torqit pedal torq

It is a known fact that most cars suffer throttle lag, particularly newer cars with drive-by-wire systems that inefficiently control the signal from the cars throttle to the ECU. The pedal torq eliminates throttle lag by taking the signal from the pedal, adjusting it to an efficient signal setting and sending it on to the cars ECU.

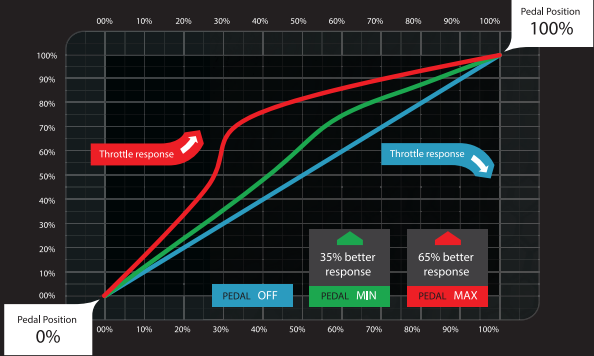

How it Works

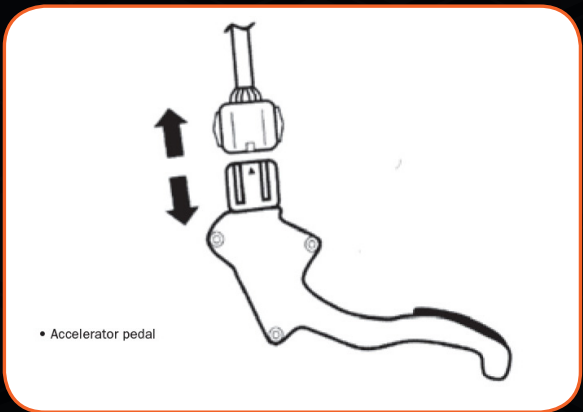

Many modern vehicles utilize a 'drive-by-wire' control system for the accelerator. This means that when pressure is applied to the accelerator pedal a sensor measures how much pressure has been applied and sends signal to a control module which in turn sends a signal to the engine to open the throttle the corresponding amount.

The pedal torq sits between the sensor and the control module, intercepting the signal and altering it in order to shorten and improve the response time. The pedal torq reduces the amount of pedal pressure required to achieve 'throttle wide open', allowing drivers to access the engines full potential.

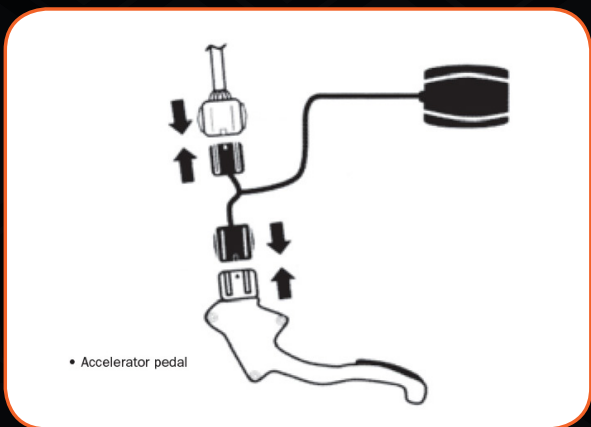

throttle response modification

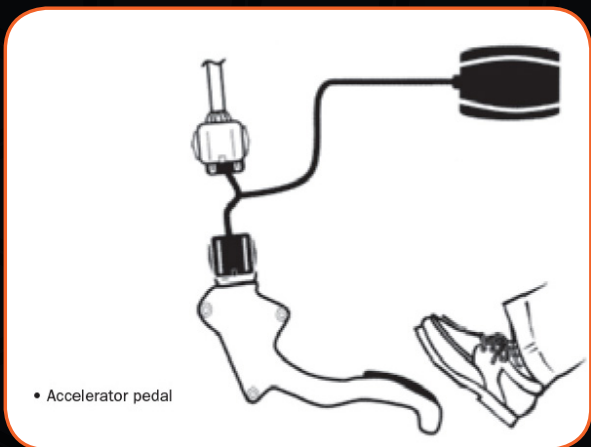

“Pedal torque” is used to describe the speed at which a vehicles’ engine responds to pressure on the accelerator pedal, any deficiencies in response are emphasised under hard acceleration, as shown in the graph. Pedal torq removes these deficiencies improving throttle response by up to 65%.

1. Disconnect accelerator pedal sensor plugs.

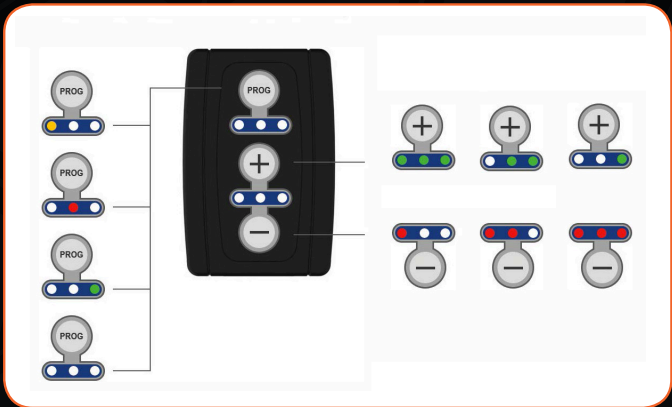

2. Connect the plugs of the pedal torque to the two original connector plugs. Secure the cable with cable ties if required.

3. The vehicle is now ready to drive.

Please Note: Ensure that the wiring harness is secure and does not interfere with the safe operation of the vehicle!

The pedal torq has 3 preset programs.

Press “PROG” shortly to switch between these 3 programs.

SPORT

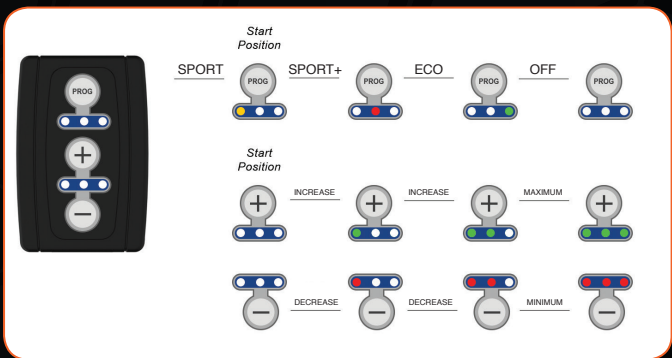

SPORT +

ECO

OFF

The pedal torq has 6 levels of adjustment in each program.

Press[+] to increase or[-] to reduce the setting.
