MASONITE GLASS

More Light. More Comfort. Less Energy.

As the leader in both innovation and trend, Masonite has invested in new state-of-the-art automated high-speed warm-edge spacer assembly lines that put Masonite Glass at the forefront of the door lite industry.

Warm-edge flexible spacers have been shown to have up to nine times the life expectancy of traditional metal insulating glass systems available on the market today. They expand and contract and always return to their original shape, protecting against stress cracks that can lead to seal failure.

WARM-EDGE FLEXIBLE SPACERS
= LESS SEAL FAILURES

Warm-Edge Flexible Spacer
Flexible spacers can move as glass bows inward or outward, resulting in a reduction of seal failures when compared to metal spacers.

VS.

FULL-METAL SPACERS

Full-Metal Spacer
Metal spacers are rigid and seal stress can result in seal failure.

PERFORMANCE BENEFITS OVER OTHER SPACERS

CLEARER VIEWING

Warm-Edge Flexible Spacers

All-foam design dramatically reduces interior condensation, delivering a clear view.

Less-Metal Spacer

Mid-performance spacer systems that still contain metal improve condensation resistance.

Full-Metal Spacer

With conventional metal spacers, condensation is a fact of life.

SOUND REDUCING

Improved sound absorption over traditional metal spacers; warm-edge flexible spacers are a huge help in keeping the decibels down.

LONGER LASTING

Warm-Edge Flexible Spacers

Warm-edge flexible spacers feature a unique no-metal composite-laminating technology that provides superior durability and thermal performance in insulating glass units.

ENERGY SAVING

The thermal performance of a window plays a major role in household energy conservation. A high-performance window system will keep your energy costs low by reducing heat loss in the winter and heat gain in the summer.
