Acknowledgments

A great many people, many long gone, provided the research that is compiled in this little book. First among them are those whose names were rarely recorded – the people of the many islands of the Pacific who shared their star knowledge.

Appreciation is also due the 19th and early 20th century researchers who collected and wrote down the information.

A special debt is due to Rubellite Kawena Johnson whose life's work has been to revive through her brilliant scholarship the knowledge of her ancestors.

I also have to thank David H. Kelley, Glen Kila, Clarence DeLude, Alika Poe Silva, Mahealani Keale, Tom Lenchanko, and Gary David Thompson.

Dedication:

To the children of Kamaile Academy.

Preface

This catalog is the work of many, many people from many places and times. Its purpose is to gather in one place as many of the known names and identities of Polynesian, particularly Hawaiian, celestial objects as can be found. It is hoped that this catalog will benefit others who would like to learn more about the ways in which Polynesians understood the sky.

That Polynesians knew the sky well is certain, as this catalog testifies. Underlying and coincident with that knowledge is an entire body of interrelated understandings of the natural world, including the very nature of knowledge and the many ways of teaching and learning.

I've made no comments, provided none of my own ideas or thoughts about the many meanings and implications of the star names. This work – the star catalog – is intended to be a tool for others to use for whatever their purposes may be and whoever they may be – scholars, cultural practitioners, students, anyone interested in Polynesian sky knowledge.

And it belongs, first and foremost, to Polynesians past and present.

*The rows of stars of Kane,
The stars in the firmament,
The stars that have been fastened up,
Fast, fast, on the surface of the heaven of Kane,
And the wandering stars,
The tabued stars of Kane,
The moving stars of Kane;
Innumerable are the stars;
The large stars,
The little stars,
The red stars of Kane. O infinite space!
The great Moon of Kane,
The great Sun of Kane,
Moving, floating,
Set moving about in the great space of Kane.
The great Earth of Kane,
The Earth Kapakapaua of Kane,
The Earth that Kane set in motion,
Moving are the stars, moving is the moon,
Moving is the great Earth of Kane.*

The Origin of Light

Those members of the primal offspring who remained in this upper world were sore oppressed by the gloomy light that here

obtained. It was Tane who introduced the clear, bright light we know, he who set on high the whanau marama, the light-giving family, the Children of Light, the heavenly bodies. These Shining Ones were arranged on the breast of Rangi, the Sky Parent, by Tane-te-waiora, and to each member was assigned the path he must traverse. So the sun, moon, and stars appeared, and so the maramatanga taiahoaho (clear enduring light) entered the world.
