## GARRISON STEEL PICKET FENCING

**Global steel picket fencing**, also known as Garrison fence is particularly popular for commercial applications as it provides a high level of security.

Whether your need is for a commercial property, park, or school, our products offer maximum security, while also providing a lot of cost savings.

They are 1800 or 2100mm tall and made of steel tube. As these are Garrison style, they have pressed pointed tips. They give unique feature and also act as a deterrent as they would be incredibly dangerous and difficult for any intruder to try to climb and enter your premises. Keeping property secured is crucial to prevent damage to your property, robbery and unauthorised access. So why not keep your employees, customers, products, and information safe with our trustworthy products.

This product range is made of pre-galvanised steel and then powder coated. The treatment of the steel gives it an extended life period and prevents rusting. Additionally, it requires low maintenance and upkeep, regardless of the climate. Our products are economical, yet durable, which make them a great investment for improving the security of your property.

Garrison fencing units are also made with durable components including heavy duty hinges and posts, enabling them to last longer compared to others. This quality alone makes the investment worthwhile as it eliminates a lot of maintenance and replacement costs.

<b>Panel Size (mm)</b>	1800H / 2100H x 2400W
<b>Pick Size (mm)</b>	25 x 25 x 1.2
<b>Post Size (mm)</b>	65 x 65 x 2.0 x 2900
<b>Capping</b>	Steel
<b>Pre Finish</b>	Galvanised
<b>Hardware</b>	Nuts & Bolts Supplied
<b>Fence Connectors</b>	Straight & Angled Connectors
<b>Gates to Match</b>	Manual sliding gates Remote controlled electric sliding gates Conventional swinging gates

## GARRISON STEEL PICKET FENCING

# FENCING

## PVC RURAL FENCING

**Global PVC Fencing** is the ultimate fencing for the livestock and animal farming industries. It is an excellent alternative to wood, steel or wire, providing strength and durability to withstand harsh Australian conditions. It will not break down, crack, peel, warp or discolour and has a life expectancy of 30 years.

Global PVC Fencing is constructed from a revolutionary vinyl material that lasts longer and is stronger than wood. It has a higher tensile strength and four times the flexibility of timber. It can absorb high impacts, and retains its shape for life. It will never need painting, is rot and termite resistant and much easier to clean than traditional fencing, thus saving you valuable time and money.

The rails are reinforced with internal ribs, which make the fence strong enough to support an adult's weight (for example climbing on or over the fence). A horse leaning on the fence will not break the rails as they are designed to flex and return to their original position. The specially designed notched system allows the rail to pop out of the post under severe impact, rather than breaking, so they are easily put back into place. On the rare occasion that breakage does occur from severe direct impact, rails can be individually and easily replaced.

Global PVC fencing is much safer for animals and people alike, as it has a smooth surface with no nails, sharp edges or splinters, and no nasty wires to get caught on or tangled in.

Animals are less likely to suck or chew on a Global PVC Fence as it has a tough surface, retains virtually no moisture and has no taste. For example, horses that develop wind sucking disorder typically will chew on timber fences, because it offers them taste and texture. Global PVC Fencing has neither taste nor texture so it helps to prevent wind sucking.

Finally, if you are in the business of breeding quality horses, cattle or even alpacas for sale, then the clean, uniform lines of Global PVC Fencing throughout your property will leave visitors with a lasting impression, speaking volumes for the standard of your business.

Available in 2, 3 or 4 rail systems (3 rail sample above).

Fence Height (mm)	1200
Post Size (mm)	1800 x 127 x 127
Post Centres (mm)	2400
Rail Size (mm)	140 x 38
Number of rails available	2 / 3 / 4
UV Resistant	Yes – See in Store

## PVC PICKET FENCING

**Global PVC Picket fence** is a great fencing solution for the discerning home customer. This stylish option is simple to erect, long lasting and does not need repainting every few years.

Panels come fully assembled and clip into the posts with a unique notching system making it easy for even first timers to put together. Global PVC Picket fencing is impervious to rot and protected from UV light by the Titanium Dioxide impregnated into the plastic.

The fence is strengthened with an aluminium insert in the bottom rails. These units also have added security features including notched pickets and rails to ensure that the neighbourhood kids do not run off down the street with them.

Two ranges are available, Gothic Scalloped and New English Flat.

**Gothic Scalloped:** With a scalloped design these fencing panels help add a colonial look to your home.

**New English Flat:** For those looking for simple clean lines to compliment the look of their home, the New English Flat is a great option. The fence is the same height straight across

Both vehicle and pedestrian gates are also available for ease of access.

Contact your local Global warehouse today for more information.

## STEEL MESH

**Global steel mesh sheets** have a number of uses in industrial, agricultural and home environments whether it be for fencing, ute enclosures or pallet rack mesh backing.

Global steel mesh sheets are a 50mmx50mm mesh with a 3mm thickness and the sheets are 2900mm x 2300mm.

Global recommends that a standoff mesh backing system be used whenever a single row of pallet racking is positioned in a location that is not against a wall.

From Worksafe Victoria Guidance note:- Pallet Racking operation and maintenance

“In situations where single rows of pallet racking are installed, and there is pedestrian access along the rear of the racking, rear protection should be installed to prevent loads falling out of the back of the racking.

Wire Thickness (mm)	3
Mesh Size (mm)	50 x 50
