CERAMIC SANITARYWARE - IMPORTANT INFORMATION

Ceramic Porcelain

is a material with dense sintered white body coated with a white or coloured glaze.

Ceramic Sanitaryware

is unharmed by the thermal stresses of hot and cold water. The glazes are scratchproof, unaffected by light, and resistant to ageing. They resist the acids, alkalis and solvents contained in most cleansers, normally used in the household. Hydrofluoric acid and its compounds do not belong to it.

Instructions for care

The glaze of the ceramic fixtures resists the acids, solvents and alkalis contained in most toiletries, cleansers and cosmetics. Please remove residues for such agents and refer to the instructions of the manufacturer of these products. For nonceramic parts, i. e. WC seat, metal, etc. use non-abrasive cleaners.

If sanitary fixtures with a ceramic trap (WC's, urinals, etc.) are exposed to frost, a suitable antifreezing preventative must be added to the water in the trap.

LCC recommendations for cleaning

Only use mild cleansing agents (e.g. all purpose cleaners) to clean the surface, since most of the dirt and hard water deposits will drip off with the water. Aggressive substances such as drain openers, scouring liquid or scouring powder may damage the coating.

Tolerances

Measures, weights and colours are subject to the usual ceramic tolerances. Especially by the crude installation observe the deviations of measures due to fabrication against the indicated measures in the catalogue.

The manufacturer reserves the right of alterations in construction and details.

Colours

Lighting has a substantial influence for judging the colour identity. We'd like to ask you to consider that even with the same lighting and same distance from the source of light, only by the diversity of the model and by the shadow, the subjective impression of different colour nuances may occur. This effect will even increase when different materials meet.

Built-in basins

In general fixings are not supplied with washbasins as we have no control over the surface to which they are fixed. Consideration should be given to the shape, size and weight of the basin, together with the material makeup of the wall, to ensure that the correct proprietary fixings are used and the basin is securely and safely installed.

LIST OF CONVENTIONAL SIGNS

- B Bolt distance in cm
- D Possible distance for vertical outlet in cm (middle outlet to wall)
- xxx Colour / material
- yyy Charge / option number

- 1 open tap hole (Ch. 104)
- 3 open tap holes (Ch. 108)
- without tap hole (Ch. 109)

CERTIFICATES / QUALITY / ECOLOGY

Factory

All our factories are ISO 9001 certified.

Our two factories in Austria are even ISO 14001 certified and verified by EMAS. The efficiency of these manufacturing plants have been awarded by the European Environment Prize for outstanding achievements in 2007.

Since 1998 LAUFEN environmentally screens suppliers and internally benchmarks input, output, raw materials, resources and energy to improve environmental balance by efficient use.

Products

All our products are CE conform and the majority is also tested and approved by various external testing institutions in order to guarantee functional and high quality products.

Laufen also offers products which fulfill special specifications and approvals for certain market requirements.

Water saving

Laufen steadily improves the water consumption of several products.

For example:

- 0-liter urinal Lema
- cisterns with a flushing volume of 4.5/3 liters
- cartridge Ecototal for faucets
