GROOMING SOLUTIONS**

2021

Your grooming needs require the right motor.

Andis® products are among the best cutting, smoothest running and most durable found anywhere in the world. Each utilizes expertly developed motor technology designed to complement the application, ensuring maximum performance. So which type of motor should you choose? Whether magnetic, pivot or rotary motor, your Andis selection will deliver the high-quality results you've come to expect when you pair the correct motor with the right application.

MAGNETIC MOTORS

Reliable Power & High Blade Speed for light body grooming

Magnetic motors run at high speed resulting in smooth cuts. Light textures of hair will feed and cut well with magnetic motor clippers. Less moving parts make these simple, reliable and the longest lasting of all the motors.

PIVOT MOTORS

High Power & Lower Blade Speed for complete body grooming

Pivot motors have a lower blade speed than magnetic motors but are twice as powerful. Higher cutting power makes them ideal for cutting thick or heavy hair. They are whisper quiet, cool running and long lasting.

ROTARY MOTORS

High Power & High Blade Speed for a wide range of grooming

Rotary motors have an equal amount of power and blade speed. They are also the only motor available with multiple speeds. Their balance between power, speed, size and weight makes them extremely versatile and perfect for heavy-duty cutting.

BRUSHLESS ROTARY

Brushless motors deliver more power and torque than standard designs. They also last longer and weigh less.

Did you know an unclean dog is harder to groom? Make sure your dog is thoroughly bathed, combed and dry. This will ensure the clipper glides smoothly through your dog's coat for optimal results. Clipping an unclean dog is not only more difficult and takes longer, but it will also dull your blade.

- 2 Clean and disinfect blades by using Cool Care Plus®.
- 3 Use the 5-point oiling system to lubricate your clipper: with the blade teeth pointing down, apply 3 drops across the teeth of the blade and 1 drop on each back rail.
- 4 If you notice a decrease in performance after cleaning and oiling your blade, replace the blade to maintain peak cutting performance.
