

Product brochure

Medium voltage AC drive ACS2000, 250 – 2600 kW, 4.0 – 6.9 kV

ACS2000 - flexible and reliable motor control

The ACS2000 medium voltage AC drive provides reliable motor control for a wide range of applications.

The ACS2000 is designed for high reliability, easy installation and fast commissioning reducing the total cost of ownership.

With its compact footprint, the ACS2000 can be retrofitted to control standard induction motors via a direct connection to 4.0 - 6.9 kV line supplies (direct-to-line). Alternatively, the ACS2000 can be operated with an input isolation transformer to allow for flexible line side power voltages. It is available with an integrated transformer or it can be connected to an external transformer.

The ACS2000 direct-to-line combines the cost savings of a transformerless variable speed drive system with the benefits of Voltage Source Inverters (VSIs), including excellent availability and reliability, high and constant power factor and superior dynamic control performance.

The ACS2000 is available as low harmonic drive for optimal low harmonic performance or as regenerative drive for enhanced active braking and power factor correction.

Key product features

- Suitable for use with or without an input isolation transformer
- Direct-to-line connection (transformerless) provides low cost of ownership
- Simple drive system integration
- Three in three out cabling technique for quick and easy installation
- Suitable for new or existing induction motors
- Modular design provides high reliability and low maintenance costs
- ACS2000, low harmonic drive for low harmonic performance
- ACS2000, regenerative drive for regeneration and power factor correction

Fields of application

| Industries | Applications |
|-----------------------------|---|
| Cement, mining and minerals | Conveyors, crushers, mills, mine hoists, fans and pumps |
| Chemical, oil and gas | Pumps, compressors, extruders, mixers and blowers |
| Metals | Fans and pumps |
| Pulp and paper | Fans, pumps, refiners, vacuum pumps and chippers |
| Power generation | Fans, pumps, conveyors and coal mills |
| Water | Pumps |
| Other applications | Test stands, wind tunnels and sugar mills |

Key features

The ACS2000 general purpose drive offers unique features which provide superior application flexibility with a standard solution.

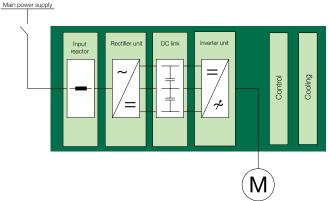

Line supply connection flexibility

The ACS2000 provides different line supply connection options, each offering unique benefits. The ACS2000 is available for connection to an external input isolation transformer, with an integrated input isolation transformer or for use without a transformer. The latter allows a direct connection to the industrial line supply (direct-to-line).

Direct-to-line

The ACS2000 direct-to-line features an Active Front End (AFE), which enables transformerless operation. This can lower investment costs substantially. Due to its compact size and lighter weight compared to a drive requiring a transformer, it also results in lower transportation costs and needs less space in the electrical room.

The ACS2000 can be easily retrofitted to fixed speed motors while the direct-to-line technology results in quick and easy installation and commissioning.

Topology of the ACS2000 for direct-to-line connection

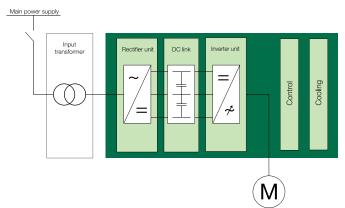

For operation with transformer

External transformer

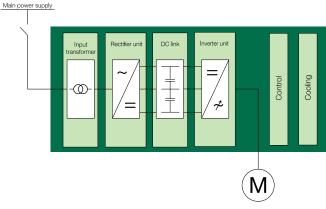

For applications where a voltage-matching input transformer is needed or galvanic isolation from the power supply is required, the ACS2000 can be connected to a conventional oil or dry-type converter transformer.

Integrated transformer

Alternatively, the ACS2000 is also available with an integrated input isolation transformer.

Topology of the ACS2000 for operation with an external transformer

Topology of the ACS2000 with an integrated input transformer

Powerful performance with DTC

Precise and reliable process control, together with low energy consumption, results in top performance. The ACS2000 drive control platform uses ABB's award-winning Direct Torque Control (DTC), resulting in the highest torque and speed performance as well as the lowest losses ever achieved in medium voltage AC drives. Control of the drive is immediate and smooth under all conditions.

Motor friendly output waveform for use with new or existing motors

The ACS2000 provides near sinusoidal current and voltage waveforms making it compatible for use with standard motors and cable insulation. This is achieved with ABB's patented multilevel topology which utilizes one DC link enabling a multi-level output waveform with a minimum number of power components.

Output sine filter – perfect output power quality for special applications

An output sine filter, which is well-known from the ACS1000, is optionally available. Side effects of an inverter such as voltage reflections and common mode voltages will be totally eliminated, resulting in an excellent waveform of voltage and current, supplied to the motor. The output sine filter is used for very long motor cables, for retrofitting of old motors with an aged insulation system and for special applications such as ESP pumps (electrical submersible pumps) and conveyors in underground mines.

Low harmonic signature

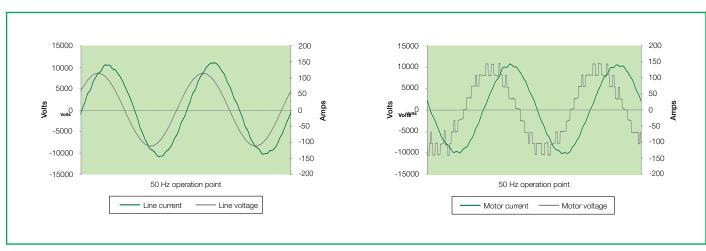

A low harmonic solution is available which meets the most stringent requirements for harmonic distortion as defined by relevant standards. This avoids the need for harmonic analysis or the installation of network filters.

Regeneration

For applications with high braking energy, the ACS2000 is available with optional regeneration capability, which feeds back braking energy to the line supply. This further reduces the overall energy consumption.

Power factor correction

For applications where other loads connected to the same line supply cause leading or lagging power factor, the ACS2000 is available with a static VAR compensation option. With static VAR compensation, a smooth line supply voltage profile can be maintained and reactive power penalties can be avoided.

Line and motor current and voltage

ACS2000 - the right choice for general purpose applications

Depending on the application, variable speed drives have to fulfill different requirements. The ACS2000 provides the right solution for general purpose applications.

ACS2000, low harmonic drives

ABB's low harmonic drives offer optimal low harmonic performance which does not require any additional filtering.

Line side harmonics of the ACS2000 are compliant with all relevant standards. This avoids the need for harmonic analysis or the installation of a multi-pulse transformer, network filters or other additional equipment for harmonics reduction.

ACS2000, regenerative drives

ACS2000 regenerative drives feature an Active Front End (AFE), which provides enhanced active braking and power factor correction.

Regenerative braking

The AFE enables regenerative braking which allows full power flow both in motoring and generating mode. Regeneration offers significant energy savings compared to other braking methods as energy is fed back to the supply network.

Regeneration is especially suitable for applications with frequent starts and stops. It allows energy efficient continuous braking of applications such as downhill conveyors or expanders in gas pipelines.

Power factor correction

The AFE can also provide reactive power (VAR) compensation. With VAR compensation, the voltage level can be controlled to stay within tight limits. A smooth network voltage profile can be maintained and reactive power penalties can be avoided.

ACS2000

The air-cooled general purpose drive provides simple and reliable motor control for a wide range of applications.

User-friendly drive control panel for local operation

- Keypad with multi-language display
- Main supply on/off pushbuttons
- Emergency off pushbutton

ACS2000

It is designed for easy installation, fast commissioning and efficient maintenance reducing the total cost of ownership.

Features and benefits

| Features | Advantages | Benefits |
|---|---|---|
| Operation without transformer (direct-to-line) | | |
| | No transformer required | Reduces capital expenditure |
| | Easy retrofit to fixed-speed motors | Minimizes investment |
| | Easy and fast commissioning | Lowers downtime |
| | Compact and light drive system | Lowers transportation costs; less space required in electrical room |
| Operation with transformer | | |
| The ACS2000 is available with an integrated transformer or for operation with an external transformer | Connection to any voltage level | Easy integration into existing infrastructure |
| | Conventional oil or dry-type input isolation transformer | No special input isolation transformer required |
| | Galvanic isolation to the line supply | Operation under single ground fault without impact on the drive |
| | Separate input isolation transformer can be located outside | Heating losses are not dissipated into electrical room, reducing load on HVAC system |
| | Integrated transformer for quick installation and commissioning | Lowers downtime |
| Active Front End (AFE) | | |
| | Power factor adjusted to compensate for reactive power | Reduces energy loss in distribution system, avoiding need for larger cables and utility penalties |
| | Enables a direct connection to the line supply | Transformer is not required |
| | Four-quadrant operation (regenerative braking) | Minimizes energy consumption |
| | Inherent low harmonic signature | Harmonic emissions compliant with all relevant standards |
| Multilevel topology | | |
| | Patented multilevel topology | Low parts count, which boosts drive availability |
| | Provides near sinusoidal current and voltage waveforms | Compatible with standard new or existing motors |
| Voltage Source Inverter (VSI) topology | | |
| | Excellent availability, reliability and efficiency | Higher uptime of plant or process |
| | High and constant power factor | Eliminates utility penalties |
| | Superior dynamic control performance | Safe ride through during supply voltage dips and better process control |
| Direct Torque Control (DTC) | | |
| | Precise and reliable process control with superior performance | Higher productivity |
| Compact size | | |
| | Requires less space in electrical room | Frees up valuable floor space |

Simple drive system integration

Installing a medium voltage AC drive could not be easier with ABB's three in - three out concept. Simply disconnect the direct-on-line cable, connect the drive, and connect the drive to the motor.

Along with its flexible line supply connection options and advanced software tools the ACS2000 allows smooth and simple drive system integration into any industrial environment.

Flexible control interface

ABB offers an open communication strategy, enabling connection to higher-level process controllers. The ACS2000 can be installed with all major fieldbus adapters for smooth integration, monitoring and controlling of different processes, according to customer requirements.

DriveOPC

DriveOPC is a software package, which allows communication between ABB drives and the customer's Windows®-based applications.

DriveStartup

The commissioning wizard DriveStartup is an advanced tool which simplifies and speeds-up commissioning, reducing plant downtime considerably.

Configurable disconnect

ABB offers a configurable disconnect option package for a flexible, self-contained switchgear solution where no control coordination is required upstream. It provides a visible blade switch disconnect and integral input contactor with options such as a motor protection relay, control power transformer and other customer controls.

Maintenance

Simple and efficient maintenance is an important factor in keeping operating costs down.

The ACS2000 is designed to maximize uptime as well as to facilitate quick repair. The modular design lends itself to quick and effective replacement of components, resulting in industry leading Mean Time to Repair (MTTR).

Reliable components

ABB drive technologies, such as the multilevel VSI topology, provide a low parts count, which increases reliability, extends Mean Time Between Failures (MTBF) and improves availability.

Easy access

The ACS2000 has been designed to allow easy front access to all drive components.

Redundant cooling

The ACS2000 is available with redundant fans which increases availability.

Service and support

The ACS2000 is backed by comprehensive service and support, from the customer's initial inquiry throughout the entire life cycle of the drive system.

Installation and commissioning

Proper installation and commissioning of the equipment, done by qualified and certified commissioning engineers, reduces start-up time, increases safety and reliability and decreases life cycle costs. In addition, operators can be given practical training by experienced specialists on site.

With its three in - three out principle, flexible line supply connection options and advanced software tools, such as the commissioning wizard, start-up of the ACS2000 is easy and fast, thereby minimizing plant downtime.

Life cycle management

ABB's drive life cycle management model maximizes the value of the equipment and maintenance investment by maintaining high availability, eliminating unplanned repair costs and extending the lifetime of the drive.

Life cycle management includes:

- providing spare parts and expertise throughout the life cycle
- providing efficient product support and maintenance for improved reliability
- adding functionality to the initial product
- providing a smooth transition to a new technology at the end of the life cycle

Training

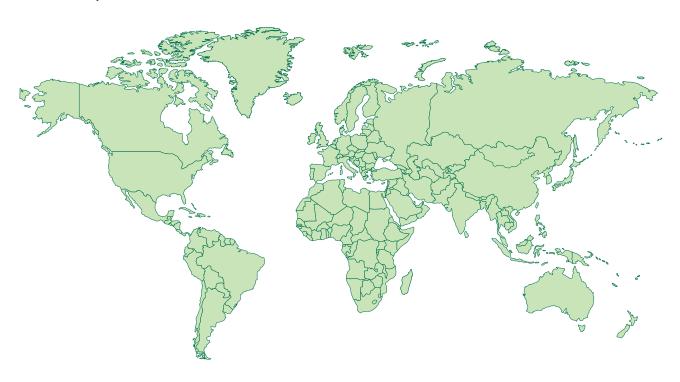

ABB provides extensive training for its medium voltage AC drives. A range of training programs is offered from basic tutorials to programs tailored to the customer's specific needs.

Global network, local presence

Aftersales service is an integral part of providing the customer with a reliable and efficient drive system. The ABB Group of companies operates in more than 100 countries and has a worldwide network of service operations.

Services for ABB's medium voltage AC drives

- Supervision of installation and commissioning
- Local support
- Worldwide service network
- Spare parts and logistics network
- Training
- Remote services
- 24 x 365 technical support
- Preventive maintenance
- Customized service agreements

Data sheet ACS2000

Inverter type

Voltage Source Inverter (VSI), 9 levels line-to-line, with high voltage IGBT (Insulated Gate Bipolar Transistor) power semiconductors

Motors

Induction motors; 250 - 2,500 kW

Standards

All common standards

4 kV according to EN, IEC, CE, NEMA, IEEE 1566, UL 347A 6 kV according to EN, IEC, CE, NEMA

Input

5-level self-commutated IGBT active front end (AFE) or 24-pulse diode front end (DFE)

| | direct-to-line | with integrated transformer | for operation with external transformer |
|---------------------|----------------|--------------------------------|---|
| Low harmonic drives | AFE | DFE | DFE |
| Regenerative drives | AFE | AFE | AFE |

Rated input voltages:

4.16 kV, -10% to +10% (-30% with derating) 6.0 / 6.6 kV, -10% to +10% (-30% with derating) 6.9 kV, -10% to +5% (-35% with derating); with DFE 0% to +5% The ACS2000 with integrated transformer is available with primary transformer voltages of 6.0, 6.6, 10 and 11 kV (+10% to -10%).

Input frequency 50/60 Hz

Auxiliary supply voltage

400, 440, 480 or 600 VAC, 3-phase, $50/60\,Hz$

UPS (Uninterruptible Power Supply) / Single phase control supply

If available, an external UPS can be connected for control power supply, 110 – 240 VAC, single phase or 110/220 VDC. Alternatively, the control can be powered via the auxiliary supply voltage or an internal UPS can be provided.

Output frequency

0 to 75 Hz

Rated output voltage

 $4.0 - 6.9 \, kV$

Efficiency of converter

up to 97.5%

Input power factor

Controlled to 1 or adjustable to compensate for reactive power of other loads connected to the same network

Ambient temperature

+1 to 40°C (higher with derating)

Enclosure classes

IP21 to IP42

Control interface (optional)

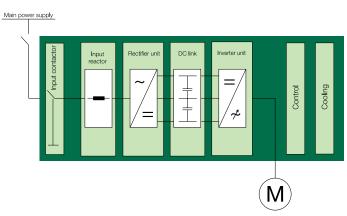

All common fieldbuses including Profibus, Modbus, DeviceNet, Ethernet, ACS Drivebus, ABB Advant Fieldbus AF100, others

Standard protection functions

Auxiliary voltage fault, overtemperature supervision, overcurrent, short circuit detection, motor overload, motor stall and overspeed protection, communication fault (I/O watchdog), earth fault, main circuit breaker supervision/tripping, emergency off signal supervision

Example options

- Motor supervision I/Os
 - Fault/alarm: overtemperature, vibration of bearings
 - PT 100: winding and bearing temperatures
- Transformer supervision I/Os
 - Fault/alarm: overtemperature, Buchholz
 - PT 100: winding temperatures
- Hardwired signals for remote drive control
 - References: start/stop, speed/torque etc.
 - Status feedback signals: ready/running
 - Analog signals: current/voltage/power etc.
- Redundant cooling fans with automatic switch over for duty cycling and upon fan failure
- ABB DriveWindow service and diagnostic software
- ABB DriveMonitor[™] for remote monitoring and diagnostics
- Output sine filter for special requirements, such as motor operation in hazardous atmosphere zone 1, when motor cable length is extra long or for motors nearing the end or exceeding the expected life time
- Configurable disconnect package

Topology of the ACS2000 with direct-to-line connection with configurable disconnect

Notes:

Indicative information referring to typical 4-pole motor, under nominal supply voltage conditions. The ratings apply at 40°C. At higher temperatures (up to 50°C) the derating is 1.5% / 1°C.

Ratings for nominal network conditions

With sine filter option motor ratings also valid for square torque applications

No-overload use

 $\mathbf{P}_{\text{\tiny cont. max}}$: Typical motor power in no-overload use.

Nominal ratings

 $I_{\text{cont. max}}$: Rated current available continuously without overloadability at 40°C.

 ${\rm I}_{\rm max}\!\!:$ Maximum output current, available for 10 seconds at start.

Light-overload use

 $\mathsf{P}_{\mathsf{N}}\!\!:$ Typical motor power in light-overload use.

 $\rm I_{\rm N}$: Continuous current rating of particular sub-frame allowing 110% $\rm I_{\rm N}$ at 40°C for 1 minute every 10 minutes.

Heavy-duty use

 P_{hd} : Typical motor power in heavy-duty use.

 $_{\rm hd}^{\rm I}$: Continuous current rating of particular sub-frame allowing 150% $\rm I_{hd}$ at 40°C for 1 minute every 10 minutes.

- 'x' indicates the different converter types
 - B for operation with external transformer
 - L direct-to-line
 - K with integrated transformer
- 3 AFE: 6.0 / 6.6 kV, -10% to +10%; 6.9 kV, -10% to +5% DFE: 6.0 / 6.6 kV, -10% to +10%; 6.9 kV, 0% to +5%
- Values for 6.6 kV primary voltage (>6.6 kV to 12 kV: +300 mm)
- $^{\rm 5}$ Values for 6.6 kV primary voltage (>6.6 kV to 12 kV: +200 mm)
- ⁶ Up to 400 mm more with sine filter option

Dimensions:

Height: 2,100 mm cabinet height

2,490 mm (incl. cooling fans on top)
2,700 mm with redundant cooling fans

Notes:

Indicative information referring to typical 4-pole motor, under nominal supply voltage conditions. The ratings apply at 40° C. At higher temperatures (up to 50° C) the derating is $1.5\% / 1^{\circ}$ C.

Ratings for nominal network conditions

No-overload use

 $\mathbf{P}_{\text{cont. max}}\!\!:\!$ Typical motor power in no-overload use.

Nominal ratings

 $I_{\text{cont. max}}$: Rated current available continuously without overloadability at 40°C.

 I_{max} : Maximum output current, available for 10 seconds at start.

Light-overload use

 $P_{\rm N}$: Typical motor power in light-overload use.

Heavy-duty use

 P_{hd} : Typical motor power in heavy-duty use.

 I_{nd}^{-2} Continuous current rating of particular sub-frame allowing 150% I_{nd} at 40°C for 1 minute every 10 minutes.

- 'x' indicates the different converter types
 - A for operation with external transformer
 - T direct-to-line
 - I with integrated transformer
- $^{\rm 3}$ AFE: 6.0 / 6.6 kV, -10% to +10%; 6.9 kV, -10% to +5%

Dimensions:

Height: 2,100 mm cabinet height

2,490 mm (incl. cooling fans on top) 2,700 mm with redundant cooling fans

Notes:

Indicative information referring to typical 4-pole motor, under nominal supply voltage conditions. The ratings apply at 40°C. At higher temperatures (up to 50°C) the derating is 1.5% / 1°C.

Ratings for nominal network conditions

No-overload use

 $\mathbf{P}_{\text{cont. max}}\!\!:$ Typical motor power in no-overload use.

Nominal ratings

 $I_{\text{cont. max}}$: Rated current available continuously without overloadability at 40°C.

 I_{max} : Maximum output current, available for 10 seconds at start.

Light-overload use

 $P_{\rm N}$: Typical motor power in light-overload use.

 $I_{_{\rm N}}$ Continuous current rating of particular sub-frame allowing 110% $I_{_{\rm N}}$ at 40°C for 1 minute every 10 minutes.

Heavy-duty use

 $P_{\rm hd}$: Typical motor power in heavy-duty use.

 $I_{\rm he}$: Continuous current rating of particular sub-frame allowing 150% $I_{\rm hd}$ at 40°C for 1 minute every 10 minutes.

- 'x' indicates the different converter types
 - A for operation with external transformer
 - T direct-to-line
 - I with integrated transformer
 - 'y' indicates the different voltages
 - 6 for 6.6 kV
 - 9 for 6.9 kV
- AFE: 6.0 / 6.6 kV, -10% to +10%; 6.9 kV, -10% to +5%

Dimensions:

Height: 2,100 mm cabinet height

2,490 mm (incl. cooling fans on top) 2,700 mm with redundant cooling fans
