Fiery JDF Technology

The integration between PrintSmith™ Vision and Fiery® takes advantage of Fiery JDF technology. JDF is an open standard technology that allows data to pass between different applications and systems to help automate the print production workflow. JDF simplifies data exchange and collection; eliminates manual data entry and re-entry; and makes print production faster, more efficient, and more accurate.

About the PrintSmith Vision and Fiery Integration

To take advantage of the PrintSmith Vision and Fiery integration, you must have a digital printer that supports Fiery JDF technology or you must have Fiery Central configured.

Fiery Central is a production printing solution. To optimize printing resources, you can manage the workloads on groups of print devices from a central console. Fiery Central can print jobs on both Fiery and non-Fiery printers.

Notes Check the EFI Web site to find out if Fiery JDF technology is supported on your digital printer(s). It may be built-in or available as an update *at no extra cost*.

For simplicity, the term *Fiery device* is used both for a printer with Fiery JDF technology or for Fiery Central in the rest of this guide.

When PrintSmith Vision is integrated with Fiery, the details (print production intent) for digital jobs entered in PrintSmith are translated to print processing instructions on a Fiery device. When a job is completed on the Fiery device, information is sent back to PrintSmith Vision to adjust stock inventories automatically and to provide production counts. This automated workflow reduces errors, collects data you need to run your shop profitably, and helps you avoid spending more time entering and re-entering data about a job than producing the job.

Some initial configuration in PrintSmith Vision is required before jobs can be submitted to a Fiery device.

Requirements

- PrintSmith Vision 3.4
- One or more Fiery devices (printers with Fiery JDF technology, also called JDF-enabled)
- Fiery JDF version 1.5.0.25
- Fiery Command WorkStation® – a print job management interface for Fiery systems, available as a free download from the EFI Web site
- Remote Print Center (RPC) if PrintSmith Vision is hosted by EFI (for information, see “Appendix: Installing Remote Print Center (RPC)” on page 47)

About this Guide

This guide explains how to configure PrintSmith Vision with a Fiery device and describes the workflow when you submit jobs to a Fiery device.

The guide assumes that:

- PrintSmith Vision is already installed and set up, and that you are familiar with the process of creating invoices and jobs.
 - Your Fiery device(s) and/or Fiery Central are set up and configured.
-

EFI Professional Services can help you perform EFI software installations, upgrades, and updates. This group can also help you implement, customize, and optimize your EFI software, plus offers a range of training options.

Setup

In this chapter

Overview of Setup Tasks	10
Task 1: Review and Adjust Media Tolerances	10
Task 2: Configure Fiery Central Printer Group	11
Task 3: Configure FJDF on Fiery Server	14
Task 4: Add a Fiery Device	15
Task 5: Review and Edit Digital Definitions for Fiery Mapping	23
Task 6: Map Print Services to PrintSmith Vision Finishing Charges	24
Managing Fiery Devices	28
Manually Mapping Individual Stocks	28

Overview of Setup Tasks

The process of configuring the Fiery integration involves completing these tasks in PrintSmith Vision:

1. In PrintSmith Vision, review and adjust media tolerances (these affect media mapping).
2. (Fiery Central only) Configure Fiery Central printer group.
3. Configure FJDJ on Fiery server.
4. Use a wizard to step through the process of adding your Fiery device.
5. Map PrintSmith digital definitions to the correct machine (Fiery device).
6. Map print services to PrintSmith Vision finishing charges.

Note Task 6 does not apply to Fiery Central.

This chapter also provides information about managing your Fiery devices (for example, editing or deleting them) and about manually mapping media.

Task 1: Review and Adjust Media Tolerances

When you run the wizard to add a Fiery device to PrintSmith Vision, the system automatically tries to map stock definitions in PrintSmith Vision to the media in the paper catalog on the Fiery device. When a match is found, the media is mapped.

To broaden the mapping possibilities, the system uses media tolerances. For example, a 1-inch tolerance for size means that Fiery media that is an inch smaller or larger than the PrintSmith stock definition can be mapped to the stock. If you have a stock in PrintSmith that is 17 x 22, and the system does not find an exact match in the paper catalog, it will look for the first instance of media within that 1-inch tolerance, for example, 16 x 21 or 18 x 23. Similarly, a 5% recycled percent tolerance will automatically map media with a 5% higher or lower recycled percentage.

PrintSmith Vision comes with some default media tolerances. Review and adjust them as necessary before you run the wizard to add a Fiery device.

To review and adjust media tolerances

Note During automatic media mapping, if the system finds an exact match, the media is mapped; tolerance is ignored, even if it was specified. The tolerance is taken into account only if an exact match is not there. If you want auto-mapping to occur *only* for exact matches in both systems, set the tolerances to 0.

1. In PrintSmith Vision, click **Preferences** in the QuickAccess panel (or select **Admin > Preferences**).
2. Under **System**, select **Fiery Media**.
3. If necessary change the tolerance criteria (including unit of measure) that you want the system to use during auto media mapping.

Fiery Media	
Size :	1.00 IN
Recycled Percent :	5 %
Thickness :	50.0000 Microns
Weight :	5.0000 GSM

4. Click **Save** to save the your Fiery Media preferences.

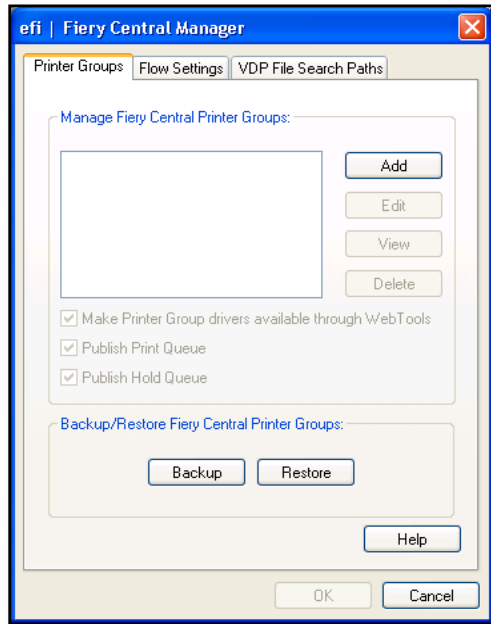

Note You can adjust these preferences at any time and then re-synchronize the media mapping while editing the device. See “Managing Fiery Devices” on page 28.

Task 2: Configure Fiery Central Printer Group

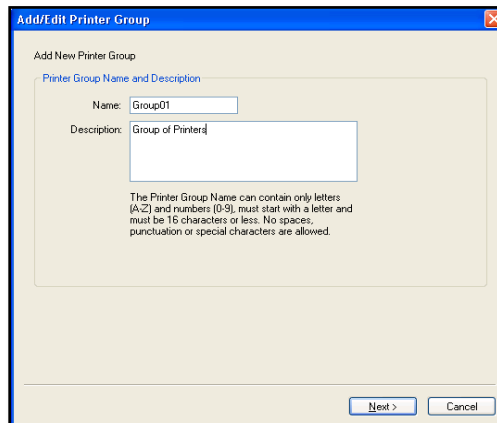

Fiery Central supports both Fiery and non-Fiery printers. You must add all these printers to a group on the Fiery Central server. This allows operators to manage, monitor, and control all these printers from a single Fiery Central server.

Note These steps apply only to Fiery Central.

1. On the **Start** menu select **Programs > EFI > Fiery Central > Fiery Central Manager**.
The Fiery Central Manager window opens.
2. On the **Printer Groups** tab, click **Add**.

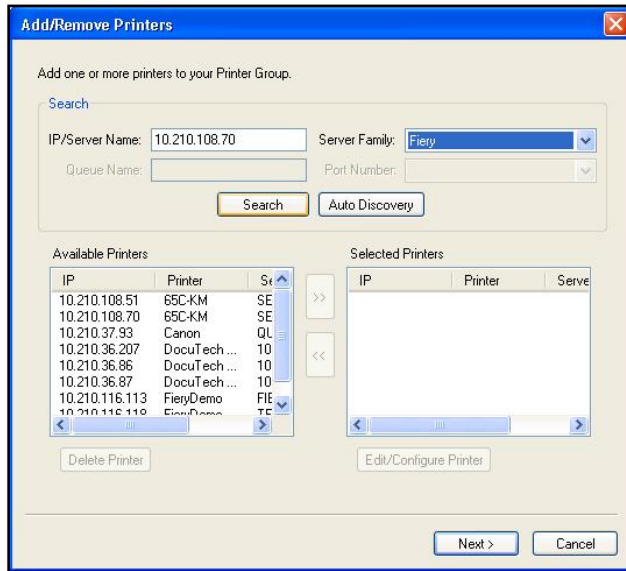

3. Enter a **Name** and **Description** for the group and then click **Next**.

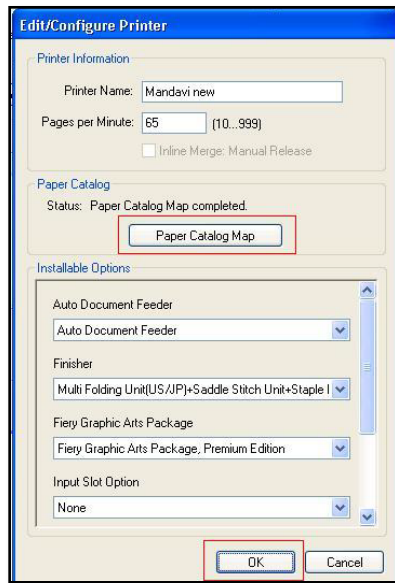

4. In the Add/Remove Printers window, do one of the following:
 - In the **IP/Server Name** field, enter the IP address or DNS name of the printer and select a **Server Family**. Then click **Search** to list the printer under **Available Printers**.
 - Click **Auto Discovery** to search for all available devices on the network.

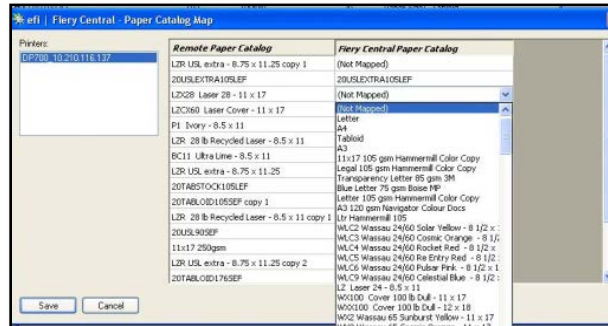

5. Under **Available Printers**, select the printer you want to add to the group and then click >> to add the printer to the **Selected Printers** list.

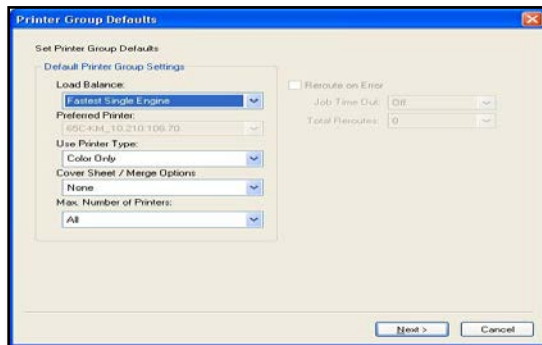

6. In the Edit/Configure Printer window:
 - a. Enter the **Printer Name** (for reference).
 - b. Specify **Installable Options** according to the printer's capabilities.
 - c. Click **Paper Catalog Map** to retrieve the media list from Fiery Central.

- d. In the Paper Catalog Map window, manually map the media and then click **Save** to go back to the Edit/Configure Printer window.

- e. Click **OK** to save what you did in the Edit/Configure Printer window and return to the Add/Remove Printers window.
7. Click **Next**. (To add more printers to the group, repeat steps 4 to 6.)
 8. In the Printer Group Defaults window, modify the default settings if necessary and click **Next**.

9. In the Save Printer Group window, review the group you created and then click **Save** to save the settings. Doing so will automatically re-start the Fiiery Central server to incorporate the changes.

Task 3: Configure FJDF on Fiery Server

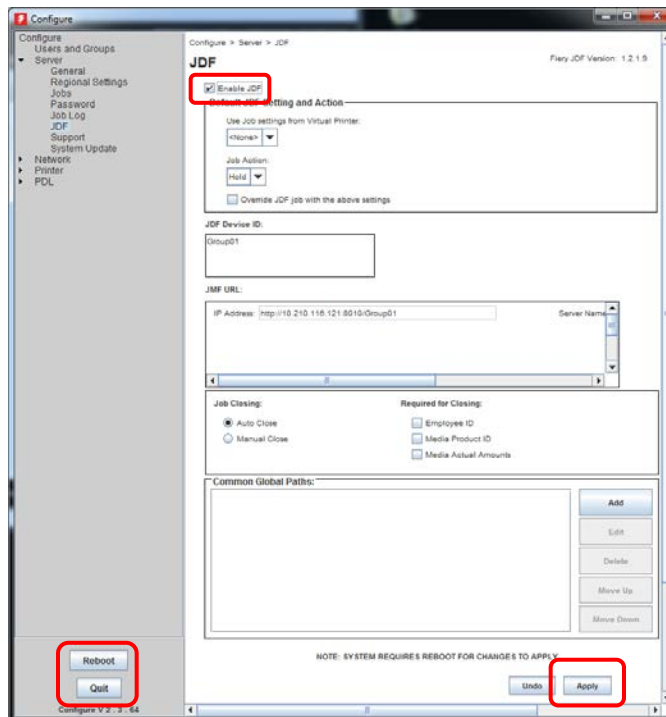

To enable JDF communication, FJDF on the Fiery server needs to be configured and running.

1. Ensure the Fiery server is up and running.
2. Open a browser and enter the URL **http://ipaddress/** where *ipaddress* is the IP address of the Fiery server.
3. On the server page, click the **Configure** tab.
4. Select **Launch Configure** to open a new browser window.
5. Provide the credentials to log in as the administrator.
6. In the browser window, select **Server > JDF** and see if the **Enable JDF** check box is selected.

If the **Enable JDF** check box is already selected, FJDF is already configured, so no further action is required. Click **Quit** in the lower left corner of the window.

If the **Enable JDF** check box is cleared, do the following:

- a. Select the **Enable JDF** check box.
- b. Click **Apply** in the lower right corner of the window.
- c. Click **Quit** in the lower left corner of the window.
- d. You will be prompted to restart the server. Click **Reboot**.
- e. Wait for the server to restart.

7. To check if FJDF is configured and running, enter this URL into a browser: **http://ipaddress:8010** (where *ipaddress* is the IP address of the Fiery Central server). This lists the devices configured on the Fiery server.

Task 4: Add a Fiery Device

The Manage Fiery Devices wizard takes you through the process of integrating your Fiery device with PrintSmith Vision, automatically mapping your PrintSmith Vision stock definitions to media in a Fiery paper catalog, and automatically mapping Fiery capabilities to print services.

Before you begin

Before you run the wizard to add a Fiery device, be aware of the following:

- If you want to add a Fiery device manually (instead of having the system search for it), you must know its IP address. For Fiery Central, you must also know the port number and group name.

Important If PrintSmith Vision is EFI-hosted, you must enter the IP address of a Fiery device (you cannot search for it.)

- You will be asked to select the digital press associated with the Fiery. The digital press is the physical equipment defined in the Production Copiers table in PrintSmith Vision. In a digital press definition, the digital press is identified in the **Machine Name** field.

Start the Manage Fiery Devices wizard

- In PrintSmith Vision, select **Admin > Fiery Integration**. The Manage Fiery Devices window opens.

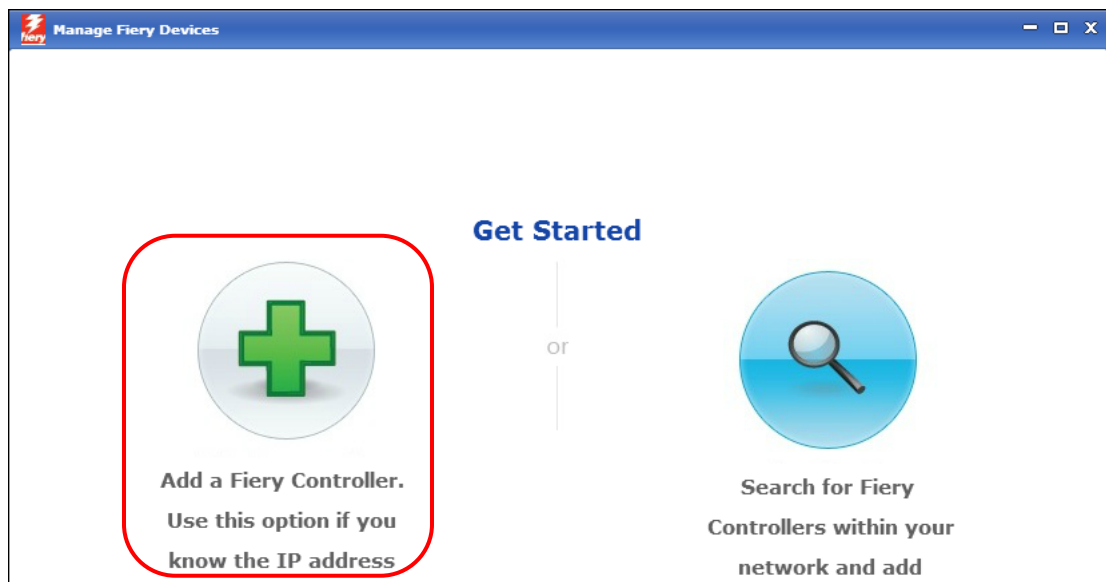

The first step is to add your Fiery devices. You can add a Fiery device in one of two ways:

- By entering the IP address of the Fiery device (see below).
- By having the system search for Fiery devices (see page 21).

Note You cannot search for Fiery devices if PrintSmith Vision is EFI-hosted.

Add a Fiery device by providing an IP address

1. If you know the IP address of your Fiery device, click **Add a Fiery Controller**.

2. In the next window, enter the IP address of the Fiery device .

For Fiery Central, enter the IP address, port number, and group name using the format shown at the top of the window.

3. Click **Next**.

fiery Manage Fiery Devices

Please enter the IP address you want to connect. For connecting to Fiery Central devices please enter IP Address, Port Number and Group Name in the following format(10.210.37.3:8010/Group01).

IP ADDRESS

Cancel Back Next

Select a digital press

- In the Associate Digital Press window, select the digital press that is identified with the Fiery and click **Next**. (This is the physical equipment itself as defined in the Production Copiers table in PrintSmith Vision.)

Associate Digital Press

You should associate Digital Press Definition with your Fiery Device

Select a Digital Press For Fiery

Canon CLC 5000 ▼

Select media types and manage media mapping

1. If you have many stock definitions in PrintSmith Vision (for example, imported from a vendor catalog), narrow down the mapping possibilities by selecting the check boxes of the types of stock you want to map and then clicking **Next**.

Select Media Types

Select media types which should be synchronized during media mapping with the Fiery controller media

- Envelope
- Sheet Stock
- Roll Stock
- Large Format
- Rigid Substrate

After you click **Next**, the media mapping automatically takes place between the PrintSmith Vision stock definitions and the media in the Fiery paper catalog.

2. A Media Mapping Completed window opens and informs you how many media were mapped. Click **Manage Mapping** to review what was mapped and to override the auto mapping or to manually map media if necessary.

Media Mapping Completed

6 Out Of 27 medias are mapped .Please Click on the Manage Mapping Button to override the Auto Media mapping.

Manage Mapping

3. Review the mapped media.

⚠ 21 of 27 media are not mapped.Please do manual mapping. Synchronize Media

The **Fiery Media** column lists the media in the paper catalog on the Fiery device; the **MIS Media** column lists the stocks in PrintSmith Vision that were mapped to the media in the Fiery paper catalog.

The media mapping window includes the following informational icons:

-  No mapping exists for the media.
-  The media was mapped automatically.
-  The media was mapped manually.
-  Click to display more information about the media.

4. If media was mapped automatically, click  to check the details and verify the media was mapped as you want.

 A4 gsm 176 - Chandrakant	Classic Cover , 8.5 x 11.0 White 65.0lbs 
Product Id : 9dA4gsm176Chandrakant	Stock # :

Size : 11.0" x 17.0IN	
Color : White	
Weight : 176 GSM	
Thickness : 120Microns	
PCW Recycled % : 0	

Select the Media or Synchronize again

- Click  next to the media and note its specifications in the Fiery paper catalog. Go back to your stock definitions in PrintSmith Vision and either create a matching stock or edit an existing stock. Alternatively, change your Fiery Media tolerance preferences (see page 10). Return to the media mapping window by editing the device (see “Managing Fiery Devices” on page 28) and click **Synchronize Media**. The old mapping is removed and the new media should now be mapped based on the newly added stock definitions and/or changed media tolerances.

Tips Always click **Synchronize Media** after you make a change in PrintSmith Vision that may affect mapping.

You can also map individual stocks manually. See page 28.

To un-map media, expand the drop-down list in the **MIS Media** column and press Home. This removes the mapping.

6. After you finish mapping media, click **Next** to proceed to Fiery capability mapping.

Review Fiery capability mapping and finish the configuration process

After you finish mapping media and click **Next**, the capabilities of the Fiery device are automatically mapped to print services.

Note If you are configuring Fiery Central, a message informs you that there are no device capabilities for the selected Fiery device.

Typically, unless you create custom print services, you do not need to map anything manually, but you can do so if you want. If you do create custom print services later, you can edit your Fiery device and map the custom print service to a Fiery capability. For information about custom print services, see page 27.

Important Later in the setup process (see Task 6: Map Print Services to PrintSmith Vision Finishing Charges” on page 24), you will map PrintSmith Vision finishing charges to print services. These print services can then be added to jobs, which ensures the Fiery gets the correct finishing instructions.

1. If a message informs you there are no device capabilities for the selected Fiery device, click **OK** and continue to the final window (step 2).

If **Fiery Capabilities** and **Print Services** are displayed, review the mapping and click **Next**.

Click to expand

28 out of 51 capabilities could not be mapped automatically.
Please click the below grid and then do manual mapping.

Notes Virtual printers and job presets are defined on the Fiery itself. If nothing was defined, this information will not be displayed. For more information about virtual printers and job presets, see page 35.

The capabilities of the Fiery device are listed in the bottom part of the window. **False** next to a capability means it is not supported on the Fiery device.

The Fiery device is now listed in the Manage Fiery Devices window.

- Click **Close**.

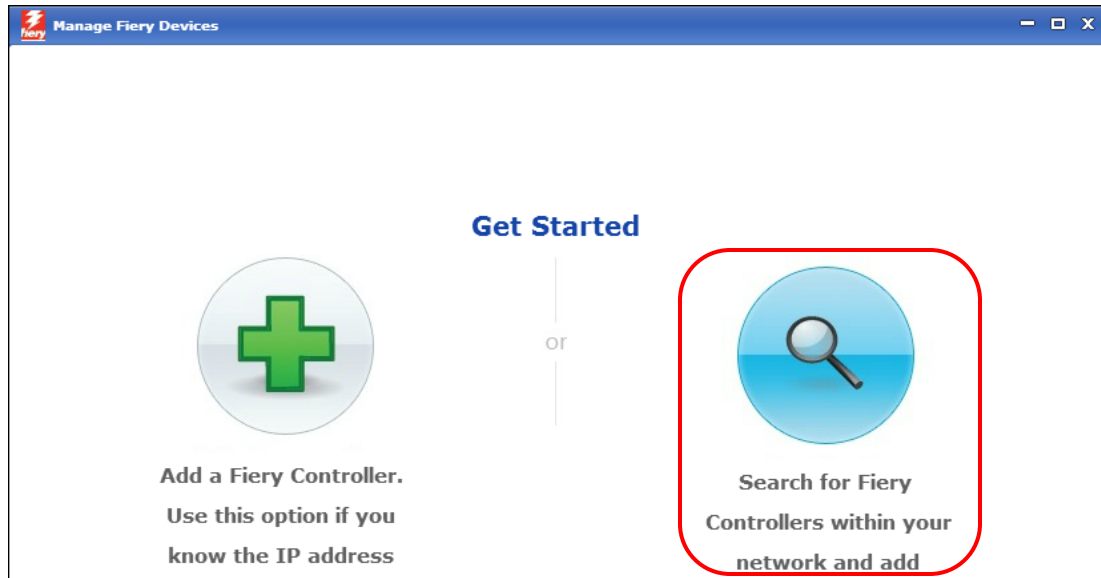

Tip Any time you want to edit a device (for example, to map more media automatically or map Fiery capabilities), select **Admin > Fiery Integration**, select the device, and click **Edit**. For more information about managing devices, see page 28.

Add a Fiery device by searching for it

You can search for Fiery devices either by having the system automatically discover them on your part (subnet) of the network or by providing a range of IP addresses for the system to search.

Important If PrintSmith Vision is EFI-hosted, you cannot search for a Fiery device; you must enter its IP address as described on page 15.

1. In the Manage Fiery Devices window (**Admin > Fiery Integration**), click **Search for Fiery Controllers**.

2. Do one of the following:
 - To automatically discover Fiery devices on your part of the network (local subnet), leave **Auto Discovery** selected and click **Next**.
 - To search a range of IP addresses, select **IP Address Range**, enter the IP addresses in the **From** and **To** fields, and click **Next**.

Note The search may take a few minutes.

The system lists the Fiery devices it found.

The top part of the window shows Fiery devices that are supported, meaning you can submit jobs to them.

The bottom part of the window shows Fiery devices that are not activated so cannot be used.

Supported Fiery Servers found in your network					
Server	IP Address	Model	Server Version	JDF Version	
Not activated Fiery Device found in your network					
Server	IP Address	Model	Server Version	JDF Version	
Phantom-1124	10.210.100.39:8010/Phantom-1124	EFI Phantom FS1	FS200	1.2.3.10	▲

Cancel Back

- If supported devices were found, select the one you want to use and click **Next**. Then follow the steps beginning with “Select a digital press” on page 16.

If no supported devices are found, do one of the following:

- Enable (activate) one of the JDF devices listed in the bottom part of the window and then run the configuration wizard again (**Admin > Fiery Integration**).
- Make sure the IP range you specified (if any) was correct and try searching again.
- Try to add a Fiery device by specifying its IP address as described in “Add a Fiery device by providing an IP address” on page 15.

Task 5: Review and Edit Digital Definitions for Fiery Mapping

To use a digital definition for printing jobs on a Fiery device, the digital definition must include a machine name that is mapped to a Fiery device. During the process of adding a Fiery, you selected a digital press, for example, a Canon. The **Machine Name** field in a digital definition has the name of that digital press.

Review your digital definitions to ensure they include the correct machine name. For example, if your Fiery is associated with your Canon, and you want jobs based on the digital definition for **Text 8.5 x 11 B&W Digital** to be printed on the Fiery, make sure the **Machine Name** field in the digital definition is set to Canon.

Whenever this digital definition is then used in a job, after you submit the job, it will be routed to the Fiery device with all the necessary job information.

1. Click **Digital Definitions** in the QuickAccess panel (or select **Pricing > Digital Definitions**).
2. In the list at the top of the window, select the definition you want to review.
3. Make sure the **Machine Name** is set to the digital press associated with the Fiery.

Note If the digital press identified in the **Machine Name** field is associated with a Fiery, the **Fiery Device** check box is automatically selected and the Fiery device is identified. (If you change the Fiery device, the **Machine Name** will also change because they are linked – changing one automatically changes the other.)

The screenshot shows the 'Digital Definitions' window. At the top, there are icons for New, Save, Duplicate, Revert, and Delete. Below is a table of digital definitions:

Default	BW	Color	LF	Name	Machine Name
*	<input type="radio"/>	<input type="radio"/>		Text 8.5 x 11 B&W Digital	Canon CLC 5000
	<input type="radio"/>	<input type="radio"/>		Text 8.5 x 14 B&W Digital	Docutech
	<input type="radio"/>	<input type="radio"/>		Text 11 x 17 B&W Digital	Docutech
*	<input type="radio"/>	<input checked="" type="radio"/>		Text 8.5 x 11 Color Digital	Canon CLC 5000
	<input type="radio"/>	<input checked="" type="radio"/>		Text 8.5 x 14 Color Digital	Canon CLC 5000
	<input type="radio"/>	<input checked="" type="radio"/>		Text 11 x 17 Color Digital	Canon CLC 5000

Below the table is a detailed view of the selected definition 'Text 8.5 x 11 B&W Digital'. The 'Machine Name' field is set to 'Canon CLC 5000' and the 'Fiery Device' field is set to 'FIERYDEMOILAB7'. Both fields are highlighted with red boxes. Other fields include 'Name', 'ID', 'Output Description', 'Production Location', 'Cost Center', and 'Printer Type' (with 'B&W' selected).

4. Click **Save**.
5. Repeats steps 2 through 4 for each digital definition you want to use with a Fiery device.

Task 6: Map Print Services to PrintSmith Vision Finishing Charges

When you ran the Manage Fiery Devices wizard, it automatically mapped Fiery capabilities to print services.

Important If you are using Fiery Central, no Fiery capabilities were mapped to print services so the information below does not apply to you. Print services must be mapped manually when using Fiery Central.

In PrintSmith Vision you must now map the print services to finishing charges. When a print service is mapped to a finishing charge in PrintSmith, the print service can be added to a job that you submit to the Fiery. For example, if you add a folding or binding print service to a job, the Fiery receives the instructions it needs to produce the job in terms of the kind of folding or binding that was requested.

Tips You do not need to map all the print services to charges, just the ones that are most likely to be used for the jobs you submit to the Fiery.

If you are also using Digital StoreFront, you may have already mapped your print services, in which case you do not need to any mapping unless more is required.

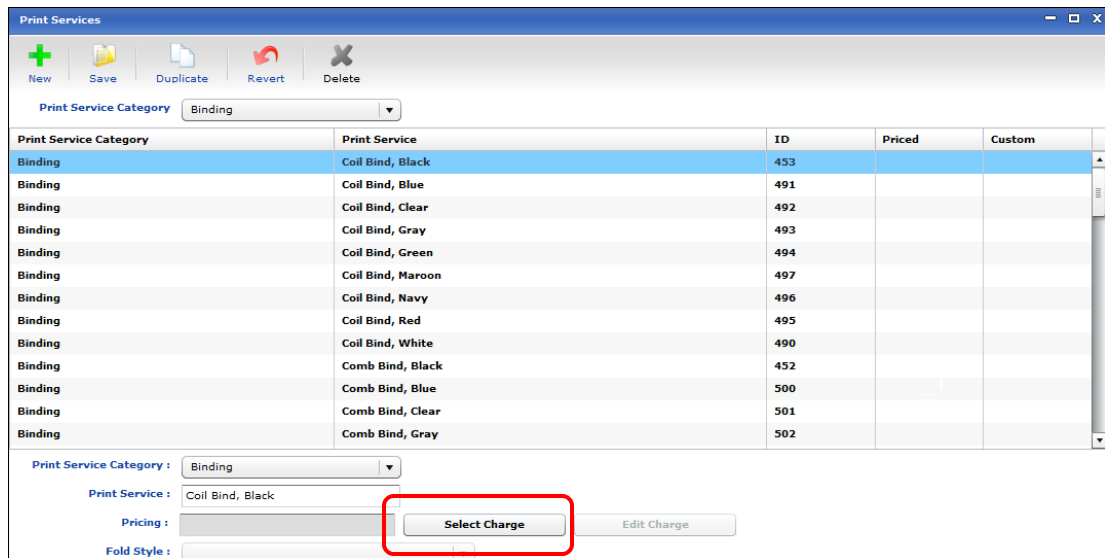

You may not have charge definitions that correspond to the available print services. In this case you can create new charges and then map them.

In addition, because the print service is mapped to a charge in PrintSmith, the pricing for the charge is reflected in the job.

Note If you are integrated with Digital StoreFront, the price for a print service in the job *a/ways* comes from Digital StoreFront (and overrides the price of the charge in PrintSmith).

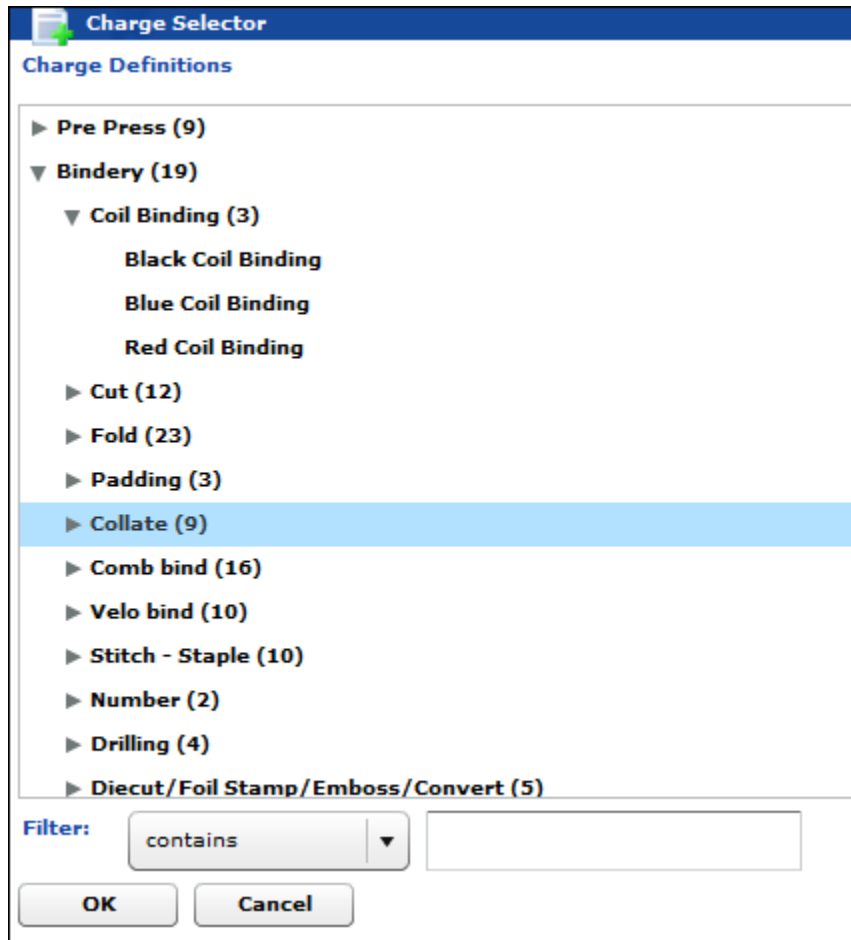

Mapping print services to charges

1. In PrintSmith Vision, select **Pricing > Print Services**. The Print Services window opens.
2. By default, all print service categories are listed. To list just one category (for example, binding), select it in the **Print Service Category** field.
3. In the list of print services, select the one you want to map to a charge and click **Select Charge**.

- In the Charge Selector window, expand the category that corresponds to the print service you selected.
- Select the charge you want to map to the print service and click **OK**.

Note If you do not have a matching charge defined, you may need to define it and then come back here to map it.

The **Pricing** field at the bottom of the Print Services window now displays the name of the charge you selected.

- For some fold charges, a **Fold Style** may be available. Select it if necessary.

- Click **Save** on the toolbar. The **Priced** column now includes a check mark.

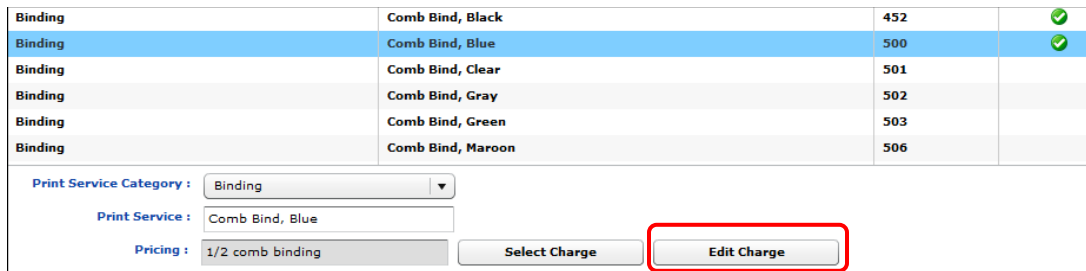

- Repeat steps 3 to 7 for all the print services you want to map to charges.

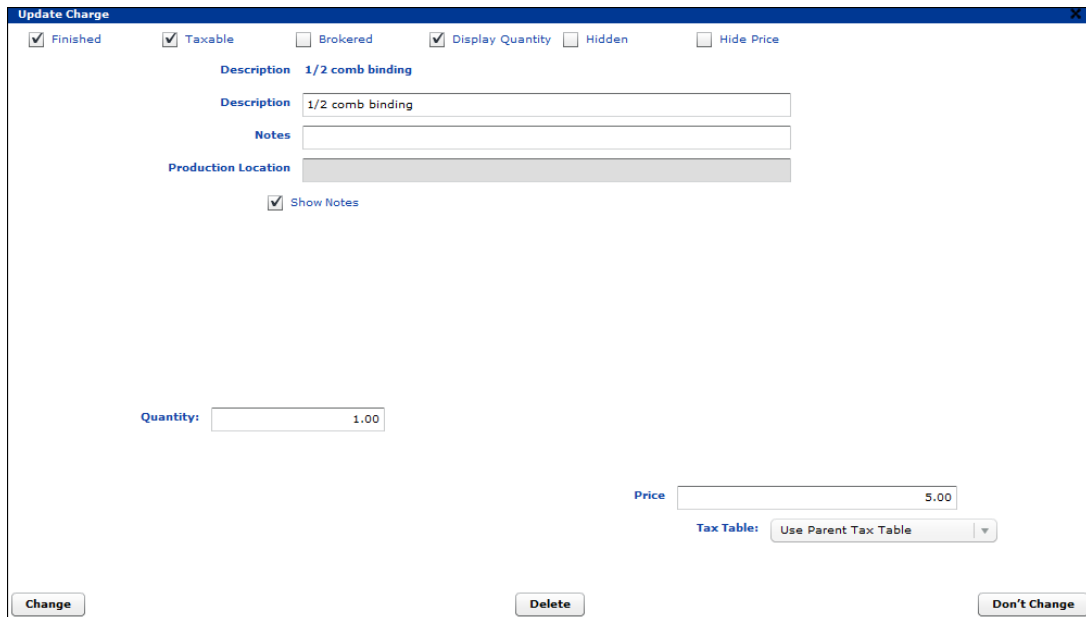

Updating charges

After you map a charge to a print service, you can update the charge if necessary, for example, change the price.

- In the Print Services window, select a print service that is mapped to a PrintSmith charge (the **Priced** column has a check mark).
- Click **Edit Charge**.

- In the Update Charge window, make any necessary changes and click **Change**.

Creating custom print services

If PrintSmith Vision is integrated with a Fiery, but *not* with Digital StoreFront, you can create custom print services in PrintSmith Vision. You can then map the custom print service to a Fiery capability. When this mapped custom print service is added to a job that you submit to the Fiery, the Fiery will receive the appropriate instructions.

Note If you *are* integrated with Digital StoreFront, you should *not* create custom print services in PrintSmith Vision because they will not exist in Digital StoreFront. Instead, you should create the custom print services in Digital StoreFront, synchronize them with PrintSmith Vision (from the **Settings** tab on the MIS Systems page in Digital StoreFront), and map them to a charge in PrintSmith as described on page 24. You must then map the custom print service to a Fiery capability (by editing the Fiery device) so that the Fiery receives the appropriate instructions when the custom print service is part of a job coming from Digital StoreFront.

To create a custom print service

1. In the Print Services window, select a **Print Service Category** at the bottom of the window and then click **New** on the toolbar.
2. In the **Print Service** field, enter the name of the print service.
3. Click **Select Charge** and select the PrintSmith charge you want to map to this print service.
4. Click **Save** on the toolbar. The print service now has check marks in the **Priced** and **Custom** columns.

The screenshot shows a form with the following elements:

- Print Service Category :** A dropdown menu currently showing "Lamination (Large Formats)".
- Print Service :** An empty text input field.
- Pricing :** A greyed-out text input field.
- Select Charge** : A button to the right of the Pricing field.

5. Edit your Fiery device (as described next) so you can map your custom print service to a Fiery capability.

Tip You can also create a custom print service by copying an existing one. Select a print service in the Print Services window and click **Duplicate** on the toolbar. Edit its name and then complete steps 3 to 5 above.

Managing Fiery Devices

Once you have added a Fiery device, you can edit it or delete it if necessary. For example, you may want to edit a Fiery device to auto-map additional media or to map Fiery capabilities to print services.

1. Select **Admin > Fiery Integration**. The Manage Fiery Devices window opens.
2. Select (highlight) the device you want to edit or delete.

3. To edit the Fiery device, click **Edit**.

You will now be taken through the same steps (selecting a digital press, selecting media types, mapping media, and mapping Fiery capabilities) as when you added the Fiery. You can make changes at any point. For example, if you changed the Fiery media tolerance preferences (see page 10), you can return to the media mapping window and synchronize the media to see if more media was mapped.

4. To delete the Fiery device, click **Delete**.

Manually Mapping Individual Stocks

In addition to the automatic media mapping that the system performs when you add a Fiery device, individual stocks in PrintSmith can be mapped to a media in the paper catalog on a particular Fiery device. If you have multiple Fiery devices, you can quickly map the same stock to more than one Fiery.

1. Click **Stock Definitions** in the QuickAccess panel (or select **Pricing > Stock Definitions**).
2. In the Stock Picker window, select the stock you want to map to media in a Fiery catalog.

3. Click the **Fiery Paper Catalog** tab.

Specification and Pricing Pricing Options Inventory **Fiery Paper Catalog**

4. Select the **Associate with item from Fiery Paper Catalog** check box.
5. Under **Fiery Device**, select the device on which you plan to use this stock.
6. Under **Paper Catalog**, select the media to which you want to map the PrintSmith Vision stock.
7. If you have multiple Fiery devices, repeat steps 5 and 6 to map the current stock definition to a stock in the paper catalog on a different Fiery device. (You can have different mappings on different devices.)
8. Click **Save** on the toolbar of the Stock Definitions window.

Workflow

In this chapter

Overview	32
Creating Jobs for Printing on a Fiery	32
Submitting Jobs to a Fiery Device	35
Processing on the Fiery	39
What Is Sent Back to PrintSmith Vision	44

Overview

Once setup is complete, you can start submitting jobs to your Fiery devices. What happens to submitted jobs depends on how you configured your Fiery device. Either all jobs are sent to the Held queue (recommended) and are reviewed by an operator in Command WorkStation before being printed or jobs are sent directly to the Print queue.

1. In PrintSmith Vision, create an invoice and a job for a digital printer that is integrated with a Fiery device.
2. From PrintSmith Vision, submit the job to the Fiery.
3. If jobs are sent to the Held queue, review the job in Command WorkStation (CWS), make any necessary changes or corrections, and print the job.

If jobs are sent to the Print queue, and have no errors, they are printed right away. Otherwise, make any necessary corrections so the job can be printed.

4. After the job is printed, close the job. (The Fiery may be configured to close jobs automatically.) Information about the job is then sent back to PrintSmith Vision.

Details of this workflow follow.

Creating Jobs for Printing on a Fiery

The procedure that follows summarizes how to create a job in PrintSmith Vision for the Fiery. For details of creating invoices and jobs in PrintSmith, see the *PrintSmith Vision - Setup and User Guide*.

When you create jobs for a Fiery device, note the following:

- You must always provide a content file (what you want printed) as part of the job specification. In PrintSmith Vision, content files are also known as *digital assets*.
- To provide finishing instructions to the Fiery, add print services, not charges to the job. You can still include charges, but that information is not conveyed to the Fiery.

To create a job for a Fiery

1. Create an invoice and add a B&W or color job to it.
2. In the Job window, in the **Pricing Copier** field, be sure to select a digital definition that is associated with a Fiery device. (For information, see “Task 5: Review and Edit Digital Definitions for Fiery Mapping” on page 23.)

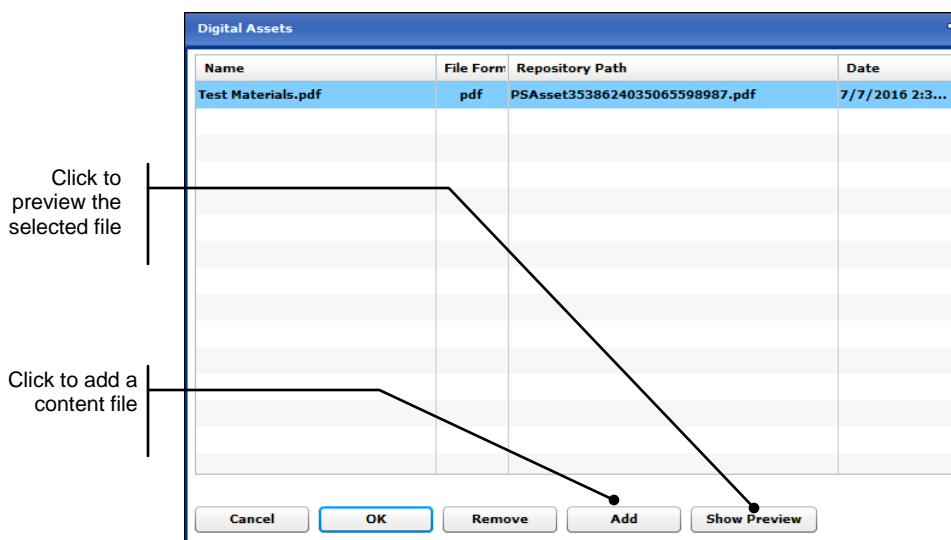

The screenshot shows the 'Job' window in PrintSmith Vision. The 'Description' field contains 'Coil bound copies'. Below this, there are checkboxes for 'Customer Supplied Stock' and 'Special Order'. The 'Stock' field is set to '20# Ardor Bond' with a 'Change' button. The 'Color' is set to 'White'. Under 'Size', there are dropdowns for 'Parent', 'Run Size', 'Finish', and 'Folded Size', all currently set to '8.5 x 11'. A diagram of a page with dimensions 8.5 and 11.0 is shown. At the bottom, the 'Pricing Copier' dropdown is set to 'Text 8.5 x 11 B&W Digital' and the 'Costing Copier' is set to 'Using Pricing Copier/Press'. A callout box points to the 'Pricing Copier' dropdown with the text: 'This must be associated with a Fiery device.'

3. Provide the content file for the job:
 - a. Under **Commands** in the Job window, click **Digital Assets**.

The Digital Assets window opens.

- b. Click **Add** and select the file you want to print.

The **Repository Path** column shows the name of the file as it will be listed in the DigitalAssetsRepository folder.

- c. To review the file, select it and click **Show Preview**. (You can review files in PDF, JPG, and PNG format.)
 - d. Click **OK**. (The **Digital Assets** command is now displayed in green to indicate a content file was supplied.)

Important If you do not provide a content file, you will not be able to print the job on the Fiery (an unknown page count in Command WorkStation indicates a missing content file).

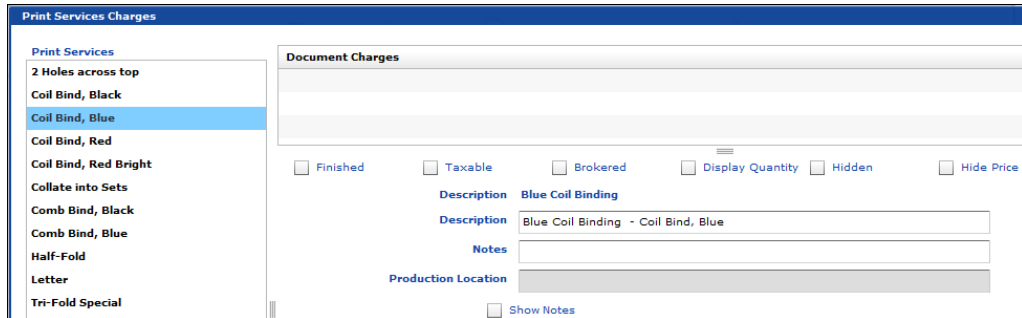

Currently the sheet count that is sent from PrintSmith Vision to the Fiery is based on the pages in the PDF content file and the ordered quantity. It does not account for any waste or “in sets of” specified for the job.

4. Add print services for any finishing options you want to convey to the Fiery:
 - a. Under **Charges**, click **Print Services**.

The Print Services Charges window opens and lists all the print services that are mapped to PrintSmith charges. (For information about this mapping, see “Task 6: Map Print Services to PrintSmith Vision Finishing Charges” on page 24.)

- b. In the Print Services Charges window, select the print service you want and click **Add**.

The print service you added is now listed under **Document Charges**.

- c. Add more print services if necessary.
 - d. Click **Done**.

The print service is now listed under **Charges** in the Job window. It is in orange to distinguish it from any regular charges you might add (which are displayed in black).

5. Click **Save** on the toolbar of the Job window and then save the invoice.

Note You cannot submit a job to a Fiery device if the job or invoice is not saved.

Submitting Jobs to a Fiery Device

You can submit jobs to a Fiery device in one of two ways:

- You can submit a single job directly from the Job window.
- You can submit several jobs at a time from the Work in Progress window. From this window you can also cancel a submitted job and see the status of all jobs that were submitted to Fiery devices.

Before you start submitting jobs, familiarize yourself with the virtual printers or job presets that may be available on the Fiery device you are using for a job.

About virtual printers and job presets

Virtual printers and job presets serve as shortcuts to increase productivity and take advantage of what your Fiery has to offer. A virtual printer or job preset is a predefined set of commonly used print options for configuring a print job. When virtual printers or job presets are defined for a Fiery device, they are automatically available for selection when jobs are submitted to the Fiery, which minimizes selections and clicks.

Virtual printers include a job action like “hold/print/delete” when a job reaches the Fiery while job presets are predefined templates of job properties that are typically placed in the Held queue only. You define virtual printers and job presets with Command WorkStation. Fiery Central supports just job presets whereas a Fiery server can have both virtual printers and job presets associated with it.

Note On some Fiery servers, virtual printers are an installable option that must be enabled.

When you are submitting a job to the Fiery:

- If you select a virtual printer or job preset for a job, the job is printed according to the job presets. Only the quantity and stock are sent to the Fiery device from PrintSmith Vision.
- If you do not select a virtual printer or job preset, information from the job in PrintSmith is sent to the Fiery device, but not all the job information may be used – only that which can be sent in JDF format, and which applies to the Fiery device. For example, business cards may be printed 1-up even if you specified 20-up.

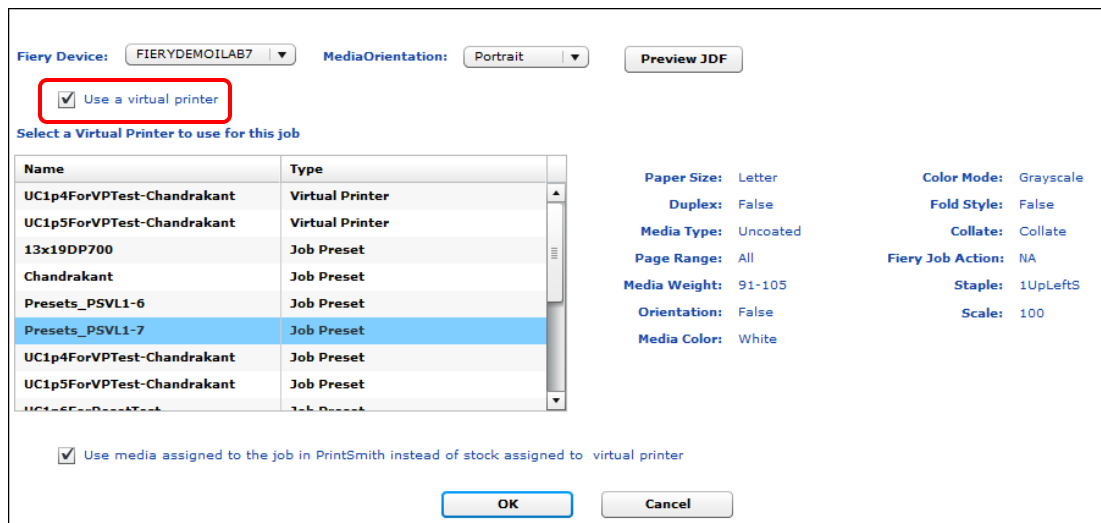

Submitting jobs from the Job window

1. Open the invoice that includes the job you want to submit and then open the job. (Both the invoice and job must have been previously saved.)
2. Click **Submit** on the toolbar (or select **Submit to Fiery** under **Commands** in the left pane).

3. To use a virtual printer or job preset for the job:
 - a. Select the **Use a virtual printer** check box.
 - b. Select the virtual printer or job preset you want to use. Information about it is then displayed on the right as shown in the figure below. The job will be produced according to the characteristics of the virtual printer you select.
 - c. Select the **MediaOrientation**.
 - d. (Optional) Click **Preview JDF** to examine the JDF ticket that will be sent to the Fiery.
 - e. If you want the job printed on the stock you selected for the job instead of on the media defined on the virtual printer, leave the **Use media assigned to the job in PrintSmith instead of stock assigned to virtual printer** check box selected. (If this media is not recognized on the Fiery, you will need to map the media in Command WorkStation. See page 42.)
 - f. Click **OK**.

After a few seconds you will get a message indicating the job was submitted. See “Processing on the Fiery” on page 39.

4. If you do not want to use a virtual printer or job preset for the job:
 - a. Leave the **Use a virtual printer** check box cleared.
 - b. Select the **MediaOrientation**.
 - c. (Optional) Click **Preview JDF** to examine the JDF ticket that will be sent to the Fiery.
 - d. Click **OK**.

After a few seconds you will get a message indicating the job was submitted. See “Processing on the Fiery” on page 39.

OK Cancel

Tip After you submit a job, the **Submit** button on the toolbar of the Job window changes to **Void Submitted Job**. Click this if you change your mind about printing the job. After the job is voided, the button changes back to **Submit**.

Void Submitted Job

Submitting jobs from the Work in Progress window

1. Select **Reports > Work in Progress**.
2. In the **Report Type** field, select **Integrated Schedule**. The Work in Progress window now includes a **Fiery** pane.

The screenshot shows the 'Work in Progress' window. At the top, there are controls for 'Report Type' (set to 'Integrated Schedule') and 'Sort By' (set to 'Customer'). Below these are 'Include' options for 'Invoices' and 'Estimates', and 'Print Options' for 'Print Screen'. There are also 'Print' and 'Notify' icons. The 'Options' section includes checkboxes for 'Completed', 'On Hold', 'Firm dates ONLY', 'Print Double Space', 'Show Totals', 'No Pricing', and 'Print Job Comments'. The 'Fiery' pane is highlighted with a red box and contains 'Submit', 'Cancel', and 'Info' buttons. At the bottom, a table lists jobs with columns for Doc#/Job, Customer Name, Description, Submit Date, Wanted by, Device ID, Location, Status, and % Done.

Doc#/Job	Customer Name	Description	Submit Date	Wanted by	Device ID	Location	Status	% Done
1243 / 1	Anna's Designs	Coil bound copies	7/7/2016	7/14/2016	FIERYDEMO			
1242 / 1	BP OIL	B&W	6/14/2016	6/21/2016	FIERYDEMO			

3. (Optional) To sort the list of jobs differently, select a different criterion in the **Sort By** field.
4. Select the job you want to submit and click **Submit** in the **Fiery** pane.
5. Depending whether you are selecting a virtual printer or not, complete either step 3 or 4 as described in "Submitting jobs from the Job window" starting on page 36.
6. To cancel a job you submitted, select the job and click **Cancel** in the **Fiery** pane.

Status information is provided in the last three columns in the Work in Progress window:

Status	% Done	Queue
Ready	0	26
Waiting	0	31
Waiting	0	24

7. To see some additional details of a submitted job, select it and click **Info** in the **Fiery** pane. In the figure below you can see the job is waiting to be processed.

The screenshot shows a dialog box with the following information:

- Doc#/Job #:** 1243/1
- Description:** Coil bound copies
- Status:** Ready
- Percent:** 0%
- Last Updated:** Thu Jul 7 14:35:29 GMT-0400 2016

At the bottom of the dialog box are two buttons: **OK** and **Cancel**.

Processing on the Fiery

What happens to jobs after you submit them from PrintSmith depends on how the Fiery is configured.

If jobs are sent to the Held queue

If the Fiery is configured so that jobs are sent to the Held queue (which is the recommended method), you must always review each job. For example, you may want to look at the job ticket or select media before printing the job.

1. Start Command WorkStation. Your job should be listed on the **Held** tab.

2. If any warnings are displayed for a job, make the necessary adjustments. A typical cause is unrecognized (unmapped) media. For information about mapping the media, see page 42.

Warning of issue with a job

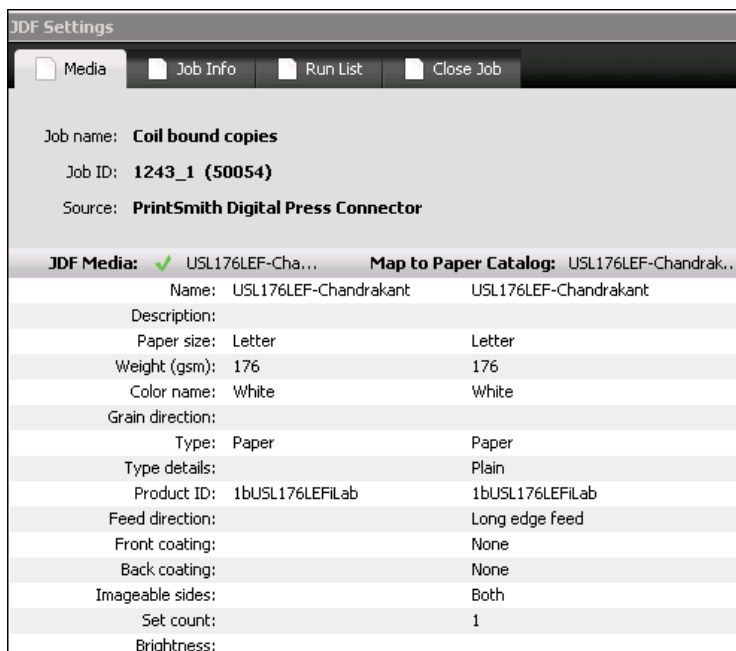

3. If a job was submitted without a content file, the warning icon is displayed next to the job and **Unknown** is displayed next to **Pages** below **JDF Settings**. In this case, cancel the submitted job in PrintSmith, add a content file to the job, and re-submit the job.

4. Review the details of the job. For example, right-click the job and select **JDF Settings**.

On the **Media** tab you can see what media was selected:

On the **Job Info** tab, you can see finishing information, for example, **Binding: Coil Bind, Blue**.

The screenshot shows the 'JDF Settings' window with the 'Job Info' tab selected. The job name is 'Coil bound copies' and the job ID is '1243_1 (50054)'. The source is 'PrintSmith Digital Press Connector'. The 'Job Header' section contains Job Part ID, Related Job ID, Related Job Part ID, and Project ID. The 'MIS Details' section includes Chargeable, Work Type, Work Type Details, and Operation Mode, all set to 'Unknown'. The 'Scheduling' section shows Priority, Due Date (7/14/2016 9:30:00 AM), Start, End, and Created (7/7/2016 11:46:01 PM). The 'Comments' section has a text area with 'Binding: Coil Bind, Blue' highlighted by a red box and an 'Add' button.

5. Print the job.

After it is printed, the job is listed on the **Printed** tab.

Held (3)		Printed (10)		Archived (1)		+	
Job Title	User	Size	Pages	Copies	Date/Time	From	To
✓ JDF Coil bound copies	PrintSmit...	0.2 MB	11	...	Today 12:03:56 AM		
✓ JDF B&W	PrintSmit...	0.1 MB	16	1	Yesterday 8:25:46 PM		
✓ JDF Brochure - Brochure	PrintSmit...	1.3 MB	2	1	Yesterday 7:20:33 PM		

6. If a mistake was made, such as the wrong stock was used for a job:
 - a. Right-click the job and select **JDF Settings**
 - b. Click the **Job Info** tab.
 - c. In the **Comments** field, enter a note to explain the problem and then click **Add**.
 - d. Click **OK**.

These comments will be included on the job ticket in PrintSmith Vision.

7. Depending how Command WorkStation is configured, jobs may close automatically or may need to be closed manually. Some shops may require some manual input even if jobs are closed automatically.

Important If you track stock inventory in PrintSmith, for accurate results do *not* configure Command WorkStation to close jobs automatically. When a job is closed automatically on the Fiery, the stock quantity is sent back to PrintSmith as soon as the job is printed, and does *not* include the actual sheet count that the operator may enter after the job is done. For the actual sheet count to be sent back to PrintSmith, make sure Command WorkStation is configured for manual closing of jobs. This gives the operator the opportunity to enter an actual sheet count (if it differs from the original sheet count for the job) before the information is sent to PrintSmith. Stock inventory in PrintSmith is then adjusted correctly

If jobs require manual closing

- Right-click the job you want to close, select **JDF Settings**, and click the **Close Job** tab. Make sure the **Employee ID** is correct and, if necessary, change the **Actual Sheets** (although typically this is not needed since the number is calculated for you). Then click **Close Job** (in the bottom left of the window).

If jobs close automatically

- Right-click the closed (finished) job, select **JDF Settings**, and click the **Close Job** tab. Make sure the **Employee ID** is correct and, if necessary, change the **Actual Sheets** (although typically this is not needed since the number is calculated for you). Note that if you change the actual sheets for a closed job, that information is *not* sent back to PrintSmith Vision.

If jobs are sent to the Print queue

If the Fiery is configured so that jobs are automatically sent to the Print queue, they are printed right away if they have no errors. If errors are found, you must correct them and then print the job. Job closing is the same as described in step 7 of “If jobs are sent to the Held queue” above.

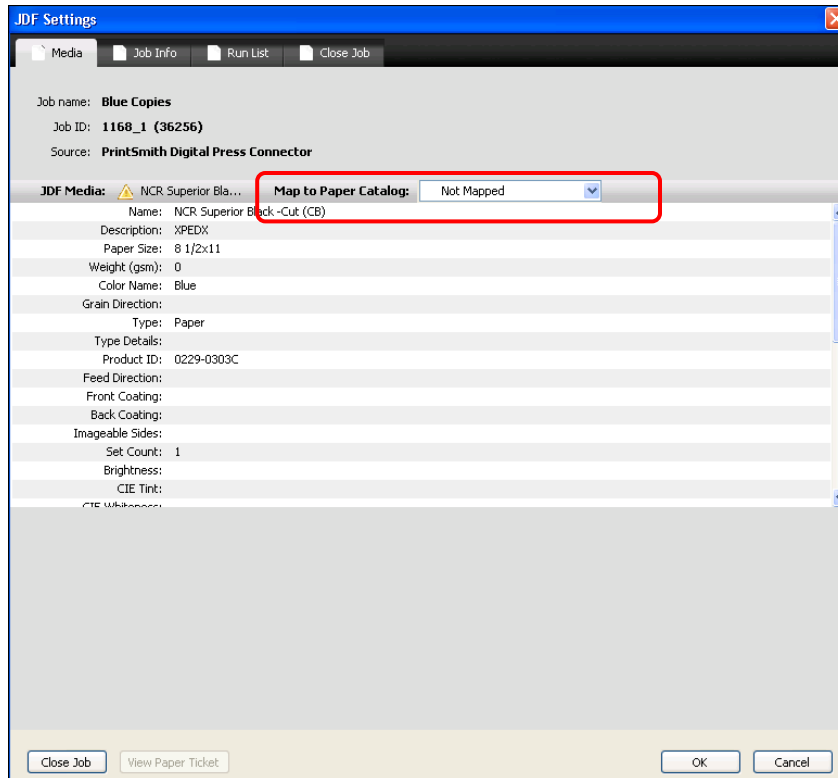

Media mapping

When a job is submitted from PrintSmith Vision, the Fiery checks whether the stock specified for the job is mapped to media in the paper catalog on the Fiery. If it is, that media is used. If no mapping exists, the Fiery attempts to map the specified stock to an entry in the paper catalog. If the mapping is successful, the media is used for any job that contains the same media definition. If the mapping fails, you can map the media manually to an item in the paper catalog.

- If a job you submitted has a warning icon next to it, the most likely issue is unrecognized media that cannot be mapped based on the information that the Fiery received. To map the media, right-click the job and select **JDF Settings** or click **JDF Settings** on the right side of the window.

2. On the **Media** tab, in the **Map to Paper Catalog** field, select the media you want to use.

3. Click **OK**.

What Is Sent Back to PrintSmith Vision

The following information is sent back to PrintSmith Vision from the Fiery:

- The status of the job. This can be seen in the Work in Progress window.
- After a job is closed, comments that were entered about the job in Command WorkStation (on the **Job Info** tab in the JDF Settings window) are included on the job ticket in PrintSmith.
- For inventoried stock, the available stock quantity is adjusted based on the stock that was consumed for the job on the Fiery.

Appendix: Installing Remote Print Center (RPC)

When Is Remote Print Center Required?

When PrintSmith Vision is EFI-hosted, to ensure communication between PrintSmith Vision and a Fiery, you must install a Remote Print Center (RPC) server on one of your PrintSmith Vision client computers that is connected to a Fiery. This RPC server then communicates with an RPC client that resides with your PrintSmith Vision server in the EFI hosting center.

RPC Requirements

The computer on which you install RPC must meet these hardware and software requirements:

<i>Operating system:</i>	Windows 7, 8, 10, Server 2008 R2 Standard, or Server 2012 R2 Standard or Essentials Macintosh OS X version 10.9, 10.9 Server, 10.10, or 10.10 Server
<i>Processor:</i>	Dual core
<i>Memory:</i>	4 GB

In addition, the computer where you install RPC must:

- Have access to the Fiery device(s) you are using.
- Have access to the Internet, including access to PrintSmith Vision.
- Run 24/7 and *not go to sleep*. It must be available for communication all the time.

Tip On a Windows computer, turn off sleep mode in the **Power Options** settings in the Control Panel; on a Macintosh, turn off sleep mode in the **Energy Saver** settings.

Installation Procedure

1. Obtain the RPC Installer as instructed.
2. On the computer where you plan to install RPC, double-click the Installer. (On Windows, this is **RPCInstallerWindow.exe**; on a Macintosh you receive a zip file named **RPCInstallerWindow.zip**, which you must unzip to obtain the Installer.)
3. Follow the instructions in the Installer, being sure to enter your PrintSmith Vision URL in the Get User Input window as shown below.
