

Irrigation systems

PRODUCT CATALOG

primed[®]

Primed[®] Medizintechnik GmbH is a highly experienced manufacturer of medical devices.

For many years we have been supplying our customers with high quality products "MADE IN GERMANY".

Primed[®] both develops and manufactures all products in-house, in a certified development process according to DIN EN 13485.

Starting from the product idea, through material tests, tool construction and product release, we produce innovative medical devices from one single source. Our production covers the entire manufacturing process (injection moulding/extrusion/assembly), up to sterilization in our own EO sterilization facility.

These conditions enable us to react extremely flexible to market requirements and to ensure the continuous development of our products.

Irrigation systems are used for diagnostic and therapeutic applications. They are required for emptying the intestine prior to examinations or surgeries, but also for dejection in ventilated or comatose patients. In addition, they are designed for draining off gases and treating functional intestinal disorders or administering contrast media and medication.

When using closed irrigation systems, the danger of contamination is minimized because neither users nor treating personnel get in contact with any intestinal contents. These single-use systems are easy and hygienically to handle and increase the efficiency of care in daily hospital routine.

IRRIGATION SYSTEMS (STERILE)

PRI-COLOBAG

Irrigation system with rectal balloon catheter and funnel connection

- irrigation bag 2000 ml
- delivery tube (length = 150 cm) with tube clamp and Y-piece
- additional tube with funnel connection and tube clamp (length = 30 cm), plus rectal balloon catheter with tube piece (length = 15 cm) – both attached via Y-piece
- rectal catheter with silicone balloon (length = 134 mm) and olive (Ø 16 mm)
- Luer-Lock syringe included
- sterile packaged

★ suitable for return flow enema, cleansing and contrast enema
