article 2.1 of the *Agreement on Safeguards*, i.e., a product is being imported "in such *increased* quantities, absolute or relative to domestic production". (emphasis added)

[258]United States' appellant's submission, para. 97. The Panel found that the USITC report contained an adequate and reasoned explanation of how the facts support the determination made with respect to "increased imports" of cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar.

[259]United States' appellant's submission, para. 98.

[260]See Panel Reports, paras. 10.200 and 10.262.

1. Legal Standard to be Used for Determining Whether there are "Increased Imports"

337. Article XIX:1(a) of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards* read as follows:

GATT 1994

Article XIX

Emergency Action on Imports of Particular Products

> 1. *(a)* If, as a result of unforeseen developments and of the effect of the obligations incurred by a Member under this Agreement, including tariff concessions, any product is being imported into the territory of that Member in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers in that territory of like or directly competitive products, the Member shall be free, in respect of such product, and to the extent and for such time as may be necessary to prevent or remedy such injury, to suspend the obligation in whole or in part or to withdraw or modify the concession. (underlining added)

Agreement on Safeguards

Article 2

Conditions

> 1. A Member may apply a safeguard measure to a product only if that Member has determined, pursuant to the provisions set out below, that such product is being imported into its territory in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products. (footnote omitted; underlining added)

338. The Panel found that the use of the present tense in the phrase "is being imported" in both Article XIX:1(a) of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards* "indicates that it is necessary for the competent authorities to examine recent imports and that the increase in imports was 'recent'."[261] The Panel also found that "increased imports must be 'sudden'"[262] because of the "unforeseen and unexpected character of the developments resulting in the increased imports as well as the emergency nature of safeguard measures".[263]

[261]Panel Reports, para. 10.159.

[262]*Ibid.*, para. 10.166.

[263]Panel Reports, para. 10.166.

339. The Panel agreed with the finding of a previous panel that since Article 2.1 of the *Agreement on Safeguards* speaks of a product that "is being imported … in such increased quantities"[264], it follows, therefore, that imports need not be increasing at the time of the determination. Instead, the requirement is only that "imports *have* increased, if the products continue 'being imported' in (such) increased quantities."[265] The Panel then considered whether a *decrease* in imports at the end of the period of investigation could, in an individual case, prevent a finding of increased imports in the sense of Article 2.1 of the *Agreement on Safeguards*. The Panel observed that this would "depend on whether, despite the later decrease, a previous increase nevertheless results in the product (still) 'being imported in (such) increased quantities'."[266] In that evaluation, according to the Panel, "factors that must be taken into account are the duration and the degree of the decrease at the end of the relevant period of investigation, as well as the nature, for instance the sharpness and the extent, of the increase that intervened beforehand."[267]

340. The Panel also referred to our findings in *Argentina – Footwear (EC)* that the "competent authorities are required to consider the *trends* in imports over the period of investigation,"[268] and that "the increase in imports must have been recent enough, sudden enough, sharp enough, and significant enough … to cause or threaten to cause 'serious injury'".[269] The Panel then concluded that "a finding that imports have increased pursuant to Article 2.1 can be made when an increase evidences a certain degree of recentness, suddenness, sharpness and significance."[270] In saying this, the Panel emphasized "that there are no absolute standards as regards *how* sudden, recent, and significant the increase must be in order to qualify as an 'increase' in the sense of Article 2.1 of the Agreement on Safeguards"[271], but added that one cannot conclude "that any increase between any two identified points in time meets the requirements of Article 2.1 of the Agreement on Safeguards."[272]

341. The United States contends that the Panel erred in finding that "the determination that imports have increased pursuant to Article 2.1 can be made only when an increase evidences a certain degree of recentness, suddenness, sharpness and significance."[273] According to the United States, this standard has no basis in Article 2.1 or anywhere else in the text of the *Agreement on Safeguards*. The United States posits that our statement in *Argentina – Footwear (EC)* that the "increase in imports must have been recent enough, sudden enough, sharp enough and significant enough … to cause or threaten to cause serious injury"[274], was a statement about "the entire investigative responsibility of

[272]Panel Reports, para. 10.168.

[273]United States' appellant's submission, para. 100, referring to paragraph 10.167 of the Panel Reports. The United States does not quote the Panel's finding accurately. The Panel, in fact, concluded in paragraph 10.167 of the Panel Reports "that a finding that imports have increased pursuant to Article 2.1 can be made when an increase evidences a certain degree of recentness, suddenness, sharpness and significance." The word "only" does not appear in the Panel's conclusion.

[274]Appellate Body Report, *Argentina – Footwear (EC)*, para. 131.

the competent authorities under the Safeguards Agreement"[275], and that "whether an increase in imports has been recent, sudden, sharp and significant enough to cause or threaten serious injury are questions that are answered as the competent authorities … proceed with the remainder of their analysis (i.e., with their consideration of serious injury/threat and causation)."[276] The analysis of these questions need not, therefore, according to the United States, form part of the evaluation of the issue of whether imports have "increased". Rather, the United States contends that "the phrase 'in such increased quantities' simply states the requirement that, in general, the level of imports at (or reasonably near to) the end of a period of investigation be higher than at some unspecified earlier point in time."[277]

342. In reply, and in contrast, China, the European Communities, Korea, New Zealand, and Norway argue that the United States is, in effect, asking us to find that "any increase is sufficient" to satisfy the requirement in Article 2.1 of the *Agreement on Safeguards*.[278] The European Communities quotes, in this respect, a passage from the USITC report where it is stated that, for United States domestic purposes, there "is no minimum quantity by which imports must have increased" and "a simple increase is sufficient."[279]

343. The Complaining Parties argue also that, in order to constitute "increased imports" within the meaning of Article XIX:1(a) of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards*, those increased imports must be "recent" and "sudden"[280]; the European Communities and Norway also argue that the increased imports must be "extraordinary" and "abnormal".[281]

344. As a consequence, we must examine whether there is any *threshold*—qualitative or quantitative—to allow a finding by a competent authority on the existence of "such increased quantities" within the meaning of Article XIX:1(a) and Article 2.1, or whether, as the United States argues, the requirement is "that, in general, the level of imports at (or reasonably near to) the end of a period of investigation be higher than at some unspecified earlier point in time."[282]

345. We examined essentially the same issue in *Argentina –Footwear (EC)* and found there that:

> … the determination of whether the requirement of imports "in such increased quantities" is met is not a merely mathematical or technical determination. In other words, it is not enough for an investigation to show simply that imports of the product this year were more than last year – or five years ago. Again, and it bears repeating, not just *any* increased quantities of imports will suffice. There must be "*such* increased quantities" as to cause or threaten to cause serious injury to the domestic industry in order to fulfil this requirement for applying a safeguard measure. And this language in both Article 2.1 of the *Agreement on Safeguards* and Article XIX:1(a) of the GATT 1994, we believe, requires that the increase in imports must have been recent enough, sudden enough, sharp enough, and significant enough, both quantitatively and qualitatively, to cause or threaten to cause "serious injury".[283] (original emphasis; underlining added; footnotes omitted)

[275]United States' appellant's submission, para. 107.

[279]European Communities' appellee's submission, para. 135, referring to USITC Report, Vol. I, p. 278.

[280]Brazil's appellee's submission, paras. 38 and 41; China's appellee's submission, para. 96; European Communities' appellee's submission, paras. 128 and 130; Japan's appellee's submission, paras. 42 and 46; Korea's appellee's submission, para. 73; New Zealand's appellee's submission, para. 5.5; Norway's appellee's submission, para. 145; Switzerland's appellee's submission, paras. 93 and 97.

[281]European Communities' appellee's submission, para. 140; Norway's appellee's submission, para. 158.

[282]United States' appellant's submission, para. 102.

346. We reaffirm this finding. In that appeal, we underlined the importance of reading the requirement of "such increased quantities" in the context in which it appears in both Article XIX:1(a) of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards*. That context includes the words "to cause or threaten to cause serious injury". Read in context, it is apparent that "there must be 'such increased quantities' as to cause or threaten to cause serious injury to the domestic industry in order to fulfill this requirement for applying a safeguard measure."[284] Indeed, in our view, the term "such", which appears in the phrase "such increased quantities" in Articles XIX:1(a) and 2.1, clearly links the relevant increased imports to their ability to cause serious injury or the threat thereof. Accordingly, we agree with the United States that our statement in *Argentina – Footwear (EC)* that the "increase in imports must have been recent enough, sudden enough, sharp enough and significant enough … to cause or threaten to cause serious injury"[285], was a statement about "the entire investigative responsibility of the competent authorities under the Safeguards Agreement"[286], and that "[w]hether an increase in imports is recent, sudden, sharp and significant enough to cause or threaten serious injury are questions that are answered as the competent authorities proceed with the remainder of their analysis (i.e., their consideration of serious injury/threat and causation)."[287]

347. We have observed previously that "the title of Article XIX is: 'Emergency Action on Imports of Particular Products"[288], and that the "words 'emergency action' also appear in Article 11.1(a) of the *Agreement on Safeguards*".[289] Because safeguard measures are "emergency actions", we have noted as well that "when construing the prerequisites for taking such actions, their extraordinary nature must be taken into account."[290] The requirement relating to "increased imports" in Articles XIX:1(a) and 2.1 must, therefore, be read in the context of the "extraordinary nature" of the "emergency action" that is authorized by Article XIX:1(a) of the GATT 1994. Even so, the fact that safeguard actions are "emergency actions", and that the prerequisites for taking such actions should therefore be construed while taking into account the "extraordinary nature" of safeguard measures, does not imply that the prerequisites for taking such actions, *in and of themselves*, must necessarily be "abnormal" or

[283]Appellate Body Report, *Argentina – Footwear (EC)*, para. 131.

[284]Appellate Body Report, *Argentina – Footwear (EC)*, para. 131.

[285]*Ibid.*

[286]United States' appellant's submission, para. 107.

[287]*Ibid.*

[288]Appellate Body Report, *Argentina – Footwear (EC)*, para. 93.

[289]*Ibid.*

[290]*Ibid.*, para. 94.

"extraordinary". The question is one of the "conditions" under which "such" increased quantities of imports occur.

348. In this respect, we note that, contrary to what the European Communities and Norway assert[291], in the single GATT 1947 case that involved Article XIX—the *US – Fur Felt Hats* case—the Working Party did *not* find that increased imports must be "abnormal", *in and of themselves*, to be "increased imports" for purposes of Article XIX. Instead, the Working Party in that case found that:

> There should be an abnormal development in the imports of the product in question *in the sense that*:
>
> (i) the product in question must be imported in increased quantities;
>
> (ii) the increased imports must be the result of unforeseen developments and of the effect of tariff concessions;
>
> (iii) the imports must enter in such increased quantities and under such conditions as to cause or threaten to cause serious injury. (emphasis added)

349. That 1951 Working Party, therefore, used the word "abnormal" to describe the overall conditions under which the increased quantities of imports must occur. The Working Party found that the relevant "development in imports" must be abnormal precisely because the increased quantities of imports, by the very terms of Article XIX:1(a), are "as a result of unforeseen developments and of the effect of tariff concessions" and enter "in such increased quantities and under such conditions as to cause or threaten to cause serious injury."

350. In a similar vein, we said in *Argentina – Footwear (EC)* that "the increased quantities of imports should have been 'unforeseen' or 'unexpected'."[292] In doing so, we were referring to the fact that the increased imports must, under Article XIX:1(a), result from "unforeseen developments" in order to justify the application of a safeguard measure. Because the "increased imports" must be "as a result" of an event that was "unforeseen" or "unexpected", it follows that the increased imports must also be "unforeseen" or "unexpected". Thus, the "extraordinary nature" of the domestic response to increased imports does not depend on the absolute or relative quantities of the product being imported. Rather, it depends on the fact that the increased imports were unforeseen or unexpected.

351. We further note that Article XIX:1(a) of the GATT 1994 and Article 2.1 of the *Agreement on Safeguards* require that the relevant product "is being imported in such increased quantities *and under such conditions* as to cause or threaten to cause serious injury". The question whether "such increased quantities" of imports will suffice as "increased imports" to justify the application of a safeguard measure is a question that can be answered only in the light of "such conditions" under which those imports occur. The relevant importance of these elements varies from case to case.

[291]European Communities' appellee's submission, para. 140; Norway's appellee's submission, para. 158.

[292]Appellate Body Report, *Argentina – Footwear (EC)*, para. 131.

352. We turn next to examine the United States' argument that, as "the words recent, sudden, sharp or significant"[293] do not appear in Article 2.1, "the phrase 'in such increased quantities' simply states the requirement that, in general, the level of imports at (or reasonably near to) the end of a period of investigation be higher than at some unspecified earlier point in time."[294]

353. Article 4.2 of the *Agreement on Safeguards* elaborates on the prerequisites for the application of a safeguard measure that are set out in Article 2.1.[295] Article 4.2(a) provides context for interpreting the meaning of the requirement relating to increased imports in Article 2.1. Article 4.2(a) provides, in relevant part, that:

> In the investigation to determine whether increased imports have caused or are threatening to cause serious injury to a domestic industry under the terms of this Agreement, the competent authorities shall evaluate…the rate and amount of the increase in imports of the product concerned in absolute and relative terms … . (underlining added)

354. We concluded in *Argentina – Footwear (EC)* that "the competent authorities are required to consider the *trends* in imports over the period of investigation (rather than just comparing the end points) under Article 4.2(a)."[296] A determination of whether there is an increase in imports cannot, therefore, be made merely by comparing the end points of the period of investigation. Indeed, in cases where an examination does not demonstrate, for instance, a clear and uninterrupted upward trend in import volumes, a simple end-point-to-end-point analysis could easily be manipulated to lead to different results, depending on the choice of end points. A comparison could support either a finding of an increase or a decrease in import volumes simply by choosing different starting and ending points.

355. For instance, if the starting point for the period of investigation were set at a time when import levels were particularly low, it would be more likely that an increase in import volumes could be demonstrated. The use of the phrase "such increased quantities" in Articles XIX:1(a) and 2.1, and the requirement in Article 4.2 to assess the "rate and amount" of the increase, make it abundantly clear, however, that such a comparison of end points will *not* suffice to demonstrate that a product "is being imported in such increased quantities" within the meaning of Article 2.1. Thus, a demonstration of "any increase" in imports between any two points in time is not sufficient to demonstrate "increased imports" for purposes of Articles XIX and 2.1. Rather, as we have said, competent authorities are required to examine the trends in imports over the entire period of investigation.[297]

356. We, therefore, reject the United States' assertion that "the phrase 'in such increased quantities' simply states the requirement that, in general, the level of imports at (or reasonably near to) the end of a period of investigation be higher than at some unspecified earlier point in time."[298] We note,

[293]United States' appellant's submission, para. 101.

[294]*Ibid.*, para. 102.

[295]Appellate Body Report, *US – Line Pipe*, para. 181, quoting *US – Wheat Gluten*, para. 98.

[296]Appellate Body Report, *Argentina – Footwear (EC)*, para. 129. (original emphasis; underlining added)

[297]Appellate Body Report, *Argentina – Footwear (EC)*, para. 129.

[298]United States' appellant's submission, para. 102.

however, that the United States clarified at the oral hearing that it agrees that an examination of trends is required for the purpose of determining whether there are increased imports under Articles XIX and 2.1, and with this we agree.[299]

357. As we explained above[300], the United States argues that the Panel erred in requiring that "a finding that imports have increased … can be made *only* when an increase evidences a certain degree of recentness, suddenness, sharpness and significance."[301] We understand that the United States is submitting in essence that, in so finding, the Panel established an absolute standard in the abstract, applicable irrespective of the facts of the case.[302]

358. In considering whether the Panel did establish such an absolute standard, we observe[303] that the word "only", although used by the United States in challenging the Panel on this point, is not contained in the Panel's relevant finding. Moreover, based on our review of the Panel's reasoning, we do not understand the Panel to have articulated any absolute standard, in the abstract, for determining whether imports have increased within the meaning of Article XIX:1(a) and Article 2.1. Rather, the Panel explicitly, and pointedly, agreed "with the United States that there are no absolute standards as regards *how* sudden, recent, and significant the increase must be in order to qualify as an 'increase' in the sense of Article 2.1"[304] of the *Agreement on Safeguards*. The Panel noted, however, that "from the absence of *absolute* standards one cannot conclude that there are no standards at all and that any increase between two identified points in time meets the requirements of Article 2.1".[305] The Panel then went on to "agree[ ] with the United States that the inquiry is not whether imports have increased 'recently and suddenly' *in the abstract*."[306] Instead, according to the Panel "[a] *concrete* evaluation is what is called for"[307] and, thus, a "competent authority must conduct an analysis considering all the features of the development of import quantities and that an increase in imports has a certain degree of being recent and sudden."[308] It seems to us, therefore, that the Panel did not find that the degree of "recentness, suddenness, sharpness and significance" had to be assessed by means of an absolute standard that, only if met, could warrant a finding of "increased imports".

359. What is more, the Panel further explained that:

> … a competent authority's findings on increased imports, distinct from its causality and injury findings, *may be informed by the results of its entire investigation*. The competent authority's findings on the first requirement – increased imports – may have effects on the injury findings or on the causation findings, as prescribed by Article 4.2(a). As a competent authority considers the other conditions necessary for imposition of a safeguard, it determines, as directed by the Appellate Body in *Argentina – Footwear (EC)*, whether the increase in imports was recent enough, sudden enough, and significant enough to cause or threaten serious injury to the relevant domestic producers.[309] (emphasis added)

[299]United States' response to questioning at the oral hearing.

[300]See *supra*, para. 341.

[302]United States' response to questioning at the oral hearing.

[303]See *supra*, footnote 273 to paragraph 341.

[304]Panel Reports, para. 10.168. (original emphasis)

[305]*Ibid.*

[306]*Ibid.*

[307]*Ibid.*

[308]Panel Reports, para. 10.168.

360. In our view, this statement is further evidence that the Panel was of the view that the assessment of whether an increase is "recent enough, sudden enough, and significant enough to cause or threaten serious injury" is to be made *on a case-by-case basis* by the competent domestic authority—and is *not*, therefore, a determination that is made in the *abstract*. We agree.

361. For these reasons, we conclude that the Panel did not require, in the abstract, that "a finding that imports have increased … can be made [only] when an increase evidences a certain degree of recentness, suddenness, sharpness and significance."[310] Rather, in our view, the Panel correctly relied on our findings in *Argentina – Footwear (EC)*.

362. We turn next to examine the Panel's findings on increased imports of CCFRS, hot-rolled bar and stainless steel rod.[311]

2. Panel's Findings with Respect to CCFRS, Hot-Rolled Bar, and Stainless Steel Rod

363. As we noted above, the United States argues that the Panel "erred in its analysis of the import data for CCFRS, hot-rolled bar and stainless steel rod."[312] As the United States sees it, the Panel's finding that imports of those products did not "increase" for purposes of Article 2.1 of the *Agreement on Safeguards* resulted from the Panel's application of a legal standard that has no basis in Article 2.1 or anywhere else in the text of the *Agreement of Safeguards*, namely, that an increase in imports must evidence "a certain degree of recentness, suddenness, sharpness and significance."[313]

364. We have examined the Panel's interpretation of the general requirement related to "increased imports" in Article 2.1, and have concluded that we agree with the interpretation advanced by the Panel. We turn now to an examination of the United States' appeal as it relates specifically to "increased imports" of CCFRS, hot-rolled bar, and stainless steel rod in the light of that interpretation. We look first to the United States' arguments concerning CCFRS.

(a) CCFRS

365. With respect to "increased imports" of CCFRS, the Panel found that:

> … the USITC's determination on increased imports of CCFRS, as published in its report, does not contain an adequate and reasoned explanation of how the facts support the determination. The USITC

[309]*Ibid.*, para. 10.171.

[310]Panel Reports, para. 10.167.

[311]United States' appellant's submission, para. 98.

[312]*Ibid.*

[313]*Ibid.*, para. 109.

> recognized that the sharpest increase took place in the period until 1998, and that, since then, imports have decreased, in 1999 and 2000, back to levels nearly as low as the 1996 level. The USITC also noted the significant decrease between interim 2000 and interim 2001 (from 11.5 to 6.9 million short tons), but it did not seem to focus on, or at least account for, this most recent trend in concluding that imports are "still significantly higher … than at the beginning of the period". Given the sharpness and significance of this most recent decrease the Panel does not find that the USITC explanation as published in its report contains an adequate and reasoned explanation of how the facts support the determination CCRFS "is being imported in … increased quantities".[314] (underlining added; footnotes omitted)

366. The United States argues that the Panel's conclusion that the USITC failed to provide a reasoned and adequate explanation of how the facts supported its finding that CCFRS was being imported "in such increased quantities" within the meaning of Article XIX:1(a) and Article 2.1 "rests in large measure on the Panel's determination that the ITC 'did not seem to focus on, or at least account' for the fact that there was a decrease in imports, on both an absolute and a relative basis, from interim 2000 to interim 2001."[315] According to the United States, the Panel gave the change between interim periods "dispositive weight",[316] although the actual requirement in Article XIX:1(a) and Article 2.1—as acknowledged by the Panel—is that "[any product] is being imported … in such increased quantities", and that, therefore, the "imports need not be increas*ing* at the time of the determination; what is necessary is that imports *have* increas*ed*, if the products continue 'being imported' in (such) increas*ed* quantities."[317]

367. We agree with the United States that Article 2.1 does *not* require that imports need to be increasing at the time of the determination. Rather, the plain meaning of the phrase "is being imported in such increased quantities" suggests merely that imports must *have* increased, and that the relevant products continue "being imported" in (such) increased quantities. We also do *not* believe that a decrease in imports at the end of the period of investigation would necessarily prevent an investigating authority from finding that, nevertheless, products continue to be imported "in such increased quantities."[318]

368. We do not agree, however, with the United States' assertion that the Panel's conclusion that there were no "increased imports" of CCFRS, for purposes of Article 2.1, is a result of the Panel giving "dispositive weight" to the decrease in imports that took place from interim 2000 to interim 2001. As we understand it, the Panel's conclusion was based on the Panel's finding that the USITC had not provided *a reasoned and adequate explanation* of how the facts supported its determination that CCFRS "is being imported in … such increased quantities". The reason why the

[314]Panel Reports, para. 10.181.

[315]United States' appellant's submission para. 111, referring to Panel Reports, paras. 10.181 and 10.183.

[316]United States' appellant's submission, para. 111.

[317]*Ibid.*, para. 112, referring to Panel Reports, para. 10.162. (original emphasis)

[318]We note that a decrease at the end of a period of investigation may, for instance, result from the seasonality of the relevant product, the timing of shipments, or importer concerns about the investigation. As we have said, the text of Article 2.1 does not necessarily prevent, in our view, a finding of "increased imports" in the face of such a decline.

Panel did not find the USITC's *explanation* to be "reasoned and adequate" was the magnitude of the decrease that occurred between interim 2000 and interim 2001 (from 11.5 to 6.9 million short tons). In the words of the Panel, the USITC "did not seem to focus on, or at least account for, [that decrease] … in concluding that imports are 'still significantly higher … than at the beginning of the period'".[319] In the absence of a reasoned and adequate explanation in the USITC report relating to the decrease in imports that occurred at the end of the period of investigation, the USITC could not be said to have adequately explained the existence of "such increased quantities" within the meaning of Article 2.1.

369. We also recall, once more, that "competent authorities are required to examine trends"[320] in imports. Because imports of CCFRS decreased from 1999, and did not recover, the Panel found that the USITC should have focused on, or at least accounted for, this most recent trend. The Panel found that the USITC did not do so, and concluded, therefore, that the USITC had not provided an explanation that CCFRS "is being imported in … such increased quantities". We see no legal error in this finding of the Panel.

370. The lack of a reasoned and adequate explanation relating to the decrease that occurred immediately before the USITC's determination is all the more significant, in our view, because the evidence of that decrease is arguably the most relevant of all the data gathered during the investigation, for purposes of assessing whether a product "*is being imported* in such increased quantities". We emphasized in *US – Lamb* "the relative importance, within the period of investigation, of the data from the end of the period, as compared with the data from the beginning of the period".[321] Once more, we do so here.

371. With respect to the timing of the "increased imports" of CCFRS, the Panel found that:

> It may well be that the increase occurring until 1998 could have qualified at the time as an increase satisfying the criteria of Article 2.1 of the Agreement on Safeguards, but the Panel need not express itself on that point because that increase, in itself, was no longer recent enough at the time of the determination. In other words, the increase occurring until 1998, taken by itself and with the decrease thereafter, is not a sufficient factual basis for supporting a determination in October 2001 that CCFRS "is being imported in … increased quantities".[322] (underlining added)

372. The United States argues that the Panel erred in concluding that the increase in imports that occurred in 1998 "'was no longer recent enough at the time of the determination' to support a finding of increased imports"[323] although "the Panel itself recognized that there are no absolute standards as

[319]Panel Reports, para. 10.181. (footnotes omitted)

[320]Appellate Body Report, *Argentina – Footwear (EC)*, para. 129.

[321]Appellate Body Report, *US – Lamb*, footnote 88 to para. 138.

[322]Panel Reports, para. 10.182.

[323]United States' appellant's submission, para. 113, referring to Panel Reports, paras. 10.182 and 10.185.

regards *how* sudden, recent, and significant the increase must be in order to qualify as an 'increase' in the sense of Article 2.1."[324]

373. Based on our review of the Panel's reasoning—in particular, the Panel's conclusions in paragraphs 10.167 – 10.171 of the Panel Reports, where the Panel states that "[a] *concrete* evaluation is called for"[325] and that "the inquiry is not whether imports have increased 'recently and suddenly' *in the abstract*"[326]—we do not understand the Panel to have meant, as the United States appears to suggest, that an increase in 1998 would not, *under any conditions*, have been recent enough to support a finding of increased imports. Instead, the Panel proceeds to explain that "[i]n other words, the increase occurring until 1998, *taken by itself and with the decrease thereafter*, is not a sufficient factual basis for supporting a determination in October 2001 that CCFRS 'is being imported in … increased quantities'."[327]

374. In our view, what is called for in every case is an *explanation* of how the *trend* in imports supports the competent authority's finding that the requirement of "such increased quantities" within the meaning of Articles XIX:1(a) and 2.1 has been fulfilled. It is this *explanation* concerning the *trend* in imports—over the entire period of investigation—that allows a competent authority to *demonstrate* that "a product is being imported in such increased quantities".

375. Finally, we note that the United States also argues that the USITC conducted a "concrete evaluation" of how the requirement relating to "increased imports" was met, and that that "evaluation" explains, according to the United States, "how the 1998 import surge had long-term effects that were still occurring at the time of the ITC's determination."[328] Unquestionably, the evaluation of the *effects* of increased imports must be appropriately assessed, where a competent authority examines causation and serious injury. We do not, however, see the relevance of such an analysis for purposes of determining whether "a product *is being imported* in such increased quantities".

376. Therefore, we *uphold* the Panel's conclusion, in paragraph 10.186 and the relevant section of paragraph 11.2 of the Panel Reports, that the application of the safeguard measure on CCFRS is inconsistent with Articles 2.1 and 3.1 of the *Agreement on Safeguards*, because the United States failed to provide a reasoned and adequate explanation of how the facts support its determination with respect to "increased imports" of that product.

377. We examine next the USITC's findings on stainless steel rod.

(b) Stainless Steel Rod

378. The Panel found that:

[324]United States' appellant's submission, para. 113, referring to Panel Reports, para. 10.168. (original emphasis)

[325]Panel Reports, para. 10.168. (original emphasis)

[326]*Ibid.*

[327]Panel Reports, para. 10.182. (emphasis added)

[328]United States' appellant's submission, para. 114. The "analysis" that the United States refers to was undertaken by the USITC as part of its causation analysis and determination of serious injury, and not as part of its determination of "increased imports".

> … the USITC's determination on increased imports of stainless steel rod, as published in its Report, does not contain an adequate and reasoned explanation of how the facts support the determination. The USITC relied on the increase occurring between 1996 and 2000, with the largest increase from 1999 to 2000 (25%). The decline between interim 2000 and interim 2001 was acknowledged, but the USITC did not give an explanation why it nevertheless found that there was an increase of imports in absolute numbers. This failure is particularly serious since this decrease (by 31.3%) was sharper than the preceding increase, and, as a matter of proportion, offset the increase of the two preceding years.
>
> The only additional aspect adduced by the USITC in response to the decrease in interim 2001 was the nearly stable market share of imports. The market share, however, is the relative notion of imports *vis-à-vis* domestic sales, and is not related to absolute import volumes. In light of the decrease in the most recent period and the overall developments between 1996 and interim 2001 which can be best described as a double up-and-down movement (returning to the low point at the end), the Panel does not believe that the facts support a finding that, at the moment of the determination, stainless steel rod "is being imported in (such) increased quantities".
>
> It may well be that the increases occurring from 1996 to 1997, or from 1998 to 2000, taken by themselves, would qualify as an increase satisfying the criteria of Article 2.1 of the Agreement on Safeguards. However, at the time of the determination, the trends of imports showed a significant recent decline, so that these past increases can no longer serve as the basis that stainless steel rod "is being imported in (such) increased quantities".[329] (underlining added; footnotes omitted)

379. With respect to stainless steel rod, the United States makes essentially the same arguments that it made with respect to the Panel's findings on increased imports of CCFRS. In particular, the United States alleges that the Panel "arbitrarily decided that the decline in the first six months of 2001 was more significant than the increase of the prior two years, without considering the different durations and magnitudes of the increases and decrease."[330] According to the United States, the Panel "thereby failed to place data for the end of the investigation period in the context of data from an earlier period."[331]

380. Again, based on our review of the Panel's reasoning, we do not find the Panel to have concluded that the USITC failed to provide a *reasoned and adequate explanation* because it had "arbitrarily decided that the decline in the first six months of 2001 was more significant than the increase of the prior two years".[332] Rather, we understand the Panel to have found that "the USITC

[329]Panel Reports, paras. 10.267–10.269.

[330]United States' appellant's submission, para. 136, referring to Panel Reports, para. 10.267.

[331]United States' appellant's submission, para. 136.

[332]*Ibid.*

did not give an explanation [of] why it nevertheless found that there was an increase of imports in absolute numbers"[333] *despite* the decline that occurred between interim 2000 and interim 2001. Instead of unduly relying on that decline, the Panel, in our view, correctly required that the decline be explained by the United States, particularly since it occurred at the end of the period of investigation and was, in the Panel's words, "sharper than the preceding increase, and, as a matter of proportion, offset the increase of the two preceding years."[334]

381. On stainless steel rod, the United States argues also that the Panel erred in rejecting "the ITC's reasoning as to why the decline in absolute imports in interim 2001 did not outweigh the increases of the previous two years."[335] According to the United States, "there was good reason to discount the significance of [that] decline in absolute imports … because the effect on the U.S. industry in terms of market share was essentially unchanged at the increased level of 1999-2000."[336] On this issue, the Panel found that "[t]he market share … is the relative notion of imports *vis-à-vis* domestic sales, and is not related to absolute import volumes."[337] On appeal, the United States argues that the USITC was "not equating market share with absolute import levels", but, rather, "it was evaluating the significance of the decline in absolute imports in interim 2001 in comparison to the increase in these imports in the previous two years."[338]

382. We do not see how this argument by the United States is relevant for purposes of a determination of whether a product "is being imported in such increased quantities" absolute or relative to *domestic production*. Obviously, "domestic production" and the domestic "market share" of the industry of the United States are not identical concepts.[339] In our view, the "share of the domestic market taken by increased imports" is a factor that is relevant under Article 4.2(a) of the *Agreement on Safeguards*, for purposes of examining whether increased imports have caused or are threatening to cause serious injury.

383. Accordingly, we *uphold* the Panel's conclusion, in paragraph 10.277 and the relevant section of paragraph 11.2 of the Panel Reports, that the application of the safeguard measure on stainless steel rod is inconsistent with Articles 2.1 and 3.1 of the *Agreement on Safeguards*, because the United States failed to provide a reasoned and adequate explanation of how the facts support its determination with respect to "increased imports" of that product.

(c) Hot-Rolled Bar

384. With respect to hot-rolled bar, the Panel stated:

> … the USITC's determination on increased imports of hot-rolled bar, as published in its report, does not contain an adequate and reasoned explanation of how the facts support the determination. The USITC relied on the higher amount of imports in 2000 than in any previous year of the period examined and on the "rapid and dramatic increase" from 1999 to 2000. The decline between interim 2000 and 2001 was acknowledged, but the USITC did not give an explanation why it, nevertheless, found that there was an increase of imports in absolute numbers. It did so only with regard to imports relative to domestic production, a finding with which the Panel will deal separately.
>
> This failure to account for the most recent data from interim 2001, as far as absolute imports are concerned, is serious in the view of the Panel. The decrease from interim 2000 (1.34 million tons) to interim 2001 (952,392 tons) represented a decrease by 28.9%, whereas the increase in the year-to-year period before (1999 to 2000) that was characterized as "rapid and dramatic" was merely 11.9%. In light of this decrease in the most recent period, the Panel does not believe that the trend of imports from 1996 to 2000 (an increase by 52.5%) is sufficient to provide a basis for a finding that, at the moment of the determination, hot-rolled bar "is being imported in such increased quantities".
>
> In the Panel's view, the trend of absolute imports between 1997 and interim 2001 is best described as an alternation of increases and decreases from year to year. Given this up-and-down movement ending with a decrease of 28.9% (in interim 2001), the Panel does not believe that the facts support a conclusion of increased imports, nor has the USITC provided an explanation to that effect. The Panel acknowledges that, until 2000, there was a net increasing trend, in other words, the two increases in 1998 and 2000 were stronger than the decrease in 1999. However, the picture changes again significantly, when one includes the decrease (by 28.9%) in interim 2001, a fact that the USITC acknowledged, but did not evaluate. Taking into account all qualitative and quantitative features of the trends of imports over the period of examination, the Panel, therefore, finds that the USITC's determination on increased imports of hot-rolled bar, as published in its Report, does not contain a reasoned and adequate explanation of how the facts support a conclusion that hot-rolled bar "is being imported in such increased quantities."[340] (underlining added)

385. The United States appeals the Panel's findings with respect to increased imports of hot-rolled bar both in absolute terms and relative to domestic production.

(i) *Absolute imports*

386. As to absolute imports, the United States argues, in essence, that, in examining absolute levels of imports for hot-rolled bar, the Panel "placed too much reliance"[341] on the decrease from interim 2000 to interim 2001, and "improperly disregarded the nature and magnitude of preceding changes in

[333] Panel Reports, para. 10.267.

[334] *Ibid.*

[335] United States' appellant's submission, para. 137.

[336] *Ibid.*

[337] Panel Reports, para. 10.268.

[338] United States' appellant's submission, para. 137.

[339] This is, of course, because not all domestic production is necessarily traded in the domestic market.

[340] Panel Reports, paras. 10.204–10.206.

[341] United States' appellant's submission, heading III.C.3.c.

imports."[342] The argument advanced by the United States here is similar to the United States' argument on increased imports of CCFRS and stainless steel rod.

387. We do not agree with the United States that the Panel "placed too much reliance" on the figures for the most recent period of the investigation. Rather, based on our review of the Panel's reasoning, we understand the Panel to have concluded that the USITC did not provide *a reasoned and adequate explanation* of how the facts supported the USITC's finding concerning "increased imports", because the USITC did *not* address the relevance of the decrease that occurred at the end of the period of investigation in any way in its report. The Panel found, in particular, that "[t]he decline between interim 2000 and 2001 was acknowledged, but the USITC did not give an explanation why it, nevertheless, found that there was an increase of imports in absolute numbers."[343]

388. As we noted in the context of examining the United States' claim related to imports of CCFRS, we note here also that, in not explaining the "most recent decrease" in absolute imports, the USITC did *not*, in our view, provide an explanation concerning the overall *trend* in imports that occurred during the period of investigation. Again we recall that, in *Argentina – Footwear (EC)*, in clarifying the *Agreement on Safeguards*, we stated that "authorities are required to examine trends".[344] In our view, by failing to address the decrease in imports that occurred between interim 2000 and interim 2001, the United States did not—and could not—provide a reasoned and adequate explanation of how the facts supported its finding that imports of hot-rolled bar "increased", as required by Article 2.1 of the *Agreement on Safeguards*. This failure to account for the decrease in absolute imports is all the more serious in the light of the fact that the intervening trend that was not addressed by the USITC occurred at the very end of the period of investigation. In *US – Lamb*, we found that the competent authority "must assess" the data from the most recent past "in the context of the data for the entire investigative period".[345] As the Panel found, it is, precisely, those most recent data that the USITC failed to account for with respect to absolute imports.

389. Having examined the Panel's findings as they relate to imports in *absolute numbers*, we turn next to examine the Panel's findings concerning imports of hot-rolled bar *relative to domestic production*.

(ii) *Relative imports*

390. As to imports relative to domestic production, we recall once again that Article 2.1 provides that a Member may apply a safeguard measure after a determination that the relevant product is "being imported … in such increased quantities, absolute *or* relative to domestic production … as to cause or threaten to cause serious injury" (emphasis added). Therefore, a determination of either an absolute or relative increase in imports causing serious injury is sufficient to authorize a Member to apply safeguard measures. Accordingly, the increased imports requirement *can* be met not only if there is an absolute increase in imports, but also if there is an increase relative to domestic production.

[342] *Ibid.*, para. 127.

[343] Panel Reports, para. 10.204.

[344] Appellate Body Report, *Argentina – Footwear (EC)*, para. 129.

[345] Appellate Body Report, *US – Lamb*, para. 138.

391. After reviewing the USITC's findings on absolute imports, the Panel examined the explanation provided by USITC with regard to *imports relative to domestic production*.[346] In assessing whether that explanation was reasoned and adequate, the Panel found that:

> The decline in imports in interim 2001 was acknowledged, but according to the USITC "the ratio of imports to US production in interim 2001 was higher than that for the first three years of the period examined, and was only three-tenths of a percentage point below the 1999 level."
>
> The Panel is not convinced by this statement and does not consider it to be a reasoned and adequate explanation supporting the determination of increased imports, given that the ratio of imports to domestic production in the most recent period, interim 2001 (24.6%), not only declined compared with full-year or interim 2000 (27.5% and 27.0% respectively) but was also lower than in 1999 (24.9%) and nearly as low as in 1998 (23.8%). Therefore the facts do not support a conclusion that hot-rolled bar "is being imported in such increased quantities, … relative to domestic production".[347]

392. Here, too, the United States challenges the Panel's interpretation, and advances essentially the same arguments that it does with respect to the Panel's findings on increased imports of hot-rolled bar in absolute terms. In particular, the United States argues that "[a]s with absolute imports, the Panel improperly disregarded the nature and magnitude of changes in relative imports preceding the first half of 2001,"[348] and "focused almost exclusively on a decline in imports in the first six months of 2001 as compared to the first six months of 2000."[349]

393. The Panel acknowledged that the USITC *had provided* an explanation in its report on imports relative to domestic production.[350] Thus, the issue here is *not* whether the USITC did, or did not, provide an "explanation" concerning the decrease that occurred at the end of the period of investigation. The issue here is the sufficiency of that "explanation". The Panel found that the explanation provided by the USITC was not reasoned and adequate because the "facts [did] not support a conclusion that hot-rolled bar 'is being imported in such increased quantities'".[351]

394. In reaching this conclusion, the Panel stated that it did not consider the statement of the USITC that "the ratio of imports to US production in interim 2001 was higher than that for the first three years of the period examined, and was only three-tenths of a percentage point below the 1999 level"[352] to be a reasoned and adequate explanation supporting the determination on increased imports. The Panel explained that this was because "the ratio of imports to domestic production in the most recent period, interim 2001 … not only declined compared with full-year or interim 2000 … but

[346] Panel Reports, para. 10.208.

[347] *Ibid.*, paras. 10.208–10.209.

[348] United States' appellant's submission, para. 130.

[349] *Ibid.*, para. 129.

[350] Panel Reports, para. 10.204.

[351] *Ibid.*, para. 10.209.

[352] Panel Reports, para. 10.208.

was also lower than in 1999 … and nearly as low as in 1998".[353] For these reasons, the Panel concluded that "the facts do not support a conclusion that hot-rolled bar 'is being imported in such increased quantities, … relative to domestic production.'"[354]

395. Based on the facts found by the Panel and in the Panel record, we have some misgivings about the Panel's assessment. As the Panel pointed out, the ratio of imports to domestic production was 18.4 per cent in 1997[355], and 27.5 per cent in 2000—the last full year included in the period of investigation. This represents an increase in 9.1 percentage points. Between interim 2000 and interim 2001, there was a decline in that ratio (2.4 percentage points, being the difference between 27 per cent for interim 2000 and 24.6 per cent for interim 2001). However, the ratio for interim 2001 was still 6.2 percentage points above that for 1997.

396. In addition, as we stated in *US – Lamb*, "data from the most recent past … must [be] assess[ed] in the context of the data for the entire investigative period".[356] In its appellant's submission, the United States points out that the ratio of imports to domestic production of hot-rolled bar increased by 43.23 per cent from 1996 to 2000, and "rose in three out of the four year-to-year comparisons, including a sizable increase from 1999 to 2000".[357] It appears to us that the decline in imports between interim 2000 and interim 2001—from 27 to 24.6 per cent of domestic production—is relatively modest when assessed in the context of the aforementioned 43.23 per cent increase, and *does not necessarily* detract from an overall determination by the USITC that the product is "being imported in such increased quantities".

397. We are not suggesting that a 43.23 per cent increase between 1996 and 2000 would be, in itself, sufficient to demonstrate "increased imports". The fact of this increase, in itself, does not prove that a product is being imported in "such" increased quantities in the sense of Articles XIX:1(a) and 2.1. As the Panel itself observed, "there are no absolute standards as regards *how* sudden, recent, and significant the increase must be in order to qualify as an 'increase' in the sense of Article 2.1."[358]

398. Our review of the facts suggests to us that they may well support the USITC's conclusion relating to increased imports. Thus, we do not necessarily share the Panel's conclusion about those facts. However, this is not the issue before us. The issue before us here is whether the USITC provided an explanation in its report on whether imports increased relative to domestic production. On that point, we agree with the Panel that the USITC did not explain why, despite the decline that occurred at the end of the period of investigation, the facts nevertheless supported a determination of "increased imports" within the meaning of Article 2.1.[359] Thus, we agree with the Panel, albeit for

[353] *Ibid.*, para. 10.209.

[354] *Ibid.*

[355] We note that the ratio of imports to domestic production was 19.2 per cent at the start of the period of investigation in 1996.

[356] Appellate Body Report, *US – Lamb*, para. 138.

[357] United States' appellant's submission, para. 128. That increase was from 24.9 per cent in 1999 to 27.5 per cent in 2000. (Panel Reports, para. 10.208)

[358] Panel Reports, para. 10.168. (original emphasis)

[359] The USITC report, in relevant part, states:

> As a ratio to U.S. production, imports declined from 19.2 percent in 1996 to 18.4 percent in 1997, but then rose to 23.8 percent in 1998, 24.9 percent in 1999, and 27.5 percent in 2000. The ratio was lower in interim 2001, at 24.6 percent, than in interim 2000, when it was 27.0 percent. Imports were higher, both in absolute terms and relative to U.S. production, in 2000 than in any prior year of the period examined and showed a rapid and dramatic increase from the previous year. While imports declined in the interim period comparison, the ratio of imports to U.S. production in interim 2001 was higher than that for the first three years of the period examined, and was only three-tenths of a percentage point below the 1999 level.

USITC Report, Vol. I, p. 92. (footnote omitted)

[360] Panel Reports, para. 10.192.

[361] *Ibid.*, para. 10.195. (emphasis added)

different reasons, that the USITC failed to provide a reasoned and adequate explanation of how the facts supported its determination.

399. Accordingly, we *uphold* the Panel's finding, in paragraph 10.210 and the relevant section of paragraph 11.2 of the Panel Reports, that the application of the safeguard measure on hot-rolled bar is inconsistent with Articles 2.1 and 3.1 of the *Agreement on Safeguards*, because the United States failed to provide a reasoned and adequate explanation of how the facts support its determination with respect to "increased imports" of that product.

400. We now turn to the United States' appeal against the Panel's findings on tin mill products.

B. *Tin Mill Products and Stainless Steel Wire*

1. Tin Mill Products

401. The Panel also found that the USITC failed to provide a reasoned and adequate explanation for its determination that imports of tin mill products had increased. The Panel noted that the President of the United States "based his determination [with respect to tin mill products] on the findings of [ ] Commissioners [Bragg, Devaney, and Miller], although those three commissioners did not perform their analysis on the basis of the same like product definition".[360] The Panel went on to find that these findings "cannot be reconciled as a matter of their substance", because they were not based on an identically-defined like product; the Panel concluded that a WTO Member is not permitted, under Articles 2.1 and 3.1 of the *Agreement on Safeguards*, to "base a safeguard measure on a determination supported by a set of explanations each of which is different and impossible to reconcile with the other. Such findings cannot simultaneously form the basis of a determination."[361]

402. The Panel also said that:

> [T]he Panel sees no inconsistency with WTO law in the fact itself that only one commissioner reached affirmative findings with regard to tin mill products as a separate product.
>
> However, if a Member *relies* on the findings made by *three* Commissioners and the findings of those *three* Commissioners constitute the *determination* of the competent authorities in the sense of Article 2.1 of the Agreement on Safeguards, there is a requirement for those findings to provide a reasoned and adequate explanation. A reasoned and adequate explanation is not contained

> in a set of findings which *cannot* be reconciled one with another. [362]
> (original emphasis; underlining added)

403. The Panel distinguished the facts before it from the situation that was before us in *US – Line Pipe* by stating:

> The question in *US – Line Pipe* was whether a *determination* could leave open the question whether there was serious injury or threat of serious injury. From the perspective of the Agreement on Safeguards, the conditions of Article 2.1 are satisfied equally by serious injury and by threat of serious injury. The challenge was not that the *underlying report* was split and contained different reasonings that could not be reconciled one with another and that, therefore, there was a violation of Articles 2.1 and 3.1 of the Agreement on Safeguards. [363] (original emphasis)

404. The United States asks us to reverse the findings of the Panel concerning tin mill products. According to the United States, the Panel erred in requiring that the findings of each Commissioner or group of Commissioners be "reconciled". [364] The United States submits that findings based on different product groupings are not intrinsically irreconcilable. [365] Moreover, the United States argues that the "inconsistency" found by the Panel is of no legal relevance, and that the views of the three Commissioners represent alternative findings, which, according to the United States, are consistent with the *Agreement on Safeguards* "so long as the analysis of at least one of the decision makers satisfies the requirements of the Agreement". [366]

405. In our analysis of this issue, we will first briefly consider the structure and functioning of the USITC, as explained by the United States, and will then summarize the relevant findings and determinations of the individual Commissioners and of the USITC in this case; thereafter, we will analyze the merits of the United States' appeal of the Panel's findings.

406. As explained by the United States, the USITC is the United States' competent authority for purposes of the *Agreement on Safeguards*. The USITC is a body that usually consists of six Commissioners. In safeguard investigations, each of the six Commissioners makes an affirmative or negative finding *independently* of each other as to whether a product is being imported in such increased quantities as to be a substantial cause of serious injury or threat thereof to the domestic industry. Each Commissioner—independently—defines the like or directly competitive product; the affirmative or negative vote of a majority of the Commissioners constitutes the overall institutional determination of the USITC. [367] If there is an equal number of affirmative and negative votes, the

[362] Panel Reports, paras. 10.198–10.199.

[363] Panel Reports, para. 10.196.

[364] United States' appellant's submission, para. 370.

[365] *Ibid.*, para. 372.

[366] *Ibid.*, para. 375.

[367] United States' appellant's submission, para. 359.

President of the United States decides which voting group constitutes the overall institutional determination of the USITC. [368]

407. In the present case, for tin mill products, the six Commissioners comprising the USITC did not all define the like or directly competitive product in the same way. Four Commissioners (Chairman Koplan, Vice Chairman Okun, as well as Commissioners Hillman and Miller) defined tin mill products as a distinct and separate product category, and set out their respective "views" [369] on the basis of this product category. [370] The remaining Commissioners (Commissioners Bragg and Devaney) did not consider tin mill products as a separate product category; rather, they considered tin mill products as part of the larger category of carbon and alloy flat products [371], and set out their respective "views" on the basis of this larger product category. [372]

408. Among the four Commissioners who had defined tin mill products as a distinct and separate product category, three reached a negative finding (Chairman Koplan, Vice Chairman Okun, and Commissioner Hillman) [373], and one reached an affirmative finding (Commissioner Miller). [374] Commissioners Bragg and Devaney reached an affirmative finding with respect to the larger product category of carbon and alloy flat products (including tin mill). [375]

409. At the oral hearing, the United States explained that "the USITC combined the results" of the views of Commissioners Bragg, Devaney, and Miller into a "single institutional determination"—an affirmative finding—on tin mill products. [376] In other words, the fact that two Commissioners considered products other than tin mill products when making their own independent findings did not affect the result with respect to tin mill products alone. The United States explained that this "single institutional determination" of the USITC on tin mill products is supported by the multiple different findings, or "views", of Commissioners Miller, Bragg, and Devaney. [377] The President of the United States chose this affirmative finding as the overall determination of the USITC, over the other "combined results" that reached a negative finding. [378] Accordingly, for purposes of WTO obligations, there is an affirmative determination made by the competent authority of the United States, the USITC, that tin mill products are being imported in such increased quantities and under

[368] *Ibid.*, footnote 469 to para. 359.

[369] At the oral hearing, the United States clarified that it viewed the term "determination" as the legal conclusion that increased imports are a cause of serious injury or threat thereof, and differentiated this term from the findings and reasoned conclusions of the individual decision-makers, which the United States prefers to call the "views" of those particular decision makers.

[370] USITC Report, Vol. I, pp. 71ff and 307ff.

[371] This product category encompasses CCFRS, tin mill, and GOES.

[372] See USITC Report, Vol. I, pp. 272–273 (Commissioner Bragg); USITC Report, Vol. I, footnote 65 on p. 36 (Commissioner Devaney).

[376] See also *ibid.*, p. 25, and the United States' appellant's submission, para. 394.

[377] See also United States' appellant's submission, para. 394.

[378] As we explained earlier, because the USITC found that it was "equally divided" with respect to tin mill products, the decision whether the affirmative or rather the negative determination represented the institutional determination of the USITC rested with the President of the United States.

such conditions as to cause or threaten to cause serious injury to the domestic industry. This determination of the USITC is supported by the views of Commissioners Miller, Bragg, and Devaney; therefore, according to the United States, it is from the views of these three Commissioners that a panel, and we, must find a reasoned and adequate explanation for the USITC's determination.

410. Additionally, and before commencing our analysis, it may be helpful to observe that the issue before us concerns, not the domestic law of the United States, but rather the obligations of the United States *under the WTO Agreement*. As we stated in *US – Line Pipe*, what matters for purposes of WTO dispute settlement is whether the determination, irrespective of how it is decided domestically, meets the requirements of the *Agreement on Safeguards*.[379]

411. Furthermore, it is also important to note that the issue before us, here, is *not* whether the product scope of the *safeguard measure* may or may not be narrower than a competent authority's *determination*—that is, it is not whether certain products included in a determination can subsequently be excluded from the scope of the actual safeguard measure.[380] Instead, the issue before us is, we repeat, whether the USITC's report provided a reasoned and adequate explanation for the USITC's "single institutional determination" that imports of tin mill products had increased within the meaning of Article 2.1 of the *Agreement on Safeguards*. We turn to this issue now.

412. We note that the Panel did not examine the substance of the findings of the three Commissioners; rather, the Panel noted only that these findings were not based on an identically-defined like product, and concluded that this rendered the findings of the three Commissioners "irreconcilable". From this conclusion, the Panel deduced that these findings could not provide a reasoned and adequate explanation for the USITC's single determination.

413. We have reservations about the Panel's approach. First, as a preliminary matter, we are not persuaded that the findings of the three Commissioners "*cannot* be reconciled".[381] We do not believe that an affirmative finding with respect to a broad product grouping, on the one hand, and an affirmative finding with respect to one of the products contained in that broad product grouping, on the other hand, are, necessarily, mutually exclusive. It may be that they are irreconcilable, but that will depend on the facts of the case. Here, the Panel did not inquire into the details of the findings as they related to increased imports and, hence, was not adequately informed as to whether the three findings were reconcilable or not.

414. Secondly, in any event, we note that Article 3.1 of the *Agreement on Safeguards* requires the competent authority, *inter alia*, to "publish a report setting forth their findings and reasoned conclusions reached on all pertinent issues of fact and law". We do not read Article 3.1 as necessarily precluding the possibility of providing multiple findings instead of a single finding in order to support a determination under Articles 2.1 and 4 of the *Agreement on Safeguards*. Nor does any other provision of the *Agreement on Safeguards* expressly preclude such a possibility. The *Agreement on Safeguards*, therefore, in our view, does not interfere with the discretion of a WTO Member to choose whether to support the determination of its competent authority by a single explanation or, alternatively, by multiple explanations by members of the competent authority. This discretion reflects the fact that, as we stated in *US – Line Pipe*, "the *Agreement on Safeguards* does not

[379]Appellate Body Report, *US – Line Pipe*, para. 158.

[380]We note that this issue was raised before the Panel; the Panel, however, decided to exercise judicial economy with respect to this claim. (Panel Reports, para. 10.700)

[381]Panel Reports, para. 10.199. (emphasis added)

prescribe the internal decision-making process for making [ ] a determination [in a domestic safeguard investigation]".[382]

415. In the appeal before us, the USITC set out, in its report, three distinct and separate sets of findings. The results were combined into a "single institutional determination". These findings were made on the basis of different product definitions developed by three Commissioners. Although we agree with the Panel that "it makes a difference whether the product at issue is tin mill or a much broader category called CCFRS and containing tin mill products", because "the import numbers for different product definitions will not be the same"[383], this very difference, as well as the fact that the findings underlying the USITC's determination were set out as distinct and separate in the USITC's report, implies that these findings should *not* be read together, nor should a panel seek to "reconcile" them. Rather, a panel must ascertain whether a reasoned and adequate explanation for the USITC's determination is contained in the report, even if only in one of the Commissioner's individual findings.

416. In our view, in the case before us, the Panel should, therefore, not have ended its enquiry after noting that the conclusions of Commissioners Bragg and Devaney were based on a product definition that differed from that on which Commissioner Miller based her conclusion. After making this correct observation, the Panel should have continued its enquiry by examining the views of the three Commissioners *separately*, in order to ascertain whether one of these sets of findings contained a reasoned and adequate explanation for the USITC's "single institutional determination" on tin mill products.

417. In fact, we note that the approach which, in our view, the Panel should have taken in the context of increased imports, is precisely the approach the Panel adopted in the context of parallelism.[384] In that context, the Panel first reviewed the findings of Commissioner Bragg and subsequently proceeded to review the findings reached by Commissioner Miller.[385] We do not understand why the Panel reviewed the multiple findings separately in the context of parallelism, but declined to do so in the context of increased imports.[386]

418. It bears emphasizing that, in reviewing each of such findings separately, a panel is of course obliged to assess whether that particular finding provides a reasoned and adequate explanation of how the facts support the competent authority's determination. As we held in *US – Lamb*, "panels must [not] simply *accept* the conclusions of the competent authorities"; they must examine these conclusions "critically" and "in depth".[387] Hence, in examining whether one of the multiple sets of explanations set forth by the competent authority, taken individually, provides a reasoned and adequate explanation for the competent authority's determination, a panel may have to address, *inter*

[382]Appellate Body Report, *US – Line Pipe*, para. 158.

[383]Panel Reports, para. 10.195.

[384]We note, however, that the Panel also relied on the divergence in product definitions in the context of its causation analysis. (Panel Reports, paras. 10.422 and 10.572)

[385]Panel Reports, para. 10.615.

[386]We are aware that, in the context of parallelism, the Panel did not review the findings of Commissioner Devaney; the Panel explained that "the United States does not rely on findings made by Commissioner Devaney in defence against the claim of violation of parallelism, possibly because this Commissioner appears not to have reached any conclusions about imports other than excluded imports". (Panel Reports, footnote 5677 to para. 10.613)

[387]Appellate Body Report, *US – Lamb*, para. 106. (original emphasis)

alia, the question whether, *as a matter of WTO obligations*, findings by individual Commissioners made on the basis of a *broad* product grouping can provide a reasoned and adequate explanation for a "single institutional determination" of the USITC concerning a *narrow* product grouping.[388] Accordingly, we do *not* suggest that the product scope of an affirmative finding by an individual Commissioner is *not* relevant for the enquiry whether this finding does or does not provide a reasoned and adequate explanation for the competent authority's determination.[389] Rather, our finding implies that a panel may not conclude that there is no reasoned and adequate explanation for a competent authority's determination by relying merely on the fact that distinct multiple explanations given by the competent authority are not based on an identically-defined like product.[390]

419. In the light of the above, we *reverse* the Panel's finding, in paragraph 10.200 of the Panel Reports, that the USITC report does not contain a reasoned and adequate explanation of how the facts support the determination of increased imports for tin mill products because "the explanation consists of alternative explanations partly departing from each other which, given the different product bases, cannot be reconciled as a matter of their substance."[391]

420. We will discuss later in this Report whether, in the light of this finding, we should complete the analysis with respect to this issue.

421. We turn next to stainless steel wire.

2. Stainless Steel Wire

422. As with tin mill products, the United States appeals the Panel's finding that the competent authority did not provide a reasoned and adequate explanation in relation to increased imports of stainless steel wire because the findings of the three Commissioners underlying the USITC's determination were not based on identically-defined like products.[392] We begin by summarizing the relevant findings of the USITC.

423. The six Commissioners of the USITC made divergent findings on the product category stainless steel wire. Four Commissioners (Chairman Koplan, Vice Chairman Okun, as well as Commissioners Hillman and Miller) defined stainless steel wire as a distinct product category and presented their respective views on the basis of this product category.[393] The remaining two Commissioners (Bragg and Devaney) did not consider stainless steel wire as a separate product category; rather, these two Commissioners identified a product category "stainless steel wire products" (Bragg) or "stainless steel wire and wire rope" (Devaney), both composed of stainless steel wire and stainless steel rope, and presented their respective views on the basis of this broader product category.[394]

424. Among the four Commissioners who defined stainless steel wire as a distinct and separate product category, three reached a negative finding (Vice Chairman Okun and Commissioners Hillman and Miller)[395], and one reached an affirmative finding (Chairman Koplan).[396] Commissioners Bragg and Devaney reached an affirmative finding with respect to the larger product category stainless steel wire products/stainless steel wire and wire rope.[397]

425. At the oral hearing, the United States explained that "the USITC combined the results" of the views of Chairman Koplan and of Commissioners Bragg and Devaney into a "single institutional determination"—an affirmative finding—on stainless steel wire.[398] In other words, the fact that two of the Commissioners considered products other than stainless steel wire did not affect the result with respect to stainless steel wire alone. The United States explained that this "single institutional determination" of the USITC on stainless steel wire is supported by the multiple different findings, or "views", of Chairman Koplan and of Commissioners Bragg and Devaney.[399] The President of the United States chose this affirmative finding as the overall determination of the USITC, over the "combined results" that reached a negative finding.[400] Accordingly, for purposes of WTO obligations, there is an affirmative determination made by the competent authority of the United States, the USITC, that stainless steel wire is being imported in such increased quantities and under such conditions as to cause or threaten to cause serious injury to the domestic industry. This determination of the USITC is supported by the views of Chairman Koplan and Commissioners Bragg and Devaney; therefore, according to the United States, it is from the views of these three Commissioners that a panel, and we, must find a reasoned and adequate explanation for the USITC's determination.

426. The Panel found that the USITC failed to provide a reasoned and adequate explanation of how the facts support its determination that imports of stainless steel wire have increased. The Panel first noted that the situation before it "is equivalent to that encountered in the context of tin mill products".[401] The Panel then stated:

---

[388]In this regard, we note that the fact that, pursuant to the domestic law of a WTO Member, a finding made on the basis of a *broad* product grouping is deemed to support a competent authority's determination which relates to a *narrower* product, does not, in and of itself, imply that this conclusion holds true also for the purposes of the *Agreement on Safeguards*.

[389]Indeed, we note that in the context of parallelism, the Panel addressed separately the finding of Commissioner Bragg and found that "findings on a product category other than tin mill products are [not] able to support a measure relating to tin mill products as a separate product category, unless there is a reasoned and adequate explanation relating the two product categories". (Panel Reports, para. 10.615)

[390]We also emphasize that our finding does not address the question whether the USITC and/or individual Commissioners correctly defined the "like product", the "imported product", or the "domestic industry".

[391]Panel Reports, para. 10.200.

[392]United States' appellant's submission, paras. 359–395.

[393]USITC Report, Vol. I, pp. 190 and 234–238.

[394]*Ibid.*, pp. 277, 280, 288–289, and 301–302 (Commissioner Bragg); and pp. 335–336 and 342–347 (Commissioner Devaney).

[395]*Ibid.*, pp. 234–238.

[396]USITC Report, Separate Views of Chairman Koplan on injury, pp. 256–259.

[397]USITC Report, Vol. I, pp. 280, 288–289, and 301–302 (Commissioner Bragg); and pp. 342–347 (Commissioner Devaney).

[398]See also *ibid.*, p. 27; United States' appellant's submission, para. 394.

[399]See also United States' appellant's submission, para. 394.

[400]As we said earlier, because the USITC found that it was "equally divided" with respect to stainless steel wire, the decision whether the affirmative or rather the negative determination represented the institutional determination of the USITC rested with the President of the United States.

[401]Panel Reports, para. 10.261.

> [T]he Agreement on Safeguards does not permit the combination of findings as supporting a determination, if these findings were reached on the basis of differently defined products. If such findings cannot be reconciled one with another (as a matter of substance), they cannot simultaneously form the basis of a determination.[402]

The Panel, moreover, cross-referenced its reasoning set out in the context of its findings on tin mill products.[403]

427. As with the Panel's findings on tin mill products, the United States argues that, with respect to stainless steel wire, the Panel erred in requiring that the findings of each Commissioner or group of Commissioners be "reconciled".[404] The United States submits that there is "nothing intrinsically irreconcilable about findings based on different product groupings".[405] The United States also argues that alternative findings by a single decision-maker are permitted by the *Agreement on Safeguards*, "so long as the analysis of at least one of the decision makers satisfies the requirements of the Agreement".[406]

428. We note that the structure and format of the USITC's determination with respect to stainless steel wire mirrors the USITC's determination with respect to tin mill products. One Commissioner (Chairman Koplan) made affirmative findings on the product stainless steel wire[407], while two other Commissioners (Bragg and Devaney) made affirmative findings on a broader product group including, as one of the elements of this product group, stainless steel wire.[408] The results of these findings were subsequently combined by the USITC into a single institutional finding concerning stainless steel wire.

429. The facts on stainless steel wire, as well as the findings of the Panel, are, for all relevant purposes, identical to those before us in the context of tin mill products. Therefore, our reasoning with respect to tin mill products is applicable, *mutatis mutandis*, also to stainless steel wire.[409] We therefore *reverse* the Panel's finding, in paragraph 10.263 and in the relevant section of paragraph 11.2 of the Panel Reports, that the USITC report does not contain a reasoned and adequate explanation of how the facts support the determination of increased imports for stainless steel wire because the "explanation consists of alternative explanations departing from each other and which, given the different product bases, cannot be reconciled as a matter of substance."[410]

[410] Panel Reports, para. 10.262.

3. Completing the Analysis

430. In the course of finding that the explanation of the USITC for its determination of increased imports of tin mill products and stainless steel wire was not reasoned and adequate, the Panel did not examine separately the findings of the three Commissioners with a view to determining whether one of these findings, as a matter of substance, contains a reasoned and adequate explanation. As we have reached a conclusion different from the Panel on the interpretation of the *Agreement on Safeguards*, and as the Panel did not undertake a substantive analysis, the question arises whether we should "complete the analysis".

431. In previous appeals, we have, when appropriate, completed the legal analysis with a view to facilitating the prompt settlement of disputes.[411] However, in the dispute before us, we have already upheld the Panel's finding that the United States acted inconsistently with Article XIX:1(a) of the GATT 1994, as well as with Article 3.1 of the *Agreement on Safeguards*, with regard to all ten measures at issue. We also find in the following section of this Report dealing with the issue of "parallelism"[412], that the United States has acted inconsistently with Articles 2.1 and 4.2 of the *Agreement on Safeguards* with respect to all product categories, because the United States failed to establish that imports covered by the safeguard measures, *alone*, satisfy the conditions for the imposition of a safeguard measure. Therefore, the Panel's finding that the safeguard measures applied to tin mill products and stainless steel wire are both "deprived of a legal basis"[413] remains undisturbed. As a result, it is not necessary for us to complete the analysis and determine whether the USITC report provided a reasoned and adequate explanation that imports of tin mill products and stainless steel wire had increased within the meaning of Article 2.1 of the *Agreement on Safeguards*.

432. We take up next the issue of "parallelism".

VII. Parallelism

433. We start by recalling that the United States excluded imports from Canada and Mexico[414], as well as from Israel and Jordan[415], from the scope of application of these safeguard measures. The Panel found that these safeguard measures were inconsistent with Articles 2.1 and 4.2 of the *Agreement on Safeguards* because the United States did not, with respect to any of the product categories at issue, establish explicitly that imports from the sources included in the application of these measures, *alone*, satisfied the conditions for the application of a safeguard measure. The United States challenges these findings of the Panel.[416]

[411] See, for instance, Appellate Body Report, *US – Gasoline*, at 18 ff; Appellate Body Report, *Canada – Periodicals*, at 469 ff; Appellate Body Report, *EC – Hormones*, paras. 222 ff; Appellate Body Report, *EC – Poultry*, paras. 156 ff; Appellate Body Report, *Australia – Salmon*, paras. 117 ff, 193 ff and 227 ff; Appellate Body Report, *US – Shrimp*, paras. 123 ff; Appellate Body Report, *Japan – Agricultural Products II*, paras. 112 ff; Appellate Body Report, *US – FSC*, paras. 133 ff; Appellate Body Report, *Canada – Aircraft (Article 21.5 – Brazil)*, paras. 43 ff; and Appellate Body Report, *US – Wheat Gluten*, paras. 80 ff and 127 ff.

[412] See *infra*, paras. 433–474.

[413] Panel Reports, para. 10.705.

[414] Proclamation, para. 8.

[415] *Ibid.*, para. 11.

[416] United States' appellant's submission, paras. 315–358.

434. In its findings, the Panel began by making some general comments about the requirement of "parallelism"[417], and then reviewed the USITC's findings on a product-specific basis. In these general comments, the Panel noted that:

> [i]ncreased imports from sources ultimately excluded from the application of the measure must … be excluded from the analysis. The increase of these imports and their effect on the domestic industry cannot be used to support a conclusion that the product in question "is being imported in such increased quantities so as to cause serious injury". *This makes it necessary ... to account for the fact that excluded imports may have some injurious impact on the domestic industry*.[418] (emphasis added)

435. In its product-specific analysis, the Panel, using similar language, relied on this reasoning in examining the USITC's determination with respect to non-NAFTA imports for nine product categories, namely, CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, and stainless steel wire. For each of these nine product categories, the Panel found that the USITC had not complied with the requirement to demonstrate a causal link between increased imports and serious injury, because it did not account for the effects—existing or possible—of excluded imports on the domestic industry.[419] The Panel did not make this finding with respect to the tenth product category, stainless steel rod.[420]

436. For all ten product categories, the Panel found a second flaw in the USITC's analysis after examining its determination concerning non-NAFTA imports. Using virtually identical language for most product categories[421], the Panel stated:

> [T]he Panel notes that the sources excluded from the measure are not only Canada and Mexico, but also those from Israel and Jordan. Accordingly, imports from sources covered by the measure are not "non-NAFTA imports", but imports other than those from Canada, Mexico, Israel and Jordan. With regard to such imports, the USITC did not establish explicitly that they satisfied the requirements of Article 2.1 (as elaborated in Article 4) of the Agreement on Safeguards, neither in the USITC Report, nor in the Second Supplementary Report.
>
> It may well be that imports from Israel and Jordan[422] were so small that they could not possibly affect the findings reached, whether about all imports or about non-NAFTA imports. However, in the view of the Panel, it would then still be necessary for the competent authorities to actually express the findings required under parallelism with regard to increased imports other than those from Canada, Mexico, Israel and Jordan. The standard is that the Member must establish explicitly that imports from sources covered by the measure satisfy all conditions for the right to apply a safeguard measure. For this finding to be made, it is not sufficient to merely find that the exclusion of imports from Israel and Jordan would not change the conclusions regarding the prerequisites for a safeguard measure. The Panel recognizes that if, as established elsewhere in the report of the competent authorities, imports from an excluded source were [very small or (virtually) non-existent], it is very possible that the facts *allow* a finding that imports from sources covered by the measure do satisfy the conditions for the application of a safeguard measure. This, however, still needs to be established explicitly and supported with a reasoned and adequate explanation.[423] (original emphasis, footnotes omitted)

437. The Panel made separate and distinct findings on parallelism for each of the ten product categories. The United States asks us to reverse the findings of the Panel on parallelism for all these ten product categories. The United States argues that, although the Panel "purported to conduct a product-by-product examination of the parallelism claims, its basis for rejecting the ITC's parallelism analysis varied little from product to product."[424] The United States contends that the Panel "asserted two general conclusions in its introductory analytical section that served as the basis for its product-specific analyses".[425] According to the United States, the first of these two "general conclusions" of the Panel is a requirement to "account for the fact that excluded imports may have some injurious impact on the domestic industry"—to which the United States refers as the "excluded sources accounting requirement".[426] As the United States describes it, the second of these two "general conclusions" of the Panel is a requirement to establish "explicitly" that imports from included sources

[417]Appellate Body Report, *US – Line Pipe*, paras. 178–181.

[418]Panel Reports, para. 10.598.

[419]The Panel used the language "to account for the fact that excluded … imports contributed to the serious injury" or "the injury caused by excluded imports must be accounted for" with respect to the product categories CCFRS (Panel Reports, paras. 10.604–10.606), hot-rolled bar (Panel Reports, paras. 10.628–10.630), cold-finished bar (Panel Reports, paras. 10.638–10.640), rebar (Panel Reports, para. 10.650), FFTJ (Panel Reports, paras. 10.664–10.667), and stainless steel bar (Panel Reports, paras. 10.674–10.677). With respect to Commissioner Miller's analysis of the causal link between non-Canadian imports of tin mill products and serious injury, the Panel stated that "[the] findings do not account for the fact that imports other than those from an excluded source are less than those from all sources and that the effects on the domestic producers are, therefore, not the same." (Panel Reports, paras. 10.620–10.621) With respect to welded pipe, the Panel stated that the USITC's finding "does not account for the fact that the threat of serious injury caused by non-NAFTA imports is but a part of the threat of serious injury caused by all imports and does not establish that there is a genuine and substantial relationship of cause and effect." (Panel Reports, para. 10.657) With respect to stainless steel wire, the Panel stated that "the findings [ ] do not take account of the portion of the threat of serious injury caused by NAFTA imports." (Panel Reports, para. 10.688)

[420]With respect to stainless steel rod, the Panel, in reviewing the USITC's finding on non-NAFTA imports, did not refer to the causation or non-attribution requirements. We address the Panel's findings with respect to stainless steel rod in paras. 457–473, below.

[421]The Panel did not include the first paragraph with respect to its findings on tin mill products and stainless steel rod.

[422]For tin mill products, the Panel referred to imports from Mexico, Israel and Jordan.

[423]Panel Reports, paras. 10.607–10.608; see also Panel Reports, paras. 10.622, 10.631–10.632, 10.641–10.642, 10.651–10.652, 10.658–10.659, 10.668–10.669, 10.678–10.679, 10.689–10.690, and 10.698.

[424]United States' appellant's submission, para. 316.

[425]*Ibid.*

[426]*Ibid.*, paras. 318 and 321–333.

satisfy the conditions for the imposition of a safeguard measure, a standard which the United States argues the Panel misconstrued to require the competent authority to make "redundant findings".[427]

438. On appeal, the United States explicitly acknowledges that it "does not dispute that the ITC's parallelism analysis *did not satisfy the standards articulated by the Panel*".[428] However, the United States considers this to be "irrelevant"[429], because it contends that these requirements are not contained in the *Agreement on Safeguards*.

439. We begin our analysis by reviewing the relevant treaty provisions. The word "parallelism" is not in the text of the *Agreement on Safeguards*; rather, the requirement that is described as "parallelism" is found in the "parallel" language used in the first and second paragraphs of Article 2 of the *Agreement on Safeguards*. Article 2 of the *Agreement on Safeguards* stipulates:

> *Conditions*
>
> 1. A Member[1] may apply a safeguard measure to a product only if that Member has determined, pursuant to the provisions set out below, that such product is being imported into its territory in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products.
>
> 2. Safeguard measures shall be applied to a product being imported irrespective of its source. (underlining added)

[1] A customs union may apply a safeguard measure as a single unit or on behalf of a member State. When a customs union applies a safeguard measure as a single unit, all the requirements for the determination of serious injury or threat thereof under this Agreement shall be based on the conditions existing in the customs union as a whole. When a safeguard measure is applied on behalf of a member State, all the requirements for the determination of serious injury or threat thereof shall be based on the conditions existing in that member State and the measure shall be limited to that member State. Nothing in this Agreement prejudges the interpretation of the relationship between Article XIX and paragraph 8 of Article XXIV of GATT 1994.

440. In *US – Wheat Gluten*, we said that:

> The same phrase – "product … being imported" – appears in *both* … paragraphs of Article 2. In view of the identity of the language in the two provisions, and in the absence of any contrary indication in the context, we believe that it is appropriate to ascribe the *same* meaning to this phrase in both Articles 2.1 and 2.2. To include imports from all sources in the determination that increased imports are causing serious injury, and then to exclude imports from one source from the application of the measure, would be to give the phrase "product being imported" a *different* meaning in Articles 2.1 and 2.2 of the *Agreement on Safeguards*. In Article 2.1, the phrase would embrace imports from *all* sources whereas, in Article 2.2, it would exclude imports from certain sources. This would be incongruous and unwarranted. In the usual course, therefore, the imports included in the determinations made under Articles 2.1 and 4.2 should correspond to the imports included in the application of the measure, under Article 2.2.[430] (original emphasis; underlining added)

441. Thus, where, for purposes of applying a safeguard measure, a Member has conducted an investigation considering imports from *all* sources (that is, *including* any members of a free-trade area), that Member may not, subsequently, without any further analysis, exclude imports from free-trade area partners from the application of the resulting safeguard measure. As we stated in *US – Line Pipe*, if a Member were to do so, there would be a "gap" between, on the one hand, imports covered by the investigation and, on the other hand, imports falling within the scope of the safeguard measure.[431] In clarifying the obligations of WTO Members under the "parallel" requirements of the first and second paragraphs of Article 2 of the *Agreement on Safeguards*, we explained in *US – Line Pipe* that such a "gap" can be justified under the *Agreement on Safeguards* only if the Member establishes:

> … "explicitly" that imports from sources covered by the measure "satisf[y] the conditions for the application of a safeguard measure, as set out in Article 2.1 and elaborated in Article 4.2 of the *Agreement on Safeguards*."[432]

442. We further explained, in that same appeal, that, in order to fulfill this obligation in Article 2, "establish[ing] explicitly" signifies that a competent authority must provide a "reasoned and adequate explanation of how the facts support their determination"[433], adding that "[t]o be explicit, a statement must express distinctly all that is meant; it must leave nothing merely implied or suggested; it must be clear and unambiguous."[434]

443. In considering the investigation by the competent authority in the case before us, we note that the USITC relied on data for imports from *all* sources. The USITC report states that "[i]n determining whether imports have increased, the Commission considers imports from all sources".[435] We observe also that, in the examination of whether increased imports were a cause of serious injury, the USITC also relied on data for all imports for each product category. It is undisputed by the United States that, in its investigation, the USITC considered imports from *all sources—including* imports from Canada, Israel, Jordan, and Mexico. Nevertheless, imports from Canada, Israel, Jordan, and Mexico were *excluded* from the application of the safeguard measures at issue. Therefore, there is,

[427] *Ibid.*, paras. 334–344.

[428] United States' appellant's submission, para. 358. (emphasis added)

[429] United States' appellant's submission, para. 358.

[435] USITC Report, Vol. I, p. 32.

in these measures, a gap between the imports that were taken into account in the investigation performed by the USITC and the imports falling within the scope of the measures as applied.

444. It was thus incumbent on the USITC, in fulfilling the obligations of the United States under Article 2 of the *Agreement on Safeguards*, to justify this gap by establishing explicitly, in its report, that imports from sources covered by the measures—that is, imports from sources *other than* the excluded countries of Canada, Israel, Jordan, and Mexico—satisfy, *alone*, and in and of themselves, the conditions for the application of a safeguard measure, as set out in Article 2.1 and elaborated in Article 4.2 of the *Agreement on Safeguards*. Further, and as we have already explained, to provide such a justification, the USITC was obliged by the *Agreement on Safeguards* to provide a reasoned and adequate explanation of how the facts supported its determination that imports from sources *other than* Canada, Israel, Jordan, and Mexico satisfy, *alone*, and in and of themselves, the conditions for the application of a safeguard measure.

445. As we have explained, the United States argues that the Panel articulated two aspects of the requirement of "parallelism" on which it subsequently relied in its product-specific findings. We will discuss each of these aspects in turn. We turn first to the Panel's findings to which the United States refers as establishing an "excluded sources accounting requirement".[436]

A. *The Need to Account for the Effects of Imports from Excluded Sources*

446. The United States claims that the Panel erred in concluding that the competent authorities are required to account for the fact that excluded imports may have some injurious impact on the domestic industry. The United States submits that, in so far as the Panel indicated that parallelism requires authorities to focus separately on imports from sources that are not excluded from the measure, the Panel's statements "accurately reflect[ ] what the Appellate Body said in [*US –] Line Pipe*".[437] However, the United States asserts that the Panel went "further" and established a requirement for a separate analysis of imports from sources not subject to the safeguards measure, according to which the competent authority must "affirmatively account for the effect of such imports."[438] The United States contends that the requirement articulated by the Panel has no basis in the text of the *Agreement on Safeguards*.[439]

447. The United States relies on statements made by the USITC in both its original report and the Second Supplementary Report, as establishing that the imports from sources covered by the safeguard measures applied by the United States, *alone*, satisfy the conditions for the application of those measures. The United States acknowledges that, in doing so, the USITC did not "account for the fact that excluded imports may have some injurious impact on the domestic industry", as the Panel required.[440] The United States argues, however, that the Panel, by requiring the competent authority to "account for the fact that excluded imports may have some injurious impact on the domestic industry", "insert[ed] … an extra analytical step with respect to parallelism".[441] The United States maintains that nothing in the *Agreement on Safeguards* requires a distinct or explicit analysis of imports from sources *not* subject to the measure.[442]

448. We note, first, that the United States agrees that the "Appellate Body has read th[e] language ['such product … being imported' in Article 2.1] to refer to only *imports from sources which are subject to a safeguards measure*".[443] The United States also agrees that Article 2.1, as read by the Appellate Body, requires the competent authority to "establish explicitly that increased imports from [sources included in the safeguard measure] alone" satisfy the conditions for a safeguard measure. The United States does not contest these requirements in this appeal.[444]

449. Secondly, as we have indicated previously, in *US – Line Pipe*, the conditions set forth in Article 2.1 are further elaborated in Article 4.2.[445] Article 4.2(b) requires that a determination that increased imports have caused or are threatening to cause serious injury to the domestic industry, as required by Article 4.2(a), can be made only where an investigation by a competent authority demonstrates the existence of a "causal link" between "increased imports" and either serious injury or the threat of serious injury. Article 4.2(b), last sentence, stipulates also, for the purposes of determining the existence of such a "causal link", that "[w]hen factors other than increased imports are causing injury to the domestic industry at the same time, such injury shall not be attributed to increased imports." This obligation is sometimes described as the "non-attribution requirement".[446]

450. As a result, the phrase "increased imports" in Articles 4.2(a) and 4.2(b) must, in our view, be read as referring to the same set of imports envisaged in Article 2.1, that is, *to imports included in the safeguard measure*. Consequently, imports *excluded* from the application of the safeguard measure must be considered a factor "other than increased imports" within the meaning of Article 4.2(b). The possible injurious effects that these excluded imports may have on the domestic industry must not be attributed to imports included in the safeguard measure pursuant to Article 4.2(b). The requirement articulated by the Panel "to account for the fact that excluded imports may have some injurious impact on the domestic industry"[447] is, therefore, not, as the United States argues, an "extra analytical step"[448] that the Panel added to the analysis of imports from all sources. To the contrary, this requirement necessarily follows from the obligation in Article 4.2(b) for the competent authority to ensure that the effects of factors other than increased imports—a set of factors that subsumes *imports excluded from*

[436]United States' appellant's submission, paras. 318 and 321–333.

[437]United States' appellant's submission, para. 324.

[438]*Ibid.*, para. 327.

[439]We note that Canada, in its third participant's submission, also argues that the Panel erred in reading *US – Line Pipe* to mean that parallelism necessarily requires the competent authority to account for the fact that excluded imports may have some injurious impact on the domestic industry. (Canada's third participant's submission, para. 35)

[440]United States' appellant's submission, para. 358.

[441]*Ibid.*, para. 326.

[442]*Ibid.*, paras. 326 and 329.

[443]*Ibid.*, para. 327. (emphasis added)

[444]United States' appellant's submission, para. 324. The United States also states, in its appellant's submission, that to the extent the Panel's findings on this issue "indicate[] that parallelism requires authorities to focus separately on imports from sources that are not excluded from the measure, [they] accurately reflect[ ] what the Appellate Body said in [*US –] Line Pipe*." (United States' appellant's submission, para. 324)

[445]Appellate Body Report, *US – Line Pipe*, para. 181; Appellate Body Report, *US – Wheat Gluten*, para. 98.

[446]Appellate Body Report, *US – Lamb*, para. 179.

[447]Panel Reports, para. 10.598.

[448]United States' appellant's submission, para. 326.

the safeguard measure—are not attributed to imports included in the measure, in establishing a causal link between imports included in the measure and serious injury or threat thereof. [449]

451. The non-attribution requirement is part of the overall requirement, incumbent upon the competent authority, to demonstrate the existence of a "causal link" between increased imports (covered by the measure) and serious injury, as provided in Article 4.2(b). Thus, as we found in *US – Line Pipe*, "to fulfill the requirement of Article 4.2(b), last sentence, the competent authorities must establish explicitly, through a reasoned and adequate explanation, that injury caused by factors other than increased imports is not attributed to increased imports". [450]

452. In order to provide such a reasoned and adequate explanation, the competent authority must explain how it ensured that it did not attribute the injurious effects of *factors other than included imports*—which subsume "excluded imports"—to the imports included in the measure. As we explained in *US – Line Pipe* [451] in the context of Article 3.1 and "unforeseen developments" in this Report [452], if the competent authority does not provide such an explanation, a panel is not in a position to find that the competent authority ensured compliance with the clear and express requirement of non-attribution under Article 4.2(b) of the *Agreement on Safeguards*.

453. As a result, we are of the view that, in this dispute, the Panel did not err by requiring the competent authority to "account for the fact that excluded imports may have some injurious impact on the domestic industry", to ensure that the effects of these excluded imports are not attributed to the imports included in the safeguard measure.[453] Rather, as we see it, the Panel correctly interpreted the causation and non-attribution requirements under Articles 2 and 4 of the *Agreement on Safeguards*.

[449]We recall that in *US – Lamb*, we stated, in this respect:

> As part of th[e] determination [of the existence of a causal link], Article 4.2(b) states expressly that injury caused to the domestic industry by factors other than increased imports "shall not be attributed to increased imports." In a situation where *several factors* are causing injury "at the same time", a final determination about the injurious effects caused by *increased imports* can only be made if the injurious effects caused by all the different causal factors are distinguished and separated. Otherwise, any conclusion based exclusively on an assessment of only one of the causal factors – increased imports – rests on an uncertain foundation, because it *assumes* that the other causal factors are *not* causing the injury which has been ascribed to increased imports. The non-attribution language in Article 4.2(b) precludes such an assumption and, instead, requires that the competent authorities assess appropriately the injurious effects of the other factors, so that those effects may be disentangled from the injurious effects of the increased imports. In this way, the final determination rests, properly, on the genuine and substantial relationship of cause and effect between increased imports and serious injury.

(Appellate Body Report, *US – Lamb,* para. 179) (original emphasis; underlining added)

[450]Appellate Body Report, *US – Line Pipe,* para. 217.

[451]*Ibid*., para. 107.

[452]See *supra*, paras. 278 and 302.

454. We note that the United States' appeal of the Panel's findings in this regard is explicitly limited to the Panel's articulation of the requirement itself. The United States acknowledges that, in making its determinations concerning imports of nine of the ten product categories from sources other than Canada and Mexico, the USITC did not comply with the requirement set forth by the Panel, that is, to "account for the fact that excluded imports may have some injurious impact on the domestic industry". [454]

455. Accordingly, we see no reason to disturb the Panel's findings for those nine product categories for which the Panel found that the United States did not account for the effect of imports excluded from the safeguard measures.[455] For those nine product categories, as the Panel found, the United States has failed to comply with the parallelism requirement, because it did not establish that imports covered by the safeguard measures at issue, *alone*, satisfy the requirements for the imposition of a safeguard measure, and the United States has, in effect, acknowledged that it has failed to do so. As this flaw in the USITC's analysis on parallelism affects the United States' right to exclude imports from the scope of the measures at issue, there is, in our view, no need for us to address, with respect to these nine product categories, the Panel's statement that the USITC's parallelism analysis was also flawed because the USITC did not "actually express the findings required under parallelism with regard to increased imports other than those from Canada, Mexico, Israel and Jordan". [456]

456. We, therefore, *uphold* the Panel's findings, in paragraphs 10.609, 10.623, 10.633, 10.643, 10.653, 10.660, 10.670, 10.680, 10.692, and the relevant sections of paragraph 11.2 of the Panel Reports, with respect to CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, FFTJ, welded pipe, stainless steel bar, and stainless steel wire, that the United States acted inconsistently with its obligations under Articles 2.1 and 4.2 of the *Agreement on Safeguards* because, in establishing whether imports included in the safeguard measure satisfy, *alone*, the requirements for the imposition of a safeguard measure, it did not account for the possible injury caused by imports from excluded sources.

B. *Conclusions with Respect to Stainless Steel Rod*

457. We now turn to the Panel's findings concerning the one remaining product category for which the Panel made somewhat different findings relating to parallelism, stainless steel rod.

458. On stainless steel rod, the Panel, in addressing the USITC's finding on non-NAFTA imports, did not refer to the causation or non-attribution analysis. Instead, it stated:

[453]We note that, in its causation analysis, the USITC found for every product a causal link between *all* imports and serious injury; this implies that the subsequently-excluded imports were contributing to the total injurious effects attributed to all imports. Moreover, the USITC or individual Commissioners stated, for certain products (CCFRS, hot-rolled bar, cold-finished bar, welded pipe, FFTJ, stainless steel bar, and tin mill products), that imports from some sources excluded from the measures contributed "importantly" to serious injury. (USITC Report, Vol. I, pp. 66, 100, 108, 166–167, 178-180, 213, 309–310)

[454]United States' appellant's submission, para. 358. The only product category not covered by this admission is stainless steel rod, a product category which we consider separately, below.

[455]They are: CCFRS, tin mill products, hot-rolled bar, cold-finished bar, rebar, FFTJ, welded pipe, stainless steel bar, and stainless steel wire.

[456]Panel Reports, paras. 10.608, 10.622, 10.632, 10.642, 10.652, 10.659, 10.669, 10.679, and 10.690.

> The Panel agrees with the United States that in a case where excluded imports account for less than 0.08% of total imports, it would normally be possible to reach the conclusion that imports from other sources satisfy the same requirements as all imports do. However, the Panel is unable to identify … the required findings that establishes explicitly, with a reasoned and adequate explanation, that imports from other sources than Canada, Mexico, Israel and Jordan satisfy the conditions of Article 2.1 as elaborated by Article 4.2 of the Agreement on Safeguards. In particular, the rather implicit statement made that imports other than Canadian and Mexican imports have increased and that they have caused serious injury to the domestic industry, does not relate to imports covered by the measure which are imports from sources other than Canada, Mexico, Israel and Jordan.[457] (footnote omitted)

459. The Panel also found a second flaw with the USITC's analysis on stainless steel rod. After examining the USITC's determination on non-NAFTA imports, the Panel went on to state:

> Also, it may well be that imports from Israel and Jordan were so small that they could not possibly affect the findings reached, whether about all imports or about non-NAFTA imports. However, in the view of the Panel, it would then still be required for the competent authorities to actually express the findings required under parallelism with regard to increased imports other than those from Canada, Mexico, Israel and Jordan. The standard is that the Member must establish explicitly that imports from sources covered by the measure satisfy all conditions for the right to apply a safeguard measure. For this finding to be made it is not sufficient to merely find that the exclusion of imports from Israel and Jordan would not change the conclusions regarding the prerequisites for a safeguard measure. The Panel recognizes that if imports from an excluded source were "small and sporadic" and "virtually non-existent" or "small and non-existent" and "non-existent", it is very likely that the facts *allow* a finding that imports from sources covered by the measure do satisfy the conditions for the application of a safeguard measure. This, however, still needs to be established explicitly and supported with a reasoned and adequate explanation.[458] (original emphasis; underlining added; footnotes omitted)

460. The United States claims that the Panel "misconstrued" our clarification of the requirement that findings must be "explicit" in a way that would require the USITC to make "redundant findings".[459] The United States contends that the USITC's reasoning with respect to imports from

[457]Panel Reports, para. 10.697.

[458]Panel Reports, para. 10.698.

[459]United States' appellant's submission, heading III.E.3.

Israel and Jordan was "complete, clear, and unambiguous", because "imports from Israel and Jordan were too small to affect the data on which the ITC relied for its conclusions."[460]

461. As we said earlier, a "gap" between imports covered under an investigation and imports falling within the scope of a measure can be justified under Article 2, as elaborated in Article 4.2, only if the competent authorities "establish explicitly" that imports from sources covered by the measure "satisf[y] the conditions for the application of a safeguard measure".[461] Also, as we have recalled previously, we stated, in *US – Line Pipe*, that "'establish[ing] explicitly' implies that the competent authorities must provide a '*reasoned and adequate explanation* of how the facts support their determination'".[462] Moreover, we also stated in that same appeal that, in order to be "explicit", a statement must "express distinctly all that is meant; it must leave nothing merely implied or suggested; it must be clear and unambiguous."[463]

462. For the measures before us, the USITC made a determination on the basis of an investigation of imports from *all* sources, and concluded from this investigation that imports from all sources satisfied the conditions for the application of these safeguard measures. The USITC then made additional findings, which, according to the United States, established that imports from those sources included in these safeguard measures—that is, imports from sources *other than* Canada, Israel, Jordan, and Mexico—satisfied, on their own, the conditions of the *Agreement on Safeguards* for the application of a safeguard measure.

463. The USITC made several references to the excluded countries in several parts of its report. With respect to stainless steel rod, the USITC stated, in footnote 1437 of its report:

> We also have considered whether the exclusion of imports of stainless rod from Mexico or Canada from our injury analysis would have affected our finding that imports were a substantial cause of serious injury to the stainless rod industry. Because imports of stainless rod from Mexico and Canada each accounted for an extremely small percentage of total imports during the period of investigation, INV-Y-180 at Table G-25, we find the exclusion of these volumes does not change our volumes or pricing analysis in a significant manner. Accordingly, our injury analysis would not be changed in any way by their exclusion.[464] (underlining added)

464. In its "Views on Remedy", the USITC observed that "[i]mports of stainless steel rod from Jordan are not a substantial cause of serious injury or threat of serious injury because there have been no imports of stainless steel rod from Jordan during the period of investigation".[465] Moreover, in its

[460]*Ibid.*, para. 340.

[461]Appellate Body Report, *US – Wheat Gluten*, para. 98; Appellate Body Report, *US – Line Pipe*, para. 181. We recall that Article 2.1 of the *Agreement on Safeguards* requires a determination that: (1) a product is being imported "in such quantities and under such conditions"; (2) "as to cause"; (3) serious injury or the threat of serious injury to domestic producers. (Appellate Body Report, *Argentina – Footwear (EC)*, para. 92)

[462]Appellate Body Report, *US – Line Pipe*, para. 181, referring to Appellate Body Report, *US – Lamb*, para. 103. (original emphasis)

[463]Appellate Body Report, *US – Line Pipe*, para. 194.

[464]USITC Report, Vol. I, p. 223 and footnote 1437 thereto.

[465]*Ibid.*, p. 405 and footnote 268 thereto.

"Views on Remedy", the USITC indicated, with respect to stainless steel rod, that imports from Israel, as well as from certain other sources, "accounted for a small or non-existent percentage of total imports and had a minimal share of the domestic rod market during the period of investigation."[466] In addition, the USITC stated, in its Second Supplementary Report, that "in accord with its findings in the Views on Remedy, … exclusion of imports from Israel and Jordan would not change the conclusions of the Commission or of individual Commissioners."[467]

465. These are all the comments by the USITC on which the United States relies as satisfying the parallelism requirement.[468] At no point did the USITC make a determination on whether imports from those sources that were ultimately included in the safeguard measure—that is, imports from those sources *other than* Canada, Israel, Jordan, and Mexico—satisfied, *alone*, in and of themselves, the conditions for the application of a safeguard measure. Instead, the USITC made *two separate determinations*—one determination that the exclusion of imports from *Canada and Mexico* would not change the "injury analysis"[469] of the USITC, and another *separate* determination that the exclusion of imports from *Israel and Jordan* would not change the conclusions of the USITC.[470]

466. The requirement of the *Agreement on Safeguards* to establish explicitly that imports from sources covered by a measure, *alone*, satisfy the conditions for the application of a safeguard measure cannot be fulfilled by conducting a *series of separate and partial* determinations. For example, where a WTO Member seeks to establish explicitly that imports from *sources other than A and B* satisfy the conditions for the application of a safeguard measure, if that Member conducts a separate investigation, and makes a separate determination, on whether imports from sources *other than A* satisfy the relevant conditions, and then, subsequently, conducts *another* separate and distinct investigation, and makes a separate determination, on whether imports from sources *other than B* satisfy the relevant conditions, then these *two separate* determinations, in our view, do not demonstrate that imports from sources other than *A and B together* satisfy the requirements for the imposition of a safeguard measure. By making these two separate determinations, that Member will,

[466] *Ibid.*, p. 405.

[467] USITC Second Supplementary Report, p. 4. (footnote omitted) In footnote 26 to this statement, the USITC makes reference to its own and the individual Commissioners' "Views on Remedy" on all product categories at issue.

[468] With respect to Israel and Jordan, the United States relies, for all product categories, on product-specific findings made by the USITC in the views expressed on remedy in its original report. (United States' appellant's submission, para. 335) The United States also relies on the general statement of the USITC, contained in the Second Supplementary Report, that "exclusion of imports from Israel and Jordan would not change the conclusion of the Commission or of individual Commissioners." (United States' appellant's submission, para. 338) With respect to non-NAFTA imports, the United States references its arguments before the Panel on product-specific statements by the USITC (United States' appellant's submission, para. 351 and footnote 460 thereto; para. 354 and footnote 463 thereto; para. 355 and footnote 464 thereto); in the case of stainless steel rod, the United States relied, before the Panel, on footnote 1437 of the USITC's report. (Panel Reports, para. 7.1846) We note that, on appeal, the United States does not argue that the Panel failed to examine the relevant USITC's findings; rather, the United States disagrees with the conclusions that the Panel derived from its review of these findings.

[469] USITC Report, Vol. I, p. 223, footnote 1437.

[470] We note that the USITC provided these two separate findings with respect to almost all product categories at issue. For one product category—tin mill products—*three* separate findings were provided—one finding for imports from sources other than Canada, one finding for imports from sources other than Mexico, and one finding that the "exclusion of imports from Israel and Jordan would not change the conclusions of the USITC or individual Commissioners". (USITC Report, Vol. I, p. 310, footnotes 28 and 29; USITC Second Supplementary Report, p. 4)

logically, for each of them, be basing its determination, in part, either on imports from A or on imports from B.[471] If this were permitted, a determination on the application of a safeguard measure could be easily subjected to mathematical manipulation. This could not have been the intent of the Members of the WTO in drafting and agreeing on the *Agreement on Safeguards*.

467. We are, therefore, of the view that the Panel raised a valid methodological concern when it stated that "it would … be required for the competent authorities to actually express the findings required under parallelism with regard to increased imports other than those from Canada, Mexico, Israel and Jordan."[472]

468. It may not have made a practical difference in the application of the safeguard measures at issue in this appeal, in as much as, on the facts, the quantity of imports from the excluded countries was negligible or virtually non-existent.[473] However, we are of the view that, rather than making *two separate determinations*—excluding either Canada and Mexico, or, alternatively, Israel and Jordan—from the underlying data on which it based its overall determination, the USITC should have, as the Panel found[474], provided *one single joint* determination, supported explicitly by a reasoned and adequate explanation, on whether imports from sources *other than Canada*, *Israel*, *Jordan*, *and Mexico*, by themselves, satisfied the conditions for the application of a safeguard measure.

469. The United States argues that "[i]n the context in which [the USITC's statement concerning Israel and Jordan] appeared, [its] meaning [ ] was clear: imports from Israel and Jordan were either non-existent or so small that the Commission's conclusions for imports from sources other than Canada and Mexico were also applicable to imports from sources other than Canada, Mexico, Israel

[471] Clearly, where a Member examines imports from sources *other than A*, it will be *including*, in its analysis, imports from B; conversely, when examining imports from sources *other than B*, the Member will be *including* in its analysis imports from A. Thus, at each step of the investigation, the Member will be including the effects of some of the excluded imports in its analysis.

[472] Panel Reports, para. 10.622.

[473] We note that we are *not* addressing the question of the appropriate interpretation, in this respect, of the parallelism requirement in circumstances where imports from Israel and Jordan were *zero* in every year of the period of investigation. We note that, for the product category at issue, stainless steel rod, contrary to the United States' assertion in paragraphs 337 and 342 of its appellant's submission, according to the data tables contained in the USITC report and referenced in paragraph 336 of the United States' appellant's submission, imports from Israel during the period of investigation were *not zero* in every year. (USITC Report, Appendix E, Table E-3, p. E-5)

[474] Panel Reports, para. 10.698.

and Jordan."[475] The United States also submits that "[t]he Panel appears to believe that it was not enough for the ITC to state that the findings that it made with respect to non-NAFTA imports were equally applicable to non-FTA imports. Instead, the ITC apparently had to repeat the findings word for word in a section specifically addressing non-FTA imports."[476] The United States argues that such a finding would have been "redundant".[477] The United States also points out that, in the case of stainless steel rod, the Panel accepted that "it is adequate for an authority to state that, because the volume of imports is *extremely small*, the authority's conclusions with respect to *all imports* are also applicable to imports from *all sources other than excluded sources*".[478] The United States contends that the Panel should have adopted the same analytical approach when reviewing the USITC's finding on imports from sources other than Israel and Jordan.

470. We are not persuaded by these arguments of the United States. First, we do not find any explicit statement in the USITC's report that the USITC's findings relating to imports from sources other than *Canada and Mexico* were also applicable to imports from sources other than *Canada*, *Israel*, *Jordan*, *and Mexico*.[479] Secondly, with respect to the Panel's findings on the exclusion of Canada and Mexico for stainless steel rod, the Panel did, indeed, state that "in a case where excluded imports account for less than 0.08% of total imports, it would normally be possible to reach the conclusion that imports from other sources satisfy the same requirements as all imports do".[480] The United States does not mention, however, that the Panel, after the quoted sentence, immediately went on to state that it was "unable to identify … the required finding that establishes explicitly … that imports from other sources than Canada, Mexico, Israel and Jordan satisfy the conditions of Article 2.1".[481] In other words, in its findings on the USITC's determination on imports of stainless steel rod from sources other than Canada and Mexico, the Panel raised the same valid methodological concern that it did with respect to the USITC's finding on imports from sources other than Israel and Jordan—namely, that, instead of a single determination concerning all included imports, the USITC made two separate determinations, excluding, in each of these determinations, only some of the non-covered sources. For this reason, we do not see any inconsistency in the Panel's logic.

471. As for the argument that the USITC's findings on imports from sources other than Canada and Mexico should have been read by the Panel as applying simultaneously to imports from sources other than Canada, Israel, Jordan, and Mexico *by virtue of the small import volumes at issue*, we observe that the *Agreement on Safeguards* does not provide for any different application of the parallelism requirement based on the volume of imports.[482] With this argument, the United States is asking us to read something into the *Agreement on Safeguards* that is not there, and this we cannot do.[483]

472. As we explained in *US – Wheat Gluten* and *US – Line Pipe*, a competent authority must establish, unambiguously, with a reasoned and adequate explanation, and *in a way that leaves nothing merely implied or suggested*, that imports from sources covered by the measure, *alone*, satisfy the requirements for the application of a safeguard measure. We are *not* suggesting that very low imports volumes, either from some, or from all, of the excluded sources at issue, are irrelevant for a competent authority's findings or the reasoned and adequate explanation underpinning such findings. We recognize that, where import volumes from excluded sources are very small, it is quite possible that the explanation underpinning the competent authority's conclusion need not be as extensive as in circumstances where the excluded sources account for a large proportion of total imports. Nevertheless, even if an explanation need not necessarily be extensive, the requisite explicit finding *must still be provided*. That finding must be contained in the authority's report, must be supported by a reasoned and adequate explanation, and—as we stated above—must address imports from all covered sources, excluding *all* of the non-covered sources. Nowhere in the *Agreement on Safeguards* is there any indication that these important principles can be disregarded in circumstances where imports from some or all sources are at low levels.

473. For these reasons, we do not agree with the United States that the Panel required the USITC to make "redundant findings".[484] Rather, the Panel correctly noted that the USITC had not provided the requisite finding, supported by a reasoned and adequate explanation—namely, whether the exclusion of *all* non-covered sources would change the USITC's conclusion about the prerequisites for the application of a safeguard measure. The Panel was certainly aware—as we are—of the very small import volumes at issue. However, the USITC had not made the requisite finding, and, as panels may not conduct *de novo* reviews, the Panel could not make the determination for the competent authority, even if the data needed for making such determination could be gleaned from the competent authority's report. Therefore, we cannot fault the Panel for having applied faithfully the requirements of the *Agreement on Safeguards*, as clarified by us in our previous reports. Similarly, the mere fact that import volumes were low—however low such import volumes may be—cannot entitle the Panel to make a finding that should have been made by the USITC. For these reasons, we do not reverse the Panel's findings on stainless steel rod.

---

[475]United States' appellant's submission, para. 339. The United States appears to be suggesting that the statement of the USITC that the "exclusion of imports from Israel and Jordan would not change the conclusions of the Commission or of individual Commissioners" refers to the conclusions concerning *non-NAFTA* imports (rather than to the conclusions concerning *all* imports). However, the USITC did not explicitly make this point and this reading of the USITC's finding is not evident to us. Moreover, the United States bases this suggested reading of the USITC's statement on the fact that "this statement immediately preceded the ITC's parallelism analysis for imports from sources other than Canada and Mexico." (United States' appellant's submission, para. 339) However, we note that, for stainless steel rod, the USITC's findings on non-NAFTA imports are contained in the original report, whereas the statement with respect to the exclusion of imports from Israel and Jordan is contained in the Second Supplementary Report. Consequently, the statement concerning the exclusion of imports from Israel and Jordan did not "immediately prece[de]" the USITC's analysis of non-NAFTA imports of stainless steel rod. Therefore, we read the statement that the "exclusion of imports from Israel and Jordan would not change the conclusions of the Commission or of individual Commissioners", as far as stainless steel rod is concerned, as referring not to the USITC's conclusions concerning non-NAFTA imports, but rather to the USITC's conclusions concerning *all* imports.

[476]United States' appellant's submission, para. 343.

[477]*Ibid.*, para. 343. At the oral hearing, the United States stated that the combination of particular findings of the USITC provides the finding that is required concerning imports from all excluded sources.

[478]United States' appellant's submission, para. 341. (emphasis added)

[479]We note, moreover, that in its statement, contained in the Second Supplementary Report, that "the exclusion of imports from Israel and Jordan would not change the conclusions of the Commission or individual Commissioners", the USITC explicitly refers to its findings under the section of the original report entitled "Views on Remedy of the Commission"; in that section, for stainless steel rod, under the heading "Country Exclusion", the USITC mentions Canada and Mexico, as well as Israel and Jordan, separately, and, in our view, does not discuss any connection between imports from these four sources and does not refer to these four sources together. (USITC Report, Vol. I, p. 405 and footnote 268 thereto)

[480]Panel Reports, para. 10.697. (footnote omitted)

[481]*Ibid.*

[482]Some of the Complaining Parties suggested that the United States was, in effect, seeking to invoke a *de minimis* exception. (European Communities' appellee's submission, para. 347; Norway's appellee's submission, para. 219) At the oral hearing, the United States argued that it was not invoking a *de minimis* principle, but rather a "principle of explanation".

[483]Appellate Body Report, *India – Quantitative Restrictions*, para. 94; Appellate Body Report, *India – Patents (US)*, para. 45.

[484]United States' appellant's submission, heading III.E.3.

474. We, therefore, *uphold* the Panel's findings, in paragraph 10.699, and in the relevant section of paragraph 11.2 of the Panel Reports, with respect to stainless steel rod that the United States acted inconsistently with its obligations under Articles 2.1 and 4.2 of the *Agreement on Safeguards* because it failed to establish explicitly, with a reasoned and adequate explanation, that imports included in the safeguard measure satisfy, *alone*, the requirements for the imposition of a safeguard measure.

VIII. Causation

475. We next address the issue of causation. On this issue, the Panel found that, for nine product categories[485], the USITC failed to provide a reasoned and adequate explanation demonstrating that a "causal link" existed between increased imports and serious injury, as required by Articles 2.1, 4.2(b) and 3.1 of the *Agreement on Safeguards*.

476. For seven of those product categories—CCFRS, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar—the Panel found that the USITC's "causal link" determination was "inconsistent with Articles 4.2(b), 2.1 and 3.1 of the Agreement on Safeguards".[486]

477. For the other two product categories—tin mill products and stainless steel wire—the Panel found that the USITC report did not contain "a reasoned and adequate explanation of how the facts support" the "causal link" determination, "as required by Articles 2.1, 4.2(b) and 3.1 of the Agreement on Safeguards", because the determination was based on alternative explanations given by different Commissioners that, in the Panel's view, could not be reconciled.[487]

478. The United States claims that the Panel erred in making these findings on causation, and requests that we reverse all nine findings of the Panel. However, given the different grounds articulated by the Panel for, on the one hand, tin mill products and stainless steel wire, and, on the other hand, the other seven products, the United States makes two separate claims. The United States addresses tin mill products and stainless steel wire in one claim[488], and the other seven products in another claim.[489] We will consider the two claims separately.

A. *CCFRS, Hot-Rolled Bar, Cold-Finished Bar, Rebar, Welded Pipe, FFTJ, and Stainless Steel Bar*

479. For the seven products other than tin mill products and stainless steel wire, we begin by recalling that Members may apply safeguard measures "*only*" when, as a result of unforeseen developments and of the effect of obligations incurred, including tariff concessions, a product is being imported in such increased quantities and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products. It is

[485]CCFRS (see Panel Reports, para. 10.419); tin mill products (see Panel Reports, para. 10.422); hot-rolled bar (see Panel Reports, para. 10.445); cold-finished bar (see Panel Reports, para. 10.469); rebar (see Panel Reports, para. 10.487); welded pipe (see Panel Reports, para. 10.503); FFTJ (see Panel Reports, para. 10.536); stainless steel bar (see Panel Reports, para. 10.569); stainless steel wire (see Panel Reports, para. 10.573).

[486]Panel Reports, paras. quoted in footnote 485.

[487]*Ibid.*

[488]United States' appellant's submission, section F, paras. 359–396; see also literal C in para. 397.

[489]United States' appellant's submission, section D, paras. 139–314; see also literal D in para. 397.

"*only*" if these prerequisites set forth in Article XIX:1(a) of the GATT 1994 and in the *Agreement on Safeguards* are shown to exist that the right to apply a safeguard measure arises.

480. Furthermore, *all* of these prerequisites must be established in the investigation for products being imported from sources included in the application of the measure, as "the imports included in the determinations made under Articles 2.1 and 4.2 should correspond to the imports included in the application of the measure, under Article 2.2" of the *Agreement on Safeguards*.[490]

481. In this case, the Panel decided to exercise judicial economy with respect to all claims on "serious injury".[491] Consequently, the Panel made no findings on whether the USITC had demonstrated that the domestic industry in the United States was suffering "a significant overall impairment".[492] The Panel also decided to exercise judicial economy with respect to all claims relating to the appropriate definition of the "imported product", the "like product", and the "domestic industry".[493] For this reason, the Panel relied on a number of assumptions[494] in assessing whether the USITC's "investigation demonstrate[d], on the basis of objective evidence, the existence of the causal link between increased imports of the product concerned and serious injury or threat thereof".[495]

482. We have found earlier[496] that the ten measures at issue are inconsistent with Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards*, and, in consequence, we have upheld the Panel's finding that the USITC failed to provide a reasoned and adequate explanation demonstrating that the alleged "unforeseen developments" *resulted* in imports of the ten products to which the measures at issue apply. Also, on the issue of "parallelism", we have found[497] that the ten measures at issue are inconsistent with Articles 2.1 and 4.2 of the *Agreement on Safeguards*, and, in consequence, we have upheld the Panel's finding that the USITC failed to demonstrate that imports from sources covered by the safeguard measures at issue, *alone*, were being imported into the territory of the United States "in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that

[490]Appellate Body Report, *US – Wheat Gluten*, para. 96.

[491]Panel Reports, para. 10.700.

[492]Article 4.1(a) of the *Agreement on Safeguards*.

[493]Panel Reports, para. 10.700.

[494]In paragraph 10.278 of the Panel Reports, the Panel stated that it "assumed for the purposes of its consideration of the issue of causation", that the relevant domestic producers had been correctly defined and that serious injury or threat thereof existed. We note that the Panel found no "increased imports" for five product categories – CCFRS, hot-rolled bar, stainless steel rod, tin mill, and stainless steel wire. However, the Panel must also have assumed, tacitly, that, for the purposes of its causation analysis, imports had increased for those five products. We do not see anything improper *per se* in panels making such assumptions, especially when doing so enables panels to make findings they otherwise would not have made, thereby facilitating appellate review. We are mindful that the volume and complexity of this case may have prompted the Panel to exercise judicial economy on several issues and to rely on the corresponding inter-dependent assumptions. We note, however, that the cumulation of several inter-related assumptions could have affected our ability to complete the Panel's legal analysis had we pursued a ruling on causation.

[495]Article 4.2 (b) of the *Agreement on Safeguards*. We note that "serious injury" is the purported effect that should be causally linked by the competent authority to "increased imports". When the determination of "serious injury" is challenged, a panel may only conclude definitively that "the existence of the causal link" has been adequately demonstrated *after* having established that "increased imports" *and* "serious injury" were adequately determined in the investigation.

[496]See *supra*, para. 330.

[497]See *supra*, para. 456.

produces like or directly competitive products", as required in Article 2.1 and further developed in Article 4.2 of the *Agreement on Safeguards.*

483. As we have already found that the measures before us are inconsistent with Article XIX:1(a) of the GATT 1994 and with Articles 2.1, 3.1, and 4.2 of the *Agreement on Safeguards*, it is unnecessary, for the purposes of resolving this dispute, to rule on whether the Panel was correct in finding that the United States also acted inconsistently with Articles 2.1 and 4.2 of the *Agreement on Safeguards* because the USITC report failed to demonstrate the existence of a "causal link" between increased imports from *all* sources (that is, imports covered by the measures *and* imports not covered by the measures) and serious injury to the domestic industry. We, therefore, decline to rule on the issue of causation. Accordingly, and as we have not examined the Panel's findings on causation for the seven products that are the focus of this claim by the United States—CCFRS, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar—we neither reverse nor uphold those findings.

484. At the oral hearing in this appeal, none of the participants appeared to disagree that, if we were to uphold the Panel's findings on "unforeseen developments", parallelism, and/or increased imports, it would not be *necessary* for us to rule on the claims raised on causation. Nevertheless, several participants expressed an interest in having us rule on causation as it would provide guidance to Members on applying safeguard measures in the future consistently with their WTO obligations. The United States expressed a strong preference for us to rule on causation, stating that "[it would] be important for us in terms of understanding what our obligations are under the *Agreement [on Safeguards]* and what we have to do to comply with them".[498]

485. Guidance may be found in our previous rulings. In *US – Line Pipe*, for example, we interpreted Article 4.2(b) of the *Agreement on Safeguards* as establishing:

> … two distinct legal requirements for competent authorities in the application of a safeguard measure. First, there must be a *demonstration* of the "*existence* of the causal link between increased imports of the product concerned and serious injury or threat thereof". Second, the injury caused by factors other than the increased imports must not be attributed to increased imports.[499] (emphasis added)

486. Moreover, in *US – Lamb*, when examining the requirement of Article 4.2(b) that the determination as to increased imports must be "on the basis of objective evidence", we explained that "objective evidence" means "objective data".[500] Thus, Article 4.2(b) requires a "demonstration" of the "existence" of a causal link, and it requires that this demonstration must be based on "objective data". Further, this "demonstration" must be included in the report of the investigation, which should "set[ ] forth the findings and reasoned conclusions, as required by Articles 3.1 and 4.2(c)" of the *Agreement on Safeguards*.[501]

[498]United States' response to questioning at the oral hearing.

[499]Appellate Body Report, *US – Line Pipe*, para. 208.

[500]Appellate Body Report, *US – Lamb*, para. 130.

[501]Appellate Body Report, *US – Line Pipe*, para. 236.

487. In *US – Line Pipe*, we also found that, in the context of "non-attribution", competent authorities: (i) "must 'establish explicitly' that imports from sources covered by the measure 'satisf[y] the conditions for the application of a safeguard measure, as set out in Article 2.1 and elaborated in Article 4.2 of the *Agreement on Safeguards*'"[502]; and (ii) must provide a "reasoned and adequate explanation of how the facts support their determination".[503]

488. In *US – Wheat Gluten*, we found that "the term 'causal link' denotes … a relationship of cause and effect"[504] between "increased imports" and "serious injury". The former—the purported cause—contributes to "bringing about", "producing" or "inducing" the latter[505]—the purported effect. The "link" must connect, in a "genuine and substantial"[506] causal relationship, "increased imports", and "serious injury".

489. In sum, the *Agreement on Safeguards*—in Article 2.1, as elaborated by Article 4.2, and in combination with Article 3.1—requires that competent authorities demonstrate the *existence* of a "causal link" between "increased imports" and "serious injury" (or the threat thereof) on the basis of "objective evidence". In addition, the competent authorities must provide a reasoned and adequate explanation of how facts (that is, the aforementioned "objective evidence") support their determination. If these requirements are not met, the right to apply a safeguard measure does not arise.

490. In *EC – Tube or Pipe Fittings*, we found that the non-attribution language of Article 3.5 of the *Anti-Dumping Agreement* does not require, *in each and every case*, an examination of the *collective* effects of other causal factors, in addition to an examination of the *individual* effects of those causal factors.[507] We explained there that an assessment of the collective effects of other causal factors "is *not always* necessary to conclude that injuries ascribed to dumped imports are actually caused by those imports and not by other factors."[508] We acknowledged, however, that "there may be cases where, because of the specific factual circumstances therein, the failure to undertake an examination of the collective impact of other causal factors would result in the investigating authority improperly attributing the effects of other causal factors to dumped imports".[509] We explained further that "an investigating authority is not required to examine the collective impact of other causal factors, *provided that*, under the specific factual circumstances of the case, it fulfils its obligation not to attribute to dumped imports the injuries caused by other causal factors".[510]

[502]We first made this assertion in *US – Wheat Gluten*, in the context of a discussion on parallelism. (Appellate Body Report, *US – Wheat Gluten*, para. 98) In *US – Line Pipe*, we explained that the same reasoning would apply to Article 4.2(b), last sentence. (Appellate Body Report, *US – Line Pipe*, para. 216)

[503]We made this assertion originally in *US – Lamb* in the context of a discussion of a claim under Article 4.2(a) of the *Agreement on Safeguards.* (Appellate Body Report, *US – Lamb*, para. 103) In *US – Line Pipe*, we explained that the same reasoning would apply to Article 4.2(b), last sentence. (Appellate Body Report, *US – Line Pipe,* para. 216)

[504]Appellate Body Report, *US – Wheat Gluten*, para. 67.

[505]*Ibid.*

[506]*Ibid.*, para. 69.

[507]Appellate Body Report, *EC – Tube or Pipe Fittings*, para. 190.

[508]*Ibid.*, para. 191. (emphasis added)

[509]Appellate Body Report, *EC – Tube or Pipe Fittings*, para. 192.

[510]*Ibid.* (emphasis added)

491. Lastly, it may be useful to refer to our finding in *EC – Tube or Pipe Fittings* in respect of the relevance of factors that "had effectively been found not to exist".[511] In that case, the competent authority had found, contrary to the submissions of the exporters, that the difference in costs of production between the imported product and the domestic product was virtually non-existent and thus did not constitute a "factor other than dumped imports" causing injury to the domestic industry under Article 3.5 of the *Anti-Dumping Agreement*. Consequently, we found that there was no reason for the investigating authority to undertake the analysis of whether the alleged "other factor" had any *effect* on the domestic industry under Article 3.5[512] because the alleged "other factor" "had effectively been found *not* to exist".[513] In other words, we did not rule that minimal (or not significant) factors need not be considered by the competent authorities in conducting non-attribution analyses. Rather, we ruled that only factors that have been found to exist need be taken into account in the non-attribution analysis.

B. *Tin Mill Products and Stainless Steel Wire*

492. We turn now to the two other products on which the Panel found that the USITC failed to provide a reasoned and adequate explanation of how the facts supported its determination that a "causal link" existed between increased imports and serious injury to the domestic industry that produces like or directly competitive products. The Panel based its findings on causation for tin mill products and stainless steel wire on the Panel's previous conclusion that the United States was not entitled to apply safeguard measures to imports of those two products because the relevant determinations made by the USITC were supported by findings of different Commissioners that could not be reconciled.[514] We have already reversed those findings.[515]

493. Accordingly, we also *reverse* the Panel's findings on causation made, respectively, in paragraphs 10.422, 10.573, and the relevant sections of paragraph 11.2 of the Panel Reports, that the USITC report does not contain a reasoned and adequate explanation of how the facts support the determination that increased imports of tin mill products and stainless steel wire *caused* serious injury to the relevant domestic industry as required by Articles 2.1, 4.2(b), and 3.1 of the *Agreement on Safeguards* because the determination was based on different findings by the USITC Commissioners. This is not to say that we find that a causal link *has been* established with respect to tin mill products and stainless steel wire. We are simply saying that the reasoning used by the Panel to find that the USITC failed to establish a causal link for these products is flawed, and does not support the Panel's conclusion that no such link was established. We make no finding on whether or not a causal link has been established for these products. In the light of our other findings in this Report that all ten safeguard measures are inconsistent with Article XIX:1(a) of the GATT 1994 and Articles 2.1, 3.1 and 4.2 of the *Agreement on Safeguards*, it is not necessary, for purposes of resolving this dispute, to make further rulings on causation related to tin mill products and stainless steel wire.

[515]See *supra*, paras. 419 and 429.

IX. Article 11 of the DSU

494. In its Notice of Appeal, the United States alleged that the Panel "acted inconsistently with Article 11 of the DSU in that it failed to make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with GATT 1994 and the Safeguards Agreement."[516] In its appellant's submission, the United States' arguments under Article 11 are intermingled with its arguments on the Panel's findings on "unforeseen developments"[517] and with its arguments on the Panel's causation analysis.[518]

495. Article 11 of the DSU provides:

> The function of panels is to assist the DSB in discharging its responsibilities under this Understanding and the covered agreements. Accordingly, a panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements, and make such other findings as will assist the DSB in making the recommendations or in giving the rulings provided for in the covered agreements. Panels should consult regularly with the parties to the dispute and give them adequate opportunity to develop a mutually satisfactory solution.

496. In response to our questioning during the oral hearing, the United States stated that it was not making any "specific claims under Article 11", and that it was for us to decide whether a ruling on Article 11 of the DSU was necessary.[519] The United States asserted that the Panel's allegedly incorrect conclusions with respect to Articles 2.1, 3.1, and 4 of the *Agreement on Safeguards* and Article XIX of the GATT 1994 "resulted partly from its failure to observe its obligations under Article 11."[520] Therefore, the United States said that it did not make a claim under Article 11 that is "separate and distinct"[521] from its claims with respect to the substance of the Panel's analysis.

497. As we have stated previously, "not every failure by the Panel in the appreciation of the evidence before it can be characterized as failure to make an objective assessment of the facts."[522] Similarly, not every error of law or incorrect legal interpretation attributed to a panel constitutes a failure on the part of the panel to make an objective assessment of the matter before it.

498. A challenge under Article 11 of the DSU must not be vague or ambiguous. On the contrary, such a challenge must be clearly articulated and substantiated with specific arguments. An Article 11

[516]Notice of Appeal, WT/DS248/17, WT/DS249/11, WT/DS251/12, WT/DS252/10, WT/DS253/10, WT/DS254/10, WT/DS258/14, WT/DS259/13, 14 August 2003, p. 4, para. 6.

[517]United States' appellant's submission, paras. 77–79.

[518]*Ibid.*, paras. 160–161. The United States clarified during the oral hearing that it was not pursuing its claim, set out in paragraph 6 of its Notice of Appeal, that the Panel had failed to meet its obligations under Article 11 because it had made self-contradictory findings.

[519]United States' response to questioning at the oral hearing.

[520]*Ibid.*

[521]*Ibid.*

[522]Appellate Body Report, *Japan – Agricultural Products II*, para. 141.

claim is not to be made lightly, or merely as a subsidiary argument or claim in support of a claim of a panel's failure to construe or apply correctly a particular provision of a covered agreement.[523] A claim under Article 11 of the DSU must stand by itself and be substantiated, as such, and not as subsidiary to another alleged violation.

499. The United States' arguments on Article 11 of the DSU are mentioned only in passing in its appellant's submission. Nowhere do we find a clearly articulated claim or specific arguments that would support such a claim. Moreover, the United States did not clarify its challenge under Article 11 of the DSU during the oral hearing. In sum, the United Stated has not substantiated its claim that the Panel acted inconsistently with Article 11 of the DSU, and this claim must therefore fail.

X. Article 12.7 of the DSU

500. The United States also contends that the Panel acted inconsistently with its obligations under Article 12.7 of the DSU by failing to provide "the basic rationale" for its findings and conclusions, in the context of its analysis of "unforeseen developments" under Article XIX:1(a) of the GATT 1994.[524]

501. The United States argues that the Panel did not articulate, "except in conclusory fashion", the reasons for finding that the USITC did not provide "reasoned conclusions" as required by Article 3.1 of the *Agreement on Safeguards*.[525] The United States maintains that the Panel merely concluded that the USITC's demonstration of "unforeseen developments" was "plausible, but … not sufficiently supported and explained", without pointing to any evidence that undermined any of the USITC's conclusions, or providing any alternative explanation.[526] Accordingly, the United States submits that "the Panel failed to set forth explanations and reasons sufficient to disclose its justifications for its findings and recommendations."[527]

502. Article 12.7 of the DSU reads, in relevant part:

> … the report of a panel shall set out the findings of fact, the applicability of relevant provisions and the basic rationale behind any findings and recommendations that it makes.

503. We have already reviewed the Panel's findings on the USITC's analysis of "unforeseen developments". Based on our review of the Panel's reasoning, it appears to us that the Panel considered in detail the evidence that was before the USITC, and provided detailed explanations of how and why it concluded that the USITC had failed to demonstrate, through a reasoned and adequate explanation, that the alleged "unforeseen developments" *resulted* in increased imports of *each*

[523]The United States further clarified during the oral hearing that if we were to conclude that the Panel erred in its findings on Article 4.2(b) of the *Agreement on Safeguards*, it would not be necessary for us to reach its claim under Article 11.

[524]In its Notice of Appeal, the United States made a general claim that the Panel acted inconsistently with Article 12.7 of the DSU. Although in its appellant's submission the United States made reference to Article 12.7 in the context of its claims regarding "unforeseen developments", "causation", as well as "parallelism", in response to questioning at the oral hearing, the United States clarified that its claim under Article 12.7 related exclusively to the Panel's findings on "unforeseen developments".

[525]United States' appellant's submission, para. 95.

[526]*Ibid.*

[527]*Ibid.*

product subject to a safeguard measure.[528] The Panel explains, for instance, that, although the USITC report "describes a plausible set of unforeseen developments that *may have resulted* in increased imports to the United States from various sources, it falls short of demonstrating that such developments *actually resulted* in increased imports into the United States causing serious injury to the relevant domestic producers."[529] The Panel then goes on to say that:

> … even if "large volumes of foreign steel production were displaced from foreign consumption" this does not, in itself, imply that imports to the United States increased as a result of unforeseen developments. Article XIX of GATT, however, requires a demonstration that the unforeseen development resulted in *increased imports into* the United States. In our view, the USITC's explanation failed to link these steel market displacements to the increased imports *into the United States* at issue.[530] (original emphasis)

504. In our view, in making these statements, the Panel has sufficiently set out in its Reports the "basic rationale" for its finding that the USITC failed to explain how, though "plausible", the "unforeseen developments" identified in the report in fact *resulted* in increased imports of the specific products subject to the safeguard measures at issue.

505. The United States also argues that the Panel did not explain why the USITC failed to demonstrate that the alleged "unforeseen developments" resulted in increased imports of each of the products to which the safeguard measures apply, but rather "simply assumed that the ITC's demonstration, which focused on macroeconomic events and relied on broad economic indicators, could not suffice as a demonstration for any specific measure."[531]

506. In our view, the Panel did not simply *assume*, but rather clearly pointed to, a deficiency in the USITC's reasoning. The Panel reviewed the USITC's findings and found that the USITC failed to demonstrate that the "plausible" unforeseen developments did, in fact, result in increased imports of the specific products subject to the safeguard measures at issue. Because the USITC, according to the United States, relied on macroeconomic events having effects across the respective industries, it was for the USITC to show how those events were relevant to each product covered by each of the safeguard measures at issue. As the United States itself acknowledges, "Article 3.1 assigns the competent authorities – not the panel – the obligation to 'publish a report setting forth *their* findings and reasoned conclusions reached on all pertinent issues of fact and law'."[532] Therefore, it was for the USITC, and not for the Panel, to explain how the facts supported its determination with respect to "unforeseen developments". The argument of the United States in this appeal seeks to shift the burden of this demonstration to the Panel, whose function, in this regard, is confined to assessing the adequacy of the "reasoned conclusions" put forward by the competent authority. We agree with the Panel that the USITC's demonstration was insufficient, and we find no error in the Panel's explanation of that finding.

[528]The Panel's reasoning is explained, in particular, in Panel Reports, paras. 10.121-10.150.

[529]Panel Reports, para. 10.122 (emphasis added)

[530]Panel Reports, para. 10.123. (original emphasis; footnote omitted)

[531]United States' appellant's submission, para. 82.

[532]*Ibid.*, para. 55 (original emphasis).

507. Although the United States may not agree with the rationale provided by the Panel for its findings, we find that the Panel set out, in its Reports, a "basic rationale" consistent with the requirements of Article 12.7 of the DSU. Accordingly, we reject the United States' claim relating to the Panel's alleged failure to provide a "basic rationale" for its finding concerning Article XIX:1(a) of the GATT 1994.

XI. Conditional Appeals

508. The Complaining Parties request us to find that the United States acted inconsistently with Articles 2.1, 4.1(c), and 5.1 of the *Agreement on Safeguards*. China also requests us to find that the United States acted inconsistently with Article 9.1 of the *Agreement on Safeguards*. These requests, however, are conditional. To reach these claims we would, first, need to reverse the finding made by the Panel, in paragraph 10.705 of the Panel Reports, that all ten safeguard measures imposed by the United States "were deprived of a legal basis".[533] We have not done so.

509. In a previous section of this Report[534], we found that the ten measures at issue are inconsistent with Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards*, and we consequently upheld the Panel's finding that the USITC failed to provide a reasoned and adequate explanation demonstrating that the alleged "unforeseen developments" *resulted* in increased imports of the ten products to which the measures at issue apply.

510. Likewise, in examining the issue of "parallelism", we also found[535] that the ten measures at issue are inconsistent with Articles 2.1 and 4.2 of the *Agreement on Safeguards*, and we consequently upheld the Panel's relevant findings that the USITC failed to demonstrate that imports from sources covered by the safeguard measures at issue, *alone*, were being imported into the territory of the United States "in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products", as required by Article 2.1 and further elaborated in Article 4.2 of the *Agreement on Safeguards.*

511. Consequently, we do not disturb the finding made by the Panel, in paragraph 10.705 of the Panel Reports, that all ten safeguard measures imposed by the United States "were deprived of a legal basis". Therefore, the condition on which some of the Complaining Parties request us to rule on the question of whether the United States, by imposing the safeguard measures at issue, acted inconsistently with its obligations under Articles 2.1, 4.1(c), 5.1, and 9.1 of the *Agreement on Safeguards*, does not arise. In these circumstances, there is no need for us to examine these conditional appeals.[536]

[533]Brazil, Japan, and Korea formulated their conditional appeal in different terms, which will be described and addressed in the paragraphs below.

[534]*Supra*, para. 330.

[535]See *supra*, paras. 456 and 474.

512. Finally, we note that, in addition, Brazil, Japan, and Korea, in their joint appellants' submission, condition their cross-appeal with respect to Article 5.1 of the *Agreement on Safeguards* on the event that we uphold or modify the Panel's findings on causation. In this event, these parties request us to complete the analysis "regarding the failure of the United States to adequately analyze causation and to find that the United States failed to ensure that its safeguard measures were limited to the extent necessary, as required by Article 5.1."[537] Similarly, in the event that we uphold the Panel's findings on causation, New Zealand requests us to find that the United States failed to comply with Article 5.1 of the *Agreement on Safeguards*. Alternatively, in the event that we reverse the Panel's findings with respect to increased imports and causation, Brazil, Japan, and Korea request us to examine whether the safeguard measures, as explained by the United States in its "*ex post* economic analysis and model"[538], comply with Article 5 of the *Agreement on Safeguards*. In a previous section of this Report, we decided not to rule on the findings made by the Panel on causation[539] with respect to CCFRS, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar. Consequently, the aforementioned conditions do not arise for those seven products. As for the two remaining products, namely, tin mill products and stainless steel wire, we reversed the Panel's findings on both "increased imports" and causation.[540] However, as we have found that the measures applied to those two products are inconsistent with Article XIX:1(a) of the GATT 1994 and with Articles 2.1, 3.1, and 4.2 of the *Agreement on Safeguards*, it is, in our view, not necessary, for the purposes of resolving this dispute, to rule on whether, in applying these measures, the United States also acted inconsistently with its obligation under Article 5.1 of the *Agreement on Safeguards.*

XII. Findings and Conclusions

513. For the reasons set out in this Report, the Appellate Body:

(a) upholds the Panel's conclusions, in the relevant sections of paragraph 11.2 of the Panel Reports concerning the complaints of China, the European Communities, New Zealand, Norway, and Switzerland[541], that the application of all safeguard measures at issue in this dispute is inconsistent with the requirements of Article XIX:1(a) of the GATT 1994 and Article 3.1 of the *Agreement on Safeguards* because "the United States failed to provide a reasoned and adequate explanation

[536]We note that Brazil, Japan, and Korea, in their conditional appeal on whether the USITC acted inconsistently with Articles 2.1 and 4.1(c) of the *Agreement on Safeguards* by "grouping [ ] CCFRS products into a single like product" (see Brazil's, Japan's, and Korea's other appellants' submission, para. 4), request that we address this claim in the event that we (i) disagree with the Panel's finding that the safeguards measures are "deprived of a legal basis"; (ii) reverse an aspect of any of the Panel's findings against the United States with respect to CCFRS; or (iii) conclude that the Panel should have issued a like product ruling to support its CCFRS causation finding. We note that, in the light of our rulings, none of the conditions listed by Brazil, Japan, and Korea arises.

[537]Brazil's, Japan's, and Korea's other appellants' submission, para. 2.

[538]*Ibid.*, para. 3.

[539]See *supra*, para. 483.

[540]See *supra*, para. 493.

[541]In upholding claims on "unforeseen developments", the Panel refers to claims made by China, the European Communities, New Zealand, Norway, and Switzerland.

demonstrating that 'unforeseen developments' had resulted in increased imports causing serious injury to the relevant domestic producers";

(b) upholds the Panel's conclusions, in the relevant sections of paragraph 11.2 of the Panel Reports, that the application of the safeguard measures on imports of CCFRS, stainless steel rod and hot-rolled bar is inconsistent with the requirements of Articles 2.1 and 3.1 of the *Agreement on Safeguards* because "the United States failed to provide a reasoned and adequate explanation of how the facts supported its determination with respect to 'increased imports'";

(c) reverses the Panel's conclusions, in the relevant sections of paragraph 11.2 of the Panel Reports, that the application of the safeguard measures on imports of tin mill products and stainless steel wire is inconsistent with Articles 2.1 and 3.1 of the *Agreement on Safeguards* because "the United States failed to provide a reasoned and adequate explanation of how the facts supported its determination with respect to 'increased imports', since the explanation given consisted of alternative explanations partly departing from each other, which given the different product bases, cannot be reconciled as a matter of substance"; and finds it unnecessary to complete the analysis to decide whether the determination with respect to "increased imports" for tin mill products and stainless steel wire is consistent with Articles 2.1 and 3.1 of the *Agreement on Safeguards*;

(d) reverses the Panel's conclusions, in the relevant sections of paragraph 11.2 of the Panel Reports, that the application of the safeguard measures on imports of tin mill products and stainless steel wire is inconsistent with Articles 2.1, 4.2(b), and 3.1 of the *Agreement on Safeguards* because "the United States failed to provide a reasoned and adequate explanation of how the facts supported its determination of a 'causal link' between any increased imports and serious injury, since the explanation given consisted of alternative explanations partly departing from each other, which given the different product bases, cannot be reconciled as a matter of substance"; and finds it unnecessary to complete the analysis to decide whether the determination with respect to a "causal link" for tin mill products and stainless steel wire is consistent with Articles 2.1, 4.2(b), and 3.1 of the *Agreement on Safeguards*;

(e) upholds the Panel's conclusions, in the relevant sections of paragraph 11.2 of the Panel Reports, that the application of all safeguard measures at issue in this dispute is inconsistent with Articles 2.1 and 4.2 of the *Agreement on Safeguards* because "the United States failed to comply with the requirement of 'parallelism' between the products for which the conditions for safeguard measures had been established, and the products which were subjected to the safeguard measure";

(f) finds it unnecessary, for purposes of resolving this dispute, to rule on whether the Panel was correct in finding that, with respect to CCFRS, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar, the United States acted inconsistently with Articles 2.1, 3.1 and 4.2(b) of the *Agreement on Safeguards* because the USITC report failed to demonstrate the existence of a "causal link" between increased imports from all sources and serious injury to the domestic industry, and neither reverses nor upholds the Panel's findings on causation;

(g) finds that the United States did not substantiate the claim raised under Article 11 of the DSU;

(h) finds that the Panel satisfied its duty, under Article 12.7 of the DSU, to set out a "basic rationale behind [its] findings" with respect to Article XIX:1(a) of the GATT 1994; and

(i) declines to rule on the conditional appeals of the Complaining Parties relating to Articles 2.1, 4.1(c), 5.1, and 9.1 of the *Agreement on Safeguards*.

514. The Appellate Body *recommends* that the DSB request the United States to bring its safeguard measures, which have been found in this Report, and in the Panel Reports as modified by this Report, to be inconsistent with the *Agreement on Safeguards* and the GATT 1994, into conformity with its obligations under those Agreements.

UNITED STATES – DEFINITIVE SAFEGUARD MEASURES ON IMPORTS OF CERTAIN STEEL PRODUCTS

Notification of an Appeal by the United States
under paragraph 4 of Article 16 of the Understanding on Rules
and Procedures Governing the Settlement of Disputes (DSU)

The following notification, dated 11 August 2003, sent by the United States to the Dispute Settlement Body (DSB), is circulated to Members. This notification also constitutes the Notice of Appeal, filed on the same day with the Appellate Body, pursuant to the *Working Procedures for Appellate Review*.

Pursuant to Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU") and Rule 20 of the *Working Procedures for Appellate Review*, the United States hereby notifies its decision to appeal to the Appellate Body certain issues of law covered in the Panel Reports on *United States – Definitive Safeguard Measures on Imports of Certain Steel Products* (WT/DS248/R, WT/DS249/R, WT/DS251/R, WT/DS252/R, WT/DS253/R, WT/DS254/R, WT/DS258/R and WT/DS259/R) and certain legal interpretations developed by the Panel.

1. The United States seeks review by the Appellate Body of the Panel's legal conclusion that the application of safeguard measures on imports of certain carbon flat-rolled steel ("CCFRS"); tin mill; hot-rolled bar; cold-finished bar; rebar; welded pipe; fittings, flanges, and tool joints ("FFTJ"); stainless steel bar; stainless steel rod; and stainless steel wire is inconsistent with Articles XIX:1 of the *General Agreement on Tariffs and Trade 1994* ("GATT 1994") and Article 3.1 of the *Agreement on Safeguards* ("Safeguards Agreement")[542] on the grounds that the United States failed to provide a reasoned and adequate explanation demonstrating that "unforeseen developments" had resulted in increased imports of each of these products causing serious injury to the relevant domestic industry. (Paras. 10.148-10.150 and 11.2.) These findings are in error, and are based on erroneous findings on issues of law and related legal interpretations, including, for example,

[542]Unless indicated otherwise, reference to articles with Arabic numerals are to articles of the Safeguards Agreement and references to articles with Roman numerals are to articles of GATT 1994.

(a) that the Panel could not consider data on the record of the U.S. International Trade Commission ("USITC") and cited in other sections of the USITC report in evaluating whether the competent authorities provided their findings and reasoned conclusions with regard to unforeseen developments in accordance with Article 3.1 (paras. 10.133-10.135 and 10.145);

(b) that the USITC was obliged to explain why the specific products under examination were affected individually by the confluence of unforeseen developments (paras. 10.127 and 10.147); and

(c) that the USITC did not sufficiently support and explain its conclusion that the displacement of steel on world markets led to increased imports to the United States from all sources (paras. 10.122-10.123, 10.125, 10.143-10.144 and 10.146).

2. The United States seeks review by the Appellate Body of the Panel's legal conclusion that the application of safeguard measures on imports of CCFRS, hot-rolled bar, and stainless steel rod is inconsistent with Articles 2.1 and 3.1, on the grounds that the United States failed to provide a reasoned and adequate explanation of how the facts supported its determinations with respect to increased imports of these products. (Paras. 10.181, 10.183, 10.186-10.187, 10.204, 10.208, 10.210, 10.267, 10.271, 10.277, and 11.2.) These findings are in error, and are based on erroneous findings on issues of law and related legal interpretations, including, for example,

(a) that increased imports must be "sudden," and must "evidence[] a certain degree of recentness, suddenness, sharpness and significance" (paras. 10.159 and 10.166-10.167);

(b) that in light of the decrease in imports of CCFRS, hot-rolled bar, and stainless steel rod between interim 2000 and interim 2001, the USITC report did not contain an adequate and reasoned explanation of how the facts support its determinations regarding the absolute and relative increases in imports of these products (paras. 10.181, 10.184, 10.204, 10.208, 10.267, and 10.271); and

(c) that an increase in imports in 1998 (for CCFRS) and in 2000 (for hot-rolled bar and stainless steel rod) was not recent enough at the time of the USITC determination to support a finding under Article 2.1 that imports of CCFRS, hot-rolled bar, or stainless steel rod are "being imported in . . . increased quantities" (paras. 10.181-10.182, 10.185, 10.207, 10.269).

3. The United States seeks review by the Appellate Body of the Panel' s legal conclusion that the determinations regarding both increased imports of tin mill and stainless steel wire and also the causal link between these increased imports and serious injury to the corresponding domestic industry are inconsistent with Articles 2.1, 3.1, and 4.2(b) on the grounds that the explanations given for these determinations consisted of alternative explanations partly departing from each other, which given the different product bases, cannot be reconciled as a matter of substance. (Paras. 10.200, 10.262, 10.422, 10.573, and 11.2.) These findings are in error, and are based on erroneous findings on issues of law and related legal interpretations, including, for example,

(a) that findings by the competent authorities that are based on differently defined products are impossible to reconcile (paras. 10.194, 10.262, 10.422, and 10.572); and

(b) that a reasoned and adequate explanation is not contained in a set of findings by the competent authorities that rests on more than one like product definition (paras. 10.194, 10.262, 10.422, and 10.572).

4. The United States seeks review by the Appellate Body of the Panel's legal conclusion that the application of safeguard measures on imports of CCFRS, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar is inconsistent with Articles 2.1, 3.1, and 4.2(b) of the Safeguards Agreement, on the grounds that the United States failed to provide a reasoned and adequate explanation that a "causal link" existed between any increased imports and serious injury or threat of serious injury to the relevant domestic producers with respect to increased imports of these products. (paras. 10.418-10.419, 10.444-10.445, 10.468-10.469, 10.486-10.487, 10.502-10.503, 10.535-10.536, 10.568-10.569, and 11.2) These findings are in error, and are based on erroneous findings on issues of law and related legal interpretations, including, for example,

(a) that the USITC failed to provide a reasoned and adequate explanation of its finding that there was a causal link between increased imports of CCFRS and the serious injury suffered by the domestic industry; more specifically that:

(i) the USITC failed to provide a reasoned and adequate explanation of its finding that there was a coincidence in import and industry trends during the period (paras. 10.374-10.376); and

(ii) that the USITC failed to provide a compelling explanation of why the "conditions of competition in the CCFRS market established a causal link between imports and industry trends (para. 10.381);

(b) that the USITC's definition of CCFRS as a like product prevented the application of a causation analysis consistent with Article 4.2(b) for the industry producing that product (paras. 10.378, 10.380, 10.416-10.417);

(c) that the USITC failed to provide a compelling explanation that a causal link existed between increased imports of cold-finished bar and the serious injury suffered by the domestic industry (para. 10.458);

(d) that the USITC's non-attribution analysis failed to separate and distinguish the injurious effects of particular factors other than increased imports so that the injury caused by these factors, together with other factors, was not attributed to increased imports of CCFRS, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, and stainless steel bar (paras. 10.389, 10.396, 10.401, 10.407-10.410, 10.418-10.419, 10.440, 10.443-10.444, 10.467-10.468, 10.484-10.486, 10.496, 10.499-10.501, 10.529, 10.533-10.535, 10.560, and 10.565-10.568);

(e) that, in addition to an individual assessment of the effects of other factors causing injury to the domestic industry, Article 4.2(b) calls for "an overall assessment of such 'other factors'" (para. 10.332) or for an evaluation of the "cumulative effects of individual factors" causing injury (paras. 10.409 and 10.567);

(f) that a competent authority may be required, in certain circumstances, to use an economic modeling analysis to quantify the amount of injury caused by imports and other factors causing injury as part of its causation analysis under Articles 2.1, 3.1, and 4.2(b) (paras. 10.340-10.342); and

(g) that the explanation of the competent authorities must be "clear and unambiguous" and "establish explicitly" that injury caused by factors other than increased imports is not attributed to increased imports (para. 10.330).

5. The United States seeks review by the Appellate Body of the Panel's legal conclusion that the application of safeguard measures on imports of CCFRS, tin mill, hot-rolled bar, cold-finished bar, rebar, welded pipe, FFTJ, stainless steel bar, stainless steel rod, and stainless steel wire is inconsistent with Articles 2.1 and 4.2, on the grounds that the United States failed to comply with the requirement of "parallelism" because it had not established that imports from sources subject to the safeguard measure satisfied the conditions for application of a safeguard measure. (Paras. 10.609, 10.615, 10.623, 10.633, 10.643, 10.653, 10.660, 10.670, 10.680, 10.685, 10.692, 10.699, and 11.2) These findings are in error, and are based on erroneous findings on issues of law and related legal interpretations, including, for example,

(a) that Articles 2.1 and 4.2 make it necessary to account for the fact that excluded imports may have some injurious impact on the domestic industry and that the USITC analysis failed to account for this impact (paras. 10.598, 10.605-10.606, 10.621, 10.629-10.630, 10.639-10.640, 10.650, 10.657, 10.666-10.667, 10.676-10.677, and 10.688);

(b) that the USITC's findings regarding imports from Israel and Jordan did not establish explicitly or provide a reasoned and adequate explanation that imports from sources not excluded from the measure satisfied the conditions for application of a safeguard measure (paras. 10.607-10.608, 10.622, 10.631-10.632, 10.641-10.642, 10.651-10.652, 10.658-10.659, 10.668-10.669, 10.678-10.679, 10.689-10.690, and 10.698);

(c) that the views of Commissioner Bragg did not meet the requirements of parallelism with regard to tin mill and stainless steel wire because she "reached findings on the broader category of CCFRS" and "on a broader category including stainless steel wire" (paras. 10.615 and 10.685); and

(d) that Commissioner Koplan's parallelism analysis regarding stainless steel wire does not contain the required findings that establish explicitly, with a reasoned and adequate explanation, that imports from sources other than Canada, Mexico, Israel, and Jordan satisfy the conditions of Article 2.1 as elaborated by Article 4.2 (para. 10.688).

6. The United States seeks review of the Panel's findings referenced above on the grounds that the Panel acted inconsistently with Article 11 of the DSU in that it failed to make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with GATT 1994 and the Safeguards Agreement. As particular examples,

(a) the Panel found that the USITC's demonstration of unforeseen developments was not sufficiently supported and explained, even though the Panel found the explanation plausible, cited no alternative explanation, and found no error in the USITC's reasoning or the data used to support that reasoning (paras. 10.145-10.150); and

(b) made self-contradictory findings (including in paragraphs 10.173, 10.182, 10.192, 10.225, 10.433-10.437, 10.442, and 10.519).

7. The United States also seeks review of the Panel's findings referenced above on the grounds that the Panel acted inconsistently with Article 12.7 of the DSU, in that its report did not set out the basic rationale behind its findings and recommendations.

Report of the Panel, *United States – Measures Affecting Imports of Certain Passenger Vehicle and Light Truck Tyres from China*, WT/DS399/R, adopted 13 December 2010

I. INTRODUCTION

1.1 On 14 September 2009, the People's Republic of China ("China") requested consultations with the United States pursuant to Article XXIII:1 of the GATT 1994, Articles 1 and 4 of the DSU and Article 14 of the *Safeguards Agreement*, with regard to certain measures taken by the United States allegedly affecting the import of certain passenger vehicle and light truck tyres from China.[1] China and the United States held consultations in Geneva on 9 November 2009, but failed to resolve the dispute. At the DSB meeting on 19 January 2010, China requested the establishment of a Panel pursuant to Article XXIII:2 of the GATT 1994, Articles 4.7 and 6 of the DSU and Article 14 of the *Safeguards Agreement*.[2] At that meeting, the DSB established a panel pursuant to the request of China.

1.2 The Panel's terms of reference are the following:

> To examine, in the light of the relevant provisions of the covered agreements cited by the parties to the dispute, the matter referred to the DSB by China in document WT/DS399/2 and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements.

1.3 On 2 March 2010, China requested the Director-General to determine the composition of the panel, pursuant to paragraph 7 of Article 8 of the DSU. This paragraph provides:

> If there is no agreement on the panelists within 20 days after the date of the establishment of a panel, at the request of either party, the Director-General, in consultation with the Chairman of the DSB and the Chairman of the relevant Council or Committee, shall determine the composition of the panel by appointing the panelists whom the Director-General considers most appropriate in accordance with any relevant special or additional rules or procedures of the covered agreement or covered agreements which are at issue in the dispute, after consulting with the parties to the dispute. The Chairman of the DSB shall inform the Members of the composition of the panel thus formed no later than 10 days after the date the Chairman receives such a request.

1.4 On 12 March 2010, the Director-General accordingly composed the Panel as follows:[3]

Chairman: Professor Celso Lafer

Members: Professor Donald M. McRae
Mr. Luis M. Catibayan

1.5 The European Union, Japan, Chinese Taipei, Turkey, and Viet Nam reserved their rights to participate in the Panel proceedings as third parties.

1.6 The Panel met with the parties on 1-2 June 2010 and 20-21 July 2010. The Panel met with the third parties on 2 June 2010. The Panel issued its interim report to the parties on 24 September 2010. The Panel issued its final report to the parties on 8 November 2010.

[2] WT/DS399/2.
[3] WT/DS399/3.

II. FACTUAL ASPECTS

2.1 This case is about a transitional product-specific safeguard measure under Paragraph 16 of the Protocol that has been applied on imports of certain passenger vehicle and light truck tyres from China pursuant to Section 421 of the Trade Act of 1974.

2.2 A petition was filed by the USW on 20 April 2009, requesting the USITC to initiate an investigation under Section 421(b) of the Trade Act of 1974. The USITC instituted the investigation effective on 24 April 2009. The USITC determined that there was market disruption as a result of rapidly increasing imports of subject tyres from China that were a significant cause of material injury to the domestic industry. Following a Presidential decision additional duties have been imposed on imports of subject tyres for a three-year period, in the amount of 35 per cent *ad valorem* in the first year, 30 per cent *ad valorem* in the second year, and 25 per cent *ad valorem* in the third year. The *Tyres* measure took effect on 26 September 2009.

III. PARTIES' REQUESTS FOR FINDINGS AND RECOMMENDATIONS

A. CHINA

3.1 China has seven specific claims in this dispute and requests the Panel to find that:

(i) the United States failed to evaluate properly whether imports from China were in "such increased quantities" and "increasing rapidly" as required by Paragraphs 16.1 and 16.4 of the Protocol;

(ii) the U.S. statute implementing the causation standard of Paragraph 16 into U.S. law is inconsistent "as such" with Paragraphs 16.1 and 16.4 of the Protocol;

(iii) the United States failed to evaluate properly whether imports from China were a "significant cause" as required by Paragraphs 16.1 and 16.4 of the Protocol;

(iv) the United States has imposed a transitional safeguard measure that goes beyond the "extent necessary", and thus it is inconsistent with Paragraph 16.3 of the Protocol;

(v) the United States has imposed a transitional safeguard measure for a three-year period that is beyond "such period of time" that is "necessary", and thus it is inconsistent with Paragraph 16.6 of the Protocol.

3.2 China also claims that the transitional safeguard measure is inconsistent with the GATT 1994 and requests the Panel to find that:

(vi) the transitional safeguard measure is inconsistent with Article I:1 of the GATT 1994 as the United States does not accord the same treatment that it grants to passenger vehicle and light truck tyres originating in other countries to like products originating in China;

(vii) the transitional safeguard measure is inconsistent with Article II:1(b) of GATT 1994 as the tariffs consist of unjustified modifications of U.S. concessions on passenger vehicle and light truck tyres under the GATT 1994.

3.3 China asks that the Panel find that the United States is not in conformity with Paragraph 16 of the Protocol and Articles I:1 and II:1(b) of GATT 1994. China asks that the Panel recommend that the United States promptly comply with its obligations and withdraw the challenged measures.

B. THE UNITED STATES

3.4 The United States asks the Panel to reject China's claims in their entirety.

IV. ARGUMENTS OF THE PARTIES

4.1 The arguments of the parties are set out in their written submissions and oral statements to the Panel and in their answers to questions. Executive summaries of the parties' written submissions, and executive summaries of their oral statements are attached to this report as annexes (see List of Annexes, pages vi and vii).

V. ARGUMENTS OF THE THIRD PARTIES

5.1 The European Union, Japan, Chinese Taipei, Turkey and Viet Nam reserved their rights to participate in the Panel proceedings as third parties. Chinese Taipei, Turkey and Viet Nam did not submit third party written submissions or make oral statements. The arguments of the European Union and Japan are set out in their written submissions and oral statements. Executive summaries of the third parties' written submissions and third party oral statements, or executive summaries thereof, are attached to this report as annexes (see List of Annexes, pages vi and vii).

VI. INTERIM REVIEW

6.1 On 24 September 2010, the Panel issued its Interim Report to the parties. On 8 October 2010, both parties submitted requests for the review of precise aspects of the Interim Report. On 25 October 2010, the parties submitted comments on one another's request for review.

6.2 This Interim Review section summarises the parties' requests for review and comments thereon, as well as our responses. Because the footnote numbering (but not the paragraph numbering) of our Report has changed due to changes made at the interim review stage, for the sake of clarity the footnote references in this section reflect the numbering in the Final Report.

6.3 The Panel is grateful to the parties for their assistance in identifying a number of typographical errors in the Interim Report.

A. REQUEST FOR REVIEW SUBMITTED BY CHINA

1. Increasing rapidly

(a) Para. 7.83

6.4 **China** claims that the Panel is going beyond merely presenting the facts in providing the data for the increases of subject and non-subject imports and recommends that the Panel "simply report the data for subject and non-subject imports." China continues that if the Panel "wishes to go beyond merely summarising the data", the Panel should make two changes. First, the Panel should report parallel figures for subject and non-subject imports. Second, China argues that if the Panel includes percentage increases, it should also include the volume change from one year to the next for both subject and non-subject imports. China continues that percentage increases alone are misleading and "the Panel should either present no percentage changes, or present both percentage changes and volume changes from year to year."

6.5 **The United States** claims that, under the standard of review in Article 11 of the DSU, "the Panel will necessarily need to 'go beyond' a 'mere presentation' of the facts on the record; instead, the Panel is expected to evaluate whether the ITC's analysis was 'reasoned and adequate' in light of the record evidence." The United States does not consider that parallel data on non-subject imports is necessary to make the Panel's analysis any clearer. The United States accuses China of attempting to place weight on the comparative levels of subject and non-subject volumes, an approach it did not take during the proceedings.

6.6 We do not consider it necessary to include any further data on non-subject imports. The obligation in the Protocol is to consider whether subject imports are "increasing rapidly" on an absolute or relative basis. On China's first point regarding the data for increases in non-subject imports, we note that we address the role of non-subject imports throughout the report[4] and specifically in paras. 7.364 to 7.367. Paragraph 7.83 focuses on absolute increases. However, in order to address China's concerns we have deleted the third table in paragraph 7.83, with appropriate adjustments to the text at the beginning of that paragraph, and added a citation in new footnote 176 .

6.7 Regarding China's second point and its desire to include volume changes from year to year, we note that China argued the relevance of year-on-year increases in annual volumes at para. 120 of its First Written Submission and in para. 28 of its Oral Statement at the First Panel Meeting. We consider this to be an argument associated with the rate of increase. As we have noted in para. 7.92 of our Report, under the Protocol the rapid increase need only be on an absolute or relative basis. China does not contest this. As such, we do not consider inclusion of this data adds anything further to what we have already said about the rate of increase in paras. 7.87 to 7.93.

(b) Para. 7.84

6.8 **China** argues that the statement by the Panel "that 'the greatest increase occurred in the last two years of the period' ... inappropriately accepts the U.S. efforts to combine the final two years of the period."[5] China submits that the Panel should delete this statement or "present a more in-depth explanation" given that the "statement, as written, is misleading and masks the actual amount of increase in 2008, which was the smallest increase of any year of the period." China continues that if "the Panel is to note that the largest increase in the period occurred in 2007, then the Panel should also note that the smallest increase of the entire period, in terms of both quantity and percentage increase, occurred in the last year of the period – 2008."[6]

6.9 **The United States** argues that the Panel did not focus only on the increases in import volumes in 2007 and 2008. Rather, the Panel conducted a detailed analysis of the increase in subject imports in 2008. The United States does not think any revision is necessary, but should the Panel believe further clarification is justified it suggests replacing the sentence: "The greatest increase occurred in the last two years of the period" with "The greatest increases (14.5 million units) occurred in 2007. This was followed by a further significant increase (4.5 million units) in 2008."

6.10 We note that the jurisprudence states that consideration should be given to trends over the investigation period, as well as to the recent period.[7] In that regard it is entirely appropriate that we consider what was happening to imports in the final two years of an investigation *as well as* considering trends during the course of the period of investigation. China's argument in these proceedings was to look at the *most* recent period, which it considered to be 2008. The Panel has

[4] *See* for example paras. 7.95, 7.203-7.204, 7.293, and 7.301.
[5] China's comments on the Interim Report, para. 10.
[6] China's comments on the Interim Report, para. 11.
[7] We refer to para. 7.88 of the Interim Report and footnote 187.

determined that a focus solely on 2008 was not appropriate.[8] In any case, paragraph 7.93 of the Report recalls that in each year of the period of investigation, there was an increase that was *in addition* to the increase in the previous year. However, to address China's request we have added a footnote to the end of the sentence in paragraph 7.84.

(c) Para. 7.86

6.11 **China** argues that the Panel "concludes its review of the import data without ever addressing the quarterly or monthly data for 2007 and 2008 which was presented by China." China continues that this is "a major omission that should be corrected." China argues that "[i]mports dropped on a quarterly basis in three of the four quarters in 2008, and dropped 7.8 per cent in Q3 and Q4 2008 relative to Q2 2008."[9] China claims that this "drop off in subject imports at the end of the period is directly applicable to the question of whether subject imports are 'increasing rapidly' under the Protocol."[10]

6.12 **The United States** argues that the Panel did not need to dwell on China's arguments based on quarterly data as the arguments "were of a subsidiary nature and not persuasive."

6.13 We consider that China's argument regarding the use of quarterly data is connected to China's argument regarding the rate of increase, which was addressed in the Report in paragraphs 7.87 to 7.93. However, to reflect China's concerns we have added a footnote to the end of paragraph 7.86.

(d) Para. 7.87

6.14 **China** argues that the Panel mischaracterises China's argument regarding the meaning of "increasing rapidly" when it states that China "argues that for imports to be 'increasing rapidly' there must be an increasing rate of increase in 2008, the final year of the period of investigation, compared to 2007." China claims that it never stated that the rate of increase "must" be higher than that of 2007. China continues that it stated "that such a scenario *could* be indicative that imports are 'increasing rapidly' under the Protocol." China claims that its argument regarding the rate of increase "is simply that the effects of a significant decline in the rate of increase in 2008 should be taken into account when assessing the issue of whether or not subject imports are 'increasing rapidly'."

6.15 **The United States** notes that at footnote 134 in paragraph 7.87 of the Interim Report (now see paragraph 7.87 and footnote 182 of the Final Report) "the Panel expressly recognised that China had outlined two scenarios for the meaning of 'rapidly,' and acknowledged that other scenarios might be possible". The United States argues that the Panel's analysis and focus on the rate of increase accurately characterised the "thrust of China's arguments on this issue throughout its submissions and statements."

6.16 To take into account China's concerns that its arguments be reflected accurately, we have modified paragraphs 7.87 and 7.92 of our Report.

6.17 **China** also claims that it has "simply argued that the steep drop-off in 2008 (just a 10.8 per cent increase as opposed to the 53.7 percent increase in 2007) casts doubt on whether imports can still be properly found to be 'increasing rapidly'." China argues that the "mischaracterization of China's

[8] Paras. 7.87 to 7.93 of the Interim Report.

[9] China's comments on the Interim Report, para. 12. Refers to China's First Written Submission, paras. 127-128.

[10] China's comments on the Interim Report, para. 12. Refers to China's Second Written Submission, paras. 119-122.

argument on this issue resulted in the Panel impermissibly glossing over the 2008 drop in the rate of increase, when instead the rate trends should have been examined closely and put into context."[11] China claims that its argument regarding the rate of increase "is simply that the effects of a significant decline in the rate of increase in 2008 should be taken into account" in determining whether imports are "increasing rapidly".

6.18 **The United States** disagrees that the Panel glossed over the drop in the rate of increase in 2008. The United States notes that the Panel considered the absolute and relative increases in import volumes in 2008, and refers to paras 7.87 to 7.93 of the Report to argue that the Panel considered and rejected China's claim "that the decline in the rate of increase in Chinese import volumes in 2008 meant that imports were not 'increasing rapidly' in 2008".

6.19 We consider there is ample basis in the Report to negate any accusation that the Panel "glossed" over the 2008 drop in the rate of increase. On the contrary, given China's focus on the rate of increase, there was considerable attention given to the data in 2008 in paragraphs. 7.83 to 7.105. Therefore, on this point we make no further changes to paragraph 7.87.

2. "As such" causation

(a) Paras. 7.138-7.140

6.20 **China** contends that the Panel sets up a false straw man by stating that China is arguing "cause" is capable of "producing or bringing about a result on its own" while "contribute" would require the contribution of other causal factors for an event to occur. China submits that it never argued that "significant cause" must be the sole cause. China asserts that the Panel's creation of this straw man led the Panel to sidestep the real issue – that of whether "to contribute" *requires less* than "to cause."

6.21 **The United States** asserts that the Panel accurately reflected China's arguments. The Panel clearly explained that the focus of China's argument was that "the term 'contribute' is less stringent than 'cause,'" just as China now asserts.[12] Moreover, after noting that China had relied on specific dictionary definitions of these terms, the Panel then concluded that, "[l]ooking exclusively at these terms, one might legitimately conclude that a 'contribution' has a lesser causal effect than a 'cause,'" because "implicit in the definitional differences invoked by China is the notion that the term 'contribute' allows for multiple factors to each 'play a part in' bringing about a result, whereas 'cause' means that the triggering event is in and of itself capable of bringing out, or producing that result."[13] The Panel's assertion that the definitions cited by China could be read to imply that a "cause" be the "sole" cause of injury were simply its own reasoned way of evaluating the merits of China's arguments and entirely appropriate.[14]

6.22 The Panel sees no need to make changes in the light of China's request. The Panel did not state that China argued that "significant cause" must be the sole cause. It reflected China's argument accurately in footnote 248 of the Report. The Panel's analysis of the meaning of the term "cause" in the context of Paragraph 16.4 of the Protocol and its relationship with the term "contribute" is dealt with in paragraphs 7.138 – 7.146 of the Final Report.

[11] China's comments on the Interim Report, para. 6.

[12] Interim Report, para. 7.137.

[13] Interim Report, para. 7.138.

[14] The United States makes this point, even though it does not fully agree with the Panel's assertion that "cause" could, in some cases, be read as having a different definition or meaning than the word "contribute" in situations involving descriptions of causal effect.

(b) Para. 7.158

6.23 **China** claims that the Panel mischaracterizes China's argument on what "significant cause" requires. In particular, China denies that it had argued that "significant cause" means that rapidly increasing imports must be "the most" significant cause of market disruption.

6.24 **The United States** disagrees with China. The United States asserts that China did argue, as it now concedes, that the term "significant" necessarily requires a comparison of the effects of Chinese imports "relative to other matters."[15] Moreover, China also made clear in its submissions that it believed that the ITC should have weighed the effects of Chinese imports against other injury causes.[16] Indeed, China specifically argued that the U.S. statute was inconsistent with the Protocol because it permitted the ITC to find that Chinese imports were a "significant cause" of injury even if they were "a less important factor than any other single cause."[17] Given China's arguments, which were not particularly clear, the Panel reasonably concluded that China was suggesting, among other things, that the ITC should have determined whether Chinese imports were a "more important" cause of injury to the industry than other causes.

6.25 We have modified para. 7.158 of the Final Report in light of China's request. We have also included new footnote 268 in our Report.

3. "As applied" causation

(a) Paras. 7.140 and 7.169-7.170

6.26 **China** requests clarification as to what the Panel has interpreted the term "significant" in "significant cause" to mean. China asks the Panel to make two changes. First, the Panel should explain what it interprets "significant" in "significant cause" to mean and distinguish "a significant cause" from simply "a cause." Second, the Panel should then apply this interpretation of "significant cause" in each of its findings on causation, noting why certain injury factors indicate that subject imports are a "significant cause" of material injury, and not simply a "cause."

6.27 **The United States** asserts that there is no need for the Panel to clarify its findings on the issue or to change its analysis of the USITC's findings on this score, as the Panel could not have been clearer on its definition of the term. The United States submits that the Panel properly stated that the United States, China and the Panel all agreed that the word "significant," as used in the Protocol, means "important," "notable," or "consequential." Moreover, the Panel also clearly rejected the idea that the U.S. statute or the Protocol contemplated that a "even a minimal cause" of injury might be a "significant cause" of injury under the Protocol. Finally, the Panel made clear that it applied this standard when reviewing the USITC's analysis, stating that it had assessed whether the USITC reasonably found that Chinese imports were a "significant," i.e., "important," "notable" or "consequential," cause of material injury to the industry.

6.28 Regarding para. 7.170 of our Report, the phrase "significant cause" is simply a shorthand reference to the particular causation standard in Paragraph 16.4. The point is that the causal element (as opposed to the "significant" element) of the Paragraph 16.4 causation standard could likely not be established without analysing correlation and the conditions of competition. Since the causation

[15] E.g. China's First Written Submission, paras. 204-207; China's Second Written Submission, para. 155.

[16] E.g. China's First Written Submission, paras. 204-205.

[17] China's First Written Submission, para. 206.

standard in Paragraph 16.4 is "significant cause", it would therefore be difficult to establish "significant cause" without analysing correlation or the conditions of competition.

6.29 We have modified para. 7.159, to state expressly that a "significant" cause is one that is important or notable.

6.30 Regarding China's second request, we note that the Panel's job is to review the determinations (including "significant cause") made by the USITC. It is not for the Panel to itself explain "why certain injury factors indicate that subject imports are a 'significant cause' of material injury". This is the role of the USITC. Accordingly, we see no need to make the changes requested by China.

(b) Paras. 7.174 – 7.177

6.31 **China** requests clarification of the Panel's findings on non-attribution. China notes the Panel's finding that "a finding of causation ... should only be made if it is properly established that rapidly increasing imports have injurious effects that *cannot be explained* by the existence of other causal factors."[18] In China's opinion, the Panel should clarify this "presently-vague" standard, and specify under what circumstances injurious effects *can* be explained by the existence of other causal factors. The Panel should also specify under what circumstances injurious effects *cannot* be explained by the existence of other causal factors. China submits that, in elaborating on this analysis, the Panel should follow the Appellate Body jurisprudence from *US – Hot-Rolled Steel* which states that investigating authorities must "separate and distinguish" the injurious effects of imports from the injurious effects of other factors.

6.32 **The United States** contends that there is nothing "vague" about the Panel's description of the standard that it applied to the USITC's analysis. The Panel's explanation of the standard is as specific and clear as statements made by the Appellate Body and WTO panels about the standards to be applied when reviewing non-attribution analyses under other WTO Agreements. Moreover, the Panel's actual review of the USITC's analysis of other injury factors, such as the industry's business strategy and the effects of demand changes, was lengthy, detailed and rigorous,[19] despite China's claims to the contrary.[20] China has provided the Panel with no basis for revisiting or revising its findings on these issues. The United States contends that the Panel correctly found that the specific "separate and distinguish" analysis that has been found applicable under the non-attribution language of these Agreements is <u>not</u> directly applicable to causation analysis under the Protocol, because the Protocol does not contain the sort of non-attribution requirement that is set forth in the *AD*, *SCM* and *Safeguards Agreements*.[21] According to the United States, China itself conceded that, due to the absence of specific non-attribution language in the Protocol, it has "never claimed {in this proceeding} that under Article 16 'the authority must perform the same non-attribution analysis for other factors in the market that it would in a global safeguard proceeding.'"[22] Given this, China has no basis for asking the Panel to now apply the "separate and distinguish" standard to the USITC's analysis of other factors in this proceeding.

6.33 The Panel sees no reason to alter the provisions or paragraphs as requested. The Panel is required to interpret the provisions of the Protocol, and assess the USITC's application of those

[18] Interim Report, para. 7.177 (emphasis added).

[19] Interim Report, paras. 7.262-7.3.78.

[20] China's Comments, para. 20.

[21] Appellate Body Report, *US – Upland Cotton*, para. 436 (stating that absence of non-attribution language in serious prejudice provisions of the Subsidies Agreement indicates that a "panel has a certain degree of discretion in selecting an appropriate methodology for determining whether the 'effect of a subsidy is significant price suppression"); Panel Report, *US – Upland Cotton*, para. 7.1343.

[22] China's Second Written Submission, para. 309.

provisions to the facts at hand. The Panel is not required to explain how those provisions may or may not be applied in all circumstances. In addition, the Panel already clearly explained why the *US – Hot-Rolled Steel* "separate and distinguish" standard is not applicable in the present case, and China conceded as much at para. 309 of its Second Written Submission.

(c) Paras. 7.196 – 7.197

6.34 **China** asks the Panel to correct footnote 305 of the Report, regarding the percentage of tier 1 shipments accounted for by subject imports. In addition, China asks the Panel to explain why competition still exists even though subject imports do not compete with domestic tires for over 50 per cent of all shipments. China also asks the Panel to clarify the exact "*variation* in the levels of competition between subject imports and domestic products as between tier 1 and tiers 2 and 3",[23] indicating what the degree of competition was in tier 1, and what the degree of competition was in tiers 2 and 3.

6.35 **The United States** agrees that the Panel should correct footnote 305 of its Report. Otherwise, though, the United States contends that China is doing nothing more than re-arguing its theory that there was minimal competition between Chinese and U.S. tires in the replacement market. The United States believes there is no need to revise the analysis or conclusions.

6.36 We have corrected footnote 305 of the Report, as requested by both parties. The Panel sees no need to make any of the additional changes requested by China.

(d) Para. 7.205

6.37 **China** asks the Panel to clarify what it means by "there was some variation in the levels of competition within the OEM market."[24] The Panel should make a finding as to what degree of competition existed in the OEM market between subject imports and domestic products – simply stating that competition varied is too vague. In stating what degree of competition existed in the OEM market, the Panel should note which facts it is relying upon in making this finding.

6.38 **The United States** submits that the Panel conducted a detailed and fact-specific evaluation of this issue, correctly finding that China's share of this market grew from a relatively small level of 0.2 per cent in 2004 to a more pronounced 4.9 per cent in 2008, the final year of the period.[25] As the Panel also correctly pointed out, the record showed that, during the period, the absolute volumes and market share of the U.S. tires in this sector fell, thus indicating that the "degree of resultant competition between subject imports and domestically-produced tires in the OEM market was increasing."[26] Given the detailed factual nature of the Panel's assessment on this issue and the reasonableness and clarity of its conclusions, the United States does not believe that there is a need for the Panel to revise its findings on the issue, including its correct statement that there was "some variation in the levels of competition over the period."

6.39 The Panel sees no reason to alter the Report as requested.

[23] Interim Report, para. 7.197 (emphasis added).
[24] Interim Report, para. 7.205.
[25] Interim Report, para. 7.202.
[26] Interim Report, para. 7.204.

(e) Para. 7.229

6.40 **China** submits that the Panel mischaracterizes China's argument on correlation. China asserts that it never argued that, for there to be correlation between imports and injury factors, "a precise correlation between the degree of change in imports and the degree of change in the injury factors" is necessary.[27] To the contrary, China argued that simple temporal correlation is insufficient.[28] There should be a general correlation in degree between the increases in imports and the decreases in injury factors – but it need not be precise.[29]

6.41 In **the United States'** view, the Panel correctly summarized China's arguments on correlation in its report by stating, for example, that China argued that "the degree of the respective annual increases {in Chinese imports} must correspond generally with the degree of the respective declines in injury factors."[30] Given that China itself stated during the proceeding that, when evaluating the Commission's correlation analysis, the Panel must assess whether the "degree of the respective annual increases {in imports} ... correspond generally with the degree of the respective declines in injury factors,"[31] China's claim that the Panel mis-characterized or misunderstood its arguments is simply unfounded.

6.42 The United States further contends that the Panel does not attribute to China the claim that a "precise correlation" between import and injury factor trends is required.[32] Instead, the Panel was setting forth its own view that a correlation analysis is not an exact science and that it is therefore unrealistic to expect or require a precise correlation between the degree of changes in imports and the degree of change in the injury factors.[33]

6.43 We have amended para. 7.229 of our Report to clarify our understanding of China's arguments.

(f) Paras. 7.307 – 7.312

6.44 **China** contends that, in addressing the plant closures, the Panel never puts these closures in proper context and never accounts for the closures as an effect of the globalization of the tyre industry and not as an effect of a rapid increase in subject imports (as is necessary if the plant closures are to be attributed to subject imports). The Panel found that all three closures were announced in, and stem from, 2006[34] when subject imports were minimal, yet nonetheless found two of the three closures to be attributable to subject imports.[35] There is a disconnect, however, from the 2006 closures to what the Panel is fundamentally assessing – whether subject imports are rapidly increasing during the recent period and causing injury due to this rapid increase. In attributing the closures to subject imports, the Panel totals data of subject imports for all of 2006, even though the closures were

[27] Interim Report, para. 7.229.
[28] China's Oral Statement at the Second Panel Hearing, paras. 62-63.
[29] China's Oral Statement at the Second Panel Hearing, para. 64 ("The only way for these statements to be significant in the context of a proper coincidence analysis, however, is for the degree of the respective annual increases to correspond *generally* with the degree of the respective declines in injury factors") (emphasis added).
[30] Interim Report, para. 7.217.
[31] China's Oral Statement at the Second Panel Hearing, para. 64 (emphasis in original). China went on to point out that "[t]he orders of magnitude [of these changes] are key." *Id.*
[32] Interim Report, para. 7.229. On the contrary, the Panel correctly states that China argued that "the degree of the increases in imports should correspond with the degree of declines in injury factors." Interim Report, para. 7.228.
[33] Interim Report, para. 7.229.
[34] Interim Report, para. 7.307.
[35] Interim report, para. 7.312.

announced in June and July of 2006 – only halfway through the year.[36] This is therefore an inaccurate reading of the record. Because the plant closures were announced only halfway through 2006, these decisions were based on data from 2005 – not totals for the whole year 2006. Thus, the Panel should re-assess the closures and do so based off subject import data for 2005 only. Statements based on full-year 2006 data should be deleted. Finally, the Panel should explain what significance it accords to the questionnaire data where no U.S. producer responded that they were materially injured by subject imports, four said that they were not, and the other six either said they were not in a position to answer or took no position.[37] The Panel notes these facts, but fails to assess them in any way. The Panel should do so and explain what weight it is giving to this evidence and how it effects the Panel's assessment of causation.

6.45 **The United States** asserts that the Panel correctly disagreed with China's claim that there were only "minimal" increases in the volumes of Chinese imports before 2006.[38] In paragraph 7.307, the Panel noted that the record showed that there was a "very substantial increase in the volume of {Chinese} imports prior to 2006." As the Panel correctly stated, the subject imports from China increased from 14.6 million tires in 2004 to 20.8 million tires in 2005, indicating that Chinese imports grew by 42.7 per cent between 2004 and 2005.[39] Accordingly, as the Panel indicated, the significant increases in subject imports prior in 2005 provided the USITC with a sufficient basis for concluding that these increases were a significant contributing factor for the industry's decision to close certain production plants in 2006. The United States also contends that the Panel correctly relied on import data for 2006 in its analysis.[40] Because the plant closure announcements occurred at least six months into 2006, the Panel reasonably relied on the fact that Chinese imports continued to increase significantly over their 2005 levels in 2006, and that Chinese imports became the second-lowest priced source of tires in 2006.[41] Given that Chinese imports continued their aggressive surge into the market in 2006 and continued to be increasingly aggressive in their pricing practices in that same year, the Panel and the ITC both reasonably relied on these facts when concluding that Chinese imports were a significant factor in the industry's decision to close these production facilities.

6.46 The United States believes the Panel clearly explained what weight it gave to the fact that no producer specifically reported that it was materially injured by imports, and reasonably concluded that producers' statements were not dispositive of the question as to whether Chinese imports caused material injury to the industry. As the Panel reasonably noted, even though some domestic producers stated that they were not injured by subject imports and even though other producers took no position on the issue, these facts did not constitute conclusive evidence that domestic producers had not been affected by the subject imports, nor did it indicate that the producers did not choose to close certain production facilities due to subject import competition.

6.47 In light of China's request, we have included footnote 440 in our Report, concerning the 2005 subject import data. We see no need to make any of the additional changes requested by China.

(g) Paras. 7.353 – 7.354

6.48 **China** submits that the Panel offers a wholly inadequate assessment of the causal implications of the recession. In light of the Panel's conclusion that "we must assess whether the reasoning provided by the USITC in its determination seems adequate in light of plausible alternative

[36] Interim Report, paras. 7.307-7.308.
[37] Interim Report, para. 7.312.
[38] Interim Report, para. 7.307.
[39] Interim Report, para. 7.307.
[40] Interim Report, paras. 7.307 and 7.308.
[41] Interim Report, paras. 7.301 and 7.307-308.

explanations of the record evidence or data advanced by China in this proceeding,"[42] the Panel should have assessed the causal implications of the recession in-depth as it assuredly qualifies as a "plausible alternative explanation." Additionally, the Panel's decision to dismiss the causal implications of the recession because the injury to the domestic industry could not be attributed "in whole" to the recession is inadequate.[43] This too easily dismisses a causal factor that was significantly injuring the U.S. industry simply because it was not responsible for the entire injury. The Panel should delete this statement and engage in a more in-depth assessment of the causal effects of the recession. Particular factual findings regarding the extent of the effects of the recession should be made. The Panel quoted the USITC's finding that U.S. apparent consumption declined by 20.4 million tires in 2008.[44] Accordingly, the Panel should make a finding that this decline in demand was attributable to the effects of the recession in 2008 or, if not, the Panel should note what this decline in demand in 2008 was attributable to.

6.49 **The United States** asserts that the Panel's analysis of the recession was neither brief nor inadequate. In its analysis, the Panel addressed at length China's arguments that demand declines during the period were the primary cause of the industry's troubles over the period of investigation.[45] In the same analysis, the Panel addressed in detail China's argument that the recession in 2008 accounted for the bulk of the declines in the industry's condition in that year.[46] As the Panel correctly concluded in its factually-detailed consideration of China's claims, the record clearly showed that, in 2008, the volume of the Chinese imports increased substantially even as demand fell by 6.9 per cent and even as the sales volumes of U.S. and non-subject tires fell.[47] As the Panel also correctly concluded, this continued growth in Chinese imports in 2008 meant that the U.S. industry was forced to absorb virtually all of the declines in demand in 2008, thus establishing that the Chinese imports had a clear and significant adverse impact on the production, sales and market share levels of the industry in that year.[48] The Panel's analysis of this issue was reasoned, detailed and complete, and no change to the Panel's analysis is warranted.

6.50 The United States further asserts that China's argument that the Panel should not have dismissed the recession as a causal factor simply because the recession did not explain the injury to domestic injury "in whole" China misses the point. As the Panel and the USITC found, the record evidence showed clearly that increased volumes of subject imports were having an adverse impact on the domestic industry, and that this impact was independent of the effects of the recession on demand in 2008.[49] Accordingly, the Panel agreed that the USITC reasonably found subject imports to be a significant cause of material injury to the domestic industry, even in 2008, and that the declines in the industry's production, sales, market share and profitability levels in that year could not be attributed wholly or primarily to the recession in 2008, or to any other alleged causal factors, as China claimed. Again, the Panel's analysis was reasoned and thoughtful, and need not be revised.

6.51 The Panel sees no reason to alter the provisions or paragraphs as requested.

[42] Interim Report, para. 7.18.
[43] Interim Report, para. 7.354.
[44] Interim Report, para. 7.353.
[45] Interim Report, paras. 7.323 - 7.352.
[46] Interim Report, paras. 7.337 - 7.339, 7.342 - 7.343, and 7.351-7.352.
[47] Interim Report, para. 7.203.
[48] Interim Report, para. 7.354.
[49] Interim Report, paras. 7.337 - 7.339, 7.342 - 7.343, and 7.351-7.352.

B. REQUEST FOR REVIEW SUBMITTED BY THE UNITED STATES

1. Standard of review

(a) Para. 7.18

6.52 **The United States** asks that the word "seems" be replaced with the word "is" in the final sentence of this paragraph.

6.53 **China** believes the change requested by the United States is unnecessary.

6.54 We agree with China that the change is not strictly necessary.

2. "As such" causation

(a) Para. 7.136

6.55 **The United States** asks that a cite to Article XVI:4 of the WTO Agreement be included at the end of the first sentence of this paragraph.

6.56 **China** opposes the U.S. suggestion to cite Article XVI:4 of the WTO Agreement to support the proposition that the "WTO Agreement does not prescribe any particular manner in which a Member's WTO obligations and commitments must be transposed into its domestic law." China asserts that while it may be true that the WTO Agreement does not prescribe a particular manner of transposing WTO obligations into domestic law, Article XVI:4 does not say this.

6.57 We see no need to make the change requested by the United States. As noted by China, Article XVI:4 of the WTO Agreement does not provide that the WTO Agreement does not prescribe any particular manner in which a Member's WTO obligations and commitments must be transposed into its domestic law.

3. Substantive findings generally

(a) Paras. 7.197, 7.215, 7.216, 7.238, 7.260, 7.322, 7.359, 7.367, and 7.379

6.58 **The United States** suggests that the findings set forth in these paragraphs be linked back to the Panel's standard of review through the insertion of the following sentence: "Therefore, we find that the USITC's determination was reasoned and adequate in this respect, consistent with the standard wet out by the Panel in paragraph 7.18." The United States also proposes a reformulation of the Panel's findings in certain of these paragraphs.

6.59 **China** believes these changes are unnecessary. China further contends that the proposed U.S. language actually goes beyond the language of Para 7.18. Para 7.18 addresses only whether the ITC reasoning was "adequate" and does not otherwise making any statement about the whether the ITC determination was "reasoned."

6.60 With the exception of a minor change regarding paragraph 7.359, we agree with China that the changes proposed by the United States are unnecessary.

4. Remedy

(a) Para. 7.397

6.61 **The United States** suggests that the last sentence of this paragraph is unnecessary.

6.62 **China** opposes the U.S. suggestion to delete the last sentence of this paragraph. The Panel has correctly noted that there is "no guarantee" that a measure imposed to improve the injurious condition of the domestic industry caused by increased imports will "not be excessive." The U.S. attempt to delete this fair, objective statement is constitutes over-reaching.

6.63 We agree with China that there is no need to delete the last sentence of this paragraph.

(b) Para. 7.414

6.64 **The United States** proposes the insertion of a footnote at the end of the first sentence to refer the reader back to paragraph 7.20, where the Panel concluded that there is no obligation to explain.

6.65 **China** does not comment on this request.

6.66 In the absence of any objection by China, we have included the new footnote 555 requested by the United States.

(c) Para. 7.418, footnote 557

6.67 **The United States** asks that the Panel explain that it is not addressing the issue raised in this footnote as a matter of judicial economy.

6.68 **China** does not comment on this request.

6.69 The Panel has amended footnote 557 to highlight its intended purpose, which is to demonstrate that China's GATT 1994 claims are dependent on its claims under the Protocol.

5. Conclusion

(a) Para. 8.1

6.70 **The United States** suggests that, for greater clarity, the Panel should include a full conclusion on each of China's claims. The United States also asks the Panel to include a conclusion regarding the rejection of China's "as such" claim.

6.71 **China** does not comment on this request.

6.72 The Panel sees no reason to alter the concluding paragraph.

VII. FINDINGS

A. GENERAL ISSUES

7.1 We shall begin with some preliminary observations and then address general issues relating to our standard of review, the burden of proof, and the rules of treaty interpretation. We also consider the relationship between sub-paragraphs 1 and 4 of Paragraph 16 of the Protocol.

1. Preliminary observations

7.2 The Panel was aware that there are a number of features of this particular case that provide a background against which the case has to be considered and constitute a context for dealing with the matters raised.

7.3 First, this is the first case under the transitional product-specific safeguard mechanism in Paragraph 16 of the Protocol. It thus raises questions that have not yet been dealt with in WTO dispute settlement, including the question of the relationship of this particular safeguard measure to the global safeguards mechanisms under the WTO Agreements: GATT Article XIX and the WTO *Safeguards Agreement.* Thus, the case raises important questions of the interpretation of the transitional product-specific safeguard mechanism that will obviously be of interest to other WTO Members even though the mechanism expires in 2013.

7.4 Second, the safeguard measure imposed in this case under Paragraph 16 of the Protocol of Accession of China is country specific, but nevertheless such a measure has effects on non-subject imports of tyres into the United States with its own systemic implications.

7.5 Third, imposition of a safeguard measure in this case was based on a determination of the USITC that was not unanimous. Two commissioners dissented on the critical issue of causation. Such a circumstance warrants the panel in giving very careful consideration in particular to that aspect of the USITC determination.

7.6 Fourth, the investigation that led to the imposition of a safeguard measure in this case against the importation of tyres from China was initiated, unusually, as the result of a petition by a labour union in the United States and not by the domestic producers of tyres. This, of itself, alerted the Panel to the possibility that there was something different about this case, particularly where the domestic producers, the normal petitioners in such cases, had indicated that they would not make any adjustments notwithstanding that a safeguard remedy was put in place with adjustment purposes.

7.7 Fifth, the issue of "material injury" was not in question before the Panel and, indeed, the determination of the USITC on this point was unanimous. Thus, a key issue in this case was causation, a matter that was complicated by the fact that the period of investigation involved in part a period of massive global economic downturn or recession.

7.8 Sixth, an important allegation in this case relating to this key issue of causation was that the U.S. tyre manufacturing industry had voluntarily reduced its investment in the United States and had invested in manufacturing tyres in China instead. Thus, according to this view, the reduction in domestic manufacturing of tyres and the increase in imports from China were the consequences of deliberate economic decision-making by the U.S. tyre industry.

7.9 In such circumstances, the argument went, this case involved the invocation of a mechanism designed to protect a domestic industry that did not want that protection and by its own actions had precipitated the events that were now being invoked to justify the application of the transitional product-specific safeguard mechanism of China's Protocol of Accession. Arguably, it explained too why the investigation had been initiated by a labour union, a body that was concerned with job losses resulting from this transfer of manufacturing capacity to China, and not by the domestic producers themselves. Thus, the Panel was aware that this aspect of the case raised the question of the suitability or relevance of safeguard mechanisms in the context of "outsourcing" and "globalization", matters of considerable systemic interest to WTO Members.

7.10 Having stated this important contextual background, the Panel was also aware that the issues before it involved the interpretation of the provisions of the transitional product-specific safeguard mechanism and that it was the task of the Panel to do that. It was not for the Panel to seek to recalibrate what the WTO Members had agreed to in the negotiations that led to the accession of China to the WTO in the light of what the Panel might perceive as changing economic circumstances that perhaps had not been considered when the Protocol was negotiated. That remains the prerogative of the WTO Members themselves. Nevertheless, the Panel felt that it was important to set this background out as it informed the understanding of the Panel of the arguments made before it in this case.

2. Standard of review

7.11 Article 11 of the DSU, and, in particular, its requirement that "… a panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements", sets forth the appropriate standard of review for WTO Agreements. Since the Protocol is silent as to the appropriate standard of review, Article 11 of the DSU will be applied by the Panel in examining the consistency of the U.S. *Tyres* measure with Paragraph 16 of the Protocol.

7.12 Although there is a disagreement between the parties regarding certain aspects of the nature of the "objective assessment" we must undertake in this case, there is much regarding our standard of review that the parties do agree on.

7.13 The United States submits that:

> in order for the Panel to make an "objective assessment" of the market disruption determination by the ITC, it must examine whether the ITC provided a reasoned explanation as to how the evidence before it (on the record) supported its conclusion that the requirements set out in paragraph 16.4 of the Protocol were met. The Panel is not acting as an initial trier of fact, and therefore must not conduct a *de novo* review. However, we do not suggest that the Panel should grant total deference to the competent authority. The Panel should review whether the analysis and explanations provided in the ITC Report reveal how the ITC considered the factors under paragraph 16.4 and whether the ITC provided a reasoned explanation as to how the facts supported the market disruption determination.[50]

7.14 China agreed with this part of the United States' understanding of our standard of review. In particular:

> China agrees the Panel must not conduct *de novo* review. China agrees the Panel must not grant total deference to the authorities. China agrees the "Panel should review whether the analysis and explanations provided in the ITC Report reveal how the ITC considered the factors under paragraph 16.4 and whether the ITC provided a reasoned explanation as to how the facts supported the market disruption determination" – the focus must be on the USITC Determination as it was written, and that rationale must constitute a "reasoned and adequate explanation."[51]

7.15 We agree with this part of the parties' assessment of our standard of review. It is well established in WTO case law regarding trade remedy cases that a Panel should neither conduct a de novo review, nor grant total deference to an investigating authority.[52] It is also well established that

[50] U.S. Reply to Question 18 from the Panel, para. 47, footnote omitted.
[51] China's Second Written Submission, para. 44.
[52] *See*, for example, Appellate Body Report, *US – Lamb*, para. 106.

the Panel's standard of review "must be understood in the light of the obligations of the particular covered agreement at issue".[53] Taking into account the obligations imposed by Paragraph 16,[54] we consider that our review of China's claims under Paragraph 16 of the Protocol should contain both a formal and a substantive element.[55] The formal aspect is whether the USITC evaluated "objective factors", as required by Paragraph 16.4. The substantive element is whether the USITC provided a reasoned and adequate explanation of its determination, in line with its obligation under Paragraph 16.5.

7.16 The main disagreement between the parties concerns the USITC's treatment of alternative explanations of the evidence and data before it. China relies on the Appellate Body Report in *US – Countervailing Duty Investigation on DRAMS* to argue that "the explanation provided by the investigating authority 'should also address alternative explanations that could reasonably be drawn from the evidence, as well as the reasons why the agency chose to discount such alternatives in coming to its conclusions'".[56] The United States denies that the USITC was required to address any alternative explanations in its determination. The United States claims that, in *US – Countervailing Duty Investigation on DRAMS*, "this level of detail [of requiring an assessment of alternative explanations] is derived from the requirements found in Articles 22.3 and 22.5 of the *SCM Agreement*, and particularly the requirement in Article 22.5 for the notice or report to contain "the reasons for acceptance or rejection of relevant arguments or claims made by interested Members and by the exporters and importers".[57] The United States notes that no such provision is contained in Paragraph 16 of the Protocol.

7.17 In making the abovementioned finding in *US – Countervailing Duty Investigation on DRAMS*, the Appellate Body referred in a footnote to para. 106 of its Report in *US – Lamb*, which reads in relevant part:

> A panel must find, in particular, that an explanation is not reasoned, or is not adequate, if some *alternative explanation* of the facts is plausible, and if the competent authorities' explanation does not seem adequate in the light of that alternative explanation. Thus, in making an "objective assessment" of a claim under Article 4.2(a), panels must be open to the possibility that the explanation given by the competent authorities is not reasoned or adequate.[58]

7.18 We note that there is no obligation in Paragraph 16 of the Protocol requiring the USITC to address, in its determination, alternative explanations that could reasonably be drawn from the evidence or data before it.[59] Nor is there any provision equivalent to Article 22.5 of the *SCM Agreement*. Since a panel's standard of review is necessarily distinct from the substantive and procedural obligations of the investigating authority, our standard of review cannot impose any such

[53] *See*, for example, Appellate Body Report, *US – Countervailing Duty Investigation on DRAMS*, para. 184.

[54] We note in particular that, under Paragraph 16.4 of the Protocol, an investigating authority is required to "consider objective factors" in determining if market disruption exists. Furthermore, under Paragraph 16.5, the importing Member "shall provide written notice of the decision to apply a measure, including the reasons for such measure...".

[55] Appellate Body Report, *US – Lamb*, paras. 103-104.

[56] China's Second Written Submission, para. 46, citing Appellate Body Report, *US – Countervailing Duty Investigation on DRAMS*, para. 186.

[57] U.S. Reply to Question 18 from the Panel, para. 47 n. 52.

[58] Appellate Body Report, *US – Lamb*, para. 106 (emphasis in original).

[59] This issue concerns alternative explanations generally. It does not concern the issue of whether the USITC should have considered alternative causes of injury, or conducted a non-attribution analysis in respect of any such alternative causes of injury.

obligation on the USITC.[60] For this reason, and guided by the abovementioned finding of the Appellate Body in *US – Lamb*, we consider that, in order to review whether the reasoning of the USITC was reasoned and adequate, we must assess whether the reasoning provided by the USITC in its determination seems adequate in light of plausible alternative explanations of the record evidence or data advanced by China in this proceeding.

7.19 The other disagreement between the parties concerns our review of the U.S. remedy determination. China contends that our review of remedy should take account of the fact that the "United States must ... provide a 'reasoned explanation' for the remedy being imposed – both the level of the tariffs, and the decision to continue the tariffs for three years".[61] According to the United States, our review should take account of the fact that "the Protocol does not contain an obligation for a Member to consider particular factors or to demonstrate at the time of the imposition of the measure how the measure meets the requirement of Paragraphs 16.3 and 16.6".[62]

7.20 We recall that our standard of review "must be understood in the light of the obligations of the particular covered agreement at issue".[63] In this regard, we note that the last sentence of Paragraph 16.5 of the Protocol requires a Member to "provide written notice of the decision to apply a measure, including the reasons for such measure and its scope and duration". This provision refers to the need to provide a statement of the "reasons for such measure". It does not refer to the need to provide a statement of the "reasons for the scope and duration of such measure". In our view, therefore, a Member need only provide written notice of the scope and duration of the measure. It need not provide written notice of the reasons for the scope and duration of that measure.

7.21 Our interpretation of the last sentence of Paragraph 16.5 is consistent with the Appellate Body's finding[64] in *US – Line Pipe* that Article 5.1 generally does not require a Member to justify, at the time of application, that the safeguard measure at issue is applied "only to the extent necessary". The burden, therefore, is on China to establish that the *Tyres* measure is excessive. China cannot simply point to any failure on the part of the United States to explain, in a published determination, that the measure is not excessive. Instead, we consider that our review of the U.S. remedy should be based on the arguments and evidence put forward by the parties during the present WTO dispute settlement proceeding.[65]

3. Burden of proof

7.22 We recall the general principles applicable to burden of proof in WTO dispute settlement, which require that a party claiming a violation of a provision of a covered agreement by another Member must assert and prove its claim.[66] In this dispute, China, which has claimed that the United States acted inconsistently with Paragraph 16 of the Protocol, and Articles I:1 and II:1 of the GATT 1994, thus bears the burden of demonstrating that the United States acted inconsistently with those provisions. In addition, it is generally for each party asserting a fact to provide proof thereof.[67] We note in addition that a prima facie case is one which, in the absence of effective refutation by the

[60] However, if the USITC failed to consider plausible alternative explanations, there may be a greater risk that we, under our standard of review, would find that the USITC's reasoning does not seem adequate in light of those plausible alternative explanations.

[67] *Ibid.*

other party, requires a panel, as a matter of law, to rule in favour of the party presenting the prima facie case.[68]

4. Treaty interpretation

7.23 Article 3.2 of the DSU directs panels to clarify the existing provisions of the covered agreements "in accordance with customary rules of interpretation of public international law". It is well settled that the principles codified in Articles 31 and 32 of the *Vienna Convention* are such customary rules. Equally, in WTO case law Article 33 is so applied.[69] These provisions read as follows:

Article 31: General rule of interpretation

1. A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose.

2. The context for the purpose of the interpretation of a treaty shall comprise, in addition to the text, including its preamble and annexes:

(a) any agreement relating to the treaty which was made between all the parties in connection with the conclusion of the treaty;

(b) any instrument which was made by one or more parties in connection with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty.

3. There shall be taken into account, together with the context:

(a) any subsequent agreement between the parties regarding the interpretation of the treaty or the application of its provisions;

(b) any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation;

(c) any relevant rules of international law applicable in the relations between the parties.

4. A special meaning shall be given to a term if it is established that the parties so intended.

Article 32: Supplementary means of interpretation

Recourse may be had to supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion, in order to confirm the meaning resulting from the application of article 31, or to determine the meaning when the interpretation according to article 31:

(a) leaves the meaning ambiguous or obscure; or

[68] Appellate Body Report, *EC-Hormones*, para. 104.
[69] *See*, for example, Panel Report, *Japan – DRAMS (Korea)*, para. 7.45.

(b) leads to a result which is manifestly absurd or unreasonable.

Article 33: Interpretation of treaties authenticated in two or more languages

1. When a treaty has been authenticated in two or more languages, the text is equally authoritative in each language, unless the treaty provides or the parties agree that, in case of divergence, a particular text shall prevail.

2. A version of the treaty in a language other than one of those in which the text was authenticated shall be considered an authentic text only if the treaty so provides or the parties so agree.

3. The terms of the treaty are presumed to have the same meaning in each authentic text.

4. Except where a particular text prevails in accordance with paragraph 1, when a comparison of the authentic texts discloses a difference of meaning which the application of articles 31 and 32 does not remove, the meaning which best reconciles the texts, having regard to the object and purpose of the treaty, shall be adopted.

7.24 We shall apply these principles in this case.

5. Relationship between Paragraph 16.1 and Paragraph 16.4 of the Protocol

7.25 In order to properly assess the conformity of the United States' measure with Paragraph 16 of the Protocol, we must establish the conditions under which the provisions would apply. This is particularly important regarding China's claims on increased imports and causation, in respect of which the parties have developed significantly diverse positions on the interaction between sub-paragraphs 1 and 4 of Paragraph 16.

7.26 Paragraph 16.1 of the Protocol provides:

In cases where products of Chinese origin are being imported into the territory of any WTO Member in such increased quantities or under such conditions as to cause or threaten to cause market disruption to the domestic producers of like or directly competitive products, the WTO Member so affected may request consultations with China with a view to seeking a mutually satisfactory solution, including whether the affected WTO Member should pursue application of a measure under the Agreement on Safeguards. Any such request shall be notified immediately to the Committee on Safeguards.

7.27 Paragraph 16.4 of the Protocol provides:

Market disruption shall exist whenever imports of an article, like or directly competitive with an article produced by the domestic industry, are increasing rapidly, either absolutely or relatively, so as to be a significant cause of material injury, or threat of material injury to the domestic industry. In determining if market disruption exists, the affected WTO Member shall consider objective factors, including the volume of imports, the effect of imports on prices for like or directly competitive articles, and the effect of such imports on the domestic industry producing like or directly competitive products.

(a) Arguments of the parties

7.28 According to **China**, Paragraphs 16.1 and 16.4 are interrelated. China contends that Paragraph 16.1 functions as a *chapeau* for Paragraph 16, providing the basic conditions for any action under Paragraph 16.[70] China submits that Paragraph 16.1 also provides "important context" for understanding the obligations of Paragraph 16.4 (and *vice versa*), such that "[t]he two provisions must be read together".[71] In reading the two provisions together, China understands Paragraph 16.4 to add to the basic conditions set forth in Paragraph 16.1.

7.29 Thus, in respect of the issue of increased imports, China asserts that "the first requirement of [Paragraph] 16.1 sets a base level requirement of 'in such increased quantities'".[72] Referring to the case law of the Appellate Body regarding the interpretation of the same phrase in Article 2.1 of the *Safeguards Agreement*, China contends that imports will only be "in such increased quantities" if they are sudden enough, sharp enough, and significant enough, to cause injury. China continues, though, that "even if the increase in imports is sudden enough, sharp enough, or significant enough to satisfy the [Paragraph 16.1] requirement of 'in such increased quantities', they still must meet the additional [Paragraph 16.4] standard of 'increasing rapidly'".[73]

7.30 China adopts the same approach to the Paragraph 16 causation standard. Thus, China asserts that the word "cause" in Paragraph 16.1 constitutes the "base requirement".[74] China asserts that the Appellate Body has confirmed, in case law regarding the *Safeguards Agreement*, that a "'cause' requires 'a genuine and substantial relationship of cause and effect' between the imports and the alleged injury".[75] China contends that "Article 16.4 further strengthens this basic requirement, by modifying the term 'cause' with 'significant'".[76] China contends that sub-paragraphs 1 and 4 of Paragraph 16 therefore require that increased imports under the Protocol must have "a significant, important, genuine and substantial causal relationship with material injury being suffered by the U.S. domestic industry".[77]

7.31 The upshot of China's interpretative analysis is that the increased imports and causation standards of Paragraph 16 are more stringent than those of the *Safeguards Agreement*, since they incorporate both the disciplines of the *Safeguards Agreement* (as embodied in Paragraph 16.1), plus the additional requirements of Paragraph 16.4.

7.32 **The United States** submits that Paragraph 16.1 does not impose any obligations regarding the existence of market disruption, but merely sets forth the general conditions under which a Member is authorized to seek consultations with China. The United States asserts that, while Paragraph 16.1 provides context for the interpretation of Paragraph 16.4, it does not set out a general obligation with respect to the market disruption determination.[78] According to the United States, it is Paragraph 16.4 that sets the standards that a Member has to meet in order to make an affirmative market disruption determination.[79] The United States contends that, consistent with Paragraph 16.4, a Member must find that imports are (1) "increasing rapidly" so as to be (2) a "significant cause" of (3) material injury

[79] *See* U.S. Reply to Question 19 from the Panel.

or threat thereof.[80] The United States contends that these are the standards against which its measure should be assessed. The United States contends that the transitional safeguard mechanism exists outside and apart from the global safeguard disciplines embodied in Article XIX of the GATT 1994, and the *Safeguards Agreement*.

(b) Evaluation by the Panel

7.33 In our view, Paragraph 16.1 is concerned with more than the mere right of Members to seek consultations. Paragraph 16.1 provides the very basis for action under the Paragraph 16 transitional product-specific safeguard mechanism, as Paragraph 16.1 consultations are the trigger for any subsequent action to address the "market disruption" in question. Indeed, it is only if such consultations fail that transitional product-specific measures may be imposed (under Paragraph 16.3).

7.34 In accordance with Paragraph 16.1, action under Paragraph 16 is triggered when Chinese imports are being imported "in such increased quantities or under such conditions"[81] "as to cause" "market disruption". But what do these terms mean substantively? How does a Member know when imports are in sufficiently "increased quantities" to justify action? What is the degree of harm that the domestic industry must suffer? And what is the degree of causal relationship required between those imports and that harm?

7.35 Similar questions regarding "increased quantities" and causation arose in the context of disputes concerning Article 2.1 of the *Safeguards Agreement*. In that context, the answers were provided by the Appellate Body, based on its interpretation of the relevant provisions of that Agreement. In the context of Paragraph 16, the answers are provided in Paragraph 16.4, which sets forth a definition of "market disruption" that encompasses the nature of the increase in imports, the nature of the harm to be suffered by the domestic industry, and the degree of causal nexus that must exist between those imports and that harm. In particular, Paragraph 16.4 provides that the increase in imports must be rapid, that the harm to the domestic industry must amount to material injury, and that the rapidly increasing imports must be a significant cause of that material injury. Thus, imports from China will be "in such increased quantities ... as to cause ... market disruption" when those imports are "increasing rapidly ... so as to be a significant cause of material injury."

7.36 Thus, Paragraphs 16.1 and 16.4 are interrelated. They should be read together, and each provision provides important context for interpreting the other. The interrelation between Paragraphs 16.1 and 16.4, the joint reading of these provisions, and the definitional nature of Paragraph 16.4, suggest that Paragraph 16.4 clarifies the substance of the trigger conditions provided for in Paragraph 16.1.[82]

7.37 Since Paragraph 16.4 clarifies the substance of the conditions for taking action under Paragraph 16, it is in light of the "increasing rapidly" and "significant cause" standards of Paragraph 16.4 that the conformity of the U.S. *Tyres* measure should be assessed.[83] As indicated

[80] Oral Statement by the U.S. at the Second Meeting, para. 21.
[81] In the light of the French and Spanish texts and in accordance with Article 33(4) of the *Vienna Convention*, the word "or" is to be taken to include "and".
[82] Indeed, the clarificatory role of Paragraph 16.4 has been acknowledged by China which, after itself noting the interrelationship between Paragraphs 16.1 and 16.4, asserted that:

> Article 16.4, in turn, defines the specific circumstances in which "market disruption" is deemed to exist, thus clarifying the applicable requirements – in particular, that imports be "increasing rapidly" and constitute a "significant cause" of material injury. (China's Reply to Question 35 from the Panel, para. 36.)

[83] We note that China itself has asserted that:

above, we shall interpret the phrases "increasing rapidly" and "significant cause" in the manner prescribed by Articles 31 and 32 of the *Vienna Convention*. To the extent that the provisions of Article XIX of the GATT 1994 or the *Safeguards Agreement*, as interpreted by the Appellate Body, are relevant they will be taken into account.

B. WAS THE USITC ENTITLED TO FIND THAT IMPORTS WERE "INCREASING RAPIDLY" IN ACCORDANCE WITH PARAGRAPH 16 OF THE PROTOCOL?

1. Introduction

7.38 China claims that the United States failed to evaluate properly whether imports from China were "increasing rapidly" in accordance with Paragraph 16.4 of the Protocol. The thrust of China's argument is that a decline in the rate of increase in 2008, the most recent period in China's view, means that imports were no longer "increasing rapidly".

2. Arguments of the Parties

7.39 **China** argues that the term "increasing" means imports must be increasing in the *most* recent past. China claims that Paragraph 16.1 and Paragraph 16.4 both use the present continuous tense in detailing the increased imports standard under the Protocol.[84] China submits that Paragraph 16.1 is in the present continuous tense as the phrase "are being" modifies "imported". China contends that in Paragraph 16.4 the phrase "are increasing rapidly" is a construction in the present continuous tense.[85] China argues that, therefore, there is consistency in the tenses between the two paragraphs, and it is this present continuous tense that requires the investigating authority to focus on the *most* recent period of time.[86]

7.40 China provides two reasons for this. First, as a matter of grammar, the present continuous tense requires the activity to be happening either now, or in the near future or very recent past.[87] In China's view that distinguishes imports that are "increasing rapidly" from imports that have "increased rapidly". In this case, China argues that the *most* recent period of time is the most recently completed year and any other period for which data is available.[88] Second, China argues that this approach is consistent with the way the Appellate Body has interpreted the textual distinction between "increased" and "increasing" when considering Article 4.2 in the *Safeguards Agreement.*[89] China also believes that the use of the term "increasing" requires the analysis under Paragraph 16 of the Protocol to focus

When evaluating whether China-specific safeguards under Article 16 are WTO-consistent, a panel must determine whether the national authorities have properly found that imports are "increasing rapidly" and that they are a "significant cause" of any injury. (China's Reply to Question 9b from the Panel, para. 35.)

[84] China's Second Written Submission, para. 70.

[85] China's Reply to Question 12 from the Panel, para. 46 and footnote 37 noting that the grammatical point does not arise in the French and Spanish texts as the present tense captures the English equivalent of both the simple present tense and the present continuous tense.

[86] China's Second Written Submission, para. 70.

[87] China's Reply to Question 12 from the Panel, para. 46.

[88] China's Reply to Question 14 from the Panel, para. 53. China's Second Written Submission, para. 84.

[89] China's Reply Question 12 from the Panel, para. 47. Appellate Body Report, *US – Steel Safeguards,* para. 367. Oral Statement by China at the First Meeting, para. 22. China's Reply to Question 36 from the Panel, para. 40.

on an even *more* recent period of time compared to the *Safeguards Agreement* to determine whether imports are increasing.[90]

7.41 China notes that when describing an increase, "rapidly" indicates "a significant or steep increase"[91] or a recent surge.[92] China continues that the way to make the distinction between imports that are "increasing rapidly" compared to imports that are merely increasing is to consider the rate at which the increase is occurring.[93] China contends that a trend line over time that is "progressing quickly" must either have a steep slope (a "rapid" change over time, as opposed to a gradual change over time) or must have an accelerating slope (a "rapid" change over time, since the change is "progressing quickly" by progressing at an increasingly faster rate).[94] China argues that "[t]he ordinary meaning of 'rapidly' can best be understood in this context as imports increasing more 'rapidly' than they have been increasing previously".[95] In other words, China argues "increasing rapidly" does not contemplate the present increase being modest and the past increase being rapid.[96] Rather, imports must be accelerating or continuing at a high rate in light of the preceding period.[97]

7.42 China points to the drop in the rate of increase in 2006/2007 (53.7 per cent) compared to 2007/2008 (10.8 per cent) to argue that imports were no longer "increasing rapidly" in the most recent past. China responds to a question from the Panel to say that imports were "increasing rapidly" in 2007, but that "such a finding would be premised primarily on the dramatic changes in rate of increase, not simply an increase in absolute quantity".[98] China claims that the USITC failed to address the fact that the majority of the increase in volume of imports, approximately 86 per cent, occurred between 2004 and 2007.[99] China also claims that the U.S. blurred the last two years of the investigation, which obscures the fact that 46 per cent of the growth in absolute volume occurred from 2006 to 2007.[100] Between 2007 and 2008 the growth in absolute volume was only 14 per cent.[101]

7.43 China provides the following table to argue further that imports were no longer "increasing rapidly" in 2008:[102]

[90] Oral Statement by China at the First Meeting, para. 22. China's Second Written Submission, para. 71. China's First Written Submission, para. 101.

[91] China's First Written Submission, para. 79.

[92] China's First Written Submission, para. 85.

[93] China's Second Written Submission, para. 77. We note that China develops a 3 prong qualitative test to determine whether imports are "increasing rapidly" that requires (1) consideration of data in the most recent period; (2) the most weight to be given to the most recent trends; and (3) an analysis of the most recent year in more detail when the initial analysis shows imports are slowing.

[94] China's Second Written Submission, para. 77.

[95] China's Reply to Question 14 from the Panel, para. 54. China's Second Written Submission, para. 85.

[96] China's First Written Submission, para. 83.

[97] China's First Written Submission, para. 85. China considers that there may be other scenarios where imports can be "increasing rapidly". China's First Written Submission, para. 81.

[98] China's Reply to Question 13 from the Panel, para. 49.

[99] China's First Written Submission, para. 133, quoting the USITC report, page V-1.

[100] 14,498/31400*100 = 46%.

[101] China's Second Written Submission, para. 116.

[102] China's Second Written Submission, para. 114. China's First Oral Statement, para. 28.

	Average Annual Increase over 2004-2007 Period	Annual Increase in 2007 Compared to 2006	Annual Increase in 2008 Compared to 2007
Quantity of Tires (million tires)	9.0 M	14.5 M	4.5 M
Rate of Absolute Increase (%)	42.1%	53.7%	10.8%
Increase in Market Share (% pts)	3.1 % pt	4.7 % pt	2.7 % pt

7.44 China challenges the 10.8 per cent increase in 2008 as not being in and of itself rapid. China argues that the Panel in *US – Steel Safeguards* found an increase of 11.9 per cent during the most recent full year of data not to be sufficient to constitute "increased imports".[103] China contends that a 10.8 per cent increase cannot, therefore, be sufficient to comply with the higher standard under the Protocol for imports to be "increasing rapidly".[104]

7.45 China provides the following table regarding relative data of subject imports:[105]

Year	Per cent of Domestic Production (percentage)	Change in Share of Production (percentage points)	Per cent of Total Consumption (percentage)	Change in Share of Consumption (percentage points)
2004	6.7	--	4.7	--
2005	10.0	3.3	6.8	2.1
2006	14.6	4.6	9.3	2.5
2007	23.0	8.4	14.0	4.7
2008	28.7	5.7	16.7	2.7

7.46 China argues that the USITC's treatment of relative import data is cursory and misleading as the USITC did not pay enough attention to the changes in 2008, but, rather, stressed changes over the full period. China argues that the trends in share of consumption (i.e. market share), suggest a stable trend given that the change in share of consumption was consistently in the 2-3 percentage points range, apart from 2007.[106]

7.47 China considers that relative data under the Protocol refers to market share, that is, imports as a percentage of total consumption rather than imports relative to domestic production.[107] China submits that while consideration of imports relative to domestic production makes sense for global safeguards due to Article 2.1 ("absolute or relative to domestic production") and Article 4.2(a) ("the share of the domestic market taken by increased imports, changes in the level of sales, production,

[103] China's Reply to Question 36 from the Panel, para. 43.
[104] We note that China makes similar claims regarding the comparable numbers in relative data. *See* China's Reply to Question 36 from the Panel, para. 43.
[105] China's First Written Submission, para. 158. USITC Report, Table II-2.
[106] China's First Written Submission, para. 132.
[107] China's Reply to Question 38 from the Panel, para. 48. China's Second Written Submission, para. 117.

productivity, capacity utilization, profits and losses and employment") of the *Safeguards Agreement*, under the Protocol there is no elaboration of the meaning to be given to "relative" data. China argues that the USITC relied on imports relative to domestic production when Paragraph 16 seems to place the focus on market share.[108] China argues that a focus on domestic production is misleading when non-subject imports were such an important factor in the market and the "domestic industry is engaging in a conscious strategy of shifting some of its production offshore".[109]

7.48 China also claims that the blurring of the last two years of the investigation obscures the fact that 39 per cent of the growth in market share occurred from 2006 to 2007. Between 2007 and 2008 the growth of market share was only 22 per cent.[110]

7.49 China argues that the U.S. relies too heavily on an end-point-to-end-point analysis given that the Appellate Body has found such an approach to be inadequate for assessing properly whether imports have "increased" under the *Safeguards Agreement*.[111] China claims that an end-point-to-end-point analysis is particularly inappropriate under Paragraph 16 of the Protocol.[112] China acknowledges that a longer period of time may be necessary to provide context for what is happening in the most recent period, but claims that an end-point-to-end-point analysis "misapplies the relevance of this longer period of time and … can obscure the more relevant analysis of what is happening over the more recent period".[113]

7.50 China recalls that in *Argentina – Footwear (EC)*, even though imports almost doubled over a five year period, due to a decline in imports at the end of the period neither the Panel nor the Appellate Body found "increased imports" in accordance with the *Safeguards Agreement*. China argues that the essential lesson from *Argentina – Footwear (EC)* is that any year, and particularly the recent period, must be put in context and not considered in isolation.[114] China submits that the U.S. argument in the case before us, stressing increases over the period of investigation, is similar to that argument rejected in *Argentina – Footwear (EC)*.

7.51 Regarding trends in value, China argues that the USITC erroneously relied on trends in value when the "text of Paragraph 16 requires a focus on the 'quantity' of imports".[115]

7.52 China argues that the USITC never discussed the implications of the low base level at the beginning of the period.[116] China continues that when imports begin at a low base level it is "inevitable that the subsequent increases will seem large".[117] China argues that these increases were never placed in their proper context.[118]

7.53 China argues that the USITC should have included data for the first quarter of 2009 in its period of investigation, which would have been in keeping with USITC established practice. China

[118] China's First Written Submission, para. 117.

contends that had the data from the first quarter of 2009 been included, it would have shown a sharp decline in subject imports from China.[119]

7.54 China argues that the USITC's refusal to collect or consider available interim data "stands in stark contrast to its well-established and consistent practice of collecting interim data in other cases".[120] China notes that the petition in this case was not filed until 20 April 2009. However, the USITC decided not to collect interim data even though it had "collected interim data in *every single* other Section 421 safeguard investigation in which an interim period was completed prior to the filing of the petition".[121] China considers the USITC refusal to collect interim data for the completed first quarter of 2009 is "wholly inconsistent" with the USITC's practice in other Section 421 cases.[122]

7.55 Noting the U.S. argument that the USITC does not have an established practice of collecting interim data as outlined by China, and that it decides whether to collect interim data on a case by case basis, China accuses the United States of being "overboard and quite dangerous" in its case by case approach. China believes the United States overstates the burden of collecting such data and that the desire to avoid the imposition of a slight reporting burden on domestic producers is not a sufficient explanation.[123] China claims that when the staff report was completed on 12 June 2009, import data was available for the first quarter of 2009 ("Q1 2009").[124]

7.56 China asserts that the United States collects interim data in antidumping and countervailing investigations whenever such data is available. China claims that in 2009 the USITC collected interim data in all such investigations as long as one quarter in 2009 had been completed prior to the petition being filed.[125] As one example, China notes that in *Oil Country Tubular Goods from China,* a case that began 11 days before the initiation of the *Tyres* investigation, the USITC collected interim data for Q1 2009.[126]

7.57 China argues that in the only Section 421 transitional safeguard investigation to be initiated prior to the completion of an interim period, *Uncovered Innerspring Units from China,* the USITC collected information for the entire previous year even though the investigation started just 6 days after the completion of the prior year.[127]

7.58 China dismisses the contention by the USITC that the first quarter 2009 data would have been of limited use given the lack of information on the relative share of imports from China and claims that the "record was incomplete only because the USITC chose to leave the record incomplete".[128] China argues that the USITC reason for not using Q1 2009 data (i.e. that it would add no probative value in the absence of relative data) "overlooks the fact that the absolute level of imports was still a

key issue to be considered ...".[129] China claims that the "inability to address one issue completely does not justify ignoring probative data on another issue".[130]

7.59 **The United States** argues that China seeks to have the Panel impose an overly restrictive view of how recent increases in imports should be in order to comply with the Protocol.[131] The United States continues that there is no support in the text of the Protocol for investigating authorities to consider only very recent increases in imports. The United States contends that there is no meaningful distinction between the language in the Protocol and the language in the *Safeguards Agreement* to indicate an investigating authority must focus its analysis on a *more* recent period of time under the Protocol compared to the *Safeguards Agreement*. The United States notes that the USITC has consistently explained that it must "focus on recent increases in imports" under the Protocol.[132]

7.60 The United States submits that the ordinary meaning of "rapid" means "progressing quickly, developed or completed within a short time".[133] The United States contends that, in light of this, when the Panel is examining the USITC's analysis regarding imports it should assess whether the USITC "reasonably concluded that the growth in Chinese imports had 'progressed quickly' over the period of investigation or had been 'developed or completed within a short period of time'".[134]

7.61 The United States notes that Paragraph 16 of the Protocol does not define the nature of the rapid increase that is sufficient to meet the requirements of Paragraph 16. The United States challenges China's view that imports must be "steep" or "surging", arguing that China is imposing a higher standard to find that imports are "increasing rapidly" than is warranted by the text.[135]

7.62 The United States argues that the Protocol does not preclude a competent authority from finding imports to be "increasing rapidly" over the period examined simply because the rate of increase of imports lessens at the end of the period. Nor does the Protocol "suggest that imports must be growing at their most rapid pace at the end of the period examined by a competent authority".[136] The United States contends that, instead, the Protocol only requires that the competent authority find that there was a rapid increase in imports on an absolute or relative basis, during the period, and that these imports were a significant cause of material injury or threat of material injury to the industry.[137]

7.63 The United States claims that China continues to make the factually mistaken assertion that imports from China were "declining in 2008", the end of the period of investigation.[138] The United States notes that the subject imports were at their highest levels in absolute terms in 2008.[139] The United States contends that the record shows "clearly and unequivocally" that there was a rapid and recent increase in the volumes of Chinese imports.[140]

[138] Oral Statement by China at the First Meeting, para. 7.
[139] United States' First Written Submission, para. 122.
[140] United States' Second Written Submission, para. 20.

7.64 The United States criticises the focus by China on the rate of increase in volumes of Chinese imports rather than actual volumes or market shares of subject imports. The United States submits that the use of a change in the rate of increase is the only way China can provide support for its claim that there was a declining or lessening trend in imports in 2008.[141] The United States submits that even if the rate of growth in absolute terms had lessened in 2008 when compared to the extremely rapid rate of growth seen in 2007, the quantities of Chinese imports in 2008 continued to grow in a rapid manner.[142] The United States contends that it does not matter that subject imports may have increased at a lower rate in 2008 than they did in 2007.

7.65 The United States continues that in 2008 the absolute volume of imports was 10.8 per cent higher than 2007; 70 per cent higher than in 2006; 121 per cent higher than in 2005; and 215.5 per cent higher than in 2004.[143] The United States argues that it should be clear that in 2008 Chinese imports of subject tyres continued to increase in a rapid manner, just as they had throughout the period of investigation.[144]

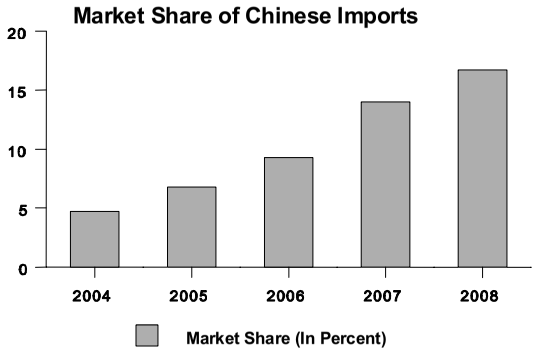
7.66 The United States argues that China's discussion of the *US – Steel Safeguards* case is misleading. The United States argues that the panel's decision in that case was based on a sharp decline in absolute and relative terms at the end of the period and trends in absolute imports that differ significantly from this case, i.e., "an alternation of increases and decreases from year to year"[145] rather than the upwards trend from year to year in the current case.

7.67 The United States notes that both the market share of the subject imports and the ratio of subject imports to U.S. production rose considerably throughout the period examined, with the two largest year to year increases, in both sets of data, occurring in 2007 and 2008.[146] The United States submits, therefore, that the USITC had a reasonable basis for finding that the increase in 2008 continued to be "large", "rapid" and "significant".[147]

7.68 The United States notes that in 2007 and 2008 there was a 62 per cent growth in the market share of subject imports.[148] Overall, the market share of subject imports increased by 12 percentage points between 2004 and 2008. The market share in 2008 was 2.7 percentage points higher than 2007; 7.4 percentage points higher than in 2006; 9.9 percentage points higher than in 2005; and 12.0 percentage points higher than in 2004.[149]

7.69 The United States provides the following graph to illustrate the increases in market share:[150]

[141] United States' Second Written Submission, para. 23.
[142] United States' Second Written Submission, para. 25.
[143] United States' Second Written Submission para. 20, and USITC Report pages 11-12 and Table C-1.
[144] United States' Second Written Submission, para. 20.
[145] U.S. comment on China's Reply to Question 36 from the Panel, paras. 20-22. Panel Report, *US – Steel Safeguards*, para. 10.206.
[146] United States' First Written Submission, para. 111.
[147] United States' First Written Submission, para. 120 - 122.
[148] United States' First Written Submission, para. 122.
[149] USITC Report, pages 11-12 and Table C-1.
[150] United States' First Written Submission, para. 21; USITC Report Table C-1.



7.70 The ratio of subject imports to U.S. production increased by 22 percentage points between 2004 and 2008[151] with the highest annual increase in 2007 and the second highest annual increase in 2008.[152]

7.71 The United States argues that the USITC did not merely recite that there was a growth in imports between the first and last years of the period. Rather, the United States argues that the USITC specifically considered the growth in absolute and relative quantities for the subject imports during each year of the period of investigation, and in particular for 2007 and 2008 and concluded that the subject imports increased throughout the period and by significant amounts in each year.[153]

7.72 The United States notes that an investigating authority is not forbidden from examining trends in imports between the end points of an investigation and acknowledges that it should also be looking at trends over the entire period.[154] The United States recalls that the Appellate Body has explained that, in the context of the *Safeguards Agreement*, the "competent authorities should not consider such data [from the most recent past] in isolation from the data pertaining to the entire period of investigation".[155] The United States contends that the increase in imports in the *Argentina – Footwear (EC)* case, and specifically the drop in the final two years motivated the comments about an end-point-to-end-point analysis by the Appellate Body. The United States argues that the facts of the present case are very different and that the USITC correctly concluded that the increases in subject imports were "large, rapid and continuing" throughout the period, including the final years of the period examined by the USITC.[156]

7.73 The United States claims that the Protocol does not prohibit a competent authority from considering trends in the value of subject imports. The United States notes that the value of subject

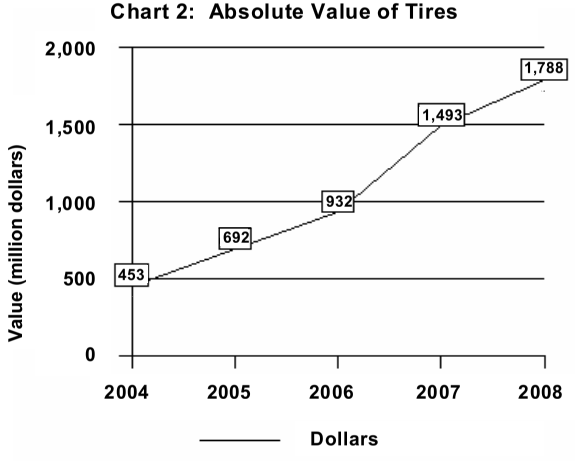
[155] Appellate Body Report, *US – Lamb*, paras. 137-138.
[156] United States' First Written Submission, para. 118, quoting USITC Report at page 12.

imports increased by 294.5 per cent between 2004 and 2008 and provides the following graph to illustrate the changes in value over the period of investigation:[157]



7.74 The U.S. claims that imports of subject tyres from China at the beginning of the period were not small. In 2004 imports from China were five per cent of the market and the fourth largest import source.[158] The United States argues that whether or not subject imports were small at the beginning of the period, they had become a large presence in the market at the end of the period.[159]

7.75 The United States argues that the Protocol does not require the inclusion of the most recently concluded quarterly data. The U.S. contends that the USITC's choice of a five year period of investigation that ended less than four months before the beginning of the investigation satisfies the standard under the Protocol.

7.76 The United States explains that:

> ... the ITC has an established practice in investigations under Section 421 of collecting, at a minimum, five full years of data, plus for any interim period that can reasonably be collected, when conducting its investigations. The ITC decides on a case-by-case basis, whether to attempt to collect data for the 'interim period,' which is the most recently completed period of less than a full calendar year.[160] (footnotes omitted)

7.77 The United States continues that the USITC considers a number of factors in deciding whether to use interim data including: the likelihood of obtaining full information; the amount of time elapsed between the end of the most recent quarter and the issuance of questionnaires; and the number of parties.[161] The United States notes that the USITC is less likely to seek data for a particular

[157] United States' First Written Submission, paras. 108-109. USITC Report, pages 11-12 and 22.
[158] United States' First Written Submission, para. 129.
[159] United States' First Written Submission, para. 129.
[160] United States' First Written Submission, para. 132.
[161] United States' First Written Submission, para. 132.

quarter if a relatively small amount of time has elapsed between the end of the quarter and the beginning of the investigation, if participants in the market are unlikely to provide meaningful information, or if the number of participants is large so that the USITC is unlikely to obtain reasonably complete data in the time allocated.[162]

7.78 The United States argues that in the *Tyres* case, data was needed from 10 U.S. producers, 35 importers and 36 foreign producers. The USITC believed that "a relatively complete data series for that period would not have been available in time for use in this investigation".[163] The United States continues that China fails to mention that in the five Section 421 cases it argues interim data was used, the period of time that had elapsed between the end of the most recent quarter and the filing of the petition ranged from 33 to 67 days.[164] In the *Tyres* case just 20 days had elapsed between the end of the quarter and when the petition was filed and the staff began preparing questionnaires.[165]

7.79 The United States submits that the USITC takes a case by case approach regarding the availability and usefulness of interim data.[166] The United States argues that the antidumping and countervailing investigations referred to by China are not analogous to the *Tyres* case. For 10 of the 11 preliminary-phase investigations that occurred in 2009, the period of time that elapsed between the end of the quarter and the filing of the petitions ranged between 29 and 100 days, "considerably longer than the 20 days between the end of the quarter and the filing of the petition in the *Tires* case".[167] The United States continues that there have been occasions where a petition has been filed more than 20 days after the end of a quarter where the USITC has not collected interim data. The United States argues this demonstrates further that the decision to collect interim data "depends on the nature and complexities of the relevant investigation".[168]

7.80 The United States explains that in the case of *Uncovered Innerspring Units from China*, China does not recognise that the USITC reasonably concluded that asking parties to provide a set of data for one full year as opposed to data for a full year plus two interim periods was likely to place a significantly lower reporting burden on participants. The United States explains:

> In the Innersprings investigation, the ITC collected data for five full years, 1999, 2000, 2001, 2002, and 2003. *Uncovered Innerspring Units from China*, Inv. No. TA-421-5, USITC Pub. 3676 at I-12, III-7-8 (March 2004). If the ITC had chosen to collect data only through the third quarter of 2003, then it would have had to collect data for seven, rather than five reporting periods: 1998, 1999, 2000, 2001, and 2002, plus interim data for the first three quarters of 2003 and the first three quarters of 2002. This would obviously have increased the burden considerably on all respondents.[169]

7.81 The United States argues that absent data to assess whether imports were increasing on a relative basis, it would not have been possible for the USITC to assess whether imports were "increasing rapidly".[170] The United States continues that the USITC's ability "to determine whether imports were increasing on a relative basis was a necessary component of its 'increasing imports' analysis. Even if the available data showed that imports were declining on an absolute level during

the first quarter of 2009, the USITC would still not have been able to conclude that imports were not increasing rapidly overall because it could not assess whether they were increasing rapidly on a relative basis".[171]

3. Evaluation by the Panel

7.82 The Panel begins by reviewing various data concerning the volume of subject and non-subject imports in absolute terms. We then consider China's arguments regarding the interpretation of the phrase "increasing rapidly". Thereafter, we consider issues regarding: the USITC's determination that imports were increasing rapidly in relative terms; China's argument that the USITC improperly relied on an end-point-to-end-point analysis of imports; China's argument that the USITC improperly relied on increases in value rather than increases in volume; China's argument that the USITC should have taken account of the fact that subject imports began from a low base; and China's argument that the USITC should have collected data for the first quarter of 2009.

(i) Review of import data

7.83 We summarise below the import data on the absolute increase in the volume of subject imports in each year of the period of investigation[172]; and the percentage increase in subject imports year on year between 2005 and 2008.[173]

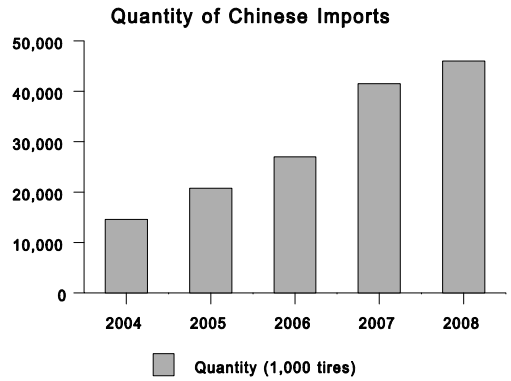
Year	2004	2005	2006	2007	2008
Quantity of subject imports (1,000 tyres)	14,575	20,790	27,005	41,503	45,975

Year	2004	2005	2006	2007	2008
Increase in subject imports (percentage points)	-	42.7	29.9	53.7	10.8

7.84 There were absolute increases in subject imports in each year of the period of investigation. This resulted in an overall increase of 31 million units, or 215.5 per cent, in subject imports from China by the end of the period.[174] The greatest increase occurred in the last two years of the period.[175] Regarding non-subject imports, the next largest increase in imports between 2004 and 2008 was from Indonesia, representing an increase of just 3.9 million units.[176] The absolute increases in volume of

[171] United States' First Written Submission, para. 141. USITC Report, page 12, footnote 55.
[172] Data referred to comes from the USITC Report, Table C-1.
[173] Data referred to comes from the USITC Report, Table C-1.
[174] USITC Report, pages 11-12, and Table II-1.
[175] We note that there was a 14.5 million unit increase in subject imports in 2007 compared to 2006, representing a 53.7 per cent increase; and a 4.5 million unit increase in 2008 compared to 2007, representing a 10.8 per cent increase. The increase in 2008 was in addition to the large increase in 2007.
[176] USITC Report, Table II-1.

subject imports from China over the period of investigation are clearly depicted in the following graph:[177]



7.85 On the basis of this data, the USITC concluded:

> In absolute terms, imports of subject tires from China increased throughout the period of investigation and were the highest, in terms of both quantity and value, in 2008, at the end of the period. The quantity of subject imports rose by 215.5 percent between 2004 and 2008, by 53.7 percent between 2006 and 2007, and by 10.8 percent between 2007 and 2008." The value of subject imports rose even more rapidly, increasing by 294.5 percent between 2004 and 2008, by 60.2 percent between 2006 and 2007, and by 19.8 percent between 2007 and 2008.
>
> ...we find that the subject imports increased, both absolutely and relatively throughout the period by significant amounts in each year and, as stated above, were at their highest levels at the end of the period in 2008. Whether viewed in absolute or relative terms, and whether viewed in terms of the increase from 2007 to 2008 alone or the increase in the last two full years (or even the last three years), the increases were large, rapid, and continuing at the end of the period – and from an increasingly large base.[178]

7.86 At first glance, taking into account the absolute import data outlined above, we see no error in the USITC's conclusion that there was a rapid increase in subject imports from China in absolute terms.[179]

[177] United States' Second Written Submission, para. 20. USITC Report, pages.11-12 and Table C-1.
[178] USITC Report, pages 11-12. Footnotes omitted. We consider relative data and data based on value in paras. 7.94-7.99 and 7.104 below.
[179] China also argues, as part of a 3 prong test, that there should be an analysis of the most recent year in more detail when the initial analysis shows imports are slowing. In this case, China argues that quarterly data for the final two years of the period of investigation should have been analysed. *See* China's Second Written Submission, para. 87 and China's Reply to Question 14, para. 56. We do not agree that subject imports were slowing in 2008. Indeed, in 2008 subject imports were at their highest levels in absolute terms. We note that China provides quarterly data for 2007 and 2008 in para. 127 of its First Written Submission and at Exhibit China-26. This data reveals that the two highest absolute quarterly quantities were Q2 and Q3 2008, and apart

(ii) The meaning of the phrase "increasing rapidly"

7.87 Despite these absolute increases, China argues that imports were not "increasing rapidly" in accordance with the Protocol. According to China, the use of the present continuous tense in the phrases "are being imported" (Paragraph 16.1) and "are increasing" (Paragraph 16.4) requires the investigating authority to focus on the *most* recent past, in this case 2008.[180] China asserts that this requirement for the most recent past is reinforced by the use of the term "increasing" in Paragraph 16.4, rather than the term "increased".[181] China also submits that the increase in imports must be "rapid", which China understands as requiring a quick progression in the rate of increase in the volume of imports.[182] We note that China outlines two scenarios for the meaning of "rapidly" and acknowledges that other scenarios might be possible.[183] The first scenario is that imports must be increasing at a consistently very high rate. The second scenario is that imports must be increasing at a higher rate in each successive year.[184] China argues that, regardless of the scenario, the rate cannot be declining rapidly and that it is "fatal" that the rate of increase from 2007 to 2008 was "a fraction of any of the prior years."[185]

7.88 We note China's argument that the use of the present continuous tense in the phrases "are being imported" (Paragraph 16.1) and "increasing" (Paragraph 16.4) require a focus on the most recent past. However, we recall that the Appellate Body has found the grammatical construction of the phrase "is being imported" in Article 2.1 of the *Safeguards Agreement* to mean that "the increase in imports must have been sudden and recent".[186] The Appellate Body did not find that the increase must have occurred in the *most* recent past.[187]

from the final quarter, on a comparative basis subject imports were higher in 2008 than 2007. See U.S. First Written Submission para. 28. In our view, the legal standard for finding imports to be "increasing rapidly" does not hinge on the final quarter comparison between 2007 and 2008.

[180] We note that China considers the most recent past will include the most recently completed year and any more recent period for which data is available. *See* China's Reply to Question 14 from the Panel, para. 53. China's Second Written Submission, para. 84. We address China's arguments regarding the need to include the first quarter 2009 data in paras. 7.106 to 7.109. We note that the situation during the period of investigation is used as a proxy for the situation pertaining currently at the time of imposition. Panel Report, *Japan – DRAMS (Korea)*, para. 7.357. *See* also Panel Report, *Mexico – Anti-Dumping Measures on Rice*, para. 7.58.

[181] China's Second Written Submission, para. 71.

[182] We also note that China considers a "rapid" increase is an *additional* requirement to the requirements in the *Safeguards Agreement*, thus setting forth a standard even more demanding under the Protocol. *See* China's First Written Submission, para. 67. We do not agree that it is useful to compare the *Safeguards Agreement* and the Protocol in this way. The obligations under the Protocol must be interpreted according to the *Vienna Convention*.

[183] China's Second Written Submission, para 77. China's First Written Submission, para. 81.

[184] We note that China focuses on the second of these scenarios, as do we in our analysis. See, for example China's First Written Submission, paras. 115, 120-126, and 131-135; Oral Statement by China at the First Panel Meeting, paras. 26-31; China's Reply to Questions 13 and 14, paras. 49-55; China's Second Written Submission, paras. 110-117.

[185] China's Second Written Submission, para. 112.

[186] Appellate Body Report, *Argentina – Footwear (EC),* para. 130. We do not consider the term "sudden" applies here given Paragraph 16.4 of the Protocol includes the term "rapidly". Since Article 2.1 of the *Safeguards Agreement* does not refer to the term "increasing rapidly", case law interpreting what is happening to imports under Article 2.1 of the *Safeguards Agreement* is of limited contextual relevance.

[187] We note that the period of investigation needs to be recent in order to be relevant, but still long enough to ensure a proper analysis of what is happening to imports over the period, with a focus on the latter part of the investigation. Appellate Body Report, *US – Steel Safeguards*, para. 374.

7.89 According to the panel in *US – Line Pipe*:

> The word 'recent' – which was used by the Appellate Body in interpreting the phrase 'is being imported' – is defined as 'not long past; that happened, appeared, began to exist or existed lately'.[188] In other words, the word 'recent' implies some form of retrospective analysis. It does not imply an analysis of the conditions immediately preceding the authority's decision. Nor does it imply that the analysis must focus exclusively on conditions at the very end of the period of investigation.[189]

7.90 The findings of the Appellate Body in *Argentina – Footwear (EC)* and the Panel in *US – Line Pipe* are applicable here. We consider that the phrase in Paragraph 16.1 of the Protocol, "are being imported" is essentially the same as the phrase "is being imported" in Article 2.1 of the *Safeguards Agreement*. As such, we consider that the Appellate Body's interpretation of the temporal implications of the phrase "is being imported" provides useful guidance in this case. We are also guided by the finding of the panel in *US – Line Pipe* that, although "the word 'recent' implies some form of retrospective analysis... [i]t does not imply an analysis of the conditions immediately preceding the authority's decision". These findings suggest that there is nothing in the use of the present continuous tense in Paragraphs 16.1 and 16.4 of the Protocol that would require an investigating authority to focus on the movements in imports during the *most* recent past, or during the period immediately preceding the authority's decision.

7.91 We recall China's focus on the fact that Paragraph 16.4 uses the term "increasing", in the present continuous tense, rather than the past tense "increased". China argues that the difference between imports that have "increased rapidly" and imports that are "increasing rapidly" means that an investigating authority must find that imports are still "increasing" rapidly during the most recent period. We agree there is a temporal difference between imports that have increased rapidly and those that are increasing rapidly. However, the text of Paragraph 16.1 does not say "increased rapidly". The text says "are being imported … in such increased quantities" and, as acknowledged by China, this phrase uses the same grammatical tense as the phrase "increasing rapidly" in Paragraph 16.4. Reading the terms "increased" and "increasing" in their proper context, we do not consider that the use of the term "increasing" in Paragraph 16.4 requires a focus on a more recent period than the term "increased" in Paragraph 16.1.[190]

7.92 We note that the ordinary meaning of rapid means "progressing quickly; developed or completed within a short time".[191] The adverb "rapidly" is defined as "… with great speed, swiftly".[192] There is no reference to the rate of increase in the dictionary meaning of "rapidly", nor any suggestion that imports can only increase rapidly if there is an increase in the rate of increase in those imports. Accordingly, in order for imports to be "increasing rapidly", they need only be increasing "with great speed", or "swiftly". There is no need for any swift progression in the *rate* of increase in those imports. Nor does a decline in the rate of increase necessarily preclude a finding that imports are "increasing rapidly". Under the Protocol the rapid increase need only be on an absolute or relative basis.

[188] *The Compact Edition of the Oxford English Dictionary*, Volume 1 (Oxford University Press, 1971).

[189] Panel Report, *US – Line Pipe,* para. 7.204.

[190] China also relies on its understanding of the object and purpose of Paragraph 16 of the Protocol to support its call for a narrow interpretation of the phrase "increasing rapidly". We address China's arguments regarding the object and purpose of Paragraph 16 of the Protocol at paras. 7.147-7.149.

[191] Shorter Oxford English Dictionary, Vol.2, page 2463. Both China and the United States acknowledge this dictionary definition. *See* China's First Written Submission, para. 79. United States' First Written Submission, para. 87.

[192] Shorter Oxford English Dictionary, Vol. 2, page 2465.

7.93 Furthermore, even if the USITC had been required to focus on imports during the last year of the period, the fact that the 10.8 per cent increase in 2008 was lower than the increase in the preceding year does not mean that imports were not "increasing rapidly" in 2008. An increase of 10.8 per cent in 2008 by no means precludes a finding that imports are "increasing rapidly", especially when that increase is assessed in context.[193] Nor is it a "modest" increase.[194] In this regard, we recall that the 10.8 per cent increase in absolute volumes between 2007 and 2008 was *in addition* to an increase of 53.7 per cent between 2006 and 2007, which was *in addition* to an increase of 29.9 per cent between 2005 and 2006, which was *in addition* to an increase of 42.7 per cent between 2004 and 2005. In our view, the 10.8 per cent increase in absolute volumes from 2007 to 2008 reinforces the USITC's conclusion that imports were "increasing rapidly" during the period, and continued to be "increasing rapidly" at the end of the period.

(iii) Relative increase in imports

7.94 We note that there is no definition in the Protocol for imports that are "increasing rapidly... relatively". Therefore, in our view, any reasonable form of a relative assessment is acceptable. As such, the interpretation of this factor is not necessarily limited to a consideration of the market share of Chinese imports, i.e., imports from China as a percentage of total consumption. We see no reason why imports relative to domestic production cannot also be considered. We note that in this case the USITC considered *both* imports relative to market share *and* imports relative to domestic production.[195] Specifically, the USITC found that:

> Both the ratio of subject imports to U.S. production and the ratio of subject imports to U.S. apparent consumption rose throughout the period examined, and both ratios were at their highest levels of the period in 2008. The ratio of subject imports to U.S. production increased by 22.0 percentage points between 2004 and 2008, with the two largest year-to-year increases occurring at the end of the period in 2007 and 2008. The ratio of subject imports to U.S. apparent consumption increased by 12.0 percentage points during the period examined, with the two largest year-to-year increases also occurring at the end of the period in 2007 and 2008.[196]

7.95 We summarise below the data regarding the market share of China's imports compared to the market share of non-subject imports:[197]

U.S. imports from:	2004	2005	2006	2007	2008
China (%)	4.7	6.8	9.3	14.0	16.7
All other sources (%)	31.9	33.6	34.5	33.4	33.7

7.96 There was an increase in the market share of subject imports from China in every year, leading to a 12 percentage point increase over the period of investigation. In comparison, the market share of non-subject imports was more or less stable.[198]

[193] And we note that in making its finding the USITC considered the "increase and rate of increase in subject imports". USITC Report, page 11.
[194] China's First Written Submission, para. 125.
[195] USITC Report, page 12.
[196] USITC Report, page 12. *See* also Table II-2 and Table V-1.
[197] USITC Report, Table C-1.

7.97 We summarise below the data for subject imports as a percentage of domestic production.

Year	2004	2005	2006	2007	2008
Subject imports as % of domestic production	6.7	10.0	14.6	23.0	28.7

7.98 We note that there were increases in subject imports relative to domestic production year after year, as demonstrated in the above table.[199] There was a 22 percentage point increase in subject imports relative to domestic production over the period of investigation. Thus, regardless of a focus on imports relative to market share or relative to domestic production there were increases from year to year and significant increases over the period of investigation.

7.99 China argues that "stable" changes in market share reveal that imports are not increasing rapidly on a relative basis (See table in para. 7.45, above: the change in the market share between 2004 and 2005 was 2.1 percentage points; between 2005 and 2006 was 2.5 percentage points; between 2006 and 2007 was 4.7 percentage points; and between 2007 and 2008 was 2.7 percentage points). While we consider comparing rates of increase from year to year might be useful, we have already explained its limitations. The *change* in the market share seems to us a step further away again from the text of the Protocol where the obligation is to find rapid increases "either absolutely or relatively".

7.100 In any event we have, up to this point, determined that the USITC gave a reasonable and adequate explanation for concluding that the absolute data indicates that imports are "increasing rapidly". That is sufficient under the Protocol and it is not necessary to consider the situation in relation to relative data. However, for the sake of completeness we have done so, and find that given rapidly increasing subject imports from China relative to domestic production and relative to market share, imports are "increasing rapidly" in relative terms.

(iv) End-point-to-end-point analysis

7.101 The Panel next considers China's arguments regarding the utility of an end-point-to-end-point analysis by recalling what the Appellate Body said in *Argentina – Footwear (EC)*:

> We agree with the Panel that Articles 2.1 and 4.2(a) of the *Agreement on Safeguards* require a demonstration not merely of *any* increase in imports, but, instead, of imports 'in such increased quantities ... and under such conditions as to cause or threaten to cause serious injury.' In addition, we agree with the panel that the specific provisions of Article 4.2(a) require that 'the *rate* and *amount* of the increase in imports...in absolute and relative terms'(emphasis added) must be evaluated. Thus, we do not dispute the Panel's view and ultimate conclusion that the competent authorities are required to consider the *trends* in imports over the period of investigation (rather than just comparing the end points) under Article 4.2(a). As a result, we agree with the Panel's conclusion that 'Argentina did not adequately consider the intervening trends in imports, particular the steady and significant declines in imports beginning in

[198] Non-subject imports are discussed in more detail in the discussion on other causes of injury at paras. 7.364 to 7.367.
[199] China argues that the domestic production factor is unreliable given that the "domestic industry is engaging in a conscious strategy of shifting some of its production offshore …". China's Reply to Question 38 from the Panel, para. 51. We address the business strategy issue in paras. 7.285-7.322.

> 1994, as well as the sensitivity of the analysis to the particular end points of the investigation period used.[200]

7.102 As we understand it the Appellate Body is not saying that an end-point-to-end-point analysis is prohibited in all circumstances. But, rather, that the investigating authority in *Argentina – Footwear (EC)* did not assess the trends in imports during the period of investigation adequately, and did not take into account the particular sensitivity of the analysis to the end points selected given intervening trends. That is, the investigating authority in that case did not adequately consider the declines in absolute and relative imports in the final two years of the investigation.[201] Such was the significance of the decreases in that case that a one-year change in the base year "transformed the increase relied upon by Argentina into a decline".[202] We note that in the case before us the facts are very different. The USITC did not rely exclusively on an end-point-to-end-point analysis, but rather engaged in various temporal comparisons.[203] Furthermore, there was not even a predominant reliance on an end-point-to-end-point analysis, as the USITC relied on the fact that there was an absolute and relative increase in subject imports in every year of the investigation.[204]

7.103 China claims that an end-point-to-end-point-analysis "can obscure the more relevant analysis of what is happening over the more recent period".[205] We note that the Appellate Body in *US – Steel Safeguards* was concerned that a "simple end-point-to-end-point analysis could easily be manipulated" in cases where there is no "clear and uninterrupted upward trend in import volumes".[206] In this case, however, there was "a clear and uninterrupted upward trend in import volumes". As such, the results could not be manipulated by the selection of end points.[207]

(v) Value / volume

7.104 The Panel next considers China's argument that the USITC relied on increases in value rather than increases in volumes. The Panel begins by noting that even though the text of the Protocol refers to quantities, it does not prohibit an analysis that looks at the value of imports. We note that in this case the USITC assessed both the quantity and value of imports.[208] The value of subject imports rose by 294.5 per cent between 2004 and 2008; 52.6 per cent between 2004 and 2005; 34.7 per cent between 2005 and 2006; by 60.2 per cent between 2006 and 2007, and by 19.8 per cent between 2007 and 2008.[209] If an assessment of the quantity of imports tells a starkly different story to that of value due to factors influencing value being something other than volumes of imports, then a more searching analysis might discount an assessment based on value. However, China has not presented any arguments to suggest that the increase in value in this case could be explained by factors other than an increase in subject imports.[210]

[200] Appellate Body Report, *Argentina – Footwear (EC)*, para. 129. (Footnotes omitted).
[201] Panel Report, *Argentina – Footwear (EC)*, paras. 8.153 – 8.164.
[202] Panel Report, *Argentina – Footwear (EC)*, para. 8.164.
[203] *See* para. 7.85.
[204] *See* paras. 7.83-7.86 and 7.94-7.100 on absolute and relative data.
[205] China's Second Written Submission, para. 105.
[206] Appellate Body, *US – Steel Safeguards*, para 354.
[207] We note that China also argues that the USITC needed to focus on the most recent period and look at increases in 2008 relative to the entire period. China considers the failure by the USITC to focus on 2008 in this way was "in "large part [due] to its over reliance on an 'end-point-to-end-point' analysis". We have considered the relevance of the *most* recent period in paras. 7.87-7.93.
[208] USITC Report, pages 11-12.
[209] *See* USITC Report, Table C-1.
[210] We note that Table II-I in the USITC Report provides information regarding the per unit price of subject imports. It shows that the increase in price over the period (from 31.10 per unit in 2004 to 38.90 per unit in 2008, or a 25 per cent increase) was substantially less that the overall increase in value (294.5 per cent between 2004 and 2008).

(vi) Low base

7.105 China also argues that there was a "low" base at the beginning of the investigation period and this was never put into context by the USITC. In our view subject imports were not "low" at the beginning of the period. Having five per cent of the market at a value of 450 million dollars, and being the fourth largest import source are far from humble beginnings. Furthermore, gaining 12 percentage points in market share at a value of 1.7 billion dollars, and becoming the largest import source over the period of investigation means subject imports were a large and significant presence in the market at the end of the period.[211]

(vii) Interim data for the first quarter of 2009

7.106 Finally, the Panel addresses China's argument that data from the first quarter of 2009 should have been included in the period of investigation. The Panel begins its analysis by recalling footnote 55 on page 12 of the USITC Report which explains why the USITC did not collect or analyse Q1 2009 data.

> ... The data the Commission compiled and relied upon in this investigation, however, did not include first quarter 2009 data because a relatively complete data series for that period would not have been available in time for use in this investigation. The first quarter 2009 import data also are of no probative value in determining whether subject imports are increasing rapidly in relative terms in the absence of a data series that includes first quarter 2009 data on U.S. production and U.S. apparent consumption. Thus consideration of first quarter 2009 import data alone would not change our finding that imports of the subject imports from China are increasing rapidly, both absolutely and relatively."[212]

7.107 Regarding the selection of an investigation period, we recall that WTO jurisprudence in relation to the *Safeguards Agreement* says that where there are no specific rules as to the length of the period of investigation, the period selected must be sufficiently long to allow conclusions to be drawn regarding increased imports, and the period must allow an investigating authority to focus on recent imports.[213] We consider that the same logic applies in the context of the Protocol. In our view, given that there are no precise guidelines in the Protocol, the selection of a five year period of investigation that ended less than four months before the beginning of the investigation provides recent data and satisfies the standard under the Protocol.

7.108 We note that the Parties do not agree on what the USITC standard practice is regarding interim data. China argues that the USITC has a "well-established and consistent practice of collecting interim data in other cases".[214] The United States says that the USITC has an established practice in investigations under Section 421 "of collecting, at a minimum, five full years of data, plus any interim period that can reasonably be collected"[215] but that the USITC decides on a case-by-case basis whether to attempt to collect data for the interim period.[216] For the purposes of our analysis we

[211] USITC Report, Table C-1.
[212] USITC Report, page 12, footnote 55.
[213] Panel Report, *US – Line Pipe,* para. 7.201.
[214] China's First Written Submission, para. 139.
[215] United States' First Written Submission, para. 132.
[216] United States' First Written Submission, para. 132. Regarding the United States argument drawing on *US – Lamb* to support its view of a recent period of time, we note that the comments by the Appellate Body in that case were in relation to the evaluation of the state of the domestic industry when making a threat

do not consider it relevant whether the USITC deviated from its standard practice, only whether the choice of an investigation period was reasonable and adequate, and we have concluded that it was.[217]

7.109 We note that the USITC was concerned at not having relative data for the first quarter of 2009 and considered that even if it had collected absolute data for the first quarter of 2009, it would have served no probative value as it could not have completed the analysis regarding rapidly increasing imports without relative data. We note also that in the other Section 421 investigations both absolute and relative data were included.[218] Given the requirement to consider imports that are "increasing rapidly, either absolutely or relatively" it seems only practical that all data be available for any period selected as part of the investigation period in order to be able to determine whether imports are "increasing rapidly". In any event, we do not consider the USITC was obliged to collect and incorporate absolute and relative data for the first quarter of 2009 into its period of investigation.

4. Conclusion

7.110 For all of the above reasons, we conclude that the USITC did not fail to evaluate properly whether imports from China met the specific threshold under Paragraph 16.4 of the Protocol of "increasing rapidly".

C. IS THE U.S. IMPLEMENTING STATUTE'S CAUSATION STANDARD INCONSISTENT AS SUCH WITH PARAGRAPH 16.1 AND PARAGRAPH 16.4 OF THE PROTOCOL?

7.111 China claims that Section 421 is "as such" inconsistent with Paragraph 16 of the Protocol (irrespective of the way in which the USITC applied that standard in the *Tyres* investigation), because it fails to fully implement the "significant cause" standard set forth in Paragraph 16.4 of the Protocol. China asserts that the U.S. implementing statute properly cites the appropriate causation standard as "significant cause", but then improperly defines "significant cause" as:

> a cause which *contributes significantly* to the material injury of the domestic industry, but *need not be equal to or greater than any other cause*.[219]

7.112 China's claim focuses on two elements of the definition set forth in the statute. First, China asserts that the statute lowers the Paragraph 16.4 causation standard by redefining "significant cause" as "contributes significantly". Second, China contends that the statute further lowers the causation standard by allowing imports to be a less important factor than any other single cause, no matter how minor that other cause might be.

7.113 The United States contends that the causation standard of the U.S. implementing statute is fully consistent with the provisions of the Protocol.

---

determination. The comments were not in relation to increased imports. Therefore we do not consider it relevant context for the purposes of this case. In any event we have already given our views on the temporal element to be considered under the Protocol in interpreting "increasing rapidly" - i.e. that it is the recent period of time that needs to be considered, while also considering trends over the period of investigation with particular attention on what is happening to imports in the latter part of the period.

[217] We note that, in the Section 421 investigations mentioned by China, the amount of time that had elapsed between the end of the most recent quarter and the filing of the petition ranged from 33 to 67 days, compared to the 20 days in this case. We consider this difference notable. We also note that responses to questionnaires were due on 7 May 2009, and it is arguably not reasonable to expect exporters, importers and producers to supply first quarter absolute and relative data by 7 May.

[218] China's Reply to Question 37 from the Panel, paras. 44-47.

[219] 19 U.S.C. § 2451(c)(1). (emphasis supplied)

7.114 Before turning to the substance of the parties' arguments, we first examine a threshold issue regarding the application of the mandatory/discretionary distinction.

1. Threshold issue regarding the application of the mandatory/discretionary distinction

7.115 We note the U.S. argument that, consistent with a long-standing distinction in GATT and WTO case law between mandatory and discretionary legislation, China must demonstrate that Section 421 mandates, or requires, the USITC to apply a causation standard that is inconsistent with the Protocol. The United States submits that there is nothing in the U.S. statute that mandates action that is inconsistent with the United States' obligations under the Protocol.

7.116 China contends that "the Appellate Body has explained that panels are *not* obliged, as a preliminary jurisdictional matter, to examine whether the challenged measure is mandatory".[220] China further contends that the general status of the mandatory/discretionary distinction is unsettled, and accordingly the Appellate Body has urged "caution against the application of this distinction in a mechanistic fashion".[221] China submits that, in any event, Section 421 does require the USITC to apply a fundamentally flawed definition. China asserts that the United States has not argued, and indeed cannot argue, that the USITC was free to disregard the statutory definition at its discretion.[222] China asserts that whenever the USITC makes the legal finding that imports are "a significant cause" of material injury, this finding is necessarily defined to be something different from (and lower in standard than) a finding of "significant cause" in accordance with the correct standard under the Protocol.

7.117 While we acknowledge that the Appellate Body has cautioned against the application of this distinction "in a mechanistic fashion", the Appellate Body has not expressly ruled out the applicability of the mandatory/discretionary distinction in the context of assessing the WTO-consistency of a legislative measure. Rather, the Appellate Body has itself implicitly applied the distinction. Thus, in *US – Carbon Steel*, the Appellate Body upheld the panel's ruling on the basis that "the European Communities did not satisfy its burden of proving either that United States law *mandates* USDOC to act inconsistently with Article 21.3 of the *SCM Agreement*, or that such law restricts in a material way USDOC's *discretion* to make a determination consistent with Article 21.3 in a sunset review".[223] The Appellate Body also did not rule out the application of the mandatory/discretionary distinction when the occasion to do so presented itself in *US – Zeroing (EC) (Article 21.5 – EC)* Instead, the Appellate Body repeated an earlier finding that "the import of the 'mandatory/discretionary distinction' may vary from case to case".[224]

7.118 In practice, the import of the mandatory/discretionary distinction is most pronounced in cases where, although a Member's law appears to be WTO-inconsistent on its face, there is sufficient discretion to allow national authorities to apply the law in a WTO-consistent manner. In such cases, the discretion reserved to national authorities "saves" the statute. For the reasons set forth below, we do not consider that Section 421 appears inconsistent on its face. In this case, therefore, the potential import of the mandatory/discretionary distinction is limited. That being said, we consider that we should approach China's "as such" claim against Section 421 by evaluating whether or not

Section 421 requires the United States to establish causation in a manner inconsistent with Paragraph 16 of the Protocol.[225]

2. Whether the statute lowers the Paragraph 16.4 causation standard by redefining "significant cause" as "contributes significantly"

(a) Arguments of the parties

7.119 **China** asserts that the U.S. "contributes significantly" definition is at odds with the ordinary meaning of the Paragraph 16.4 "significant cause" standard, interpreted in context and in light of the object and purpose of the Protocol.

7.120 In respect of the ordinary meaning of the terms, China contends that the statute improperly equates the word "cause" with "contribute", whereas these two words in fact have very different meanings. China asserts that the ordinary meaning of "cause" is "that which produces an effect or consequence"[226] or "something that brings about an effect or a result".[227] China contends that, by contrast, the ordinary meaning of "contribute" is "to play a part in the achievement of a result"[228], or "to play a significant part in bringing about an end or result"[229], which is a weaker notion than that of "cause". China contends that a cause "produces" or "brings about" the consequence, and does not merely "contribute to" or "play a part" in its occurrence.

7.121 China refers to the French and Spanish versions of the Protocol in support of its argument. China asserts that the French version uses the verb "causer", which means "to be at the origin of something, to have something as effect".[230] China asserts that the verb "contribuer" is defined so as to have a lower determinative value, meaning to merely "help with", or "have a part, more or less important, in the production of a result".[231] China makes similar arguments in respect of the translation and meaning of the Spanish terms "causar", "causa" and "contribuir".[232] According to China, both the French and Spanish versions of the text reveal the much less-determinative character of "to contribute" when compared with "to cause".

7.122 China asserts that the addition of the word "significant" strengthens this causal link requirement, since the Shorter Oxford English Dictionary defines "significant" as "important, notable, consequential".[233] China submits that the causal connection must be important, notable, or consequential, such that a simple causal connection is not sufficient. China contends that the ordinary meaning of "significant cause" therefore requires a particularly strong, manifest and important causal connection. China contends that the U.S. statute fails to reflect this standard, since a factor can make an "important contribution" at a far lower level of casual relationship than when it rises to the level of an "important cause".

[225] In doing so, we are guided in particular by the approach of the panel in *Korea – Commercial Vessels,* paras. 7.60–7.67.

[232] China's First Written Submission, para. 200.
[233] Shorter Oxford English Dictionary, Vol. 2, at 2833 (2007 ed.).

7.123 China relies on the context of the phrase "significant cause", and the object and purpose of the Protocol, to argue that "significant cause" should be interpreted more narrowly than the "causal link" causation standard set forth in Article 4.2(b) of the *Safeguards Agreement.*

7.124 Regarding context, China first notes that paragraph 246(c) of the Working Party Report provides:

> 246. …Members of the Working Party confirmed that in implementing the provisions on market disruption, WTO Members would comply with those provisions and the following: ….
>
> > (c) In determining whether market disruption existed, including the causal link between imports that were increasing rapidly, either absolutely or relatively, and any material injury or threat of material injury to the domestic industry, the competent authority would consider objective factors …

7.125 China contends that the term "cause" in Paragraph 16 of the Protocol and the phrase "causal link" in the Working Party Report are used synonymously. China then directs the Panel to the WTO case law regarding the interpretation of the phrase "causal link" in Article 4.2(b) of the Safeguards Agreement. In particular, China notes that the Appellate Body has found that the phrase "causal link" (as used in Article 4.2(b) of the *Safeguards Agreement*) requires a showing that there is a "*genuine and substantial relationship* of cause and effect between imports and threat of injury".[234]

7.126 China asserts that Paragraph 16.4 of the Protocol then goes further, as the word "significant" is used to strengthen the basic requirement to establish a "genuine and substantial relationship of cause and effect between imports and threat of injury". According to China, it is no longer enough for the relationship to be "genuine and substantial"; the relationship must be both "genuine and substantial" and also must be "significant". China asserts that, whereas the Protocol imposes a more stringent causation standard than the *Safeguards Agreement*, the U.S. statutory definition of "contributes significantly" actually lowers that threshold.

7.127 A further contextual element relied on by China concerns the meaning of the term "market disruption". China asserts that the word "disruption" means "break apart, throw into disorder, shatter; separate forcibly; esp. interrupt the normal continuity of (an activity etc); throw into disorder".[235] China also refers to the French and Spanish versions of the Protocol (which refer respectively to "désorganisation du marché" and "desorganización del Mercado").[236] China contends that the causal relationship that justifies the imposition of a product-specific safeguard measure must not only be significant, but also have the very serious consequence of throwing the market into disorder, breaking it apart, or shattering it.

7.128 As for object and purpose, China asserts that the Protocol as a whole should be viewed as an instrument which facilitates the expansion of trade. According to China, Paragraph 16 of the Protocol is an exceptional, country-specific measure designed to address unforeseen surges in imports from China – an "escape valve" to be used only in emergency situations as an extraordinary remedy. China contends that Paragraph 16 should therefore be given a narrow construction, to differentiate the higher

[234] Appellate Body Report, *US – Softwood Lumber VI (Article 21.5 – Canada),* para. 132 (emphasis added).

[236] China's First Written Submission, para. 189.

causation standard of Paragraph 16 from the lower causation standard applied in the *Safeguards Agreement*.

7.129 The **United States** contends that China's argument regarding the distinction between "cause" and "contribute" is premised on the mistaken notion that the Protocol requires that imports from China be the sole cause of material injury to an industry. The United States asserts that China's argument is inconsistent with the text of the Protocol, as the Protocol provides that "market disruption shall exist" if Chinese imports constitute "*a* significant cause of material injury" to the industry. By providing that Chinese imports may constitute "a significant cause" of injury, the Protocol explicitly contemplates that there may be multiple significant causes of material injury or threat to an industry, a point which China ignores.

7.130 The United States asserts that China's argument is also inconsistent with the ordinary meaning of the word "cause". The United States contends that, while the Shorter Oxford English Dictionary defines the word "cause" as meaning a factor that "produces an effect or consequence" or "that brings about an effect or result"[237], there is no question that the word "cause" can be used to describe a situation where more than one factor brings about or produces a particular effect or result. According to the United States, one can correctly state that the "hearing room's heating system *and* the sun's rays on the windows of the hearing room caused the hearing room to be very hot during the morning session". The United States asserts that, given that it is entirely correct to use "cause" in this manner, it is also clear that "cause" can be used with respect to situations where multiple factors contribute to "bringing about" or "producing" an effect or result.

7.131 The United States further contends that China's argument is inconsistent with the Appellate Body's explanation of the terms "cause" and "causal link" in the *Safeguards Agreement* context. According to the United States, the Appellate Body examined the "causal link" requirement contained in Article 4.2(b) of the *Safeguards Agreement* in *US – Wheat Gluten*, and explained:

> The word "causal" means "relating to a cause or causes," while the word "cause," in turn, denotes a relationship between, at least, two elements, whereby the first element has, in some way, "brought about," "produced,", or "induced" the existence of the second element. The word "link" indicates simply that increased imports have played a part in, *or contributed to*, bringing about serious injury so that there is a causal "connection" or "nexus" between these two elements. Taking these words together, the term "causal link" denotes, in our view, a relationship of cause and effect such that increased imports *contribute to "bringing about, "producing," or "inducing*" the serious injury.[238]

7.132 The United States contends that since China has conceded that the words "cause" and "causal link" are effectively the same for the purposes of the analysis set forth in the Protocol[239], this reasoning would suggest that the ITC can reasonably assess whether increased imports are a significant "cause" of injury to the industry by assessing whether they significantly "contribute" to the industry's injury.

[237] The United States refers in this regard to the dictionary definition set forth at para. 198 of China's First Written Submission.

[238] Appellate Body Report, *US – Wheat Gluten*, para. 67, emphasis supplied.

[239] The United States refers in this regard to China's First Written Submission, para. 180 ("the term 'cause' in the text of Article 16 of the Protocol and the phrase 'causal link' as used in the discussion of Article 16 of the Working Party Report are used synonymously").

7.133 The United States asserts that China is wrong to argue that by modifying "cause" with "significant", the Protocol simply took the causation standard of the *Safeguards Agreement* and made it more "severe". The United States contends that, under the *Vienna Convention*, each term must be interpreted in the context of its particular agreement. The United States asserts that such analysis demonstrates two different requirements: a "genuine and substantial relationship of cause and effect" under the *Safeguards Agreement* and an "important, notable, or consequential" cause under Paragraph 16 of the Protocol. The United States submits that China's effort to argue that one is more "severe" than the other is a pointless exercise, as it provides no guidance as to the meaning of either, or as to whether the causation standard under Section 241 is consistent with Paragraph 16 of the Protocol.

7.134 Regarding China's reliance on definitions of the words "market" and "disruption", the United States submits that there is no need for the Panel to consult a dictionary to define the term "market disruption" because the Protocol itself defines the term. The United States relies on Article 31.4 of the *Vienna Convention*, whereby "[a] special meaning shall be given to a term if it is established that the parties so intended". The United States contends that, in accordance with that principle, the Protocol's explicit definition of the term makes recourse to other sources unnecessary.

7.135 The United States disputes China's argument that a more "demanding" standard for causation should be applied under Paragraph 16 of the Protocol because the transitional product-specific safeguard mechanism is an "exceptional, country-specific measure designed to address unforeseen surges in imports from China".[240] The United States contends that China is mistaken in claiming that the transitional remedy under Paragraph 16 was intended to be used only in exceptional circumstances involving unforeseen surges in Chinese imports. According to the United States, the extraordinary nature of global safeguards is squarely rooted in the texts and immediate contexts of Article XIX of the GATT 1994 and the text of the *Safeguards Agreement*, which refer to the concepts of "emergency action" and "unforeseen and unexpected" developments. The United States contends that China's theory is based on the mistaken assumption that the basic principles that are applicable to an action taken under the *Safeguards Agreement* are also applicable to the transitional mechanism specified in the Protocol. The United States asserts that, unlike the provisions of Article XIX of the GATT 1994 and the provisions of the *Safeguards Agreement*, nothing in the Protocol indicates that the Protocol's transitional measure was intended to be an "emergency action"[241] or that the rapid increase in imports from China must be the result of "unforeseen developments".[242] The United States submits that, because similar terms and language were not included in Paragraph 16 of the Protocol, it is inappropriate to conclude, as China does, that the Appellate Body's statements about the "extraordinary" nature of a global safeguard apply to the transitional mechanism set forth in the Protocol.

(b) Evaluation by the Panel

7.136 The WTO Agreement does not prescribe any particular manner in which a Member's WTO obligations and commitments must be transposed into its domestic law. Accordingly, there is nothing to prevent a Member from including in its domestic law definitions of terms used in the WTO Agreement. Although a Member's decision to define WTO terms runs the risk that the resultant definition may not be WTO-consistent, WTO-inconsistency must not be presumed. Accordingly, the onus is on China to establish that the Section 421 definition of "significant cause" as "contributes significantly" is inconsistent with the causation standard set forth in Paragraph 16.4 of the Protocol.

[240] China's First Written Submission, paras. 191-193.

[241] GATT 1994, Article XIX:1(a); *Safeguards Agreement*, Article 11.1(a).

[242] GATT 1994, Article XIX:1(a).

7.137 China seeks to meet its burden by invoking dictionary definitions that allegedly show that the term "contribute" is less stringent than "cause". In particular, China submits that the ordinary meaning of "cause" is "that which produces an effect or consequence"[243] or "something that brings about an effect or a result"[244], whereas the ordinary meaning of "contribute" is merely "to play a part in the achievement of a result"[245], or "to play a significant part in bringing about an end or result"[246], which is a weaker notion than that of "cause". Thus, China contends that a cause "produces" or "brings about" the consequence, and does not merely "contribute to" or "play a part" in its occurrence.[247]

7.138 Looking exclusively at these dictionary definitions, one might legitimately conclude that a "contribution" has a lesser causal effect than a "cause". In particular, implicit in the definitional differences invoked by China is the notion that the term "contribute" allows for multiple factors to each "play a part in" bringing about a result, whereas "cause" means that the triggering event is in and of itself capable of bringing about, or producing, that result. In other words, a "cause" is capable of producing or bringing about a result on its own, whereas a "contribution" would only ever play a part in the occurrence of that result, along with other contributing factors.

7.139 We recall, though, that the terms of the Protocol must be interpreted in context. Of particular contextual importance in this regard is the fact that, according to Paragraph 16.4 of the Protocol, rapidly increasing imports need only be "a" significant cause of market disruption. In other words, the imports need not be the *sole* cause of the market disruption.[248] We note that the definitions cited by China do not appear to leave room for multiple causes. In particular, China invokes The Shorter Oxford English Dictionary definition of the noun "cause" as "*that which* produces an effect or consequence", and the verb "cause" as "to be *the* cause of, effect, bring about".[249] These definitions emphasise the singularity of the causal factor. The same emphasis on the singularity of cause is found in the French and Spanish definitions advanced by China. China notes that the French verb "causer" means "to cause", and is further defined as "to be at *the origin* of something, to have something as an effect". Regarding the Spanish version of Paragraph 16.4, China asserts that, in Spanish, the verb "causar" means "to cause", and is further defined as "when referring to a cause: produce its effect" as well as "[t]o be *the* cause, the reason and motive of the occurrence of something".[250] China further asserts that, "[n]otably, "causa" is defined as "cause"[251] as well as that "which is considered as fundamental to or *the origin* of something". Thus, both the French and Spanish definitions invoked by China suggest that an event has a single cause. In addition, both the French and Spanish definitions refer to the notion of "origin". Since an event may only have one origin, the singular nature of the causal factor inherent in the definitions proposed by China is again emphasised.

7.140 In the context of Paragraph 16.4, which refers to "*a* significant cause", we consider that Members must be entitled to interpret the term "cause" in a way that allows for the possibility that the

[243] Shorter Oxford English Dictionary, Vol. 1, at 365 (2007 ed.).
[244] Webster's Ninth New Collegiate Dictionary, at 217 (1986 ed.).
[245] Shorter Oxford English Dictionary, Vol. 1, at 509 (2007 ed.).
[246] Webster's Ninth New Collegiate Dictionary, at 285.
[247] The United States does not contest the dictionary definitions submitted by China.
[248] In its Reply to Question 19 (para. 61) from the Panel, China acknowledges that "the rapidly increasing imports need not 'produce' or 'bring about' the injury in and of themselves," but submits that "the causal role of subject imports ... requires something significantly more than mere contribution". This suggests that, for China, a contribution could necessarily only ever be a "mere" contribution. As explained below (*See* paras. 7.158 to 7.159), the Section 421 causation standard provides for more than a "mere" contribution.
[249] Shorter Oxford English Dictionary, Vol. 1, at 365-66 (2007 ed.).
[250] Diccionario de la Lengua Espanola, dictionary published by the Real Academia Espanola, available at: http://www.rae.es/rae.html.
[251] The Oxford Spanish Dictionary at 149 (2003 ed.).

causal factor is one of several causal factors that together produce or bring market disruption.[252] Where a Member does so, it is no longer appropriate to refer to each causal factor as "produc[ing] a result" (since this implies that each cause has produced the result on its own, which is not the case). Each causal factor might more accurately be said to play a part in producing that result. Since the ordinary meaning of "contribute" is to "play a part" in the achievement of a result"[253], it seems reasonable that Members might refer to multiple causes each "contributing" to the result.

7.141 Furthermore, we note that the parties in this case use the terms "cause" and "causal link" synonymously.[254] In the particular context of the Protocol, we agree with this approach. While Paragraphs 16.1 and 16.4 use the term "cause", paragraph 246(c) of the Working Party Report refers to the concept of "causal link":

> In determining whether market disruption existed, including the *causal link* between imports which were increasing rapidly, either absolutely or relatively, and any material injury or threat of material injury to the domestic industry, the competent authorities would consider objective factors, including (1) the volume of imports of the product which was the subject of the investigation; (2) the effect of imports of such product on prices in the importing WTO Member's market for the like or directly competitive products; (3) the effect of imports of such product on the domestic industry producing like or directly competitive products. (emphasis supplied)

7.142 According to paragraph 246(c), therefore, the finding of "cause" necessitated by Paragraph 16.4 might properly be referred to as a finding of "causal link". Thus, a finding that rapidly increasing imports are a (significant) cause of material injury is equivalent to a finding that there is a (significant) causal link between the imports and the injury. Regarding the meaning of the term "causal link" (in the first sentence of Article 4.2(b) of the *Safeguards Agreement*), the Appellate Body found in *US – Wheat Gluten* that:

> The word "link " indicates simply that increased imports have played a part in, or contributed to, bringing about serious injury so that there is a causal "connection" or "nexus" between these two elements." Taking these words together, the term "the causal link" denotes, in our view, a relationship of cause and effect such that increased imports contribute to "bringing about", "producing" or "inducing" the serious injury.[255]

7.143 The Appellate Body further explained that the "contribution must be sufficiently clear as to establish the existence of 'the causal link' required".[256] In other words, the Appellate Body finds that the existence of a causal link might be established on the basis of a (sufficiently clear) contribution. Since in the context of the Protocol the terms "cause" and "causal link" may properly be used synonymously, this guidance from the Appellate Body provides support – in the context of a provision that envisages a multiplicity of causal factors – for interpreting "cause" as "contribute to bring about".

[252] Although a Member might choose to interpret the term "cause" to mean *sole* cause, Paragraph 16 of the Protocol does not require them to do so.
[253] China's First Written Submission, para. 198.
[254] China's First Written Submission, para. 180, and United States' First Written Submission, para. 172.
[255] Appellate Body Report, *US – Wheat Gluten*, para. 67.
[256] Appellate Body Report, *US – Wheat Gluten*, para. 67.

7.144 In response to Question 5 from the Panel, China seeks to play down the relevance of the abovementioned finding by the Appellate Body (which concerned the first sentence of Article 4.2(b) of the *Safeguards Agreement*) by arguing that the ordinary meaning of the term "link" does not include the notion of "contribute to":

> China strongly doubts that the Appellate Body was focused here on the particular meaning of the word "contribute" and how this might relate to other possible formulations in relation to causation. Nor, in all likelihood, was the Appellate Body attempting to set in stone a definition of the term "link" for all future cases. More likely, the Appellate Body was concerned with setting out a reasoned explanation in the context of the particular circumstances of *US - Wheat Gluten*, as well as providing some useful guidance for the future.
>
> China notes the ordinary meaning of the word "link," as a noun, is "a connecting part" or "a means of connection." "Link" as a verb means "to connect or join (two things or one thing to another) with or as with a link." The notion of "contribute to" is simply not part of the ordinary meaning of "link."[257]

7.145 We are not persuaded by China's reading of the abovementioned finding by the Appellate Body in *US – Wheat Gluten*, or its suggestion that the Appellate Body could not have indicated that the term "link" might denote "contribution", for we are in no doubt that the Appellate Body was using the term "contribute" to denote the "connection" or "nexus" of the imports to the cause of the injury. This is abundantly clear from the Appellate Body's finding that "[t]he word 'link' indicates simply that increased imports have played a part in, or contributed to, bringing about serious injury". In other words, it is through the (causal) link that imports contribute to causing, i.e., bringing about, the injury.

7.146 Thus, in the context of a provision that envisages that there might be more than one "significant cause" of market disruption, it is not inconsistent with Paragraph 16.4 to interpret the ordinary meaning of the term "cause" as "contribute".

7.147 Before concluding, we recall that the term "cause" should also be interpreted in the light of the object and purpose of the treaty. In this regard, China submits that Paragraph 16 of the Protocol is an exceptional, country-specific measure designed to address unforeseen surges in imports from China – an "escape valve" to be used only in emergency situations as an extraordinary remedy.[258] China contends that Paragraph 16 should therefore be given a narrow construction, to differentiate the higher causation standard of Paragraph 16 from the lower causation standard applied in the *Safeguards Agreement.*

7.148 We note that the Appellate Body in *US – Shrimp* stated that:

> A treaty interpreter must begin with, and focus upon, the text of the particular provision to be interpreted. It is in the words constituting that provision, read in their context, that the object and purpose of the states parties to the treaty must first be sought. Where the meaning imparted by the text itself is equivocal or inconclusive, or where confirmation of the correctness of the reading of the text itself is desired, light from the object and purpose of the treaty as a whole may usefully be sought.[259]

[257] China's Second Written Submission, paras. 149–150, footnote omitted.

[258] We note the U.S. argument that because "the Protocol is an integral part of the WTO Agreement, as such, it does not have its own 'object and purpose', in the sense of Article 31(1) of the *Vienna Convention*". (U.S. First Written Submission, para. 66). We disagree. Even though the Agreement on Agriculture and *SCM Agreement* are both "integral parts" of the WTO Agreement (WTO Agreement, Article II:2), the Appellate Body has on various occasions referred to the object and purpose of these specific Agreements (*See*, for example, Appellate Body Report on *Canada – Autos*, paras. 138 and 142, and Appellate Body Report on *US – Upland Cotton*, paras. 613 and 623. We note that, in the latter case, even the United States referred to the object and purpose of the Agreement on Agriculture, as distinct from the WTO Agreement (*See* para. 68)).

7.149 With regard to the claim that Paragraph 16 is an exceptional measure to be used only in emergency situations, the Panel notes that whether it is to be regarded as an emergency action or not the words of Article 16 still have to be interpreted in accordance with Articles 31 and 32 of the *Vienna Convention.*

7.150 To determine whether the Section 421 causation standard is inconsistent with the United States' WTO obligations, we must establish what that causation standard actually means. It is well established that, when ascertaining the meaning of domestic legislation, a panel might refer to evidence of the consistent application of that law.[260] In its defence, the United States has produced evidence to the effect that the "contributes significantly" definition is equivalent to the Protocol's "significant cause" standard because of consistent USITC practice requiring the demonstration of a "direct and significant causal link" between the rapidly increasing imports and the market disruption. In particular, the United States refers to the following extract from the USITC Report in the *Tyres* case:

> The third statutory criterion for finding market disruption is whether the rapidly increasing imports are a significant cause of material injury or threat of material injury. The term "significant cause" is defined in section 421(c)(2) of the Trade Act of 1974 to mean "a cause which contributes significantly to the material injury of the domestic industry, but need not be equal to or greater than any other cause." The legislative history of section 406 describes the significant cause standard as follows:
>
> > Under this standard, the imports subject to investigation need not be the leading or most important cause of injury or more important than (or even equal to) any other cause, so long as a direct and significant causal link exists. Thus, if the ITC finds that there are several causes of the material injury, it should seek to determine whether the imports subject to investigation are a significant contributing cause of the injury or are such a subordinate, subsidiary or unimportant cause as to eliminate a direct and significant causal relationship.[261]

7.151 In addition, the United States refers to two additional Section 421 investigations: *Pedestal Actuators From China* and *Certain Ductile Iron Waterworks Fittings From China.* In both cases, the USITC made the same reference to the legislative history of Section 406. In our view, these three cases are sufficient to show that the USITC consistently interprets the "contributes significantly" standard of Section 421 as requiring a "direct and significant causal link", which is essentially equivalent to a showing of "significant cause".[262]

7.152 Although the fact that the USITC consistently interprets the "contributes significantly" standard of Section 421 as requiring a "direct and significant causal link" is not necessarily

[259] Appellate Body Report, *US – Shrimp*, para. 114.

[260] *See*, for example, Appellate Body Report, *US – Carbon Steel*, para. 157.

[261] USITC Report, page 18.

[262] China has not contested that a showing of "direct and significant causal link" would meet the Paragraph 16.4 "significant cause" standard. Indeed, China argued in para. 40 of its oral statement at the first meeting that "this dispute would be very different" with respect to its "as such" claim if "the statute required a 'direct and significant causal link', as does the USITC determination".

determinative of the issue at hand, it does support a finding that the Section 421 "contributes significantly" standard is no less stringent than the Paragraph 16.4 "significant cause" standard.

7.153 China argues that the above extracts from the USITC determinations relate to the legislative history of Section 406, rather than Section 421. The USITC references the legislative history of Section 406 because that contains the same statutory definition of "significant cause" (i.e., "contributes significantly") as provided for in Section 421. The evidence presented by the United States relates to the consistent application of the "contributes significantly" standard in Section 421 determinations, not in Section 406 determinations. In these circumstances, we consider it appropriate to take into account the legislative history of the Section 406 "contributes significantly" standard.

3. Whether the statute further lowers the Paragraph 16.4 causation standard by allowing imports to be a less important factor than any other single cause, no matter how minor that other cause might be

7.154 We recall that Section 421 allows a determination that increased imports constitute a "significant cause" of material injury even though their causal effect is not "equal to or greater than" that of any other cause.

(a) Arguments of the parties

7.155 **China** claims that, in circumstances where there are also other causes of injury to the domestic industry, the "significance" of the increased imports as a causal factor should be assessed relative to those other causes, rather than in a vacuum. According to China, the core meanings of "significant" – important, notable, consequential[263] – all include the notion of significance relative to other matters, in this case other causes. Thus, China claims that Paragraph 16.4 of the Protocol prevents increased imports from being treated as a "significant cause" if the causal effect of the increased imports is relatively less important than the causal effect of some other factor, or if the increased imports play a relatively small role in the market. China submits that the U.S. statutory definition is inconsistent with Paragraph 16.4 of the Protocol because it fails to provide for any such relative assessment between the causal effect of subject imports and other causes of market disruption. China claims that, by allowing imports that are a less important factor than any other single cause, no matter how minor that other cause might be, to still qualify as a "significant cause", the U.S. statutory definition further lowers the causation standard set forth in Paragraph 16.4. For this reason, China refers to the fact that the Section 421 "contributes significantly" standard requires no more than a "mere"[264] contribution.

7.156 The **United States** denies that Paragraph 16.4 of the Protocol requires the weighing of causal factors, or precludes a finding that increased imports are a "significant cause" of material injury simply because the causal effect of such increased imports may be less than some other factor(s). The United States asserts that Paragraph 16.4 refers to "a significant cause", indicating that increased imports might be one of several "significant causes" of injury to the domestic industry.

7.157 The United States further submits that the USITC stated in the underlying determination that it may not find that imports from China are a "significant cause" of material injury if those imports are such an "unimportant," subordinate," or "subsidiary" cause of injury that there is no "direct and

[263] *See* Panel Report, *US – Upland Cotton*, para. 7.1325 ("The ordinary meaning of the term 'significant is 'important; notable … consequential. The term 'significant' therefore connotes something that can be characterized as important, notable or consequential").

[264] *See*, for example, China's Second Written Submission, para. 137.

significant causal link" between the imports and material injury or threat.[265] Instead, as the USITC has consistently stated, the USITC must find a "direct and significant causal link" between imports from China and material injury or threat.[266] The United States asserts that such an interpretation precludes the possibility that increased imports might be treated as a "significant cause" when they do not, in fact, have the requisite degree of causal effect.

(b) Evaluation by the Panel

7.158 We first consider China's argument that the core meanings of "significant" – important, notable, consequential[267] – all include the notion of significance relative to other matters (in this case other causes).[268] While we agree with China (and the United States[269]) that the ordinary meaning of the word "significant" is "important", "notable", "consequential"[270], we disagree with China's argument that these meanings must include the notion of significance relative to other causal factors. We note that China has provided no evidence or explanation in support of this argument. In our view, rapidly increasing imports might properly constitute a significant cause of market disruption even though their causal role is not as significant as other factors.

7.159 Regarding China's argument that Section 421 impermissibly allows an investigating authority to determine that even a minimal cause, which can be less than any other cause, could still be considered as "a significant cause," we consider that this possibility is excluded by the plain text of Section 421. The statutory definition at issue in this claim provides that rapidly increasing imports must "contribute significantly" to the market disruption. Since the relevant contribution must be "significant", i.e., important, or notable, we see no basis for concluding that only a "minimal", or "mere", contribution might suffice.[271] Furthermore, we have already explained that, in the context of Paragraph 16.4 of the Protocol, the term "cause" may be interpreted to mean "contributes". Thus, if rapidly increasing imports "contribute significantly" to the market disruption, they will necessarily be a "significant cause" of that market disruption for the purpose of Paragraph 16.4 of the Protocol.

[265] USITC Report, page 18.

[266] The United States refers, by way of an example, to page 18 of the USITC Report.

[267] *See* Panel Report, *US – Upland Cotton*, para. 7.1325 ("The ordinary meaning of the term 'significant is 'important; notable … consequential. The term 'significant' therefore connotes something that can be characterized as important, notable or consequential").

[268] China challenges the statement in Section 421 that imports "need not be equal to or greater than any other cause". Inherent in this challenge seems to be the notion that imports might only satisfy the "significant cause" standard if their impact is equal to or greater than any other cause. This is reflected in para. 155 of China's Second Written Submission, where China asserts that "[i]t is hard to see how a minor cause – one indeed that is less important than any other cause – can be properly considered to be 'significant'." This statement is also made in para. 38 of the Oral Statement of China at the First Meeting. In our view, this argument is at odds with the plain language of Paragraph 16.4, which requires only that rapidly increasing imports be "a" significant cause of market disruption. If the drafters of Paragraph 16.4 had intended that rapidly increasing imports should be "the most" significant cause of market disruption, they would have drafted Paragraph 16.4 accordingly.

[269] *See*, for example, the United States' First Written Submission, para. 179.

[270] The New Shorter Oxford English Dictionary, (1993).

[271] We note China's argument that Paragraph 16.4 focuses on the nature of the cause, such that "the obligation to find imports from China to be a 'significant cause' requires more than a mere contribution", whereas Paragraph 16.1 and Article 2.1 of the *Safeguards Agreement* focus on the (causal) link, rather than the nature of the cause itself (China's Reply to Question 16, paras. 61 and 63). While we do not necessarily agree with China's interpretation of Article 2.1 of the *Safeguards Agreement* and Paragraph 16.1 of the Protocol, we do agree that "significant cause" requires more than a mere contribution.

4. Conclusion

7.160 For all of the above reasons, we do not consider that the Section 421 "contributes significantly" standard requires the United States to establish causation in a manner inconsistent with Paragraph 16 of the Protocol.

D. WHETHER THE USITC PROPERLY FOUND THAT RAPIDLY INCREASING IMPORTS WERE A SIGNIFICANT CAUSE OF MATERIAL INJURY

7.161 China claims that the USITC failed to properly demonstrate that subject imports were a "significant cause" of market disruption, contrary to Paragraphs 16.1 and 16.4 of the Protocol. China's claim is based on three principal arguments: the USITC failed to show that the conditions of competition between subject imports and the domestic product support a finding of causation; the USITC failed to establish any temporal correlation between rapidly increasing subject imports and material injury to the domestic industry; and the USITC failed to address alternative causes of material injury to the domestic industry, in the sense that the USITC failed to ensure that injury caused by other factors was not improperly attributed to subject imports.

7.162 Before turning to the substance of the USITC's causation analysis, though, we first address disagreements between the parties regarding the nature of the causation analysis actually required by Paragraph 16 of the Protocol.

1. The nature of the analysis required by Paragraph 16 of the Protocol

(a) Conditions of competition / correlation

7.163 The parties disagree as to whether the USITC was required to analyse the conditions of competition and correlation. China says it was. The United States says it was not.

(i) Arguments of the parties

7.164 **China** submits that WTO case law has established that the conditions of competition must always be analysed under the *Safeguards Agreement*, since Article 2.1 of the *Safeguards Agreement* refers to a product being imported in increased quantities and "under such conditions" as to cause serious injury. China argues that Paragraph 16.1 of the Protocol contains the same language ("under such conditions") as Article 2.1 of the *Safeguards Agreement*. China contends that while a conditions of competition assessment is required for global safeguards, it is especially indispensable under the more exacting causation standard of the Protocol. China submits that this is particularly the case where the relevant market encompasses a broad range of products and market segments, as in the U.S. tyre market.

7.165 China claims that an analysis of correlation is also required under Paragraph 16 of the Protocol. China asserts that WTO case law highlights the central role played by correlation in the context of establishing causation under the *Safeguards Agreement*. China refers in particular to the finding of the panel in *Argentina – Footwear (EC)* (affirmed by the Appellate Body) that:

> In practical terms, we believe therefore that this provision means that if causation is present, an increase in imports normally should coincide with a decline in the relevant injury factors. While such a coincidence by itself cannot prove causation, its absence would create serious doubts as to the existence of a causal link, and would require a very compelling analysis of why causation still is present.[272]

7.166 China submits that such case law is relevant to the Protocol, and that the correlation analysis is even more demanding under the Protocol than under the *Safeguards Agreement*, given the allegedly more onerous "significant cause" causation standard provided for in the Protocol.

7.167 **The United States** denies, as a legal matter, that an investigating authority is required to analyse the conditions of competition under Paragraph 16 of the Protocol. The United States notes in this regard that Article 2.1 of the *Safeguards Agreement* provides that a Member may impose a global safeguard only if it has determined that a product "is being imported into its territory in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry". (Emphasis added). The United States asserts, by way of comparison, that the language of Paragraph 16.1 of the Protocol states that a need for a transitional measure may arise in cases where products from China are being imported "in such increased quantities or under such conditions as to cause or threaten to cause market disruption". (Emphasis added). The United States submits that, unlike the language of the *Safeguards Agreement* which specifically requires an analysis of increased quantities *and* the conditions under which imports are causing serious injury, the Protocol indicates that increased quantities alone or conditions alone may cause market disruption. The United States further submits that the Protocol's definition of market disruption in Paragraph 16.4 does *not* require the investigating authority to examine conditions of competition to determine if market disruption exists, but directs it only to consider import volumes, their price effects, and the effect of imports on the domestic industry.

7.168 The United States further asserts that the Protocol does not indicate that the competent authority should assess whether there is a coincidence of trends between increasing imports and the declines in the condition of the industry analysis, or suggest that an authority must provide a "compelling analysis of why causation is still present" if such a coincidence does not exist, as alleged by China. According to the United States, therefore, China has no basis for asserting that the USITC was required to perform a "coincidence of trends" analysis in its determination, or that it must provide "a compelling analysis of why causation is still present" if that coincidence does not exist.

(ii) Evaluation by the Panel

7.169 The first sentence of Paragraph 16.4[273] requires the importing Member to determine whether imports cause market disruption, i.e., whether imports (that are increasing rapidly) are a "significant cause" of material injury, or threat thereof, to the domestic industry. The first sentence of Paragraph 16.4 does not require that causation be established on the basis of any particular methodology. In addition, the second sentence of Paragraph 16.4 requires that "objective factors " be considered in determining the existence of market disruption, including causation:

> In determining if market disruption exists, the affected Member shall consider objective factors, including the volume of such imports, the effect of imports on prices for like or directly competitive articles, and the effect of imports on the domestic industry producing like or directly competitive products.

7.170 Thus, Paragraph 16.4 does not require the importing Member to apply any particular methodology for establishing market disruption, including causation. The second sentence of

---

[272] Panel Report, *Argentina – Footwear (EC)*, para. 8.238; Appellate Body Report, *Argentina – Footwear (EC)*, paras. 144-145.

[273] *See* paras. 7.33 to 7.37.

Paragraph 16.4 simply requires the consideration of objective factors. This suggests that an investigating authority is free to choose any methodology to establish causation, provided it addresses the objective factors set forth in Paragraph 16.4, and provided in particular it is sufficient to establish that rapidly increasing imports are a "significant cause" of material injury. We believe that an analysis of the conditions of competition[274] and correlation will often be relevant, and may on the facts of a given case prove essential, to a consideration of "significant cause". Indeed, it might be very difficult to establish "significant cause" without performing these types of analyses.[275] Our task is to perform an objective assessment of the USITC's overall determination of "significant cause," in light of the arguments of the parties. The USITC did rely on analyses of the conditions of competition and correlation in determining that rapidly increasing subject imports were a "significant cause" of material injury. Accordingly, to the extent the arguments of the parties require, we shall examine those analyses as part of our assessment of the USITC's overall determination of "significant cause".

(b) Non-attribution

7.171 The parties disagree as to the extent to which an importing Member is required to assess the injurious effects (on the domestic industry) of factors other than increased imports, and ensure that injury caused by such other factors is not improperly attributed to increased imports. Such assessment is generally referred to as "non-attribution".

(i) Arguments of the parties

7.172 **China** attributes the injury suffered by the U.S. domestic industry to a number of alternative factors, including changes in demand and the domestic industry's business strategy. China contends that the USITC ignored or failed to assess fully these other causes of injury, or to establish that the injury caused by such other factors was not improperly attributed to the subject imports. China submits that it is impossible to make the requisite determination of causation without considering the role played by causes of injury other than subject imports. China asserts that it would be inconsistent with the object and purpose of Paragraph 16 for a Member to apply a safeguard measure based on injury caused by factors other than imports from China. China acknowledges that there is no explicit "non-attribution" requirement in Paragraph 16, but submits that this requirement is in fact embedded in the ordinary meaning of the phrase "causal link", which the USITC was required to examine by virtue of paragraph 246(c) of the Working Party Report (and which is found in the first sentence of Article 4.2(b) of the *Safeguards Agreement*). Reading Paragraph 16 of the Protocol in light of paragraph 246(c) of the Working Party Report, China refers to a finding by the Appellate Body in *US – Lamb* which, it alleges, explains how a "causal link" should be established under the *Safeguards Agreement*. China understands the Appellate Body to have found that, to establish a "causal link" for

[274] We recall that, in the light of the French and Spanish texts and in accordance with Article 33(4) of the *Vienna Convention*, the word "or" in the first sentence of Paragraph 16.1 is to be taken to include "and" (*See* note 81 above).

[275] In its Reply to Question 25 from the Panel, the United States has indicated that "it is possible for a competent authority to evaluate the 'effect of imports on prices for like or directly competitive articles' and the 'effect of imports on the domestic industry producing like or directly competitive products,' as the terms are used in paragraph 16.4, without performing a 'coincidence of trends' analysis and/or performing a detailed assessment of all possible conditions of competition in the market. For example, a competent authority could reasonably choose to assess the effects of imports on prices and the industry by performing an economic modelling exercise, such as a static equilibrium or a linear regression modelling analysis". We are not persuaded by this argument, since a static equilibrium analysis generally involves an advanced analysis of the conditions of competition, and a linear regression modelling analysis generally involves an advanced analysis of correlation over an extended period of time (i.e., "regression" back in time). In our view, therefore, the United States' Reply to Question 25 does not really explain how causation might be established without some form of conditions of competition and/or correlation analysis.

the purpose of Article 4.2(b) of the *Safeguards Agreement*, an investigating authority had to establish a "genuine and substantial relationship of cause and effect" between the increased imports and the serious injury suffered by the domestic industry. China further understands the Appellate Body to have found that, in order to establish the "genuine and substantial relationship of cause and effect", an investigating authority must "distinguish[] and separate[]" the injurious effects caused by all the different causal factors. China therefore submits that an investigating authority cannot conclude that a "causal link" exists without first assessing whether other factors are actually responsible, or better explain the data. However, China does not claim that, under Paragraph 16, the authority must perform the same non-attribution analysis for other factors in the market that it would in a global safeguard proceeding.[276]

7.173 **The United States** contends that China's argument regarding the need to consider other causes, and ensure that their injurious effects are not attributed to rapidly increasing imports, is legally mistaken because it is premised on analytical standards developed by the Appellate Body under the *Safeguards Agreement*, which have no basis in the text of the Protocol. The United States submits that China's argument disregards the actual text of the Protocol, and the context and scope of the Appellate Body's findings under the *Safeguards Agreement*. The United States asserts that, since the negotiators of the Protocol were presumably aware that the *Safeguards Agreement* and the *AD Agreement* contained "non-attribution" language but chose not to include any "non-attribution" requirement in the causation provisions of the Protocol, the Panel should assume that such an analysis was not intended to be required. The United States submits that it is well-established that, under the principle of *inclusio unius est exclusio alterius*, when a treaty includes a term or requirement in one part but excludes that term or requirement from another part, the absence of that term or requirement indicates that the drafters intentionally chose not to include that term or requirement in the provision from which it is absent. That being said, the United States does accept that some form of non-attribution analysis is required – albeit not the non-attribution imposed by the Appellate Body in the context of Article 4.2(b) of the *Safeguards Agreement*. According to the United States, "a competent authority may use any reasonable methodology to consider such other factors when assessing whether market disruption exists.[277] The United States submits that a competent authority's need to address the effects of other possibly injurious factors will depend on the facts and circumstances of the particular case. The United States posits three possibilities in this regard: in some cases, another factor might arguably be so significant a cause of injury to the industry that the competent authority will need to perform a detailed and reasoned explanation of the effects of that factor, to ascertain whether that factor severs the apparent causal link between imports and material injury; in other cases, the factor may be contributing to injury in a considerably less significant fashion. In those circumstances, the competent authority could reasonably reference the factor and indicate in a reasonable fashion why the factor does not explain the injury caused to the pertinent industry; and, in still other cases, the authority could simply find that there was no evidence establishing that a particular factor caused injury to the industry, or that the parties have not presented sufficient evidence to establish that the factor causes any injury at all. In such cases, the authority would have little or nothing to investigate and no need to analyze the effects of the factor.

(ii) Evaluation by the Panel

7.174 While at the outset of this proceeding, it appeared that the parties disagreed fundamentally on whether an investigating authority was required by Paragraph 16 to perform a non-attribution

[276] China's Second Written Submission, para. 309, footnote omitted.

[277] U.S. First Written Submission, para. 299. *See* also U.S. Reply to Question 29 from the Panel.

analysis, by the end it was clear that the parties agreed that some form of non-attribution analysis may be required in certain circumstances.[278]

7.175 As to the nature of the non-attribution analysis that may be required under Paragraph 16 of the Protocol, we begin by considering the following finding of the Appellate Body in *US – Lamb*, which China relied on in its arguments:

> In a situation where *several factors* are causing injury "at the same time", a final determination about the injurious effects caused by *increased imports* can only be made if the injurious effects caused by all the different causal factors are distinguished and separated. Otherwise, any conclusion based exclusively on an assessment of only one of the causal factors – increased imports – rests on an uncertain foundation, because it *assumes* that the other causal factors are *not* causing the injury which has been ascribed to increased imports.[279]

7.176 Although the reasoning in *US – Lamb* was based on the requirement of non-attribution in Article 4.2(b) of the *Safeguards Agreement* and thus is not directly applicable here, this does not mean that the obligation to demonstrate that rapidly increasing imports are a significant cause of material injury should not entail some form of analysis of the injurious effects of other factors. An analogy can be drawn with the approach in *US – Upland Cotton*, where notwithstanding the absence of non-attribution language in Articles 5 and 6.3 of the *SCM Agreement*, both the panel and Appellate Body found that (some form of) non-attribution is inherent in establishing the causal link between the subsidy and price suppression. Both took that view that if non-attribution does not occur, one cannot establish with certainty that price suppression was the effect of the subsidy (as opposed to some other injurious factor).

7.177 Thus, we consider that the causal link between rapidly increasing imports and material injury must be assessed "within the context of other possible causal factors".[280] In particular, a finding of causation for the purpose of Paragraph 16.4 should only be made if it is properly established that rapidly increasing imports have injurious effects that cannot be explained by the existence of other causal factors. We shall evaluate the USITC's assessment of alternative causes in this light.

7.178 We now turn to the substance of China's claims against the USITC's finding of significant cause, beginning with China's claims against the USITC's assessment of the conditions of competition between subject imports and domestic tyres.

2. The conditions of competition between subject imports and domestic tyres

7.179 **China** claims that the USITC's causation analysis was based on a misinterpretation and distortion of the conditions of competition, such that the USITC failed to understand the attenuated nature of competition between subject imports from China and domestic tyres.[281] China claims that

[278] *See*, for example, para. 309 of China's Second Written Submission, and para. 299 of the United States' First Written Submission. China also asserts that non-attribution under the Protocol does not require a precise quantification of the injury caused by the various injurious factors (*See* China's Reply to Question 17(b) from the Panel, para. 71).

[279] Appellate Body Report, *US – Lamb*, para. 179 (emphasis in original).

[280] Panel Report, *US – Upland Cotton*, para. 7.1344.

[281] In its First Written Submission, China refers to declining demand and the industry business strategy in the context of its claim regarding the USITC's treatment of the conditions of competition. However, China only develops its arguments regarding these factors when claiming that the USITC ignored or failed to assess fully other causes of injury (in the context of its non-attribution claim) (*See* paras. 219 and 220 of China's First Written Submission, which contain cross-references to more detailed arguments set forth in Section V.C.4(a)

the USITC improperly dismissed the fact (a) that subject imports and domestic tyres focus on different market segments in the replacement tyre market, and (b) that U.S. producers have a greater involvement in the OEM sector. China also claims that the USITC (c) improperly concluded from questionnaire responses that subject imports and domestic tyres were substitutable.

7.180 **The United States** denies that there were any flaws in the USITC's analysis of the conditions of competition, or that the USITC erred in finding that competition between domestic tyres and subject imports was not attenuated.

7.181 We begin by considering China's argument that the USITC dismissed the fact that domestic tyres and subject imports focused on different segments of the replacement market.

(a) Different segments in the replacement market

(i) Arguments of the parties

7.182 **China** argues that the USITC failed adequately to account for the fact that, within the replacement market, Chinese and domestic tyres focus on different market segments. China contends that the largest share of U.S. producer shipments was to the higher-end tier 1, and that the largest share of imports from China was to the lower-end tier 3. China refers to the USITC determination to argue that only 18.6 per cent of U.S. producer shipments fell into tier 3. China also relies on the finding by a dissenting commissioner that "U.S. production is focused on the higher-value, premium branded products and the OEM market, segments in which the subject imports are not competing in any meaningful manner".[282] According to China, the most logical inference from the record data is that any competition between Chinese and domestic tyres in the replacement market is attenuated.

7.183 China acknowledges that U.S. producers have not completely exited the tier 2 and tier 3 categories, and that domestic tyres and subject imports are therefore present in these same categories.[283] Nevertheless, China contends that the USITC fails to provide a reasoned or adequate explanation why the "vestigial" competition within tiers 2 and 3 rises to the level of "significant competition", or permits the further inference that imports from China rise to the level of a "significant cause" of any injury experienced by the U.S. producers. According to China, subject imports are absent from tier 1, which represents approximately 70 per cent of the replacement market.

7.184 **The United States** submits that the USITC addressed this issue at length in its determination, but found that, although the U.S. replacement market could generally be segmented into three categories, market participants did not agree on which tyres fell into which categories.[284] The United States asserts that market participants responded to the USITC's supplemental questionnaires on this issue with a wide range of estimates of the share of U.S. producer's and subject Chinese tyre shipments falling into each category, further evidencing the fact that there was no bright line or

and (b) of China's First Written Submission). Furthermore, in its Second Written Submission, China only refers to demand and industry business strategy as "other causes" of injury (Section IV.C.3(b)). We therefore do not consider it necessary to review these issues in the context of the present claim. At para. 234 of its First Written Submission, China also referred to certain "other factors" allegedly affecting the conditions of competition which the USITC allegedly overlooked. However, China has made no specific arguments as to how such "other factors" actually affected the conditions of competition, nor otherwise explained why the USITC should have considered such factors in its assessment of the conditions of competition. There is therefore no basis for us to uphold China's claim regarding these "other factors."

[282] USITC Report, page 52 (dissenting Commissioners).

[283] USITC Report, page 64 (dissenting Commissioners).

[284] USITC Report, page 27.

industry-wide accepted dividing line between the three categories.[285] In addition, the United States contends that the information on the record did not support China's argument that there was little competition between subject tyres and U.S. tyres in these categories, as the record showed that both subject tyres and U.S. produced tyres competed in all three segments of the market in 2008, albeit to varying degrees. The USITC found that subject imports and the domestic product were both present in category one, and that both had a significant presence in categories two and three.[286] The United States asserts that, in 2008, 18.6 per cent of U.S. producers' U.S. shipments fell into category three, the category in which subject tyres were most heavily concentrated, and the record showed that there was also a significant presence of both subject imports and domestically produced tyres in category two.[287] The United States contends that, given that the record showed that there was significant competition between subject imports and U.S. tyres in the market sectors in which subject imports were supposedly most heavily concentrated, the USITC reasonably rejected the claim that competition between subject and U.S. tyres was attenuated. The United States asserts that it is important to recall that the domestic industry shipped 18.6 per cent of its shipments into the category three sector in 2008, the last year of the period, after the domestic industry had already undertaken substantial reductions and plant closures to reduce its production of low-end tyres (a decision that the United States claims was made in reaction to the significant and increasing volume of subject imports).[288]

(ii) Evaluation by the Panel

7.185 China's argument regarding attenuated competition in the replacement market is based on the existence of three distinct tiers, or market segments, and the fact that domestically produced tyres and subject imports were focused on different market segments. According to China, domestic tyres were confined principally to tier 1, whereas subject imports were confined principally to tiers 2 and 3. China asserts that the limited presence of domestic tyres in tiers 2 and 3 meant that there was only "vestigial" competition between subject imports and domestic tyres in those segments.

7.186 We note that the USITC did not deny the existence of different market segments. Instead, the USITC issued a supplemental questionnaire to explore this issue, and to examine the possibility of attenuated competition between U.S. industry and subject imports.[289] On the basis of the supplemental questionnaire responses, the USITC "agree[d] with respondents that the record supports the view that the U.S. replacement market generally can be segmented into three categories", but noted that "there was less agreement [among firms submitting questionnaire responses] as to which tires were included in the two lower-priced categories".[290]

7.187 China acknowledges that there is no bright dividing line between the three different segments, but argues that "[t]he fact that the distinction may not be absolute does not mean that the distinction does not exist at all, or that the distinction does not produce highly attenuated competition".[291] China further argues that "[a]lthough responses indicated some differences in opinion concerning the dividing line between tiers 2 and 3, there was not much doubt about the dividing line between tier 1,

[285] USITC Report, page 27.
[286] USITC Report, page 27.
[287] USITC Report, page 27.
[288] USITC Report, pages 24-25.
[289] USITC Report, page 27.
[290] USITC Report, page 27.
[291] China Second Written Submission, para. 201.

on the one hand, and tiers 2 and 3, on the other".[292] According to China, "[t]he record as a whole demonstrates a strong distinction between tier 1 tires and tier2/tier 3 tires."[293]

7.188 Regarding the differentiation between segments in the replacement market, we note the finding by dissenting commissioners that:

> There is consensus among the parties that the subject tire market is segmented between the OEM and replacement markets, and, to some degree, that there are categories or tiers within the replacement market. However, *there is no consensus on how to define what types of tires are classified in each tier, or what brands are classified in each tier within the replacement market*. In addition to examining industry publications placed on the record, the Commission issued supplemental questionnaires to gather additional information about competition among tiers. The record indicated that in general, tier 1 comprises premium or flagship brands; tier 2 comprises mid-level, secondary/associate, or smaller producer brands; and tier 3 comprises entry-level or non-recognizable branded tires. The majority of questionnaire responses classify private brands as tier 3 tires but are *mixed as to where to place associate brands, with some responses placing them in tier 2 and others placing them in tier 3*. In addition, market participants do not agree on what specific brands are classified in each tier. Other responses classify tires based on price.[294]

7.189 This finding indicates that there was no consensus as to the dividing lines between the three market segments in the replacement market (particularly in respect of the differentiation between tiers 2 and 3).[295] The lack of consensus regarding the dividing lines between the market segments is further confirmed by the fact that there were:

> wide variations in the estimates for the share of the total U.S. market accounted for by each tier. Producers and importers reported that tier 1 ranged from 21 per cent to 78 percent of the total U.S. tire market; tier 2 ranged from 7 percent to 52 percent of the market; and tier 3 ranged from 10 percent to 50 percent of the market.[296]

7.190 In other words, there was no established market perception of where the boundaries between tiers 1, 2 and 3 should lie. Indeed, five of the 26 respondent importers reported that the replacement market could not be segmented[297], and one major U.S. producer reported "there was no consensus in the marketplace on how to divide the U.S. market".[298]

7.191 We recall China's arguments that domestically produced tyres were confined principally to tier 1, whereas subject imports were confined principally to tiers 2 and 3, and that there is "a strong distinction between tier 1 tires and tier 2/tier 3 tires". In this regard, we note the statement in the finding by the dissenting commissioners that:

[292] China Second Written Submission, para. 200.
[293] China Second Written Submission, para. 201.
[294] USITC Report, page 51 (dissenting commissioners), emphasis supplied.
[295] In its comments on the U.S. Reply to Question 46 from the Panel, China asserts that "the overwhelming number of companies responding to the questionnaire ... were able to segment the market into three tiers" (China's comments on U.S. Reply to Question 46 from the Panel, para. 21). The point is not whether respondents could segment the replacement market. The point is whether the distinction between those segments was so well established that it should necessarily have been taken into account by the USITC.
[296] USITC Report, page 52 (dissenting commissioners).
[297] USITC Report, page V-5.
[298] USITC Report, page V-6.

> While not arguing that there is a clear dividing line among each of the tiers, *respondents*, in general, contend that competition is attenuated between *domestically produced tires which are primarily in tier 1 and 2* tires for the OEM and replacement markets, and *subject imports which are primarily in tier 3* tires for the replacement market.[299]

7.192 This statement, which refers to respondents arguing that domestically produced tyres are present in both tiers 1 and 2, is at odds with China's argument that there is "a strong distinction between tier 1 tires and tier 2/tier 3 tires", and that domestic tyres compete primarily in tier 1, whereas subject imports compete primarily in tiers 2 and 3. China's argument is also at odds with the specific statement by one Chinese producer during the underlying investigation that:

> while there is certainly a real distinction between Tier 1 and Tier 2 tires, *it is often useful to group Tier 1 and Tier 2 tires together* in the category of 'higher-end" tires, since both of these segments are ones in which brand equity is an important element. Tier 3 tires, by comparison, are 'economy' or 'low-end' tires. Brand equity plays essentially no role in the marketing of these tires.[300]

7.193 Thus, while this one Chinese producer notes that there is a real distinction between tiers 1 and 2, that distinction is apparently not so profound that tier 1 and tier 2 tyres should not be grouped together for the purpose of identifying tyres that compete on the basis of brand equity.

7.194 Given the uncertainty regarding the basis for distinguishing between tiers 1, 2 and 3 of the replacement market, respondents' views that domestically produced tyres were primarily in tiers 1 *and 2*, and one respondent's view that it is in any event "useful to group Tier 1 and Tier 2 tires together" for certain purposes, we are not persuaded by China's argument that the USITC was required to have found that there is "a strong distinction between tier 1 tires and tier2/tier 3 tires".

7.195 Furthermore, even if tiers 2 and 3 could be clinically isolated from tier 1, record evidence demonstrates that there remained significant competition between domestic tyres and subject imports in tiers 2 and 3. In 2008[301], U.S. producers and subject imports accounted for 16 and 27.3 per cent respectively of tier 2 shipments, and 18.6 and 42.4 per cent respectively of tier 3 shipments.[302] In our view, such U.S. industry presence in tiers 2 and 3 suggests significantly more than the merely "vestigial" competition alleged by China.[303] The fact that this data relates to 2008, after the U.S. industry closed plant producing lower-value (i.e., tier 2 and 3) tyres, suggests that the competition between the U.S. industry and subject imports would have been even greater earlier in the period of investigation.

7.196 We note China's argument that subject imports were absent from tier 1, which it estimated to represent 70 per cent of the replacement market. The United States contests China's estimate, on the basis of a press article providing an overview of the tyre market in 2008. The United States asserts

[299] USITC Report, page 52 (dissenting commissioners), emphasis supplied.
[300] Post-Hearing Brief of GITI, page 6, (emphasis supplied).
[301] This data is taken from interested parties' responses to a supplemental questionnaire from the USITC. That supplemental questionnaire only requested data for 2008.
[302] These figures are based on each individual producer's and importer's own estimates of the percentage of its own shipments that were shipped in each tier in 2008. The USITC did not itself make a determination that certain volumes of shipments by individual producers and importers in 2008 should be classified as tier 1, 2 or 3 tyres. Certain producers and importers did not report segment-specific data, as they claimed that the market could not be divided into distinct segments.
[303] In absolute numbers, there were more U.S. industry sales in tiers 2 and 3 in 2008 than subject imports. *See* U.S. Reply to Question 46 from the Panel, para. 24.

that tier 1 occupies considerably less than the 70 per cent share of the replacement market claimed by China. We do not consider it necessary to enter into the details of the parties' arguments regarding this issue, as China's estimate of the relative importance of tier 1 was made before the United States provided the abovementioned supplemental questionnaire data in response to Question 46 from the Panel. On the basis of that data, we note that tier 1[304] accounted for 51.2 per cent of shipments in the replacement market. Thus, while subject imports from China may only have had a limited presence in tier 1[305], subject imports had a far greater presence in the remainder of the replacement market where, as explained above, domestic tyres were also prevalent.

7.197 In the circumstances, we conclude that while there was a general understanding that the tyre replacement market was divided into 3 tiers, we find no fault with the USITC's conclusion that there was no distinct dividing line between these tiers. Also, while we recognize that there was some variation in levels of competition between subject imports and domestic products as between tier 1 and tiers 2 and 3, we find no fault with the USITC's conclusion that subject imports and domestic products were not focused in different tiers and do not accept that the USITC should have found that there was only "vestigial" competition between them in tiers 2 and 3.

(b) U.S. producers' focus on the OEM market

(i) Arguments of the parties

7.198 **China** claims that the USITC failed to accord significance to the U.S. producers' greater involvement in the OEM market. China contends that the USITC incorrectly found that there was competition between domestic tyres and subject imports in the OEM market, even though between 17.7 and 23.3 per cent of U.S. producers' shipments were in the OEM market, whereas only 0.8 to 7.3 per cent of subject imports went to the OEM market. China further contends that subject imports only accounted for 0.2 to 4.9 per cent of all OEM shipments, such that any competition between subject imports and domestic tyres in the domestic OEM market was negligible.

7.199 **The United States** submits that the USITC recognized that the vast majority of both imports of tyres from China and domestically produced tyres were sold in the replacement market[306], but also recognized that both Chinese and U.S. producers sold and competed in the OEM market as well.[307] The United States asserts that the USITC record showed that U.S. producer's shipments to the OEM market declined steadily during this period to a period low of 24.2 million tyres in 2008, representing 17.7 per cent of U.S. shipments in that year[308], whereas import shipments from China increased irregularly from 121,000 tyres in 2004 to a period high 2.3 million tyres in 2008, representing five per cent of imports from China in that year, and 4.9 per cent of the OEM market.[309] The United States therefore asserts that, in every year of the period, there were considerable amounts of U.S. tyres and an increasingly significant amount of subject imports in the OEM market, thereby demonstrating that there was competition between imports from China and domestically produced tyres in the OEM market.

[304] We rely in this regard on the data reported by those producers and importers that did divide the market into three segments.
[305] The supplemental questionnaire data indicates that subject imports accounted for less than one per cent of those tier 1 shipments.
[306] USITC Report, page 21. The United States asserts that the USITC noted that the replacement market is by far the more important market for both types of producers, but stated that it was relatively more important to Chinese producers since a higher percentage of their shipments went to that market.
[307] USITC Report, page 27.
[308] USITC Report, Tables V-2 and V-3.
[309] USITC Report, Tables V-2 and V-3.

7.200 Regarding China's argument that competition between domestic and Chinese tyres in the OEM market was "negligible", because Chinese tyres amounted to approximately five per cent of shipments to that market in 2008[310], the United States contends that this assertion has no basis in the text of the Protocol, or the facts on the record. The United States submits that there is no legal basis under the Protocol for the USITC to ignore the impact of increasing volumes of subject imports in the OEM market simply because these imports accounted for only five per cent of shipments in the market. The United States further submits that the facts on the record showed that while U.S. producers' U.S. shipments into the OEM market declined in every year of the period examined, shipments of imports from China increased in every year. The United States asserts that, even from 2007 to 2008, when both domestically produced tyres and non-subject import tyres declined in that sector, subject imports from China continued to grow, reaching their period high in 2008. Furthermore, the United States disagrees that Chinese imports were virtually absent from the OEM market. The United States asserts that, while this statement may have been true at the start of the period in 2004 when Chinese imports of 121,000 tires accounted for less than one-tenth of one per cent of the market, it was certainly not true in 2008, when OEM subject import volumes rose to their period high of 2.3 million tyres and accounted for approximately 5 per cent of the OEM market.

(ii) Evaluation by the Panel

7.201 While it is true that the OEM sector was more important for U.S. producers than for subject imports, the proportion of U.S. producer shipments to that sector was *decreasing*, whereas the proportion of subject imports to the OEM sector was *increasing*. According to Table V-3 of the USITC Determination, the proportion of U.S. producer shipments to the OEM sector decreased from 23.3 per cent in 2004 to 17.7 per cent in 2008. Over the same period, the proportion of OEM subject imports increased from 0.8 per cent to 5 per cent.

7.202 In absolute terms, the quantity of U.S. producer OEM shipments decreased from 45,351,000 in 2004 to 24,211,000 in 2008, while the quantity of OEM subject imports increased from 121,000 in 2004 to 2,281,000 in 2008. Thus, as the absolute volume of U.S. producer OEM shipments decreased by 46.6 per cent, the absolute volume of OEM subject imports increased by 1,785 per cent. The OEM market share of subject imports increased from 0.2 to 4.9 per cent over the period of investigation, while the OEM market share of U.S. producer shipments fell from 69.6 to 51.6 per cent.

7.203 Furthermore, we recall the USITC's finding that, overall, subject imports in 2008 increased substantially while apparent consumption fell by 6.9 per cent, and non-subject imports and U.S. producer shipments declined.[311] This trend was even more pronounced in the OEM market. As apparent consumption in the OEM market fell by 16.4 per cent from 2007 to 2008, the volume of OEM subject imports increased by 12.4 per cent (while the volume of OEM non-subject imports declined by 11.3 per cent, and U.S. producer OEM shipments declined by 22 per cent).[312]

7.204 Thus, during the period of investigation both subject imports and domestically-produced tyres were present in the OEM sector. Over the period as a whole, the degree of the resultant competition between subject imports and domestically-produced tyres in the OEM sector was increasing, as the relative importance of domestically-produced tyres decreased, and that of subject imports increased.[313]

[310] China's First Written Submission, para. 226.

[311] USITC Report, page 26.

[312] Apparent consumption data calculated on the basis of USITC Report, Table V-3.

[313] We note China's argument (China's Second Written Submission, para. 195) that the United States improperly relied on ex post rationalization in arguing that, because "U.S. producers' U.S. shipments into the OEM market declined in every year of the period examined, [while] shipments of imports from China increased in every year", "it was therefore reasonable for the USITC to find a growing degree of competition between subject imports and domestically produced tyres in the OEM market". (U.S. First Written Submission, para. 227). However, we see no reason why the United States may not rely on the fact (established in the USITC's record) that OEM imports from China were growing while U.S. OEM shipments were falling to rebut China's argument regarding the allegedly negligible competitive impact of subject imports in the OEM sector. Furthermore, we note the USITC's finding that "[t]he share shipped to the OEM market by U.S. producers declined each year during the period examined, while the share of subject imports from China shipped to the OEM market increased irregularly and was at its highest in 2006 at 7.3 percent" (USITC Report, page 21).

Consistent with the trend for OEM and replacement market shipments overall, the competitive importance of subject imports in the OEM market became particularly pronounced at the end of the period of investigation, when despite a fall in apparent consumption of 16.4 per cent, subject imports were able to increase by 12.6 per cent, while non-subject imports and U.S. producer shipments fell by 11.3 and 22 per cent respectively.

7.205 In light of the above considerations, although we accept that there was some variation in the levels of competition within the OEM market, we do not consider that the USITC was required to dismiss competition from subject imports in the OEM sector as "negligible".[314]

(c) Reliance on Questionnaire responses to establish the substitutability of imports and domestic tyres

(i) Arguments of the parties

7.206 **China** contends that the USITC improperly found that subject imports and domestic tyres were substitutable. China asserts that the USITC's finding is improperly premised on "vague"[315] responses to a questionnaire that simply asked producers, importers and purchasers "if subject tires produced in the United States and in other countries are used interchangeably", giving the option of "always", "frequently", "sometimes", and "never".[316] China asserts that the questionnaire failed to differentiate between product type, category or characteristics, even though there is market segmentation between the OEM and replacement markets, and even though there are three separate tiers within the replacement market, and widely varying tyre sizes and characteristics. China submits that the questionnaire responses relied on by the USITC constitute the type of subjective and overbroad questionnaire data that the panel in *Argentina – Footwear (EC)* warned against.

7.207 **The United States** submits that there was nothing "vague" about the questionnaire responses relied on by the USITC, and that the large majority of producers, importers, and purchasers agreed that tyres from China and tyres produced in the United States were "always" or "frequently" used interchangeably.[317] The United States asserts that these questionnaire responses were also consistent with other evidence on the record relating to substitutability as, for example, the record showed that

[314] China First Written Submission, para. 226. Regarding China's argument that non-subject OEM imports were nine times the quantity of subject OEM imports (China's Second Written Submission, para. 193), in our view this relates more to the possibility of non-subject imports being an "other cause" of injury, than to the issue of whether or not there is attenuated competition between subject imports and domestic tyres. This issue is addressed at paras. 7.364 to 7.367.

[315] China's First Written Submission, para. 223.

[316] USITC Report, page V-16, Table V-6, n. 1.

[317] USITC Report, page 23. The United States asserts that six out of seven U.S. producers, 21 out of 25 importers, and 18 out of 22 purchasers reported that tyres from China and tyres produced in the United States are "always" or "frequently" used interchangeably. USITC Report, Table V-6. The United States asserts that any market participant that responded that tyres from China and tyres from the United States are "sometimes" or "never" used interchangeably" was given the opportunity to provide an explanation for this answer in the questionnaire.

tyres from China and tyres from the United States compete in all segments of the market.[318] The United States contends that the interchangeability of subject imports and domestically produced tyres was further confirmed by the fact that the USITC was able to conduct pricing comparisons of large quantities of shipments by U.S. producers and importers of subject tyres for six specific pricing products, each with specific dimensions, load indexes, and speed ratings, in the large majority of quarters over the period.[319] The United States submits that, according to this evidence, the large majority of responding market participants, whether they are producers, importers, or purchasers, indicated that market segmentation was not a bar to, or limit on the interchangeability of the subject and U.S. tyres.

7.208 Regarding China's reliance on the Appellate Body's report in *Argentina – Footwear (EC)*, the United States contends that the facts of the underlying investigation are very different. The United States submits that, in *Argentina – Footwear (EC)*, the panel noted that the investigating authority performed no analysis of the conditions of competition in the market, but simply summarized the conflicting views of domestic producers and importers. The panel noted that the investigating authority conducted no price comparisons of imported and domestic footwear to support its references to "cheap imports", despite the fact that its causation finding was based primarily on price considerations. The panel stated that the authority did not even analyze the effects of imported prices on the domestic industry, but indicated instead that it compared broad statistical indicators, resulting in conclusory statements. Moreover, the panel noted that the investigating authority itself acknowledged that its references to "cheap imports" had mostly to do with a problem of customs valuation and that the composition of imports had actually shifted to higher-valued goods. According to the United States, it was in the context of these glaring deficiencies that the panel stated that this "is not an analysis of the conditions of competition that is called for by Articles 2 and 4.2". The United States asserts that the USITC performed a much more rigorous analysis than in that case.

(ii) Evaluation by the Panel

7.209 We understand China to claim that the questionnaire responses were insufficient to establish the interchangeability of subject imports and domestic tyres, as the questionnaire failed to differentiate between "product category, characteristics, or market segment."[320] As a general matter, we note that China's arguments concern the original questionnaire sent out by the USITC at the beginning of the investigation. In light of the responses to that original questionnaire, the USITC issued a supplemental questionnaire to gather additional information about the existence of segments or product categories in the market. In our view, there is nothing inherently wrong with an investigating authority first issuing a generally-worded questionnaire regarding the competitive relationship between domestic tyres and subject imports, and then following that original questionnaire up with a more detailed supplemental questionnaire addressing particular issues raised in the responses to the original questionnaire.

7.210 Regarding the issue of whether the original questionnaire should have been phrased more specifically in terms of market segmentation, we recall our findings above regarding the absence of any clear differentiation between the market segments. We recall that this was confirmed by the dissenting commissioners, who found that:

[318] USITC Report, page 27. The United States contends that the USITC noted that there was general agreement as to the existence of three categories of tyres in the replacement market, but that there was less agreement as to which tyres were included in the two lower-priced categories.
[319] USITC Report, Tables V-9-V-14.
[320] China's First Written Submission, para. 222.

> *there is no consensus on how to define what types of tires are classified in each tier, or what brands are classified in each tier within the replacement market.*[321]

7.211 In the absence of any industry consensus on the distinction between tiers 1, 2 and 3, we do not consider that the USITC was required to have included, in its original questionnaire, more specific questions regarding interchangeability on the basis of distinctions between tiers 1, 2 and 3 of the replacement market.

7.212 China also raises the possibility of distinguishing domestic tyres from subject imports on the basis of other factors, such as "product category" or "characteristics"[322], or "tire sizes".[323] However, it is not clear to the Panel how the USITC could have drawn such distinctions, particularly since it appears that there was no industry consensus on which the USITC might have acted. Furthermore, record evidence suggests that size and performance would not have been a suitable basis for distinguishing domestic tyres from subject imports, as one Chinese respondent witness stated that tier 3 tyres "cover the same broad spectrum of size and performance as are offered in the first two segments".[324]

7.213 Nor do we consider that the findings of the Panel in *Argentina – Footwear (EC)* provide any guidance on whether the USITC improperly relied on "subjective" questionnaire responses. The *Argentina – Footwear (EC)* panel found that "the question of price [wa]s of particular importance to the analysis" of the conditions of competition in that case, as price was "the only 'condition of competition' between imports and domestic products on which Argentina's causation finding was based". The panel therefore "focus[ed] [its] assessment of this analysis primarily on whether there is support in the record for Argentina's conclusions about import prices and their effect on the domestic industry". In making its assessment, the panel found:

> *no evidence* in the record to support the statements that the imports were cheaper than the domestic goods. In particular, there is *no evidence* that any price comparisons of imported and domestic footwear were made in the investigation, including on the basis of average unit values of all imports and all domestic products.[325]

7.214 The circumstances of the USITC *Tyres* investigation are very different from those in *Argentina – Footwear (EC)*. In particular, this is not a case where the investigating authority had "no evidence" regarding the conditions of competition other than the original questionnaire responses. Nor is this a case where the original questionnaire replies did not address the specific condition of competition at hand (i.e., the competition between subject imports and domestic producers).

7.215 For the above reasons, we find no error in the USITC's reliance on the original questionnaire responses.

(d) Conclusion

7.216 For all of the above reasons, we find no error in the USITC's assessment of the conditions of competition.

3. Correlation between the increase in imports and the decline in injury factors

(a) Arguments of the parties

7.217 **China** submits that the USITC failed to properly establish correlation between the rapidly increasing subject imports and the material injury suffered by the domestic industry. China claims that, by finding that imports increased over the five-year period of investigation while injury factors declined over that period, the USITC merely engaged in an end-point-to-end-point analysis, of the sort rejected by the panel in *Argentina – Footwear (EC)*. According to China, the consistent teaching of WTO jurisprudence is that the coincidence must be apparent with respect to movements in imports and injury factors. As the panel in *Argentina – Footwear (EC)* observed, in a causation analysis "it is the *relationship* between the movements in imports (volume and market share) and the movements in injury factors that must be central to a causation analysis and determination".[326] China contends that it is not enough that imports increase in every year of the period and that injury factors decline in every year of the period. According to China, the degree of the respective annual increases must correspond generally with the degree of the respective declines in injury factors. China contends that the orders of magnitude are key, in the sense that the varying degrees in annual import increases should be reflected in varying degrees of annual declining injury indicators. China submits that the USITC never addressed these orders of magnitude.

7.218 China claims that the failure in the USITC's analysis is particularly apparent with respect to the more recent period (i.e., changes in 2006-2007 and 2007-2008). China contends that the USITC statement that "the largest declines in these indicators have occurred since 2006 when subject imports exhibited the greatest and fastest increases"[327] is misleading on several levels. China asserts that the USITC failed to point out that imports from China grew at their fastest rate in 2006-2007, but grew at their slowest rate (10.8 per cent) in the period from 2007-2008. Worse still, the USITC failed to address the fact that the various injury factors typically showed a substantial improvement in 2006-2007, when imports from China were at their highest level in the period, and experienced their greatest declines of the period in 2008, when Chinese imports grew at the slowest rate in the period. In other cases, the injury factors (e.g., price, R&D expenditures, and capital improvements) show positive trends throughout the period. According to China, the record regarding the more recent period poses two concrete tests for the U.S. theory of causation. Given the U.S. argument that imports from China were fungible, that the product is price sensitive, and that different market segments do not matter, China suggests that one would expect the large increase in imports over the 2006 to 2007 period to have the largest adverse impact on injury indicators. China also suggests that one would also expect that the small increase in imports over the 2007 to 2008 period would have the smallest adverse impact on injury indicators. China submits, though, that the facts in the record belie the U.S. theory.

7.219 Regarding the 2006-2007 period, China suggests that the U.S. correlation theory would demonstrate that the large increase in imports from China over the 2006-2007 period to have the largest adverse impact on injury indicators. China contends that this theory is not supported by the facts, though, since over the 2006-2007 period, many key indicators were in fact positive. China asserts that prices – both for specific pricing products and for average unit values overall – were up sharply, as was net sale value. China asserts that operating profits were also up sharply. China further asserts that productivity, capacity utilization, capital expenditures and R&D spending were all up. According to China, therefore, six of the ten factors showed strong improvements, and a seventh factor – net sales – showed improvement on a sales value basis. China asserts that these seven out of

[326] Panel Report, *Argentina – Footwear (EC)*, para. 8.237.

[327] *See* USITC Report, page 24 ("All of these indicators were at their lowest levels of the period in 2008, when subject imports were at their highest ...").

ten factors improved, even in the face of the largest increase in imports from China over the entire period. China acknowledges that the volume metrics – production, net sales volume, market share, and employment – declined over the 2006-2007 period, but claims that these declines must be placed in context. In particular, China claims that the declines in the 2006-2007 period are more modest than the declines in the "prior two comparison periods". China therefore claims that these factors, also, were actually "much better" in 2007. China concludes that, of the ten indicators, at most only two arguably suggest some possible coincidence – market share, and employment. According to China, this pattern strongly suggests the absence of any overall coincidence, as it is hard to see an overall coincidence when eight of ten factors actually show results that are in fact improving.

7.220 Regarding the 2007-2008 period, China recalls that the U.S. theory of correlation should show the small increase in imports from China over the 2007-2008 period having the smallest adverse impact on injury indicators. China contends, though, that in fact the opposite is true, as six indicators (production, net sales volume, profit, productivity, capacity utilization and employment) were all down.

7.221 China submits, therefore, that over the 2006-2007 and 2007-2008 periods, the vast majority of the changes in injury indicators are inconsistent with the U.S. theory, and the few changes that at least might support the U.S. theory in fact provide very weak support.

7.222 **The United States** submits that China's arguments against the USITC's analysis must fail because they are premised on the concept that even a minor variation in the trends establishes that there is not a "coincidence of trends" between increasing imports and material injury. The United States disagrees that the USITC should have considered whether the "degree of the respective annual increases [in Chinese imports] correspond generally with the degree of the respective declines in injury factors".[328] The United States submits that China's argument is flawed as an analytical matter because it assumes that Chinese imports must cause all, or most, of the injury being suffered by an industry in any particular year of the period being examined. According to the United States, it is only in such a situation that there would be a close "correspondence" between the degree of the annual increase in Chinese import volumes and any declines in the indicia of the industry's condition. In cases where other factors are causing material injury to an industry at the same time as Chinese imports, the United States contends that there might not necessarily be the same "degree" of correspondence between changes in the volume trends of Chinese imports and changes in the industry's condition.

7.223 The United States asserts that, with respect to the *Safeguards Agreement*, WTO panels have explained that the "overall coincidence [in trends] is what matters and not whether coincidence or lack thereof can be shown in relation to a few select factors which the competent authority has considered".[329] The United States notes in this regard that the panel in *US – Wheat Gluten* found:

> [I]n light of the overall coincidence of the upward trend in increased imports and the negative trend in injury factors over the period of investigation, the existence of slight absences of coincidence in the movement of individual injury factors in relation to imports would not preclude a finding by the USITC of a causal link between increased imports and serious injury.[330]

7.224 The United States submits that the USITC properly concluded that there was a clear overall "coincidence" in trends between the rapidly increasing imports and their effects on the domestic

[328] Oral Statement by China at the Second Panel Meeting, para. 64.

[329] Panel Report, *US – Steel Safeguards*, para. 10.302.

[330] Panel Report, *US – Wheat Gluten*, para. 8.101.

industry.[331] The United States asserts that, during a period in which Chinese import volumes increased rapidly in every year of the period, the record showed that:

- The domestic industry's market share fell in every year of the period, declining by 13.7 percentage points over the period of investigation;[332]
- The domestic industry's production declined in every year of the period, resulting in an overall decline of 26.6 per cent;
- The domestic industry's capacity declined in every year of the period, for an overall decline of 17.8 per cent;
- The domestic industry's U.S. shipments declined in every year of the period, for an overall decline of 29.7 per cent;[333]
- The domestic industry's net sales quantities declined in every year of the period, for an overall decline of 28.3 per cent;[334] and
- The domestic industry's employment-related factors fell significantly over the period of investigation, with the number of production-related workers falling by 14.2 per cent, the number of hours worked falling by 17.0 per cent, and wages paid falling by 12.5 per cent over the period.[335]

7.225 The United States submits that all of these factors were at their lowest levels in 2008, while Chinese tyre imports were at their highest levels in 2008 (in terms of volume of imports and market share). The United States also asserts that the USITC found that the U.S. industry suffered declines in operating income, operating margins, capacity utilization, and productivity of the domestic industry in three out of four years of the period, and all, except for capacity utilization, were at their lowest levels for the period in 2008.[336] Thus, the United States notes that:

- Productivity fell by 11.5 per cent over the period.
- Capacity utilization fell by 10.3 percentage points over the period.
- Operating margins fell by 4.8 percentage points over the period.
- Operating income fell from $256.2 million in 2004 to a loss of 262.8 million in 2008.

7.226 The United States contends that there was therefore clear evidence of a coincidence between imports and declines in the industry's condition over the period of investigation.[337]

[337] Oral Statement by the U.S. at the Second Panel Meeting, para. 59.

(b) Evaluation by the Panel

7.227 We shall first address China's general arguments regarding correlation. We shall then address China's specific arguments regarding the USITC's finding that subject imports caused a cost-price squeeze.

(i) Correlation generally

7.228 We recall that Paragraph 16 does not require a showing of correlation between material injury and rapidly increasing imports.[338] Instead, correlation is a tool that an investigating authority might use to demonstrate causation (either alone, or in conjunction with other analytical tools). There is a basic disagreement between the parties regarding the type of correlation that might be sufficient to establish causation under Paragraph 16 of the Protocol. In brief, the United States considers that there need only be an overall coincidence between imports and injury factors, in the sense that the upward movements in imports should occur at the same time as the downward movements in injury factors. China submits that mere temporal coincidence does not suffice. China contends that more is required, in the sense that the degree of the increases in imports should correspond with the degree of the declines in injury factors. According to China, simply assessing whether an upward movement in imports over the period coincides with a downward movement in injury factors amounts to no more than an end-point-to-end-point analysis, of the sort condemned by the Appellate Body in *Argentina – Footwear (EC)*.

7.229 We are not persuaded that causation might only be based on a finding of correlation if the varying degrees of increase in imports over the period of investigation are reflected in the varying degrees, or rates, of declines in injury indicators. Correlation between the varying degrees of increase in imports and decrease in injury indicators suggests a certain degree of precision. However, correlation between imports and injury factors is not an exact science, especially as there may be other causes of injury at work. As a result, it would be unrealistic to expect, or require, a somewhat precise correlation between the degree of change in imports and the degree of change in the injury factors. While a more precise degree of correlation between the upward movements in imports and the downward movements in injury factors might result in a more robust finding of causation, and might indeed suffice on its own to demonstrate causation, a finding of "significant cause" is not excluded simply because an investigating authority relies on an overall coincidence between the upward movement in imports and the downward movement in injury factors, especially if that finding of overall coincidence is combined – as it was in the present case - with other analyses indicative of causation.

7.230 In *Argentina – Footwear (EC)* the panel stated that it would assess Argentina's causation analysis:

> on the basis of (i) *whether an upward trend in imports coincides with downward trends in the injury factors*, and if not, whether a reasoned explanation is provided as to why nevertheless the data show causation.[339]

7.231 These findings were upheld by the Appellate Body[340], and were followed by the panel in *US – Steel Safeguards*. The latter panel found that:

[338] *See* paras. 7.169 to 7.170 above.
[339] Panel Report, *Argentina – Footwear (EC)*, para. 8.229, emphasis supplied.
[340] Appellate Body Report, *Argentina – Footwear (EC)*, para. 145.

> the word "coincidence" in the current context refers to the *temporal* relationship between the movements in imports and the movements in injury factors. In other words, upward movements in imports should normally occur at the same time as downward movements in injury factors in order for coincidence to exist. [341]

7.232 There is no suggestion in these statements by the *Argentina – Footwear (EC)* and *US – Steel Safeguards* panels that the orders of magnitude are key, or that changes in the degree of increase in imports should be reflected in changes in the degree of decline in injury factors. Rather, the panels simply found that imports should increase at the same time as the injury factors decline.

7.233 The *US – Steel Safeguards* panel also found that it is the "overall coincidence ... that matters, and not whether coincidence or lack thereof can be shown in relation to a few select factors which the authority has considered".[342]

7.234 In light of the above considerations regarding the degree of precision required for an assessment of correlation, we consider that the USITC was entitled to support its determination of "significant cause" with a finding of overall coincidence between an upward trend in subject imports from China and downward trends in the relevant injury factors.[343] We recall our finding that the USITC properly established that imports were "increasing rapidly" during the period of investigation, and that imports continued to increase in every year of the period. In terms of injury factors, we note that:

- The domestic industry's market share fell in every year of the period, declining by 13.7 percentage points over the period of investigation;[344]
- The domestic industry's production declined in every year of the period, resulting in an overall decline of 26.6 per cent;
- The domestic industry's capacity declined in every year of the period, for an overall decline of 17.8 per cent;
- The domestic industry's U.S. shipments declined in every year of the period, for an overall decline of 29.7 per cent;[345]
- The domestic industry's net sales quantities declined in every year of the period, for an overall decline of 28.3 per cent;[346] and
- The domestic industry's employment-related factors fell significantly over the period of investigation, with the number of production-related workers falling by 14.2 per cent, the number of hours worked falling by 17.0 per cent, and wages paid falling by 12.5 per cent over the period.[347]

[341] Panel Report, *US – Steel Safeguards*, para. 10.299.
[342] Panel Report, *US – Steel Safeguards*, para. 10.302.
[343] China has advanced detailed arguments regarding the alleged lack of correlation between increased imports and injury. Since these arguments are based on its more precise approach to correlation, which we have rejected, we do not need to consider all of China's arguments in detail. We do, though, consider China's arguments regarding the USITC's finding of a "cost-price squeeze" (*see* paras. 7.239 to 7.260 below).
[344] USITC Report, pages 25-26.
[345] USITC Report, pages 15-18 and 24.
[346] USITC Report, pages 23-24.
[347] USITC Report, pages 17 and 24.

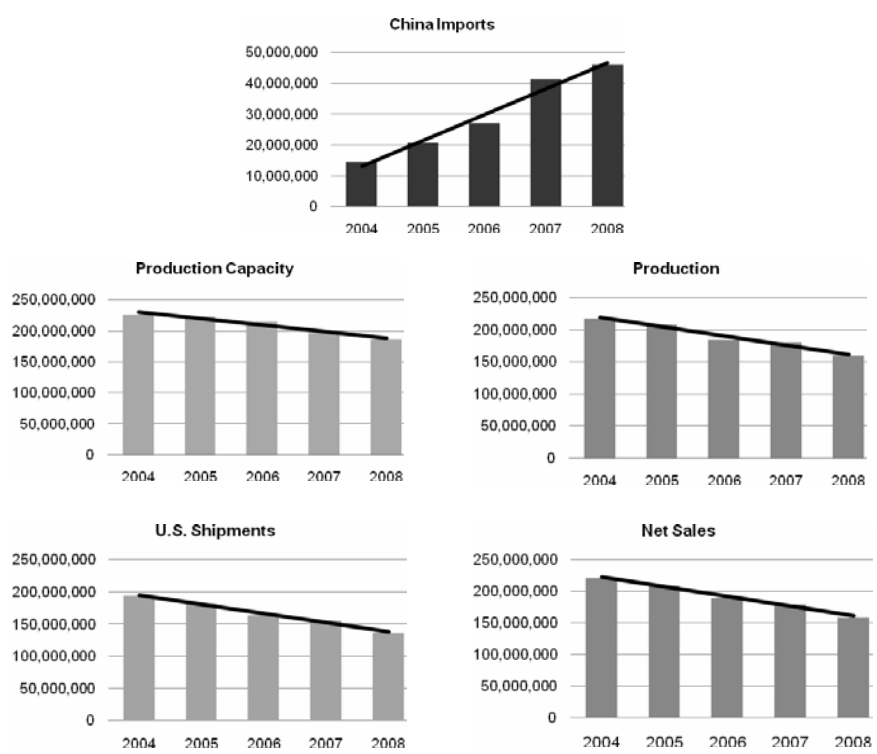
7.235 Furthermore, the U.S. industry suffered declines in operating income, operating margins, capacity utilization, and productivity of the domestic industry in three out of four years of the period, and all, except for capacity utilization, were at their lowest levels for the period in 2008, when subject imports were at their highest.[348] In particular:

- Productivity fell by 11.5 per cent over the period;
- Capacity utilization fell by 10.3 percentage points over the period;
- Operating margins fell by 4.8 percentage points over the period, with declines in three out of four years of that period; and
- Operating income fell from $256.2 million in 2004 to a loss of 262.8 million in 2008.

7.236 We consider that this data was sufficient for the USITC to properly find that there was an overall coincidence between the upward movement in subject imports and the downward movement in domestic industry injury factors. In our view, such overall coincidence is amply demonstrated by the following figures submitted by the United States:

[348] USITC Report, Table C-1.

Subject tires: Comparison of China imports to U.S. industry indicators, in units, 2004-08



Source: USITC Report, Table C-1.

7.237 China contests the relevance of these figures on the basis that it relates only to volume-based indicators. According to China, volume-based indicators are influenced by the decline in demand and the domestic industry's business strategy of ceding the low-end of the replacement market. We are not persuaded. First, we find below[349] that no prima facie case has been established that there was error in the USITC's conclusion that the industry did not voluntarily adjust its business strategy (i.e., cede the low-end of the replacement market) independent of the rapidly increasing imports from China. Second, we also find below that the USITC properly considered the effect of changes in demand on the domestic industry. In particular, it is apparent that declines in demand do not account for the totality of the injury suffered by the domestic industry.[350] In these circumstances, it was appropriate for the USITC to take declines in volume-metrics into account for the purpose of analysing correlation. Finally, we recall that the U.S. industry also suffered declines in operating income, operating margins, capacity utilization, and productivity of the domestic industry in three out

[349] *See* paras. 7.285 to 7.322 below.
[350] *See* paras. 7.323 to 7.359 below.

of four years of the period, and all, except for capacity utilization, were at their lowest levels for the period in 2008.

7.238 For these reasons, we do not accept that the USITC failed to properly establish correlation in the present case. The USITC's finding of overall coincidence was sufficient to support, along with other considerations, its conclusion that subject imports from China were a "significant cause" of material injury to the U.S. tyre industry.

(ii) Cost–price squeeze

7.239 As part of its arguments regarding an alleged lack of temporal correlation between increasing subject imports and declining injury factors, China claims that there is no correlation between increased imports and falling prices, as prices actually increased over the period.[351] The United States submits that China's observation is irrelevant, as the USITC did not find that subject imports had caused price depression. Instead, the USITC found price suppression, as underselling by subject imports caused domestic producers to experience a "cost-price squeeze"[352], preventing them from raising their prices sufficiently to offset increasing costs. China submits that the USITC's "cost-price squeeze" theory is predicated on a chain of false assumptions and improper inferences concerning (a) the cost of goods sold ("COGS") to sales ratio, (b) alleged underselling by subject imports, and (c) the role of non-subject imports. China addresses each of these elements in turn.

COGS/sales ratio

7.240 **China** contends that the USITC found that there was a "cost-price squeeze" over the period because the COGS/sales ratio rose by 5.4 percentage points from 2004 to 2008, when the volume of imports from China was at its highest. China rejects this finding, alleging that movements in the COGS/sales ratio do not correlate with rapidly increasing imports from China. China notes in particular that the COGS/sales ratio *fell* by 5.3 percentage points in 2007, which was the very year when imports from China rose by their highest margin. China asserts that, if rapidly increasing imports from China were creating a "cost-price squeeze", one would certainly expect to see that effect in 2007.

7.241 China asserts that the lack of correlation between the COGS/sales ratio and rapidly increasing imports is further evidenced by 2008 data. In 2008, the COGS/sales ratio rose by 5.8 percentage points, whereas the rate of increase in imports from China fell from the previous year. China contends that any "cost-price squeeze" in 2008, if it existed, would have been attributable to the near collapse of the U.S. auto industry and the onset of the worst recession since the 1930s.

7.242 China submits that the USITC theory is also at odds with the relatively greater price increases that U.S. producers were able to achieve during the period. Thus, China notes that the average unit value of U.S.-produced tyres rose 44 percentage points over the period, whereas the average price of non-subject imports rose by only 36.8 percentage points, and imports from China by 25.1 percentage points. China contends that the consistent average unit value increases over the period, and the magnitude of the increases U.S. producers were able to achieve (admittedly over all market tyre segments, including high-value tier 1), do not support the USITC "price squeeze" hypothesis. China

[351] We note that Paragraph 16.4 of the Protocol provides separately for analyses of "the effect of imports on prices" and "the effect of such imports on the domestic industry". Accordingly, it is not apparent to us that the question of price should necessarily be reviewed in the context of temporal correlation. However, since the United States has not objected to China's approach to this issue, we consider China's arguments on price under this section of our Report.
[352] USITC Report, page 24.

notes in this regard that, for pricing product no. 1, the average U.S. price increased by $12.57, whereas the average subject import price increased by only $1.96.

7.243 **The United States** asserts that China acknowledges that the ratio of costs to goods sold increased in every year of the period but one (2007).[353] The United States submits that the fact that the ratio of cost of goods sold to sales declined in 2007, when subject imports increased at the greatest rate, is not enough to show that overall coincidence is not present, as in every other year of the period the ratio of cost of goods sold to sales increased, thus corresponding with increases in the volumes of subject imports in every year. The United States contends that increases in U.S. industry average unit values should be viewed in light of increases in U.S. costs.

7.244 The **Panel** notes that China's claim that there was no correlation between the increase in subject imports and the increase in the COGS/sales ratio is based on its argument that there must be a precise correlation between the relevant trends, and that the USITC's analysis was merely a "simplistic end-point-to-end-point juxtaposition of data"[354] that does not withstand scrutiny. As explained above, we consider that the United States properly found an overall coincidence between rapidly increasing imports and the deterioration in the condition of the domestic industry. The fact that annual movements in every single injury factor did not precisely track annual movements in subject imports does not invalidate the USITC's finding of overall coincidence.

7.245 Regarding China's argument that U.S. producers were able to increase their prices by far more than subject imports, we recall that the USITC made a finding of price suppression. Accordingly, the price of U.S. products must be viewed in light of the costs of the U.S. industry. While China argues[355] that the average U.S. industry price for product no. 1 increased by $12.57 over the period, this price increase must be viewed in light of the $21.24 increase in U.S. industry costs over the same period. Similarly, although the average unit value of U.S.-produced tyres increased by 44 percentage points over the period, the average unit cost of goods sold increased by 52.4 percentage points.[356]

Underselling

7.246 **China** contends that the USITC misleadingly relied on questionnaire responses to assert that there was "pervasive underselling" by imports from China. China acknowledges that questionnaire data showed that imports from China were cheaper than U.S.-produced tyres in 119 of 120 instances in which the USITC compared pricing of Chinese and U.S. tyres, but refers to the observation by the dissent that these comparisons appear to have lumped together tyres with different speed ratings, load indices, and levels of performance, possibly aggregating tyres at different price points. China submits that the margin of underselling calculated and relied on by the USITC is therefore unreliable.

7.247 Furthermore, China contends that any price differences between domestic tyres and subject imports merely reflected the fact that U.S. producers were predominantly and increasingly positioned in the higher-end, premium tyre market, and accounted for more than half of all OEM sales in the U.S., whereas between 95 per cent and 99 per cent of imports from China were in the replacement market, focused on lower-end production. China submits that these differences will inevitably skew the data, and inflate any alleged "margin of underselling". China contends that the data was further skewed by the fact that no OEM sales by subject imports were included in the price comparisons, whereas 3 of the six U.S. producers reported data for the more-expensive OEM sales. China submits

[353] China's First Written Submission, para. 257.
[354] China's Second Written Submission, para. 232.
[355] China's Second Written Submission, para. 239.
[356] USITC Report, Table C-1.

that the USITC should have engaged in a more rigorous analysis of price competition between domestic tyres and subject imports, given the heterogeneous product market in question.

7.248 Furthermore, China criticises the USITC's reliance on questionnaire responses from three U.S. producers to the effect that they had to reduce prices or roll back announced price increases to avoid losing sales to competitors selling tyres from China. China laments the absence of specifics as to when, how frequently, or in what context this dynamic allegedly occurred, or how significant it was to operations over the period. Moreover, China notes (as the dissent observed) that not a single producer could report a specific example of lost revenues or lost sales, and that the USITC did not ask for or receive data from producers suggesting that Chinese import competition barred them from passing through cost increases in the form of needed price rises (as the "cost-price squeeze" theory would require).

7.249 In addition, China refers to the USITC's finding that the margin of underselling was the greatest in 2007, when the imports from China increased by the largest amount. China notes that 2007 was also the year in which the domestic industry saw record profitability. According to China, this disconnect between high margins of underselling and the financial condition of the domestic industry calls into serious doubt the logic of the USITC.

7.250 **The United States** notes that Paragraph 16.4 of the Protocol states that an investigating authority shall consider, among other things, "the effect of imports on prices for like or directly competitive articles" to determine if market disruption exists. The United States submits that the USITC conducted a detailed and thorough evaluation of pricing in the tyres market, and explained how the persistent and significant underselling by subject imports contributed to the deteriorating condition of the domestic industry.

7.251 The United States explains that the USITC collected quarterly data over the period examined for six specific products, each of which was defined by specific dimensions, load indexes, and speed ratings of each to ensure compatibility.[357] The United States asserts that these pricing products accounted for a significant amount of domestic producer's U.S. shipments and subject import shipments[358], and that the resultant comparisons showed underselling by the subject imports in 119 out of 120 comparisons, with the average margins of underselling at their highest in 2007 and 2008, coinciding with the largest volumes of subject imports.[359] The United States asserts that the USITC found that the consistent underselling by the large and rapidly increasing volume of subject tyres displaced domestic shipments by U.S. producers, and eroded the domestic industry's market share, leading to a substantial reduction since 2004 in domestic capacity, production, shipments, and employment during the period examined. The United States asserts that the USITC also noted that continued underselling by the subject imports prevented domestic producers from raising prices sufficiently to offset higher production costs and thus suppressed prices.[360]

7.252 The United States rejects China's argument that the price comparison data collected by the USITC is "unreliable" because it does not define the price comparison products in a specific enough manner.[361] The United States submits that the USITC defined its price comparison products in a

[357] USITC Report, V-23-24. In response to China's argument that different speed ratings cause the USITC data to be unreliable, the United States notes that one of the respondent's own witnesses testified in this case that product 3 (which is the only passenger vehicle price product to have three speed ratings) "is a commodity tyre size and that there is little difference in the S, T, and H speed ratings in that particular size. *Id.* at V-35 citing Hearing Transcript, page 304 (Berra).
[358] USITC Report, page 23, n. 128.
[359] USITC Report, Tables V-9-V-14 and Table C-1.
[360] USITC Report, page 24.
[361] China's First Written Submission, para. 260.

highly specific manner that allowed it to perform an apples-to-apples comparison of prices of subject and domestic tyres. The United States further asserts that, given that the large majority of market participants reported that tyres from China and domestically produced were "always" or "frequently" interchangeable, it was entirely reasonable for the USITC to rely on this pricing data as a basis for assessing whether the subject imports were underselling the U.S. tyres.

7.253 Regarding China's argument that the USITC's price comparison data are unreliable because U.S. producers' ship a much higher percentage of their tyres into the more expensive OEM market, the United States asserts that the USITC's price comparison data only compared prices for subject and U.S. tyres on sales into the replacement market.[362] The United States argues that, since no shipments to the OEM market were included in these price comparisons, the fact that more U.S. tyres were sold into the OEM sector than subject tyres does not affect the validity of the USITC's actual price comparisons in any way.

7.254 The **Panel** notes that the USITC found underselling in 119 out of 120 price comparisons undertaken on the basis of data provided by U.S. producers and importers. The USITC also found that the margins of underselling for all six products increased during the period of investigation, and that the increase in the margins for five of the six products were at their highest levels of the period in 2007 and 2008. The USITC also found that the average margin of underselling for all six products coincided with increasing volumes of subject imports, and that the greatest increase in the average margin of underselling was in 2007, the year in which the volume of rapidly increasing imports rose by the greatest amount.[363]

7.255 China challenges the USITC's findings on various grounds. First, China alleges that the USITC's price comparisons were not sufficiently precise, in the sense that they lumped together tyres with different speed ratings, load indices, and levels of performance, possibly aggregating tyres at different price points. We note, though, that the relevant price comparisons were undertaken in respect of six different products, each of which was defined by reference to particular size, load index, and speed rating criteria. For example, the USITC defined Product 1 by tyre size (P225/60R16), load index (97-98), and speed rating S or T.[364] Product 2 was tyre size P235/75R15, load index 105-108, and speed rating S or T. China has not provided any explanation as to why products defined on the basis of such particular criteria would not provide a proper basis for comparing prices.

7.256 China also argues that the USITC's findings regarding underselling were distorted by the fact that the U.S. producers accounted for more than half of sales in the OEM market, whereas subject imports were focused primarily on the replacement market. We note, however, that, according to Tables V-9 to V-16 of the USITC Report, the USITC collected price data for each of the six products for both the OEM and replacement markets. Furthermore, the USITC's findings regarding the increase in the average margin of underselling were based on Tables V-9 to V-14, which concerned sales to the replacement market only. Accordingly, we consider that there was no risk that prices for the OEM market were compared with prices for the replacement market.[365]

7.257 China also argues that the USITC's findings regarding underselling were distorted by the fact that U.S. producers and subject imports targeted different segments of the replacement market, such

[362] USITC Report Tables V-9-V-14. According to the United States, these tables specify that the price comparisons are for shipments to the replacement market only. The United States asserts that shipments to the OEM market are in a separate table, V-15.
[363] USITC Report, page 23.
[364] USITC Report, V-23.
[365] In any event, the USITC found that, in 69 out of 78 quarters, the prices of U.S.-produced tyres sold to the OEM market were actually lower than the prices of comparable U.S.-produced tyres sold to the replacement market (USITC Report, page V-35).

that the price of segment 3 subject imports should not be compared with the price of segment 1 U.S. products. We recall our earlier findings regarding market segmentation, and our rejection of China's claim of attenuated competition. In light of these findings, we do not consider that any differentiation between segments in the replacement market, was so clearly defined, or pronounced, that it should have been incorporated into the pricing analysis undertaken by the USITC. We also recall that, in 2008, the U.S. industry made a large proportion of its sales in tiers 2 and 3, where sales of subject imports were concentrated.[366] As explained above[367], China's claim that the domestic industry and subject imports targeted different segments of the replacement market is, therefore, unfounded.

7.258 Furthermore, China submits that there was no correlation between underselling and profitability, as the largest margin of underselling coincided with record profitability in 2007. We are not persuaded by this argument, as the USITC did properly establish that "increases in the average margin of underselling coincided with increasing volumes of subject imports".[368] The USITC further established that "significant and continuous underselling throughout the period ... by the large and rapidly increasing volume of subject Chinese tires eroded the domestic industry's market share, leading to a substantial reduction since 2004 in domestic capacity, production, shipments, and employment during the period examined".[369] In other words, the USITC found that underselling by subject imports generally had a highly detrimental impact on the domestic industry. In our view, the fact that the USITC might not have specifically addressed the relationship between underselling and one single additional injury indicator – profitability – does not detract from the USITC's findings regarding the effects of "increasing" underselling by subject imports more generally. Nor, as explained above[370], does the fact that profitability might have increased in 2007 undermine the USITC's finding of overall coincidence between rapidly increasing imports and injury to the domestic industry (particularly as operating margins fell by 4.8 percentage points over the period, with declines in three out of four years of the period).

7.259 Finally, we note China's argument that any price suppression would more likely have been caused by non-subject imports, which "dwarfed" subject imports and which also undersold domestic tyres. We address the role of non-subject imports below[371], in the context of our consideration of China's arguments regarding other causes of injury.

7.260 For the above reasons, we find no objection to the USITC's finding of a cost–price squeeze.

(c) Conclusion

7.261 In the light of the above considerations, we find that the USITC's reliance on an overall coincidence between an upward movement in imports and a downward movement in injury factors to support its finding of "significant cause" and to be in accordance with the requirements of Paragraph 16.4 of the Protocol.

4. The non-attribution of injury caused by other factors to increasing imports

7.262 **China** attributes the injury suffered by the U.S. domestic industry to a number of factors other than subject imports from China, namely: the domestic industry's business strategy; changes in demand; non-subject imports, and various other factors. China submits that, as a result of these other

[366] *See* para. 7.195 above.

[371] *See* paras. 7.364 to 7.367 below.

causes of injury, the domestic producers would have experienced the same injury even without imports from China. China contends that the USITC ignored or failed to assess fully these other causes of injury, or to establish that the injury caused by such other factors was not improperly attributed to the subject imports. China asserts that the USITC merely listed some of the arguments made by respondents regarding alternative causes in a single paragraph and then stated, without explanation, that it "considered" them.[372] China submits that the USITC then dismissed these other causes as legally irrelevant, stating that Section 421 "does not require a weighing of causes, but only that we find that rapidly increasing imports, in and of themselves, are a significant cause of material injury ...".[373] China also claims that, in addition to examining the impact on the domestic industry of each of these alternative factors individually, the USITC should also have examined the cumulative effect of these other causal factors.

7.263 **The United States** contends that the USITC properly addressed all of the factors that could reasonably be considered significant enough to break the causal link between imports and material injury.

7.264 We shall examine each of the alleged alternative causes identified by China in turn, beginning with the change in the domestic industry's business strategy. In examining the parties' arguments, we recall our view that a finding of causation for the purpose of Paragraph 16.4 should only be made if it is properly established that rapidly increasing imports have injurious effects that cannot be explained by the existence of other causal factors.[374]

(a) The domestic industry's business strategy

(i) Arguments of the parties

7.265 **China** contends that the USITC relied on four factors to reject the argument that domestic producers had voluntarily ceded the low end of the market: (1) imports from China were increasing before plant closures in 2006 and 2008; (2) significant purchases of tyre-manufacturing equipment in China occurred over the past ten years; (3) U.S. producers were not the largest importers of Chinese tyres during the period; and (4) a 2006 article noted that imports from China were expected to increase.[375] China challenges the USITC's assessment of each of these factors.

Plant closures

7.266 China claims that the USITC improperly attributed plant closings to imports from China, when the record in fact demonstrates that domestic producers were engaged in a long-term strategy that led them to voluntarily close high-cost U.S. plants and plants that focused on small-sized or low-value tyres, and shift production in the United States towards the higher-end segments of the market.

7.267 China claims that the USITC ignored the fact that, rather than suffering injury as a result of subject imports, the U.S. industry chose to restructure itself voluntarily, consistent with its global sourcing strategy. China argues that the U.S. producers are "global companies with global sourcing strategies"[376], and that their "[o]perations in China have enhanced the[ir] profitability".[377] China alleges that the domestic industry voluntarily ceded the low end of the market because it was

[372] USITC Report, page 29.
[373] USITC Report, page 29.
[374] *See* para. 7.177 above.

[376] China's First Written Submission, para. 345.
[377] China's First Written Submission, para. 348.

profitable to do so. In particular, China argues that "the imports from China (and other low-cost jurisdictions) are a *positive* factor"[378] for U.S. producers, who "were themselves responsible for manufacturing and importing many of these tires".[379]

7.268 China argues that U.S. producers testified repeatedly that they had voluntarily shifted domestic production away from lower-end tyres to the premium, higher-value branded segment. China contends that the USITC improperly rejected the testimony of the U.S. producers concerning their own business strategy, declaring erroneously that the restructuring of the U.S. industry was not "voluntary", and that the resultant plant closures were instead caused by imports from China.[380]

7.269 According to China, there is no record evidence to suggest that imports from China caused any of the plant closures. Regarding two plant closures by Continental, China asserts that hearing testimony indicated that these closures occurred because these two plants were the highest-cost facilities in the entire company:

> The Mayfield, Kentucky and Charlotte, North Carolina plants were closed in 2004 and 2006 respectively. Based on my personal knowledge of the situation as a nine-year employee of Continental, I can tell the Commission that Chinese imports had nothing to so with these closings. As far back as 1997 I was involved in monthly staff meetings that discussed the cost levels in all Continental plants worldwide, including the U.S.
>
> The Mayfield plant was consistently the highest cost plant in the global Continental system. The Charlotte plant was also one of the highest cost plants in the system. Continental was facing many issues during this period. But Chinese import competition was not among them.[381]

7.270 China further contends that, in press releases, Continental attributed the closure of the Mayfield site to declining business conditions and escalating energy and raw materials costs, and the closure of its Charlotte facility to "global competition putting pressure on us as our manufacturing costs are cheaper overseas", the "skyrocketing costs of energy, raw materials, and health care", and the plant's inability to successfully restructure its labor agreement with USW.[382] China submits that no mention was made of Chinese import competition.

7.271 China notes that Bridgestone closed its Oklahoma City facility in 2006 because it produced smaller tyres at the lower-value end of the market.[383] China asserts that, in a press release, Bridgestone said that "this plant produces tires in the low-end segment of the market where demand is shrinking and fierce competition from low-cost producing countries is increasing".[384] China asserts that the press release also stated that "the market is quickly running away from the products we produce in Oklahoma City".[385] China submits that, again, no mention was made of Chinese import competition.

[383] USITC Report, page 64, n. 123 (dissenting Commissioners).
[384] "Bridgestone Firestone to close Oklahoma City Tire Plant", 13 July 2006.
[385] "Bridgestone Firestone to close Oklahoma City Tire Plant", 13 July 2006.

7.272 Regarding Goodyear's 2006 announcement of the closure of its Tyler plant, China asserts that Goodyear's press release explained this closure as consistent with its June 2006 announcement that it would exit certain segments of the private label tyre market.[386] China asserts that the press release also noted that "[t]he Tyler plant principally produces small diameter passenger tires, a segment that has been under considerable pressure from low cost imports".[387] According to China, this generic reference to "low-cost imports" could apply to any import source, including the many non-subject imports that are cheaper than domestic tyres. China contends that the October 2006 press release never mentions imports from China.

7.273 China also refers to three closures announced for 2009. China contends that these three announced closures were all primarily due to the economic crisis that began in 2008 and the overall decline in demand for tyres.[388] China submits that there is no evidence that imports from China are to blame for these closures.

7.274 China further contends that the USITC improperly found that imports from China were increasing before plant closures in 2006 and 2008, whereas the decisions to close these plants were made before imports rose significantly in 2007.

7.275 **The United States** contends that the record showed that imports were already increasing before the announced plant closings, and that U.S. producers issued contemporaneous statements at the time of these plant closings confirming that low-priced competition from imports, including subject imports from China, was an important part of their decisions.[389]

Purchases of tyre-manufacturing equipment by Chinese producers

7.276 **China** notes that the USITC relied on:

> articles in trade publications referred to a surge in the purchase of Western tire production equipment by Chinese tire manufacturers during the last ten years, indicating that Chinese producers were expanding their capacity to produce and export tires.[390]

7.277 China contends that the mere fact that Chinese companies purchased western tyre manufacturing equipment says nothing about whether the U.S. producers voluntarily adopted their business strategy, or were "forced" to curtail lower-end manufacture in the United States by imports from China arriving in the U.S. market. According to China, the USITC did not find that domestic producers shut plants or took other action due to fears about increasing Chinese capacity. China asserts that there is no evidence on the record to suggest such a fear. Furthermore, China contends that the increase in Chinese production capacity is only relevant in the context of a finding of threat of material injury.

7.278 **The United States** asserts that the USITC relied on the above article to demonstrate that market participants were well aware of the extraordinary growth in the size and export capacity of the Chinese industry before and during the period of investigation. According to the United States, the USITC reasonably relied on this article as evidence that U.S. producers had closed certain production

[386] "Goodyear announces planned closing of Tyler facility", 30 October 2006.
[387] USITC Report, pages I-16 through I-17 (citing "Goodyear announces planned closing of Tyler facility", 30 October 2006 (press release)).

[389] USITC Report, pages 26-27.
[390] USITC Report, page 26.

facilities as a strategy to deal with the rapid growth in the size and aggressiveness of the Chinese industry, and the rapid increase in its exports to the United States.

Subject imports by U.S. producers

7.279 **China** notes that the USITC referred to the fact that:

> U.S. producers were not among the largest importers of subject tires from China during the period examined and collectively accounted for only approximately 23.5 percent of subject imports, including purchases in 2008.

7.280 **China** asserts that the fact that U.S. producers were not the largest importers of Chinese tyres is a *non sequitur*, and has no bearing on whether imports from China were a significant cause of the business strategy that these global producers adopted.

7.281 **The United States** asserts that, because U.S. producers were not the primary importers of the subject imports, they were also not responsible for the large bulk of the increase in Chinese imports over the period. The United States argues that 84.2 per cent of the growth in subject imports over the period of investigation was imported by companies other than U.S. producers.[391] According to the United States, it was reasonable for the USITC to conclude that this indicated that the industry's alleged "voluntary business strategy" was not itself responsible for the tremendous growth in the subject imports during the period.

2006 Article: imports from China expected to increase

7.282 China notes that, in concluding that "a more reasonable explanation for U.S. producers' capacity reductions in 2006 and thereafter was a reaction to increases in subject imports from China that were already occurring and, given the size and degree of the increases, likely would continue in the future"[392], the USITC cites specifically to a March 2006 article in *MTD Modern Tire Dealer*, entitled "China and You: Expect more tire imports in the years to come". In particular, the USITC explains that:

> The article noted that China exported an estimated 21 million tires to the United States in 2005, and described the overall effect on domestic supply as "profound" and likely to remain so as imports increase. The article also said, with respect to Chinese production and shipments of tires for the replacement market, that "everyone agrees there will be rapid growth in the segment, especially with all the activity from foreign investing."[393]

7.283 **China** contends that an article positing an expectation that imports from China would increase by an unspecified amount in the future hardly suggests that the global sourcing strategy adopted by the U.S. producers was not "voluntary", or that it was somehow dictated by imports from China.

7.284 **The United States** asserts that this contemporaneous view of the "profound" effect that the increasingly large industry in China had had, and would have on the U.S. tyre market supports the USITC's view that the subject imports were likely to increase as China continued to expand its capacity, production, and share of shipments to the United States. According to the United States, it is

[391] USITC Report, Table II-3.
[392] USITC Report, pages 26-27.
[393] USITC Report, page 27, footnote 150.

no wonder that domestic producers soon realized that they could not compete with the increasing volumes of low-priced subject imports in that market, and reacted by substantially reducing capacity and closing U.S. plants.

(ii) Evaluation by the Panel

7.285 China presents the domestic industry's business strategy as an "other cause"[394] of material injury to the domestic industry, in the sense that declines in certain injury indicators (such as the volume-metrics, including production, shipments and net sales quantities) should be attributed to the domestic industry's withdrawal from the low-value segments of the replacement market (i.e., tiers 2 and 3), rather than subject imports. Under this theory, subject imports merely filled a "supply gap"[395] left by the retreating domestic industry.

7.286 The Chinese respondents presented similar arguments before the USITC.[396] Those arguments raised a serious issue that had to be addressed by the USITC, particularly given the lack of domestic producer support for the USW's petition, and the assertion by certain producers that they were not materially injured by subject imports from China[397], and would not change their operations in the event that a remedy were imposed.[398]

7.287 The USITC did address this issue in its Report. The USITC did so primarily in the follow extract from its Report:

> We do not agree that domestic producers voluntarily abandoned the lower-priced part of the U.S. tire market and that the subject imports simply filled the void left by their departure. Imports from China were already increasing before Bridgestone, Continental, and Goodyear announced the plant closings that occurred in 2006 and 2008. The three companies confirmed in statements issued at the time of the announcements that low-priced competition from Asia, including China, was an important part of their decisions.** Moreover, articles in trade publications referred to a surge in the purchase of Western tire production equipment by Chinese tire manufacturers during the last ten years, indicating that Chinese producers were expanding their capacity to produce and export tires. U.S. producers were not among the largest importers of subject tires from China during the period examined and collectively accounted for only approximately 23.5 percent of subject imports, including purchases in 2008. Thus, we find that a more reasonable explanation for U.S. producers' capacity reductions in 2006 and thereafter was a reaction to increases in subject imports from China that were already occurring and, given the size and degree of the increases, likely would continue in the future.[399]

** In a footnote, the USITC noted that:

> All three companies cited import competition as a factor in their plant closings: Bridgestone cited "fierce competition from low-cost producing countries" as a factor in closing its Oklahoma City plant in 2006; Continental cited "global competition" and "manufacturing costs [that] are cheaper overseas" as contributing to the closure of its Charlotte, NC, plant in 2006; and for Goodyear, pressure from low-cost imports was cited as contributing to closure of its Tyler, TX, plant in 2008. CR at I-20-22, PR at I-15-17.[400]

[396] *See*, for example, USITC Report, pages 19-20, and 26.
[397] USITC Report, page III-10.
[398] USITC Report, page VI-1.
[399] USITC Report, page 26, footnotes generally omitted.

7.288 The USITC also found that "significant and continuous" underselling by subject imports "eroded the domestic industry's market share", causing the domestic industry to "reduce capacity so as to focus on the parts of their business in which they could expect to remain profitable despite the impact of subject imports from China". The USITC found that "the substantial reduction in domestic capacity and the closures of U.S. plants during the period examined were largely a reaction to the significant and increasing volume of subject imports from China, and were not, as respondents argue, part of a strategy by domestic tire produces to voluntarily abandon the low-priced, 'value' segment of the U.S. market".[401]

7.289 China challenges the USITC's treatment of a number of factors, including in particular plant closures in 2006 and 2008, the purchase of tyre-manufacturing equipment by Chinese producers, the proportion of total subject imports made by U.S. producers, and a 2006 article regarding the "profound" effect of subject imports on the U.S. industry. While we necessarily consider the USITC's handling of these factors, and the relevant evidence, individually, we shall also assess the USITC's conclusion on the basis of the totality of the factors and evidence relied on by the USITC.

7.290 Before turning to the evidence regarding the abovementioned factors, we first consider it necessary to make a number of more general observations regarding China's arguments.

General observations regarding China's arguments

7.291 We note that China presents the domestic industry's business strategy as an "other cause"[402] of material injury to the domestic industry. China contends that, following the domestic's industry's abandonment of tier 3, "imports from other countries, including China, were then left to fill the 'supply gap'".[403] In this sense, subject imports are to some extent presented as an "own goal", since they result from the industry's own business strategy. At the same time, though, China argues that the U.S. producers are "global companies with global sourcing strategies"[404], and that their "[o]perations in China have enhanced the[ir] profitability".[405] China further argues that "the imports from China (and other low-cost jurisdictions) are a *positive* factor"[406] for U.S. producers, who "were themselves responsible for manufacturing and importing many of these tires".[407] In this sense, China also presents the subject imports resulting from[408] the domestic industry's strategy of off-shoring the production of low-value tyres as being non-injurious.[409] These different aspects of China's arguments prompt the following observations.

[400] USITC Report, footnote 147.
[401] USITC Report, pages 24-25.
[402] *See* Section V.C.4 of China's First Written Submission, entitled "The USITC ignored or failed to assess fully other causes of injury".
[403] China's Reply to Question 41 from the Panel, para. 58.
[404] China's First Written Submission, para. 345.
[405] China's First Written Submission, para. 348.
[406] China's First Written Submission, para. 349.
[407] China's First Written Submission, para. 349.
[408] This would seem to cover all subject imports, and not merely those imported by the U.S. producers.
[409] In the same vein, China argues that the decline in volume-based injury factors should not justify a determination of material injury, since those metrics simply reflect the domestic industry's desire to withdraw from the low-end of the tyre market.

7.292 First, the argument that subject imports are non-injurious is belied by the (increasing) margin of underselling established by the USITC.[410] Indeed, one might legitimately wonder why such underselling was necessary if the domestic industry had, as alleged by China, voluntarily ceded the low-end of the market, and if subject imports were merely filling the resultant "supply gap".

7.293 Second, if the domestic industry' withdrawal had really left a void in parts of the market, one would have expected that both subject and non-subject imports would have benefited from the domestic industry's withdrawal. Indeed, China claims that "imports from other countries, including China," were left to fill that "supply gap". The record clearly indicates, though, that only subject imports benefited from the domestic industry's alleged withdrawal from parts of the market.[411] Furthermore, although China refers specifically to the U.S. industry shifting production to Brazil and Indonesia[412], we note that Indonesia's share of imports only increased from 1.8 to 4.3 per cent over the period, while Brazil's share barely moved from 4 to 4.1 per cent. Over the same period, imports from China increased from 12.9 to 33.1 per cent of total imports.

7.294 Third, we note China's argument that "[f]rom 2006 to 2007, when the largest increases in imports from China and Chinese market share occurred, the U.S. tire industry in fact had its *best* financial performance".[413] Although the domestic industry generally did record its highest operating margin (i.e., operating income as a proportion of sales) of the period in 2007[414], when the rate of increase in subject imports was greatest, there were still three (out of ten) domestic producers who recorded operating losses that year.[415] In addition, when the absolute volume of subject imports was greatest, in 2008, the domestic industry recorded its worse operating loss of the period. We are not persuaded, therefore, that there is necessarily any positive connection between the volume of subject imports and the profitability of the domestic industry.

7.295 Fourth, although China contends that, as a result of their business strategy, domestic producers "were themselves responsible for manufacturing and importing many of these tires [from China]",[416] the USITC found[417] that domestic producers only accounted for 23.5 per cent of subject imports in 2008, the year when "the full effect of the industry's shifting business strategy" was allegedly being felt.[418] If subject imports really were being imported by U.S. producers consistent with their own business strategy of off-shoring production of tier 2 and 3 tyres, and if subject imports really were beneficial to domestic producers, we would expect domestic producers to account for a far greater proportion of subject imports. In fact, over the period of investigation as a whole, the USITC record showed that 84.2 per cent of the growth in subject imports was imported by companies *other than* U.S. producers.[419]

7.296 Fifth, regarding China's claim that the domestic industry's "[o]perations in China have enhanced the[ir] profitability",[420] we find no obvious nexus between any increase in the domestic industry's profitability and the volume of subject tyres imported by domestic producers. In particular,

[410] *See* USITC Report, page 23. China challenges the USITC's findings on underselling. We address, and reject, China's arguments at paras. 7.254 to 7.258 above.
[411] Overall, the share of non-subject imports in total U.S. imports declined from 87.1 to 66.9 per cent over the period (USITC Report, Table II-1).
[412] *See* China's First Written Submission, para. 346.
[413] China's First Written Submission, para. 11.
[414] USITC Report, Table C-1.
[415] USITC Report, Table III-5.
[416] China's First Written Submission, para. 349.
[417] USITC Report, page 26.
[418] China's comments on U.S. Reply to Question 49 from the Panel, para. 50.
[419] USITC Report, Table II-3.
[420] China's First Written Submission, para. 348.

as the volume of subject tyres imported by U.S. producers increased by 163 per cent between 2004 and 2008[421], the domestic industry's operating margin *fell* by 4.8 percentage points, going from a positive operating margin of 2.4 per cent to a negative operating margin of 2.4 per cent.[422] Furthermore, from 2006 to 2007, when the operating margin *increased* by 5.5 percentage points, the volume of subject imports by U.S. producers had increased by only 3.6 per cent. When the volume of subject imports by U.S. producers increased more substantially – by 33.6 per cent – from 2007 to 2008, the domestic industry's operating margin *fell* by 6.9 percentage points.

7.297 We now turn to China's arguments concerning the a number of the specific factors relied on by the USITC.

Plant closures

7.298 Put simply, the main issue concerning plant closures is whether such closures preceded, and indeed prompted, the increase in subject imports, or whether plants were closed as a result of competition from subject imports. In addressing this issue, the USITC relied on evidence regarding the closure of the Continental, Charlotte, plant in 2006, the Bridgestone, Oklahoma City, plant in 2006, and the Goodyear, Tyler, plant in 2008.[423] Our analysis will therefore focus on the evidence and arguments regarding these three plant closures.[424]

7.299 Regarding the Continental, Charlotte, plant, we note that a contemporaneous Continental press release attributed the closure of this plant to *inter alia* "global competition putting pressure on us as *our* manufacturing costs are cheaper overseas".[425] As observed above, the USITC interpreted this to be a reference to import competition from China. For our part, we consider that Continental's reference to "global competition" should be understood as competition from other *Continental* plants in the world. This is because the press release clearly refers to "our" manufacturing costs being "cheaper overseas". As to whether import competition from other Continental plants in the world might include subject imports from China, we note that the USITC Report clearly states that Continental did not have any production facilities in China.[426] Since Continental did not have any production facilities in China, there was no proper basis for the USITC to conclude that imports from Continental plants around the world might include subject imports from China. We also note that a former Continental employee testified before the USITC that "Chinese imports had nothing to do with [the Charlotte] closing[]".[427] In these circumstances, the USITC could not properly have attributed the closure of the Continental, Charlotte plant to subject imports from China.

7.300 Regarding Bridgestone's closure of its Oklahoma plant, the contemporaneous press release stated that "this plant produces tires in the low-end segment of the market where demand is shrinking and fierce competition from low-cost producing countries is increasing".[428] The press release further stated that "the market is quickly running away from the products we produce in Oklahoma City". To some extent, then, shifts in demand played a part in the closure of the Bridgestone, Oklahoma plant. However, the reference to "fierce competition from low-cost producing countries" suggests that shifts

[421] USITC Report, Table II-3.
[422] USITC Report, Table C-1.
[423] *See* USITC Report, footnote 147, and U.S. Reply to Question 51 from the Panel.
[424] Since the USITC did not rely on evidence regarding the Continental, Mayfield plant, or the three closures announced for 2009, we shall not consider the evidence regarding these additional closures.
[425] Continental press release, "CTNA announces indefinite suspension of tire production at Charlotte plant", 10 March 2006.
[426] USITC Report, pages IV-3 to IV-6, describing "U.S. Producers' Subject Tire Manufacturing Facilities in China". No Continental plant is included in this listing.
[427] USITC hearing transcript, page 234, lines 7-15.
[428] Bridgestone press release, "Bridgestone Firestone to close Oklahoma City Tire Plant", 13 July 2006.

in demand were not entirely responsible for the closure of that plant. The reference to "fierce" competition also suggests that import competition was not as benign as China suggests, and that imports were not merely filling a "supply gap" caused by the industry's retreat from the low-end of the market.[429]

7.301 As to whether the USITC could properly have understood Bridgestone's reference to "fierce [import] competition" to include competition from subject imports from China, we note that the press release makes no express mention of imports from China. However, footnote 130 of the USITC Report provides that the average margin of underselling by subject imports was 10.8 per cent in 2004, 14.8 per cent in 2005, and 18.8 per cent in 2006. Furthermore, the average unit price for non-subject imports was consistently higher than the average unit price for subject imports during the period 2004 - 2006.[430] Indeed, by 2006 only imports from Indonesia were cheaper than subject imports from China[431], and Indonesian imports represented only 3.4 per cent of total imports in 2006, compared to subject imports' 21.2 per cent share. Furthermore, the Chair of the USITC, in expressing separate views on remedy, stated that "information in the record shows that the volume of third-country imports has declined since 2005, and that unit values of third-country imports are on average well above those of imports from China and closer to those of domestic tires".[432] In fact, the volume of non-subject imports declined 1.8 per cent from 102,424,000 tyres in 2005 to 100,601,000 tyres in 2006, whereas the volume of subject imports increased 29.9 per cent from 20,790,000 to 27,005,000 in this period. In addition, the market share of subject imports nearly doubled from 4.7 per cent in 2004 to 9.3 per cent in 2006, whereas the market share of non-subject imports increased only slightly from 31.9 per cent to 34.5 per cent over the same period. In light of the increasing underselling by, and growth in, subject imports relative to non-subject imports in the years 2004-2006, we consider that it was not unreasonable for the USITC to understand the reference to "fierce [import] competition" to include subject imports from China.

7.302 In addition, we note that the USITC Report states:

> The 2006 announced closure of Bridgestone's Oklahoma City, OK plant was reportedly related to both the plant's product mix (low-end segment of the market) and intense competition from lower-cost sources - low-cost Korean and *Chinese-made* tires specifically cited.[433]

7.303 In response to a question from the Panel regarding this statement by the USITC, the United States explained that a senior Bridgestone employee was quoted in a contemporaneous press article as identifying "low-cost Korean and Chinese-made tires flooding the U.S. market as one of the reasons for the plant's economic troubles".[434]

7.304 For these reasons, we consider that the USITC could properly have attributed the closure of the Bridgestone, Oklahoma City, plant to subject imports.

7.305 Regarding the closure of the Goodyear, Tyler, plant in 2008, we note that Goodyear's contemporaneous press release noted that "[t]he Tyler plant principally produces small diameter passenger tires, a segment that has been under considerable pressure from low cost imports".[435] In

[434] U.S. Reply to Question 52 from the Panel, para. 55.
[435] USITC Report, pages I-16 through I-17 (citing "Goodyear announces planned closing of Tyler facility", 30 October 2006 (press release)).

theory, it is possible that this generic reference to "low-cost imports" could apply to imports from any source, including non-subject imports. In the circumstances of this case, though, we consider that the USITC was entitled to understand this to be a reference to subject imports from China, particularly in light of the above considerations regarding the increasing underselling by, and growth in, subject imports relative to non-subject imports. The competition from subject imports was clearly greater than the competition from non-subject imports.[436]

7.306 We note China's argument that subject imports could not have played an important role in the decisions by U.S. producers to close the abovementioned plants because such closures were announced before the significant increase in subject imports in 2007. China also contends that subject imports only represented 6.8 per cent of the U.S. market by volume and 4.7 per cent by value at the end of 2005. China adds that subject imports were "dwarfed" by non-subject imports, with non-subject imports holding 33.6 per cent of the U.S. market by volume and 31.2 per cent by value in 2005.

7.307 The USITC record indicates that all three of the abovementioned plant closures were announced in 2006. The press release for the Bridgestone closure was dated July 2006.[437] The press release for the Continental closure was also dated July 2006.[438] The Goodyear closure was described in 2008 as being consistent with, and therefore presumably part of, a June 2006 announcement. It is true, therefore, that these closures were announced prior to 2007. However, although China seeks to focus the Panel's attention on 2007, and the fact that subject imports increased by their greatest amount in that year, the USITC record shows a very substantial increase in the volume of imports prior to 2006. In particular, the USITC found:

> Subject imports from China increased from 14.6 million tires in 2004 to 20.8 million tires in 2005 (or by 42.7 percent), 27.0 million tires in 2006 (or by an additional 29.9 percent), and 41.5 million tires in 2007 (or by an additional 53.7 percent).[439]

7.308 Thus, between 2004 and 2006, when the abovementioned plant closures were announced, subject imports had already increased significantly by 85 per cent.[440] Although the greatest growth in

[436] Furthermore, we note that union officials testified before the USITC to the effect that the Goodyear, Tyler, plant was closed as a result of subject imports from China. One union official testified that:

> Imports from China closed our plant …. From the very beginning, Goodyear told us the Tyler plant was at risk because of low-priced imports. … the company repeatedly identified imports from Asia, including fast-growing imports from China, as a threat to our plant. (USITC Hearing Transcript at 93-94).

Another union official testified that:

> In interim meetings with Goodyear since 2003, we've had open discussions about imports from China. In presentations to the union, Goodyear specifically identified low-priced Asian imports as a threat to our facilities, and they show that China's share of these imports are rising steadily. … To help the company survive the onslaught of tires from China, it was not enough just to cut costs. There was simply no way to compete with China on cost alone. Their prices are so far below any rational level you would get in a functioning market that even if we came to work for free we couldn't compete on the basis of cost. (USITC Hearing Transcript at pages 85-86.)

[437] USITC Report, page I-15, footnote 45.
[438] USITC Report, page I-15, footnote 51.
[439] USITC Report, footnote 146.
[440] At interim review, China argued that because the plant closures were announced only halfway through 2006, these decisions should be viewed in light of subject import data from 2005 – not totals for the

the rate of increase in subject imports was yet to occur, in 2007, the fact that subject imports had already increased by 85 per cent before the plant closures was sufficient for the USITC to properly find, in the context of the additional evidentiary considerations outlined above, that these plant closures were linked to the increase in subject imports from China. Regarding the importance of subject imports relative to non-subject imports, we recall our above finding concerning the increasing underselling by, and growth in, subject imports relative to non-subject imports.

7.309 We also note China's argument that U.S. producers "testified repeatedly that they had shifted domestic production away from lower-end tires to the premium, higher-value branded segment".[441] In making this argument, China cites only to the following finding by the dissenting commissioners:

> Domestic producers … made significant strategic business decisions to shift U.S. production toward higher-value tires and capitalize on consumer brand loyalty.[442]

7.310 This statement by the dissenting commissioners does not constitute, nor refer to, producer testimony. Furthermore, there is no doubt that U.S. producers reduced U.S. production of tyres for tiers 2 and 3 of the replacement market. The issue under examination is whether the U.S. industry did so voluntarily, independent of competition from subject imports, or whether the domestic industry was forced to close U.S. production capacity as a result of competition from Chinese imports. The abovementioned statement by the dissenting commissioners does not address this particular issue.

7.311 China also submits that testimony before the USITC by "businessmen directly engaged in buying and selling tier 3 tires emphasized that U.S. producers were not pushed out of tier 3 – but instead abandoned it".[443] We recall, though, that even in 2008 the U.S. industry still made 18.6 per cent of its shipments to tier 3 of the replacement market. We also recall the finding by the dissenting commissioners that.

> We recognize that domestic tire producers have not abandoned the tier 3 market, as respondents maintain.[444]

7.312 Accordingly, China has not presented convincing evidence that producers acknowledged that they voluntarily closed U.S. production operations for the low-end of the replacement market. While it is true that none of the U.S. producers expressed support for the petition, only four out of ten producers said they were not materially injured by subject imports. Other producers either said they were not in a position to answer, or took no position on the issue. Furthermore, although some producers said they would not change their operations in the event that a remedy was imposed,[445] this fact is hardly surprising given that a remedy of only three years' duration was under consideration. There would be little value in adapting to a market situation that would likely only last for three years, whereupon subject imports would resume. For the above reasons, we consider that the USITC could properly attribute plant closures to subject imports.

whole year 2006. We are not persuaded by this argument. First, as noted above, the USITC record indicated that subject imports had already increased by 42.7 per cent from 2004 to 2005. Second, the volume of imports at the end of 2006 is a fair reflection of the trend in subject imports during the course of 2006, while the plant closures were occurring.

[445] USITC Report, page VI-1.

Subject imports by U.S. producers

7.313 China suggests that the proportion of subject imports made by U.S. producers is not relevant to the issue of whether or not rapidly increasing subject imports played any role in the domestic industry's decision to shift the production of certain tyres overseas. However, we recall that the USITC was responding to an argument that domestic producers had voluntarily ceased production in the United States of lower-value tyres, as part of a restructuring of their global production operations, and replaced those tyres with imports from other sources, including China. Presumably, as discussed above,[446] if U.S. production of lower-value tyres had declined because domestic producers had decided to replace domestic production of low-value tyres with imports from their global production facilities, it would be expected that much of the growth in imports of subject merchandise would have been on behalf of those domestic producers. In this context, the volume of subject imports made by domestic producers is relevant. China also notes the proportion of subject imports made by U.S. producers, and that U.S. producers importing subject imports is "in line with" the abovementioned business strategy.[447] In other words, China itself refers to the proportion of subject imports made by U.S. producers as proof of the existence of the abovementioned business strategy.

7.314 We already touched upon this issue at para. 7.295 above. In this respect, we recall China's argument that "the imports from China (and other low-cost jurisdictions) are a *positive* factor"[448] for U.S. producers, who "were themselves responsible for manufacturing and importing many of these tires".[449] If China's argument were correct, it would seem reasonable to expect U.S. producers to account for a relatively large share of subject imports (as the more they would import, the better off they would be).

7.315 In these circumstances, we see no error in the USITC having considered the proportion of subject imports actually accounted for by U.S. producers. Furthermore, we see no error in the USITC having relied on the fact that U.S. producers only accounted for approximately 23.5 per cent of subject imports to support a finding – based also on other considerations – that U.S. producers had not voluntarily ceased U.S. production of the low-end tyres.

Purchase of tyre-manufacturing equipment by Chinese producers

7.316 As an initial matter, we note China's argument that any increase in Chinese production capacity should only be relevant in the context of a finding by the USITC of a threat of material injury. While this factor would be of particular relevance in an analysis of threat of material injury, we do not consider that an objective and impartial investigating authority should be precluded from relying on such evidence – in conjunction with additional evidence regarding other factors – to determine whether subject imports might have caused domestic producers to cease producing low-value tyres.

7.317 As to the significance of the evidence considered by the USITC, we note that the trade publication article cited by the USITC reports that Chinese producers had been increasing their production capacity for the ten years preceding 2008, long before the abovementioned plant closures in the United States occurred. The article also reports that the "China boom" (in purchases of tyre-making equipment) "has not ended", even though China already hosted half of the world's tyre-making facilities. In our view, this article provided a reasonable basis for the USITC to conclude that U.S. producers might well have decided that subject imports from China had already become an

[446] *See* para. 7.295 above.
[447] China's First Written Submission, para. 347.
[448] China's First Written Submission, para. 349.
[449] China's First Written Submission, para. 349.

inescapable part of the market, and would continue to grow in significance, such that U.S. producers should adapt their business strategy accordingly. Combined with other relevant evidence, this article could properly support a determination by an objective and impartial investigating authority that "a more reasonable explanation for U.S. producers' capacity reductions in 2006 and thereafter was a reaction to increases in subject imports from China that were already occurring and, given the size and degree of the increases, likely would continue in the future".[450]

2006 Article: imports from China expected to increase

7.318 China contends that an article positing an expectation that imports from China would increase by an unspecified amount in the future hardly suggests that the global sourcing strategy adopted by the U.S. producers was not "voluntary", or that it was somehow dictated by imports from China.

7.319 We agree that the article, in and of itself, does not explain that the U.S. produces closed plants as a result of subject imports. However, the article does indicate that subject imports from China had already had a "profound" impact on the domestic industry, and that the industry generally agreed that subject imports would increase further ("everyone agrees there will be rapid growth in the segment, especially with all the activity from foreign investing"). When considered in light of other evidence, this evidence might properly be used to support a determination that domestic producers would have had an interest in adapting their business strategy in the face of, rather than independent of, subject imports from China.

(iii) Conclusion

7.320 The Panel was confronted with the fact that the majority of the USITC and the dissenting commissioners drew precisely the opposite conclusions on the issue of business strategy. The majority took the view that the strategy to reduce U.S. production and locate production in China was itself a response to increased imports and thus it was not an alternative cause that prevented the increasing imports from China to be a significant cause. The dissenting commissioners took the view that the business strategy of relocating production to China was an independent business strategy that began before imports were increasing. Yet both considered precisely the same evidence. There was no evidence considered by the dissenting commissioners that was not also considered by the majority. And, no further evidence that might have been considered by the majority but was not was adduced in this case.

7.321 In these circumstances, it would be inappropriate for the Panel simply to make a choice between the views of the majority and the dissenting commissioners. In fact, our own assessment of the record indicates that it is difficult to separate out the business strategy from the increasing imports. It may well be, as the dissenting commissioners say, that the strategy of relocating to China began before 2004 and before the substantial increases in subject imports.[451] But it is also true that plant closures occurred after the increase in imports and may well have been linked to the competition from imports. Indeed, the decision to locate production in China might have been the result of an independent business strategy, but the decision to close plants might well have been a response to imports.

7.322 In the light of these considerations, the Panel can see no basis for determining that the USITC's analysis of the alternative business strategy was in error. It was for China to establish a prima facie case of such error and it failed to do so.

[450] USITC Report, page 26.
[451] USITC Report, page 49 (dissenting Commissioners).

(b) Changes in demand

7.323 **China** claims that a proper evaluation of demand by the USITC would have shown that any injury suffered by the domestic industry was caused by changes in demand, rather than subject imports. China submits that the USITC overlooked four important changes in demand for tyres in the United States. First, there was a prolonged contraction in demand over the period of investigation, with apparent consumption falling by 10.3 per cent during the 2004-2008 period. China asserts that consumption was lower in every year except 2007, which saw a modest, but short-lived, increase. China recalls the dissent's observation that consumers were buying fewer tyres, and driving more miles on their existing tyres.[452] China also asserts that, from 2007 to 2008, there was almost a one-to-one correspondence between the decline in the overall U.S. market and the decline in U.S. domestic shipments.

7.324 Second, China contends that the contraction in demand was particularly pronounced in the OEM market, with total shipments in that market falling by 28 per cent. China recalls that the U.S. producers devoted approximately 20 per cent of their domestic production to the OEM market.

7.325 Third, China submits that the recession of 2008, and the near-collapse of the U.S. auto industry, greatly accelerated this contraction in demand. China notes that consumer demand for vehicles – a key determinant for tyre demand – fell dramatically in 2008. China refers to the dissent's observation that:

> The near collapse of the US automobile industry lent a devastating blow to the OEM market in 2008. Thus the fact that the industry's performance turned negative in 2008 was not the result of subject imports (whose rate of increase had slowed), but was due to the effects of the economic recession on US producers' sales to both the OEM and replacement markets.[453]

7.326 Fourth, China asserts that, at the same time consumer demand shifted in favour of larger tyres, even for smaller, fuel-efficient vehicles. According to China, this required producers to shift production, and in some cases reduce capacity or close factories that produced smaller tyres.[454]

7.327 China contends that the USITC barely acknowledged these changes in demand in its Report.

(i) Demand over the period of investigation as a whole: correlation with injury

Arguments of the parties

7.328 **China** contends that there was a "prolonged contraction" in demand over the period of investigation, with apparent consumption falling by 10.3 per cent during the 2004-2008 period. China asserts that consumption was lower in every year except 2007, which saw a modest, but short-lived, increase. China also contends that the volume indicators (of the condition of the domestic industry) track demand more closely than subject imports. According to China, moderate declines in demand during the 2004-2005 and 2005-2006 periods correspond with moderate declines in domestic industry volume indicators. China asserts that, during the 2006-2007 period, demand increased, and the domestic industry volume indicators improved as a result. China contends that, during the 2007-2008 period, the trends reverse: demand and volume indicators fell sharply, while imports from China

[452] USITC Report, pages 47-48 (dissenting Commissioners).
[453] USITC Report, page 64 (dissenting Commissioners).
[454] *See* USITC Report, page 51, n. 47 (dissenting Commissioners); USITC Report, pages III-1 through III-6.

moderated. China also asserts that, from 2007 to 2008, there was almost a one-to-one correspondence between the decline in the overall U.S. market and the decline in U.S. domestic shipments.

7.329 Regarding the trend in demand over the period of investigation, the **United States** denies that there was a "prolonged" contraction in demand "apparent across the entire period of investigation".[455] The United States asserts that the record showed that apparent U.S. consumption declined slightly by 0.8 per cent from 2004 to 2005, and by 4.4 per cent from 2005 to 2006, but actually increased by 1.6 per cent from 2006 to 2007, before declining by 6.9 per cent from 2007 to 2008. According to the United States, therefore, demand "fluctuated" somewhat during the period, even though it had declined overall by the end of the period.[456]

7.330 The United States submits that the USITC also considered the possibility that the recession in 2008 had affected the link between the increased imports and injury, by examining the impact of the recession in 2008 on the increasing volumes of the subject imports, and on the volumes trends for the U.S. industry and non-subject imports.[457] The United States notes that the USITC found that, "even in 2008 when U.S. apparent consumption was falling," the record showed that the subject "imports continued to increase rapidly".[458] Specifically, the USITC stated, "subject imports increased by 4.5 million tyres in 2008, while U.S. consumption declined by 20.4 million tyres".[459] The United States asserts that the USITC pointed out that, in contrast, the quantities of U.S. tyres and those of non-subject imports declined during 2008, with imports from third countries falling at roughly the same pace as the decline in consumption, and U.S. production falling by 11.1 per cent, a pace that was significantly faster than the 6.9 per cent decline in consumption in that year.[460] The United States argues that, given these trends in 2008, the USITC reasonably rejected the claims of Chinese respondents that the recession in 2008 explained all or most of the declines in the industry's production and shipment levels during that year[461], and therefore reasonably concluded that the recession did not indicate that the subject imports were not a significant cause of material injury to the industry.[462]

7.331 The United States asserts that if injury factors tracked demand, the 2007 1.6 per cent increase in demand should have resulted in a similar increase in the volume indicators. The United States asserts that this did not happen, as volume indicators all fell from 2006 to 2007. The United States notes, though, that in 2007 subject imports increased by 53.7 per cent, in excess of the increase in demand. The United States asserts that the lack of correlation between injury factors and demand is also evident from the 2004-2005 period, when demand fell slightly, by 0.8 per cent, but the injury indicia fell by a considerably faster pace. The United States acknowledges that both demand and injury indicators fell in 2006 and 2008, but asserts that the declines in the industry's condition considerably outpaced the declines in demand in those years.

7.332 **China** submits that the U.S. analysis is overly-simplistic, and based on the assumption that the only causal factor at work is subject imports from China. Regarding 2007, China contends that injury indicators do not have to precisely track the increase in demand. According to China, the changes in 2007 should rather be compared to the changes in 2006. In this regard, China asserts that, because 2006 saw a decrease in demand while 2007 saw an increase, the changes in the injury

[455] Oral Statement by China at First Panel Meeting, paras. 77-78.
[456] USITC Report, page 15 and 32.

indicators in 2007 should be much more modest than the changes in 2006. China contends that they were, in the sense that the volume indicators declined by less in 2007 than in 2006. According to China, the changes in all volume-based metrics significantly improved in 2007 when demand increased, as compared to the changes in 2006 when demand decreased. China contends that the changes experienced by the domestic industry in 2007 must also be viewed in light of the industry's change in business strategy, which inevitably caused volume indicators to decline. Regarding the other years, China contends that the U.S. argument rests on the false premise that when assessing the changes in demand it is proper to expect the injury factors to change by the *same amount*. China submits that, while correspondence in degrees of magnitude is important and indicative of coincidence, it is unlikely that there will be a precise one-to-one correlation in a multi-causal world. China contends that, where the degree of correspondence between demand and the industry's condition is not exact, the other causal factors, such as changing business strategy, should be taken into account.

Evaluation by the Panel

7.333 Although the USITC did not include in its report a discrete section on demand, in our view the USITC ultimately did properly address the issue of demand, and did properly find that subject imports had injurious effects independent of any injury caused by changes in demand. In particular, we note the USITC's finding that:

> The large increase in the volume of subject imports is also reflected in those imports' large and growing share of the U.S. market. Subject imports increased their share of the U.S. market by 12 percentage points (more than threefold) between 2004 and 2008, from 4.7 percent in 2004 to 16.7 percent in 2008. More than half of this increase, 7.4 percentage points, has occurred since 2006.[463]

7.334 In a footnote at the end of that finding, the USITC calculates subject imports' "share of the quantity of apparent U.S. consumption" for the whole period of investigation: 4.7 per cent in 2004, 6.8 per cent in 2005, 9.3 per cent in 2006, 14.0 per cent in 2007, and 16.7 per cent in 2008.[464] The USITC expressly found:

> The ratio of subject imports to U.S. apparent consumption increased by 12.0 percentage points during the period examined, with the two largest year-to-year increases also occurring at the end of the period in 2007 and 2008.[465]

7.335 In a related footnote, the USITC stated:

> ... The ratio of subject imports to U.S. apparent consumption increased from 4.7 percent in 2004 to 6.8 percent in 2005, 9.3 percent in 2006, 14.0 percent in 2007, and 16.7 percent in 2008.[466]

7.336 The USITC clearly found, therefore, that the ratio of subject imports to U.S. apparent consumption increased throughout the period of investigation. Even when demand increased by 1.6 per cent in 2007, the volume of subject imports increased by the significantly greater figure of 53.7 per cent. As a result, subject import market share increased by 4.8 percentage points, while the domestic industry's market share declined by 3.4 points (and the market share of non-subject imports

[463] USITC Report, page 22.
[464] USITC Report, footnote 127.
[465] USITC Report, page 12.
[466] USITC Report, footnote 52.

declined by 1.1 per cent).[467] In 2005, demand fell by a very modest 0.8 per cent. Subject imports in that year increased by 42.7 per cent, resulting in a 2.1 percentage point increase in market share, while the domestic industry's market share fell by 3.7 percentage points. In 2006, as demand fell by 4.4 per cent, the volume of subject imports increased by a further 29.9 per cent, resulting in a 2.4 percentage point increase in subject import market share. This contrasted with a 3.4 percentage point decline in the domestic industry's market share.

7.337 Regarding 2008 in particular, the USITC found:

> Moreover, imports continued to increase rapidly even in 2008 when U.S. apparent consumption was falling. Subject imports increased by 4.5 million tires in 2008, while U.S. apparent consumption declined by 20.4 million tires. Imports from third countries declined by 6.0 million tires in 2008, or by 6.1 percent, roughly consistent with the 6.9 percent decline in U.S. apparent consumption in 2008. Meanwhile, domestic production of subject tires declined by 20.0 million tires in 2008, or by 11.1 percent, and absorbed virtually all the decline in U.S. apparent consumption that year.[468]

7.338 We further note that, as demand fell by 6.9 per cent in 2008, the volume of subject imports continued to increase by an additional 10.8 per cent, resulting in a 2.7 percentage point increase in market share, compared with a fall in the domestic industry's market share of 2.9 percentage points.

7.339 Notwithstanding the above record evidence regarding the injurious effects of subject imports as distinct from the injurious effects of changes in demand, China asserts that the decline in the state of the domestic industry correlated with a "prolonged contraction" in demand, such that the USITC should have attributed any injury suffered by the domestic industry to that contraction in demand. We begin by considering whether or not there really was a "prolonged contraction" in demand over the period of investigation as a whole, as alleged by China. We note in this regard that apparent consumption[469] of all passenger vehicle and light truck tyres declined (by volume) by 10.3 per cent from 2004 to 2008. We also note, though, that the bulk of this fall in apparent consumption occurred at the end of the period of investigation, from 2007 to 2008.[470] Prior to 2007, apparent U.S. consumption declined slightly by 0.8 per cent from 2004 to 2005, by 4.4 per cent from 2005 to 2006, but actually increased by 1.6 per cent from 2006 to 2007. Accordingly, while there was a pronounced

[467] USITC Report, Table C-1.

[468] USITC Report, page 26, footnote omitted.

[469] During the Panel's second substantive meeting with the parties, China argued that the USITC improperly relied on apparent consumption as a proxy for demand. China pursued this argument in response to Question 31 from the Panel. In our view, it is entirely appropriate for investigating authorities to use apparent consumption as a proxy for demand in the context of trade remedy investigations. Indeed, we understand that it is common practice for investigating authorities to do so. Furthermore, in these proceedings China has itself referred to apparent consumption data as a proxy for demand. At page 32 of its first oral statement, for example, China submits a chart of graphs, the first of which is entitled "Changes in Total Consumption (Proxy for Demand)". Furthermore, at para. 76 of its second oral statement, China refers to the "broader trend of declining consumption over the entire period". In doing so, China refers to para. 322 of its Second Written Submission, which in turn refers to "the broader contraction in demand that was apparent over the entire period". In this context, therefore, China is clearly using the term "consumption" as a synonym for demand. Furthermore, at para. 332 of its First Written Submission China refers to the fact that "[a]pparent consumption ... fell by 10.3 percentage points" to support it argument that there was a "prolonged contraction in demand". Finally, in China's comments on the U.S. Replies to Questions from the Panel after the second meeting, China refers to USITC apparent consumption data to describe the movements in demand (*See* para. 42).

[470] According to Table V-1 of the USITC Report, apparent consumption fell from 307,484,000 to 296,091,000, i.e., 3.7 per cent, over four years between 2004 and 2007. Apparent consumption fell by 6.9 per cent in the single year from 2007 to 2008 (from 296,091,000 to 275,702,000).

decline in apparent consumption from 2007 to 2008, the record evidence does not demonstrate a "prolonged contraction" in demand over the period of investigation as a whole. In these circumstances, we see no error in the USITC's finding that demand (or apparent consumption) "fluctuated"[471] during the period of investigation.

7.340 We note China's assertion that demand declined by 4.4 per cent from 2005 to 2006, but improved by 1.6 per cent from 2006 to 2007, and that this improvement in demand correlates with an "improvement" in injury factors, in the sense that the continued downward movements in volume-based injury factors from 2006 to 2007 were "much more modest" than the changes from 2005 to 2006. We acknowledge that the decline in volume metrics from 2006 to 2007 was less than for 2005 to 2006.[472] In our view, though, if correlation between demand and injury were to exist, an improvement in demand should generally result in an *upward* movement in volume metrics.[473] In this case, the 1.6 per cent *increase* in demand coincided with a 2.4 per cent *decline* in production, a 5 per cent *decline* in U.S. shipments, a 5.5 per cent *decline* in net sales quantities, a 3.6 percentage point *decline* in market share, a 6.4 per cent *decrease* in the number of production-related employees, a 3.7 per cent *fall* in hours worked, a 6.3 per cent *decline* in wages paid, and a 2.7 per cent *fall* in hourly wages. Thus, injury indicators did not improve as demand increased.

7.341 Furthermore, we note that the change from 2006 to 2007 does not correlate in any meaningful manner with the change from 2004 to 2005. In 2005, demand fell by only 0.8 per cent. At the same time, production fell by 4.8 per cent, U.S. shipments quantities fell by 6.7 per cent, net sales quantities fell by 5.7 per cent, and market share fell by 3.7 percentage points. In other words, the 2005 0.8 per cent *fall* in demand had virtually the same effect on shipments and net sales as the 2007 1.6 per cent *increase* in demand.

7.342 Demand fell by 4.4 per cent in 2006, and by 6.9 per cent in 2008. Injury factors also declined in those two years. However, the decline in the volume-based injury factors was considerably more pronounced than the fall in demand. In 2006, compared to a 4.4 per cent decline in demand, U.S. industry production fell by 11 per cent, shipments fell by 9.9 per cent, and net sales fell by 8.9 per cent. In 2008, compared to a 6.9 per cent fall in demand, U.S. industry production fell by 11.1 per cent, U.S. shipments fell by 12.1 per cent, and net sales fell by 11.7 per cent. Although the declines in shipments and net sales were more pronounced in 2008 than 2006, the fall in production was virtually the same in those two years, despite the fall in demand in 2008 (6.9 per cent) being considerably greater than in 2006 (4.4 per cent).

7.343 Regarding 2008, China asserts that the fact that there was almost a one-to-one correspondence between the decline in the overall U.S. market and the decline in U.S. domestic shipments from 2007 to 2008 shows that the decline of the domestic industry was closely linked to demand. We note, though, that the U.S. industry held only 49.6 per cent of the market in 2008.[474] Accordingly, there is no reason why the domestic industry should have absorbed more than its *pro rata* share, i.e., 49.6 per cent, of the decline in demand in that year. In our view, a decline in demand should generally have comparable effects on all sources of supply, including subject imports. The fact that the domestic industry was required to absorb virtually 100 per cent of the decline in demand in 2008, while subject

[471] USITC Report, page 15.

[472] From 2005 to 2006, production fell by 11 per cent, shipments fell by 9.9 per cent, and net sales quantities fell by 8.9 per cent.

[473] China itself made a similar argument in these proceedings. At para. 42 of its second oral statement, China argued that "production must go down if demand is going down". We agree. Just as production should decrease if demand declines, so production should increase if demand improves.

[474] USITC Report, Table C-1.

imports continued to increase by 10.8 per cent, demonstrates that subject imports were having effects on the domestic industry that could not be explained by that decline in demand.

7.344 We note China's argument that, where the degree of correspondence between demand and the industry's condition is not exact, the other causal factors, such as changing business strategy, should be taken into account (in the sense that the change in strategy would explain changes in the domestic industry's volume metrics, as the production, shipments and sales of low-value tyres are reduced). In the light of our earlier findings relating to the change in business strategy, this factor cannot be used to explain any absence of correlation between demand and the state of the industry.

7.345 Taking into account the above considerations, including in particular the USITC's findings regarding the effects of subject imports independent of changes in demand, we conclude that the USITC's finding that injury should be attributed to subject imports rather than demand is compelling.

(ii) Demand in the OEM market

Arguments of the parties

7.346 **China** contends that the fall in demand was "particularly pronounced"[475] in the OEM sector, where the domestic industry focused 20 per cent of its production. According to China, the USITC should therefore have analysed demand trends in the OEM sector separately from demand trends in the replacement market.

7.347 The **United States** submits that there was no need for the USITC to separately address the demand trend in the OEM market, as "there were similar demand and import volume trends in the OEM market and overall market, that is, that demand declined overall and that imports obtained an increasing share of the overall and OEM market".[476] The United States also asserts that the OEM market was relatively less important for both domestic producers and subject imports from China. In this regard, the United States notes the USITC's finding that the "replacement market [was] by far the more important market for both groups of producers".[477]

Evaluation by the Panel

7.348 In support of its claim that the fall in OEM demand was "particularly pronounced", China asserts that total OEM shipments fell by 28 per cent over the period of investigation. China derives this number from Table V-3 of the USITC Report. Using the same data source, we calculate that the fall in total shipments to the replacement market over the period was 33 per cent.[478] By this measure, therefore, the decline in OEM demand was actually less pronounced than the decline in demand in the replacement market.

7.349 Furthermore, we note that the OEM sector was generally less important than the replacement market for both the domestic industry and subject imports. In this regard, only 17.7 per cent of U.S. producers' shipments, and 5 per cent of subject imports, went to the OEM market. The domestic

[475] China's First Written Submission, para. 333.
[476] U.S. Reply to Question 32 from the Panel, para. 5.
[477] USITC Report, page 21.
[478] According to Table V-3, shipments from all sources to the replacement market in 2008 totalled 228,162,000. Total replacement shipments in 2004 totalled 341,332,000. This constitutes a decline of 113,170,000, which is 33 per cent of total 2004 replacement shipments.

industry therefore shipped less tyres to the OEM sector than to tier 3 of the replacement market alone.[479]

7.350 Since the decline in demand was not more pronounced in the OEM market than the replacement market, and since the OEM market was less important for the domestic industry and subject imports than the replacement market, we do not consider that the USITC was required to analyse demand in the OEM market separately from demand in the replacement market.

(iii) The 2008 recession

Arguments of the parties

7.351 **China** contends that the recession of 2008, and the near collapse of the U.S. auto industry, greatly accelerated the contraction in demand. China claims that the USITC majority only mentions the 2008 recession dismissively and in passing:

> We have also considered the other possible causes of material injury cited by respondents, including the *current recession*, the contraction in the OEM tire market, sharp increases in raw material costs and raw material shortages, automation for increased productivity, imports from non-subject countries, higher gasoline prices resulting in less driving, strikes and labor actions, U.S. tire producers' high legacy costs, and other factors such as equipment restraints.[480]

7.352 The **United States** contends that the USITC did consider the possibility that the recession in 2008 had affected the link between the increased imports and injury, and concluded that it had not broken that causal link.[481] The United States asserts that the USITC examined the impact of the recession in 2008 on the increasing volumes of the subject imports, and on the volumes trends for the U.S. industry and non-subject imports[482], and found that, "even in 2008 when U.S. apparent consumption was falling", the record showed that the subject "imports continued to increase rapidly".[483] Specifically, the USITC stated, "subject imports increased by 4.5 million tires in 2008, while U.S. consumption declined by 20.4 million tires".[484] In contrast, the USITC pointed out, the quantities of U.S. tyres and those of non-subject imports declined during 2008, with imports from third countries falling at roughly the same pace as the decline in consumption, and U.S. production falling by 11.1 per cent, a pace that was significantly faster than the 6.9 per cent decline in consumption in that year.[485]

Evaluation by the Panel

7.353 We recall the USITC's finding that:

> Moreover, imports continued to increase rapidly even in 2008 when U.S. apparent consumption was falling. Subject imports increased by 4.5 million tires in 2008, while U.S. apparent consumption declined by 20.4 million tires. Imports from third

[479] USITC Report, Table V-3 indicates that U.S. producers shipped 24,211,000 units to the OEM market in 2008. According to data submitted by the United States in its Reply to Question 46 from the Panel, U.S. producers reportedly shipped 25,430,000 units to tier 3 in 2008.
[480] USITC Report, page 29, emphasis supplied, footnote omitted.
[481] USITC Report, page 26.
[482] USITC Report, page 26.
[483] USITC Report, page 26.
[484] USITC Report, page 26.
[485] USITC Report, page 26.

countries declined by 6.0 million tires in 2008, or by 6.1 percent, roughly consistent with the 6.9 percent decline in U.S. apparent consumption in 2008. Meanwhile, domestic production of subject tires declined by 20.0 million tires in 2008, or by 11.1 percent, and absorbed virtually all the decline in U.S. apparent consumption that year.[486]

7.354 In making this finding, the USITC properly established that the injury to the domestic industry could not be attributed in whole to the fall in demand resulting from the 2008 recession. The fact that subject imports continued to increase significantly during that recession, forcing the domestic industry to absorb virtually all of the resultant fall in demand, indicates that subject imports were having an adverse impact on the domestic industry independent of the effects of the fall in demand during the 2008 recession.

(iv) Shift to larger tyres

Arguments of the parties

7.355 **China** asserts that the domestic industry suffered injury as a result of consumer demand shifting in favour of larger tyres, even for smaller, fuel-efficient vehicles. According to China, this required producers to shift production, and in some cases reduce capacity or close factories that produced smaller tyres.[487]

7.356 The **United States** submits that the record evidence did not indicate that there was a "shift in demand in favor of larger tires" during the period of investigation. The United States asserts that, in its questionnaires, the USITC asked U.S. producers and importers to report the factors that had a significant impact on demand trends during the period of investigation.[488] The United States asserts that not one of the responding U.S. producers or importers reported that a "shift in demand in favor of larger tires" had affected demand trends during the period of investigation.[489] Instead, producers and importers identified such factors as the "downturn in the economy", "lower vehicle production", "fewer miles being driven", "overstretched tire life", "more radial tire use", "economic growth", "increased use in performance wheels", and "continued popularity of SUV's, light trucks, and crossover vehicles" as being factors affecting demand changes over the period.[490] The United States further asserts that, in the press release cited in the USITC Report's discussion of demand characteristics, the Rubber Manufacturers Association ("RMA") similarly did not attribute declines in the passenger or light truck tires markets in 2008 to a "shift in demand in favor of larger tires".[491]

Evaluation by the Panel

7.357 At para. 339 of its First Written Submission, and para. 322 of its Second Written Submission, China asserts that the shift towards larger tyre sizes caused U.S. producers to close factories that produced smaller tyres. In other words, China asserts that the shift to larger tyre sizes was bad for U.S. producers, as it reduced demand for their small-sized products. In this regard, we note, as argued

[486] USITC Report, page 26, footnote omitted.
[487] *See* USITC Report, page 51, n. 47 (dissenting Commissioners); USITC Report, pages III-1 through III-6.
[488] USITC Report, page V-9-V-11.
[489] USITC Report, page V-9-V-11.
[490] USITC Report, page V-9.
[491] USITC Report, page V-9.

by the United States[492], that none of the responding U.S. producers or importers reported that a "shift in demand in favor of larger tires" had affected demand trends during the period of investigation.[493]

7.358 Given that none of the respondent producers or importers reported any shift in demand in favour of larger tyres, we are not persuaded that the USITC should have considered any such shift in demand in its Determination.

(v) Conclusion

7.359 For the above reasons, we find no error in the USITC's consideration of changes in demand for tyres in the United States or the conclusion that any injury suffered by the domestic industry was caused by subject imports, rather than changes in demand.

(c) Non-subject imports

(i) Arguments of the parties

7.360 **China** argues that the USITC also failed to properly analyse the injury caused to the domestic industry by imports from countries other than China. China suggests that injury caused by non-subject imports was improperly attributed to subject imports.

7.361 In this regard, China notes the observation by the dissent that non-subject imports "dwarf" imports from China throughout the period. China observes that, although their share of the U.S. market declined over the period, non-subject imports accounted for 66.9 to 87.1 per cent of all U.S. imports by quantity, whereas subject imports from China accounted for only 12.9 to 33.1 per cent.[494]

7.362 China contends that non-subject imports were also cheaper than U.S.-made tyres. While China acknowledges that the average unit price for all non-subject imports in the period ($40 to $55) was $8-$10 higher than imports from China, this average unit price is still below the unit value of U.S.-produced tyres, which grew from $48/tyre to $69/tyre over the period. Moreover, China asserts that the unit value of tyres imported from Indonesia was lower than that of imports from China.

7.363 **The United States** asserts that the average unit values for non-subject imports were well above the average unit values for subject imports throughout the period. The United States further asserts that the absolute volumes and market share for non-subject imports remained relatively steady over the period, in contrast to the significant increases in both volume and market share by subject imports. The United States notes that China had become the largest producer of tyres in the world by 2006, producing 33 per cent of all passenger and light truck tyres produced globally in that year.[495] According to the United States, therefore, the USITC's finding that undersold subject imports, not non-subject imports, displaced domestic sales, is fully supported by the record.

[492] United States' Reply to Question 57 from the Panel, para. 67.
[493] USITC Report, pages V-9 to V-11. Later in this proceeding, China linked the increase in tyre sizes to the popularity of SUVs and light trucks. However, this is inconsistent with China's earlier arguments, as the decline in SUV production during the period of investigation would have affected the U.S. production of *large* tyres, whereas China initially argued that the shift to larger tyres would have affected the U.S. production of *small* tyres.
[494] USITC Report, page II-3, Table II-1.
[495] USITC Report, Table II-1.

(ii) Evaluation by the Panel

7.364 The USITC found that the average unit value of subject imports increased from $31.10 – 38.90 over the period, while the average unit value of non-subject imports increased from $40.42 – 55.29, and the average unit value of U.S. producers' shipments increased from $48.40 to 69.69.[496] Thus, the prices of non-subject imports were lower than those of U.S. producers throughout the period of investigation, and this may have impacted negatively on the domestic industry. We note, though, that the average unit value of non-subject imports remained 22-25 per cent higher than the average unit value of subject imports, suggesting that non-subject imports would have had considerably less price effect on the domestic industry than subject imports. Indeed, by 2006 only imports from Indonesia were cheaper than subject imports from China[497], and Indonesian imports represented only 3.4 per cent of total imports in 2006, compared to subject imports' 21.2 per cent share. Although imports from Indonesia remained cheaper than subject imports for the remainder of the period, the market share of Indonesian imports only reached 4.3 per cent by the end of the period, compared with a market share of 33.1 per cent for subject imports from China. Overall, the share of non-subject imports in total U.S. imports declined from 87.1 to 66.9 per cent over the period, as the share of subject imports to total U.S. imports increased from 12.9 to 33.1 per cent. In this regard, the USITC found that "since 2006, imports from China gained a greater share of the U.S. market than was lost by domestic producers, indicating that they also took market share away from third-country sources".[498]

7.365 The USITC further found that, whereas subject imports "increased by 4.5 million tires in 2008, while U.S. apparent consumption declined by 20.4 million tires", "[i]mports from third countries declined by 6.0 million tires in 2008, or by 6.1 per cent, roughly consistent with the 6.9 per cent decline in U.S. apparent consumption in 2008". Furthermore, the Chair of the USITC, in expressing separate views on remedy, stated that "information in the record shows that the volume of third-country imports has declined since 2005, and that unit values of third-country imports are on average well above those of imports from China and closer to those of domestic tires".[499]

7.366 The USITC's record also showed that, whereas subject imports from China were the fourth largest single import source in 2004, subject imports accounted for the largest single share of imports by 2006, and substantially increased their share of total imports by 2008.[500]

7.367 Thus, although the volume of non-subject imports was greater than the volume of subject imports from China, and although non-subject imports remained cheaper than domestically-produced tyres, the dominant feature of the U.S. market was the rise of subject imports from China at the expense of both non-subject imports and the U.S. industry. In these circumstances, and in light of the above considerations, we find that the USITC did not fail to properly analyse injury caused by non-subject imports or improperly attribute injury caused by non-subject imports to subject imports.

(d) Miscellaneous other factors

(i) Arguments of the parties

7.368 **China** submits that the USITC also neglected several other alternative causal factors noted by respondents, including: sharp increases in raw material costs and raw material shortages; automation

[496] USITC Report, Table C-4.
[497] USITC Report, Table II-1.
[498] USITC Report, page 26.
[499] USITC Report, page 42.
[500] USITC Report, Table II-1, showing that subject imports accounted for 12.9 per cent of total imports in 2004, and 33.1 per cent of total imports in 2008.

for increased productivity; higher gasoline prices resulting in less driving; strikes and labour actions; U.S. tyre producers' high legacy costs; and other factors such as equipment restraints.[501] China does not develop any arguments regarding these factors, other than to claim that the USITC essentially listed and then dismissed these factors, without a reasoned and adequate explanation.

7.369 **The United States** submits that China has failed to offer evidence to support its claim that these factors were causes of material injury to the industry during the period, or to explain why they are significant enough to break the causal link between the subject imports and injury. The United States contends that China simply asserts that the "USITC essentially listed and then dismissed these factors, without a reasoned and adequate explanation" of them.[502] The United States argues that this is legally insufficient to meet China's burden, as complainant, to present evidence and argument sufficient to establish a presumption that the measure being challenged is inconsistent with a Member's WTO obligations.[503] The United States asserts that China has failed to explain why any of these factors was actually a cause of injury to the industry, or why these factors break the existence of a causal link between the subject imports and injury to the industry. Furthermore, the United States contends that the USITC did, in fact, address these other factors in its analysis.

7.370 **China** submits that it did meet its burden of proof regarding these other factors, as it "has pointed out that the USITC wrongly dismissed these factors with little or no discussion, because the statute did not require a weighing of causal factors".[504] China then challenges the United States' assertion that the USITC did adequately address the relevant other factors.

(ii) Evaluation by the Panel

7.371 It is not sufficient for a complaining party to simply point out that the investigating authority failed to address certain other factors, or failed to address them in sufficient detail. The complaining party must first establish prima facie the relevance of those other factors, i.e., their capacity to cause injury to the domestic industry, and their potential to break the causal link between the subject imports and the material injury to the domestic industry. This China has not done. Thus, while these other alternative factors might have been relevant, we do not consider that in this regard China has met its burden of proof.

(e) Cumulative assessment

(i) Arguments of the parties

7.372 **China** asserts that each of the abovementioned factors taken individually severs the causal link between subject imports and market disruption. China contends that, when these other factors are considered cumulatively, "the extent to which they sever the causal link is even more dramatic".

7.373 China acknowledges that "the requirement to consider all alternative causes together is not required in every case", but claims that "the interrelated nature of the various conditions of competition require them to be considered together."[505] China relies in this regard on the statement by the Appellate Body in *EC – Tube or Pipe Fittings* that "there may be cases where because of the specific factual circumstances therein, the failure to undertake an examination of the collective impact

[501] USITC Report, page 29.
[502] China's First Written Submission, para. 356.
[503] Appellate Body Report, *US – Shirts and Blouses*, pages 14-15.
[504] China's Second Written Submission, para. 337.
[505] China's First Written Submission, footnote 240.

of other causal factors would result in the investigating authorities improperly attributing the effect of these other causal facts to dumped imports".[506]

7.374 The **United States** asserts[507] that China's argument ignores the fact that the Protocol itself imposes no obligation on the competent authority to perform an analysis of such other factors at all, and certainly does not require the authority to conduct an analysis of the effects of these factors on a cumulative basis. The United States asserts that, even under the *AD Agreement*, the Appellate Body has stated that an antidumping authority is not required to examine the collective impact of other causal factors.[508] The United States argues that, although the *AD Agreement*, unlike the Protocol, includes language contemplating that an authority should consider the injurious effects of other causal factors in its analysis, the Appellate Body stated that this specific language:

> does not compel, *in every case*, an assessment of the *collective* effects of other causal factors, because such an assessment is not always necessary to conclude that injuries ascribed to dumped imports are actually caused by those imports and not by other factors.[509]

7.375 According to the United States, even when a particular agreement requires an analysis of other injury factors, the Appellate Body has refused to require the investigating authorities to examine the effects of those factors on a cumulative basis. The United States contends that since China has failed to establish why it would be necessary to conduct such an analysis here, and since the Protocol does not require any analysis of these factors, the Panel should reject China's interpretation of the Protocol on this matter.

(ii) Evaluation by the Panel

7.376 China claims that the USITC was required to demonstrate that the *collective* injurious effects of the industry's business strategy, the change in demand, non-subject imports and miscellaneous other factors were not sufficient to break the causal link between the increasing imports and the material injury to the domestic industry.

7.377 In *EC – Tube or Pipe Fittings* the Appellate Body found that "there may be cases where, because of the specific factual circumstances therein, the failure to undertake an examination of the collective impact of other causal factors would result in the investigating authority improperly attributing the effects of other causal factors to dumped imports".[510] Notwithstanding the lack of any requirement for cumulative assessment in the Protocol, we acknowledge that there may be cases where the collective injurious effect of other causal factors might be so dominant that the injury caused by increasing imports could not properly be found to be "significant". However China has not demonstrated that this was the case in the underlying USITC investigation.[511] Accordingly, we find that China has failed to establish that in the context of the present case the USITC should have provided a cumulative assessment of the effects of the other causes of injury.

[506] Appellate Body Report, *EC – Tube or Pipe Fittings*, para. 192.
[507] U.S. First Written Submission, paras. 329–330.
[508] Appellate Body Report, *EC – Tube or Pipe Fittings*, para. 192.
[509] Appellate Body Report, *EC – Tube or Pipe Fittings*, para. 191.
[510] Appellate Body Report, *EC – Tube or Pipe Fittings*, para. 192.
[511] Indeed, in rejecting China's claims regarding the USITC's assessment of the individual injurious effects of these other factors, we have reviewed record evidence indicating that subject imports from China had significant injurious effects, independent of any injurious effects of other causal factors.

(f) Conclusion

7.378 For all of the above reasons, we find that China has failed to establish that injury caused by other factors was improperly attributed to subject imports.

5. Conclusion

7.379 Having carefully considered all of the arguments of the parties, and taking into account our standard of review, we find that the USITC did not fail to properly establish that rapidly increasing imports from China were a "significant cause" of material injury to the domestic industry.

E. WHETHER THE TRANSITIONAL SAFEGUARD MEASURE WENT BEYOND THE "EXTENT NECESSARY", CONTRARY TO PARAGRAPH 16.3 OF THE PROTOCOL

7.380 China has two broad claims. First, China claims that no remedy is appropriate in this case as the USITC failed to establish that 'increasing rapidly' imports from China are a 'significant cause' of market disruption. Second, China claims that even if the United States had complied with the other requirements of Paragraph 16, the specific remedy applied by the United States in this case was inconsistent with Paragraph 16.3 because the remedy was not limited to the market disruption caused by rapidly increasing imports from China. China claims that the United States instead imposed a remedy that addressed all of the alleged market disruption, including that caused by factors other than rapidly increasing imports.

7.381 The United States denies that the remedy went beyond the "extent necessary", contrary to Paragraph 16.3 of the Protocol.

7.382 Since China's first claim relates to its substantive claims concerning Paragraphs 16.1 and 16.4, we only address China's second claim in this Section of our Report. That claim concerns Paragraph 16.3 of the Protocol, which provides:

> If consultations do not lead to an agreement between China and the WTO Member concerned within 60 days of the receipt of a request for consultations, the WTO Member affected shall be free, in respect of such products, to withdraw concessions or otherwise to limit imports only to the extent necessary to prevent or remedy such market disruption. Any such action shall be notified immediately to the Committee on Safeguards.

1. Arguments of the parties

(a) China

7.383 China argues that the ordinary meaning of the words "only" and "necessary" (in the first sentence of Paragraph 16.3) emphasise the need for any restrictions to be "narrowly defined and properly focussed".[512] China continues that the restrictions "cannot overcompensate and attempt to address broader injuries being suffered by the domestic industry".[513] China argues that "the restrictions must be narrowly drawn so that they are limited solely to the extent 'necessary' to address the market disruption resulting from rapidly increasing imports from China that are a significant cause of material injury, and that market disruption alone".[514] China argues that the objective is not to

[512] China's First Written Submission, para. 362.
[513] China's First Written Submission, para. 362.
[514] China's First Written Submission, para. 362.

provide "some general benefit to the domestic industry".[515] China claims that the word "remedy" "can be defined as 'a means of counteracting or removing something undesirable; redress; relief.' In other words, to 'remedy' market disruption means to remove that market disruption".[516]

7.384 China argues that the terms of Paragraph 16.3 must be read in context with "other provisions of Paragraph 16 and the provisions of other WTO agreements that address analogous issues."[517] China continues that this "context confirms that measures applied under Paragraph 16.3 can *only* address rapidly increasing imports from China that are a significant cause of material injury, and cannot be used to address the condition of the domestic industry more generally".[518] China claims that "the essential phrase of Paragraph 16.3 – that restrictions may be imposed "only to the extent necessary to prevent or remedy such market disruption" – can only be understood in the context of understanding the meaning of 'market disruption'. 'Market disruption' refers to a situation in which imports are 'increasing rapidly' and are a 'significant cause of material injury'".[519]

7.385 China submits that the focus of any permissible remedy must be on the effect of the allegedly injurious imports. Although it may be possible to consider permissibly other aspects pertaining to the domestic industry, any permissible remedy must be *limited* to the effect of the imports – and only the imports – themselves. China therefore asserts that the focus of a remedy should be on the effect of the allegedly injurious imports – not on the overall effect on the domestic industry. According to China, imports cannot be held responsible for the *entire* downturn being experienced by the domestic industry, and the remedy cannot seek to address that entire downturn. China submits that, without ever determining the amount or magnitude of the injurious impact subject imports were allegedly having on the domestic industry, the United States could not possibly have limited the imposed remedy to "only the extent necessary" to remedy this impact, as required by Paragraph 16.3.

7.386 China claims that there is no indication of "how the USITC took 'into account' the specific market disruption it had found to exist".[520] Quoting further from the USITC Report, China contends that the focus of the USITC was on the benefits to the domestic industry, not on the specific market disruption found to exist:

> "This increase in the tariff would significantly improve the competitive position of the domestic industry, increasing domestic production, shipments and employment and restoring the domestic industry to at least a modest level of profitability. The increase should accomplish this by reducing the quantity of subject imports and raising their price in the US market."[521]

7.387 China argues that the USITC's flawed approach to remedy is partly rooted in its flawed approach to causation.[522] China criticises the USITC for saying, without explanation, that it did not need to weigh other causes in the market as imports from China were themselves a significant cause.[523] China claims that the USITC failed to provide any "analysis of the role of alternative causes compared to that of imports from China".[524] China claims this failure carried through to its remedy

analysis where the USITC made "no attempt to calibrate its remedy to the market disruption caused solely by rapidly increasing imports from China".[525]

(b) United States

7.388 The United States agrees that a remedy under the Protocol can only remedy the material injury that results from rapidly increasing imports from China. The United States notes that China argues that the USITC considered the effect that increased tariffs would have on the U.S. industry. In doing so, China claims that the USITC went beyond the extent necessary to remedy market disruption caused by rapidly increasing imports. The United States argues that this reasoning runs "directly contrary to the Protocol, which defines market disruption, in part, in terms of material injury and threat of material injury to the domestic industry".[526] Therefore, a Member seeking to comply with Paragraph 16.3 is entitled to consider the effect on the domestic industry otherwise "it cannot know whether its remedy properly addresses market disruption in the sense of material injury".[527]

7.389 The United States disagrees that the statements quoted from the USITC Report support China's claims. The United States argues that nowhere does the USITC suggest that the proposed tariffs will address all of the injury to the domestic industry.[528] The United States continues in paragraph 341 of its submission that the USITC gave a thorough explanation of its remedy determination. Part D of the remedy recommendation "analyses the proposed tariff increase and how it is the 'most appropriate remedy to address the market disruption caused by rapidly increasing imports from China' making clear that it addressed only the material injury caused by Chinese imports".[529] The United States argues that the USITC discussion of why it rejected the remedy proposed by the petitioners gives further evidence of how it addressed the market disruption caused by the subject imports only.[530] The USITC explained that the proposed quota by the petitioners would have been "equivalent to 65 *ad valorem* tariff 'which we view to be higher than necessary to remedy the market disruption caused by rapidly increasing imports from China'".[531] The United States continues that part E of the remedy recommendation "addresses the short- and long-term effects of the recommended remedy, explaining that economic modelling indicates that the proposed 55 per cent tariff would likely reduce shipments of Chinese tyres by 38.2 to 58.4 per cent in the first year. The USITC then explains how this reduction in shipments will have an effect on domestic and non-subject imports, on their prices, and eventually on the domestic industry's revenue".[532] The United States also quotes Chairman Aranoff's separate views on remedy as further evidence that only the material injury caused by subject imports was addressed in its remedy recommendation.[533] The United States concludes that the USITC conducted a detailed analysis to craft a remedy that would only address the injury caused by Chinese imports.

2. Evaluation by the Panel

7.390 China's basic argument[534] under Paragraph 16.3 of the Protocol is that a transitional product-specific safeguard measure should not exceed the amount necessary to prevent or remedy the market disruption *caused by the subject imports*. China claims that the *Tyres* measure necessarily exceeds the amount necessary to prevent or remedy the market disruption *caused by the subject imports* because the USITC never determined the extent of the injury *caused by those imports*. In other words, without knowing how much injury was caused by the subject imports, it was impossible for the United States to limit the measure to the amount necessary to prevent or remedy that injury.

7.391 We begin by noting that the parties agree that a remedy imposed under Paragraph 16 of the Protocol should be limited to the injury / market disruption caused by the subject imports, rather than the injury / market disruption caused by all injurious factors generally. We agree that the scope of the remedy should be limited in this way.[535]

7.392 We next consider China's argument that the USITC's flawed approach to remedy is partly rooted in its flawed approach to causation.[536] This raises issues regarding the relationship between the non-attribution requirement under the Protocol, and the scope of the remedy. The Appellate Body found[537] in *US – Line Pipe* that Article 5.1 of the *Safeguards Agreement* generally[538] does not impose any obligation on a Member to justify, at the time of application, that the safeguard measure at issue is applied "only to the extent necessary." The Appellate Body went on to state:

> This does not imply, as Korea seems to assert, that the measure may be devoid of justification or that the multilateral verification of the consistency of the measure with the *Agreement on Safeguards* is impeded. The Member imposing a safeguard measure must, in any event, meet several obligations under the *Agreement on Safeguards*. And, meeting those obligations should have the effect of clearly explaining and "justifying" the extent of the application of the measure. By separating and distinguishing the injurious effects of factors other than increased imports from those caused by increased imports, as required by Article 4.2(b), and by including this detailed analysis in the report that sets forth the findings and reasoned conclusions, as required by Articles 3.1 and 4.2(c), a Member proposing to apply a safeguard measure should provide sufficient motivation for that measure. Compliance with Articles 3.1, 4.2(b) and 4.2(c) of the *Agreement on Safeguards* should have the incidental effect of providing sufficient "justification" for a measure and, as we will explain, should also provide a benchmark against which the permissible extent of the measure should be determined.[539]

[534] We note China's argument that the United States was not permitted to impose any transitional safeguard measure as the substantive requirements of the Protocol had not been met. This argument concerns the claims addressed in the preceding sections of this Report.

[535] We note that this is broadly consistent with the findings of the Appellate Body in *US – Line Pipe*. We generally consider that the reasoning at paras. 252-259 of that Appellate Body Report is not fully applicable in these proceedings, since it is based in part on the text of the second sentence of Article 4.2(b) of the *Safeguards Agreement*, which is absent from Paragraph 16 of the Protocol.

[536] China's First Written Submission, para. 386. The reactions of the United States to this line of argument by China are included in Part C, on causation.

[537] Appellate Body Report, *US – Line Pipe*, para. 233.

[538] An exception is made in cases where the safeguard measure takes the form of a quantitative restriction which reduces the quantity of imports below the average of imports in the last three representative years. This exception has no bearing on the present case.

[539] Appellate Body Report, *US – Line Pipe*, para. 236.

7.393 Thus, the Appellate Body considers that a non-attribution analysis under Article 4.2(b), second sentence, of the *Safeguards Agreement* will provide a "benchmark" (of injury attributed to the relevant imports), against which the permissible extent of the safeguard measure may be measured. Indeed, the Appellate Body went on to find that a violation of the obligation to perform a non-attribution analysis under Article 4.2(b), second sentence, was sufficient to establish a prima facie case of violation of the Article 5.1 obligation to restrict the measure to the extent necessary to prevent or remedy serious injury caused by the increased imports at issue. This finding is the basis for China's argument that, because the USITC never determined the extent of the injury caused by the subject imports, the *Tyres* measure is necessarily excessive.

7.394 Since Paragraph 16.4 of the Protocol does not require the same type of non-attribution analysis as that required by the second sentence of Article 4.2(b) of the *Safeguards Agreement*[540], the reasoning of the Appellate Body in *US – Line Pipe* is not applicable. Although we consider that increasing imports should be viewed "in the context of" other factors, to ensure a proper finding of causation, there is no obligation to separate and distinguish the injurious effects of factors other than increased imports from those caused by increased imports (as required by the second sentence of Article 4.2(b) of the *Safeguards Agreement*).[541] Since there is no "full-blown" non-attribution analysis under the Protocol, there is no benchmark against which to measure the scope of the remedy. Nor is there any basis for finding that a failure to separate and distinguish the injurious effects of rapidly increasing imports from the injurious effects of other causal factors establishes prima facie that the remedy is excessive. Instead, China must itself demonstrate that the scope of the measure is excessive.

7.395 While the lack of a benchmark creates difficulties in any challenge of the measure, nevertheless, the burden is on China to establish prima facie that the scope of the measure is excessive. But the burden is not impossible. For example, China might have challenged the accuracy of the analysis set forth in Exhibit US-20 which shows that the *Tyres* measure was based on an objective assessment of the impact of the measure over the first year, and that the impact of the measure would have addressed the volume and price effects of the subject imports. China has not challenged the accuracy of any of that analysis. Nor did China provide any type of assessment of what the maximum permissible extent of the measure should have been (i.e., in relation to the amount of injury caused by increased imports), and has therefore failed to provide any benchmark by which to conclude that the extent of the *Tyres* measure is excessive.

7.396 The only additional argument by China concerns the fact that the measure was focused on improving the condition of the domestic industry generally, rather than on the specific harm caused by subject imports. China alleges that the United States essentially assumed that the increasing imports from China were entirely responsible for the deteriorating condition of the domestic industry. China refers in this regard to the following reasoning by the USITC:

> We believe that the tariffs will significantly reduce subject imports and boost U.S. industry sales and prices, resulting in increasing profitability. This profitability will lead to the preservation of jobs and the creation of new ones, as well as encourage investment.[542]

[540] *See* para. 7.176 above.

[541] We note that China agrees that non-attribution under the Protocol does not require a precise quantification of the injury caused by the various injurious factors (*See* China's Reply to Question 17(b) from the Panel, para. 71).

[542] USITC Report, page 30.

> This increase in the tariff would significantly improve the competitive position of the domestic industry, increasing domestic production, shipments, and employment and restoring the domestic industry to at least a modest level of profitability. The increase should accomplish this by reducing the quantity of subject imports and raising their price in the U.S. market.[543]

7.397 However the Panel is not convinced that this demonstrates that the measure is excessive. First, a measure is not necessarily excessive simply because it seeks to improve the condition of the industry. To the extent that the condition of the industry deteriorated as a result of increased imports, a measure designed to improve the condition of the industry does address the injurious effects of the increased imports. While there is no guarantee that a measure imposed on this basis will not be excessive, there is similarly no certainty that a measure imposed on this basis will necessarily be excessive.

7.398 Second, since the USITC found that the domestic industry suffered market disruption as a result of rapidly increasing subject imports that were underselling domestic production, a measure that is aimed at "reducing the quantity of subject imports and raising their price in the U.S. market" can be justified. The Panel notes, however, that it does allow for the possibility of the expansion of non-subject imports rather than the improvement of the condition of the domestic industry, and observes that is a consequence of a country-specific safeguard and not a defect of the remedy in this case.

7.399 For these reasons, we find that China has failed to establish prima facie that the *Tyres* measure exceeds "the extent necessary to prevent or remedy" the market disruption caused by rapidly increasing subject imports, contrary to Paragraph 16.3 of the Protocol.

F. WHETHER THE DURATION OF THE REMEDY EXCEEDED THE PERIOD OF TIME NECESSARY TO PREVENT OR REMEDY MARKET DISRUPTION

7.400 China claims that the three-year duration of the remedy exceeds the period of time necessary to prevent or remedy the market disruption, contrary to Paragraph 16.6 of the Protocol. The first sentence of Paragraph 16.6 provides:

> A WTO Member shall apply a measure pursuant to this Section only for such period of time as may be necessary to prevent or remedy the market disruption.

7.401 The United States denies China's claim.

1. Arguments of the parties

(a) China

7.402 China claims that the decision by the United States to impose a remedy for three years is inconsistent with Paragraph 16.6 of the Protocol, which provides that a remedy may be imposed "only for such period of time as may be necessary to prevent or remedy the market disruption". China asserts that this obligation limits the duration of any such safeguard measures to "such" market disruption, which is limited to that disruption properly attributed to rapidly increasing imports from China. In particular, China asserts that the ordinary meaning of the terms "only" and "necessary" in Paragraph 16.6 makes it clear that a remedy measure can be in place only for the exact amount of time that is necessary to address and remedy the "market disruption" caused by the rapidly increasing imports. China further contends that the term "necessary" adds an additional meaning, in the sense

[543] USITC Report, page 35.

that the use of this term confirms that a remedy measure cannot simply be tangentially useful or helpful, but must rather be essential and indispensable to prevent or remedy the market disruption that has been significantly caused by the rapidly increasing imports from China. According to China, the ordinary meaning of Paragraph 16.6 will not permit a remedy measure that lasts longer than necessary, or one that is not precise in addressing the market disruption that has been properly justified as having been caused by rapidly increasing imports from China. China also refers to the context of Paragraph 16, and the object and purpose thereof, in support. In particular, China contends that the *Safeguards Agreement*, the *AD Agreement* and the *SCM Agreement* all contain durational limitations, indicating that any remedy must be "narrowly tailored in terms of duration".[544]

7.403 China notes the discussion of the majority of the USITC regarding the duration of the remedy:

> We recommend that the remedy remain in place for a three-year period because we believe that a remedy of such duration is needed to give firms and workers in the industry time to identify and implement needed adjustments to import competition. Although domestic producers did not identify any specific planned adjustments in their questionnaire responses, other information in the record indicates that domestic producers have put plant and equipment upgrades on hold pending more favourable market opportunities. Moreover, we anticipate that the relief may encourage certain domestic producers to reconsider plant closures.[545]

7.404 According to China, this rationale says nothing about why tariffs need to last for three years to address the specific market disruption that had been found – the market disruption that the USITC allegedly linked to imports from China that were "increasing rapidly", and that were the "significant cause" of injury to the domestic industry (rather than injury caused by "import competition" more generally). China understands the USITC's logic to be that because imports from China could be blamed for certain problems, and since the domestic industry would benefit from three years, the remedy should last for three years. But China contends that, under Paragraph 16.6 of the Protocol, whether the domestic industry would benefit from a three-year remedy is irrelevant, since this provision only allows a remedy to last for the period of time needed to address the specific market disruption at issue.

7.405 China also asserts that the USITC's rationale is defective because the USITC failed to give any significant weight to what U.S. producers themselves were saying, and the fact that the domestic producers had not provided specific restructuring plans, even though the USITC asked them to do so.[546] Instead, the USITC opined, that "the relief *may* encourage certain domestic producers to reconsider planned plant closures".[547] China contends that such "speculation" is inadequate, since it fails to demonstrate that the three-year remedy measures imposed are necessary to remedy the market disruption (and why this three-year duration is needed to prompt producers to "reconsider" closure decisions). China asserts that the President also imposed a remedy for three years without any regard to the specific market disruption "significantly caused" by rapidly increasing imports.

[544] China's First Written Submission, para. 401.
[545] USITC Report, page 36.
[546] USITC Report, page VI-1, Table VI-2. China asserts that the public version of the determination does not provide any details, but does confirm the question was asked. China notes that the USITC majority then confirms in its commentary that no specific adjustment plans were presented.
[547] USITC Report, page 36 (emphasis added).

(b) United States

7.406 The United States does not dispute China's arguments regarding the ordinary meaning of Paragraph 16.6 of the Protocol. However, the United States rejects China's argument that the duration requirements in the *Safeguards Agreement*, the *AD Agreement*, and the *SCM Agreement* demonstrate that "any remedy imposed must be narrowly tailored in terms of duration".[548] The United States notes in this regard that the *AD Agreement* and the *SCM Agreement* allow the imposition of relief as long as the injurious dumping or subsidization continues.

7.407 Regarding China's argument that a remedy measure may remain in place "only for the exact amount of time" or "for that period of time specifically found" to address the market disruption[549], the United States submits that such level of exactitude is neither required nor possible. The United States asserts that authorities cannot know at the time of taking a measure the "exact amount of time" it will be necessary. According to the United States, this is why paragraph 246(f) of the Working Party Report explicitly allowed authorities to extend a measure based on a finding that "action continued to be necessary to prevent or remedy market disruption".

7.408 The United States submits that China also fails to give appropriate weight to the remaining elements of Paragraph 16.6, which allow China to suspend concessions substantially equivalent to any safeguard measure two years after its application if there was a relative increase in imports and three years after application if there was an absolute increase. According to the United States, these elements indicate that the negotiators of the Protocol envisaged safeguard measures remaining in place for at least three years if there was an absolute increase in Chinese imports, as was the case with regard to tyres, or even longer in the case of an extension under paragraph 246(f) of the Working Party Report. The United States notes China's reference to these provisions as "rights that China has under certain circumstances"[550], but contends that they maintain their utility as context for the first sentence of Paragraph 16.6 or as an indication of the expectations of the negotiators of the Protocol.

7.409 Regarding China's argument that the USITC's rationale "focuses entirely on the condition of the domestic industry and the time it needs to adjust", the United States recalls its argument (see preceding section) that the effect of the remedy on the domestic industry is not merely relevant, but critical, in understanding whether it is "necessary to prevent or remedy market disruption".

7.410 Regarding China's argument that the USITC did not give sufficient weight to the views of domestic producers who "had not provided specific restructuring plans"[551], the United States refers to its earlier arguments (see preceding section) to the effect that the USITC weighed all of the evidence before it, and considered that the evidence favouring its remedy outweighed the evidence cited by China against the remedy.

7.411 Regarding China's argument that the USITC relied on "speculation" based on a quotation of part of one sentence stating that "we anticipate that the relief may encourage certain domestic producers to reconsider planned plant closures"[552], the United States contends that China draws the wrong conclusion. The United States notes that, in the preceding paragraph, the USITC explained that it provided for progressive reduction of the level of the relief because "[w]e also expect the level of tariff protection that is necessary to offset market disruption to decrease as new investments and

[548] China's First Written Submission, para. 401.
[549] China's First Written Submission, paras. 397 and 405.
[550] China's First Written Submission, para. 399.
[551] China's First Written Submission, para. 414.
[552] China's First Written Submission, quoting USITC Report, page 36.

other adjustments are implemented".[553] According to the United States, the subsequent statement that the industry "may reconsider" plant closures reflects only the understanding that there are many "investments" or other "adjustments" the industry might take, and that it was impossible to know with certainty at the time of its determinations which ones the prevailing business climate would allow.

2. Evaluation by the Panel

7.412 As a preliminary matter, we note China's argument that the United States was not permitted to impose any transitional safeguard measure of any duration as the substantive requirements of the Protocol had not been met. This argument is tied to the China's claims under Paragraphs 16.1 and 16.4 of the Protocol, which we address in the preceding Sections of this Report. The present Section focuses on China's arguments regarding the consistency of the remedy imposed by the United States with Paragraph 16.6 of the Protocol.

7.413 The core of China's claim under Paragraph 16.6 is based on the same arguments that China advanced under Paragraph 16.3. As China itself explains:

> The arguments presented above regarding Article 16.3 are also applicable as regards the U.S. failure to comply with Article 16.6. Similar to the requirements of Article 16.3, Article 16.6 of the Protocol limits a remedy to "only for such period of time as may be necessary…." The USITC's failure to determine – either quantitatively or qualitatively – what effect subject imports were allegedly having on the domestic industry makes it virtually impossible for a remedy to comply with Article 16.6's requirement. Without knowing the effect that must be prevented or remedied, it is impossible to know for how long a remedy needs to be imposed.[554]

7.414 We recall that there was no obligation on the United States to explain why a three-year measure was needed to prevent or remedy the market disruption caused by subject imports.[555] We further recall that there was also no obligation on the United States to quantify the injury caused by increasing imports, or separate and distinguish that injury from injury caused by other factors. Accordingly, it is not enough for China to simply "demonstrate[e] that the USITC failed to ascertain the amount of the alleged effect of subject imports on the domestic industry".[556] Instead, the onus is on China to establish prima facie that a three-year measure was excessive. China has failed to meet this burden.

7.415 For these reasons, we find that China has failed to establish prima facie that the *Tyres* measure exceeds the period of time necessary to prevent or remedy the market disruption, contrary to Paragraph 16.6 of the Protocol.

G. WHETHER THE U.S. *TYRES* MEASURE IS INCONSISTENT WITH ARTICLES I:1 AND II:1(B) OF THE GATT 1994

7.416 China claims that the imposition of additional (transitional safeguard) duties on imports of subject tyres from China is inconsistent with Article I.1 of the GATT 1994, whereby:

> With respect to customs duties and charges of any kind imposed on or in connection with importation or exportation or imposed on the international transfer of payments

[553] USITC Report, pages 35-36.
[554] China's Second Written Submission, para. 361.
[555] *See* para. 7.20 above.
[556] China's Second Written Submission, para. 362.

> for imports or exports, and with respect to the method of levying such duties and charges, and with respect to all rules and formalities in connection with importation and exportation, and with respect to all matters referred to in paragraphs 2 and 4 of Article III,* any advantage, favour, privilege or immunity granted by any contracting party to any product originating in or destined for any other country shall be accorded immediately and unconditionally to the like product originating in or destined for the territories of all other contracting parties.

7.417 China also claims that the imposition of the additional (transitional safeguard) duties on imports of subject tyres from China is inconsistent with Article II.1(b) of the GATT 1994, whereby:

> The products described in Part I of the Schedule relating to any contracting party, which are the products of territories of other contracting parties, shall, on their importation into the territory to which the Schedule relates, and subject to the terms, conditions or qualifications set forth in that Schedule, be exempt from ordinary customs duties in excess of those set forth and provided therein. Such products shall also be exempt from all other duties or charges of any kind imposed on or in connection with the importation in excess of those imposed on the date of this Agreement or those directly and mandatorily required to be imposed thereafter by legislation in force in the importing territory on that date.

7.418 China's GATT 1994 claims are entirely dependent on its claims under Paragraph 16 of the Protocol.[557] Since we have not accepted China's claims under Paragraph 16 of the Protocol, we similarly do not accept China's claims under Articles I:1 and II:1 of the GATT 1994.

VIII. CONCLUSION

8.1 For the reasons set forth above, we find that in imposing the transitional safeguards measure on 26 September 2009 in respect of imports of subject tyres from China, the United States did not fail to comply with its obligations under Paragraph 16 of the Protocol and Articles I:1 and II:1 of the GATT 1994.

---

[557] The dependent nature of China's GATT 1994 claims is shown by China's argument that there is "also" a GATT 1994 violation because of the additional duties "not having been justified as emergency action under relevant WTO rules" (*See* China's First Written Submission, paras. 417 and 421).

Report of the Appellate Body, *Turkey – Restrictions on Imports of Textile and Clothing Products*, WT/DS34/AB/R, adopted 22 October 1999

El-Naggar, Member

I. Introduction

1. Turkey appeals from certain issues of law and legal interpretations in the Panel Report, *Turkey – Restrictions on Imports of Textile and Clothing Products* (the "Panel Report").[1] The Panel was established to consider a complaint by India regarding quantitative restrictions introduced by Turkey on imports of Indian textile and clothing products.

2. On 6 March 1995, the Turkey-EC Association Council adopted Decision 1/95[2], which sets out the rules for implementing the final phase of the customs union between Turkey and the European Communities. Article 12(2) of this Decision states:

> In conformity with the requirements of Article XXIV of the GATT Turkey will apply as from the entry into force of this Decision, substantially the same commercial policy as the Community in the textile sector including the agreements or arrangements on trade in textile and clothing.

In order to apply what it considered to be "substantially the same commercial policy" as the European Communities on trade in textiles and clothing, Turkey introduced, as of 1 January 1996, quantitative restrictions on imports from India on 19 categories of textile and clothing products.[3]

[1]WT/DS34/R, 31 May 1999.

[2]Reproduced in WT/REG22/1.

[3]For a further discussion of the underlying facts and a more detailed description of the products involved in this case, see the Panel Report, paras. 2.2-2.46 and 4.1-4.3, and the Annex to the Report.

3. The Panel considered claims by India that the quantitative restrictions introduced by Turkey were inconsistent with Articles XI and XIII of the GATT 1994, and Article 2.4 of the Agreement on Textiles and Clothing (the "*ATC*"). In the Panel Report, circulated on 31 May 1999, the Panel reached the conclusion that the quantitative restrictions were inconsistent with the provisions of Articles XI and XIII of the GATT 1994 and consequently with those of Article 2.4 of the *ATC*, and rejected Turkey's defence that the introduction of any such otherwise GATT/WTO incompatible import restrictions is permitted by Article XXIV of the GATT 1994.[4]

4. On 26 July 1999, Turkey notified the Dispute Settlement Body (the "DSB") of its intention to appeal certain issues of law covered in the Panel Report and legal interpretations developed by the Panel, pursuant to Article 16.4 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "DSU"), and filed a Notice of Appeal pursuant to Rule 20 of the *Working Procedures for Appellate Review* (the "*Working Procedures*"). On 5 August 1999, Turkey filed its appellant's submission.[5] On 20 August 1999, India filed an appellee's submission.[6] On the same day, Hong Kong, China; Japan; and the Philippines filed third participant's submissions.[7]

5. The oral hearing in the appeal was held on 14 September 1999. The participants and third participants presented oral arguments and responded to questions put to them by the Members of the Division hearing the appeal.

II. Arguments of the Participants

A. *Claims of Error by Turkey – Appellant*

6. Turkey appeals the Panel's finding that Article XXIV of the GATT 1994 does not allow it to introduce, upon the formation of its customs union with the European Communities, quantitative restrictions on textile and clothing products which are inconsistent with Articles XI and XIII of the GATT 1994 and Article 2.4 of the *ATC*.

7. Turkey argues that the Panel erred in presuming the existence of a conflict between, on the one hand, Articles XI and XIII of the GATT 1994 and Article 2.4 of the *ATC*, and, on the other, Article XXIV of the GATT 1994. The Panel's reasoning was based on the incorrect presumption that the quantitative restrictions introduced by Turkey in the framework of its customs union with the European Communities were incompatible with Turkey's WTO obligations.

8. According to Turkey, Article XXIV permits the common regulation of commerce of a customs union in a particular sector to be determined by one of the constituent members' lawful quantitative restrictions in that sector, provided that unified regulations are not on the whole more restrictive than the previous regulations of the constituent members.

9. Turkey further contends that Article XXIV is different from exceptions such as Articles XX and XXI of the GATT 1994. The right under Article XXIV to establish a customs union is an autonomous right; it is not an "exception" from other GATT obligations.

10. Turkey argues that the Panel ignored the proper relationship between Article XXIV and the general obligations under the GATT 1994. The Panel did not properly interpret the ordinary meaning of the text of Article XXIV, and, in particular, the chapeau of paragraph 5 of that Article. The ordinary meaning of the chapeau of paragraph 5 demonstrates that Article XXIV confers on WTO

[4]Panel Report, para. 10.1.

[5]Pursuant to Rule 21(1) of the *Working Procedures*.

[6]Pursuant to Rule 22(1) of the *Working Procedures*.

[7]Pursuant to Rule 24 of the *Working Procedures*.

Members a right to enter into a customs union, and to derogate, under certain conditions, from their GATT obligations, including, but not limited to, their obligations under Article I.

11. In Turkey's view, other provisions in Article XXIV confirm that forming a customs union or free-trade area is a right of WTO Members. The provisions of Articles XXIV:6, XXIV:7, XXIV:8 and XXIV:9 establish requirements for implementation of a customs union, but do not prohibit its ultimate formation, thereby supporting the proposition that Members have a right to form a customs union under Article XXIV.

12. Turkey argues that there is no textual support for the Panel's conclusion that Article XXIV permits derogations from Article I, but not from other GATT provisions. The chapeau of Article XXIV:5 states that "the provisions of this Agreement" shall not prevent the formation of a customs union, thereby covering all provisions of the GATT 1994, not just Article I.

13. Turkey claims that the Panel's conclusion that Article XXIV:5(a) "does not authorize Members forming a customs union to deviate from the prohibitions contained in Articles XI and XIII of GATT or Article 2.4 of the ATC"[8] was based on a number of legal errors. First, Turkey argues that the Panel misinterpreted the ordinary meaning of Article XXIV:5(a). Specifically, Turkey argues that the Panel ignored the chapeau to Article XXIV:5. The chapeau clearly states that no GATT 1994 provision shall "prevent" the formation of a customs union as long as certain conditions set out in sub-paragraph 5(a) are satisfied. The Panel ignored the chapeau, and, as a result, came to the erroneous conclusion that Article XXIV:5(a) does not "authorize or prohibit" the use of quantitative restrictions upon the formation of a customs union.

14. Second, Turkey argues that the Panel's reading of Article XXIV:5(a) must fail because it renders the provision a "nullity". The "economic test" established by sub-paragraph 5(a) applies to the duties and regulations of commerce of the customs union as a whole, not, as stated by the Panel, to the duties and regulations of the particular customs union members. Under the Panel's interpretation, the introduction of an otherwise inconsistent measure could disqualify the customs union even though trade flows were, on the whole, facilitated.

15. Third, Turkey argues that the Panel's analysis of "the immediate context" of Article XXIV:5(a) does not support its interpretation of that provision. The Panel failed to include the chapeau of Article XXIV:5(a) in its analysis of the context. Furthermore, the Panel misinterpreted the context of Article XXIV:5(a), in particular, Articles XXIV:5(b), XXIV:4, XXIV:6, and the location of Article XXIV in Part III of the GATT 1994.

16. Turkey also claims that the Panel failed to interpret properly the ordinary meaning of Article XXIV:8(a). The Panel erred by failing to examine the entire context of Article XXIV:8(a), and, therefore, overlooked the interdependent nature of sub-paragraphs 8(a)(i) and 8(a)(ii), and their relationship in the broader context of Article XXIV.

17. Turkey submits that if it is not allowed to impose quantitative restrictions on the textile and clothing products at issue in this case, the European Communities will exclude 40 per cent of Turkey's exports from the customs union between Turkey and the European Communities, thereby leading to an inconsistency with Article XXIV:8(a)(i). Turkey will thus be exposed to a challenge that the proposed customs union does not cover "substantially all trade" and, therefore, is not consistent with Article XXIV.

18. Turkey notes that the Panel stated that Turkey had several alternatives to the imposition of quantitative restrictions: increased tariffs, rules of origin, early phase-out, and tariffication. Each of these suggestions is flawed, and, moreover, Turkey fails to see how the Panel could conclude that Turkey had a duty to opt for one of these alternatives as long as the measures challenged by India did

[8]Panel Report, para. 9.134.

not result in the common regulation of commerce of the Turkey/EC customs union being on the whole more restrictive than the regulations of Turkey and the European Communities before the formation of the customs union.

19. Turkey also argues that the wider context of Articles XXIV:5 and XXIV:8 and the object and purpose of the *WTO Agreement* do not support the Panel's interpretation. Article XXIV:4, the Preamble of the *Understanding on the Interpretation of Article XXIV of the General Agreement on Tariffs and Trade 1994* (the "*Understanding on Article XXIV*") and the Singapore Ministerial Declaration do not support a conclusion that the introduction of quantitative restrictions as part of the formation of a customs union is prohibited by Article XXIV.

20. Finally, Turkey argues that the Panel drew the wrong conclusion from past GATT/WTO practice. The Panel concluded from its review of GATT/WTO practice that there is no agreement or acceptance that Article XXIV *authorized or required* the introduction of otherwise GATT/WTO inconsistent measures upon the formation of a customs union. The Panel erred, however, by not reviewing whether GATT/WTO practice *prohibited* the introduction of such measures. Turkey recalls, for example, that during the accession of Sweden to the European Communities, Sweden adopted quantitative restrictions similar to those challenged in this case. In that case, no GATT Contracting Party challenged those measures under Articles XXII or XXIII of the GATT.

B. *Arguments of India - Appellee*

21. India argues that the Panel's ruling that Article XXIV does not authorize the introduction of quantitative restrictions in this case is compelled by the recognized principles of interpretation set out in Articles 31 and 32 of the *Vienna Convention on the Law of Treaties*. The terms of Article XXIV:5 exempt from the other obligations of the GATT 1994 only those measures that are "inherent" in the formation of a customs union. For example, in order to form a customs union, preferential treatment inconsistent with Article I of the GATT 1994 must be granted. By contrast, customs unions can be formed without the introduction of new quantitative restrictions on imports that are inconsistent with Article XI of the GATT 1994.

22. India argues that the context of Article XXIV:5 confirms this interpretation. Article XXIV:4 explains why customs unions are permitted and which purposes they are to serve. Based on the context provided by Article XXIV:4, Article XXIV:5 cannot be interpreted to provide a justification for measures raising barriers to the trade of other WTO Members. Furthermore, the existence in Article XXIV:6 of a mechanism for compensation in the case of increases in tariff duties, without a corresponding provision for compensation for the introduction of new quantitative restrictions, makes clear that Article XXIV was not meant to authorize the imposition of quantitative restrictions.

23. Examining the object and purpose of the *WTO Agreement*, India notes Turkey's argument that the requirements of Article XXIV:5 and Article XXIV:8 apply to the import regimes of the WTO Members forming the customs union taken as a whole, not to individual measures. As there is, however, no mechanism for providing compensation for the introduction of new quantitative restrictions, acceptance of Turkey's argument would induce Members forming a customs union to replace the protection afforded by their tariffs with new quantitative restrictions. This result contradicts the object and purpose of the drafters, who established a strong prohibition on the use of quantitative restrictions.

24. With respect to Turkey's general claims of legal error, India argues that the Panel did not presume a conflict between the provisions of Article XXIV and the provisions of Articles XI and XIII of the GATT 1994 and Article 2.4 of the *ATC*. The Panel made no such presumption, and simply addressed the question whether there was a need to examine the consistency of the customs union with Article XXIV. Furthermore, in contrast to what Turkey argues, the Panel never stated that Article XXIV was an exception to GATT obligations. The Panel simply noted that Turkey made an "affirmative defence" based on Article XXIV.

25. Next, India responds to Turkey's statement that Article XXIV:5 permits the formation of a customs union as long as the economic assessment in sub-paragraph 5(a) is fulfilled. Article XXIV defines the purposes for which a WTO Member can deviate from other GATT provisions, but does not define the provisions themselves. Only those provisions of the GATT 1994 that "prevent" the formation of a customs union may provide the basis for a defense under Article XXIV. Under the terms of Article XXIV:5, the formation of a customs union is not "prevented" by the obligations set out in Article XI of the GATT 1994 and Article 2.4 of the *ATC*. The formation of a customs union is only "prevented" by those provisions of the GATT 1994 that prohibit discrimination, such as Article I of the GATT 1994 and other most-favoured-nation provisions, because discrimination is inherent in regional integration.

26. India also claims that, contrary to Turkey's argument, the Panel did not rule that Article XXIV justifies only deviations from Article I, and that Article XXIV consequently applied only to tariffs. In fact, the Panel made clear that Article XXIV could permit Members to refrain from applying quantitative restrictions, as well as tariffs, to their partner in the customs union.

27. Finally, according to India, Turkey is unable to explain why the mere fact that a type of measure is regulated in Part III of the GATT 1994 demonstrates that the other Parts of the GATT 1994 no longer apply. Turkey's arguments fail to take into account the reason why the drafters divided the GATT into three parts.

28. With respect to Turkey's specific claims of legal error, India responds to Turkey's objection that the Panel failed to consider the chapeau of Article XXIV:5 in its examination of Article XXIV:5(a) by arguing that the Panel in fact conducted a thorough textual and contextual analysis. In response to Turkey's claim that the Panel's interpretation renders Article XXIV:5(a) a nullity, India argues that Article XXIV:5(a) establishes a requirement that Members forming a customs union must meet in addition to their other market access obligations. This additional requirement has not been reduced to inutility by the Panel's interpretation. Members forming a customs union may not have bound all their tariffs or may apply their tariffs at levels below the bound rate, or they may have the right to impose quantitative restrictions consistently with one of the exceptions to Article XI of the GATT 1994. In these circumstances, the Members could exercise their right to increase barriers to trade, but only under the conditions set out in Article XXIV:5(a).

29. India also submits that, in contrast to Turkey's claims, the immediate context of Article XXIV:5(a) supports the Panel's interpretation that that provision does not authorize the introduction of quantitative restrictions. In particular, the text of Article XXIV:5(b), Article XXIV:4, and Article XXIV:6, as well as the placement of Article XXIV in Part III of the GATT 1994, all support the Panel's interpretation. India also argues that, contrary to Turkey's claims, the wider context of Articles XXIV:5 and XXIV:8 and the object and purpose of the *WTO Agreement* support the Panel's interpretation of these provisions.

30. Furthermore, India contends that Turkey's claim that the Panel did not properly interpret the ordinary meaning of Article XXIV:8(a) is incorrect. The Panel found that Article XXIV:8(a)(ii) does not provide authorization for Members forming a customs union to violate the prescriptions of Articles XI and XIII of the GATT 1994 or Article 2.4 of the *ATC*. Turkey objects to this interpretation on the ground that it curtails the right of Members with different trade regimes to form a customs union. Turkey fails to take into account that the right to form a customs union is not absolute. Moreover, the Panel's interpretation does not prevent Turkey from forming a customs union with the European Communities, even though it might affect the nature and timing of the formation.

31. Finally, according to India, the Panel drew the correct conclusions from GATT/WTO practice on this issue. The situation here is different from the case involving Sweden's adoption of quantitative restrictions on the occasion of its accession to the European Union, as Turkey did not accede to the European Union. The measures at issue here are simply quantitative restrictions

adopted by Turkey in the context of an agreement establishing a customs union with the European Communities.

32. In addition to responding to Turkey's general and specific claims of legal error, India makes a number of general observations. First, the argument that Article XXIV of the GATT 1994 can provide a justification for quantitative restrictions has never been accepted under the GATT 1947. Second, the agreement establishing a customs union between Turkey and the European Communities was drafted on the assumption that Article XXIV does not justify the introduction of new quantitative restrictions on imports of textile and clothing products. This agreement explicitly recognized the possibility that Turkey would not be able to impose quantitative restrictions and that, therefore, a system of certificates of origin would continue to be applied on these products. Third, the agreement between Turkey and the European Communities provides for the formation of a customs union only at a future date, and therefore constitutes, at most, an interim agreement for the formation of a customs union. To realize the objectives of this interim agreement, Turkey did not have to impose the same restrictions on imports of textiles and clothing as imposed by the European Communities.

III. Arguments of Third Participants

A. *Hong Kong, China*

33. Hong Kong, China argues that Article XXIV is best characterized as a specific provision of the GATT 1994 under which WTO Members are permitted, subject to compliance with certain conditions, to form customs unions or free trade areas that may depart from certain other provisions of the *WTO Agreement*.

34. In interpreting Article XXIV:5, Hong Kong, China notes that it is important to examine the context provided by Article XXIV:4. This paragraph states that the purpose of a customs union or free-trade area is "not to raise barriers to the trade of other contracting parties with such territories." Similarly, the *Understanding on Article XXIV* states that parties to regional trade agreements "should to the greatest possible extent avoid creating adverse effects on the trade of other Members."[9] It would be contrary to the stated purpose of regional agreements set out in Article XXIV:4 to interpret the chapeau to Article XXIV:5 to permit the raising of barriers to trade in violation of Articles XI and XIII of the GATT 1994.

35. Hong Kong, China also states that, under Article XXIV:8(a), a customs union need not result in a total alignment of the external trade regimes of the constituent territories. Furthermore, Turkey's claims about past GATT/WTO practice on this issue are inapposite. In particular, the circumstances in which Sweden introduced discriminatory quantitative restrictions on imports of textile and clothing products were completely different from those in the present case.

B. *Japan*

36. Japan states that a basic tenet of the *WTO Agreement* is the primacy of the multilateral trading system based on the core principle of the elimination of discriminatory treatment in international trade relations. Members must observe this principle whenever they exercise their rights and obligations under the *WTO Agreement*, including when they enter into regional trade agreements under

[9]Understanding on Article XXIV, Preamble.

Article XXIV of the GATT 1994. Regional trade agreements are only allowed if they are complementary to the multilateral trading system and if they comply with the rules set out in Article XXIV of the GATT 1994.

37. Japan does not believe that Article XXIV functions as a "waiver" which allows derogation from the basic tenets of the multilateral trading system. Furthermore, it should not be interpreted as a waiver of the obligation to eliminate quantitative restrictions, which is a central pillar of the WTO system. Hence, Japan disagrees that Article XXIV gives WTO Members the right to introduce quantitative restrictions in contravention of the *WTO Agreement* on the occasion of the formation of a customs union.

C. *The Philippines*

38. The Philippines first notes that Turkey's invocation of Article XXIV is an affirmative defence to its acknowledged violation of Articles XI and XIII of the GATT 1994 and Article 2.4 of the *ATC*.

39. The Philippines then argues that Turkey's quantitative restrictions are not justified by Article XXIV. First, the quantitative restrictions are not justified because they are on the whole more restrictive than the general incidence of regulations of commerce applicable in the constituent territories prior to the formation of the customs union, in contravention of Article XXIV:5(a). Second, the quantitative restrictions violate Article XXIV:4 because Turkey (and the European Communities) did not avoid creating adverse effects on the trade of other Members to the greatest possible extent. Third, the chapeau of Article XXIV:5 applies solely to the provisions of the GATT 1994 that, if enforced, would prohibit the formation of a customs union. It does not exempt Members from complying with other obligations under the *WTO Agreement*. Fourth, the grounds upon which measures are permitted under Articles XI, XII, XIII, XIV, XV and XX are, by their nature, specific to the Member concerned and, accordingly, cannot be grandfathered.

40. The Philippines also argues that, in any case, Turkey and the European Communities have not formed a customs union. The arrangement between Turkey and the European Communities does not qualify as a customs union under Article XXIV:8 because, *inter alia*, all restrictive regulations of commerce have not been eliminated with respect to substantially all trade between Turkey and the European Communities. In addition, Turkey and the European Communities do not apply substantially the same duties and regulations of commerce to the trade with Members not included in the customs union.

IV. Issue Raised in this Appeal

41. This appeal relates to certain quantitative restrictions imposed by Turkey on 19 categories of textile and clothing products imported from India. Turkey adopted these quantitative restrictions upon the formation of a customs union with the European Communities. The Panel found these quantitative restrictions to be inconsistent with Articles XI and XIII of the GATT 1994 and Article 2.4 of the *ATC*.[10] The issue raised by Turkey in this appeal is whether these quantitative restrictions are nevertheless justified by Article XXIV of the GATT 1994.

V. Article XXIV of the GATT 1994

42. In examining Turkey's defence that Article XXIV of the GATT 1994 allowed Turkey to adopt the quantitative restrictions at issue in this appeal, the Panel looked, first, at Article XXIV:5(a) and, then, at Article XXIV:8(a) of the GATT 1994. The Panel examined the ordinary meaning of the terms of these provisions, in their context and in the light of the object and purpose of the *WTO Agreement*. The Panel reached the following conclusions:

> With regard to the specific relationship between, in the case before us, Article XXIV and Articles XI and XIII (and Article 2.4 of the ATC), we consider that the wording of Article XXIV does not authorize a departure from the obligations contained in Articles XI and XIII of GATT and Article 2.4 of the ATC.
>
> …
>
> [Paragraphs 5 and 8 of Article XXIV] do not … address any specific measures that may or may not be adopted on the formation of a customs union and importantly they do not authorize violations of Articles XI and XIII, and Article 2.4 of the ATC. … We draw the conclusion that even on the occasion of the formation of a customs union, Members cannot impose otherwise incompatible quantitative restrictions.[11]

Consequently, the Panel rejected Turkey's defence that Article XXIV justifies the introduction of the quantitative restrictions at issue. Turkey appeals the Panel's interpretation of Article XXIV.

43. We note that, in its findings, the Panel referred to the chapeau of paragraph 5 of Article XXIV only in a passing and perfunctory way. The chapeau of paragraph 5 is not central to the Panel's analysis, which focuses instead primarily on paragraph 5(a) and paragraph 8(a). However, we believe that the chapeau of paragraph 5 of Article XXIV is the key provision for resolving the issue before us in this appeal. In relevant part, it reads:

> Accordingly, the provisions of this Agreement *shall not prevent*, as between the territories of contracting parties, *the formation of a customs union* …; *Provided* that: … (emphasis added)

44. To determine the meaning and significance of the chapeau of paragraph 5, we must look at the text of the chapeau, and its context, which, for our purposes here, we consider to be paragraph 4 of Article XXIV.

45. First, in examining the text of the chapeau to establish its ordinary meaning, we note that the chapeau states that the provisions of the GATT 1994 "*shall not prevent*" the formation of a customs

---

[10]Panel Report, para. 9.86.

[11]*Ibid.*, paras. 9.188 and 9.189.

union. We read this to mean that the provisions of the GATT 1994 *shall not make impossible* the formation of a customs union.[12] Thus, the chapeau makes it clear that Article XXIV may, under certain conditions, justify the adoption of a measure which is inconsistent with certain other GATT provisions, and may be invoked as a possible "defence" to a finding of inconsistency.[13]

46. Second, in examining the text of the chapeau, we observe also that it states that the provisions of the GATT 1994 shall not prevent "*the formation of a customs union*". This wording indicates that Article XXIV can justify the adoption of a measure which is inconsistent with certain other GATT provisions only if the measure is introduced upon the formation of a customs union, and only to the extent that the formation of the customs union would be prevented if the introduction of the measure were not allowed.

47. It follows necessarily that the text of the chapeau of paragraph 5 of Article XXIV cannot be interpreted without reference to the definition of a "customs union". This definition is found in paragraph 8(a) of Article XXIV, which states, in relevant part:

[12]"Prevent" is defined as "make impracticable or impossible by anticipatory action; stop from happening." *The New Shorter Oxford English Dictionary* (Clarendon Press, 1993), Vol. II, at 2348.

[13]We note that legal scholars have long considered Article XXIV to be an "exception" or a possible "defence" to claims of violation of GATT provisions. An early treatise on GATT law stated: "[Article XXIV] establishes an *exception to GATT obligations* for regional arrangements that meet a series of detailed and complex criteria." (emphasis added) J. Jackson, *World Trade and the Law of GATT* (The Bobbs-Merrill Company, 1969), p. 576. See also J. Allen, *The European Common Market and the GATT* (The University Press of Washington, D.C., 1960), p. 2; K. Dam, "Regional Economic Arrangements and the GATT: The Legacy of Misconception", *University of Chicago Law Review*, 1963, p. 616; and J. Huber, "The Practice of GATT in Examining Regional Arrangements under Article XXIV", *Journal of Common Market Studies*, 1981, p. 281. We note also the following statement in the unadopted panel report in *EEC – Member States' Import Regimes for Bananas*, DS32/R, 3 June 1993, para. 358: "The Panel noted that Article XXIV:5 to 8 permitted the contracting parties to *deviate from their obligations under other provisions of the General Agreement* for the purpose of forming a customs union …". (emphasis added)

The chapeau of paragraph 5 refers only to the provisions of the GATT 1994. It does not refer to the provisions of the *ATC*. However, Article 2.4 of the *ATC* provides that "[n]o new restrictions … shall be introduced *except under* the provisions of this Agreement or *relevant GATT 1994 provisions*." (emphasis added) In this way, Article XXIV of the GATT 1994 is incorporated in the *ATC* and may be invoked as a defence to a claim of inconsistency with Article 2.4 of the *ATC*, provided that the conditions set forth in Article XXIV for the availability of this defence are met.

> A customs union shall be understood to mean the substitution of a single customs territory for two or more customs territories, so that
>
> (i) duties and other restrictive regulations of commerce (except, where necessary, those permitted under Articles XI, XII, XIII, XIV, XV and XX) are eliminated with respect to *substantially all the trade* between the constituent territories of the union or at least with respect to substantially all the trade in products originating in such territories, and,
>
> (ii) … *substantially the same* duties and other regulations of commerce are applied by each of the members of the union to the trade of territories not included in the union. (emphasis added)

48. Sub-paragraph 8(a)(i) of Article XXIV establishes the standard for the *internal trade* between constituent members in order to satisfy the definition of a "customs union". It requires the constituent members of a customs union to eliminate "duties and other restrictive regulations of commerce" with respect to "substantially all the trade" between them. Neither the GATT CONTRACTING PARTIES nor the WTO Members have ever reached an agreement on the interpretation of the term "substantially" in this provision.[14] It is clear, though, that "substantially all the trade" is not the same as *all* the trade, and also that "substantially all the trade" is something considerably more than merely *some* of the trade. We note also that the terms of sub-paragraph 8(a)(i) provide that members of a customs union may maintain, where necessary, in their internal trade, certain restrictive regulations of commerce that are otherwise permitted under Articles XI through XV and under Article XX of the GATT 1994. Thus, we agree with the Panel that the terms of sub-paragraph 8(a)(i) offer "some flexibility" to the constituent members of a customs union when liberalizing their internal trade in accordance with this sub-paragraph.[15] Yet we caution that the degree of "flexibility" that sub-paragraph 8(a)(i) allows is limited by the requirement that "duties and other restrictive regulations of commerce" be "eliminated with respect to substantially all" internal trade.

49. Sub-paragraph 8(a)(ii) establishes the standard for the trade of constituent members *with third countries* in order to satisfy the definition of a "customs union". It requires the constituent members of a customs union to apply "substantially the same" duties and other regulations of commerce to external trade with third countries. The constituent members of a customs union are thus required to apply a common external trade regime, relating to both duties and other regulations of commerce. However, sub-paragraph 8(a)(ii) does *not* require each constituent member of a customs union to apply *the same* duties and other regulations of commerce as other constituent members with respect to trade with third countries; instead, it requires that *substantially the same* duties and other regulations of commerce shall be applied. We agree with the Panel that:

> [t]he ordinary meaning of the term "substantially" in the context of sub-paragraph 8(a) appears to provide for both qualitative and quantitative components. The expression "substantially the same duties and other regulations of commerce are applied by each of the Members of the [customs] union" would appear to encompass both quantitative and

[14]Panel Report, para. 9.148.

[15]*Ibid.*, para. 9.146.

> qualitative elements, the quantitative aspect more emphasized in relation to duties.[16]

50. We also believe that the Panel was correct in its statement that the terms of sub-paragraph 8(a)(ii), and, in particular, the phrase "substantially the same" offer a certain degree of "flexibility" to the constituent members of a customs union in "the creation of a common commercial policy."[17] Here too we would caution that this "flexibility" is limited. It must not be forgotten that the word "substantially" qualifies the words "the same". Therefore, in our view, something closely approximating "sameness" is required by Article XXIV:8(a)(ii). We do not agree with the Panel that:

> … as a general rule, a situation where constituent members have "comparable" trade regulations having similar effects with respect to the trade with third countries, would generally meet the qualitative dimension of the requirements of sub-paragraph 8(a)(ii).[18]

Sub-paragraph 8(a)(ii) requires the constituent members of a customs union to adopt "substantially the same" trade regulations. In our view, "comparable trade regulations having similar effects" do not meet this standard. A higher degree of "sameness" is required by the terms of sub-paragraph 8(a)(ii).

51. Third, in examining the text of the chapeau of Article XXIV:5, we note that the chapeau states that the provisions of the GATT 1994 shall not prevent the formation of a customs union "*Provided that*". The phrase "*provided that*" is an essential element of the text of the chapeau. In this respect, for purposes of a "customs union", the relevant proviso is set out immediately following the chapeau, in Article XXIV:5(a). It reads in relevant part:

> with respect to a customs union …, the duties and other regulations of commerce imposed at the institution of any such union … in respect of trade with contracting parties not parties to such union … shall not on the whole be higher or more restrictive than the general incidence of the duties and regulations of commerce applicable in the constituent territories prior to the formation of such union …;

52. Given this proviso, Article XXIV can, in our view, only be invoked as a defence to a finding that a measure is inconsistent with certain GATT provisions to the extent that the measure is introduced upon the formation of a customs union which meets the requirement in sub-paragraph 5(a) of Article XXIV relating to the "duties and other regulations of commerce" applied by the constituent members of the customs union to trade with third countries.

53. With respect to "duties", Article XXIV:5(a) requires that the duties applied by the constituent members of the customs union *after* the formation of the customs union "shall *not* on the whole be *higher* … than the *general incidence*" of the duties that were applied by each of the constituent members before the formation of the customs union. Paragraph 2 of the *Understanding on Article XXIV* requires that the evaluation under Article XXIV:5(a) of the *general incidence of the duties* applied before and after the formation of a customs union "shall … be based upon an overall assessment of weighted average tariff rates and of customs duties collected."[19] Before the agreement on this Understanding, there were different views among the GATT Contracting Parties as to whether

[16]Panel Report, para. 9.148.

[17]*Ibid*.

[18]*Ibid*., para. 9.151.

[19]Paragraph 2 of the *Understanding on Article XXIV* further states that "this assessment shall be based on import statistics for a previous representative period to be supplied by the customs union, on a tariff-line basis and in values and quantities, broken down by WTO country of origin."

one should consider, when applying the test of Article XXIV:5(a), the *bound* rates of duty or the *applied* rates of duty. This issue has been resolved by paragraph 2 of the *Understanding on Article XXIV*, which clearly states that the *applied* rate of duty must be used.

54. With respect to "other regulations of commerce", Article XXIV:5(a) requires that those applied by the constituent members *after* the formation of the customs union "shall *not* on the whole be … *more restrictive* than the *general incidence*" of the regulations of commerce that were applied by each of the constituent members *before* the formation of the customs union. Paragraph 2 of the *Understanding on Article XXIV* explicitly recognizes that the quantification and aggregation of regulations of commerce other than duties may be difficult, and, therefore, states that "for the purpose of the overall assessment of the incidence of other regulations of commerce for which quantification and aggregation are difficult, the examination of individual measures, regulations, products covered and trade flows affected may be required."[20]

55. We agree with the Panel that the terms of Article XXIV:5(a), as elaborated and clarified by paragraph 2 of the *Understanding on Article XXIV*, provide:

> … that the effects of the resulting trade measures and policies of the new regional agreement shall not be more trade restrictive, overall, than were the constituent countries' previous trade policies.[21]

and we also agree that this is:

> an "economic" test for assessing whether a specific customs union is compatible with Article XXIV.[22]

56. The text of the chapeau of paragraph 5 must also be interpreted in its context. In our view, paragraph 4 of Article XXIV constitutes an important element of the context of the chapeau of paragraph 5. The chapeau of paragraph 5 of Article XXIV begins with the word "accordingly", which can only be read to refer to paragraph 4 of Article XXIV, which immediately precedes the chapeau. Paragraph 4 states:

> The contracting parties recognize the desirability of increasing freedom of trade by the development, through voluntary agreements, of closer integration between the economies of the countries parties to such agreements. They also recognize that the purpose of a customs union or of a free-trade area should be to facilitate trade between the constituent territories and not to raise barriers to the trade of other contracting parties with such territories.

57. According to paragraph 4, the purpose of a customs union is "to facilitate trade" between the constituent members and "not to raise barriers to the trade" with third countries. This objective demands that a balance be struck by the constituent members of a customs union. A customs union should facilitate trade within the customs union, but it should *not* do so in a way that raises barriers to trade with third countries. We note that the *Understanding on Article XXIV* explicitly reaffirms this purpose of a customs union, and states that in the formation or enlargement of a customs union, the constituent members should "to the greatest possible extent avoid creating adverse affects on the trade

[20]In paragraph 43 of its appellant's submission, Turkey argues that this provision must be interpreted as allowing the constituent members of a customs union to introduce GATT/WTO inconsistent quantitative restrictions upon the formation of the customs union. We see no basis for such an interpretation.

[21]Panel Report, para. 9.121.

[22]*Ibid.*, para. 9.120.

of other Members".[23] Paragraph 4 contains purposive, and not operative, language. It does not set forth a separate obligation itself but, rather, sets forth the overriding and pervasive purpose for Article XXIV which is manifested in operative language in the specific obligations that are found elsewhere in Article XXIV. Thus, the purpose set forth in paragraph 4 informs the other relevant paragraphs of Article XXIV, including the chapeau of paragraph 5. For this reason, the chapeau of paragraph 5, and the conditions set forth therein for establishing the availability of a defence under Article XXIV, must be interpreted in the light of the purpose of customs unions set forth in paragraph 4. The chapeau cannot be interpreted correctly without constant reference to this purpose.

58. Accordingly, on the basis of this analysis of the text and the context of the chapeau of paragraph 5 of Article XXIV, we are of the view that Article XXIV may justify a measure which is inconsistent with certain other GATT provisions. However, in a case involving the formation of a customs union, this "defence" is available only when two conditions are fulfilled. First, the party claiming the benefit of this defence must demonstrate that the measure at issue is introduced upon the formation of a customs union that fully meets the requirements of sub-paragraphs 8(a) and 5(a) of Article XXIV. And, second, that party must demonstrate that the formation of that customs union would be prevented if it were not allowed to introduce the measure at issue. Again, *both* these conditions must be met to have the benefit of the defence under Article XXIV.

59. We would expect a panel, when examining such a measure, to require a party to establish that both of these conditions have been fulfilled. It may not always be possible to determine whether the second of the two conditions has been fulfilled without initially determining whether the first condition has been fulfilled. In other words, it may not always be possible to determine whether not applying a measure would prevent the formation of a customs union without first determining whether there *is* a customs union. In this case, the Panel simply assumed, for the sake of argument, that the first of these two conditions was met and focused its attention on the second condition.

60. More specifically, with respect to the first condition, the Panel, in this case, did not address the question of whether the regional trade arrangement between Turkey and the European Communities is, in fact, a "customs union" which meets the requirements of paragraphs 8(a) and 5(a) of Article XXIV. The Panel maintained that "it is arguable" that panels do not have jurisdiction to assess the overall compatibility of a customs union with the requirements of Article XXIV.[24] We are not called upon in this appeal to address this issue, but we note in this respect our ruling in *India – Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Products* on the jurisdiction of panels to review the justification of balance-of-payments restrictions under Article XVIII:B of the GATT 1994.[25] The Panel also considered that, on the basis of the principle of judicial economy, it was not necessary to assess the compatibility of the regional trade arrangement between Turkey and the European Communities with Article XXIV in order to address the claims of India.[26] Based on this reasoning, the Panel assumed *arguendo* that the arrangement between Turkey and the European Communities is compatible with the requirements of Article XXIV:8(a) and 5(a) and limited its examination to the question of whether Turkey was permitted to introduce the quantitative restrictions at issue.[27] The assumption by the Panel that the agreement between Turkey and the European Communities is a "customs union" within the meaning of Article XXIV was not appealed. Therefore, the issue of whether this arrangement meets the requirements of paragraphs 8(a) and 5(a) of Article XXIV is not before us.

61. With respect to the second condition that must be met to have the benefit of the defence under Article XXIV, Turkey asserts that had it not introduced the quantitative restrictions on textile and

[24] Panel Report, para. 9.53.

[25] Adopted 22 September 1999, WT/DS90/AB/R, paras. 80 – 109.

[26] Panel Report, para. 9.54.

[27] *Ibid*., para. 9.55.

clothing products from India that are at issue, the European Communities would have "exclud[ed] these products from free trade within the Turkey/EC customs union".[28] According to Turkey, the European Communities would have done so in order to prevent trade diversion. Turkey's exports of these products accounted for 40 per cent of Turkey's total exports to the European Communities.[29] Turkey expresses strong doubts about whether the requirement of Article XXIV:8(a)(i) that duties and other restrictive regulations of commerce be eliminated with respect to "substantially all trade" between Turkey and the European Communities could be met if 40 per cent of Turkey's total exports to the European Communities were excluded.[30] In this way, Turkey argues that, unless it is allowed to introduce quantitative restrictions on textile and clothing products from India, it would be prevented from meeting the requirements of Article XXIV:8(a)(i) and, thus, would be prevented from forming a customs union with the European Communities.

62. We agree with the Panel that had Turkey not adopted the same quantitative restrictions that are applied by the European Communities, this would not have prevented Turkey and the European Communities from meeting the requirements of sub-paragraph 8(a)(i) of Article XXIV, and consequently from forming a customs union. We recall our conclusion that the terms of sub-paragraph 8(a)(i) offer some – though limited – flexibility to the constituent members of a customs union when liberalizing their internal trade.[31] As the Panel observed, there are other alternatives available to Turkey and the European Communities to prevent any possible diversion of trade, while at the same time meeting the requirements of sub-paragraph 8(a)(i).[32] For example, Turkey could adopt rules of origin for textile and clothing products that would allow the European Communities to distinguish between those textile and clothing products originating in Turkey, which would enjoy free access to the European Communities under the terms of the customs union, *and* those textile and clothing products originating in third countries, including India. In fact, we note that Turkey and the European Communities themselves appear to have recognized that rules of origin could be applied to deal with any possible trade diversion. Article 12(3) of Decision 1/95 of the EC-Turkey Association Council, which sets out the rules for implementing the final phase of the customs union between Turkey and the European Communities, specifically provides for the possibility of applying a system of certificates of origin.[33] A system of certificates of origin would have been a reasonable alternative until the quantitative restrictions applied by the European Communities are required to be terminated under the provisions of the *ATC*. Yet no use was made of this possibility to avoid trade diversion. Turkey preferred instead to introduce the quantitative restrictions at issue.

63. For this reason, we conclude that Turkey was not, in fact, required to apply the quantitative restrictions at issue in this appeal in order to form a customs union with the European Communities. Therefore, Turkey has not fulfilled the second of the two necessary conditions that must be fulfilled to be entitled to the benefit of the defence under Article XXIV. Turkey has not demonstrated that the formation of a customs union between Turkey and the European Communities would be prevented if it were not allowed to adopt these quantitative restrictions. Thus, the defence afforded by

[28] Turkey's appellant's submission, para. 56.

[29] Panel Report, para. 9.153.

[30] Turkey's appellant's submission, para. 56

[31] *Supra*, para. 48

[32] Panel Report, para. 9.152.

[33] Article 12(3) reads as follows:

> Until Turkey has concluded these arrangements, the present *system of certificates of origin for the exports of textile and clothing* from Turkey into the Community will remain in force and such products not originating from Turkey will remain subject to the application of the Communities Commercial Policy in relation to the third countries in question. (emphasis added)

Article XXIV under certain conditions is not available to Turkey in this case, and Article XXIV does not justify the adoption by Turkey of these quantitative restrictions.

VI. Findings and Conclusions

64. For the reasons set out in this report, the Appellate Body concludes that the Panel erred in its legal reasoning by focusing on sub-paragraphs 8(a) and 5(a) and by failing to recognize the crucial role of the chapeau of paragraph 5 in the interpretation of Article XXIV of the GATT 1994, but upholds the Panel's conclusion that Article XXIV does not allow Turkey to adopt, upon the formation of a customs union with the European Communities, quantitative restrictions on imports of 19 categories of textile and clothing products which were found to be inconsistent with Articles XI and XIII of the GATT 1994 and Article 2.4 of the *ATC*.

65. We wish to point out that we make no finding on the issue of whether quantitative restrictions found to be inconsistent with Article XI and Article XIII of the GATT 1994 will *ever* be justified by Article XXIV. We find only that the quantitative restrictions at issue in the appeal in this case were not so justified. Likewise, we make no finding either on many other issues that may arise under

Article XXIV. The resolution of those other issues must await another day. We do not believe it necessary to find more than we have found here to fulfill our responsibilities under the DSU in deciding this case.

66. The Appellate Body recommends that the DSB request that Turkey bring its measures which the Panel found to be inconsistent with Articles XI and XIII of the GATT 1994 and Article 2.4 of the *ATC* into conformity with its obligations under these agreements.

I. Introduction

1. Mexico appeals certain issues of law and legal interpretations developed in the Panel Report, *Mexico – Tax Measures on Soft Drinks and Other Beverages* (the "Panel Report").[1] The Panel was established to consider a complaint by the United States concerning certain tax measures and bookkeeping requirements imposed by Mexico on soft drinks and other beverages that use sweeteners other than cane sugar.

2. The measures challenged by the United States include: (i) a 20 per cent tax on the transfer or, as applicable, the importation of soft drinks and other beverages that use any sweetener other than cane sugar (the "soft drink tax"); (ii) a 20 per cent tax on specific services (commission, mediation, agency, representation, brokerage, consignment, and distribution), when such services are provided for the purpose of transferring products such as soft drinks and other beverages that use any sweetener other than cane sugar (the "distribution tax"); and (iii) a number of requirements imposed on taxpayers subject to the soft drink tax and to the distribution tax (the "bookkeeping requirements").[2] Before the Panel, the United States claimed that these measures are inconsistent with paragraphs 2 and 4 of Article III of the *General Agreement on Tariffs and Trade 1994* (the "GATT 1994").

3. In its first written submission to the Panel, Mexico requested that the Panel decide, as a preliminary matter, to "decline to exercise its jurisdiction in this case"[3] and that it "recommend to the parties that they submit their respective grievances to an Arbitral Panel, under Chapter Twenty of the NAFTA[4], which can address both Mexico's concern with respect to market access for Mexican cane sugar in the United States under the NAFTA and the United States' concern with respect to Mexico's

[2] These measures are described in more detail in paragraphs 2.2-2.5 of the Panel Report.

[3] Panel Report, para. 4.2.

[4] North American Free Trade Agreement (the "NAFTA").

tax measures."[5] Mexico also stated that, in the event the Panel decided to exercise jurisdiction, the Panel should find that the measures are justified pursuant to Article XX(d) of the GATT 1994.[6]

4. On 18 January 2005, the Panel issued a preliminary ruling in which it rejected Mexico's request.[7] In doing so, the Panel concluded that, "under the DSU[[8]], it had no discretion to decide whether or not to exercise its jurisdiction in a case properly before it."[9] The Panel added that, "even if it had such discretion, the Panel did not consider that there were facts on record that would justify the Panel declining to exercise its jurisdiction in the present case."[10]

5. In its Report, circulated to Members of the World Trade Organization (the "WTO") on 7 October 2005, the Panel concluded that:

(a) With respect to Mexico's soft drink tax and distribution tax:

(i) As imposed on sweeteners, imported beet sugar is subject to internal taxes in excess of those applied to like domestic sweeteners, in a manner inconsistent with Article III:2, first sentence, of the GATT 1994;

(ii) As imposed on sweeteners, imported HFCS[11] is being taxed dissimilarly compared with the directly competitive or substitutable products, so as to afford protection to the Mexican domestic production of cane sugar, in a manner inconsistent with Article III:2, second sentence, of the GATT 1994;

(iii) As imposed on sweeteners, imported beet sugar and HFCS are accorded less favourable treatment than that accorded to like products of national origin, in a manner inconsistent with Article III:4 of the GATT 1994;

(iv) As imposed on soft drinks and syrups, imported soft drinks and syrups sweetened with non-cane sugar sweeteners (including HFCS and beet sugar) are subject to internal taxes in excess of those applied to like domestic products, in a manner inconsistent with Article III:2, first sentence, of the GATT 1994.

(b) With respect to Mexico's bookkeeping requirements: As imposed on sweeteners, imported beet sugar and HFCS are accorded less favourable treatment than that accorded to like products of national origin, in a manner inconsistent with Article III:4 of the GATT 1994.[12]

The Panel rejected Mexico's defence under Article XX(d) of the GATT 1994, concluding that "the challenged tax measures are not justified as measures that are necessary to secure compliance by the

[11]High-fructose corn syrup ("HFCS").

[12]Panel Report, para. 9.2. (original underlining)

United States with laws or regulations which are not inconsistent with the provisions of the GATT 1994."[13] The Panel therefore recommended "that the Dispute Settlement Body request Mexico to bring the inconsistent measures … into conformity with its obligations under the GATT 1994."[14]

6. On 6 December 2005, Mexico notified the Dispute Settlement Body (the "DSB") of its intention to appeal certain issues of law covered in the Panel Report and certain legal interpretations developed by the Panel, pursuant to Article 16.4 of the DSU, and filed a Notice of Appeal[15] pursuant to Rule 20(1) of the *Working Procedures for Appellate Review* (the "*Working Procedures*").[16] On 13 December 2005, Mexico filed an appellant's submission.[17] In its appeal, Mexico challenges the Panel's preliminary ruling rejecting Mexico's request that the Panel decline to exercise jurisdiction in this case, as well as the Panel's findings concerning Article XX(d) of the GATT 1994. Mexico did not appeal the Panel's findings under Article III of the GATT 1994. On 6 January 2006, the United States filed an appellee's submission.[18] On the same day, China, the European Communities, and Japan each filed a third participant's submission.[19] Also on the same day, Canada and Guatemala each notified the Appellate Body Secretariat of its intention to appear at the oral hearing as a third participant.[20]

7. By letter dated 5 January 2006, Mexico requested authorization to correct certain clerical errors in its appellant's submission pursuant to Rule 18(5) of the *Working Procedures*. On 9 January 2006, the Appellate Body Division hearing the appeal ("the Division") invited all participants and third participants to comment on Mexico's request, in accordance with Rule 18(5). On 11 January 2006, the United States responded that, although some of the requested corrections are not "clearly clerical", within the meaning of Rule 18(5), "[i]n the circumstances of this dispute", the United States did not object to Mexico's request. No other comments were received. By letter dated 16 January 2006, the Division authorized Mexico to correct the clerical errors in its appellant's submission but emphasized, however, that it had not been requested, and did not make, a finding "as to whether all of the corrections requested by Mexico are 'clerical' within the meaning of Rule 18(5) of the *Working Procedures*."

8. On 13 January 2006, the Appellate Body received an *amicus curiae* brief from *Cámara Nacional de las Industrias Azucarera y Alcoholera* (National Chamber of the Sugar and Alcohol Industries) of Mexico.[21] The Division did not find it necessary to take the brief into account in resolving the issues raised in this appeal.

[13]*Ibid.*, para. 9.3.

[14]*Ibid.*, para. 9.5.

[17]Pursuant to Rule 21(1) of the *Working Procedures*. A courtesy English translation of Mexico's appellant's submission, prepared by Mexico, was provided to the participants and third participants on 16 December 2005.

[18]Pursuant to Rule 22(1) of the *Working Procedures*.

[19]Pursuant to Rule 24(1) of the *Working Procedures*.

[20]Pursuant to Rule 24(2) of the *Working Procedures*.

[21]At the oral hearing, Mexico stated that its arguments are set out in it's appellant's and oral submissions. Mexico added, however, that it would not object should the Appellate Body decide to accept the *amicus* brief. The United States noted that the *amicus* brief had been received late in the proceedings and that it presented new arguments and claims of error that were not part of Mexico's Notice of Appeal. Accordingly, while taking the view that the Appellate Body had the authority to accept the brief, the United States argued that it should decline to do so in the circumstances of this dispute.

9. The oral hearing in this appeal was held on 18 January 2006. The participants and third participants presented oral arguments (with the exception of Guatemala) and responded to questions posed by the Members of the Division hearing the appeal.

II. Arguments of the Participants and the Third Participants

A. *Claims of Error by Mexico – Appellant*

1. Exercise of Jurisdiction

10. Mexico argues that the Panel erred in rejecting Mexico's request that it decline to exercise jurisdiction in the circumstances of the present dispute. According to Mexico, the Panel's decision was primarily based on the Panel's view that Article 11 of the DSU "compels a WTO [p]anel to address the claims" on which a finding is necessary to enable the DSB to make sufficiently precise recommendations or rulings to the parties to the dispute and that, therefore, a WTO panel has no discretion to decline to exercise validly established jurisdiction.[22] Mexico submits that this is incorrect and ignores the fact that, like other international bodies and tribunals, WTO panels have certain "implied jurisdictional powers"[23] that derive from their nature as adjudicative bodies. According to Mexico, such powers include the power to refrain from exercising substantive jurisdiction in circumstances where "the underlying or predominant elements of a dispute derive from rules of international law"[24] under which claims cannot be judicially enforced in the WTO, such as the NAFTA provisions or when one of the disputing parties refuses to take the matter to the "appropriate forum".[25] Mexico contends, in this regard, that the United States' claims under Article III of the GATT 1994 are inextricably linked to a broader dispute[26] concerning the conditions provided under the NAFTA for access of Mexican sugar to the United States market, and that only a NAFTA panel could resolve the dispute between the parties.

11. Mexico further emphasizes that there is nothing in the DSU that explicitly rules out the existence of a WTO panel's power to decline to exercise its jurisdiction even in a case that is properly brought before it. Mexico adds that the application by panels of the principle of "judicial economy" illustrates that notwithstanding the requirement of Article 7.2 of the DSU that panels address the relevant provisions in any covered agreement or agreements cited by the parties to the dispute, WTO panels can decide not to address certain claims. Thus, according to Mexico, there is no question that WTO panels have an implicit or inherent competence. As other examples of panels' "implied jurisdictional powers", Mexico points, *inter alia*, to the power of panels to determine whether they have substantive jurisdiction over a matter and the power to decide all matters that are inherent to the "adjudicative function"[27] of panels.

[22]Mexico's appellant's submission, para. 64 ("*obliga a un Grupo Especial de la OMC a abordar las reclamaciones*").

[23]*Ibid.*, para. 65 ("*facultades implícitas en relación con su competencia*").

[24]Mexico's appellant's submission, para. 73 ("*los elementos predominantes de una disputa derivan de reglas del derecho internacional*").

[25]*Ibid.* ("*foro adecuado*").

[26]*Ibid.*

[27]*Ibid.*, para. 67 ("*función jurisdiccional*").

12. Finally, referring to the ruling of the Permanent Court of International Justice (the "PCIJ") in the *Factory at Chorzów* case, Mexico calls into question the "applicability" of its WTO obligations towards the United States in the context of this dispute.[28]

2. Article XX(d) of the GATT 1994

13. Mexico appeals the Panel's finding that the measures at issue are not justified pursuant to Article XX(d) of the GATT 1994. In addition, Mexico requests the Appellate Body to complete the analysis and find that its tax measures are justified under Article XX(d) of the GATT 1994, because the measures are necessary "to secure compliance" by the United States of its obligations under the NAFTA.

14. Mexico asserts that the Panel erred in finding that the measures at issue are not designed "to secure compliance" within the meaning of Article XX(d). According to Mexico, this finding is based on an erroneous interpretation of the terms "to secure compliance" as involving enforcement action within a *domestic* legal system. Mexico argues that there is no basis to exclude action taken to enforce *international* treaty obligations from the scope of Article XX(d). Mexico adds that, in the broader context of international law, countermeasures are measures aimed at securing compliance with international obligations. Mexico further submits that the Panel erred by equating the concept of "enforcement" with that of "coercion". In Mexico's view, the Panel's effort to distinguish between actions at the domestic level and at the international level based on its understanding of the concept of coercion in this dispute has no textual basis, because Article XX(d) simply does not refer to the use of coercion.

15. Moreover, Mexico asserts that the Panel erred by confusing the issue of the "design" of the measure under Article XX(d) with the issue of its "outcome".[29] Rather than examining whether Mexico's measures were put in place in order to secure the United States' compliance with its NAFTA obligations, the Panel considered the effectiveness of those measures. Mexico emphasizes that "even if the outcome of a measure is completely uncertain or unpredictable, the measure in question can, nevertheless be 'designed to secure compliance with laws and regulations' within the meaning of Article XX(d)".[30] Contrary to the Panel's finding, the issue of the likely outcome of a given measure is not legally relevant to the assessment of the design of the measure under Article XX(d). Thus, Mexico takes issue with the Panel's finding that the "uncertain outcome of international countermeasures is a reason for disqualifying them as measures eligible for consideration under Article XX(d)".[31] Mexico notes, in this regard, that nothing in the text of Article XX(d) suggests that any measure is *a priori* ineligible as a measure "to secure compliance with laws and regulations" on the basis of its "uncertain outcome".

[28]See *ibid.*, paras. 73-74. The passage of the ruling that Mexico refers to reads as follows:

> … one party cannot avail himself of the fact that the other has not fulfilled some obligation … if the former party has … prevented the latter … from having recourse to the tribunal which would have been open to him.

(Permanent Court of International Justice, *Factory at Chorzów (Germany v. Poland)* (Jurisdiction), 1927, PCIJ Series A, No. 9, p. 31) (underlining added by Mexico omitted)

[29]Mexico's appellant's submission, para. 98 ("*destino*"; "*resultado*").

[30]*Ibid.*, para. 102 ("*aun si el resultado de la medida es totalmente incierto, impredecible, bien puede estar 'destinada a lograr la observancia de las leyes y reglamentos' en el sentido del artículo XX(d)*").

[31]*Ibid.*, para. 104 ("*el resultado incierto de las contramedidas internacionales es una razón para excluirlas como medidas que pueden ser objeto de consideración, en el marco del inciso (d) del artículo XX*") (quoting Panel Report, para. 8.187).

16. Turning to the meaning of the terms "laws and regulations" in Article XX(d), Mexico notes that the Panel's interpretation of these terms is based on the erroneous conclusions reached by the Panel with respect to the terms "to secure compliance". Mexico submits that the words "laws" and "regulations" are expressly qualified in other provisions of the covered agreements; the absence of qualifying language in Article XX(d) thus supports the view that the terms are not limited to *domestic* laws or regulations, but include international agreements. Mexico adds that a review of the Article XX exceptions reveals that only three—(paragraphs (c), (g), and (i))—are, expressly or by implication, concerned with an activity that would occur *within* the territory of the Member seeking to justify its measures. This position, according to Mexico, is supported by the Appellate Body's findings in *US – Shrimp (Article 21.5 – Malaysia)*.[32]

17. Mexico further requests, in the event the Appellate Body should reverse the Panel's conclusion, that it complete the Panel's analysis and find that the Mexican measures are "necessary" within the meaning of Article XX(d) and meet the requirements of the chapeau of that Article. According to Mexico, the uncontested facts and evidence in the Panel record, and the Panel's acknowledgement that Mexico's measures have "attracted the attention" of the United States, provide an ample basis on which to complete the analysis and conclude that the measures are "necessary" within the meaning of Article XX(d).

18. Mexico observes that, before the Panel, the United States could not identify any alternative measure that Mexico could and should have used in order to attain its legitimate objective. It further explains that the fact that a measure does not or has not yet achieved its objective does not mean that it is not "necessary" within the meaning of Article XX(d). It may mean that it is insufficient to secure compliance, or that it is insufficient to secure immediate compliance, but can do so over time; however, it says nothing about whether the measure is "necessary". Moreover, Mexico submits that the evidence on the record demonstrates that the measures at issue have contributed to securing compliance in the circumstances of this case by changing the dynamics of the NAFTA dispute and forcing the United States to pay attention to Mexico's grievances, and also contradicts the Panel's finding that Mexico's measures do not contribute to securing compliance in this dispute.

19. As regards the chapeau of Article XX of the GATT 1994, Mexico asserts that its measures neither arbitrarily nor unjustifiably discriminate between countries where the same conditions prevail. Rather than constituting "arbitrary or unjustifiable discrimination", the measures constitute "limited sectoral retaliation in the relevant market segment (*i.e.*, the sweeteners market)."[33] Nor can the measures be said to be a "disguised restriction on [international] trade" because they constitute "a proportionate, legitimate and legally justified response to actions and omissions of the United States"[34], and, furthermore, the measures have been published.

[32]Mexico's appellant's submission, paras. 174 and 177-178 (referring to Appellate Body Report, *US – Shrimp (Article 21.5 – Malaysia)*, paras. 123-124 and 128-130).

[33]Mexico's appellant's submission, para. 173 ("*retorsiones sectoriales limitadas al segmento del mercado relevante (i.e., el mercado de los edulcorantes)*"). Mexico asserts that the facts of this case are similar to the situation examined by the Appellate Body in *US – Shrimp (Article 21.5 – Malaysia)*. Mexico explains that, in that dispute, the Appellate Body found that a United States unilateral measure was not inconsistent with the chapeau of Article XX of the GATT 1994. According to Mexico, in that case, the Appellate Body did not require the United States to conclude an international agreement with the disputing parties, but rather required it to have made good faith efforts in that direction. In this case, Mexico argues that it has sought to resolve the dispute through NAFTA and bilateral negotiations, but "the United States has essentially blocked Mexico's ability to have its grievance resolved." (Mexico's appellant's submission, paras. 174-181 ("*Estados Unidos esencialmente ha bloqueado la posibilidad de México para resolver su agravio.*"))

[34]*Ibid.*, para. 182 ("*una respuesta proporcional, legítima y legalmente justificada a las acciones y omisiones de Estados Unidos*").

20. Finally, Mexico argues that the Panel, "separately and in addition"[35] to the previous errors, failed to make "an objective assessment of the facts", as required by Article 11 of the DSU, in finding that "Mexico has not established that its measures contribute to securing compliance in the circumstances of this case."[36] According to Mexico, the Panel's finding is based solely on the Panel's view that attracting the attention of the United States is not equivalent to securing compliance with a law or regulation and ignores that "achieving the objectives sought by the countermeasures can take time".[37]

B. *Arguments of the United States – Appellee*

1. Exercise of Jurisdiction

21. The United States submits that the Panel properly rejected Mexico's request for the Panel to refrain from exercising jurisdiction in the present dispute.

22. Referring to Article 11 of the DSU, the United States observes that, if the Panel had declined to exercise jurisdiction over this dispute, or had agreed to Mexico's request that it refrain from issuing findings and recommendations, the Panel would have made no findings on the United States' claims that Mexico's tax measures are inconsistent with Article III of the GATT 1994. This would have left the DSB "unable to give any rulings or (as is appropriate in this dispute) to make any recommendations"[38] in accordance with the rights and obligations under the DSU and the GATT 1994. The United States emphasizes that such a result is incompatible with the text of the DSU and would have required the Panel to disregard the mandate given to it by the DSB. Moreover, the United States observes that the Panel's own terms of reference in this dispute instructed the Panel to examine the matter referred to the DSB by the United States and to make such findings as will assist the DSB in making the recommendations and rulings provided for under the DSU.

23. Referring to Articles 3.2 and 19.2 of the DSU, the United States adds that, if a panel were to decline to exercise jurisdiction over a particular dispute, it would diminish the rights of the complaining Member under the DSU and other covered agreements. The United States further notes that prior reports of panels and the Appellate Body also support the Panel's findings. In this regard, the United States refers to *Mexico – Corn Syrup (Article 21.5 – US)*, where the Appellate Body stated that "panels are required to address issues that are put before them by the parties to a dispute."[39]

24. The United States observes that Mexico has referred to the principle of judicial economy as an example of "situations where WTO panels have refrained from exercising validly established substantive jurisdiction on certain claims that are before them."[40] However, the United States submits that, "when a panel exercises judicial economy, it does not decline to exercise substantive jurisdiction either over a dispute or certain claims in a dispute. Rather, the panel … declines to make findings on certain claims when resolution of such claims is not necessary for the panel to fulfill its mandate under Article 11 of the DSU and its terms of reference."[41] In other words, judicial economy "does not

[35]*Ibid.*, heading III.E ("*independiente y adicional*").

[39]*Ibid.*, para. 127 (quoting Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 36).

[40]*Ibid.*, para. 129 (quoting Mexico's appellant's submission, para. 68).

[41]*Ibid.* (referring to Appellate Body Report, *US – Wool Shirts and Blouses*, p. 19, DSR 1997:I, 323, at 340; and to Appellate Body Report, *Canada – Wheat Exports and Grain Imports*, para. 133).

relieve a panel from its duty to carry out its mandate under Articles 7 and 11 of the DSU to resolve the dispute"[42] before it.

2. Article XX(d) of the GATT 1994

25. The United States submits that the Panel properly found that Mexico's tax measures are not designed "to secure compliance" and, thus, are not justified as measures "to secure compliance with laws or regulations" within the meaning of Article XX(d) of the GATT 1994. It notes that previous GATT and WTO disputes in which Article XX(d) has been invoked have involved domestic laws or regulations.

26. The United States agrees with the Panel's analysis of the terms "laws or regulations" and, therefore, supports the Panel's finding that these terms refer only to *domestic* laws or regulations and not to obligations under international agreements. The United States explains that Article XX(d) refers to "laws" and "regulations" in the plural, while the singular "law" is used when referring to "international law".[43] The United States further observes that the terms "laws or regulations" precede the words "which are not inconsistent" in Article XX(d) and explains that the term "inconsistent" appears elsewhere in the GATT 1994 in connection with domestic measures. In contrast, the WTO agreements use the word "conflict" when referring to international obligations.

27. The United States further submits that Mexico's interpretation of the terms "laws or regulations" would undermine Articles 22 and 23 of the DSU, as it would permit action, including the suspension of concessions, by any Member "outside the rules of the DSU".[44] The United States observes that Article XX(d) was not intended to provide the basis for suspending concessions under the WTO agreements upon a mere allegation of a breach of a non-WTO international agreement. Otherwise, according to the United States, "this would effectively convert WTO dispute settlement into a forum of general dispute resolution for all international agreements."[45] Furthermore, the United States argues that, if the terms "laws or regulations" are read to include obligations under non-WTO agreements, the WTO dispute settlement system "would become a forum for WTO Members to allege and obtain findings as to the consistency of another Member's measure with any non-WTO agreement."[46] The United States, therefore, disagrees with Mexico's arguments that the phrase "laws or regulations" in Article XX(d) refers to international agreements.

28. With respect to the Panel's interpretation of the phrase "to secure compliance", the United States notes that the references to coercion were intended "merely [to] reinforce the Panel's view that 'enforcement' does not refer to the international level"[47] and not, as Mexico argues, to create an additional requirement for justifying a measure under Article XX(d). The United States therefore agrees with the Panel that the terms "to secure compliance" do not apply to measures taken by one Member to induce another Member to comply with obligations under a non-WTO treaty.

29. The United States also rejects Mexico's submission that the "Panel wrongly found that measures with an 'uncertain outcome' are '*a priori* ineligible' as measures to secure compliance with

[42]*Ibid.*, para. 130.

[43]The United States observes that Article 3.2 of the DSU and Article 17.6 of the *Anti-Dumping Agreement* also use the term "law" in the singular when referring to "public international law".

[44]United States' appellee's submission, para. 37.

[45]*Ibid.*, para. 85. (footnote omitted)

[46]*Ibid.*, para. 41.

[47]*Ibid.*, para. 54 (referring to Panel Report, paras. 8.175 and 8.178).

laws or regulations."[48] While the United States concedes that the Panel's analysis "could have admittedly been clearer"[49], it also notes that the Panel did not require certainty, and argues that the Panel's remarks on this point simply characterized Mexico's failure to "put forth *any* evidence that its tax measures were designed to [secure] compliance."[50] The United States agrees with Mexico that "Article XX(d) does not require the party invoking the defense to establish that its measure will, without a doubt or with certainty, secure compliance with laws or regulations."[51] Nevertheless, the United States submits that Mexico has to provide some evidence that the measure is "designed" to secure such compliance.

30. For all these reasons, the United States submits that the Appellate Body should uphold the Panel's conclusion that Mexico's tax measures are *not* designed to secure compliance and, thus, are *not* justified as measures "to secure compliance with laws or regulations" within the meaning of Article XX(d) of the GATT 1994.

31. In the event the Appellate Body should reverse the Panel's finding and accept Mexico's request to complete the analysis, the United States asserts that Mexico's measures are neither "necessary" for purposes of Article XX(d), nor do they meet the requirements of the chapeau of that Article. According to the United States, Mexico has not demonstrated that the measures at issue contribute to compliance by the United States with its NAFTA obligations and "ignores"[52] the fact that the trade impact of a measure is one of the factors that must be weighed and balanced when determining whether a measure is "necessary". The impact of Mexico's measures was "essentially [to] prohibit the use of imported HFCS in Mexican soft drinks and other beverages and to reduce import volumes".[53] The United States adds that "[i]t is difficult to understand how discriminating against imports from potentially every WTO Member is 'necessary' to secure [the United States'] compliance with [its] obligations under the NAFTA."[54] The United States further observes that the absence of alternative measures that could be reasonably available does not, in itself, mean that the challenged measures are "necessary". In any event, the United States submits that if Mexico's objective was to attract the attention of the United States, it could have pursued a variety of other actions, including pursuing the diplomatic avenues available under the NAFTA.

32. The United States submits, furthermore, that Mexico's measures do not meet the requirements of the chapeau of Article XX of the GATT 1994. The only evidence that Mexico offers to support its contention that the measures do not constitute arbitrary or unjustifiable discrimination is the characterization of the measures as international countermeasures.[55] This is insufficient, argues the United States, for Mexico to meet its burden of proof. Moreover, the fact that Mexico may have been transparent about its measures is not sufficient to establish that such measures are not a "disguised restriction on trade".[56]

[48]United States' appellee's submission, para. 70 (quoting Mexico's appellant's submission, paras. 104-105).

[49]*Ibid.*, para. 71.

[50]*Ibid.* (original emphasis)

[51]*Ibid.*, para. 72. (footnote omitted)

[52]*Ibid.*, para. 96.

[53]*Ibid.*, para. 97.

[54]*Ibid.*

[55]According to the United States, the Appellate Body rulings in *US – Shrimp (Articles 21.5 – Malaysia)* do not support Mexico's position, because that dispute did not involve a disagreement about the commitments made under an international agreement. (United States' appellee's submission, paras. 109-110)

[56]*Ibid.*, para. 114.

33. Lastly, the United States requests the Appellate Body to reject Mexico's contention that the Panel did not make an objective assessment of the facts, as required by Article 11 of the DSU. According to the United States, the Panel did not "ignore" arguments or evidence submitted by Mexico. The United States further explains that, in any event, the errors alleged by Mexico in support of its claim under Article 11 of the DSU "relate to the interpretation of Article XX, and do not support a conclusion that the Panel breached Article 11."[57]

C. *Arguments of the Third Participants*

1. China

34. Referring to Articles 7 and 11 of the DSU, China argues that a WTO panel does not have an implied power to refrain from performing its "statutory function".[58] China submits that, if a panel that is "empowered and obligated"[59] to assist the DSB in the settlement of a dispute declines to exercise jurisdiction, such a decision would create legal uncertainty and be contrary to the aim of providing security and predictability to the multilateral trading system as well as the prompt settlement of disputes as provided for in Article 3.3 of the DSU. China argues, moreover, that the notion of judicial economy is "relevant and applicable"[60] only if a panel has assumed the jurisdiction defined by its terms of reference and has made "such findings as will assist the DSB" within the meaning of Article 11 of the DSU.

35. China asserts that the terms "laws or regulations" in Article XX(d) do not encompass international agreements. China states that Article X of the GATT 1994 provides contextual guidance for the interpretation of Article XX(d). Article X expressly distinguishes between "[l]aws, regulations, judicial decisions and administrative rulings" and "[a]greements … between the government or a governmental agency of any Member and the government or governmental agency of any other Member". China adds that interpreting "laws or regulations" to include international agreements would allow a WTO Member to justify under Article XX(d) its deviation from its WTO obligations in the name of any remedial measure in response to any alleged breach of any non-WTO international agreement. Such a scenario, according to China, is not consistent with the object and purpose of the GATT 1994.

2. European Communities

36. The European Communities submits that the Appellate Body should uphold the Panel's finding that it did not have the discretion to decline to exercise jurisdiction in this case. The European Communities submits that "the functions and obligations of WTO Panels must be established on the basis of the DSU, and particularly Article 11 thereof."[61] On this basis, the European Communities agrees that a panel has an inherent power to establish whether it has jurisdiction, and whether a particular matter is within its jurisdiction. However, the European Communities argues that a panel may not freely, or by "the notion of 'judicial economy'", decide to refrain from exercising its jurisdiction "in a case properly brought before it under the DSU."[62]

[57] *Ibid.*, para. 118.

[58] China's third participant's submission, para. 5.

[59] *Ibid.*, para. 6.

[60] *Ibid.*, para. 7.

[61] European Communities' third participant's submission, para. 8.

[62] *Ibid.*, paras. 10-11.

37. The European Communities asserts, furthermore, that the Appellate Body should uphold the Panel's finding that only measures made applicable in the domestic legal order of a WTO Member constitute "laws or regulations" within the meaning of Article XX(d). The European Communities disagrees, however, with the Panel's finding that "international agreements, even when incorporated into the domestic law of a WTO Member, can never be regarded as 'laws or regulations' for the purposes of Article XX(d)".[63] In addition, the European Communities takes issue with the Panel's interpretation of the terms "to secure compliance" as requiring a degree of certainty in the results that may be achieved through the measure.

3. Japan

38. Japan disagrees with the Panel's interpretation of the terms "to secure compliance" in Article XX(d). In this regard, Japan submits that Article XX(d) does not necessarily exclude measures that have, as a purpose, to secure compliance, but are not accompanied by compulsory enforcement. According to Japan, compliance can be secured by a request or a command without being accompanied by any coercion. Japan considers that the Panel erred by indicating that the determination of whether a measure is designed "to secure compliance" should be analyzed based on the degree of certainty of its outcome. Nevertheless, Japan agrees with the Panel's finding that Article XX(d) does not cover international agreements. Japan explains that the terms "laws or regulations", read together with the phrase "to secure compliance", "presuppose a hierarchical structure that is associated with the relation between the state and its subjects"[64] and, therefore, excludes international agreements.

III. Issues Raised in This Appeal

39. The following issues are raised in this appeal:

(a) whether the Panel erred in concluding that a WTO panel "has no discretion to decide whether or not to exercise its jurisdiction in a case properly before it"[65] and, if so, whether the Panel erred in declining to exercise that discretion in the circumstances of this dispute;

(b) whether the Panel erred in concluding that Mexico's measures do not constitute measures "to secure compliance with laws or regulations", within the meaning of Article XX(d) of the GATT 1994[66]; and

(c) whether the Panel failed to make an objective assessment of the facts of the case, as required by Article 11 of the DSU, in concluding that "even if the assumption were to be made in the abstract that international countermeasures are potentially capable of qualifying as measures designed to secure compliance", within the meaning of Article XX(d) of the GATT 1994, "Mexico has not established that its measures contribute to securing compliance in the circumstances of this case."[67]

[63] *Ibid.*, para. 44.

[64] Japan's third participant's submission, para. 22.

[65] Panel Report, para. 7.18.

[66] *Ibid.*, para. 8.198.

[67] *Ibid.*, para. 8.186.

IV. The Panel's Exercise of Jurisdiction

A. *Introduction*

40. In its first written submission to the Panel, Mexico requested that the Panel decide, as a preliminary matter, to decline to exercise jurisdiction "in favour of an Arbitral Panel under Chapter Twenty of the North American Free Trade Agreement (NAFTA)."[68] In a preliminary ruling, the Panel rejected Mexico's request and found instead that, "under the DSU, it had no discretion to decide whether or not to exercise its jurisdiction in a case properly before it."[69] The Panel added that even if it had such discretion, it "did not consider that there were facts on record that would justify the Panel declining to exercise its jurisdiction in the present case."[70]

41. In its reasoning, the Panel opined that "discretion may be said to exist only if a legal body has the freedom to choose among several options, all of them equally permissible in law."[71] According to the Panel, "such freedom ... would exist within the framework of the DSU only if a complainant did not have a legal right to have a panel decide a case properly before it."[72] Referring to Article 11 of the DSU and to the ruling of the Appellate Body in *Australia – Salmon*, the Panel observed that "the aim of the WTO dispute settlement system is to resolve the matter at issue in particular cases and to secure a positive solution to disputes" and that a panel is required "to address the claims on which a finding is necessary to enable the DSB to make sufficiently precise recommendations or rulings to the parties."[73] From this, the Panel concluded that a WTO panel "would seem therefore not to be in a position to choose freely whether or not to exercise its jurisdiction."[74] Referring to Articles 3.2 and 19.2 of the DSU, the Panel further stated that "[i]f a WTO panel were to decide not to exercise its jurisdiction in a particular case, it would diminish the rights of the complaining Member under the DSU and other WTO covered agreements."[75] The Panel added that Article 23 of the DSU "make[s] it clear that a WTO Member that considers that any of its WTO benefits have been nullified or impaired as a result of a measure adopted by another Member has the right to bring the case before the WTO dispute settlement system."[76]

42. On appeal, Mexico contends that the Panel erred in rejecting Mexico's request that it decline to exercise jurisdiction in the circumstances of the present dispute. Mexico submits that WTO panels, like other international bodies and tribunals, "have certain implied jurisdictional powers that derive from their nature as adjudicative bodies."[77] Such powers include the power to refrain from exercising substantive jurisdiction in circumstances where "the underlying or predominant elements of a dispute derive from rules of international law under which claims cannot be judicially enforced in the WTO, such as the NAFTA provisions" or "when one of the disputing parties refuses to take the matter to the appropriate forum."[78] Mexico argues, in this regard, that the United States' claims under Article III of the GATT 1994 are inextricably linked to a broader dispute[79] regarding access of Mexican sugar to the United States' market under the NAFTA. Mexico further emphasizes that "[t]here is nothing in the DSU ... that explicitly rules out the existence of"[80] a WTO panel's power to decline to exercise validly established jurisdiction and submits that "the Panel should have exercised this power in the circumstances of this dispute."[81]

43. In contrast, the United States argues that, "[t]he Panel's own terms of reference in this dispute instructed the Panel 'to examine ... the matter referred to the DSB by the United States'"[82] and "to make such findings as will assist the DSB" in making the recommendations and rulings provided for under the DSU. China and the European Communities agree with the United States that the Panel had no discretion to decline to exercise jurisdiction. China submits that if a panel declines to exercise jurisdiction over a dispute, such a decision will create legal uncertainty, contrary to the aim of providing security and predictability to the multilateral trading system and the prompt settlement of disputes as provided for in Article 3.3 of the DSU.[83] The European Communities agrees with the Panel's finding that it did not have discretion to decline to exercise jurisdiction in this case, and emphasizes that "the functions and obligations of WTO Panels must be established on the basis of the DSU, and particularly Article 11 thereof."[84]

B. *Analysis*

44. Before addressing Mexico's arguments, we note that "Mexico does not question that the Panel has jurisdiction to hear the United States' claims."[85] Moreover, Mexico does not claim "that there are legal obligations under the NAFTA or any other international agreement to which Mexico and the United States are both parties, which might raise legal impediments to the Panel hearing this case".[86]

[68]Panel Report, para. 7.1.

[69]*Ibid.*

[70]*Ibid.*

[78]*Ibid.*, para. 73 ("*los elementos predominantes de una disputa derivan de reglas del derecho internacional, cuyo cumplimiento no puede reclamarse en el marco OMC, por ejemplo las disposiciones del TLCAN*"; "*cuando una de las partes contendientes se rehúsa a someterse al foro adecuado*").

[79]*Ibid.*

[80]*Ibid.*, para. 65 ("*Nada en el ESD ... explícitamente descarta que ... existan*").

[81]*Ibid.*, para. 72 ("*el Grupo Especial debió haber ejercido esa facultad en las circunstancias de esta disputa*").

[82]United States' appellee's submission, para. 125.

[83]China's third participant's submission, para. 6.

[84]European Communities' third participant's submission, para. 8.

[85]Mexico's appellant's submission, para. 71 ("*México no discute que el Grupo Especial tiene competencia para resolver la reclamación que Estados Unidos ha interpuesto*") (quoting Mexico's response to Question 35 posed by the Panel; Panel Report, p. C-16). Mexico confirmed this point in response to questioning at the oral hearing.

[86]Panel Report, para. 7.13. In response to questioning at the oral hearing, Mexico argued that the panel in *Argentina – Poultry Anti-Dumping Duties* "at least contemplated the existence of a situation where an impediment found in another agreement might give rise to declining jurisdiction". The panel in *Argentina – Poultry Anti-Dumping Duties* referred to Article 1 of the Protocol of Olivos, which provides that, once a party decides to bring a case under either the MERCOSUR or WTO dispute settlement forum, that party may not bring a subsequent case regarding the same subject-matter in the other forum, and went on to state:

Instead, Mexico's position is that, although the Panel had the authority to rule on the merits of the United States' claims, it also had the "implied power" to abstain from ruling on them[87], and "should have exercised this power in the circumstances of this dispute."[88] Hence, the issue before us in this appeal is not whether the Panel was legally precluded from ruling on the United States' claims that were before it, but, rather, whether the Panel could decline, and should have declined, to exercise jurisdiction with respect to the United States' claims under Article III of the GATT 1994 that were before it.

45. Turning to Mexico's arguments on appeal, we note, first, Mexico's argument that WTO panels, like other international bodies and tribunals, "have certain implied jurisdictional powers that derive from their nature as adjudicative bodies"[89], and thus have a basis for declining to exercise jurisdiction. We agree with Mexico that WTO panels have certain powers that are inherent in their adjudicative function. Notably, panels have the right to determine whether they have jurisdiction in a given case, as well as to determine the scope of their jurisdiction. In this regard, the Appellate Body has previously stated that "it is a widely accepted rule that an international tribunal is entitled to consider the issue of its own jurisdiction on its own initiative, and to satisfy itself that it has jurisdiction in any case that comes before it."[90] Further, the Appellate Body has also explained that panels have "a margin of discretion to deal, always in accordance with due process, with specific situations that may arise in a particular case and that are not explicitly regulated."[91] For example, panels may exercise judicial economy, that is, refrain from ruling on certain claims, when such rulings

> The Protocol of Olivos ... does not change our assessment, since that Protocol has not yet entered into force, and in any event it does not apply in respect of disputes already decided in accordance with the MERCOSUR Protocol of Brasilia. Indeed, the fact that parties to MERCOSUR saw the need to introduce the Protocol of Olivos suggests to us that they recognised that (in the absence of such Protocol) a MERCOSUR dispute settlement proceeding could be followed by a WTO dispute settlement proceeding in respect of the same measure.

(Panel Report, *Argentina – Poultry Anti-Dumping Duties*, para. 7.38) (footnote omitted)

[87]Thus, Mexico suggested that, in the circumstances of this dispute, it would not have been "appropriate" for the Panel "to issue findings on the merits of the United States' claims." (Panel Report, para. 7.11 (referring to Mexico's first written submission to the Panel, paras. 102-103))

[88]Mexico's appellant's submission, para. 72 ("*debió haber ejercido esa facultad en las circunstancias de esta disputa*").

[89]*Ibid.*, para. 65 ("*tienen ciertas facultades implícitas en relación con su competencia, las cuales derivan de su propia naturaleza como órganos jurisdiccionales*").

[90]Appellate Body Report, *US – 1916 Act*, footnote 30 to para. 54. See also Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 53. In that dispute, the Appellate Body also stated that:

> … panels have to address and dispose of certain issues of a fundamental nature, even if the parties to the dispute remain silent on those issues. ... [P]anels cannot simply ignore issues which go to the root of their jurisdiction—that is, to their authority to deal with and dispose of matters. Rather, panels must deal with such issues—if necessary, on their own motion—in order to satisfy themselves that they have authority to proceed.

(Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 36)

[91]Appellate Body Report, *EC – Hormones*, footnote 138 to para. 152. See also Appellate Body Report, *US – FSC (Article 21.5 – EC)*, paras. 247-248.

are not necessary "to resolve the matter in issue in the dispute".[92] The Appellate Body has cautioned, nevertheless, that "[t]o provide only a partial resolution of the matter at issue would be false judicial economy."[93]

46. In our view, it does not necessarily follow, however, from the existence of these inherent adjudicative powers that, once jurisdiction has been validly established, WTO panels would have the authority to decline to rule on the entirety of the claims that are before them in a dispute. To the contrary, we note that, while recognizing WTO panels' inherent powers, the Appellate Body has previously emphasized that:

> Although panels enjoy some discretion in establishing their own working procedures, *this discretion does not extend to modifying the substantive provisions of the DSU. ... Nothing in the DSU gives a panel the authority either to disregard or to modify ... explicit provisions of the DSU.*[94] (emphasis added)

47. With these considerations in mind, we examine the scope of a panel's jurisdictional power as defined, in particular, in Articles 3.2, 7.1, 7.2, 11, 19.2, and 23 of the DSU. Mexico argues that "[t]here is nothing in the DSU ... that explicitly rules out the existence of"[95] a WTO panel's power to decline to exercise its jurisdiction even in a case that is properly before it.

48. We first address Article 7 of the DSU, which governs the terms of reference of panels. Article 7 of the DSU states, in its first paragraph, that panels shall have the following terms of reference:

> "To examine, in the light of the relevant provisions in (name of the covered agreement(s) cited by the parties to the dispute), the matter referred to the DSB by (name of party) in document … and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in that/those agreement(s)."

The Panel in this dispute was established with standard terms of reference[96], which instructed the Panel to "examine" the United States' claims that were before it and to "make findings" with respect to consistency of the measures at issue with Article III of the GATT 1994.

[92]Appellate Body Report, *US – Wool Shirts and Blouses*, p. 19, DSR 1997:I, 323, at 340. Mexico referred, in its appellant's submission, to a panel's discretion to apply judicial economy as "an example of situations where WTO panels have refrained from exercising validly established jurisdiction on certain claims that are before them." (Mexico's appellant's submission, para. 68 ("*un ejemplo de situaciones en las que grupos especiales de la OMC se han abstenido de resolver ciertas reclamaciones sobre las cuales tienen competencia sustantiva validamente establecida*")) Mexico clarified at the oral hearing, however, that "it is clear that in the context of the exercise of judicial economy a panel cannot decline entirely to exercise jurisdiction." The United States noted, in this regard, that the doctrine of judicial economy "does not relieve a panel from its duty to carry out its mandate under Articles 7 and 11 of the DSU to resolve the dispute" before it. (United States' appellee's submission, para. 130)

[93]Appellate Body Report, *Australia – Salmon*, para. 223.

[94]Appellate Body Report, *India – Patents (US)*, para. 92.

[95]Mexico's appellant's submission, para. 65 ("*Nada en el ESD ... explícitamente descarta que ... existan*").

[96]The Panel's terms of reference in this dispute were as follows:

49. The second paragraph of Article 7 further stipulates that "[p]anels shall address the relevant provisions in any covered agreement or agreements cited by the parties to the dispute." The use of the words "shall address" in Article 7.2 indicates, in our view, that panels are required to address the relevant provisions in any covered agreement or agreements cited by the parties to the dispute.[97]

50. We turn next to Article 11 of the DSU, which provides that:

> The function of panels is to assist the DSB in discharging its responsibilities under this Understanding and the covered agreements. Accordingly, a panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements, and make such other findings as will assist the DSB in making the recommendations or in giving the rulings provided for in the covered agreements. …

51. Article 11 of the DSU states that panels *should* make an objective assessment of the matter before them. The Appellate Body has previously held that the word "should" can be used not only "to imply an exhortation, or to state a preference", but also "to express a duty [or] obligation".[98] The Appellate Body has repeatedly ruled that a panel would not fulfil its mandate if it were not to make an objective assessment of the matter.[99] Under Article 11 of the DSU, a panel is, therefore, charged with the *obligation* to "make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements." Article 11 also requires that a panel "make such other findings as will assist the DSB in making the recommendations or in giving the rulings provided for in the covered agreements." It is difficult to see how a panel would fulfil that obligation if it declined to exercise validly established jurisdiction and abstained from making any finding on the matter before it.

52. Furthermore, Article 23 of the DSU states that Members of the WTO *shall* have recourse to the rules and procedures of the DSU when they "seek the redress of a violation of obligations ... under the covered agreements". As the Appellate Body has previously explained, "allowing measures to be the subject of dispute settlement proceedings ... is consistent with the comprehensive nature of the right of Members to resort to dispute settlement to 'preserve [their] rights and obligations … under the covered agreements, and to clarify the existing provisions of those agreements'."[100] We also note in this regard that Article 3.3 of the DSU provides that the "prompt settlement of situations in which *a Member considers* that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member is essential to the effective functioning of the WTO".[101] The fact that a Member may initiate a WTO dispute whenever it considers that "any benefits accruing to [that Member] are being impaired by measures taken by another Member" implies that that Member is *entitled* to a ruling by a WTO panel.

53. A decision by a panel to decline to exercise validly established jurisdiction would seem to "diminish" the right of a complaining Member to "seek the redress of a violation of obligations" within the meaning of Article 23 of the DSU, and to bring a dispute pursuant to Article 3.3 of the DSU. This would not be consistent with a panel's obligations under Articles 3.2 and 19.2 of the DSU.[102] We see no reason, therefore, to disagree with the Panel's statement that a WTO panel "would seem … not to be in a position to choose freely whether or not to exercise its jurisdiction."[103]

54. Mindful of the precise scope of Mexico's appeal[104], we express no view as to whether there may be other circumstances in which legal impediments could exist that would preclude a panel from ruling on the merits of the claims that are before it. In the present case, Mexico argues that the United States' claims under Article III of the GATT 1994 are inextricably linked to a broader dispute[105], and

---

> To examine, in the light of the relevant provisions of the covered agreements cited by the United States in document WT/DS308/4, the matter referred to the DSB by the United States in that document, and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in those agreements.

(WT/DS308/5/Rev.1, para. 2)

[97]In this regard, we further note the Appellate Body's statement that, "as a matter of due process, and the proper exercise of the judicial function, panels are required to address issues that are put before them by the parties to a dispute." (Appellate Body Report, *Mexico – Corn Syrup (Article 21.5 – US)*, para. 36)

[98]Appellate Body Report, *Canada – Aircraft*, para. 187 (quoting *The Concise Oxford English Dictionary* (Clarendon Press, 1995), p. 1283).

[99]See, for instance, Appellate Body Report, *EC – Export Subsidies on Sugar*, paras. 329 and 335. See also Appellate Body Report, *Canada – Aircraft*, paras. 187-188; and Appellate Body Report, *EC – Hormones*, para. 133.

[100]Appellate Body Report, *US – Corrosion-Resistant Steel Sunset Review*, para. 89. (footnote omitted)

[101](emphasis added) Thus, the Appellate Body has explained that there is "little in the DSU that explicitly limits the rights of WTO Members to bring an action". (Appellate Body Report, *EC – Export Subsidies on Sugar*, para. 312) In a similar vein, the Appellate Body has also observed that a WTO "Member has broad discretion in deciding whether to bring a case against another Member under the DSU." (Appellate Body Report, *EC – Bananas III*, para. 135) Further, Article 3.7 of the DSU states that "[b]efore bringing a case, a Member shall exercise *its judgement* as to whether action under these procedures would be fruitful." (emphasis added) Finally, Article 3.10 of the DSU stipulates that "if a dispute arises, *all Members will engage* in these procedures *in good faith in an effort to resolve the dispute*." (emphasis added)

[102]Article 3.2 of the DSU provides that "[r]ecommendations and rulings of the DSB cannot add to or diminish the rights and obligations provided in the covered agreements."

Article 19.2 of the DSU states that "[i]n accordance with paragraph 2 of Article 3, in their findings and recommendations, the panel and Appellate Body cannot add to or diminish the rights and obligations provided in the covered agreements."

[103]Panel Report, para. 7.8.

[104]See *supra,* para. 44 and footnote 85 thereto.

[105]Mexico's appellant's submission, para. 73.

that only a NAFTA panel could resolve the dispute as a whole.[106] Nevertheless, Mexico does not take issue with the Panel's finding that "neither the subject matter nor the respective positions of the parties are identical in the dispute under the NAFTA ... and the dispute before us."[107] Mexico also stated that it could not identify a legal basis that would allow it to raise, in a WTO dispute settlement proceeding, the market access claims it is pursuing under the NAFTA.[108] It is furthermore undisputed that no NAFTA panel as yet has decided the "broader dispute" to which Mexico has alluded. Finally, we note that Mexico has expressly stated that the so-called "exclusion clause" of Article 2005.6 of the NAFTA[109] had not been "exercised".[110] We do not express any view on whether a legal impediment to the exercise of a panel's jurisdiction would exist in the event that features such as those mentioned above were present.[111] In any event, we see no legal impediments applicable in this case.

[106]In its appellant's submission, Mexico explains that, in 1998, it initiated NAFTA dispute settlement proceedings because it was of the view that the United States was acting inconsistently with its obligation under the NAFTA relating to market access for Mexican sugar to the United States market. In 2000, Mexico requested the establishment of a panel under Article 2008 of the NAFTA. Subsequently, according to Mexico, it appointed its panelists to the NAFTA panel; however, the United States failed to appoint its panelists and also instructed the United States' Section of the NAFTA Secretariat not to appoint panelists. (Mexico's appellant's submission, paras. 15-27)

As a result, "[n]o further step could be taken by Mexico to form the NAFTA panel and have its grievance heard." (Mexico's appellant's submission, para. 28 ("*No había otros pasos que México pudiera dar conforme a las disposiciones del tratado para conseguir integrar el panel y que su agravio fuera oído*")) Mexico explains that it subsequently adopted the measures at issue in this dispute "to compel the United States to comply with its obligations and [to] protect [Mexico's] own legal and commercial interests." (*Ibid.*, para. 42 ("*para mover a Estados Unidos a cumplir con sus obligaciones, a la vez que protegió [los] legítimos intereses jurídicos y comerciales [de México]*"))

The United States disputes these arguments by Mexico and argues that "the Appellate Body [should not] undertake itself to assess the correctness of Mexico's assertions as to what the NAFTA requires." (United States' appellee's submission, para. 18) It submits that, if the WTO dispute settlement were to "become a forum for WTO Members to ... obtain findings as to the consistency of another Member's measure with any non-WTO agreement", this "would be a departure from the function the WTO dispute settlement system was established to serve". (*Ibid.*, para. 41) The United States also submits that "it is in full compliance with its obligations under NAFTA's dispute settlement mechanism." (*Ibid.*, para. 84)

While these NAFTA issues have been described by the parties by way of background to the WTO dispute, neither the Panel or the Appellate Body was called upon to examine these issues.

[107]Panel Report, para. 7.14. The Panel noted, in this regard, that:

> [i]n the present case, the complaining party is the United States and the measures in dispute are allegedly imposed by Mexico. In the NAFTA case, the situation appears to be the reverse: the complaining party is Mexico and the measures in dispute are allegedly imposed by the United States. As for the subject matter of the claims, in the present case the United States is alleging discriminatory treatment against its products resulting from internal taxes and other internal measures imposed by Mexico. In the NAFTA case, instead, Mexico is arguing that the United States is violating its market access commitments under the NAFTA.

[108]Mexico's response to questioning at the oral hearing.

[109]Article 2005.6 of the NAFTA provides:

> Once dispute settlement procedures have been initiated under Article 2007 or dispute settlement proceedings have been initiated under the GATT, *the forum selected shall be used to the exclusion of the other, unless a Party makes a request pursuant to paragraph 3 or 4*. (emphasis added)

[110]Mexico's response to questioning at the oral hearing.

[111]In this context, Mexico has alluded to paragraph 7.38 of the Panel Report in *Argentina – Poultry Anti-Dumping Duties*. See also *supra,* footnote 86.

55. Finally, as we understand it, Mexico's position is that the "applicability" of its WTO obligations towards the United States would be "call[ed] into question"[112] as a result of the United States having prevented Mexico, by an illegal act (namely, the alleged refusal by the United States to nominate panelists to the NAFTA panel), from having recourse to the NAFTA dispute settlement mechanism to resolve a bilateral dispute between Mexico and the United States regarding trade in sweeteners.[113] Specifically, Mexico refers to the ruling of the Permanent Court of International Justice (the "PCIJ") in the *Factory at Chorzów* case, and "calls into question the 'applicability' of its WTO obligations towards the United States in the context of this dispute".[114]

56. Mexico's arguments, as well as its reliance on the ruling in *Factory at Chorzów*, is misplaced. Even assuming, *arguendo*, that the legal principle reflected in the passage referred to by Mexico is applicable within the WTO dispute settlement system, we note that this would entail a determination whether the United States has acted consistently or inconsistently with its NAFTA obligations.[115] We see no basis in the DSU for panels and the Appellate Body to adjudicate non-WTO disputes. Article 3.2 of the DSU states that the WTO dispute settlement system "serves to preserve the rights and obligations of Members under the *covered agreements*, and to clarify the existing provisions of *those agreements*". (emphasis added) Accepting Mexico's interpretation would imply that the WTO dispute settlement system could be used to determine rights and obligations outside the covered agreements. In light of the above, we do not see how the PCIJ's ruling in *Factory at Chorzów* supports Mexico's position in this case.

57. For all these reasons, we *uphold* the Panel's conclusion, in paragraphs 7.1, 7.18, and 9.1 of the Panel Report, that "under the DSU, it ha[d] no discretion to decline to exercise its jurisdiction in the case that ha[d] been brought before it." Having upheld this conclusion, we *find* it unnecessary to rule in the circumstances of this appeal on the propriety of exercising such discretion.[116]

V. Article XX(d) of the GATT 1994

A. *Introduction*

58. We turn now to Mexico's claim that the Panel erred in finding that the challenged measures are not justified under Article XX(d) of the GATT 1994. Before proceeding, we note that Mexico has

[112]Mexico's appellant's submission, para. 73 ("*[es] cuestion[able]*").

[113]See Panel Report, para. 7.14.

[114]Mexico's appellant's submission, para. 73 ("*cuestiona que sus obligaciones sean aplicables frente a Estados Unidos a la luz del siguiente principio general del derecho internacional*"). The passage of the ruling that Mexico refers to reads as follows:

> … one party cannot avail himself of the fact that the other has not fulfilled some obligation, or has not had recourse to some means of redress, if the former party has, by some illegal act, prevented the latter from fulfilling the obligation in question, or from having recourse to the tribunal which would have been open to him.

(Permanent Court of International Justice, *Factory at Chorzów (Germany v. Poland)* (Jurisdiction), 1927, PCIJ Series A, No. 9, p. 31) (underlining added by Mexico omitted)

[115]We also note that the ruling of the PCIJ in the *Factory at Chorzów* case relied on by Mexico was made in a situation in which the party objecting to the exercise of jurisdiction by the PCIJ was the party that had committed the act alleged to be illegal. In the present case, the party objecting to the exercise of jurisdiction by the Panel (Mexico) relies instead on an allegedly illegal act committed by the other party (the United States).

[116]Panel Report, paras. 7.1 and 7.18.

not appealed the Panel's conclusion that the challenged measures are inconsistent with Article III of the GATT 1994.[117]

59. Mexico argued before the Panel that its "measures are 'necessary to secure compliance' by the United States with the United States' obligations under the NAFTA, an international agreement that is a law not inconsistent with the provisions of the GATT 1994."[118] The United States responded that "the NAFTA is not a 'law or regulation,' and Mexico's taxes are not 'necessary to secure compliance.'"[119]

60. The Panel began its analysis by looking at the meaning of the terms "to secure compliance". According to the Panel, "to secure compliance" means "to *enforce* compliance".[120] The Panel noted that "the notion of enforcement contains a concept of action within a hierarchical structure that is associated with the relation between the state and its subjects".[121] It further observed that Article XX(d) "is concerned with action at a domestic rather than international level."[122] Based on this reasoning, the Panel concluded that "the phrase 'to secure compliance' in Article XX(d) does not apply to measures taken by a Member in order to induce another Member to comply with obligations owed to it under a non-WTO treaty."[123]

61. Having interpreted the terms "to secure compliance", the Panel proceeded to examine whether Mexico's measures are designed to secure compliance. The Panel explained that "when enforcement action is taken within a Member's legal system there will normally be no doubt, provided the action is pointed at the right target, that it will achieve that target."[124] In contrast, "the outcome of international countermeasures, such as those adopted by Mexico, is inherently unpredictable".[125] Therefore, the Panel reasoned, international countermeasures are "not eligible to be considered as measures 'to secure compliance' within the meaning of Article XX(d)."[126] The Panel added that "even if the assumption were to be made in the abstract that international countermeasures are potentially capable of qualifying as measures designed to secure compliance, the Panel's conclusion would be that Mexico has not established that its measures contribute to securing compliance in the circumstances of this case."[127] Thus, the Panel rejected Mexico's argument that "the challenged tax measures are *designed* to secure compliance by the United States with laws or regulations."[128]

62. The Panel then examined whether the challenged measures would fall within the meaning of the terms "laws or regulations" in Article XX(d). The Panel underscored the link between the terms "to secure compliance" and the terms "laws and regulations" as set out in Article XX(d). It indicated that the same reasoning that applies in determining whether Mexico's measures are measures "to secure compliance" must also apply in determining whether the measures are "laws or regulations"

[117]Therefore, we express no view on the Panel's interpretation of Article III in this case.

[118]Panel Report, para. 8.162 (referring to Mexico's first written submission to the Panel, paras. 117-118 and 125).

[119]*Ibid.*, para. 8.163.

[120]*Ibid.*, para. 8.175. (emphasis added)

[121]*Ibid.*, para. 8.178.

[122]*Ibid.*, para. 8.179.

[123]*Ibid.*, para. 8.181.

[124]Panel Report, para. 8.185.

[125]*Ibid.*, para. 8.186.

[126]*Ibid.*

[127]*Ibid.*

[128]*Ibid.*, para. 8.190. (original emphasis)

within the meaning of Article XX(d).[129] In the Panel's view, "the conclusion that these words refer to enforcement action within a particular domestic legal system, and that they do not extend to international action of the type taken by Mexico, necessarily applies to both parts of this expression."[130] The Panel further observed that, "even if it were to assume that the expression 'laws or regulations' in Article XX(d) could include international agreements such as the NAFTA, it would in any event conclude that, on the facts of the case, because of the uncertainty of their consequences, the challenged measures are not designed 'to secure compliance with laws or regulations which are not inconsistent with the provisions' of GATT 1994."[131]

63. Therefore, the Panel concluded that "Mexico has not demonstrated that the challenged measures are designed 'to secure compliance with laws or regulations', within the meaning of Article XX(d) of the GATT 1994."[132] Having made this finding, the Panel did not consider that it needed to examine whether Mexico's measures are "necessary" within the meaning of Article XX(d)[133], and whether the measures satisfy the requirements set out in the chapeau of Article XX.[134] Consequently, the Panel concluded that "Mexico has not established that the challenged measures are justified under Article XX of the GATT 1994."[135]

64. On appeal, Mexico seeks review of the Panel's conclusion that Mexico's measures are not justified under Article XX(d) of the GATT 1994. According to Mexico, the Panel incorrectly interpreted the terms "to secure compliance" as excluding international countermeasures[136], and this error led the Panel to incorrectly interpret the terms "laws or regulations" in Article XX(d).[137] Mexico argues that the terms "laws or regulations" are "broad enough to include international agreements such as the NAFTA."[138] Mexico points out that "the use of the terms 'laws' and 'regulations' elsewhere in the GATT 1994 and in other WTO agreements does not demonstrate that such terms exclude international law rules."[139]

65. The United States responds that the Panel properly found that Mexico's measures are not justified under Article XX(d). It asserts that "the ordinary meaning of 'laws' and 'regulations' is that these are rules (e.g., in the form of a statute) issued by a government and not obligations under an international agreement."[140] The United States further explains that Mexico's interpretation of Article XX(d) is in conflict with Article 23 of the DSU, by allowing a WTO Member to take action outside the rules of the DSU to secure compliance with another Member's obligations under any international agreement, including the WTO agreements.[141] It would also undermine Article 22 of the

DSU by "permit[ting] the suspension of concessions ... without DSB authorization and without any requirement to adhere to the rules established" in that provision.[142]

B. *Analysis*

1. Are Mexico's Measures Justified under Article XX(d)?

66. Article XX(d) of the GATT 1994 reads:

> *General Exceptions*
>
> Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any contracting party of measures:
>
> ...
>
> (d) necessary to secure compliance with laws or regulations which are not inconsistent with the provisions of this Agreement, including those relating to customs enforcement, the enforcement of monopolies operated under paragraph 4 of Article II and Article XVII, the protection of patents, trade marks and copyrights, and the prevention of deceptive practices[.]

67. The Appellate Body explained, in *Korea – Various Measures on Beef*, that two elements must be shown "[f]or a measure, otherwise inconsistent with GATT 1994, to be justified provisionally under paragraph (d) of Article XX".[143] The first element is that "the measure must be one designed to 'secure compliance' with laws or regulations that are not themselves inconsistent with some provision of the GATT 1994", and the second is that "the measure must be 'necessary' to secure such compliance."[144] The Appellate Body also explained that "[a] Member who invokes Article XX(d) as a justification has the burden of demonstrating that these two requirements are met."[145]

68. In our view, the central issue raised in this appeal is whether the terms "to secure compliance with laws or regulations" in Article XX(d) of the GATT 1994 encompass WTO-inconsistent measures applied by a WTO Member to secure compliance with another WTO Member's obligations under an international agreement.

69. In order to answer this question, we consider it more helpful to begin our analysis with the terms "laws or regulations" in Article XX(d) (which we consider to be pivotal here) rather than to begin with the analysis of the terms "to secure compliance", as did the Panel. The terms "laws or regulations" are generally used to refer to domestic laws or regulations. As Mexico and the United States note, previous GATT and WTO disputes in which Article XX(d) has been invoked as a defence have involved domestic measures.[146] Neither disputes that the expression "laws or regulations" encompasses the rules adopted by a WTO Member's legislative or executive branches of government. We agree with the United States that one does not immediately think about international law when confronted with the term "laws" in the plural.[147] Domestic legislative or regulatory acts sometimes may be intended to implement an international agreement. In such situations, the origin of the rule is international, but the implementing instrument is a domestic law or regulation.[148] In our view, the terms "laws or regulations" refer to rules that form part of the domestic legal system of a WTO Member.[149] Thus, the "laws or regulations" with which the Member invoking Article XX(d) may seek to secure compliance do not include obligations of *another* WTO Member under an international agreement.

70. The illustrative list of "laws or regulations" provided in Article XX(d) supports the conclusion that these terms refer to rules that form part of the domestic legal system of a WTO Member.[150] This list includes "[laws or regulations] relating to customs enforcement, the enforcement of monopolies operated under paragraph 4 of Article II and Article XVII, the protection of patents, trade marks and copyrights, and the prevention of deceptive practices". These matters are typically the subject of domestic laws or regulations, even though some of these matters may also be the subject of international agreements. The matters listed as examples in Article XX(d) involve the regulation by a government of activity undertaken by a variety of economic actors (e.g., private firms and State enterprises), as well as by government agencies. For example, matters "relating to customs enforcement" will generally involve rights and obligations that apply to importers or exporters, and matters relating to "the protection of patents, trade marks and copyrights" will usually regulate the use of these rights by the intellectual property right holders and other private actors.[151] Thus, the illustrative list reinforces the notion that the terms "laws or regulations" refer to rules that form part of

[142] *Ibid.*, para. 38. (footnote omitted)

[146] United States' appellee's submission, footnote 62 to para. 39; Mexico's response to questioning at the oral hearing.

[147] Panel Report, footnote 419 to para. 8.193; United States' appellee's submission, para. 31.

[148] In some WTO Members, certain international rules may have direct effect within their domestic legal systems without requiring implementing legislation. In such circumstances, these rules also become part of the domestic law of that Member.

[149] The European Communities notes that:

> [i]t is entirely possible that international agreements may be incorporated into the domestic legal order in such a way that they can be invoked as against individuals, and enforce[d] against them. If this is the case, the international agreement, albeit international in origin, may be regarded as having become an integral part of the domestic legal order of such Member, and thus a law or regulation within the meaning of Article XX (d) [of the] GATT [1994].

(European Communities' third participant's submission, para. 41)

[150] The participants agree that the list in Article XX(d) is not exhaustive. (See Mexico's response to Question 67 posed by the Panel after the second Panel meeting; Panel Report, p. C-61; United States' response to Question 31 posed by the Panel after the first Panel meeting; Panel Report, p. C-42; and United States' response to Question 67 posed by the Panel after the second Panel meeting; Panel Report, pp. C-79-C-80)

[151] European Communities' third participant's submission, para. 38.

the domestic legal system of a WTO Member and do not extend to the international obligations of another WTO Member.[152]

71. Our understanding of the terms "laws or regulations" is consistent with the context of Article XX(d). As the United States points out[153], other provisions of the covered agreements refer expressly to "international obligations" or "international agreements". For example, paragraph (h) of Article XX refers to "obligations under any intergovernmental commodity agreement". The express language of paragraph (h) would seem to contradict Mexico's suggestion that international agreements are implicitly included in the terms "laws or regulations".[154] The United States and China also draw our attention to Article X:1 of the GATT 1994[155], which refers to "[l]aws, regulations, judicial decisions and administrative rulings" and to "[a]greements affecting international trade policy which are in force between a government … of any Member and the government … of any other Member". Thus, a distinction is drawn in the same provision between "laws [and] regulations" and "international agreements". Such a distinction would have been unnecessary if, as Mexico argues, the terms "laws" and "regulations" were to encompass international agreements that have not been incorporated, or do not have direct effect in, the domestic legal system of the respective WTO Member. Thus, Articles X:1 and XX(h) of the GATT 1994 do not lend support to interpreting the terms "laws or regulations" in Article XX(d) as including the international obligations of a Member other than that invoking the provision.[156]

72. We turn to the terms "to secure compliance", which were the focus of the Panel's reasoning and are the focus of Mexico's appeal. The terms "to secure compliance" speak to the types of measures that a WTO Member can seek to justify under Article XX(d). They relate to the design of the measures sought to be justified.[157] There is no justification under Article XX(d) for a measure that is not designed "to secure compliance" with a Member's laws or regulations. Thus, the terms "to secure compliance" do not expand the scope of the terms "laws or regulations" to encompass the international obligations of another WTO Member. Rather, the terms "to secure compliance" circumscribe the scope of Article XX(d).

73. Mexico takes issue with several aspects of the Panel's reasoning related to the interpretation of the terms "to secure compliance". We recall that, according to the Panel, "[t]he context in which the expression is used makes clear that 'to secure compliance' is to be read as meaning to enforce compliance."[158] The Panel added that, in contrast to enforcement action taken within a Member's legal system, "the effectiveness of [Mexico's] measures in achieving their stated goal—that of bringing about a change in the behaviour of the United States—seems ... to be inescapably uncertain."[159] Thus, the Panel concluded that "the outcome of international countermeasures, such as those adopted by Mexico, is inherently unpredictable".[160]

74. It is Mexico's submission that the Panel erred in requiring a degree of certainty as to the results achieved by the measure sought to be justified.[161] Mexico also asserts that the Panel, in its reasoning, incorrectly relied on the Appellate Body Report in *US – Gambling*.[162] We agree with Mexico that the *US – Gambling* Report does not support the conclusion that the Panel sought to draw from it. The statement to which the Panel referred was made in the context of the examination of the "necessity" requirement in Article XIV(a) of the *General Agreement on Trade in Services*, and did not relate to the terms "to secure compliance". As the Appellate Body has explained previously, "the contribution made by the compliance measure to the enforcement of the law or regulation at issue"[163] is one of the factors that must be weighed and balanced to determine whether a measure is "necessary" within the meaning of Article XX(d). A measure that is not suitable or capable of securing compliance with the relevant laws or regulations will not meet the "necessity" requirement. We see no reason, however, to derive from the Appellate Body's examination of "necessity", in *US – Gambling*, a requirement of "certainty" applicable to the terms "to secure compliance".[164] In our view, a measure can be said to be designed "to secure compliance" even if the measure cannot be guaranteed to achieve its result with absolute certainty.[165] Nor do we consider that the "use of coercion"[166] is a necessary component of a measure designed "to secure compliance". Rather, Article XX(d) requires that the design of the measure contribute "to secur[ing] compliance with laws or regulations which are not inconsistent with the provisions of" the GATT 1994.

75. Nevertheless, while we agree with Mexico that the Panel's emphasis on "certainty" and "coercion" is misplaced, we consider that Mexico's arguments miss the point. Even if "international countermeasures" could be described as intended "to secure compliance", what they seek "to secure

---

[152]The United States also points out that the terms "laws or regulations" are qualified by the requirement that they not be "inconsistent" with the GATT 1994. The United States explains that the word "inconsistent" appears elsewhere in the GATT 1994 in connection with domestic measures. In contrast, when referring to treaty obligations, the WTO agreements use the word "conflict". (United States' appellee's submission, para. 33) In our view, this distinction supports the position that the terms "laws or regulations" refer to the rules that are part of the domestic legal system of a WTO Member, including international rules that have been incorporated or have direct effect in a particular domestic legal system.

[153]United States' appellee's submission, para. 34.

[154]If an international commodity agreement contains GATT-inconsistent provisions, Article XX(h) would still serve the purpose of justifying such an agreement, even if it could not be justified under Article XX(d).

[155]United States' appellee's submission, para. 35; China's third participant's submission, para. 21.

[156]The Panel noted that there are examples of international "regulations" within the WTO agreements themselves. The Panel cited, as examples, Article VI of the *Marrakesh Agreement Establishing the World Trade Organization* that refers to "regulations" to be adopted by the Ministerial Conference, and Article VII that refers to "financial regulations" to be adopted by the General Council and to the "regulations" of the GATT 1947. (Panel Report, footnotes 423 and 424 to para. 8.195) Article XXIV of the GATT 1994 also uses the term "regulations" when referring to rules applied by free trade areas or customs unions. Nevertheless, we agree with Japan that, in these instances, the context makes it clear that the regulations are international in character. (Japan's third participant's submission, paras. 17-19)

[157]Appellate Body Report, *Korea – Various Measures on Beef*, para. 157.

[158]Panel Report, para. 8.175.

[159]*Ibid.*, para. 8.185.

[160]*Ibid.*, para. 8.186. See also Mexico's appellant's submission, paras. 104-116.

[161]The European Communities and Japan agree with Mexico that the Panel erred in implying that whether a measure falls within the meaning of the phrase "to secure compliance" depends on the degree of certainty that the measure will achieve its intended results. (European Communities' third participant's submission, para. 26; Japan's third participant's submission, para. 10)

[162]Panel Report, paras. 8.187-8.188 (referring to Appellate Body Report, *US – Gambling*, para. 317).

[163]Appellate Body Report, *Korea – Various Measures on Beef*, para. 164.

[164]We note that, at the request of the United States, the Panel clarified in the interim review phase that:

> … its reasoning does not focus on whether the achievement of Mexico's objective through the measures at issue is certain or uncertain. Rather, the Panel considers that international countermeasures (as the ones allegedly imposed by Mexico) are intrinsically unable to *secure* compliance of laws and regulations. In contrast, national measures are, beyond particular factual considerations, usually in a position to achieve [] that objective, through the use of coercion, if necessary.

(Panel Report, para. 6.12) (original italics; underlining added)

[165]The European Communities notes that "even within the domestic legal order of WTO Members, enforcement of laws and regulations may not simply be taken for granted, but may depend on numerous factors". (European Communities' third participant's submission, para. 28)

[166]Panel Report, para. 8.178.

compliance with"—that is, the international obligations of another WTO Member—would be outside the scope of Article XX(d). This is because "laws or regulations" within the meaning of Article XX(d) refer to the rules that form part of the domestic legal order of the WTO Member invoking the provision and do not include the international obligations of *another* WTO Member.

76. Mexico finds support for its interpretation in the Appellate Body's rulings in *US – Shrimp* and *US – Shrimp (Article 21.5 – Malaysia)*.[167] We fail to see how these rulings support Mexico's position. In those cases, the United States sought to justify its measures under Article XX(g) of the GATT 1994, and the measures at issue were domestic laws and regulations of the United States.[168] The reference to the Inter-American Convention for the Protection and Conservation of Sea Turtles (the "Inter-American Convention") was made in the context of the examination of whether the measures constituted "a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail" for purposes of the chapeau of Article XX.[169] The United States, in those cases, did not argue that its measures were justified under Article XX(d) because they were intended to secure compliance with the obligations of another Member under the Inter-American Convention. In the present case, Mexico seeks to justify its measures under paragraph (d) of Article XX, and not under paragraph (g). Moreover, Mexico not only refers to the NAFTA in relation to the chapeau of Article XX, but also seeks justification for its measures under paragraph (d) on the basis that they are allegedly intended to secure compliance with the United States' NAFTA obligations.

77. We observe, furthermore, that Mexico's interpretation of Article XX(d) disregards the fact that the GATT 1994 and the DSU specify the actions that a WTO Member may take if it considers that another WTO Member has acted inconsistently with its obligations under the GATT 1994 or any of the other covered agreements. As the United States points out[170], Mexico's interpretation of the terms "laws or regulations" as including international obligations of another WTO Member would logically imply that a WTO Member could invoke Article XX(d) to justify also measures designed "to secure compliance" with that other Member's WTO obligations. By the same logic, such action under Article XX(d) would evade the specific and detailed rules that apply when a WTO Member seeks to take countermeasures in response to another Member's failure to comply with rulings and recommendations of the DSB pursuant to Article XXIII:2 of the GATT 1994 and Articles 22 and 23 of the DSU.[171] Mexico's interpretation would allow WTO Members to adopt WTO-inconsistent measures based upon a *unilateral* determination that another Member has breached its WTO obligations, in contradiction with Articles 22 and 23 of the DSU and Article XXIII:2 of the GATT 1994.

78. Finally, even if the terms "laws or regulations" do not go so far as to encompass the WTO agreements, as Mexico argues[172], Mexico's interpretation would imply that, in order to resolve the case, WTO panels and the Appellate Body would have to assume that there is a violation of the relevant international agreement (such as the NAFTA) by the complaining party, or they would have to assess whether the relevant international agreement has been violated. WTO panels and the

[167]Mexico's appellant's submission, paras. 174-178.

[168]See Appellate Body Report, *US – Shrimp*, paras. 2-6.

[169]See *ibid.*, paras. 169-172; and Appellate Body Report, *US – Shrimp (Article 21.5 – Malaysia)*, para. 128. See also United States' appellee's submission, para. 108.

[170]United States' appellee's submission, para. 37.

[171]Mexico's interpretation would also undermine the limitations in paragraphs 3 and 4 of Article 22 as to the magnitude and the trade sectors in which such countermeasures could be taken. (*Ibid.*, paras. 37-38)

[172]At the oral hearing, Mexico argued that the terms "laws or regulations" would not include the WTO agreements because the latter are *lex specialis*.

Appellate Body would thus become adjudicators of non-WTO disputes.[173] As we noted earlier[174], this is not the function of panels and the Appellate Body as intended by the DSU.[175]

79. For these reasons, we agree with the Panel that Article XX(d) is not available to justify WTO-inconsistent measures that seek "to secure compliance" by another WTO Member with that other Member's international obligations. In sum, while we agree with the Panel's conclusion, several aspects of our reasoning set out above differ from the Panel's own reasoning. First, we conclude that the terms "laws or regulations" cover rules that form part of the domestic legal system of a WTO Member, including rules deriving from international agreements that have been incorporated into the domestic legal system of a WTO Member or have direct effect according to that WTO Member's legal system.[176] Second, we have found that Article XX(d) does not require the "use of coercion" nor that the measure sought to be justified results in securing compliance with absolute certainty. Rather, Article XX(d) requires that the measure be designed "to secure compliance with laws or regulations which are not inconsistent with the provisions of" the GATT 1994.[177] Finally, we do not endorse the Panel's reliance on the Appellate Body's interpretation in *US – Gambling* of the term "necessary" to interpret the terms "to secure compliance" in Article XX(d).[178]

80. Therefore, we *uphold*, albeit for different reasons, the Panel's conclusion, in paragraph 8.198 of the Panel Report, that Mexico's measures do not constitute measures "to secure compliance with laws or regulations", within the meaning of Article XX(d) of the GATT 1994.

2. Mexico's Request to Complete the Analysis

81. Mexico requests the Appellate Body to complete the analysis by examining whether Mexico's measures are "necessary", within the meaning of Article XX(d) of the GATT 1994, and meet the requirements of the chapeau of that Article.[179] Mexico's request is premised on the Appellate Body reversing the Panel's conclusion that the measures are not designed "to secure compliance with laws or regulations" within the meaning of Article XX(d). We have upheld the Panel's conclusion that Mexico's measures do not constitute measures "to secure compliance with laws or regulations" within the meaning of Article XX(d) of the GATT 1994. Therefore, the premise on which Mexico's request is predicated is not fulfilled and, consequently, it is not necessary for us to complete the analysis as requested by Mexico.[180]

[173]Article 3.2 of the DSU states that the WTO's dispute settlement system "serves to preserve the rights and obligations of Members under the *covered agreements*, and to clarify the existing provisions of *those agreements*". (emphasis added)

[174]See *supra*, para. 56.

[175]We note that, in its analysis, the Panel also referred to the negotiating history of the GATT 1947, and particularly to the rejection of a proposal presented by India during the negotiations on the International Trade Organization (the "ITO") Charter according to which Members would be permitted to justify, on a temporary basis, retaliatory measures under Article XX. (See Panel Report, para. 8.176 (referring to ITO Doc. E/PC/T/180 (19 August 1947), p. 97; and "Havana Charter for an International Trade Organization", United Nations Conference on Trade and Employment, Final Act and Related Documents (Lake Success, New York, April 1948), pp. 33-34)

[176]See *supra,* paras. 69-71.

[177]See *supra,* para. 74.

[178]See *supra,* para. 74.

[179]Mexico's appellant's submission, para. 138.

[180]See, for example, Appellate Body Report, *Dominican Republic – Import and Sale of Cigarettes*, para. 74.

3. Mexico's Claim under Article 11 of the DSU [181]

82. Mexico argues, "separately and in addition"[182] to the previous errors, that the Panel failed to make "an objective assessment of the facts", as required by Article 11 of the DSU, in finding that "Mexico has not established that its measures contribute to securing compliance in the circumstances of this case."[183] Mexico argues that "[t]he evidence on the record demonstrates that the effects of the measures at issue have contributed to securing compliance in the circumstances of this case, by changing the dynamic of the NAFTA dispute and forcing the United States to pay attention to Mexico's grievances."[184] The United States submits that, contrary to Mexico's contention, the Panel did not "ignore" arguments or evidence submitted by Mexico.[185] The United States further explains that, in any event, Mexico's claim under Article 11 of the DSU "appears to be no more than a reiteration of its legal arguments that its ... measures are designed to 'secure compliance'".[186]

83. In Section B.1 above, we held that Mexico's measures do not constitute measures "to secure compliance with laws or regulations", within the meaning of Article XX(d) of the GATT 1994. Therefore, Mexico's claim under Article 11 of the DSU is predicated on an interpretation of Article XX(d) of the GATT 1994 that we have found to be incorrect. Since Mexico's measures cannot be justified under Article XX(d) as a *matter of law*, we reject Mexico's claim under Article 11 of the DSU.

4. Conclusion

84. For the reasons set out above, we *uphold* the Panel's conclusion, in paragraphs 8.204 and 9.3 of the Panel Report, that "Mexico has not established that the challenged measures are justified under Article XX of the GATT 1994".

VI. Findings and Conclusions

85. For the reasons set out in this Report, the Appellate Body:

(a) upholds the Panel's conclusion, in paragraphs 7.1, 7.18, and 9.1 of the Panel Report, that, "under the DSU, it ha[d] no discretion to decline to exercise its jurisdiction in the case that ha[d] been brought before it";

(b) upholds the Panel's conclusion, in paragraph 8.198 of the Panel Report, that Mexico's measures do not constitute measures "to secure compliance with laws or regulations", within the meaning of Article XX(d) of the GATT 1994;

(c) rejects Mexico's claim that the Panel failed to fulfil its obligations under Article 11 of the DSU, in finding, in paragraph 8.186 of the Panel Report, that "Mexico has not established that its measures contribute to securing compliance in the circumstances of this case"; and

(d) as a consequence, upholds the Panel's conclusion, in paragraphs 8.204 and 9.3 of the Panel Report, that "Mexico has not established that the challenged measures are justified under Article XX of the GATT 1994".

86. The Appellate Body recommends that the Dispute Settlement Body request Mexico to bring the measures that were found in the Panel Report to be inconsistent with the *General Agreement on Tariff and Trade 1994* into conformity with its obligations under that Agreement.

[181] In its Notice of Appeal, Mexico claimed that the Panel "failed to make an objective assessment of the matter before it, including the facts of the case, inconsistently with its obligation under Article 11 of the DSU, with respect to Mexico's request for determinations of fact, status and relevance of the NAFTA dispute between the parties." (Mexico's Notice of Appeal (attached as Annex I to this Report), para. 4 (referring to Panel Report, paras. 8.231 and 8.232) (footnote omitted)) Mexico also asserted that "in concluding that international countermeasures cannot qualify for consideration as measures designed to 'secure compliance' within the meaning of Article XX(d) of the GATT 1994, the Panel improperly increased the obligations of WTO Members and reduced the rights of Members under the covered agreements." (*Ibid.*, para. 5 (referring to Panel Report, paras. 8.181 and 8.186) (footnote omitted)) Mexico did not offer arguments to support these two claims in its appellant's submission. In response to questioning at the oral hearing, Mexico confirmed that it did not intend to pursue these claims further.

ANNEX I

WORLD TRADE ORGANIZATION

WT/DS308/10
6 December 2005
(05-5832)

Original: Spanish

MEXICO – TAX MEASURES ON SOFT DRINKS AND OTHER BEVERAGES

Notification of an Appeal by Mexico under Article 16.4 and Article 17 of the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU) and Rule 20(1) of the *Working Procedures for Appellate Review*

The following notification dated 6 December 2005, from the delegation of Mexico, is being circulated to Members.

Pursuant to Article 16 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("DSU") and Rule 20 of the *Working Procedures for Appellate Review*, Mexico hereby notifies its decision to appeal to the Appellate Body certain issues of law dealt with in the Report of the Panel on *Mexico – Tax Measures on Soft Drinks and Other Beverages* (WT/DS308/R) (the "Panel Report") and certain legal interpretations developed by the Panel in this dispute.

1. Mexico seeks review by the Appellate Body of the Panel's legal conclusion that it has no discretion to decline to exercise jurisdiction in this case and its determination that, even if it had such discretion, the facts in the record do not justify a refusal by the Panel to exercise jurisdiction in this case. This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations concerning Articles 3, 7, 11 and 19 of the DSU and Articles XXII and XXIII of the GATT 1994. These errors are contained, *inter alia*, in paragraphs 7.1 to 7.18, 8.215 to 8.230 and 9.1 of the Panel Report.

2. Mexico seeks review by the Appellate Body of the Panel's legal conclusion that the challenged tax measures are not justified under Article XX of the GATT 1994 as measures necessary to secure United States compliance with laws or regulations which are not inconsistent with the provisions of the GATT 1994. This conclusion is in error and is based on erroneous findings on issues of law and related legal interpretations concerning Article XX of the GATT 1994. Paragraphs 8.168 to 8.204 and 9.3 of the Panel Report, among others, contain such errors, including the following:

(a) The Panel's interpretation and application of the expression "to secure compliance" in Article XX(d) of the GATT 1994 and its conclusion that it does not apply to measures taken by a Member in order to induce another Member to comply with obligations owed to it under a non-WTO treaty.[1]

(b) The Panel's conclusion that the challenged tax measures "are not designed to secure compliance" within the meaning of Article XX(d) of the GATT 1994 and are not eligible for consideration under Article XX(d) of the GATT 1994.[2]

(c) The Panel's interpretation and application of the phrase "laws or regulations" contained in Article XX(d) of the GATT 1994 and its conclusion that this phrase does not cover international treaties such as NAFTA.[3]

(d) The Panel's failure to consider whether the Mexican measures are "necessary" to secure compliance with a law that is not inconsistent with the provisions of the GATT 1994.[4]

3. Mexico seeks review by the Appellate Body, in the light of DSU Article 11, of the Panel's conclusion that "Mexico has not established that its measures contribute to securing compliance in the circumstances of this case".[5] This conclusion does not reflect an objective approach to analysis of the available evidence on the effects of the Mexican measures, and is inconsistent with the treatment given by the Panel to relevant evidence. Accordingly, this conclusion is inconsistent with the Panel's duty to make an objective assessment of the matter before it.

4. Mexico considers that the Panel also failed to make an objective assessment of the matter before it, including the facts of the case, inconsistently with its obligation under Article 11 of the DSU, with respect to Mexico's request for determinations of fact, status and relevance of the NAFTA dispute between the parties.[6]

5. Mexico also considers that, in concluding that international countermeasures cannot qualify for consideration as measures designed to "secure compliance" within the meaning of Article XX(d) of the GATT 1994[7], the Panel improperly increased the obligations of WTO Members and reduced the rights of Members under the covered agreements.

6. In the event that the Appellate Body reverses the Panel's conclusion that Mexico's tax measures are not justified under Article XX(d) of the GATT 1994, Mexico requests that the Appellate Body complete the legal analysis under Article XX of the GATT 1994.

Those provisions of the covered agreements which Mexico considers the Panel to have interpreted or applied erroneously include Articles XX, XXII and XXIII of the GATT 1994 and Articles 3, 7, 11 and 19 of the DSU.
