

# Rosemount 1595 Conditioning Orifice Plate

- *Designed to provide superior performance in short straight pipe run applications*
- *Requires only two diameters of straight pipe run after an upstream flow disturbance*
- *Accurate and repeatable*
- *Comprehensive offering*
- *Suitable for most gas, liquid, and steam applications*
- *Patent-pending technology*

## Rosemount 1595 Conditioning Orifice Plate

The 1595 Conditioning Orifice Plate is designed to install downstream of a variety of disturbances with minimal straight pipe run, providing superior performance.

### 1595 Conditioning Orifice Plate

- A revolutionary innovative technology based on the most common differential primary element in the industry
- Requires only two diameters of straight pipe run after an upstream flow disturbance
- Reduced installation costs
- Easy to use, prove, and troubleshoot
- Good for most gas, liquid, and steam as well as high temperature and high pressure applications

### 1595 Tailored Use

The 1595 can be used in conjunction with the Rosemount 1496 Flange Union / 1497 Meter Section. See Product Data Sheet document number 00813-0100-4792 and Figure 2 and 3 for 1496 and 1497 products.

## Rosemount DP-Flow Solutions

### **Annubar Flowmeter Series: Rosemount 3051SFA, 3095MFA, 485, and 285**

The state-of-the-art, fifth generation Rosemount 485 *Annubar* combined with the 3051S or 3095MV MultiVariable transmitter creates an accurate, repeatable and dependable insertion-type flowmeter. The Rosemount 285 provides a commercial product offering for your general purpose applications.

### **Compact Orifice Flowmeter Series: Rosemount 3051SFC, 3095MFC, and 405**

Compact Orifice Flowmeters can be installed between existing flanges, up to a Class 600 (PN100) rating. In tight fit applications, a conditioning orifice plate version is available, requiring only two diameters of straight run upstream.

### **Integral Orifice Flowmeter Series: Rosemount 3051SFP *ProPlate*<sup>®</sup>, 3095MFP Mass *ProPlate*<sup>®</sup>, and 1195**

These integral orifice flowmeters eliminate the inaccuracies that become more pronounced in small orifice line installations. The completely assembled, ready to install flowmeters reduce cost and simplify installation.

### **Orifice Plate Primary Element Systems: Rosemount 1495 and 1595 Orifice Plates, 1496 Flange Unions and 1497 Meter Sections**

A comprehensive offering of orifice plates, flange unions and meter sections that is easy to specify and order. The 1595 Conditioning Orifice provides superior performance in tight fit applications.

## Specification

The Rosemount 1595 can be used with Rosemount 1496 Orifice Flange Unions and Rosemount 1497 Meter Sections. For product offering see document number 00813-0100-4792.

### Performance

#### Flow Coefficient Uncertainty

TABLE 1. Discharge Coefficient Uncertainty

| Beta Ratio <sup>(1)</sup> | Accuracy     |
|---------------------------|--------------|
| $\beta = 0.20$            | $\pm 0.50\%$ |
| $\beta = 0.40$            | $\pm 0.50\%$ |
| $\beta = 0.65$            | $\pm 0.75\%$ |

(1) For 0.65 beta and  $ReD < 10,000$  add an additional 0.5% to the Discharge Coefficient Uncertainty.

#### Sizing

Perform a flow calculation using the Instrument Toolkit™ software package. Alternatively, contact an Emerson Process Management representative. The "Configuration Data Sheet (CDS)" on page 11" is required prior to order for application verification.

#### Straight Pipe Requirement

Use the appropriate lengths of straight pipe upstream and downstream of the 1595 to minimize the effects of moderate flow disturbances in the pipe. Table 2 lists recommended lengths of straight pipe.

TABLE 2. 1595 Straight Pipe Requirements<sup>(1)</sup>

| Beta                             |  | 0.20 | 0.40 | 0.65 |
|----------------------------------|--|------|------|------|
| Upstream (inlet) side of primary | Single 90° bend or tee                   | 2    | 2    | 2    |
|                                  | Two or more 90° bends in the same plane  | 2    | 2    | 2    |
|                                  | Two or more 90° bends in different plane | 2    | 2    | 2    |
|                                  | Up to 10° of swirl                       | 2    | 2    | 2    |
|                                  | Reducer (1 line size)                    | 2    | 2    | 2    |
|                                  | Butterfly valve (75% open)               | 2    | 2    | 2    |
|                                  | Downstream (outlet) side of primary      | 2    | 2    | 2    |

(1) Consult an Emerson Process Management representative if disturbance is not listed.

#### Pressure Tap Orientation

Orient the 1595 Conditioning Orifice Plate so that the pressure taps are centered between any 2 (of 4) orifice bore holes.

#### Centering Requirements

The 1595 should be installed so that it is centered in the pipes as recommended by ISO-5167.

### Functional

#### Service and Flow Range

Liquid, gas or vapor turbulent flow, for pipe Reynold's Numbers greater than 5,000. For pipe Reynold's Numbers less than 10,000 add an additional +0.5% uncertainty to the discharge coefficient uncertainty.

#### Pipe Sizes

2 to 24-in. (50 to 600 mm). Contact Emerson Process Management for other pipe sizes.

#### Operating Limits

Temperature Range: -320 to 1200 °F (-196 to 649 °C)

- 320 to 800 °F (-196 to 427 °C) and differential pressure up to 800 inH<sub>2</sub>O
- 800 to 1200 °F (427 to 649 °C) and differential pressure up to 400 inH<sub>2</sub>O

#### Maximum Working Pressure

- Flange rating per ANSI B16.5.

# Rosemount 1595

## Physical Specifications

### Materials of Construction

Orifice Plate  
TABLE 3.

| Code | Description        | ASTM              | UNS     | DIN (W.-Nr.)    |

### Flange Mounting Hardware

- The 1595 can be tailored for use in conjunction with the Rosemount 1496 Flange Union and, if required, the Rosemount 1497 Meter Section. See Figures 2 and 3 and Product Data Sheet 00813-0100-4792 for more information regarding the Rosemount 1496 and 1497.

### Typical Orifice Hole Sizes

Beta is calculated by:  $(\beta) = d_C / \text{Pipe ID}$ , where the calculated bore is equal to 2 x typical orifice hole size ( $d_C = 2d$ ). The table below shows the diameter of each of the four typical orifice holes.

TABLE 4.

| Line Size         | Pipe ID<br>(nominal sch40) | Beta ( $\beta$ ) = 0.20<br>d | Beta ( $\beta$ ) = 0.40<br>d | Beta ( $\beta$ ) = 0.65<br>d |
|-------------------|----------------------------|------------------------------|------------------------------|------------------------------|
| 2-in. (50.8 mm)   | 2.067-in. (52.502 mm)      | 0.207 (5.26)                 | 0.413 (10.49)                | 0.620 (15.75)                |
| 3-in. (76.2 mm)   | 3.068-in. (77.927 mm)      | 0.307 (7.80)                 | 0.614 (15.60)                | 0.997 (25.32)                |

TABLE 8. A.P.I Ring No.'s and Rating

| Line Size | A.P.I Ring No. | Rating (lbs.) |
|-----------|----------------|---------------|
| 02        | R-23           | 300-600       |
| 02        | R-24           | 900-1500      |
| 02        | R-26           | 2500          |
| 03        | R-31           | 300-600 & 900 |
| 03        | R-35           | 1500          |
| 04        | R-37           | 300-600 & 900 |
| 04        | R-39           | 1500          |
| 06        | R-45           | 300-600 & 900 |
| 06        | R-46           | 1500          |
| 08        | R-49           | 300-600 & 900 |
| 10        | R-53           | 300-600 & 900 |

| Line Size | A.P.I Ring No. | Rating (lbs.) |
|-----------|----------------|---------------|
| 12        | R-57           | 300-600 & 900 |
| 14        | R-61           | 300-600       |
| 14        | R-62           | 900           |
| 16        | R-65           | 300-600       |
| 16        | R-66           | 900           |
| 18        | R-69           | 300-600       |
| 18        | R-70           | 900           |
| 20        | R-73           | 300-600       |
| 20        | R-74           | 900           |
| 24        | R-77           | 300-600       |
| 24        | R-78           | 900           |

## NOTE

Refer to Table 5 for line size and pressure rating availability.

TABLE 9. Available Beta Ratio ( $\beta$ )

The table below shows the available Beta Ratio ( $\beta$ ) for line size vs. pipe schedule

| Line Size | Pipe Schedule | Beta ( $\beta$ ) Available |
|-----------|---------------|----------------------------|
| 2         | ≤ 80          | 0.20, 0.40, 0.60           |
| 2         | 160           | 0.20                       |
| 2         | XXS           | 0.20                       |
| 3         | ≤ 80          | 0.20, 0.40, 0.65           |
| 3         | 160           | 0.20, 0.40                 |
| 3         | XXS           | 0.20                       |
| 4         | ≤ 80          | 0.20, 0.40, 0.65           |
| 4         | 120           | 0.20, 0.40                 |
| 4         | 160           | 0.20, 0.40                 |
| 4         | XXS           | 0.20                       |
| 6         | ≤ 80          | 0.20, 0.40, 0.65           |
| 6         | 120           | 0.20, 0.40                 |
| 6         | 160           | 0.20, 0.40                 |
| 6         | XXS           | 0.20                       |
| 8         | ≤ 80          | 0.20, 0.40, 0.65           |
| 8         | 100           | 0.20, 0.40, 0.65           |
| 8         | 120           | 0.20, 0.40                 |
| 8         | 140           | 0.20, 0.40                 |
| 8         | 160           | 0.20, 0.40                 |
| 8         | XXS           | 0.20, 0.40                 |
| 10        | ≤ 80          | 0.20, 0.40, 0.65           |
| 10        | 100           | 0.20, 0.40, 0.65           |
| 10        | 120           | 0.20, 0.40                 |
| 10        | 140           | 0.20, 0.40                 |
| 10        | 160           | 0.20, 0.40                 |
| 10        | XXS           | 0.20, 0.40                 |
| 12        | ≤ 80          | 0.20, 0.40, 0.65           |
| 12        | 100           | 0.20, 0.40                 |
| 12        | 120           | 0.20, 0.40                 |
| 12        | 140           | 0.20, 0.40                 |
| 12        | 160           | 0.20, 0.40                 |
| 12        | XXS           | 0.20, 0.40                 |

| Line Size | Pipe Schedule | Beta ( $\beta$ ) Available |
|-----------|---------------|----------------------------|
| 14        | ≤ 80          | 0.20, 0.40, 0.65           |

## Rosemount 1595 Orifice Plate Ordering Table

| Code  | Beta Ratio   |
|---|--|
| 020   | 0.20 Beta Ratio  |
| 040   | 0.40 Beta Ratio  |
| 065   | 0.65 Beta Ratio (0.60 beta ratio for Line Size option 020 only)                  |
| Code  | Options  |
| Flow Calibration                            |  |
| WC  | Discharge Coefficient Verification (3 points)                                    |
| WD  | Discharge Coefficient Verification (full 10 points)                              |
| Plate Holder                                |  |
| PH  | Plate Holder for Universal Type Orifice Plate for use with RTJ flange or section |
| Special Cleaning                            |  |
| P2  | Cleaning for special processes   |
| Special Inspection                          |  |
| QC1   | Visual and dimensional Inspection with certification                             |
| QC7   | Inspection and performance certificate   |
| Material Traceability Certification         |  |
| Q8  | Material Certification per ISO 10474 3.1-B and EN 10204 3.1.B                    |
| Code Conformance                            |  |
| J5 <sup>(5)</sup>                           | NACE MR-0175 / ISO 15156   |
| Country Certification                       |  |
| J1  | Canadian Registration  |
| Typical Model Number: 1595 P 060 A3 S A 040 |  |

(1) Currently available up to 12-in. (300 mm) line size.

(2) Consult factory for availability of line sizes and flange ratings not shown.

(3) Previously PN64.

(4) For a Universal plate style in a 6-in. (150 mm) line size, the plate thickness is 0.125-in. (3.175 mm) and you will need to select code B.

(5) Materials of Construction comply with metallurgical requirements within NACE MR0175/ISO for sour oil field production environments. Environmental limits apply to certain materials. Consult latest standard for details. Selected materials also conform to NACE MR0103 for sour refining environments.

## Calculation Data Sheet

This Calculation Data Sheet can be provided. The detailed sizing calculation may be done through the "Configuration Data Sheet (CDS)" on page 11.
