

PROPOSED COURSE STRUCTURE AND SYLLABUS

B. Tech. Mechanical Engineering

**DEPARTMENT OF MECHANICAL ENGINEERING
DR. BABASAHEB AMBEDKAR TECHNOLOGICAL UNIVERSITY
LONERE 402 103**

DIST – RAIGAD, MAHARASHTRA, INDIA

Vision

The vision of the Department is to achieve excellence in teaching, learning, research and transfer of technology for the overall development of students.

Mission

Imparting quality education, looking after holistic development of students, and conducting need-based research and extension activities.

Graduate Attributes

The Graduate Attributes are the knowledge skills and attitudes which the students have at the time of graduation. These Graduate Attributes identified by National Board of Accreditation are as follows:

- 1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- 2. Problem analysis:** Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- 3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Educational Objectives

PEO1	Graduates should excel in engineering positions in industry and other organizations that emphasize design and implementation of engineering systems and devices.
PEO2	Graduates should excel in best post-graduate engineering institutes, reaching advanced degrees in engineering and related discipline.
PEO3	Within several years from graduation, alumni should have established a successful career in an engineering-related multidisciplinary field, leading or participating effectively in interdisciplinary engineering projects, as well as continuously adapting to changing technologies.
PEO4	Graduates are expected to continue personal development through professional study and self-learning.
PEO5	Graduates are expected to be good citizens and cultured human beings, with full appreciation of the importance of professional, ethical and societal responsibilities.

Program Outcomes

At the end of the program the student will be able to:

PO1	Apply knowledge of mathematics, science and engineering to analyze, design and evaluate mechanical components and systems using state-of-the-art IT tools.
PO2	Analyze problems of mechanical engineering including thermal, manufacturing and industrial systems to formulate design requirements.
PO3	Design, implement and evaluate mechanical systems and processes considering public health, safety, cultural, societal and environmental issues.
PO4	Design and conduct experiments using domain knowledge and analyze data to arrive at valid conclusions.
PO5	Apply current techniques, skills, knowledge and computer based methods and tools to develop mechanical systems.
PO6	Analyze the local and global impact of modern technologies on individual organizations, society and culture.
PO7	Apply knowledge of contemporary issues to investigate and solve problems with a concern for sustainability and eco-friendly environment.
PO8	Exhibit responsibility in professional, ethical, legal, security and social issues.
PO9	Function effectively in teams, in diverse and multidisciplinary areas to accomplish common goals.
PO10	Communicate effectively in diverse groups and exhibit leadership qualities.
PO11	Apply management principles to manage projects in multidisciplinary environment.
PO12	Pursue life-long learning as a means to enhance knowledge and skills.

B. Tech. Mechanical Engineering
Scheme of Syllabus
Semester-I
Effective from 2016-2017

Course Code	Course Name	L	T	P	C
BSH 101	Engineering Mathematics	3	1	0	4
BSH 102	Communication Skills	3	0	2	4
BSH 103	Engineering Physics	3	1	2	5
ME 104	Engineering Graphics	2	0	4	4
EE 105	Basic Electrical Engineering	3	0	2	4
ME 106	Basic Mechanical Engineering	3	0	0	3
ME 107	Energy and Environmental Engineering	2	0	0	2
ME 108	NCC/NSS/Sports/Arts*	0	0	0	0
		19	2	10	26

*Mandatory extra-curricular activities

Semester-II

Course Code	Course Name	L	T	P	C
BSH 201	Engineering Mathematics-II	3	1	0	4
ME 202	Engineering Mechanics	3	0	2	4
BSH 203	Engineering Chemistry	3	1	2	5
EX 204	Basic Electronics Engineering	3	0	2	4
CE 205	Basic Civil Engineering	3	0	0	3
CO 206	Programming in C	2	0	4	4
ME 207	Workshop Practices	0	0	2	1
ME 208	NCC/NSS/Sports/Arts	0	0	0	0
		17	2	12	25

B. Tech. Mechanical Engineering
Semester-III
Effective from 2017-2018

Course Code	Course Name	L	T	P	C
BSH 301	Engineering Mathematics-III	3	1	0	4
ME 302	Machine Drawing and Computer-aided Drafting	2	0	0	2
ME 303	Thermodynamics	3	1	0	4
ME 304	Fluid Mechanics	3	1	0	4
ME 305	Materials Science and Metallurgy	3	0	0	3
BSH 306	Basic Human Rights	2	0	0	2
BSH 307	Elective – I	3	0	0	3
ME 308	Fluid Mechanics Lab	0	0	2	1
ME 309	Machine Drawing and Computer-aided Drafting Lab	0	0	4	2
ME 310	Materials Science and Metallurgy Lab	0	0	2	1
ME 311	NCC/NSS/Sports/Arts	0	0	0	0
		19	3	8	26

Elective-I (From Humanities and Basic Sciences)

BSH 307A	Physics of Engineering Materials
BSH 307B	Applied Chemistry
BSH 307C	Interpersonal Skills

Semester-IV

Course Code	Course Name	L	T	P	C
ME 401	Theory of Machines and Mechanisms-I	4	0	0	4
ME 402	Strength of Materials	3	1	0	4
ME 403	Manufacturing Processes-I	3	0	0	3
ME 404	Applied Thermodynamics	3	1	0	4
ME 405	Numerical Methods in Engineering	2	1	0	3
ME 406	Elective – II	3	0	0	3
ME 407	Theory of Machines and Mechanisms Lab-I	0	0	2	1
ME 408	Manufacturing Processes Lab-I	0	0	2	1
ME 409	Strength of Materials Lab	0	0	2	1
ME 410	Thermal Engineering Lab-I	0	0	2	1
ME 411	NCC/NSS/Sports/Arts	0	0	0	0
		18	3	8	25

Elective - II

ME 406A	NSS-I
ME 406B	Biology for Engineers
ME 406C	Value Education
ME 406D	Renewable Energy Sources

B. Tech. Mechanical Engineering
Semester V
Effective from 2018-2019

Course Code	Course Name	L	T	P	C
ME 501	Machine Design-I	3	1	0	4
ME 502	Manufacturing Processes-II	3	0	0	3
ME 503	Theory of Machines & Mechanisms-II	4	0	0	4
ME 504	Heat Transfer	3	1	0	4
ME 505	Metrology and Quality Control	4	0	0	4
ME 506	Elective – III	3	0	0	3
ME 507	Machine Design Practice-I	0	0	2	1
ME 508	Theory of Machines and Mechanisms Lab II	0	0	2	1
ME 509	Metrology and Quality Control Lab	0	0	2	1
ME 510	Heat Transfer Lab	0	0	2	1
ME 511	NCC/NSS/Sports/Arts	0	0	0	0
		20	2	8	26

Elective – III

ME 506A	NSS – II
ME 506B	Sheet Metal Processes and Products
ME 506C	Knowledge Management
ME 506D	Sustainable Development
ME 506E	Non-Conventional Machining
ME 506F	Mechanical Measurements

Semester VI

Course Code	Course Name	L	T	P	C
ME 601	Manufacturing Processes-III	3	0	0	3
ME 602	IC Engines and Refrigeration and Air-conditioning	4	0	0	4
ME 603	Machine Design-II	3	1	0	4
ME 604	Fluid Machinery	2	1	0	3
ME 605	Elective – IV	3	0	0	3
ME 606	Elective – V	3	0	0	3
ME 607	Manufacturing Processes Lab-II	0	0	2	1
ME 608	Machine Design Practice-II	0	0	2	1
ME 609	Thermal Engineering Lab - II	0	0	2	1
ME 610	Technical Project for Community Services	0	0	3	2
ME 611	Summer Vacation Training *	0	0	0	0
ME 612	NCC/NSS/Sports/Arts	0	0	0	0
		18	2	9	25

*Six weeks in Industry

Elective–IV

ME 605A	Design of Experiments
ME 605B	Wind Energy
ME 605C	Engineering Economics
ME 605D	Entrepreneurship Development
ME 605E	Quantitative Techniques in Project Management
ME 605F	Development Engineering

Elective–V

ME 606A	Manufacturing Automation
ME 606B	Steam and Gas Turbines
ME 606C	Industrial Product Design
ME 606D	Nanotechnology
ME 606E	Intellectual Property Rights
ME 606F	Additive Manufacturing Processes

B. Tech. Mechanical Engineering
Semester VII
Effective from 2019-2020

Course Code	Course Name	L	T	P	C
ME 701	Mechatronics	3	0	0	3
ME 702	Industrial Engineering & Management	4	0	0	4
ME 703	CAD/CAM	3	0	0	3
ME 704	Power Plant Technology	3	0	0	3
ME 705	Elective – VI	3	0	0	3
ME 706	Mechatronics Lab	0	0	2	1
ME 707	CAD/CAM Lab	0	0	2	1
ME 708	Seminar	0	0	3	2
ME 709	Summer Vacation Training *	0	0	0	2
ME 710	Project Stage–I **	0	0	4	2
		16	0	11	24

*Evaluation of Six weeks Summer Vacation Training

**In case of students opting for Internship in the eighth semester, the Project must be industry-based

Elective–VI

ME 705A	Finite Element Analysis
ME 705B	Mechanical Vibrations
ME 705C	Surface Engineering
ME 705D	Human Resource Management
ME 705E	Design of Heat Exchangers

Semester VIII

Course Code	Course Name	L	T	P	C
ME 801	Elective – VII*	3	0	0	3
ME 802	Elective – VIII*	3	0	0	3
ME 803	Elective – IX*	3	0	0	3
ME 804	Elective – X*	3	0	0	3
ME 805	Elective – XI*	3	0	0	3
ME 806	Project Stage-II	0	0	8	4
		15	0	8	19

* In lieu of these Electives, Six months Internship in the industry including project

Elective–VII

ME 801A	Biomechanics
ME 801B	Failure Analysis and Design
ME 801C	Automobile Engineering
ME 801D	Engineering Tribology
ME 801E	Heating Ventilation Air Conditioning and Refrigeration (HVAC and R)

Elective–X

ME 804A	Design of Piping System
ME 804B	Product Life Cycle Management (PLM)
ME 804C	Advanced IC Engines
ME 804D	Machine Tool Design
ME 804E	Numerical Heat Transfer

Elective–VIII

ME 802A	Robotics
ME 802B	Tool Condition Monitoring
ME 802C	Experimental Stress Analysis
ME 802D	Energy Conservation and Management
ME 802E	Modeling of Thermal Systems And Optimization
ME 802F	Utilization of Solar Energy

Elective–XI

ME 805A	Tool Design
ME 805B	Advanced Refrigeration
ME 805C	Cryogenic Systems
ME 805D	Material Handling Systems
ME 805E	Advanced Methods in Engineering Design

Elective–IX

ME 803A	Plant Maintenance
ME 803B	Design of Air Conditioning Systems
ME 803C	Process Equipment Design
ME 803D	Analysis and Synthesis of Mechanisms
ME 803E	Alternative Fuels for IC Engines

Semester I

Engineering Mathematics–I

BSH 101	Engineering Mathematics-I	BSC	3-1-0	4 Credits
---------	---------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Develop an ability to find the rank, inverse, Eigen values and Eigen vectors of a matrix and consistency of linear equations using the concepts of rank
CO2	Find the n^{th} order derivatives of functions, series expansions of functions containing a single variable
CO3	Find the partial derivatives of functions using ordinary laws of partial differentiation
CO4	Apply the concepts of partial differentiation to find the percentage error in the measurement of quantities, series expansions and maxima and minima of functions containing two variables
CO5	Evaluate the double and triple integrals and apply the same to calculate area, volume, surface area, moment of inertia, centre of gravity, etc.
CO6	Check the ordinary, absolute and conditional convergence of the infinite series by using suitable tests

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1		1	1	1	1					1
CO2	2	1		1	1			1	1	1	1	2
CO3	2	1		1	1			1	1	1	1	1
CO4	2	1		1	1				1		1	2
CO5	3	1	1	1	1							1
CO6	3	1		1	1		1				1	2

Course Contents:

Unit 1: Linear Algebra-Matrices

Elementary row and column transformations on a matrix; Rank of a matrix-normal form; Inverse of a matrix by using elementary transformations; Consistency and solutions of systems of linear equations using elementary transformations; Eigen values and Eigen vectors; Properties of Eigen values and Eigen vectors; Cayley-Hamilton's theorem (without proof) and its applications.

Unit 2: Differential Calculus and Its Applications

Successive differentiation-standard results; Leibnitz's theorem; Expansions of functions: Maclaurin's series, Taylor's series; indeterminate forms.

Unit 3: Partial Differentiation

Partial derivatives of first and higher orders; Homogeneous functions: Euler's Theorem; Total derivative; Change of variables.

Unit 4: Applications of Partial Differentiations

Jacobians properties; Taylor's theorem for functions of two variables; Errors and approximations; Maxima and minima of functions of two variables; Lagrange's method of undetermined multipliers.

Unit 5: Multiple Integrals and Their Applications

Double integrals and their evaluation; Change of order for integration; Double integrals in polar coordinates; Triple integrals; Application of multiple integrals to find area, volume, surface area, moment of inertia and center of gravity.

Unit 6: Infinite Series

Definition of an infinite series; Types of infinite series-convergent, divergent and oscillatory; Positive term series-Comparison test, Integral test, D'Alembert's ratio test, Raabe's test, Logarithmic test, Cauchy's Root test; Alternating series-Leibnitz's rule; Absolute and conditional convergence; Power series-interval of convergence.

Communication Skills

BSH 102	Communication Skills	BHC	3-0-2	4 Credits
---------	----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Students are found to be confident while using English
CO2	Engage in analysis of speeches or discourses and several articles
CO3	Identify and control anxiety while delivering speech
CO4	Write appropriate communications (Academic/Business)
CO5	Prepared to take the examinations like GRE/TOFEL/IELTS
CO6	Identify and control the tone while speaking
CO7	Develop the ability to plan and deliver the well-argued presentations

Mapping of course outcomes with program outcomes

CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Communication and Communication Processes

Introduction to Communication, Forms and functions of Communication, Barriers to Communication and overcoming them, Verbal and Non-verbal Communication, ways of Effective Communication.

Unit 2: Oral Communication

Use of Language in Spoken Communication, Features of Good Communication, Principles and Practice of Group Discussion, Public Speaking (Addressing Small Groups and Making Presentation), Interview Techniques, Appropriate Use of Non-verbal Communication, Presentation Skills, Telephonic Etiquettes, Extempore, Elocution, Describing Experiences and Events.

Unit 3: Study of Sounds in English

Introduction to phonetics, Study of Speech Organs, Study of Phonemic Script, Articulation of Different Sounds in English, Stress Mark.

Unit 4: English Grammar

Grammar: Forms of Tenses, Articles, Prepositions, Use of Auxiliaries and Modal Auxiliaries, Synonyms and Antonyms, Common Errors, Sentence Formation and Sentence Structures, Use of Appropriate Diction.

Unit 5: Writing Skills

Features of Good Language, Difference between Technical Style and Literary Style, Writing Emails, Formal and Informal English, Business Writing, Advertisements, Essay Writing, (Technical, Social, and Cultural Topics), Technical Reports: Report Writing: Format, Structure and Types, Writing Memorandum, Circulars, Notices, Agenda and Minutes, Technical Manuals, Brochures

Letter Writing: Types, Parts, Layouts, Letters and Applications, Use of Different Expressions and Style, Writing Job Application Letter and Resume.

Unit 6: Reading Skills and Listening Skills

Reading: Introduction to Reading, Barriers to Reading, Types of Reading: Skimming, Scanning, Fast Reading, Strategies for Reading, Comprehension.

Listening: Importance of Listening, Types of Listening and Barriers to Listening.

CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Oscillation and Ultrasonic

Free oscillation, damped oscillation, Forced oscillation and Resonance, differential wave equation, Ultrasonic waves, production of ultrasonics (Piezoelectric effect, Magnetostriction effect) and its applications.

Unit 2: Optics, Fibre Optics and Laser

Interference of light in thin film, wedge shaped film, Newton's rings, polarization of light, methods for production of polarized light, Huygen's theory of double refraction, Laurent's half shade Polarimeter, Diffraction of light, Introduction, diffraction grating Principle of laser, Einstein's coefficients, Types of laser – Ruby and He-Ne laser and their applications. Principle and structure of optical fibre, acceptance angle, acceptance cone, numerical aperture, types of optical fibre and its applications.

Unit 3: Electron Optics, Nuclear Physics and Quantum Mechanics

Motion of a charged particle in electric and magnetic field, C. R. O., Millikan's oil drop method, Bainbridge mass spectrograph, Q - value of nuclear reactions, G. M. counter, Davisson and Germer's electron diffraction experiment, Heisenberg's uncertainty principle, Schrödinger's time dependent and time independent wave equations, physical significance of wave function.

Unit 4: Crystal Structure and X-rays

Unit cell, Bravais lattice, cubic system, number of atoms per unit cell, coordination number, atomic radius, packing density, relation between lattice constant and density, lattice planes and Miller indices, Interplaner spacing for cubic system, Bragg's law, X-ray diffraction, Determination of Crystal Structure by X-ray diffraction, Line and Continuous Spectrum of X-ray, Mosley's law.

Unit 5: Magnetic and Superconducting Materials

Magnetic dipole moment, Types of magnetic materials, B-H curve, Classical free electron theory-electrical conductivity, resistivity and its temperature dependence, microscopic Ohm's law, Superconductivity, types of superconductors, Meissner effect and Applications.

Unit 6: Semiconducting, Dielectric and Electrodynamics

Band theory of solids, Fermi level in Intrinsic and Extrinsic Semiconductors (Only Concepts), conductivity of semiconductors, Hall effect, Dielectric parameters (Dielectric constant, Electric displacement, Polarization & Polarizability), Types of polarization and dielectric materials, temperature and frequency dependences of dielectric materials, Introduction of Maxwell equations, Electromagnetic wave in free space.

Engineering Graphics

ME 104	Engineering Graphics	ESC	2-0-0	2 Credits
--------	----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Explain the methods of projections (First and third angle projections)
CO2	Draw the projections of Points, Lines, Planes, Solids, and Sections of solids
CO3	Draw Orthographic and Isometric projections of solids
CO4	Prepare development of surfaces for a given object
CO5	Describe the features of AutoCAD

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2				3							1
CO2	3	2	1	3	3						1	1
CO3	3	3	1	3	1						1	1
CO4	2		1		3							1
CO5					3				1			2

Course Contents:

Unit 1: Drawing Standards and Geometrical Construction

Drawing standard SP: 46, Type of lines, lettering, dimensioning, scaling conventions.

Geometrical construction: Dividing a given straight line into any number of equal parts, bisecting a given angle, drawing a regular polygon given one side, special methods of constructing a pentagon and a hexagon.

Unit 2: Orthographic Projections and Projections of Points

Introduction to orthographic projection, drawing of orthographic views of objects from their isometric views. Projection of points lying in four quadrants.

Unit 3: Projections Lines and Planes and Their Traces

Projection of lines parallel and perpendicular to one or both planes, projection of lines inclined to one or both planes, Traces of lines. Projection of planes parallel and perpendicular to one or both planes, projection of planes inclined to one or both planes.

Unit 4: Projections of Solids

Types of solids, projections of solids with axis perpendicular and parallel to HP and VP, solids with axis inclined to one or both the planes. Projection of spheres touching each other.

Unit 5: Sectioning of Solids, Isometric Projections

Sectioning of solids: Section planes perpendicular to one plane and parallel or inclined to other plane. Isometric projection: Isometric scale, drawing of isometric projections from given orthographic views.

Unit 6: Development of Surfaces and Introduction to Computer Aided Drafting

Development of surfaces: Development of cylindrical and conical surfaces Development of prisms. Introduction to computer aides: Introduction to computer aided drafting, drafting packages and tools to make drawings.

Engineering Graphics Lab

List of Practicals/Experiments/Assignments

1. Lines, lettering and dimensioning
2. Geometrical Constructions
3. Orthographic projections
4. Projections of points
5. Projections of lines
6. Projections of planes
7. Projections of solids
8. Section of solids

9. Isometric Projections
10. Development of Surfaces

Texts:

1. N. D. Bhatt, “Engineering Drawing”, Charotar Publishing House, 46th edition, 2003.

References:

Basic Electrical Engineering

EE 105	Basic Electrical Engineering	ESC	3-0-2	4 Credits
--------	------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the basic concepts of magnetic circuits, electromagnetism and electrostatics
CO2	Understand and analyze AC and DC circuits
CO3	Understand the working principle and applications of DC and AC machines

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1											
CO2	1	1										
CO3	1		1									

Course Contents:

Unit 1: Elementary Concepts

Pre-requisite: Concept of Potential difference. Current and resistance. Ohm’s law, effect of temperature on resistance, resistance temperature coefficient, insulation resistance. SI units of work Power and Energy. Conversion of energy from one form to another in electrical and thermal systems.

Unit 2: D. C. Circuits (Only Independent Sources)

Kirchhoff’s law, ideal and practical voltage and current sources. Mesh and Nodal analysis (Super node and super mesh excluded), Source transformation.

Star delta transformation, Superposition theorem, Thevenin's theorem Norton's theorem, maximum power transfer theorem (Source transformation not allowed for superposition theorem, Mesh and Nodal analysis.

Unit 3: A. C. Fundamentals

Sinusoidal voltage and currents, their mathematical and graphical representation, concept of cycle period, frequency, instantaneous, peak, average, r.m.s. values, peak factor, and form factor, phase difference, lagging, leading and in phase quantities and phasor representation. Rectangular and polar representation of phasors.

Study of S.C circuits of pure resistance, inductance and capacitance and corresponding voltage- current phasor diagrams, voltage – current and power waveforms.

Unit 4: Single Phase and Poly Phase A. C. Circuits

A. Single phase AC Circuits: Study of series and parallel R-L, R-C, R-L-C circuits, concept of impedance and admittance for different combinations, wave form and relevant voltage current phasor diagrams. Concept of active, reactive, apparent, complex power and power factor, resonance in series and parallel RLC circuit. Q- factor and band with

B. Polyphase AC circuits: Concept of three phase supply and phase sequence. Balanced and unbalanced loads voltage current and power relations in three phase balance star and delta loads and their phasor diagrams.

Unit 5: Electromagnetism

A. Magnetic effect of electrical current cross and dot convention, right hand thumb rule and cork screw rule, nature of magnetic field of long straight conductor, concepts of solenoid and toroid. Concepts of m.m.f, flux, flux density, reluctance, permeability and field strength, their units and relationship. Simple series and parallel magnetic circuits, comparison between electrical and magnetic circuits, force on current carrying conductor placed in magnetic field, Fleming's left hand rule.

B. Faraday's law of electromagnetic induction, Fleming's right hand rule, statically and dynamically induced EMF's self and mutual inductance coefficient of coupling, energy stored in magnetic field.

C. Introduction to electrical AC DC Machines: Principles of operation and applications.

Unit 6: Single Phase Transformer and Electrostatics

Single phase transformers: Construction, principle of working, e.m.f equations, voltage and current ratios, losses, definition of regulation and efficiency, determination of these by direct loading method. Descriptive treatment of autotransformer.

A. Electrostatics: electrostatic field, electric flux density, electric field strength, absolute permittivity, relative permittivity and capacitance, composite dielectric capacitors, capacitors in series and parallel, energy stored in capacitors, charging and discharging of capacitors and concept of time constant.

Term work shall consists of a record of minimum of eight experiments, out of which Group A is compulsory and five experiments from Group B be carried out.

Group-A

1. Wiring exercises:
 - i. study of wiring components(Wires, Switches, Fuses, sockets, plug, lamps and lamp holders, rating of different accessories)
 - ii. Control of two lamps from two switches (looping system)
 - iii. Stair case wiring
 - iv. Use of megger for insulation testing and continuity test of wiring installation and machines
2.
 - i. Study of fluorescent tube circuit
 - ii. Study of compact Fluorescent lamps(CFL) and Light Emitting Diode(LED) lamps
 - iii. Study of sodium and mercury vapour lamps
3.
 - i. Study of safety precautions while working on electrical installations and necessity of earthing
 - ii. Introduction to energy conservation
 - iii. Study of single line diagram of power system.

Group B: List of laboratory experiments (Minimum six)

1. Mesh and nodal analysis
2. Verification of super position theorem
3. Verification of Thevenin's theorem
4. Study of R-L series and R-C series circuit
5. R-L-C series resonance circuit
6. R-L- -C parallel resonance circuit
7. Relationship between phase and line currents and voltages in 3 - Phase system (Star-Deltas)
8. Power and phase measurements in three phase system by two wattmeter method
9. OC and SC test on single phase transformer

Basic Mechanical Engineering

ME 106	Basic Mechanical Engineering	ESC	3-0-0	3 Credits
--------	------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Define the scope of the Mechanical Engineering
CO2	Describe the Laws of Thermodynamics and its applicability to respective branch and working of an IC engine
CO3	Explain the terms such as Factor of safety, machine and mechanisms etc.
CO4	Describe the working of transmission system, suspension and power plants
CO5	Identify the simple operations of machine tools such as Lathe machine, Drilling Machine, Milling Machine

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1			1				1			
CO2	1	2	2	1	1							
CO3	1	1	2		2		2		1			
CO4	1	1		1	1				1			
CO5	1	1			1		2					

Course Contents:

Unit 1: Introduction to Mechanical Engineering

Thermal Engineering, Design Engineering, Manufacturing Engineering. Introduction to Laws of Thermodynamics with simple examples pertaining to respective branches, concept of thermal reservoir, irreversibility, Carnot cycle, Introduction to Heat Engine, Heat pump and refrigerator, efficiency.

Unit 2: IC Engines

Classification, Applications, 2 Stroke and 4 Stroke systems in IC Engines.

Unit 3: Automobiles

Transmission systems, Suspension system, Power Plant: Types of Power plant; Gas power plant, Thermal power plant, nuclear power plant

Unit 4: Design

Design basics, Mechanisms, Factor of safety, materials and metallurgical considerations

Unit 5: Engineering materials, machine elements, Transmission, Fasteners, support systems

Unit 6: Manufacturing

Classification, introduction to Lathe machine, Drilling machine, Milling machine, metal joining, Metal forming, casting (A visit to Workshop for demonstration)

Texts/References:

- Lecture notes prepared by Department of Mechanical Engineering

Energy and Environmental Engineering

ME 107	Energy and Environmental Engineering	ESC	2-0-0	2 Credits
--------	--------------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	
CO2	
CO3	
CO4	
CO5	
CO6	

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes

CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:**Unit 1: Conventional Power Generation**

Steam power station, Nuclear power plant-Gas turbine power plant-Hydro power station: Schematic arrangement, advantages and disadvantages, Thermo electric and thermionic generators, Environmental aspects for selecting the sites and locations of power plants.

Unit 2: Renewable Power Generation

Solar, Wind, Biogas and Biomass, Ocean Thermal energy conversion (OTEC), Tidal, Fuel cell, Magneto Hydro Dynamics (MHD): Schematic arrangement, advantages and disadvantages.

Unit 3: Energy Conservation

Scope for energy conservation and its benefits Energy conservation Principle-Maximum energy efficiency, Maximum cost effectiveness, Methods and techniques of energy conservation in ventilation and air conditioners, compressors, pumps, fans and blowers, Energy conservation in electric furnaces, ovens and boilers., lighting techniques.

Unit 4: Air Pollution

Environment and Human health-Air pollution: sources, effects, control measures, Particulate emission, air quality standards, measurement of air pollution.

Unit 5: Water Pollution

Water pollution-effects, control measures, Noise pollution-effects, control measures, Disposal of solid wastes, Bio-medical wastes, Thermal pollution, Soil pollution, Nuclear hazard.

Unit 6: Environmental Laws and Sustainable Development

Environmental protection act: Air act, Wildlife protection act, Forest conservation act, Disaster management, urban problems related to energy, watershed management, rainwater harvesting and water conservation

Semester II

Engineering Mathematics-II

BSH 201	Engineering Mathematics-II	BSC	3-1-0	4 Credits
---------	----------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Comprehend the geometrical meaning and properties of the complex numbers
CO2	Find the solutions of the differential equations of the first order and first degree, and apply the same to mechanical and electrical systems
CO3	Find the solutions of linear differential equations with constant coefficients
CO4	Make the Fourier series expansions of functions in various ranges, and apply the same in harmonic analysis
CO5	Understand the differentiation of scalar and vector point functions, and apply the same to find components of velocity and acceleration
CO6	Apply the concepts of gradient of a scalar point function, divergence of a vector point function, curl of a vector point function, line integral, surface integral and volume integral in respect of various problems pertaining to science and engineering

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2			1			1					1
CO2	3	2	1	2	2		1	1	1	1	1	2
CO3	2	2	1	2	2		1	1	1	1	1	1
CO4	3	2		2	2		1		1		1	2
CO5	3			1								1
CO6	3	2	1	2	2	1	1				1	2

Course Contents:

Unit 1: Complex Numbers

Definition and geometrical representation; De-Moivre's theorem(without proof); Roots of complex numbers by using De-Moivre's theorem; Expansion of $\sin n\theta$, $\cos n\theta$ and $\tan n\theta$ in powers of $\sin \theta$, $\cos \theta$ and $\tan \theta$; Circular functions of complex variable-definition, Hyperbolic functions, Relations between circular and hyperbolic functions, Real and imaginary parts of circular and hyperbolic functions, Logarithm of Complex quantities.

Unit 2: Ordinary Differential Equation of First Order and First Degree

Introductory remarks-Order, degree and formation of differential equations; Solutions-variables separable, homogeneous equations, equations reducible to homogeneous form, linear equations, Bernoulli's equation, exact differential equations, equations reducible to exact equations; Application to physical and electrical systems.

Unit 3: Linear Differential Equations with Constant Coefficients

Introductory remarks-complementary function, particular integral; Rules for finding complementary function and particular integral; Method of variation of parameters; Cauchy's homogeneous and Legendre's linear equations.

Unit 4: Fourier Series

Introductory remarks-Euler's formulae; Conditions for Fourier series expansion-Dirichlet's conditions; Functions having points of discontinuity; Change of interval; Odd and even function-expansions of odd and even periodic functions; Half-range series, Harmonic analysis.

Unit 5: Vector Calculus

Differentiation of vectors-general rules of differentiation: Velocity and acceleration; Relative velocity and acceleration; Radial and transverse components of velocity and acceleration; Law of central orbits-orbital motion; Tangential and normal components of velocity.

Unit 6: Applications of Vector Calculus

Scalar and vector fields, Gradient, divergence and curl, Solenoidal, irrotational vector fields. Vector identities, Integrals-line, surface and volume, Green's theorem, Gauss' divergence theorem and Stokes' theorem (without proofs).

Engineering Mechanics

ME 202	Engineering Mechanics	ESC	3-0-2	4 Credits
--------	-----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Developed a basic understanding and advanced mechanics problems using Classical Method
CO2	Determine the connection forces in trusses and in general frame structures and Locate the centroid of an area
CO3	Determine the resultant of a system of forces and support reactions on a structure
CO4	Draw complete and correct free-body diagrams and write the appropriate equilibrium equations from the free-body diagram.
CO5	Calculate the motion characteristics of a body subjected to a given force system.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	2	1	2	2						2
CO2	3	3	3	2	3	2						2
CO3	2	2	1	3	2	2						2
CO4	3	2		3	2	1						2
CO5	2	3		1	2	3						3

Course Contents:

Unit 1: Basic Concepts

Idealization of Engineering Problems, Basis of Assumptions, Objectives of Engineering Analysis and Design, Fundamental principles, free body diagram, Newton's laws, gravitation, force, resolution and composition of a forces, resultant, parallelogram law, triangle law, transmissibility, couple, moment, Varignon's theorem, co-planner concurrent and non-concurrent forces, vectorial representation of forces and moments.

Unit 2: Equilibrium of Forces

Static equilibrium, 2-D and 3-D statics, analytical and graphical conditions of equilibrium, types of supports, types of load, Lami's theorem, frames, beams, support reactions, force systems in space, concurrent forces in space, couples in space, parallel forces in space, general case of forces in space, Simple trusses (plane and space), method of joints, method of sections

Unit 3: Centroid, Friction

Centre of gravity, centroid, centroid of composite area, moment of inertia of sections, radius of gyration. Coulomb law, surface contact problems, friction angles, wedge friction, sliding friction and rolling resistance. **Dynamics**

Unit 4: Kinematics

Types of motions, kinematics of particles, rectilinear motion, constant and variable acceleration, relative and constrained motion, motion under gravity, angular motion, relation between angular motion and linear motion, tangential and radial acceleration,

Relative velocity; centrifugal and centripetal forces, projectile motion, kinematics of rigid bodies, instantaneous center of rotation.

Unit 5: Kinetics

Center of mass, mass moment of inertia, kinetics of particle, Newton's laws, D'Alembert's principle, problems on linear motion and centroidal rotation, kinetics of rigid bodies, translation, fixed axis rotation, super elevation of road and railway curves, general planar motion.

Unit 6: Work, Power, Energy

Principle of virtual work, virtual displacements for particle and rigid bodies, work done by a force, spring, potential energy, kinetic energy of linear motion and rotation, work energy equation, conservation of energy, power, impulse momentum principle, collision of elastic bodies.

Students are expected to satisfactorily complete at least eight experiments listed below.

List of Practicals/Experiments/Assignments

1. Polygon law of coplanar forces.
2. Centroid of irregular shaped bodies.
3. Bell crank lever.
4. Support reaction for beam.
5. Problems on beam reaction by graphics statics method.
6. Simple / compound pendulum.
7. Inclined plane (to determine coefficient of friction).
8. Collision of elastic bodies (Law of conservation of momentum).
9. Moment of Inertia of fly wheel.
10. Verification of law of Machine using Screw jack / Worm and Worm Wheel / Single and Double Gear Crab.
11. Application of Spreadsheet Program for simple applications such as law of moments, beam reactions, problems in kinematics, etc.

Engineering Chemistry

BSH 203	Engineering Chemistry	BSC	3-1-2	5 Credits
---------	-----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand and explain the basic concepts of Water treatment and capable to explain softening processes and water Characteristics
CO2	Understand and explain the basic concepts of Phase rule and capable to explain Phase diagram of One and Two Component system and their applications.
CO3	Classify and explain various types of coals and lubricants, its physical and chemical properties and industrial importance.
CO4	Recognize the concept of Metallurgy and concepts of Electrochemistry and its importance.
CO5	Understand fundamentals of aromatic and heterocyclic compounds, physical, chemical properties and their industrial uses.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	3	3	1		3				1	1
CO2	2	1	1		1		1		1		1	1
CO3	2	3	3	1	2		3		1		1	1
CO4	3	3	1	2	1						1	1
CO5	2	3	2		2		3				1	1

Course Contents:

Unit 1: Water Treatment

Introduction, hard and soft water, softening of water-Zeolite process, Ion exchange process, Hot Lime-Soda process, water characteristics-Hardness, Dissolve oxygen (DO), Chemical Oxygen Demand (COD), Biological Oxygen Demand (BOD).

Unit 2: Phase Rule

Phase Rule, statement, Explanation of the terms-Phase, Components, Degrees of freedom. One component system-Water and Sulphur. Reduced phase rule equation, Two components alloy system-Phase diagram of Silver-Lead alloy system.

Unit 3: Metallurgy

Introduction, Occurrence of metals, types of ores, concentration of ores by physical methods-Crushing and Sizing, Froth-Flotation, Magnetic Separation, Gravity separation method. Chemical methods-Calcination, Roasting, Reduction of Ore-by Pyrolysis, Chemical reductions, Refining of Metals.

Unit 4: Fuels and Lubricants

Fuels: Introduction, classification of fuel, essential properties of fuel, characteristics of good fuel, solid fuel-Coal, Various types of Coal, Analysis of coal-Proximate and Ultimate analysis, liquid fuel-Refining of Petroleum

Lubricants: Introduction, function of lubricants, types of lubrication-Thick film, Thin film and Extreme pressure lubrication, classification of lubricants-Solid, Semi-solid and Liquid Lubricants, properties of lubricants, Physical properties-Viscosity, Viscosity index, surface tension, Oiliness, Flash point and Fire point, Pour point and Cloud point. Chemical properties-Acidity, Emulsification, Saponification.

Unit 5: Study of Organic Compounds

Introduction and study of aromatic compounds.

Naphthalene: Introduction, Haworth synthesis, manufacture, physical and chemical properties, uses. Anthracene: Introduction, Haworth synthesis, manufacture, physical and chemical properties, uses. Pyridine: Structure determination, Synthesis, Manufacture, physical and chemical properties, uses. Manufacture of alcohol by Fermentation process.

Unit 6: Electrochemistry

Introduction-basic concepts, Transport number and its determination by Moving Boundary method, Debye-Huckel theory, Conductometric titrations, Ostwald's theory of acid-base indicator, Quinonoid theory, Electrodes-Glass electrode, Quinhydrone electrode.

Texts:

Basic Electronics Engineering

EX 204	Basic Electronics Engineering	ESC	3-0-2	4 Credits
--------	-------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Acquire knowledge in the field of solid state materials.
CO2	Analyze the structure of different types of semiconductor crystal structures. Know the intrinsic property of semiconductor materials. Students will Know the complete internal structure of PN junction including different types of bias.
CO3	Know the complete internal structure of transistors including different types of configuration and bias compensation. Students will know the applications of diode like rectifiers, clipper and clampers etc.
CO4	Gain the basic knowledge of different passive components like Resistor, Inductor, Capacitor.
CO5	Understand various Measuring instruments, sensors and transducers.
CO6	Represent numerical values in various number systems and perform number conversions between different number systems. Students will be able to use De-Morgan's Theorem to simplify a negated expression and also will be able to create circuits to solve problems using gates to replicate all logic functions.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3											
CO2	3											
CO3	3	3	2									
CO4		1	1									
CO5	3			3								
CO6	2			2								

Course Contents:

Unit 1: Basic Concepts

Electronics and its evolution, atomic structure, permitted orbits, Quantum Numbers, periodic table, electrons in solids, bonding in solids: ionic bond, covalent bond, metallic bond, secondary bonds, atom arrangement in materials, crystalline structure of metals, classification of engineering materials: metals and alloys, ceramics, organic polymers, composite materials, classification of solids: Conductors, Dielectric materials, Magnetic materials, semiconductors, Energy band description of materials.

Unit 2: Semiconductors

Conductivity of insulators, metals and semiconductors in terms of energy bands, the chemical bond in "Si" and "Ge", conductivity of intrinsic semiconductors.

Extrinsic semiconductors: *n-type and p-type* semiconductors, Hall Effect in semiconductors, Mechanism in current flow: drift and diffusion, Einstein relation, semiconductor materials: Element semiconductor, II-VI compound, III-V compounds, ternary and quaternary compounds. The junction diode: diode breakdown and current equation, diode equivalent circuit, diode as a switch, diode testing, other diodes.

Unit 3: Diode Applications and Transistors

V-I characteristics of PN-junction diode, Rectifiers: Half wave, centre tapped and bridge full wave. Zener diode regulator, voltage multiplier, clipping and clamping circuits.

Transistor: Introduction, classification, configurations, transistor as an amplifier, testing of transistor, load line analysis, biasing of the transistor, bias compensation, transistor as a switch.

Unit 4: Circuit Components

Resistors: color code, material used for resistors, spools for resistance coils, resistance wires, resistance standards, sheet metal resistors, frequency errors in resistors.

Capacitors: color code, capacitance standards, variable capacitors, frequency errors in capacitors. loss angle and power factor of capacitors

Inductors: standards of inductance, standards of mutual inductance, standards of self-inductance, variable inductance, inductors for high and low frequency work, frequency errors in inductors.

Unit 5: Measuring Instruments and Transducers

Introduction, PMMC instrument, ohmmeter, galvanometer, potentiometers, power factor meter, frequency meters.

Classification of transducers, characteristics and choice of transducers, strain gauges, thermistors, thermocouples, LVDT, Capacitive transducers, Piezo-electric transducers, opto-electronic transducers.

Unit 6: Introduction to Digital Electronics

Introduction, number system, number base conversions, basic logic gates, Universal logic gates, Boolean postulates, De-Morgan Theorems. Introduction to sequential and combinational logic circuits.

Basic Civil Engineering

CV 205	Basic Civil Engineering	ESC	3-0-0	3 Credits
--------	-------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the basic principles related to various civil engineering systems, and knowledge of uses and properties of different construction materials
CO2	Identify the various areas in his discipline to utilize his knowledge related to civil engineering
CO3	Reading and drawings of different residential building plan and understand scientific reasons behind the principles of planning
CO4	Determine the study of various modes of transportation
CO5	Apply the principle of survey and uses of various conventional surveying tools
CO6	Outline the various sources, effects and control measures of water pollution, air pollution and understanding different components of environment

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		1		1		2	1	1				3
CO2	1	2		2	1		1			1		
CO3		1	2	1	2			1	1			
CO4		1	1		1					1		1
CO5	2	3		3								
CO6			3			2	3	2	2		1	

Course Contents:

Unit 1: Introduction to Civil Engineering

Branches, role of civil engineer in various construction activities, important national projects, properties and uses of engineering materials: earth, bricks, timber, stones, aggregates, cement, steel, bitumen, glass, roofing and flooring materials, mortar, concrete.

Unit 2: Building Components

Foundation and superstructure. Bearing capacity, functions of foundation, shallow and deep foundations, suitability in different situation, plinth, footings, raft foundation, pile foundation, machine foundation, walls, lintels, beams, columns, slabs, roofs, staircases, floors, doors, windows, sills, weather sheds, and utility fixtures.

Unit 3: Building Planning and Construction

Building plans, principles of planning, site selection for buildings, typical plan of a residential building, plinth area, carpet area, cost of building, FSI, building bye laws, ventilation and lighting, loads on structure, load bearing, framed construction, steel structures, function of lintel, types of tiles, materials used for plastering & painting.

Unit 4: Surveying

Principles of survey, selection of stations, location sketches, site plan, triangulations and traversing, chain and tape surveying, base line and offsets, ranging and reciprocal ranging, field book, cross staff, prismatic compass, Plane table surveying, dumpy level, Leveling staff, bench marks, reduced level, contours, planimeter, total station, remote sensing, GIS, GPS, photogrammetry.

Unit 5: Transportation Engineering

Modes, classification of roads, general cross section of road, elements of road structure and their functions, rigid and flexible pavements, traffic signs and signals, road markings. Basics of railways, airport, harbour and docks.

Unit 6: Environmental Engineering

Environment and its components, importance and sources of water, dams, storage reservoirs, irrigation methods, watershed management and structures, ground water potential, rainwater harvesting, ground water recharge, IS specifications for drinking water, water treatment plant, need of sewage treatment & reuse of wastewater, sewage treatment plant, air pollution and its sources, air pollutants, air pollution control measures.

Students are expected to satisfactorily complete at eight experiments listed below.

List of Practicals/Experiments/Assignments

1. Study of basic building materials
2. Sketching basic components of building
3. Study of detailed building drawings
4. Distance measurement by chain, tape and EDM
5. Offset marking by cross-staff, optical square or compass
6. Demonstration of basic operations in simple leveling
7. Study of detailed survey maps such as contour plans, toposheets, etc.
8. Traffic survey during peak traffic period/hours
9. Study on standards of drinking water and various treatment processes
10. Demonstration on compressive strength of concrete

Any other experiment based on syllabus of engineering mechanics.

CO6												

Course Contents:

Unit 1: Process of Programming

Editing, Compiling, Error Checking, executing, testing and debugging of programs. IDE commands. Eclipse for C Program development, Flowcharts, Algorithms.

Unit 2: Types, Operators and Expressions

Variable names, Data types, sizes, constants, declarations, arithmetic operators, relational and logical operators, type conversions, increment and decrement operators, bitwise operators, assignment operators and expressions, conditional expressions precedence and order of evaluation.

Unit 3: Control Flow

Statements and Blocks. If else, else-if switch Loops while and for, do-while break and continue go-to and Labels.

Unit 4: Functions and Program Structure

Basic of functions, functions returning non-integers external variables scope rules, header files, static variables, register variables block structures initialization.

Unit 5: Arrays in C

Arrays in C Initializing arrays, Initializing character arrays multi-dimensional arrays, command line arguments.

Unit 6: Structures in C

Basics of structures, structures and functions arrays of structures, self-referential structures table lookup. Input and Output C Standard Library.

List of Practicals/Experiments/Assignments

1. Assignment on Flow chart.
2. Hello world example (display message to user)
3. Program to take input from user and display its value.
4. Basic example for performing different operations using operator. (with and without using scanf).
5. Basic Program on Operator. (using scanf)
 - Program to find and print area, perimeter and volume of geometric objects.
 - Program to check Perfect number.
6. Program to find maximum and minimum between two entered numbers (using if-else and conditional statement).
7. Program to swap two entered numbers.
 - Using function
 - without function

8. Program to print square and factorial of an entered number (while loop).
 - Program to find sum of digits of entered number.
9. Program to check Palindrome number.
10. Program to check Armstrong number.
11. Program to check and generate prime numbers up to n.
12. Program to find GCD of two entered numbers.
13. Program to find maximum and minimum from n entered numbers.
14. Program to print alternate numbers from n entered numbers.
15. Program to search an element in an array using linear and binary search.
16. Program to print entered numbers in ascending order using sorting.
17. Program to print addition, subtraction and multiplication of matrices.
18. Program to find length of string (With and without using library function).
19. Programs demonstrating use of Structures, Arrays of Structures and Structure containing arrays.
20. Pattern (pyramid) printing
 - Pascal triangle.
 - Floyd's triangle.
 - Number patterns.
 - Star (*) patterns.

Semester III
Engineering Mathematics-III

BSH 301	Engineering Mathematics-III	BSC	3-1-0	4 Credits
---------	-----------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Comprehend the fundamental knowledge of the Laplace and inverse Laplace transforms and their derivatives for elementary functions
CO2	Apply the properties of Laplace and inverse Laplace transforms to solve simultaneous linear and linear differential equations with constant coefficients
CO3	Conceptualize the definitions and properties of Fourier transforms
CO4	Solve boundary value problems using Fourier transforms
CO5	Find the series solutions of the linear differential equations using Frobenius method
CO6	Find the solutions of partial differential equations governing real-world problems
CO7	Conceptualize limit, continuity, derivative and integration of complex functions
CO8	Evaluate complex integrals useful in real-world problems

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	1		1	2		1			1		1
CO2	3	2		2	2		2	1	2	1	1	2
CO3	2	1		1	2		1			1		1
CO4	3	2		2	2		2	1	1	1	1	2
CO5	3	1		1	2		1					1
CO6	3	2	1	2	2	1	2	1	3	1	1	2
CO7	2				1							1
CO8	3				1					1	1	2

Course Contents:

Unit 1: Laplace Transform

Definition: conditions for existence; Transforms of elementary functions; Properties of Laplace transforms: Linearity property, first shifting property, second shifting property, transforms of functions multiplied by t^n , scale change property, transforms of functions divided by t , transforms of integral of functions, transforms of derivatives; Evaluation of integrals by using Laplace transform; Transforms of some special functions: periodic function, error function, unit step function .

Unit 2: Inverse Laplace Transform

Introductory remarks; Inverse transforms of some elementary functions; General methods of finding inverse transforms; Partial fraction method and Convolution Theorem for finding inverse Laplace transforms.

Applications to find the solutions of linear differential equations and simultaneous linear differential equations with constant coefficients.

Unit 3: Fourier Transform

Definitions: integral transforms; Fourier integral theorem (without proof); Fourier sine and cosine integrals; Complex form of Fourier integrals; Fourier sine and cosine transforms; Properties of Fourier transforms; Convolution theorem for Fourier Transforms; Application to boundary value problems.

Unit 4: Series Solutions of Differential Equations and Special Functions

Validity of series solution, Series solutions about ordinary and singular point, Frobenius method, Series solution of Bessel equation, Recurrence relations for Bessel function, Generating function for Bessel function, Orthogonality of Bessel function.

Unit 5: Partial Differential Equations and Their Applications

Formation of Partial differential equations; Solutions of Partial differential equations-direct integration, linear equations of first order (Lagrange's linear equations), homogeneous linear equations with constant coefficients; Method of separation of variables-application to find solutions of wave equation, one dimensional heat equation and Laplace equation.

Unit 6: Calculus of Complex Functions

Limit and continuity of $f(z)$, Derivative of $f(z)$, Cauchy-Riemann equations, Analytic functions, Harmonic functions-orthogonal system, Conformal transformations, complex integration-Cauchy's theorem, integral formula, Residue theorem.

Texts:

1. B. S. Grewal, "Higher Engineering Mathematics", Khanna Publishers, New Delhi.
2. P. N. Wartikar, J. N. Wartikar, "A Text Book of Applied Mathematics", Vol. I and II, Pune Vidyarthi Griha Prakashan, Pune.

Machine Drawing and Computer Aided Drafting

ME 302	Machine Drawing and Computer Aided Drafting	PCC	2-0-0	2 Credits
--------	---	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Interpret the object with the help of given sectional and orthographic views.
CO2	Construct the curve of intersection of two solids
CO3	Draw machine element using keys, cotter, knuckle, bolted and welded joint
CO4	Assemble details of any given part. i. e. valve, pump, machine tool part etc.
CO5	Represent tolerances and level of surface finish on production drawings
CO6	Understand various creating and editing commands in Auto Cad

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2								3	2		1
CO2	2	1							2	1		1
CO3	2								2	1		
CO4	2	2			1				2	1		1
CO5	1	1			1				2	1		1
CO6	1	1			1				2	2		1

Course Contents:

Unit 1: Sectional Views

Full section, half section, partial section, off-set section, revolved sections, removed sections, auxiliary section, guidelines for hatching, examples on all above types of sections of machine elements.

Unit 2: Study of Machine Elements

Study of simple machine elements and components such as screwed fasteners, shaft couplings, pipe joints, riveted and welded joints, bearings, gears, etc.

Unit 3: Interpenetration of Surfaces (Emphasis on Applied Cases)

Line or curve of intersection of two penetrating cylinders, Cone and cylinder, prism and a cylinder, cone and prism, Forged ends, etc.

Unit 4: Drawing of Assembly and Details

Part drawing of standard machine components such as valves, components of various machine tools, pumps, shaft couplings, joints, pipe fittings, engine parts, etc.

Unit 5: Production Drawing and Reading Blue Prints

Types of production drawings, size, shape and description; limits, fits and tolerances, surface roughness and surface roughness symbols, reading the blue prints.

Unit 6: Computer Aided Drafting

Introduction to Computer Aided Design and Drafting, Advantages of CADD, study of preliminary AutoCAD commands like drawing, dimensioning, viewing commands. Drawing 3D views in AutoCAD, Introduction to AutoLISP programming.

Texts:

1. N. D. Bhatt, "Engineering Drawing", Charotar Publishing House, Anand, India.
2. N. D. Bhatt, "Machine Drawing", Charotar Publishing House, Anand, India
3. Ajeet Sing, "Working with AutoCAD 2000", Tata McGraw Hill, New Delhi.
4. George Omura, "ABC of AutoLISP", BPB Publications, New Delhi.

References:

1. Narayana, Kannaiah, Reddy, "Machine Drawing", New Age International Publishers.
2. AutoCAD and AutoLISP manuals from Autodesk Corp. U.S.A.
3. IS Code: SP 46-1988, Standard Drawing Practices for Engineering Institutes.

Thermodynamics

ME 303	Thermodynamics	PCC	3-1-0	4 Credits
--------	----------------	-----	-------	-----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Define the terms like system, boundary, properties, equilibrium, work, heat, ideal gas, entropy etc. used in thermodynamics.
CO2	Study different laws of thermodynamics and apply these to simple thermal systems like balloon, piston-cylinder arrangement, compressor, pump, refrigerator, heat exchanger, etc. to study energy balance.
CO3	Study various types of processes like isothermal, adiabatic, etc. considering system with ideal gas and represent them on p-v and T-s planes.
CO4	Apply availability concept to non-flow and steady flow type systems.
CO5	Represent phase diagram of pure substance (steam) on different thermodynamic planes like p-v, T-s, h-s, etc. Show various constant property lines on them.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1										
CO2	1	2	1									
CO3		1	1									
CO4	2				1							
CO5	1	1										

Course Contents:**Unit 1: Fundamental Concepts and Definitions**

Thermodynamic systems; properties, processes and cycles. Thermodynamic equilibrium, Quasi-static process, Macroscopic vs. Microscopic viewpoint, Work and heat Transfer: Work transferred and other types of work, Heat transfer, temperature and its measurement (principle of measurement, various instruments etc.). Zeroth law of thermodynamics, specific heat and latent heat, point function, path function.

Unit 2: First Law of Thermodynamics

First law of thermodynamics for a closed system undergoing a cycle and change of state, Energy, different forms of energy, Enthalpy, PMM-I control volume.

Application of first law of steady flow processes (nozzle, turbine, compressor pump, boiler, throttle valve etc.)

Unit 3: Second Law of Thermodynamics

Limitation of first law of thermodynamics, cycle heat engine, refrigerator and heat pump, Kelvin- Planck and Clausius statements and their equivalence, Reversibility and Irreversibility, Carnot cycle, Carnot theorem, Absolute thermodynamic temperature scale.

Unit 4: Entropy

Introduction, Clausius theorem, T-s plot, Clausius inequality, Entropy and Irreversibility, Entropy principle and its application, combined I and II law, Entropy and direction, Entropy and disorder.

Unit 5: Availability

Available energy pertaining a cycle, Quality of energy, law of degradation of energy, maximum work in a reversible process, Dead state, Availability in steady flow and non-flow processes, Second law efficiency.

Unit 6: Ideal Gas

Avogadro's law, Equation of state, ideal gas and process, relation between C_p and C_v , other equation of states.

Properties of Pure Substance: Phase change of pure substance, phase diagram of pure substance, p-v, T-s, and h-s diagrams properties of steam, property table, representation of processes of steam on p-v, T-s, and diagrams, Dryness fraction and its measurement.

Texts:

1. P. K. Nag, "Engineering Thermodynamics", Tata McGraw Hill, New Delhi, 3rd edition, 2005.
2. Y. A. Cengel, M. A. Boles, "Thermodynamics-An Engineering Approach", Tata McGraw Hill, 5th edition, 2006.

References:

1. G. J. Van Wylen, R. E. Sonntag, "Fundamental of Thermodynamics", John Wiley and Sons, 5th edition, 1998.
2. M. J. Moran, H. N. Shaprio, "Fundamentals of Engineering Thermodynamics", John Wiley and Sons, 4th edition, 2004.

Fluid Mechanics

ME 304	Fluid Mechanics	PCC	3-1-0	4 Credits
--------	-----------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Define fluid, define and calculate various properties of fluid
CO2	Calculate hydrostatic forces on the plane and curved surfaces and explain stability of floating bodies
CO3	Explain various types of flow. Calculate acceleration of fluid particles
CO4	Apply Bernoulli's equation and Navier-Stokes equation to simple problems in fluid mechanics
CO5	Explain laminar and turbulent flows on flat plates and through pipes
CO6	Explain and use dimensional analysis to simple problems in fluid mechanics
CO7	Understand boundary layer, drag and lift

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	1							1
CO2	3	3	1	1	1							1
CO3	3	3	1	1	1							1
CO4	3	3										1
CO5	3	3										1
CO6	2	3										1
CO7	2	3										1

Course Contents:

Unit 1: Basics

Definition of fluid, fluid properties such as viscosity, vapour pressure, compressibility, surface tension, capillarity, Mach number etc., pressure at a point in the static mass of fluid, variation of pressure, Pascal's law, pressure measurement by simple and differential manometers using manometric expression.

Unit 2: Fluid Statics

Hydrostatic forces on the plane and curved surfaces, centre of pressure, Buoyancy, centre of buoyancy, stability of floating bodies, metacentre and metacentric height its application in shipping.

Unit 3: Fluid Kinematics

Velocity of fluid particle, types of fluid flow, description of flow, continuity equation, Coordinate free form, acceleration of fluid particle, rotational and irrotational flow, Laplace's equation in velocity potential and Poisson's equation in stream function, flow net.

Unit 4: Fluid Dynamics

Momentum equation, development of Euler's equation, Introduction to Navier-Stokes equation, Integration of Euler's equation to obtain Bernoulli's equation, Bernoulli's theorem, Application of Bernoulli's theorem such as venture meter, orifice meter, rectangular and triangular notch, pitot tube, orifices etc.

Unit 5: Types of Flow

- a) **Laminar Flow:** Flow through circular pipe, between parallel plates, Power absorbed in viscous flow in bearings, loss of head due to friction in viscous flow.
- b) **Turbulent Flow:** Reynolds's experiment, frictional loss in pipe flow, shear stress in turbulent flow, major and minor losses, HGL and TEL, flow through series and parallel pipes.

Unit 6: Dimensional Analysis

- a) **Dimensional Analysis:** Dimensional homogeneity, Raleigh's method, Buckingham's theorem, Model analysis, similarity laws and dimensionless numbers.
- b) **Introduction** to boundary layer theory and its analysis.
- c) **Forces on Submerged bodies:** Drag, lift, Drag on cylinder, Development of lift in cylinder.

Texts:

1. P. N. Modi, S. M. Seth, "Fluid Mechanics and Hydraulic Machinery", Standard Book House, 10th edition, 1991.
2. Robert W. Fox, Alan T. McDonald, "Introduction to Fluid Mechanics", John Wile and Sons, 5th edition.

References:

1. V. L. Streeter, K.W. Bedford and E. B. Wylie, "Fluid Dynamics", Tata McGraw-Hill, 9th edition, 1998.
2. S. K. Som, G. Biswas, "Introduction to Fluid Mechanics and Fluid Machines", Tata McGraw Hill, 2nd edition, 2003.

Materials Science and Metallurgy

ME 305	Materials Science and Metallurgy	PCC	3-0-0	3 Credits
--------	----------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Analyze the structure of materials at different levels
CO2	Understand concept of mechanical behavior of materials and calculations of same using appropriate equations
CO3	Explain the concept of phase and phase diagram and understand the basic terminologies associated with metallurgy
CO4	Understand and suggest the heat treatment process and types
CO5	Prepare samples of different materials for metallography
CO6	Understand the strengthening mechanisms and suggest appropriate NDT technique

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Structure of Materials

Crystal structures, indexing of lattice planes, Indexing of lattice directions, Imperfections in crystals-point defects, line defects, surface and bulk defects, Mechanism of plastic deformation, deformation of single crystal by slip, plastic deformation of polycrystalline materials.

Unit 2: Mechanical Properties and Their Testing

Tensile test, engineering stress-strain curve, true stress-strain curve, types of stress-strain curves, compression test, bend test, torsion test, formability, hardness testing, different hardness tests-Vickers, Rockwell, Brinell, Impact test, fatigue test, creep test.

Unit 3: Equilibrium Diagrams

Definitions of terms, rules of solid-solubility, Gibb's phase rule, solidification of a pure metal, plotting of equilibrium diagrams, lever rule, Iron-iron carbide equilibrium diagram, critical temperatures, solidification and microstructure of slowly cooled steels, non-equilibrium cooling of steels, property variation with microstructures, classification and application of steels,, specification of steels, transformation products of austenite, TTT diagram, critical cooling rate, CCT diagram.

Unit 4: Heat Treatment

Heat treatment of steels, cooling media, annealing processes, normalizing, hardening, tempering, quenching and hardenability, surface hardening processes-nitriding, carbonitriding, flame hardening, induction hardening.

Unit 5: Metallography

Microscopy, specimen preparation, polishing abrasives and cloths, specimen mounting, electrolytic polishing, etching procedure and reagents, electrolytic etching, optical metallurgical microscope, macroscopy, sulphur printing, flow line observations, examination of fractures, spark test, electron microscope

Unit 6: Strengthening Mechanisms and Non-destructive Testing

Refinement of grain size, cold working/strain hardening, solid solution strengthening, dispersion strengthening, Precipitation hardening. Magnetic particle inspection, dye penetrant inspection, ultrasonic inspection, radiography, eddy current testing, acoustic emission inspection.

Texts:

1. V. D. Kodgire, S.V. Kodgire, "Material Science and Metallurgy for Engineers", Everest Publishing House, Pune, 24th edition, 2008.
2. W. D. Callister, "Materials Science and Engineering: An Introduction", John Wiley and Sons, 5th edition, 2001.

3. T. E. Reed-Hill, R. Abbaschian, "Physical Metallurgy Principles", Thomson, 3rd edition, 2003.

Basic Human Rights

BSH 306	Basic Human Rights	BHC	2-0-0	2 Credits
---------	--------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the history of human rights.
CO2	Learn to respect others caste, religion, region and culture.
CO3	Be aware of their rights as Indian citizen.
CO4	Understand the importance of groups and communities in the society.
CO5	Realize the philosophical and cultural basis and historical perspectives of human rights.
CO6	Make them aware of their responsibilities towards the nation.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1						2						
CO2												
CO3												
CO4									3			
CO5								2		2		
CO6												1

Course Contents:

Unit 1: The Basic Concepts

Individual, group, civil society, state, equality, justice. Human Values, Human rights and Human Duties: Origin, Contribution of American bill of rights, French revolution. Declaration of independence, Rights of citizen, Rights of working and exploited people

Unit 2: Fundamental Rights and Economic Program

Society, religion, culture, and their inter-relationship. Impact of social structure on human behavior, Social Structure and Social Problems: Social and communal conflicts and social harmony, rural poverty, unemployment, bonded labour.

Unit 3: Workers and Human Rights

Migrant workers and human rights violations, human rights of mentally and physically challenged. State, Individual liberty, Freedom and democracy.

Unit 4: NGOs and Human Rights in India

Land, Water, Forest issues.

Unit 5: Human Rights in Indian Constitution and Law

- i) The constitution of India: Preamble
- ii) Fundamental rights.
- iii) Directive principles of state policy.
- iv) Fundamental duties.
- v) Some other provisions.

Unit 6: UDHR and Indian Constitution

Universal declaration of human rights and provisions of India; Constitution and law; National human rights commission and state human rights commission.

References:

1. Shastry, T. S. N., "India and Human Rights: Reflections", Concept Publishing Company India (P Ltd.), 2005.

Elective I

Physics of Engineering Materials

BSH 307A	Physics of Engineering Materials	POE	3-0-0	3 Credits
----------	----------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the different types of structures of solid, defects in solids and analysis of crystal structure by X-ray diffraction technique.
CO2	Understand the origin and types of magnetism, significance of hysteresis loop in different magnetic materials and their uses in modern technology
CO3	Understand the band structure of solids and conductivity, categorization of solids on the basis of band structure, significance of Fermi-Dirac probability functions
CO4	Understand the principles of superconductivity, their uses in modern technology
CO5	Understand the position of Fermi level in intrinsic and extrinsic semiconductors, Semiconductor conductivity
CO6	Understand the electric field in dielectric
CO7	Understand basics of Nano materials, synthesis methods and characterization techniques

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2		3	3		1					3
CO2	3	3			1		2		2		1	2
CO3	2	2			1		1					3
CO4	3	3			1		3		1		1	2
CO5	3	2		2	1		1					1
CO6	3	2			2		2		3		1	2
CO7	2	3	1		3	1	3	1				1

Course Contents:

Unit 1: Crystallography

Crystal directions and planes, Diatomic Crystal (CsCl, NaCl, Diamond, BaTiO₃) Crystal imperfection, Point defects, Line defects, Surface and Volume defects, Structure properties relationship, structure determination by X-ray diffraction.

Unit 2: Magnetic Materials

Origin of magnetization using atomic theory, classification of magnetic materials and properties, Langevin's theory of Dia, Para and ferromagnetism, Soft and Hard magnetic materials and their uses, Domain theory of ferromagnetism, Hysteresis loss, Antiferromagnetic and Ferrimagnetic materials, Ferrites and Garnets, magnetic bubbles, magnetic recording.

Unit 3: Conducting and Superconducting Materials

Band theory of solids, Classical free electron theory of metals, Quantum free electron theory, Density of energy states and carrier concentration, Fermi energy, Temperature and Fermi energy distribution, Superconductivity, Factor affecting Superconductivity, Meissner effect, Type-I and Type-II superconductors, BCS theory, Josephson effect, High temperature superconductors, Application of superconductors (Cryotron, magnetic levitation)

Unit 4: Semiconducting Materials

Band structure of semiconductor, Charge carrier concentration, Fermi level and temperature, Electrical conductivity, Hall effect in semiconductors, P-N junction diode, Preparation of single crystals, LED, Photovoltaic Cell

Unit 5: Dielectric Materials

Dielectric constant and polarizability, types of polarization, temperature and frequency dependences of Dielectric parameter, internal fields in solids, Clausius-Mosotti equation, dielectric loss, dielectric breakdown, ferroelectric, pyroelectric and piezoelectric materials, applications of dielectric materials

Unit 6: Nano Materials

Nano materials: Introduction and properties, synthesis of nano materials, Carbon Nano Tubes, Characterization techniques of nano materials - SEM, TEM, EDAX, FMR, XRD. Applications of Nano materials.

Texts:

1. Kittle, "Introduction to Solid state Physics", John Wiley and Sons, 8th edition, 2004.
2. M. Srivastava, C. Srinivasan, "Science of Engineering Materials and Carbon Nanotubes", New Age International Publication, 3rd edition, 2010.
3. A. J. Dekker, "Solid State Physics", Pan Macmillan and Co. Ltd., London, 01st July, 1969.

2. A. J. Dekker, "Electrical Engineering Materials", Prentice Hall Publication, 1st edition, 1959.

Elective I

Applied Chemistry

BSH 307B	Applied Chemistry	POE	3-0-0	3 Credits
----------	-------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Classify and explain various types of Corrosion and should apply methods to minimize the rate of corrosion.
CO2	Understand and apply the concepts of Photochemical and Thermal reactions.
CO3	Understand the basic concepts of Polymers, Polymerization and Moulding techniques; Determine molecular weight of High-Polymers.
CO4	Understand and apply the basic techniques in Chemistry and capable to explain the concepts of Solvent Extraction.
CO5	Understand and apply various types of Spectroscopic, Chromatographic techniques and also able to explain the concepts of Thermo-Gravimetric Analysis (TGA).

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2		2		1		2				1	1
CO2	2	2	1				2		1		1	1
CO3	2	2	2		3	1	1		1		1	1
CO4	3	2	1		3				2		1	1
CO5	3	2	1		3				2		1	1

Course Contents:

Unit 1: Corrosion and Its Control

Introduction, Fundamental reason, Electrochemical Corrosion, Direct Chemical Corrosion, Factors affecting the rate of corrosion, types of corrosion-Galvanic, Pitting Corrosion, Microbiological corrosion, Stress corrosion, methods to minimise the corrosion: Proper design, Cathodic and Anodic protection.

Unit 2: Metals and Alloys

Metals: Introduction, Properties of metals and alloys. Occurrence, extraction, properties and uses of Ni, Cr and Ti Alloys: Introduction, Need for alloying Steel, Application of Alloy Steel.

Unit 3: Polymers and Its Characterization

Introduction, molecular weight determination by osmotic pressure and viscosity method, polymers in medicines and surgery, inorganic polymers: silicones. Classes of polymerization (Synthesis and Characterization). Plastic, Moulding of plastic.

Unit 4: Basic Techniques in Chemistry

Preparing substances for analysis, dissolving the samples, Precipitation, Filtration, Washing Precipitate, Drying and Igniting precipitate. Solvent Extraction: Aqueous and Organic phase liquid – liquid extraction.

Unit 5: Spectroscopy

Brief introduction to spectroscopy, UV–Visible Spectroscopy: Laws of absorption, instrumentation and application. IR spectroscopy: introduction, theory, instrumentation and application. Brief discussion on NMR Spectroscopy and its Applications. Brief introduction of AAS (Atomic Absorption Spectroscopy)

Unit 6: Instrumental Methods of Analysis

Introduction to Chromatography, Types of Chromatography (Adsorption and partition chromatography), Paper and Thin Layer Chromatography, Gas Chromatography – introduction, theory, instrumentation. Brief discussion of Thermo gravimetric analysis (TGA).

Texts:

1. Bhal and Bhal, “Advance Organic Chemistry”, S. Chand and Company, New Delhi, 1995.
2. P. C. Jain, Monica Jain, “Engineering Chemistry”, Dhanpat Rai and Sons, Delhi, 1992.

Elective I

Interpersonal Skills

ME 307C	Interpersonal skills	POE	3-0-0	3 Credits
---------	----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Acquire interpersonal communication skills
CO2	Develop the ability to work independently.
CO3	Develop the qualities like self-discipline, self-criticism and self-management.
CO4	Have the qualities of time management and discipline.
CO5	Present themselves as an inspiration for others
CO6	Develop themselves as good team leaders

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1								1				
CO2										2		
CO3												2
CO4									1			
CO5										2		
CO6											3	

Course Contents:

Unit 1: Development of Proficiency in English

Speaking skills, Feedback & questioning technique, Objectivity in argument (Both one on one and in groups). 5 Ws and 1 H and 7 Cs for effective Communication. Imbibing etiquettes and manners. Study of different pictorial expressions of non-verbal communication and their analysis

Unit 2: Self-Management

Self-Management, Self-Evaluation, Self-discipline, Self-criticism; Recognition of one's own limits and deficiencies, dependency, etc.; Self-Awareness, Self-Management, Identifying one's strengths and weaknesses, Planning & Goal setting, Managing self-emotions, ego, pride. Leadership and Team Dynamics

Unit 3: Time Management Techniques

Practice by game playing and other learning strategies to achieve the set targets Time Management Concept; Attendance, Discipline and Punctuality; Acting in time, Quality /Productive time.

Unit 4: Motivation/Inspiration

Ability to shape and direct working methods according to self-defined criteria, Ability to think for oneself, Apply oneself to a task independently with self-motivation.

Motivation techniques: Motivation techniques based on needs and field situations

Unit 5: Interpersonal Skills Development

Positive Relationship, Positive Attitudes, Empathise: comprehending others' opinions, points of views, and face them with understanding, Mutuality, Trust, Emotional Bonding, Handling Situations (Interview), Importance of interpersonal skills.

Unit 6: Effective Computing Skills

Designing an effective Presentation; Contents, appearance, themes in a presentation, Tone and Language in a presentation, Role and Importance of different tools for effective presentation.

Fluid Mechanics Lab

ME 308	Fluid Mechanics Lab	PCC	0-0-2	1 Credits
--------	---------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand laminar and Turbulent flow and determine Critical Reynolds number using Reynolds Apparatus
CO2	Verify Bernoulli's theorem
CO3	Determine pressure drop in flow through pipes and pipe fittings
CO4	Verify momentum equation using impact of jet apparatus
CO5	Determine viscosity using viscometer
CO6	Do calibration of pressure gauges, rotameter
CO7	Use manometers for pressure measurement

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1	3	1				1	2		1
CO2	1	1	1	3	1				1	2		1
CO3	1	1	1	3	1				1	2		1
CO4	1	1	1	3	1				1	2		1
CO5	1	1	1	3	1				1	2		1
CO6	1	1	1	3	1				1	2		1
CO7	1	1	1	3	1				1	2		1

List of Practicals/Experiments/Assignments (any eight experiments from the list)

1. Flow visualization technique: characteristics of laminar and turbulent flow patterns using Helleshaw Apparatus.
2. Verification of Bernoulli's theorem
3. Determination of Critical Reynolds number using Reynolds Apparatus
4. Determinations of pressure drop in pipes of various cross-sections
5. Determinations of pressure drop in pipes of various pipe fittings etc.
6. Viscosity measurement using viscometer (at least one type)
7. Verification of momentum equation using impact of jet apparatus
8. Determination of metacentric height of a floating body
9. Calibration of a selected flow measuring device and Bourdon pressure gauge
10. Gauge and differential pressure measurements using various types of manometers, Bourdon type pressure gauge. Demonstration of measurement using these instruments Lab.
11. Experiment to study hydraulic jump.

Machine Drawing and Computer Aided Drafting Lab

ME 309	Machine Drawing and Computer-aided Drafting Lab	PCC	0-0-4	2 Credits
--------	---	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Draw Conventional representation of standard machine components, welds, materials etc.
CO2	Draw sectional view of a given machine component.
CO3	Develop Assemble view from details of given component i.e. valve, pump, machine tool part, etc.
CO4	Combine details of given machine component and draw assembled view.
CO5	Use various Auto-Cad commands to draw orthographic projection
CO6	Draw sectional view from pictorial view of given machine component using Auto-Cad

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1		1				1

CO3	3	1	1		1				2	1		2
CO4	3	1	1		1				2	1		1
CO5	2	1	1		2				2	2		1
CO6	1	1	1		1				1	1		1

List of Practicals / Experiments / Assignments (minimum six assignments should be completed)

1. One full imperial drawing sheet consisting the drawing/ sketches of representation of standard components, symbols of pipe joints, weld joints, rivet joint etc., surface finish symbols and grades, limit, fit and tolerance sketches.
2. Two full imperial drawing sheets, one consisting of assembly and the other consisting of details of any one standard component such as valves, components of various machine tools, pumps, joints, engine parts, etc.
3. Two assignment of AutoCAD: Orthographic Projections of any one simple machine component such as bracket, Bearing Housing or Cast component for Engineers such as connecting rod, Piston, etc.; with dimensioning and detailing of three views of components.
4. 3-D model at least one simple machine component.

Materials Science and Metallurgy Lab

ME 310	Materials Science and Metallurgy Lab	PCC	0-0-2	1 Credits
--------	--------------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Measure hardness of given material using Brinell and Rockwell tests
CO2	Evaluate stretchability of given sheet metal samples of different thicknesses
CO3	Demonstrate the application of various non-destructive tests
CO4	Prepare specimen for observing the microstructure of the material
CO5	Sort out plain carbon steel samples based on their carbon percentages
CO6	Carry out hardening and hardenability of the given sample.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes

CO6												

List of Practicals/Experiments/Assignments (any eight experiments from the list):

1. Brinell Hardness Test
2. Rockwell Hardness test
3. Erichson Cupping Test
4. Magnaflux Test
5. Dye Penetrant Test
6. Specimen Preparation for Microscopy
7. Sulphur Print Test
8. Spark Test
9. Study and drawing of microstructures of plain carbon steels of varying carbon percentage
10. Study and drawing of microstructures of heat treated steels
11. Jominy End Quench Test
12. Study and drawing of microstructures of cast irons
13. Study and drawing of microstructures of non-ferrous alloys
14. Hardening of steels of varying carbon percentage

Semester IV

Theory of Machines and Mechanisms-I

ME 401	Theory of Machines and Mechanisms-I	PCC	4-0-0	4 Credits
--------	-------------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Define basic terminology of kinematics of mechanisms
CO2	Classify planar mechanisms and calculate its degree of freedom
CO3	Perform kinematic analysis of a given mechanism using ICR and RV methods
CO4	Perform kinematic analysis of a given mechanism analytically using vector or complex algebra method
CO5	Perform kinematic analysis of slider crank mechanism using Klein's construction and analytical approach

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1				1								3
CO2				1								3
CO3	1	1		2								3
CO4	1	1		2								2
CO5	1	1		3								2

Course Contents:

Unit 1: Introduction

Definition of link, pair, kinematics chain, inversions, inversions of single and double slider crank chain, kinematic diagrams of mechanisms, equivalent linkage of mechanism, degree of freedom.

Unit 2: Study of Various Mechanisms

Straight line mechanisms, pantograph, Geneva mechanism, steering gear mechanisms and Hooke's joint

Unit 3:

Instantaneous centre of rotation, body and space centroids and their applications, Kennedy's theorem and its applications.

Unit 4:

Velocity and acceleration analysis and its purpose, velocity and acceleration diagrams using relative velocity method, Corioli's component of acceleration

Unit 5:

Velocity and acceleration analysis by vector methods, coordinate system, Loop closure equation, Chase solutions, velocity and acceleration by vector and complex algebra

Unit 6:

Velocity and acceleration of slider crank mechanism by analytical method and Klein's construction.

Texts:

1. A. Ghosh, A. K. Malik, "Theory of Mechanisms and Machines", Affiliated East-West Press Pvt. Ltd., New Delhi.
2. S. S. Rattan, "Theory of Machines", Tata McGraw Hill, New Delhi.

References:

Strength of Materials

ME 402	Strength of Materials	PCC	3-1-0	4 Credits
--------	-----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	State the basic definitions of fundamental terms such as axial load, eccentric load, stress, strain, E, μ , etc.
CO2	Recognise the stress state (tension, compression, bending, shear, etc.) and calculate the value of stress developed in the component in axial/eccentric static and impact load cases.
CO3	Distinguish between uniaxial and multiaxial stress situation and calculate principal stresses, max. shear stress, their planes and max. normal and shear stresses on a given plane.
CO4	Analyse given beam for calculations of SF and BM
CO5	Calculate slope and deflection at a point on cantilever /simply supported beam using double integration, Macaulay's, Area-moment and superposition methods
CO6	Differentiate between beam and column and calculate critical load for a column using Euler's and Rankine's formulae

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Simple Stresses and Strains

Mechanical properties of materials, analysis of internal forces, simple stress and strain, stress-strain curve, Hooke's law, modulus of elasticity, shearing, thermal stress, Hoop stress, Poisson's ratio, volumetric stress, bulk modulus, shear modulus, relationship between elastic constants.

Unit 2: Principal Stresses and Strains

Uni-axial stress, simple shear, general state of stress for 2-D element, ellipse of stress, principle stresses and principal planes, principal strains, shear strains, strain rosettes, Mohr's circle for stresses and strains.

Strain energy and resilience: Load deflection diagram, strain energy, proof resilience, stresses due to gradual, sudden and impact loadings, shear resilience, strain energy in terms of principal stresses.

Unit 3: Combined Stresses

Combined axial and flexural loads, middle third rule, kernel of a section, load applied off the axes of symmetry.

Shear and Moment in Beams: Shear and moment, interpretation of vertical shear and bending moment, relations among load, shear and moment.

Unit 4: Stresses in Beams

Moment of inertia of different sections, bending and shearing stresses in a beam, theory of simple bending, derivation of flexural formula, economic sections, horizontal and vertical shear stress, distribution shear stress for different geometrical sections-rectangular, solid circular, I-section, other sections design for flexure and shear.

Unit 5: Beam Deflections

Differential equation of deflected beam, slope and deflection at a point, calculations of deflection for determinate beams by double integration, Macaulay's method, theorem of area-moment method (Mohr's theorems), moment diagram by parts, deflection of cantilever beams, deflection in simple supported beams, mid-span deflection, conjugate beam method, deflection by method of superposition.

Unit 6: Torsion

Introduction and assumptions, derivation of torsion formula, torsion of circular shafts, stresses and deformation in determinate solid/homogeneous/composite shafts, torsional strain energy.

Columns and Struts: Concept of short and long Columns, Euler and Rankine's formulae, limitation of Euler's formula, equivalent length, eccentrically loaded short compression members.

Texts:

1. S. Ramamrutham, "Strength of Materials", Dhanpat Rai and Sons, New Delhi.
2. F. L. Singer, Pytle, "Strength of Materials", Harper Collins Publishers, 2002.
3. S. Timoshenko, "Strength of Materials: Part-I (Elementary Theory and Problems)", CBS Publishers, New Delhi.

References:

3. S. B. Punmia, "Mechanics of Structure", Charotar Publishers, Anand.
4. B. C. Punmia, Ashok Jain, Arun Jain, "Strength of Materials", Laxmi Publications.

Manufacturing Processes-I

ME 403	Manufacturing Processes-I	PCC	3-0-0	3 Credits
--------	---------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Identify castings processes, working principles and applications and list various defects in metal casting
CO2	Understand the various metal forming processes, working principles and applications
CO3	Classify the basic joining processes and demonstrate principles of welding, brazing and soldering.
CO4	Study center lathe and its operations including plain, taper turning, work holding devices and cutting tool.
CO5	Understand milling machines and operations, cutters and indexing for gear cutting.
CO6	Study shaping, planing and drilling, their types and related tooling's

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1		1	1				1		1
CO2	2	2	1		1	1				1		1
CO3	2	1	1		1	1				1		1
CO4	1		1		1	1				1		1
CO5	2		1		1	1				1		1
CO6	1				1	1				1		1

Course Contents:

Unit 1: Introduction and Casting Processes

What is manufacturing? Selection of manufacturing processes

Introduction to casting; solidification of metals: Pure metals, Alloys; fluid flow; fluidity of molten metal; heat transfer: Solidification time, Shrinkage; defects: Porosity; Metal casting processes: Introduction; sand casting, shell molding, investment casting; Permanent-mold casting, vacuum casting, die casting, centrifugal casting; Inspection of casting; melting practice and furnaces, general design considerations for casting.

Unit 2: Rolling and Forging Processes

Introduction to Rolling; Flat-rolling Process: Roll Force, Torque, and Power Requirements, Geometric Considerations; Flat-rolling Practice: Defects in Rolled Plates and Sheets; Rolling Mills; Various Rolling Processes and Mills.

Introduction to forging, Open-die forging; Impression-die and Closed-die forging; various forging Operations; Forgeability of Metals: Forging Defects; Die Design, Die Materials, and Lubrication; Forging Machines.

Unit 3: Extrusion, Drawing and Sheet Metal Forming

Introduction; Extrusion Process; Hot Extrusion; Cold Extrusion: Impact extrusion, Hydrostatic Extrusion; Extrusion Defects; Extrusion Equipment; Drawing Process; Drawing Practice; Drawing Defects and Residual Stresses; Drawing Equipment.

Introduction to sheet metal forming; Shearing: Shearing operations, Characteristics and Type of Shearing Dies; Sheet-metal Characteristics and Formability, Formability Tests for Sheet Metals; Bending Sheets, Plates, and Tubes; Deep Drawing: Deep Drawability, Deep-drawing Practice; Spinning; Design Considerations in Sheet-metal Forming; Equipment for Sheet-metal Forming.

Unit 4: Joining Processes

Oxy-fuel-gas Welding; Arc-Welding Processes: Non consumable Electrode; Arc-welding Processes: Consumable Electrode, Shielded Metal-arc Welding, Submerged-arc Welding, Gas Metal-arc Welding; Electrodes for Arc Welding; The Weld joint, Quality, and Testing: Weld Quality, Weldability, Testing of Welds; Joint Design and Process Selection.

Introduction to solid state welding, Friction Welding, Resistance Welding: Spot, Seam, Projection Welding. Introduction to brazing and soldering; Brazing: Brazing Methods, Design for Brazing; Soldering: Types of Solders and Fluxes, Solderability, Soldering Techniques, Soldering Applications and Design Guidelines; Mechanical Fastening, Design for Mechanical Fastening.

Unit 5: Machining Processes: Turning and Hole Making

Introduction; The Turning Process; Lathes and Lathe Operations: Lathe Components, Workholding Devices and Accessories, Lathe Operations, Types of Lathes, Turning-process Capabilities, Design Considerations and Guidelines for Turning Operations, Chip Collection Systems, Cutting Screw Threads; Boring and Boring Machines; Drilling, Drills, and Drilling Machines: Drills, Material-removal Rate in Drilling, Thrust Force and Torque, Drill Materials and Sizes, Drilling Practice, Drilling Machines, Design Considerations for Drilling; Reaming and Reamers; Tapping and Taps.

Unit 6: Machining Processes: Milling, Broaching and Gear Manufacturing

Introduction, Milling and Milling Machines: Peripheral Milling, Face Milling, End Milling, Other Milling Operations and Milling Cutters, Toolholders, Milling Process Capabilities, Design and Operating Guidelines for Milling, Milling Machines; Planing and Shaping; Broaching and Broaching Machines; Gear Manufacturing by Machining: Form Cutting, Gear Generating, Cutting Bevel Gears, Gear-finishing Processes, Design Considerations and Economics of Gear Machining.

Applied Thermodynamics

ME 404	Applied Thermodynamics	PCC	3-1-0	4 Credits
--------	------------------------	-----	-------	-----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Define the terms like calorific value of fuel, stoichiometric air-fuel ratio, excess air, equivalent evaporation, boiler efficiency, etc. Calculate minimum air required for combustion of fuel.
CO2	Study and Analyze gas power cycles and vapour power cycles like Otto, Diesel, dual, Joule and Rankine cycles and derive expressions for the performance parameters like thermal efficiency, P_m
CO3	Classify various types of boiler, nozzle, steam turbine and condenser used in steam power plant.
CO4	Classify various types of IC engines. Sketch the cut section of typical diesel engine and label its components. Define the terms like TDC, BDC, r_c , etc.
CO5	Draw P-v diagram for single-stage reciprocating air compressor, with and without clearance volume, and evaluate its performance. Differentiate between reciprocating and rotary air compressors.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1										
CO2	1	2										
CO3	1											
CO4			1		1							
CO5		2										

Course Contents:

Unit 1: Fuels and Combustion

Types of fuels, calorific values of fuel and its determination, combustion equation for hydrocarbon fuel, determination of minimum air required for combustion and excess air supplied conversion of volumetric analysis to mass analysis, fuel gas analysis.

Unit 2: Steam Generators

Classification of boilers, boiler details, requirements of a good boiler; merits and demerits of fire tube and water tube boilers, boiler mountings and accessories.

Boiler Draught: Classification of draught, natural draught, efficiency of the chimney, draught losses, types of boiler draught.

Performance of Boilers: Evaporation, equipment evaporation, boiler efficiency, boiler trial and heat balance, Introduction to IBR.

Unit 3: Vapor and Gas Power Cycles

Carnot cycle, ideal Rankine cycle, Reheat and Regeneration, Stirling cycle, Joule-Brayton cycle. Calculation of thermal efficiency, specific steam/fuel consumption, work ratio for above cycles.

Unit 4: Steam Nozzles

Types of Nozzles, flow of steam through nozzles, condition for maximum discharge, expansion of steam considering friction, super saturated flow through nozzles, General relationship between area, velocity and pressure.

Unit 5: Steam Turbines

Advantages and classification of steam turbines, compounding of steam turbines, velocity diagrams, work one done and efficiencies, losses in turbines.

Condensers and Cooling Towers: Elements of steam condensing plants, advantages of using condensers, types of condensers, thermodynamic analysis of condensers, efficiencies, cooling towers.

Unit 6: Reciprocating Air Compressor

Classification constructional details, theoretical and actual indicator diagram, FAD, multi staging, condition for maximum efficiency, capacity control.

Rotary Compressor- Concepts of: Rotary compressors, Root blower and vane type compressors, Centrifugal compressors. Velocity diagram construction and expression for work done, introduction to slip factor, power input factor.

Texts:

1. T. D. Eastop, A. McConkey, "Applied Thermodynamics", Addison Wesley Longman.
2. Rayner Joel, "Basic engineering Thermodynamics", Addison Wesley Longman.

Numerical Methods in Engineering

ME 405	Numerical Methods in Engineering	PCC	2-1-0	3 Credits
--------	----------------------------------	-----	-------	-----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Describe the concept of error
CO2	Illustrate the concept of various Numerical Techniques
CO3	Evaluate the given Engineering problem using the suitable Numerical Technique
CO4	Develop the computer programming based on the Numerical Techniques

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3		1	3							
CO2	3	3		1	3							
CO3	3	3		1	3							
CO4	3	3		1	3							

Course Contents:**Unit 1: Error Analysis**

Significant figures, round-off, precision and accuracy, approximate and true error, truncation error and Taylor series, machine epsilon, data uncertainties, error propagation, importance of errors in computer programming.

Unit 2: Roots of Equations

Motivation, Bracketing methods: Bisection methods, Open methods: Newton Raphson method, Engineering applications.

Unit 3: Numerical Solution of Algebraic Equations

Motivation, Cramer's rule, Gauss-Elimination Method, pivoting, scaling, engineering applications.

Unit 4: Numerical Integration and Differentiation

Motivation, Newton's-Cotes Integration Formulas: Trapezoidal Rule, Simpson's rule, engineering applications Numerical differentiation using Finite divide Difference method

Unit 5: Curve Fitting and Interpolation

Motivation, Least Square Regression: Linear Regression, Polynomial regression.

Interpolation: Newton's Divide Difference interpolation, engineering applications.

Solution to Ordinary Differentiation Equations: Motivation, Euler's and Modified Euler's Method, Heun's method, Runge – Kutta Method, engineering applications.

Unit 6: Computer Programming

Overview of programming language, Development of at least one computer program based on each unit.

Texts:

1. Steven C Chapra, Raymond P. Canale, "Numerical Methods for Engineers", Tata McGraw Hill Publications, 2010.

Elective II

NSS-I

ME 403	NSS-I	POE	3-0-0	3 Credits
--------	-------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand features of Indian constitution, fundamental rights and duties of citizens
CO2	Explain importance of Health, Hygiene & Sanitation
CO3	Summarize yoga a tool for healthy lifestyle
CO4	Conclude environmental issues and organize its management
CO5	Classify the disasters and youth role in its management

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1			1			1	1	1	1	2	1	
CO2			1				2	1	1	1	1	1
CO3			1			1		1	1	1	1	1
CO4			2			1	1	1	1	1	1	1
CO5	1		1			1	1	1	1	1	1	1

Course Contents:

Unit 1: Introduction and Basic Concepts of NSS

History, Philosophy, Aims & objectives of NSS Organizational structure, Concept of regular activities, Special camping, Day Camps. Basis of adoption village/slums, Methodology of conducting Survey

Unit 2: Youth and Community Mobilization

Definition, Profile of youth, Categories of youth, Issues, Challenges and opportunities for youth, Youth as an agent of social change, Youth-adult partnership, Mapping of community stakeholders, Identifying methods of mobilization, Needs and importance of volunteerism.

Unit 3: Importance and Role of Youth Leadership

Meaning and types of leadership, Qualities of good leaders; Traits of leadership, Importance and role of youth leadership

Unit 4: Life Competencies and Skill

Definition and importance of life competencies, Communication, Inter Personal, Problem solving and decision making, Positive thinking, Self-confidence and self-esteem, Life goals, Stress and time management

Unit 5: Social Harmony and National Integration

Indian history and culture, Role of youth in peace-building and conflict resolution, Role of youth in Nation building

Unit 6: Youth Development Programs in India

National Youth Policy, Youth development programs at the National Level, State Level and voluntary sector, Youth-focused and Youth-led organizations

Elective II

Biology for Engineers

ME 406B	Biology for Engineers	POE	3-0-0	3 Credits
---------	-----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Explain origin of life and Evolution, Cells, Biomolecules-Lipids
CO2	Understand Biomolecules
CO3	Understand Cell structure and function and cell cycle
CO4	Explain Mendelian genetics
CO5	Understand and Explain DNA structure, DNA replication, Transcription, Translation

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	2	3		1		1			1		1
CO2	1	2	3		1		1			1		1
CO3	1	2	3		1		1			1		1
CO4	1	2	3		1		1			1		1
CO5	1	2	3		1		1			1		1

Course Contents:

Unit 1: Introduction

Origin of life and Evolution, Cells, Biomolecules-Lipids

Unit 2: Biomolecules

Carbohydrates, water, Amino acids and proteins, Enzymes, Nucleotides

Unit 3: Cell structure

Cell structure and function, Prokaryotes, Eukaryotes

Unit 4: Cell cycle

Cell division, mitosis, meiosis, culture growth,

Unit 5: Genetics

Mendelian genetics, genetic disorders, Mendelian inheritance principle, pedigree analysis, Non- Mendelian inheritance

Unit 6: DNA

Chromatin, DNA structure, DNA replication, Transcription, Translation.

Texts:

1. Arthur T. Johnson, "Biology for Engineers", CRC Press.

References:

1. N. A. Campbell, J. B. Reece, "Biology", International edition, Benjamin Cummings, New York, 7th edition or later, 2007 or later.

Elective II

Value Education

ME 406C	Value Education	POE	3-0-0	3 Credits
---------	-----------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Give an understanding of life in all its complexities and to provide practical opportunities and mould students to meet the needs of the people
CO2	Sharpen the capacity to make right moral and ethical choices
CO3	Develop social concern reaching out to the nation as leaders and serving the needy with divine grace and power
CO4	Analyze the economic, political and social situations with respect to values
CO5	Identify the changes that must be done to thrust the society towards moral recovery

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes

Course Contents:

Unit 1: Introduction

Definition, definition of values, why values? Need for inculcation of values, object of value education, sources of value, types: personal values, social values, professional values, moral and spiritual values, behavioral (common) values.

Unit 2: Personal Values

Definition of person, self-confidence, self-discipline, self-assessment, self-restraint, self-motivation, determination, ambition, contentment humility and simplicity, sympathy and compassion, gratitude, forgiveness, honesty, courtesy.

Unit 3: Social Values

Definition of society, units of society, individual, family, different groups, community, social consciousness, equality and brotherhood, dialogue, tolerance, responsibility, co-operation, freedom repentance and magnanimity.

Unit 4: Professional Values

Definition, competence, confidence, devotion to duty, efficiency, accountability, respect for learning/learned, willingness to learn, open and balanced mind, team spirit, professional ethics, willingness for discussion, aims, efforts, avoidance of procrastination and slothfulness, alertness.

Unit 5: Moral Values

Detachment, Faith, Loyalty, Non-violence, Obedience, Prayer, Purity, Renunciation, Truthfulness; Inculcation of values: Direct and indirect approaches; process of inculcation: Being sensitive, identifying the appropriate values, internalizing the values, practicing the values.

Unit 6: Behavioral Values

Individual values and group values, good manners at home and outside, equality, purity of thoughts, speech and action, understanding the role of religion, faith, understanding commonness of religions, respect for other faiths, unity, diversity, living together, tolerance, non-violence, truthfulness, common aim, unified efforts towards peace, patriotism.

Text:

1. Dr. S. Ignacimuthu, S. J., "Values for life", Better Yourself Books, Bandra, Mumbai, 1999.
2. R. P. Dhokalia, "Eternal Human Values", NCERT Campus, Sri Aurobindo Marg, New Delhi.
3. Ramakrishna Math, "Values: Collection of Essays", Chennai, 1996.

Elective II

Renewable Energy Sources

ME 406D	Renewable Energy Sources	PCE	3-0-0	3 Credits
---------	--------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Explain the difference between renewable and non-renewable energy
CO2	Describe working of solar collectors
CO3	Explain various applications of solar energy
CO4	Describe working of other renewable energies such as wind, biomass

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	2	3		2	3	3	3	2	2		2
CO2	1	1	3	1	2	3	3	3	2	2		2
CO3	2	1	1				3	2		1		2
CO4	3	3			2	3	3	2				1

Course Contents:

Unit 1: Introduction

Energy resources, Estimation of energy reserves in India, Current status of energy conversion technologies relating to nuclear fission and fusion, Solar energy.

Unit 2: Solar Radiations

Spectral distribution, Solar geometry, Attenuation of solar radiation in Earth's atmosphere, Measurement of solar radiation, Properties of opaque and transparent surfaces.

Unit 3: Solar Collectors

Flat Plate Solar Collectors: Construction of collector, material, selection criteria for flat plate collectors, testing of collectors, Limitation of flat plate collectors, Introduction to ETC.

Concentrating type collectors: Types of concentrators, advantages, paraboloid, parabolic trough, Heliostat concentrator, Selection of various materials used in concentrating systems, tracking.

Unit 4: Solar Energy Applications

Air/Water heating, Space heating/cooling, solar drying, and solar still, Photo-voltaic conversion.

Unit 5: Wind Energy and Biomass

Types of wind mills, Wind power availability, and wind power development in India. Evaluation of sites for bio-conversion and bio-mass, Bio-mass gasification with special reference to agricultural waste.

Unit 6: Introduction to Other Renewable Energy Sources

Tidal, Geo-thermal, OTEC; Mini/micro hydro-electric, Geo-thermal, Wave, Tidal. System design, components and economics.

Texts:

1. Chetansingh Solanki, "Renewable Energy Technologies", Prentice Hall of India, 2008.

References:

1. S. P. Sukhatme, "Solar Energy: Principles of Thermal Collection and Storage", Tata McGraw Hill Publications, New Delhi, 1992.
2. G. D. Rai, "Solar Energy Utilization", Khanna Publisher, Delhi, 1992.

Theory of Machines and Mechanisms Lab-I

ME 407	Theory of Machines and Mechanisms Lab-I	PCC	0-0-2	1 Credits
--------	---	-----	-------	-----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Perform graphically kinematic analysis of any planar mechanism using ICR and RV methods.
CO2	Perform graphically kinematic analysis of slider crank mechanism using Klein's construction.
CO3	Demonstrate use of graphical differentiation method for kinematic analysis of slider crank mechanism or any other planar mechanism with a slider.
CO4	Sketch polar diagram for a Hooke's joint.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												

List of Practicals/Experiments/Assignments**1. Four sheets** (half imperial size)

Graphical solution of problems on velocity, acceleration in mechanisms by relative velocity method, instantaneous center of rotation method and Klein's construction. Atleast one problem containing Corioli's component of acceleration.

2. Experiments (any 2)

- a) Experimental determination of velocity and acceleration of Hooke's joint.
- b) Determination of displacement of slider-crank mechanism with the help of model and to plot velocity and acceleration curves from it.
- c) Experiment on Corioli's component of acceleration.

3. Assignment

Develop a computer program for velocity and acceleration of slider crank mechanism.

Manufacturing Processes Lab-I

ME 408	Manufacturing Processes Lab-I	PCC	0-0-2	1 Credits
--------	-------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Perform plain turning, step turning, knurling, eccentric turning, chamfering and facing operations on lathe.
CO2	Prepare setup and fabricate composite job using milling, shaping and drilling machine.
CO3	Making spur gears on a milling machine.
CO4	Prepare sand casting setup using split pattern for simple component.
CO5	Perform joining of two plate using TIG/MIG welding.
CO6	Demonstrate cutting of a sheet metal using flame cutting.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1		3	1		1		1	2		1
CO2	1	1		3	1		1		1	2		1
CO3	1	1		3	1		1		1	2		1
CO4	2	1		3	1		1		1	2		1
CO5	2	1		3	1		1		1	2		1
CO6	1	1		3	1		1		1	1		1

List of Practicals/Experiments/Assignments

Each student shall be required to submit any six jobs from the following:

1. Making a job with a process plan involving plain, step and taper turning operations on a Centre lathe.
2. Preparation of process planning sheet for a job including operations such as milling, drilling and shaping.
3. Making a spur gear using universal dividing head on milling machine.
4. Making a simple component by sand casting using a split pattern.
5. Cutting of a steel plate using oxyacetylene flame cutting /plasma cutting.
6. Making a butt joint on two stainless steel plates using TIG Welding.
7. An experiment on shearing operation.
8. An experiment on blanking operation.
9. An experiment on drawing operation.

Strength of Materials Lab

ME 409	Strength of Materials Lab	PCC	0-0-2	1 Credits
--------	---------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Perform tension, compression, shear and torsion tests for various metals and alloys
CO2	Perform flexure, impact and deflection tests for various materials such as timber, cast iron, etc.
CO3	Measure stress and strain experimentally using photo-elasticity, strain gauges, etc.
CO4	Carry out experiments to demonstrate thermal stresses.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												

List of Practicals/Experiments/Assignments (any 8 experiments from the list)

1. Tension test on ferrous and non-ferrous alloys (mild steel/cast iron/aluminum, etc.)
2. Compression test on mild steel, aluminum, concrete, and wood
3. Shear test on mild steel and aluminum (single and double shear tests)
4. Torsion test on mild steel and cast iron solid bars and pipes
5. Flexure test on timber and cast iron beams
6. Deflection test on mild steel and wooden beam specimens
7. Graphical solution method for principal stress problems
8. Impact test on mild steel, brass, aluminum, and cast iron specimens
9. Experiments on thermal stresses
10. Strain measurement in stress analysis by photo-elasticity
11. Strain measurement involving strain gauges/ rosettes
12. Assignment involving computer programming for simple problems of stress, strain computations.

Thermal Engineering Lab-I

ME 410	Thermal Engineering Lab-I	PCC	0-0-2	1 Credits
--------	---------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Conduct test on Bomb calorimeter, nozzle, steam turbine, condenser, compressor etc. to study their performance.
CO2	Draw performance curves of these machines.
CO3	Analyze the results obtained from the tests.
CO4	Draw conclusions based on the results of the experiments
CO5	Based on your visit to Industry, sketch its layout and write specifications.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1			2								
CO2	2	1		1								
CO3	1	2	1	2	1	1						
CO4				2								
CO5		1				1				2		2

List of Practicals/Experiments/Assignments

Experiment Number 10 and any seven experiments from 1-9 experiments from the list:

1. Determination of calorific value by Bomb calorimeter
2. Measurement of dryness fraction of steam using separating & throttling calorimeter.
3. Trial on boiler
4. Trial on convergent/convergent-divergent type nozzle
5. Performance evaluation of steam turbine (Reaction / Impulse).
6. Performance evaluation of surface condenser.
7. Flue gas analysis using emission measuring instruments
8. Study & trial on single stage/two-stage reciprocating air compressor
9. Trial on centrifugal blower
10. Visit to appropriate industry to study and experience some of the above listed systems (**Compulsory**).

Semester V

Machine Design-I

ME 501	Machine Design-I	PCC	3-1-0	4 Credits
--------	------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Formulate the problem by identifying customer need and convert into design specification
CO2	Understand component behavior subjected to loads and identify failure criteria
CO3	Analyze the stresses and strain induced in the component
CO4	Design of machine component using theories of failures
CO5	Design of component for finite life and infinite life when subjected to fluctuating load
CO6	Design of components like shaft, key, coupling, screw and spring

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1						1				1
CO2	3	2		1		1		1		1		1
CO3	1	1				1		1		1		1
CO4	3	3	2	1		2		1		1		1
CO5	1	1				1		1		1		1
CO6	2	2	2	1		1		1		1		1

Course Contents:

Unit 1: Mechanical Engineering Design Process

Traditional design methods, general industrial design procedure, design considerations, phases in design ,creativity in design, use of standardization, preferred series, introduction to ISO 9000, use of design data book, aesthetic and ergonomic considerations in design.

Unit 2: Design of Machine Elements against Static Loading

Theories of Failure (Yield and Fracture Criteria): Maximum normal stress theory, Maximum shear stress theory, Maximum distortion energy theory, comparison of various theories of failure, Direct loading and combined loading, Joints subjected to static loading e.g. cotter and knuckle joint, turnbuckle, etc. introduction to fluctuating loads.

Unit 3: Design against Fluctuating Loads

Stress concentration, stress concentration factors, fluctuating stresses, fatigue failure, endurance limit, notch sensitivity, approximate estimation of endurance limit, design for finite life and finite life under reversed stresses, cumulative damage in fatigue, Soderberg and Goodman diagrams, fatigue design under combined stresses.

Unit 4: Design of Shafts Keys and Couplings

Various design considerations in transmission shafts, splined shafts, spindle and axles strength, lateral and torsional rigidity, ASME code for designing transmission shaft.

Types of Keys: Classification and fitment in keyways, Design of various types of keys.

Couplings: Design consideration, design of rigid, muff and flange type couplings, design of flexible couplings.

Unit 5: Design of Threaded Joints

Stresses in screw fasteners, bolted joints under tension, torque requirement for bolt tightening, preloading of bolt under static loading, eccentrically loaded bolted joints.

Power Screws: Forms of threads used for power screw and their applications, torque analysis for square and trapezoidal threads, efficiency of screw, collar friction, overall efficiency, self-locking in power screws, stresses in the power screw, design of screw and nut, differential and compound screw, re-circulating ball screw.

Welded Joints: Type of welded joints, stresses in butt and fillet welds, strength of welded joints subjected to bending moments.

Unit 6: Mechanical Springs

Stress deflection equation for helical spring, Wahl's factor, style of ends, design of helical compression, tension and torsional spring under static loads, construction and design consideration in leaf springs, nipping, strain energy in helical spring, shot peening.

Texts:

1. V. B. Bhandari, "Design of Machine Elements", Tata McGraw Hill Publications, New Delhi, 2008.
2. R. L. Norton, "Machine Design: An Integrated Approach", Pearson Education Singapore, 2001.

3. A. S. Hall, A. R. Holowenko, H. G. Langhlin, "Theory and Problems of Machine Design", Schaum's Outline Series, Tata McGraw Hill book Company, New York, 1982.
4. J. E. Shigley and C. Mischke, "Mechanical Engineering Design", Tata McGraw Hill Publications, 7th edition, 2004.
5. M. F. Spotts, "Design of Machine Elements", Prentice Hall of India, New Delhi.

Manufacturing Processes-II

ME 502	Manufacturing Processes-II	PCC	3-0-0	3 Credits
--------	----------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the process of powder metallurgy and its applications
CO2	Calculate the cutting forces in orthogonal and oblique cutting
CO3	Evaluate the machinability of materials
CO4	Understand the abrasive processes
CO5	Explain the different precision machining processes
CO6	Design jigs and fixtures for given application

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	1	1			2					1
CO2	3	3										1
CO3	3	3	1	2	3							1
CO4	3	3	2									1
CO5	3	3	1	3								1
CO6	3	1	3	3	3			2				1

Course Contents:

Unit 1: Abrasive Machining and Finishing Operations

Introduction; Abrasives and Bonded Abrasives: Grinding Wheels, Bond Types, Wheel Grade and Structure; Grinding Process: Grinding-wheel wear, Grinding Ratio, Dressing, Truing and Shaping of Grinding Wheels, Grindability of Materials and Wheel Selection; Grinding Operations and Machines; Design Considerations for Grinding; Finishing Operations

Unit 2: Mechanics of Metal Cutting

Geometry of single point cutting tools, terms and definitions; chip formation, forces acting on the cutting tool and their measurement; specific cutting energy; plowing force and the “size effect”; mean shear strength of the work material; chip thickness: theory of Ernst and merchant, theory of Lee and Shaffer, friction in metal cutting

Unit 3: Thermal aspects, Tool wear, and Machinability

Temperature in Metal Cutting: Heat generation in metal cutting; temperature distribution in metal cutting, effect of cutting speed on temperatures, measurement of cutting temperatures
 Tool life and tool Wear: progressive tool wear; forms of wear in metal cutting: crater wear, flank wear, tool-life criteria,
 cutting tool materials: basic requirements of tool materials, major classes of tool materials: high-speed steel, cemented carbide, ceramics, CBN and diamond, tool coatings; the work material and its machinability
 Cutting fluids: Action of coolants and application of cutting fluids.

Unit 4: Processing of Powder Metals

Introduction; Production of Metal Powders: Methods of Powder Production, Particle Size, Shape, and Distribution, Blending Metal Powders; Compaction of Metal Powders: Equipment, Isostatic Pressing, Sintering; Secondary and Finishing Operations; Design Considerations.

Unit 5: Processing of Ceramics and Glasses

Introduction; Shaping Ceramics: Casting, Plastic Forming, Pressing, Drying and Firing, Finishing Operations; Forming and Shaping of Glass: Flat-sheet and Plate Glass, Tubing and Rods, Discrete Glass Products, Glass Fibers; Techniques for Strengthening and Annealing Glass: Finishing Operations; Design Considerations for Ceramics and Glasses

Unit 6: Processing of Plastics

Introduction; Extrusion: Miscellaneous Extrusion Processes, Production of Polymer Reinforcing Fibers; Injection Moulding: Reaction-injection Molding; Blow Moulding; Rotational Moulding; Thermoforming; Compression Moulding; Transfer Moulding; Casting; Foam Moulding; Cold Forming and Solid-phase Forming; Processing Elastomers

Texts:

1. Serope Kalpakjian and Steven R. Schmid, "Manufacturing Engineering and Technology", Addison Wesley Longman (Singapore) Pte. India Ltd., 6th edition, 2009.
2. Geoffrey Boothroyd, Winston Knight, "Fundamentals of Machining and Machine Tools", Taylor and Francis, 3rd edition, 2006.

References:

2. Paul De Garmo, J. T. Black, Ronald A. Kohser, "Materials and Processes in Manufacturing", Wiley, 10th edition, 2007.
3. M. C. Shaw, "Theory of Metal Cutting", Oxford and I.B.H. Publishing, 1st edition, 1994.

Theory of Machines and Mechanisms-II

ME 503	Theory of Machines and Mechanisms-II	PCC	4-0-0	4 Credits
--------	--------------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Identify and select type of belt and rope drive for a particular application
CO2	Evaluate gear tooth geometry and select appropriate gears, gear trains
CO3	Define governor and select/suggest an appropriate governor
CO4	Characterize flywheels as per engine requirement
CO5	Understand gyroscopic effects in ships, aero planes, and road vehicles.
CO6	Understand free and forced vibrations of single degree freedom systems

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	3	1		2		1			2		2
CO2	2	3					1					3
CO3		2										2
CO4		2		1								
CO5	2	3		2								3
CO6	2	3		3								3

Course Contents:

Unit 1: Gears

Classification of gears, Terminology of spur gears, Conjugate action, Involute and cycloidal profiles, Path of contact, Contact ratio, Interference, Undercutting, Rack shift, Effect of center distance variations, Friction between gear teeth, Internal gears. Helical gear terminology, Normal and transverse module, Virtual number of teeth, Torque transmitted by helical gears, Spiral gears, Efficiency of spiral gears, Worm and Bevel gear terminology, Tooth forces and geometric relationship, Torque capacities.

Unit 2: Gear Trains

Velocity ratios, Types of gear trains, Tooth load, Torque transmitted and holding torque. Flywheel: Turning moment diagram, Fluctuation of energy and speed, Determination of flywheel size for different types of prime movers and machines.

Unit 3: Cams and Followers

Types of cams and followers, Analysis of motion, Jump and ramp of cam, Determination of cam profiles for a given follower motion, Circular arc cam, Tangent cam, Cycloidal cam.

Unit 4: Friction and Lubrication

Dry friction, friction between nut and screw with different types of threads, Uniform wear theory and uniform pressure theory, Friction at pivot and collars, Friction in turning pair, Friction circle and friction axis, Friction in mechanisms. Lubrication, Viscosity, Viscous flow, Boundary lubrication, Thick film lubrication, Hydrostatic and hydrodynamic lubrications.

Unit 5: Friction Clutches

Single plate and multi-plate clutch, Cone clutch, Centrifugal clutch, Torque transmitting capacity, Clutch operating mechanism. **Brakes:** Shoe brake, Internal and external shoe brakes, Block brakes, Band brakes, Band and block brakes, Braking torque. **Dynamometers:** Different types of absorption and transmission type dynamometers, Construction and working of eddy current dynamometer, Torque measurement.

Unit 6: Belt and Rope Drives

Flat belts, Effect of slip, Centrifugal tension, Creep, Crowing of pulley, Initial tension in belts. V- Belts, Virtual coefficient of friction, Effect of V-groove on torque transmitted. Rope drives, Rope constructions, Advantages of rope drives.

Texts:

1. S. S. Rattan, "Theory of Machines", Tata McGraw Hill Publications, New Delhi.
2. P. L. Ballaney, "Theory of Machines", Khanna Publishers, New Delhi.

References:

1. T. Beven, "Theory of machines", CBS Publishers, Delhi.
2. J. E. Shigley, J. J. Vicker, "Theory of Machines and Mechanisms", Tata McGraw Hill International.
3. A. Ghosh, A. K. Mallick, "Theory of Mechanisms and Machines", Affiliated East West Pvt. Ltd.

Heat Transfer

ME 504	Heat Transfer	PCC	3-1-0	4 Credits
--------	---------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Explain the laws of heat transfer and deduce the general heat conduction equation and to explain it for 1-D steady state heat transfer in regular shape bodies
CO2	Describe the critical radius of insulation, overall heat transfer coefficient, thermal conductivity and lumped heat transfer
CO3	Interpret the extended surfaces
CO4	Illustrate the boundary layer concept, dimensional analysis, forced and free convection under different conditions
CO5	Describe the Boiling heat transfer, mass transfer and Evaluate the heat exchanger and examine the LMTD and NTU methods applied to engineering problems
CO6	Explain the thermal radiation black body, emissivity and reflectivity and evaluation of view factor and radiation shields

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1			1				1			
CO2	3	2			1							
CO3	3	1			2		2		1			
CO4	3	3		1	1				1			
CO5	3	3	3		1		2					
CO6	2	3		2	2		2		1			

Course Contents:

Unit 1: Introduction

Heat transfer mechanism, conduction heat transfer, Thermal conductivity, Convection heat transfer, Radiation heat transfer, laws of heat transfer

Steady State Conduction: General heat conduction equation, Boundary and initial conditions, One-dimensional steady state conduction: the slab, the cylinder, the sphere, composite systems.

Unit 2: Overall Heat Transfer and Extended Surfaces

Thermal contact resistance, Critical radius of insulation, Electrical analogy, Overall heat transfer coefficient, Heat source systems, Variable thermal conductivity, Extended surfaces.

Unsteady State Conduction: Lumped system analysis, Biot and Fourier number, Heisler chart (**No numerical examples**).

Unit 3: Principles of Convection

Continuity, Momentum and Energy equations, Hydrodynamic and Thermal boundary layer for a flat plate and pipe flow. Dimensionless groups for convection, relation between fluid friction and heat transfer, turbulent boundary layer heat transfer.

Unit 4: Forced Convection

Empirical relations for pipe and tube flow, flow across cylinders, spheres, tube banks.

Free Convection: Free convection from a vertical, inclined and horizontal surface, cylinder and sphere.

Unit 5: Boiling and Condensation

Film-wise and drop-wise condensation, pool boiling regimes, forced convection boiling (Internal flows).

Introduction to Mass Transfer: Introduction, Mechanism of diffusion, Fick's law of mass transfer, mass diffusion coefficient.

Heat Exchangers: Types of heat exchangers, the overall heat transfer coefficient, Analysis of heat exchangers, the log mean temperature difference (LMTD) method, the effectiveness-NTU method, selection of heat exchangers, Introduction to TEMA standard.

Unit 6: Radiation Heat Transfer

Introduction, Thermal radiation, Black body radiation, radiation laws, Radiation properties, Atmospheric and Solar radiation, The view factor, Radiation heat transfer from black surfaces, gray surfaces, diffuse surfaces, Radiation shields and the radiation effect.

Texts:

1. F. P. Incropera, D. P. Dewitt, "Fundamentals of Heat and Mass Transfer", John-Wiley, 5th edition, 1990.
2. S. P. Sukhatme, "A Textbook on Heat Transfer", Tata McGraw Hill Publications, 3rd edition.

References:

1. Y. A. Cengel, “Heat Transfer- A Practical Approach”, Tata McGraw Hill Publications, 3rd edition, 2006.

Metrology and Quality Control

ME 505	Metrology and Quality Control	PCC	4-0-0	4 Credits
--------	-------------------------------	-----	-------	-----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Identify techniques to minimize the errors in measurement
CO2	Identify methods and devices for measurement of length, angle, and gear and thread parameters, surface roughness and geometric features of parts.
CO3	Choose limits for plug and ring gauges.
CO4	Explain methods of measurement in modern machineries
CO5	Select quality control techniques and its applications
CO6	Plot quality control charts and suggest measures to improve the quality of product and reduce cost using Statistical tools.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1				3								2
CO2		2	2		2							
CO3			2	3	2							
CO4						3						
CO5	1					2		3	3		3	2
CO6	1					2		3	3		2	2

Course Contents:**Unit 1: Measurement Standard and Comparators**

Measurement Standard, Principles of Engineering Metrology, Line end, wavelength, Traceability of Standards. Types and Sources of error, Alignment, Temperature, Plastic deformation, Slip gauges and gauge block, Linear and Angular Measurement (Sine bar, Sine center, Autocollimator, Angle Décor and Dividing head), Calibration. Comparator: Mechanical, Pneumatic, Optical, Electronic (Inductive), Electrical (LVDT).

Unit 2: Interferometry and Limits, Fits, Tolerances

Principle, NPL Interferometer, Flatness measuring of slip gauges, Parallelism, Laser Interferometer, Surface Finish Measurement: Surface Texture, Measuring Surface Finish by Stylus probe, Tomlinson and Talysurf, Analysis of Surface Traces: Methods.

Design of Gauges: Types of Gauges, Limits, Fits, Tolerance; Terminology for limits and Fits. Indian Standard (IS 919-1963) Taylor's Principle.

Unit 3: Metrology of Screw Thread

Gear Metrology: Gear error, Gear measurement, Gear Tooth Vernier; Profile Projector, Tool marker's microscope. Advancements in Metrology: Co-ordinate Measuring Machine, Universal Measuring Machine, Laser in Metrology.

Unit 4: Introduction to Quality and Quality Tools

Quality Statements, Cost of Quality and Value of Quality, Quality of Design, Quality of Conformance, Quality of Performance, Seven Quality Tools: Check sheet, Flow chart, Pareto analysis, cause and effect diagram, scatter diagram, Brain storming, Quality circles.

Unit 5: Total Quality Management

Quality Function Deployment, 5S, Kaizan, Kanban, JIT, Poka yoke, TPM, FMECA, FTA, Zero defects.

Unit 6: Statistical Quality Control

Statistical Quality Control: statistical concept, Frequency diagram, Concept of Variance analysis, Control chart for variable & attribute, Process Capability.

Acceptance Sampling: Sampling Inspection, OC curve and its characteristics, sampling methods.

Introduction to ISO 9000: Definition and aims of standardizations, Techniques of standardization, Codification system, Varity control and Value Engineering.

Texts:

1. I. C. Gupta, "Engineering Metrology", Dhanpat ana Rai Publications, New Delhi, India.
2. M. S. Mahajan, "Statistical Quality Control", Dhanpat and Rai Publications.

Elective III

NSS-II

ME 506A	NSS-II	POE	3-0-0	3 Credits
---------	--------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand features of Indian constitution, fundamental rights and duties of citizen
CO2	Explain importance of Health, Hygiene & Sanitation
CO3	Summarize yoga a tool for healthy lifestyle
CO4	Conclude environmental issues and organize its management
CO5	Classify the disasters and youth role in its management

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1			1			1	1	1	1	2	1	
CO2			1				2	1	1	1	1	1
CO3			1			1		1	1	1	1	1
CO4			2			1	1	1	1	1	1	1
CO5	1		1			1	1	1	1	1	1	1

Course Contents:

Unit 1: Citizenship

Basic Features of Constitution of India, Fundamental Rights and Duties, Human Rights, Consumer awareness and the legal rights of the consumer, RTI.

Unit 2: Health, Hygiene and Sanitation

Definition, Needs and scope of health education , Food and Nutrition , Safe drinking water, Water borne diseases and sanitation, National Health Program, Reproductive health , Healthy Lifestyles ,HIV AIDS, Drugs and Substance abuse, Home Nursing , First Aid.

Unit 3: Youth and Yoga

History, Philosophy and concept of Yoga , Myths and misconceptions about yoga , Different Yoga traditions and their Impacts, Yoga as a preventive, promotive and curative method, Yoga as a tool for healthy lifestyle.

Unit 4: Environment Issues

Environment conservation, Enrichment and Sustainability, Climate change, Waste management, Natural resource management, Rain water harvesting, Energy conservation, Waste land development, Soil conservations and forestation.

Unit 5: Disaster Management

Introduction to Disaster Management, Classification disaster, Role of youth in Disaster Management

Unit 6: Youth and crime

Sociological and psychological factors influencing youth crime, Peer mentoring in preventing crime, Awareness about anti-ragging, Cybercrime and its prevention, Juvenile justice.

Elective III

Sheet Metal Processes and Products

ME 506B	Sheet Metal Processes and Products	POE	3-0-0	3 Credits
---------	------------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Recognize common manufacturing processes of Sheet Metal Fabrication
CO2	Understand the principles of design and fabricate of sheet metal products and recognize common material used in the industry
CO3	Distinguish Shearing, Drawing and Pressing etc. processes.
CO4	Know types of dies and formability.
CO5	Select mechanical or hydraulic presses for the given process

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1	3	2				2	1		1
CO2	3			1	3	2	3					2
CO3	1	1		3	3	2	1		3		1	3
CO4	3	3	1	1	3		1	1	1			
CO5	3	2			3	3	2				1	3

Course Contents:

Unit 1: Introduction

Importance of sheet metal engineering, materials used, desirable properties of materials in sheet metal products

Unit 2: Basic Applications

Shearing processes like blanking, piercing, and punching.

Unit 3: Drawing Processes

Shallow and deep drawing of cylindrical and rectangular bodies, forming and bending including spring-back.

Unit 4: Types of Dies

Compound dies, progressive dies, and combination dies

Unit 5: Mechanical Presses

Mechanical and hydraulic presses, modern developments in press tools, formability.

Unit 6: Case Studies

Case studies for manufacturing of sheet metal products in various engineering applications

Texts:

1. Donaldson et al., "Tool Design", Tata McGraw-Hill Publications, New Delhi, 1998.

References:

1. P. N. Rao, "Manufacturing Technology, Foundry, Forming and Welding", Vol. I, Tata McGraw Hill Publishing Co. Ltd, New Delhi, 3rd edition, 2004.

4. Sheet Metal Engineering Notes, IIT Bombay, 1999.

Elective III**Knowledge Management**

ME 506C	Knowledge Management	POE	3-0-0	3 Credits
---------	----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Define KM, learning organizations, intellectual capital and related terminologies in clear terms and understand the role of knowledge management in organizations.
CO2	Demonstrate an understanding of the history, concepts, and the antecedents of management of knowledge and describe several successful knowledge management systems.
CO3	Identify and select tools and techniques of KM for the stages of creation, acquisition, transfer and management of knowledge.
CO4	Analyze and evaluate tangible and intangible knowledge assets and understand current KM issues and initiatives.
CO5	Evaluate the impact of technology including telecommunications, networks, and internet/intranet role in managing knowledge.
CO6	Identify KM in specific environments: managerial and decision making communities; finance and economic sectors; legal information systems; health information systems

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1						1						3
CO2												3
CO3												3
CO4								2				3
CO5					3				2			3
CO6												3

Course Contents:

Unit 1: Introduction

Definition, evolution, need, drivers, scope, approaches in Organizations, strategies in organizations, components and functions, understanding knowledge.

Unit 2: Learning Organization

Five components of learning organization, knowledge sources and documentation.

Unit 3: Essentials of Knowledge Management

Knowledge creation process, knowledge management techniques, systems and tools.

Unit 4: Organizational Knowledge Management

Architecture and implementation strategies, building the knowledge corporation and implementing knowledge management in organization.

Unit 5: Knowledge Management System

Knowledge management system life cycle, managing knowledge workers, knowledge audit, and knowledge management practices in organizations, few case studies.

Unit 6: Futuristic KM

Knowledge engineering, Theory of computation, data structure.

Texts:

1. Thohothathri Raman, "Knowledge Management: A resource book", Excel, 2004.
2. M. Elias, Awad Hasan, M. Ghazri, "Knowledge Management", Pearson Education.

References:

1. Amrit Tiwana, "Strategy & Knowledge Platforms", The KM Toolkit–Orchestrating IT, Pearson, PHI, 2nd edition.
2. Peter Senge et al., "The Fifth Discipline Field Book–Strategies and Tools for Building A learning Organization", Nicholas Brealey, 1994.
3. Sudhir Warier, "Knowledge Management", Vikas Publications.
4. Madanmohan Rao, "Leading with Knowledge", Tata McGraw Hill Publications.

Elective III

Sustainable Development

ME 605B	Sustainable Development	POE	3-0-0	3 Credits
---------	-------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Explain the difference between development and sustainable development
CO2	Explain challenges of sustainable development and climate change
CO3	Explain sustainable development indicators
CO4	Analyze sustainable energy options
CO5	Understand social and economic aspects of sustainable development

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	2	3		2	3	3	3	2	2		2
CO2	1	1	3	1	2	3	3	3	2	2		2
CO3	2	1	1				3	2		1		2
CO4	3	3			2	3	3	2				1
CO5			3			2	3	2				1

Course Contents:

Unit 1: Introduction

Status of environment, Environmental, Social and Economic issues, Need for sustainability, nine ways to achieve sustainability, population, resources, development and environment.

Unit 2: Global Warming and Climate Change

Global Warming and climate Change since industrial revolution, Greenhouse gas emission, greenhouse effect, Renewable energy, etc.

Unit 3: Challenges of Sustainable Development and Global Environmental Issues

Concept of sustainability, Factors governing sustainable development, Linkages among sustainable development, Environment and poverty, Determinants of sustainable development, Case studies on sustainable development, Population, income and urbanization Health care, Food, fisheries and agriculture , Materials and energy flows.

Unit 4: Sustainable Development Indicators

Need for indicators, Statistical procedures Aggregating indicators, Use of principal component analysis, Three environmental quality indices.

Unit 5: Environmental Assessment

National environmental policy act of 1969, Environmental Impact Assessment, Project categories based on environmental impacts, Impact identification methods, Environmental impact assessment process.

Unit 6: Environmental Management and Social Dimensions

Revisiting complex issues, Sector policies concerning the environment, Institutional framework for environmental management, Achievements in environmental management, People's perception of the environment, Participatory development, NGOs, Gender and development, Indigenous peoples, Social exclusion and analysis.

Texts:

1. J. Sayer, B. Campbell, "The Science of Sustainable Development: Local Livelihoods and the Global Environment", Biological Conservation, Restoration and Sustainability, Cambridge University Press, London, 2003.
2. J. Kirkby, P. O'Keefe, Timberlake, "Sustainable Development", Earth scan Publication, London, 1993.
3. Peter P. Rogers, Kazi F. Jalal, John A. Boyd, "An introduction to sustainable development", Glen Educational Foundation, 2008.

References:

2. Low, N. "Global ethics and environment", London, Rout ledge, 1999.
3. Douglas Muschett, "Principles of Sustainable Development", St. Lucie Press, 1997.

Elective III

Non-Conventional Machining

ME 506E	Non-Conventional Machining	PCE	3-0-0	3 Credits
---------	----------------------------	-----	-------	-----------

Pre-Requisites: Engineering mathematics-I, Manufacturing processes

Course Outcomes: At the end of the course, students will be able to:

CO1	Classify Non-conventional machining processes.
CO2	Understand working principle and mechanism of material removal in various non-conventional machining processes.
CO3	Identify process parameters their effect and applications of different processes.
CO4	Summarized merits and demerits of non-conventional machining processes.
CO5	Explain the mechanism to design hybrid processes such as ELID grinding, EDCG, EDCM, etc.
CO6	Understand mechanism and working principle of micro machining using non-conventional processes.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1	1	1	1				1		1
CO2	2	2	1		2	1	1			1		1
CO3	2	2	1	1	2	1	1			1		1
CO4	2	2	1		2	1	1			1		1
CO5	3	2	1	1	2	2	1			1		1
CO6	2	2	1	1	1	2	1			1		1

Course Contents:

Unit 1: Introduction to Non-Conventional Machining Processes

An overview, Trends in manufacturing, Classification of Non-Conventional Machining processes.

Unit 2: Chemical and Electrochemical Processes

Introduction, Types: CHM, ECM, Electrochemical grinding, electrochemical deburring, electrochemical honing, Mechanism of material removal, Process characteristics, Process parameters, Equipment and Tooling (maskant sand etchants), Advantages, applications and limitations.

Unit 3: Thermo-Electrical Processes

Electrical discharge machining, Electron beam machining, Ion beam machining, Plasma arc machining, Hot machining, Mechanism of material removal, Process characteristics, Process parameters, Equipment and Tooling, Advantages, applications and limitations.

Unit 4: Mechanical Processes

Ultrasonic machining, Abrasive jet machining, Abrasive flow machining, Water Jet cutting, Mechanism of material removal, Process characteristics, Process parameters, Equipment and Tooling, Advantages, applications and limitations.

Unit 5: Laser Based Machining Processes

Types of lasers, Laser beam generation, Equipment and machining procedure, Process characteristics, Process parameters, Advantages and limitations of LBM, Applications.

Unit 6: Hybrid Processes

Concept, Mechanism of material removal, Process characteristics, Process parameters, Equipment and Tooling, classification, applications, advantages, Shaped tube electrolytic machining, Electrical discharge wire cutting, ELID grinding, Micro machining: Micro EDM, Micro ECM, Electro discharge chemical grinding (EDCG).

Texts:

1. P. C. Pande, H. S. Shan, "Modern Machining Process", Tata McGraw-Hill Publications, New Delhi, 1980.
2. V. K. Jain, "Advanced Machining Processes", Allied Publishers Pvt. Ltd., New Delhi, 2002.

- P. K. Mishra, "Non-Conventional Machining", Narosa Publishing House, New Delhi, 2007

References:

- P. C. Wellar, "Non-Traditional Machining Processes", SME, Michigan, 1984.
- Gary F. Benedict, "Non-traditional Manufacturing Processes", Marcel Dekker, 1987.

Elective III

Mechanical Measurements

ME 506F	Mechanical Measurement	PCE	3-0-0	3 Credits
---------	------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Define measurement parameters, and Identify errors in measurement
CO2	Identify methods and devices for measurement of length, angle
CO3	Identify methods and devices for measurement of pressure, flow, force, torque, strain, velocity, displacement, acceleration, temperature

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		1	3	3	1							2
CO2	1	2	2	1	1							2
CO3	1	1	3	2	1							1

Course Contents:

Unit 1: Mechanical Measurement

Need of mechanical measurement, Basic definitions: Hysteresis, Linearity, Resolution of measuring instruments, Threshold, Drift, Zero stability, loading effect and system response. Measurement methods, Generalized Measurement system, Static performance characteristics, Errors and their classification.

Unit 2: Linear and Angular Measurements

Linear Measurement Instruments, Vernier calliper, Micrometer, Interval measurements: Slip gauges, Checking of slip gauges for surface quality, Optical flat, Limit gauges, Problems on measurements with gauge.

Unit 3: Measurement of Pressure

Gravitational, directing acting, elastic and indirect type pressure transducers. Measurement of very low pressures (high vacuum). Flow Measurement: Measurement of fluid velocity, Hot Wire Anemometry, Laser Doppler Velocimetry. Flow measuring devices, Rotameter.

Unit 4: Measurement of Force, Torque and Strain

Force measurement: load cells, cantilever beams, proving rings, differential transformers. Measurement of torque: Torsion bar dynamometer, servo controlled dynamometer, absorption dynamometers. Power measurements.

Measurement of strain: Mechanical strain gauges, electrical strain gauges, strain gauge: materials, gauge factors, theory of strain gauges and method of measurement, bridge arrangement, temperature compensation.

Unit 5: Displacement, Velocity/Speed and Acceleration Measurement

Working principal of Resistive Potentiometer, Linear variable differential transducers, Electro Magnetic Transducers, Mechanical, Electrical and Photoelectric Tachometers, Piezoelectric Accelerometer, Seismic Accelerometer,

Unit 6: Temperature Measurement

Temperature Measuring Devices: Thermocouples, Resistance Temperature Detectors, Thermistor, Liquid in glass Thermometers, Pressure Thermometers, Pyrometer, Bimetallic strip. Calibration of temperature measuring devices, Numerical Examples on Flow Measurement.

Texts:

1. I. C. Gupta, "Engineering Metrology", Dhanpat Rai and Sons.
2. R. K. Jain, "Mechanical & Industrial Measurements", Khanna Publishers.

References:

1. E. O. Doebelin, "Measurement Systems, Application and Design", Tata McGraw Hill Publications.
2. G. Beckwith and G. Thomas, "Mechanical Measurements", Pearson Education.

Machine Design Practice-I

ME 507	Machine Design Practice-I	PCC	0-0-2	1 Credits
--------	---------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Apply design process to an open ended problem
CO2	Determine suitable material and size for structural component of machine/system
CO3	Apply iterative technique in design including making estimate of unknown values for first computation and checking or revisiting and re-computing
CO4	Choose logically and defend selection of design factors
CO5	Design of components for given part/system i.e. shaft, keys, coupling, links, screws, springs etc.
CO6	Work effectively as a part of design group/team
CO7	Have good communication skill, orally, graphically as well as in writing

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												
CO7												

List of Practicals/Experiments/Assignments

1. The term work shall consist of two design projects based on the syllabus of Machine Design I. Each design project shall consist of two imperial size sheets- one involving assembly drawings with a part list and overall dimensions and other sheet involving drawings of individual components. Manufacturing tolerances, surface finish symbols and geometric tolerances should be specified, wherever necessary, so as to make it working drawing
2. A design report giving all necessary calculations for the design of components and assembly should be submitted in a separate file.
3. Two assignments based on topics of syllabus of Machine Design I.

Theory of Machines and Mechanisms Lab-II

ME 508	Theory of Machines and Mechanisms Lab-II	PCC	0-0-2	1 Credit
--------	--	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Explain various types of gear boxes, gear trains, belt and rope drives
CO2	Interpreting physical principles and phenomenon of governor, gyroscopic, flywheel
CO3	Measure vibration parameters in single degree of freedom systems
CO4	Evaluating natural frequency of 1 dof

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	1	2	2		2					
CO2	2	2	1	2	2							3
CO3	3	3		3	3							3
CO4	2	3		3	3							3

List of Practicals/Experiments/Assignments

Term work should consist of total 10 experiments from the below given list.

1. Study of various types of gear boxes such as Industrial gear box, Synchromesh gear box, Differential gear box, etc.
2. To draw conjugate profile for any general shape of gear tooth
3. To generate gear tooth profile and to study the effects under cutting and rack shift using models
4. To draw cam profile for various types of follower motions
5. To study various types of lubricating systems
6. To study various types of dynamometers
7. To determine speed vs. lift characteristic curve of a centrifugal governor and to find its coefficient of insensitiveness and stability.
8. Verification of principle of gyroscope and gyroscopic couple using motorized gyroscope
9. Study of any two gyro-controlled systems
10. To study the dynamic balancing machine and to balance a rotor such as a fan or the rotor of electric motor or disc on the machine
11. To determine the natural frequency of damped vibration of a single degree of freedom system and to find its damping coefficient
12. To verify natural frequency of torsional vibration of two rotor system and position of node
13. To determine critical speed of a single rotor system
14. To determine transverse natural frequency of a beam experimentally using frequency measurement setup
15. To determine the frequency response curve under different damping conditions for the single degree of freedom system
16. To study shock absorbers and to measure transmissibility of force and motion.
17. Study of epicyclic gear train and its dynamic behaviour.

Metrology and Quality Control Lab

ME 509	Metrology and Quality Control lab	PCC	0-0-2	1 Credit
--------	-----------------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Measure linear, angular circular features, dimensional and geometric features
CO2	Measure surface roughness of components
CO3	Calibration of metrological equipment

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1	3	1							2
CO2			2	2		1		1				2
CO3			3	2		1						2

List of Practicals/Experiments/Assignments

A] Any Four from experiment No. 1 to 5 and Any Four from experiment No. 6 to 10

1. Determination of linear and angular dimensions of given composite part using precision/non precision measuring instruments.
2. Error determination with linear / angular measuring instruments.
3. Calibration of measuring instrument. Example – Dial gauge, Micrometer, Vernier (any one)
4. Verification of dimensions & geometry of given components using Mechanical & Pneumatic comparator.
5. Machine tool alignment testing on any two machines.
6. Identification of surfaces using optical flat/interferometers and measure surface roughness using surface roughness tester.
7. Determination of geometry & dimensions of given composite object using profile projector and measurement of various angles of single point cutting tool using tool maker's microscope.
8. Measurement of thread parameters using floating carriage diameter measuring machine.
9. Measurement of spur gear parameters using Gear Tooth Vernier, Span, Gear Rolling Tester.
10. Determination of given geometry using coordinate measuring machine (CMM).

B] Statistical Quality Control (SQC) (Any Two)

Note - Use of computational tools are recommended

1. Analyze the fault in given batch of specimens by using seven quality control tools for engineering application.
2. Determination of process capability from given components and plot variable control chart/ attribute chart.
3. Case study on various tools in Total Quality Management (TQM).

C] Industrial visit to Calibration lab /Quality control lab / Gear manufacturing unit / Automotive Industry / Engineering Industry.

Heat Transfer Lab

ME 510	Heat Transfer Lab	PCC	0-0-2	1 Credit
--------	-------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the various heat transfer mode of heat transfer and its application and verify
CO2	Learn the experimental methodology
CO3	Describe the concept the terms like least count, calibration of the instruments

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	3		3	2							
CO2	3	3		3	2		2					
CO3	3	3		3	2		2					

List of Practicals/Experiments/Assignments

Any eight experiments from the list:

1. Determination of thermal conductivity of a metal rod.
2. Determination of thermal conductivity of insulating powder.
3. Determination of conductivity of a composite slab.
4. Temperature distribution on a fin surface.
5. Determination of film heat transfer coefficient for nature convection.
6. Determination of film heat transfer coefficient for forced convection.
7. Determination of heat transfer coefficient for cylinder in cross flow in forced convection.
8. Performance of Double pipe Heat Exchanger / Shell and Tube Heat Exchanger.
9. Determination of emissivity of a metal surface.
10. Determination of Stefan Boltzman's constant.
11. Determination of critical heat flux.
12. Calibration of measuring instruments pressure gauge, thermocouple, flow-meter etc.

Semester VI

Manufacturing Processes-III

ME 601	Manufacturing Processes-III	PCC	3-0-0	3 Credits
--------	-----------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the basic principle of operation of NC/CNC machines
CO2	Explain the constructional features of CNC machines
CO3	Compare various drives and tooling used for CNC machines
CO4	Prepare a part program for producing a given product
CO5	Select appropriate non-traditional machining process for a given application
CO6	Learn the working principle of various micromachining processes

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Introduction to CNC System

Numerical Control, CNC, Classification of NC/CNC systems, Basic components of CNC system: Design considerations, structure, Antifriction LM guideways, spindles, ball screws; CNC Drives and controls: DC motors, AC motors, Stepper motors, Feedback devices: Encoders, tachometers; Servo motors, Linear motors

Unit 2: CNC Tooling and Programming

CNC Tooling, Tool and work holding devices, Automatic Tool Changers, Automatic Pallet Changers. Part programming: Introduction, Part Program and its elements, Methods of Programming: Manual and Computer Assisted Part programming, APT language.

Unit 3: Advanced Machining Processes

Introduction; Chemical Machining; Electrochemical Machining: Pulsed, Electrochemical Machining; Electrochemical Grinding; Electrical-discharge Machining: Wire EDM, Electrical-discharge Grinding; Laser-beam Machining; Electron-beam Machining; Water-jet Machining; Abrasive-jet Machining; Hybrid Machining Systems

Unit 4: Surface Treatments and Coatings

Introduction; Mechanical Surface Treatments; Mechanical Plating and Cladding; Thermal Spraying, Vapour Deposition: Physical Vapor Deposition, Chemical Vapor Deposition; Ion Implantation and Diffusion Coating; Laser Treatments; Electroplating, Electroless Plating, and Electroforming; Conversion Coatings, Hot Dipping, Porcelain Enamelling; Ceramic and organic coatings; Diamond Coating and Diamond like Carbon; Surface Texturing

Unit 5: Rapid Prototyping

Introduction; subtractive processes; additive processes: Fused-deposition Modeling, Stereolithography, Multijet/Polyjet Modeling, Selective Laser Sintering, Electron-beam Melting, Three-dimensional Printing, Laminated-object Manufacturing, Solid-ground Curing, Laser-engineered Net Shaping; virtual prototyping; direct manufacturing and rapid tooling

Unit 6: Micromanufacturing Technology

Introduction to fabrication of MEMS, micromachining of MEMS devices: Bulk Micromachining, Surface Micromachining; LIGA microfabrication process; Solid free-form fabrication of devices; Nanoscale manufacturing.

Texts:

1. HMT Ltd, "Mechatronics", Tata McGraw Hill Publications, New Delhi, 1998.
2. Serope Kalpakjian and Steven R. Schmid, "Manufacturing Engineering and Technology", Addison Wesley Longman (Singapore) Pte. India Ltd., 6th edition, 2009

References:

1. James Madison, "CNC Machining Handbook", Industrial Press Inc., 1996.
2. Gibbs and Crandell, CNC Machining and Programming: An Introduction, Industrial Press Inc, 2003.
3. Gary F. Benedict, "Non Traditional Manufacturing Processes", Marcel Dekker, 1987.

IC Engines and Refrigeration-Air Conditioning

ME 602	IC Engine and RAC	PCC	4-0-0	4 Credits
--------	-------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Describe and explain different types of reciprocating internal combustion engines (ICE), their typical design features and performance characteristics.
CO2	Describe and analyze the power cycle of internal combustion engines using ideal gas cycles, air cycles, and fuel-air cycles. Compute indicated power and thermal efficiency.
CO3	Understand various engine combustion parameters, generation of undesirable combustion and exhaust emissions and primitive measures,
CO4	Study various engine systems and performance improvement techniques. Testing performance analysis of IC engines.
CO5	State the importance, applications, methods of cooling and refrigeration(Domestic and Industrial).Understand Thermodynamics behind various refrigeration cycles
CO6	Describe and analyze vapor compression and vapor absorption system

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2										
CO2	1	2										
CO3		1			1		1					
CO4	1	1		2								
CO5	2	1			1							
CO6	1	2										

Course Contents:

Unit 1: Fundamentals of IC Engines

Applications, nomenclature, engine components, Engine classification, two and four stroke cycle engines; fundamental difference between SI and CI engines; valve timing diagrams.

Power Cycles: Air standard Otto, Diesel and Dual cycles; Valve timing diagrams, Fuel-Air cycles and deviation of actual cycles from ideal cycles.

Combustion: Introduction, important qualities and ratings of SI Engines fuels; qualities and ratings of CI Engine fuels.

Combustion in S.I. Engines, flame speed, ignition delay, normal and abnormal combustion, effect of engine variables on flame propagation and ignition delay, Combustion in C.I. Engines, combustion of a fuel drop, stages of combustion, ignition delay, combustion knock; types of SI and CI Engine combustion chambers.

Unit 2: Various Engine Systems

Starting systems, fuel supply systems, engine cooling system, ignition system, engine friction and lubrication systems, governing systems.

Unit 3: Engine Testing and Performance of SI and CI Engines

Parameters, Type of tests and characteristic curves.

Super charging in IC Engine: Effect of attitude on power output, types of supercharging.

Engine Emissions and control: Pollutants from SI and CI engines and their control, emission regulations such as Bharat and Euro.

Alternate fuels for SI and CI engines: Alcohols, Biodiesels, vegetable oil extraction, Trans-esterification process, properties of alternative fuels and fuel blends.

Unit 4: Introduction to Refrigeration

Fundamental of refrigeration, Unit, Applications, Methods of cooling, Refrigeration systems, Thermodynamics of Refrigeration, Air refrigeration system

Unit 5: Vapour Compression System

Theoretical and actual cycle, use for P-h and T-s charts for problem solving, various effects on system performance. Refrigerants

Vapour Absorption System: Introduction, comparison with vapour compression system Aqua-ammonia system, lithium bromide-water system.

Unit 6: Air Conditioning

Properties of moist air, psychometric chart, Sensible and latent heat loads SHF, GS HF, RSHF, bypass factor, air conditioning processes. Refrigeration and air conditioning controls.

Texts:

1. V. Ganeshan, "Internal Combustion Engines", Tata McGraw Hill Publications, New Delhi, 3rd edition.
2. C. P. Arora, "Refrigeration and Air Conditioning", Tata McGraw Hill Publications, New Delhi, 2nd edition, 2000.
3. W. F. Stoeker, J. P. Jones, "Principles of Refrigeration and Air Conditioning", Tata McGraw Hill Publications, New York, 2nd edition, 1982.

7. R.C. Jordan, G. B. Priester, "Refrigeration and Air Conditioning", Prentice Hall of India Ltd., New Delhi, 1969.
8. J. L. Threlkeld, "Thermal Environmental Engineering", Prentice Hall, New York, 1970.

Machine Design-II

ME 603	Machine Design-II	PCC	3-1-0	4 Credits
--------	-------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Define function of bearing and classify bearings.
CO2	Understanding failure of bearing and their influence on its selection.
CO3	Classify the friction clutches and brakes and decide the torque capacity and friction disk parameter.
CO4	Select materials and configuration for machine element like gears, belts and chain
CO5	Design of elements like gears, belts and chain for given power rating
CO6	Design thickness of pressure vessel using thick and thin criteria

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1						1				1
CO2	3	2		1		1		1		1		1
CO3	1	1				1		1		1		1
CO4	3	3	2	1		2		1		1		1
CO5	1	1				1		1		1		1
CO6	3	2	2	1		1		1		1		1

Course Contents:

Unit 1: Rolling Contact Bearings

Types, Static and dynamic load carrying capacities, Stribeck's Equation, Equivalent load, load and life relationship, selection of bearing life, Load factor, selection of bearing from manufacturer's catalogue, Taper roller bearings and their selection, Cyclic loads and speeds, Design for probability of survival other than 90% Lubrication and mountings of rolling contact bearings.

Sliding Contact Bearings: Methods of lubrication, Viscosity and its measurement, Effect of temperature, viscous flow through rectangular slot, Hydrostatic step bearing, Load capacity and energy losses, Reynolds equation, Raimondi and Boyd method, temperature rise, Constructional details of bearing, Bearing material, Lubrication oils, Additives and greases, Sintered metal bearings, Comparison of rolling and sliding contact bearings.

Unit 2: Spur Gear

Gear drives, Classification of gears, Law of gearing, Terminology of spur gear, Standard system of gear tooth force analysis, gear tooth failures, Selection of materials Constructional, Number of teeth, Face width, Beam strength equation, Effective load on gear tooth, Estimation of module based on beam strength.

Design for maximum power capacity, Lubrication of gears.

Helical Gears: Terminology, Virtual number of teeth, Tooth proportions, Force analysis, Beam strength equation, Effective load on gear tooth, Wear strength equation.

Unit 3: Bevel Gears

Types of bevel gears, Terminology of straight bevel, force analysis, Beam and Wear strength, Effective load on gear tooth.

Worm Gears: Terminology, Proportions, Force analysis, Friction in worm gears, Vector method, Selection of materials, Strength and wear rating, Thermal considerations

Unit 4: Belt and Chain Drives

Flat and V belts, Geometric relationship, analysis of belt tensions, condition for maximum power, Selection of flat and V belts from manufacturer's catalogue, Adjustment of belt tensions. Roller chains, Geometric relationship, polygonal effect, power rating of roller chain, sprocket wheels, and Silent chains.

Flywheel: Introduction, types of flywheel, stresses in disc and armed flywheel.

Unit 5: Brakes and Clutches

Types of clutches, torque capacity, single and multi-plate clutches, cone clutch, centrifugal clutch, friction materials.

Types of brakes, energy equation, block with shoe brake, pivoted brake with long shoe, internal expanding shoe brake, thermal considerations.

Unit 6: Pressure Vessel

Thin cylinders, thick cylinders, principal stresses, Lamé's equation, Clavirino and Birnie's equation, cylinder with external pressure, autofrettage, compounding of cylinders, gasketed joint, unfired pressure vessel, thickness of cylindrical and spherical pressure shells, end closure, opening in pressure vessel, area compensation method

Texts:

1. V. B. Bhandari, "Design of machine Elements", Tata McGraw Hill Publications, New Delhi, 1998
2. R. L. Norton, "Machine Design: An Integrated Approach", Pearson Education.

References:

1. J. E. Shigley, C. Mischke, "Mechanical Engineering Design", Tata McGraw Hill Inc, New York, 6th edition, 2003.
2. R. C. Juvinall, K. M. Marshek, "Fundamentals of Machine Component Design", John Wiley & Sons, Inc, New York, 2002.

Fluid Machinery

ME 604	Fluid Machinery	PCC	2-1-0	3 Credits
--------	-----------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand and apply momentum equation
CO2	Understand and explain Hydrodynamic Machines
CO3	Explain difference between impulse and reaction turbines
CO4	Find efficiencies, draw velocity triangles
CO5	Explain governing mechanisms for hydraulic turbines
CO6	Explain working of various types of pumps, draw velocity diagrams, do simple calculations
CO7	Design simple pumping systems

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1									1
CO2	3		3				2					1
CO3	3	2										1
CO4	3	3	2									1
CO5			3									1
CO6	3	3	3	1	1							1
CO7	3	3		3								1

Course Contents:

Unit 1: Momentum Equation and its Applications

Impulse momentum, Principle, Fixed and moving flat inclined plates, Curved vanes, Series of plates and vanes, Velocity triangle and their analysis, Water wheels. Hydrodynamic Machines: Classification, General theory, Centrifugal head, Fundamental equations, and Euler's equation, Degree of reaction, Head on machine, various efficiencies, Condition for maximum hydraulic efficiency.

Unit 2: Impulse Turbines

Impulse principle, Construction of Pelton wheel, Velocity diagrams and its analysis, Number of buckets, Jets, Speed ratio, Jet ratio.

Reaction Turbines: Constructional details of Francis, Kaplan and Propeller turbine, Deciaz turbine, and Draft tube types, Efficiencies, Cavitation.

Unit 3: Governing of Turbines

Methods of governing, Performance characteristics, Safety devices, Selection of turbines, Unit quantities, Specific speed, Principles of similarity and model testing.

Unit 4: Centrifugal Pump

Construction, Classification, Terminology related to pumps, Velocity triangle and their analysis, Cavitation, NPSH, Thoma's cavitation factor, Priming, Methods of priming, Specific speed, Performance characteristics, Actual thrust and its compensation, Troubleshooting.

Multistage Pumps: Pump H-Q characteristics and system H-Q Characteristics, Series and parallel operation of pumps, Systems in series and parallel, Principle of model testing and similarity.

Unit 5: Special Purpose Pumps

Chemical pumps, nuclear pumps, Sewage pumps, Submersible deep well pumps, Pump installation, Energy efficient pumps.

Failure of Pumping System: Pump failures, Remedies, Source failure, Causes and remedies, Trouble shooting.

Unit 6: Design of Pumping System

Principles of line layout, Estimation of pressure drops across pipes, Fittings, etc.

Miscellaneous Pumps: Reciprocating pump, Gear pump, Vane pump, Lobe pump, etc., Application field (no mathematical treatment).

Texts:

1. P. N. Modi, S. M. Seth, “Hydraulics and Fluid Mechanics including Hydraulic Machines”, Standard Book House, Rajsons Publications Pvt. Ltd., 20th edition.
2. R. K. Bansal, “A Text Book of Fluid Mechanics and Hydraulic Machines”, Lakshmi Publications Pvt. Ltd., 9th edition.

References:

1. Yunus A. Çengel, John M. Cimbala, Fluid Mechanics: Fundamentals and Applications”, McGraw Hill, 3rd edition, 2014.

Elective IV

Design of Experiments

ME 605A	Design of Experiments	POE	3-0-0	3 Credits
---------	-----------------------	-----	-------	-----------

Pre-Requisites: Engineering mathematics-I

Course Outcomes: At the end of the course, students will be able to:

CO1	Define Taguchi, factorial experiments, variability, orthogonal array, quality loss.
CO2	Plan and design the experimental investigations efficiently and effectively.
CO3	Understand strategy in planning and conducting experiments.
CO4	Evaluate variability in the experimental data using ANOVA.
CO5	Practice statistical software to achieve robust design of experiments.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1		1	1	1				1	1	1
CO2	3	2	1	3	2	1			1	2	1	1
CO3	3	2	1	3	2	1			1	2	1	1
CO4	3	3	1	3	2	1			1	2	1	1
CO5	2	3	1	2	3	2			1	2	1	1

Course Contents:

Unit 1: Introduction

Modern quality control, quality in engineering design, history of quality engineering, The Taguchi Approach to quality: Definition of quality, loss function, offline and online quality control, Taguchi's quality philosophy.

Unit 2: Full Factorial Designs

traditional scientific experiments, two factor design, three factor design, replicating experiments, factoring reactions, normal plots of estimated effects, mechanical plating experiments, four factor design, Taguchi design and western design.

Unit 3: Fractional Factorial Design

Fractional factorial design base done ightrun experiments, folding over an eight run experimental design, Fractional factorial design in sixteen run, folding over sixteen run experimental design, blocking two level designs, other two level designs, Necessity to use more than two level, factors at three and four levels.

Unit 4: Taguchi Robust Design

Construction of orthogonal array, Additive model for factor effects, Signal to noise ratios, linear graphs, Taguchi Inner and outer arrays: Noise factors, experimental designs for control and noise factors.

Unit 5: Evaluating Variability

Necessity to analyze variability, measures of variability, the normal distribution, Analysis of variance in engineering design, using estimated effects as test statistics, analysis of variance for two level designs

Unit 6: Computer Software for Experimental Design

Role of computer software in experimental design, summery of statistical packages, example of use of software packages.

Texts:

1. M. S. Phadke, "Quality Engineering using Robust Design", Prentice Hall, Englewood Cliffs, New Jersey, 1989.
2. R.H. Lochner and J.E. Matar, "Designing for Quality: An Introduction to the Best of Taguchi and Western Methods of Statistical Experimental Design", Chapman and Hall, London, 1983.

3. Raymond H. Myers, Douglas C. Montgomery, Christine M. Anderson-Cook, "Response Surface Methodology: Process and Product Optimization Using Designed Experiments", 4th Edition, Wiley, January 2016.

4. D. C. Montgomery, "Design and Analysis of Experiments", John Wiley and Sons, New York, 5th edition, 2004.
5. R. H. Lochner, J. E. Matar, "Designing for Quality: An Introduction to the Best of Taguchi and Western Methods of Statistical Experimental Design", Chapman and Hall, London, 1983.
6. M. S. Phadke, "Quality Engineering using Robust Design", Prentice Hall, Engle wood Cliffs, New Jersey, 1989.

Elective IV

Wind Energy

ME 605B	Wind Energy	POE	3-0-0	3 Credits
---------	-------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand historical applications of wind energy
CO2	Understand and explain wind measurements and wind data
CO3	Determine Wind Turbine Power, Energy and Torque
CO4	Understand and explain Wind Turbine Connected to the Electrical Network AC and DC
CO5	Understand economics of wind energy

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1							2	2	2	1		1
CO2		3	2	1	3	2	2	2	2			1
CO3	3	3	1	1	2	2	1					1
CO4	3	3		1								1
CO5	3	2	1									1

Course Contents:

Unit 1: Introduction

Historical uses of wind, History of wind electric generations

Wind Characteristics: Metrology of wind, World distribution of wind, Atmospheric stability, Wind speed variation with height, Wind speed statistics, Weibull statistics, Weibull parameters, Rayleigh and normal distribution

Unit 2: Wind Measurements

Biological indicators, Rotational anemometers, other anemometers, Wind direction

Unit 3: Wind Turbine Power, Energy and Torque

Power output from an ideal turbine, Aerodynamics, Power output from practical turbines, Transmission and generation efficiency, Energy production and capacity factor, Torque at constant speeds, Drive train oscillations, Turbine shaft power and torque at variable speeds.

Unit 4: Wind Turbine Connected to the Electrical Network

Methods of generating synchronous power, AC circuits, The synchronous generator, Per unit calculations, The induction machine, Motor starting, Capacity credit features of electrical network

Unit 5: Wind Turbines with Asynchronous Electric Generators

Asynchronous systems, DC shunt generator with battery load, Per unit calculation, Self excitation of the induction generators, Single phase operation the induction generator, Field modulated generators, Roesel generator.

Asynchronous Load: Piston water pumps, Centrifugal pumps, Paddle wheel heaters, Batteries, Hydrogen economy, and Electrolysis cells.

Unit 6: Economics of Wind Systems

Capital costs, Economic concepts, Revenues requirements, Value of wind generated electricity

Texts:

1. S. Ahmad, “Wind Energy: Theory and Practice”, Prentice Hall of India Pvt. Ltd.

References:

1. Garg L. Johnson, “Wind Energy Systems” Prentice Hall Inc., New Jersey, 1985.
2. Desire Le Gouriers, “Wind Power Plants: Theory and Design” Pergamon Press, 1982.

Elective IV

Engineering Economics

ME 605C	Engineering Economics	POE	3-0-0	3 Credits
---------	-----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Apply the appropriate engineering economics analysis method(s) for problem solving: present worth, annual cost, rate-of-return, payback, break-even, Benefit-cost ratio.
CO2	Evaluate the cost effectiveness of individual engineering projects using the methods learned and draw inferences for the investment decisions.
CO3	Compare the life cycle cost of multiple projects using the methods learned, and make a quantitative decision between alternate facilities and/or systems.
CO4	Compute the depreciation of an asset using standard Depreciation techniques to assess its impact on present or future value.
CO5	Apply all mathematical approach models covered in solving engineering economics problems: mathematical formulas, interest factors from tables, Excel functions and graphs. Estimate reasonableness of the results.
CO6	Examine and evaluate probabilistic risk assessment methods.
CO7	Compare the differences in economic analysis between the private and public sectors. Recognize the limits of mathematical models for factors hard to quantify.
CO8	Develop and demonstrate teamwork, project management, and professional communications skills

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1											3	
CO2											3	
CO3											3	
CO4											3	
CO5					3						3	
CO6											3	
CO7											3	
CO8									2		3	

Course Contents:

Unit 1: Introduction to Economics

Introduction to Economics: Flow in an economy, Law of supply and demand, Concept of Engineering Economics: Engineering efficiency, Economic efficiency, Scope of engineering economics - Element of costs, Marginal cost, Marginal Revenue, Sunk cost, Opportunity cost, Break-even analysis: V ratio, Elementary economic Analysis: Material selection for product Design selection for a product, Process planning.

Unit 2: Value Engineering

Make or buy decision, Value engineering: Function, aims, and Value engineering procedure. Interest formulae and their applications: Time value of money, Single payment compound amount factor, Single payment present worth factor, Equal payment series sinking fund factor, Equal payment series payment Present worth factor: equal payment series capital recovery factor:

Uniform gradient series annual equivalent factor, Effective interest rate, Examples in all the methods.

Unit 3: Cash Flow

Methods of comparison of alternatives: present worth method (Revenue dominated cash flow diagram), Future worth method (Revenue dominated cash flow diagram, cost dominated cash flow diagram), Annual equivalent method (Revenue dominated cash flow diagram, cost dominated cash flow diagram), rate of return method, Examples in all the methods.

Unit 4: Replacement and Maintenance Analysis

Replacement and Maintenance analysis: Types of maintenance, types of replacement problem, determination of economic life of an asset, Replacement of an asset with a new asset: capital recovery with return and concept of challenger and defender, Simple probabilistic model for items which fail completely.

Unit 5: Depreciation

Depreciation: Introduction, Straight line method of depreciation, declining balance method of depreciation, sum of the years digits method of depreciation, sinking fund method of depreciation/annuity method of depreciation, service output method of depreciation-

Unit 6: Evaluation of Public Alternatives

Introduction, Examples, Inflation adjusted decisions: procedure to adjust inflation, Examples on comparison of alternatives and determination of economic life of asset.

Texts:

1. Panneer Selvam R, "Engineering Economics", Prentice Hall of India Ltd, New Delhi, 2001.

References:

1. Chan S. Park, "Contemporary Engineering Economics", Prentice Hall of India, 2011.
2. Donald G. Newman, Jerome P. Lavelle, "Engineering Economics and analysis", Engineering Press, Texas, 2010.
3. E. P. Degarmo, W. G. Sullivan and J. R. Canada, "Engineering Economy", Macmillan, New York, 2011.
4. Zahid A. Khan, "Engineering Economy", Dorling Kindersley, 2012.

Elective IV

Entrepreneurship Development

ME 605D	Entrepreneurship Development	POE	3-0-0	3 Credits
---------	------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	enlarge the supply of entrepreneurs for rapid industrial development
CO2	Develop small and medium enterprises sector which is necessary for generation of employment
CO3	Industrialize rural and backward regions
CO4	Provide gainful self-employment to educated young men and women
CO5	Diversify the sources of entrepreneurship.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1									2			
CO2									2			
CO3											2	
CO4											2	3
CO5												3

Course Contents:

Unit 1: Introduction to Entrepreneurship

Evolution of the Concept of Entrepreneur Functions of Entrepreneur, Characteristics of an Entrepreneur, Types of Entrepreneur, Concept of Entrepreneurship, Growth of Entrepreneurship, Barriers of Entrepreneurship, Role of Entrepreneurship in India, Entrepreneurial Motivation, Major Entrepreneurial Competencies.

Unit 2: Small Scale Industries (SSI)

Characteristics of Small Scale Industry, Basis for Classification of Small Scale Industry: Resource Based, Demand Based, Ancillary, Subsidiary Based or Sub-Controlled Type, Technology Based etc. Government Policy for Small Scale Industry, Growth of SSI in Developing Countries, Role of National and State Agencies Providing Assistance To SSI's, Relationship between Small and Big Industries, Ownership Structure, Registration of SSI.

Unit 3: Project Identification and Project Formulation

Meaning of Project, Project Identification and Selection, Elements of Project Formulation, Concept and Significance of Project Formulation, Meaning, Significance and Contents of Project Report.

Accounting for Small Enterprises: Objective of Accounting, Accounting Process, Journal, Ledger, Preparation of Balance Sheet and Assessment of Economic Viability

Unit 4: Project Appraisal

Concept of Project Appraisal, Project Appraisal Methods, Cash Flows as Costs and Benefits, Payback Period, Average Rate of Return. Discounted Cash Flow Techniques, Working Capital Management, Cost of Capital, Financing of Enterprises, Project Sickness & Corrective Measures.

Unit 5: Marketing Management

Market Segmentation, Marketing Mix, and Packaging, Pricing Policy, Distribution Channels, and Govt. Purchases from SSIS.

Laws Concerning Entrepreneur: Income Tax Laws, Excise Duty ,The Central Sales Tax Act, Professional Tax, Value Added Tax (VAT), Service Tax, The Workmen Compensation Act, The Minimum Wages Act, The Maternity Benefit Act, The Payment of Bonus Act

Unit 6: Institutional Support

Government Policies for Small Scale Entrepreneurs, Institutional Setup, District Industries Centers, Industrial Estates , SIDCO, NSIC, Directorate of Industries, Commercial Banks, New Entrepreneurial Development Agencies.

Women Entrepreneurship: Growth, Problems, Recent Trends.

References:

1. S. S. Khanka, “Entrepreneurial Development”, S. Chand and Company Ltd.
2. C. B. Gupta, N. P. Srinivasan, “Entrepreneurship Development in India”, S. Chand and Sons.
3. B. Badhai, “Entrepreneurship Development Programme”, Mansell Publishing Ltd.
4. V. Desai, “Dynamics of Entrepreneurial Development and Management”, Hindustan Publishing House.
5. David H. Holt, “Entrepreneurship”, PHI Learning.
6. Roy Rajeev, “Entrepreneurship”, Oxford University Press.

Elective IV

Quantitative Techniques in Project Management

ME 605E	Quantitative Techniques in Project Management	POE	3-0-0	3 Credits
---------	---	-----	-------	-----------

Pre-Requisites: Engineering Mathematics-I/II/III

Course Outcomes: At the end of the course, students will be able to:

CO1	Define and formulate research models to solve real life problems for allocating limited resources by linear programming.
CO2	Apply transportation and assignment models to real life situations.
CO3	Apply queuing theory for performance evaluation of engineering and management systems.
CO4	Apply the mathematical tool for decision making regarding replacement of items in real life.
CO5	Determine the EOQ, ROP and safety stock for different inventory models.
CO6	Construct a project network and apply CPM and PERT method.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	1	3	2				3	1	3	1
CO2	3	1	1	3	2				3	2	3	1
CO3	3	1	1	3	2				3	2	3	1
CO4	3	1	1	3	2	1			3	2	3	1
CO5	3	1	1	3	2	1			3	2	3	1
CO6	3	1	1	3	2	2			3	2	3	1

Course Contents:

Unit 1: Introduction

Introduction to Operations Research, Stages of Development of Operations Research, Applications of Operations Research, Limitations of Operations Research Linear programming problem, Formulation, graphical method, Simplex method, artificial variable techniques.

Unit 2: Assignment and Transportation Models

Transportation Problem, North west corner method, Least cost method, VAM, Optimality check methods, Stepping stone, MODI method, Assignment Problem, Unbalanced assignment problems, Travelling salesman problem.

Unit 3: Waiting Line Models and Replacement Analysis

Queuing Theory: Classification of queuing models, Model I (Birth and Death model) M/M/I (∞ , FCFS), Model II - M/M/I (N/FCFS).

Replacement Theory, Economic Life of an Asset, Replacement of item that deteriorate with time, Replacement of items that failed suddenly.

Unit 4: Inventory Models

Inventory Control, Introduction to Inventory Management, Basic Deterministic Models, Purchase Models and Manufacturing Models without Shortages and with Shortages, Reorder level and optimum buffer stock, EOQ problems with price breaks.

Unit 5: Project Management Techniques

Difference between project and other manufacturing systems. Defining scope of a project, Necessity of different planning techniques for project managements, Use of Networks for planning of a project, CPM and PERT.

Unit 6: Time and Cost Analysis

Time and Cost Estimates: Crashing the project duration and its relationship with cost of project, probabilistic treatment of project completion, Resource allocation and Resource leveling.

Texts:

1. P. K. Gupta, D. S. Hira, "Operations Research", S. Chand and Company Ltd., New Delhi, 1996.

CO5												
CO6												

Course Contents:

Elective V

Manufacturing Automation

ME 606A	Manufacturing Automation	PCE	3-0-0	3 Credits
---------	--------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the concept of automation
CO2	Design a Pneumatic and Hydraulic system for a given application
CO3	Demonstrate the use of different sensors for automation
CO4	Design an AGV system
CO5	Understand the transfer mechanisms in automation

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	2		1						2
CO2	1	1	3	3		2						1
CO3	2	2	2									1
CO4	2	2	3	3								1
CO5	3	3	2	1		1						1

Course Contents:

Unit 1: Introduction

Concept of automation, mechanization and automation, Concept of automation in industry, mechanization and automation, classification Types of automation, Degree of automation, Technical, economic and human factors in automation,

Unit 2: Automation using Hydraulic Systems

Design aspects of various elements of hydraulic systems such as pumps, valves, filters, reservoirs, accumulators, actuators, intensifiers etc. Selection of hydraulic fluid, practical case studied on hydraulic circuit design and performance analysis. Servo valves, electrohydraulic valves, proportional valves and their applications.

Unit 3: Automation using Pneumatic systems

Pneumatic fundamentals, control elements, position and pressure sensing, logic circuits, switching circuits, fringe conditions modules and these integration, sequential circuits, cascade methods, mapping methods, step counter method, compound circuit design combination circuit design, Pneumatic equipment's, selection of components, design calculations, application, fault finding, hydro pneumatic circuits, use of microprocessors for sequencing PLC, Low cost automation, Robotic circuits.

Unit 4: Automation using Electronic Systems

Introduction, various sensors, transducers, signal processing, servo systems, programming of microprocessors using 8085 instruction, Industrial logic control systems Logic diagraming, programmable logic controllers.

Unit 5: Automation in Work Handling

Working principles and techniques, job orienting and feeding devices, Transfer mechanisms automated feed cut of components, performance analysis, Uses of various types of handling systems including AGV and its various guiding technologies

Unit 6: Applications of Automation

Development of small automation systems using mechanical devices, Circuit optimization techniques, Illustrative examples of the above types of systems as well as hybrid systems

Texts:

1. F. Kay, "Pneumatics for Industry", The Machining Publication Co., London, 1959.
2. Asphal Ray, "Robots and Manufacturing Automation", John Wiley, New York, 1985.
3. Andrew Parr, "Hydraulic and Pneumatics (HB)", Jaico Publishing House, 1999.

References:

1. M. G. Pippenger, "Industrial Hydraulics", MGH, New York, 1979.
2. G. Boothroyd, C. Poli, "Automatic Assembly", Marcel Dekker, New York, 1982.
3. Antony Esposito, "Fluid power with Applications", Prentice Hall, 1980.
4. Dudleyt, A. Pease, John J. Pippenger, "Basic Fluid Power", Prentice Hall, 1987.
5. W. Bolton, "Pneumatic and Hydraulic Systems", Butterworth, Heineman, 1997.

Elective V

Steam and Gas Turbines

ME 606B	Steam and Gas Turbine	PCE	3-0-0	3 Credits
---------	-----------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	State Various properties of Steam, Draw P-V, T-s, H-s (Mollier) diagrams for steam, Describe Theoretical steam turbine cycle.
CO2	Define and Understand Various Types of Design of Turbines.
CO3	Perform analysis of given steam and gas Turbine power plant (Efficiencies, Power Output, Performance)
CO4	Study and apply various Performance improvement Techniques in steam and gas Turbines
CO5	Assess factors influencing performance of thermal power plants,
CO6	Apply various maintenance procedures and trouble shootings to Turbines.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1										
CO2	1	1										
CO3		2			2							
CO4	1				1	2	2					
CO5	1	2										
CO6	1	1		3								

Course Contents:

Unit 1: Introduction

Properties of steam, Theoretical steam turbine cycle. The flow of steam through Impulse and Impulse–Reaction turbine blades

Unit 2:

Vortex flow in steam turbines, Energy lines, State point locus, Reheat factor and Design procedure. Governing and performance of steam turbine

Unit 3: Gas Turbine

Introduction, simple open cycle gas turbine, Actual Brayton cycle, Means of Improving the efficiency and the specific output of simple cycle,

Unit 4: Gas Turbine Cycle Modifications and Performance

Regeneration, Reheat, Intercooling, closed-cycle gas turbine, turbine velocity diagram and work done.

Unit 5: Turbine Cooling

Turbine blade cooling, material, protective coating, Performance of turbine, Application of turbine.

Unit 6:

Lubrication, cooling, fuel supply and control, Maintenance and trouble shooting.

Texts:

1. W. J. Kearton, "Steam Turbine Theory and Practice", ELBS.

References:

1. R. Yadav, "Steam and Gas Turbine", Central Publishing Home, Allahabad.
2. Jack D. Mattingly, "Elements of Gas Turbine propulsion", Tata McGraw Hill Publications.

Elective V**Industrial Product Design**

ME 606C	Industrial Product Design	PCE	3-0-0	3 Credits
---------	---------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Identify design and development process of industrial products, considering ergonomic requirements
CO2	Explain market requirements and manufacturing aspects of industrial design
CO3	Identify consumer products, functions and use
CO4	Explain aesthetic concept, symmetry
CO5	Explain economic considerations, value analysis and cost reduction
CO6	Employ standard organization structure, standardization, record keeping

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	1		2							2
CO2		3	2	1	3							2
CO3		1	2		1							2
CO4	1		2		2							2
CO5		2	1	3								
CO6								1	2	2	3	2

Course Contents:**Unit 1: Introduction-Approach to Industrial Design**

- a. Approach to industrial product based on idea generation and innovations to meet the needs of the developing society. Design and development process of industrial products, various steps such as creative process involved in idea marketing, designers, mind-criticism, design process, creation.

- b. Ergonomics and aesthetic requirements of product design, quality and maintainability consideration in product design, Use of modeling technique, prototype designs, conceptual design.

Unit 2: Industrial Product Design

- a. General design situations, setting specifications, requirements and ratings, their importance in the design, Study of market requirements and manufacturing aspects of industrial designs.
- b. Aspects of ergonomic design of machine tools, testing equipment, instruments, automobiles, process equipment etc. Convention of style, form and color of industrial design.

Unit 3: Design of Consumer Product

- a. Functions and use, standard and legal requirements, body dimensions.
- b. Ergonomic considerations, interpretation of information, conversions for style, forms, colors

Unit 4: Aesthetic Concepts

- a. Concept of unity order with variety, concept of purpose, style and environment, Aesthetic expression of symmetry, balance, contrast and continuity, proportion, rhythm, radiation.
- b. Form and style of product: visual effect of line and form, mechanics of seeing, psychology of seeing, influence of line and form, Components of style, Basic factors, effect of color on product appearance, color composition, conversion of colors of engineering products.

Unit 5: Economic Considerations

Selection of material, Design for production, use of standardization, value analysis and cost reduction, maintenance aspects in design.

Unit 6: Design Organization

Organization Structure, Designer position, Drawing office procedure, Standardization, record keeping, legal procedure of Design patents.

Elective V

Nanotechnology

ME 606D	Nanotechnology	POE	3-0-0	3 Credits
---------	----------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Demonstrate the understanding of length scales concepts, nanostructures and nanotechnology.
CO2	To impart basic knowledge on various synthesis and characterization techniques involved in Nanotechnology
CO3	To educate students about the interactions at molecular scale
CO4	Evaluate and analyze the mechanical properties of bulk nanostructured metals and alloys, Nano-composites and carbon nanotubes.
CO5	To make the students understand about the effects of using nanoparticles over conventional methods

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1		3	3	2	1		3		1	3
CO2	3	2			3	3	2				1	3
CO3	1	1	1	3	2				2	1		1
CO4	1	1		3	3	2	1		3		1	3
CO5	1	1	1	3	2				2	1		1

Course Contents:

Unit 1: Scientific Revolutions

Types of Nanotechnology and Nano machines: the Hybrid nanomaterial. Multiscale hierarchical structures built out of Nano sized building blocks (nano to macro). Nanomaterials in Nature: Nacre, Gecko, Teeth. Periodic table, Atomic Structure, Molecules and phases, Energy, Molecular and atomic size, Surfaces and dimensional space: top down and bottom up.

Unit 2: Forces between Atoms and Molecules

Particles and grain boundaries, strong Intermolecular forces, Electrostatic and Vander Waals forces between surfaces, similarities and differences between intermolecular and inter particle forces covalent and coulomb interactions, interaction polar molecules.

Thermodynamics of self-assembly.

Unit 3: Opportunity at the Nano Scale

Length and time scale in structures, energy landscapes, Inter dynamic aspects of inter molecular forces, Evolution of band structure and Fermi surface.

Unit 4: Nano Shapes

Quantum dots, Nano wires, Nano tubes, 2D and 3D films, Nano and mesopores, micelles, bilayer, vesicles, bionano machines, biological membranes.

Unit 5: Influence of Nano Structuring

Influence of Nano structuring on mechanical, optical, electronic, magnetic and chemical properties-gram size effects on strength of metals- optical properties of quantum dots.

Unit 6: Nano Behaviour

Quantum wires, electronic transport in quantum wires and carbon nano-tubes, magnetic behavior of single domain particles and nanostructures, surface chemistry of Tailored monolayer, self-assembling.

Texts:

1. C. C. Koch, "Nanostructured materials: Processing, Properties and Potential Applications", Noyes Publications, 2002.

Elective V

Intellectual Property Rights

ME 606E	Intellectual Property Rights	POE	3-0-0	3 Credits
---------	------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	State the basic fundamental terms such as copyrights, Patents, Trademarks etc.,
CO2	Interpret Laws of copy-rights, Patents, Trademarks and various IP registration Processes.
CO3	Exhibit the enhance capability to do economic analysis of IP rights, technology and innovation related policy issues and firms commercial strategies.
CO4	Create awareness at all levels (research and innovation) to develop patentable technologies.
CO5	Apply trade mark law, copy right law, patent law and also carry out intellectual property audits.
CO6	Manage and safeguard the intellectual property and protect it against unauthorized use.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1											
CO2								1				
CO3		1						1				
CO4										1		
CO5	1							1				
CO6								2				

Course Contents:

Unit 1: Introduction to Intellectual Property

Introduction, types of intellectual property, international organizations, agencies and treaties, importance of intellectual property rights.

Unit 2: Trade Marks

Purpose and function of trademarks, acquisition of trade mark rights, protectable matter, selecting and evaluating trade mark, trade mark registration processes.

Unit 3: Law of Copy Rights

Fundamental of copy right law, originality of material, rights of reproduction, rights to perform the work publicly, copy right ownership issues, copy right registration, notice of copy right, international copy right law.

Unit 4: Law of Patents

Foundation of patent law, patent searching process, ownership rights and transfer.

Unit 5: Trade Secrets

Trade secretes law, determination of trade secretes status, liability for misappropriations of trade secrets, protection for submission, trade secrete litigation.

Unfair competition: Misappropriation right of publicity, false advertising.

Unit 6: New Development of Intellectual Property

New developments in trade mark law; copy right law, patent law, intellectual property audits. International overview on intellectual property, international trade mark law, copy right law, international patent law, and international development in trade secrets law.

Texts:

1. Deborah, E. Bouchoux, "Intellectual Property Right", Cengage learning.
2. Prabuddha Ganguli, "Intellectual property right: Unleashing the knowledge economy", Tata McGraw Hill Publishing Company Ltd.

Elective V

Additive Manufacturing Processes

ME 606F	Additive Manufacturing Processes	PCE	3-0-0	3 Credits
---------	----------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the importance of Additive Manufacturing
CO2	Classify the different AM processes
CO3	Design for AM processes
CO4	Understand the applications of AM
CO5	Differentiate the post processing processes

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2	2	2	2	2					1
CO2	2	2	3	3	3	3	1					1
CO3	2	2	3	3	3		2					1
CO4	3	3	3	2	2	2	2					1
CO5	2	3	3	2	2	2	2					1

Course Contents:

Unit 1: Introduction to Additive Manufacturing (AM)

Introduction to AM, AM evolution, Distinction between AM and CNC machining, Advantages of AM.

AM process chain: Conceptualization, CAD, conversion to STL, Transfer to AM, STL file manipulation, Machine setup, build, removal and clean up, post processing.

Classification of AM processes: Liquid polymer system, discrete particle system, molten material systems, and solid sheet system.

Unit 2: Design for AM

Motivation, DFMA concepts and objectives, AM unique capabilities, Exploring design freedoms, Design tools for AM, Part Orientation, Removal of Supports, Hollowing out parts, Inclusion of Undercuts and Other Manufacturing Constraining Features, Interlocking Features, Reduction of Part Count in an Assembly, Identification of markings/ numbers etc.

Unit 3: Guidelines for Process Selection

Introduction, selection methods for a part, challenges of selection, example system for preliminary selection, production planning and control

Unit 4: AM Applications

Functional models, Pattern for investment and vacuum casting, Medical models, art models, Engineering analysis models, Rapid tooling, new materials development, Bi-metallic parts, Re-manufacturing. Application examples for Aerospace, defence, automobile, Bio-medical and general engineering industries

Unit 5: Post Processing of AM Parts

Support material removal, surface texture improvement, accuracy improvement, aesthetic improvement, preparation for use as a pattern, property enhancements using non-thermal and thermal techniques.

Unit 6: Future Directions of AM

Introduction, new types of products, employment and digipreneurship.

Texts:

1. Chua Chee Kai, Leong Kah Fai, "Rapid Prototyping: Principles and Applications", World Scientific, 2003.
2. Ian Gibson, David W. Rosen, Brent Stucker, "Additive Manufacturing Technologies: Rapid Prototyping to Direct Digital Manufacturing", Springer, 2nd edition, 2010.

Manufacturing Processes Laboratory-II

ME 607	Manufacturing Processes Laboratory-II	PCC	0-0-2	1 Credits
--------	---------------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Evaluate the work material effect on chip morphology.
CO2	Estimate the cutting forces in orthogonal cutting.
CO3	Measure tool flank wear in cylindrical turning.
CO4	Analyze the effect of process parameter on cutting force in milling.
CO5	Perform PCM and measure undercut achieved
CO6	Determine the MRR and TWR in electro-discharge machine.
CO7	Demonstrate the wire EDM process.
CO8	Perform MIG welding of steel and measure weld dimensions.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	1	1			1	2		1
CO2	3	2	1	3	1	1			1	2		1
CO3	3	2		3	1	1			1	2		1
CO4	3	2		3	1	1			1	2		1
CO5	3	1		2	1	2			1	2		2
CO6	3	1	1	2	1	2			1	2		2
CO7	1	1	1	2	1	2			1	1		2
CO8	1	1	1	2	1	2			1	2		2

List of Practicals/Experiments/Assignments

1. Measurement of cutting forces in turning operation.
2. Measurement of cutting forces in milling operation.
3. Measurement of cutting forces in drilling operation.
4. Study the effect of cutting parameters on surface finish.
5. Study the effect of cutting parameters on flank wear.
6. Measurement of cutting tool temperature by using work tool thermocouple technique.
7. To develop a manual part program of a given component on CNC Lathe using G and M codes.
8. To develop a manual part program of a given component on CNC Lathe using stock removal cycle.
9. To develop a manual part program of a given component on CNC Lathe using canned cycle.
10. To develop a manual part program of a given component on CNC Milling machine using G and M code.
11. To develop a manual part program of a given component on CNC Milling machine using pocket milling cycle.
12. To develop a manual part program of a given component on CNC Milling machine using canned cycle.
13. To examine the effect of parameters on MRR and TWR in electro discharge machining.

14. To evaluate machining accuracy in EDM.
Industrial visits to study manufacturing practices.

Machine Design Practice-II

ME 608	Machine Design Practice-II	PCC	0-0-2	1 Credit
--------	----------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Apply design process to an open ended problems
CO2	Determine suitable material and size for structural component of machine/system
CO3	Apply iterative technique in design including making estimate of unknown values for first computation and checking or revisiting and re-computing
CO4	Choose logically and defend selection of design factors
CO5	Design of components for given part/system i.e shaft, keys, coupling, links, screws, springs etc.
CO6	Work effectively as a part of design group/team
CO7	Have good communication skill, orally, graphically as well as in writing

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

List of Practicals/Experiments/Assignments

- The term work shall consist of 2 design projects based on syllabus of Machine Design-III. Each design project shall consist of 2 full imperial size sheets-one involving assembly drawings with a part list and overall dimensions and other sheet involving drawings of individual components. Manufacturing tolerances, surface finish symbols and geometric tolerances should be specified, wherever necessary, so as to make it a working drawing.
A design report giving all necessary calculations for the design of components and assembly should be submitted in a separate file. Sheets for one of the projects will be drawn using AutoCAD and computer printouts using plotter of the same will be attached along with the design report.
- At least two assignments based on topics of syllabus of Machine Design-II.

Thermal Engineering Lab-II

ME 609	Thermal Engineering Lab-II	PCC	0-0-2	1 Credit
--------	----------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Conduct test on hydraulic turbines like Pelton wheel, Francis turbine, IC Engines, Refrigeration and air conditioning test units, solar system etc. to study their performance.
CO2	Draw performance curves of these machines/systems.
CO3	Analyse the results obtained from the tests.
CO4	Draw conclusions based on the results of the experiments

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		2		2	1							
CO2	1	1			1							
CO3		1			1							
CO4				2								

List of Practicals/Experiments/Assignments

A. Fluid Machines (Any Two experiments from the list)

1. Trial to study hydraulic jump
2. Trial on Pelton Turbine for performance testing.
3. Trial on Francis Turbine for performance testing.
4. Trial on Kaplan Turbine for performance testing.
5. Trial on Centrifugal Pump with constant and variable speed.
6. Trial on Gear Pump/Reciprocating Pump for performance testing.
7. Visit to Hydel Power Plant

B. IC Engines (Any Three experiments from the list)

1. Trial on Diesel engine- variable load test and energy balance.
2. Trial on Petrol engine- variable speed test and energy balance.
3. Trial on Petrol Engine- Morse Test.
4. Measurements of exhaust emissions of Petrol engine & Diesel engine.
5. Visit to Large Vehicle Service Center/Industry related Automobiles/Components.

C. Refrigeration (Any Two from the list) and Air-conditioning (Any Two from the list)

1. Trial on vapour compression Refrigeration system
2. Trial on Ice Plant
3. Trial on Window Air Conditioner
4. Trial on Water to Water Heat Pump
5. Trial on Air to Water Heat Pump
6. Trial on Vortex Tube Refrigeration system

7. Trial on Electrolux Vapour Absorption Refrigeration system
8. Study and practice of sensible heating and cooling Air- conditioning process
9. Study and practice of cooling and dehumidification Air- conditioning process
10. Study and practice of heating and humidification Air- conditioning process
11. Study and practice of adiabatic air mixing Air- conditioning process
12. Study and practice of reheating Air- conditioning process
13. Study and practice of direct Evaporative cooling Air- conditioning system
14. Study and practice of indirect – direct Evaporative cooling Air- conditioning system
15. Field visit to Central Air-conditioning plant/Ice plant/Refrigeration plant

D. Renewable Energy (Any One from the list)

1. Performance Test on Solar Water Heater
2. Performance Test on Solar Air Heater
3. Performance Test on Solar Photovoltaic Cells
4. Performance Test on Solar Still
5. Performance Test on Solar Cooker (Box type/ Dish type)
6. Power Plant Visit

Technical Project on Community Services

ME 610	Technical Project for Community Services	PCC	0-0-3	2 Credit
--------	--	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Visit nearby places to understand the problems of the community
CO2	Select one of the problems for the study, state the exact title of the project and define scope of the problem
CO3	Explain the motivation, objectives and scope of the project
CO4	Evaluate possible solutions of the problem
CO5	Design, produce, test and analyze the performance of product/system/process
CO6	Modify, improve the product/system/process

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1						2	1	1		2		1
CO2		2								2	1	
CO3						1				2	1	
CO4		1	2				1	2				
CO5	1	1	2	3	1	1	1	2	1	1	1	
CO6			2	1	1		1	1				

Rationale

The role of technical institutes in giving technical and advisory services to the surrounding community need not be emphasized. It is desirable that each faculty member and student be involved in rendering services to community and economy. Moreover, as per Section (4) of the Act of this University, technical services to community, particularly the backward areas, is one of the basic objects of the University. In view of this, "Technical Project related to Community Services" has been included in the curriculum. This will ensure the participation of each student as well as faculty in this activity.

The weekly contact hours and the evaluation scheme for this project are as stated above. The nature of project work should be as given below in the course contents.

List of Practicals/Experiments/Assignments

The projects may be of varying nature such as a technical study/survey, design/development of a technology solution for an identified need, infusion/transfer of technology, etc. All this will be within the ambit of technology and expertise available within the University.

The student may form small groups, typically of 2 to 3 students, and carry out the project under the supervision of a faculty member.

Summer Vacation Training

ME 611	Summer Vacation Training	PCC	---	---
--------	--------------------------	-----	-----	-----

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	To make the students aware of industrial culture and organizational setup
CO2	To create awareness about technical report writing among the student.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		1	1			2		1			3	3
CO2		1	1			2		1			3	2

Students will have to undergo 6 weeks training programme in the Industry during the summer vacation after VIth semester examination. It is expected that students should understand the organizational structure, various sections and their functions, products/services, testing facilities, safety and environmental protection measures etc.

Also, students should take up a small case study and propose the possible solution(s).

They will have to submit a detailed report about the training programme to the faculty coordinator soon after joining in final year B. Tech. Programme. They will have to give a power point presentation in front of the group of examiners.

Semester VII

Mechatronics

ME 701	Mechatronics	PCC	3-0-0	3 Credits
--------	--------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Define sensor, transducer and understand the applications of different sensors and transducers
CO2	Explain the signal conditioning and data representation techniques
CO3	Design pneumatic and hydraulic circuits for a given application
CO4	Write a PLC program using Ladder logic for a given application
CO5	Understand applications of microprocessor and micro controller
CO6	Analyse PI, PD and PID controllers for a given application

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1	3	2				2	1		1
CO2	3	2			3	3	2				1	3
CO3	1	1		3	3	2	1		3		1	3
CO4	3	3	1	1	3		1	1	1			
CO5	3			1	3	2	3					2
CO6		3	3		3	3	1	1	3			2

Course Contents:

Unit 1: Introduction

Introduction to Mechatronic systems, elements, advantages; practical examples of Mechatronic systems.

Sensors and Transducers: Various types of sensors and transducers used in Mechatronic system such as pressure sensors, temperature sensors, velocity sensors, Acceleration sensors, proximity sensors, position sensors, force sensors, Optical encoders, Capacitive level sensor, tactile sensors, Selection of sensors.

Unit 2: Signal Conditioning and Data Representation

Types of electronic signals, Need for signal processing, Operational amplifiers: Types, classification and applications, Opto-isolators, Protection devices, Analogue to Digital and Digital to Analog Converters, Interfacing devices, Electro-magnetic Relays.

Data representation systems, Displays, Seven segment displays, LCD displays, Printers, Data loggers, Data Acquisition Cards/Systems

Unit 3: Drives

Electrical Drives: Types of Electrical Motors, AC and DC motors, DC servomotors, Stepper motors, linear motors, etc.

Pneumatics and Hydraulics: Components of Pneumatic systems, actuators, direction control valves, pneumatic air preparation, FRL unit, methods of actuation of valves, Sequencing of Pneumatic cylinders using Cascade and shift register methods. Electro-pneumatic valves, Electro- pneumatic circuits using single and double solenoid methods. Hydraulic cylinders, design of cylinder, Design of Piston and piston rod, Valves, poppet valve, house pipes and design of tubing, Meter-in and Meter-out circuits.

Unit 4: Microprocessor and Microcontroller

8085 microprocessor: architecture, various types of registers and their functions in 8085 μ P, Instruction sets, interfacing, applications. 8081 microcontroller: architecture, Instruction sets, various pins and their functions interfacing, applications.

Programmable Logic Controller: Introduction, Architecture, Types of inputs/outputs, Specifications, guidelines for Selection of PLCs, Programming: Ladder logic and FBD

Unit 5: Control Systems

Open and closed loop system; block diagram manipulation/reduction, Transfer function, modeling of Mechanical Systems using Spring, Dashpot and Mass equivalence.

Unit 6: Stability of Systems

On/Off controller, Proportional Control, Integral control, Derivative Control; PI, PD and PID Controllers, Introduction to control using state variable system models, Bode Plots and stability criteria.

Texts:

1. HMT Limited, "Mechatronics", Tata McGraw Hill Publications, 1998.
2. W. Bolton, "Mechatronics; Electronic Control System in Mechanical Engineering", Pearson Education Asia, 1999.
3. Raven, "Automatic Control Engineering", Tata McGraw Hill Publications, New York, 1986.

References:

Industrial Engineering and Management

ME 702	Industrial Engineering and Management	PCC	4-0-0	4 Credit
--------	---------------------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Impart fundamental knowledge and skill sets required in the Industrial Management and Engineering profession, which include the ability to apply basic knowledge of mathematics, probability and statistics, and the domain knowledge of Industrial Management and Engineering
CO2	Produce ability to adopt a system approach to design, develop, implement and innovate integrated systems that include people, materials, information, equipment and energy.
CO3	Understand the interactions between engineering, businesses, technological and environmental spheres in the modern society.
CO4	Understand their role as engineers and their impact to society at the national and global context.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1											2	1
CO2									2	2	2	
CO3								2				
CO4								2				2

Course Contents:

Unit 1: Introduction

Managing and managers, management- science, theory and practice, functions of management, evolution of management theory, contributions of Taylor, Fayol and others.

Planning: The nature and purpose of planning, objectives, strategies, policies and planning premises, decision making.

Organizing: The nature and purpose of organizing, departmentation, Line/ staff authority and decentralization, effective organizing and organizational culture.

Unit 2: Human Resource Management

Staffing: Human resource management and selection, orientation, apprentice training and Apprentice Act (1961), performance appraisal and career strategy, job evolution and merit rating, incentive schemes.

Leading: Managing and human factor, motivation, leadership, morale, team building, and communication.

Controlling: The system and process of controlling control techniques, overall and preventive control.

Unit 3: Production/Operations Management

Operations management in corporate profitability and competitiveness, types and characteristics of manufacturing systems, types and characteristics of services systems.

Operations planning and Control: Forecasting for operations, materials requirement planning, operations scheduling.

Unit 4: Design of Operational Systems

Product/process design and technological choice, capacity planning, plant location, facilities layout, assembly line balancing, and perspectives on operations systems of the future.

Unit 5: Introduction to Industrial Engineering

Scope and functions, history, contributions of Taylor, Gilbreth, Gantt and others.

Work Study and Method Study: Charting techniques, workplace design, motion economy principles.

Work Measurement: Stopwatch time study, micromotion study, predetermined time system (PTS), work sampling.

Unit 6: Ergonomics

Basic principles of ergonomics

Concurrent Engineering: Producibility, manufacturability, productivity improvement.

Total Quality Management: Just in time (JIT), total quality control, quality circles, six sigma.

Texts:

Computer Aided Design and Manufacturing (CAD/CAM)

ME 703	CAD/CAM	PCC	4-0-0	4 Credit
--------	---------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	List and describe the various input and output devices for a CAD work station
CO2	Carry out/calculate the 2-D and 3-D transformation positions (Solve problems on 2-D and 3-D transformations)
CO3	Describe various CAD modeling techniques with their relative advantages and limitations
CO4	Describe various CAD modeling techniques with their relative advantages and limitations
CO5	Develop NC part program for the given component, and robotic tasks
CO6	Describe the basic Finite Element procedure
CO7	Explain various components of a typical FMS system, Robotics, and CIM
CO8	Classify parts in part families for GT
CO9	Describe and differentiate the CAPP systems

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												
CO7												
CO8												
CO9												

Course Contents:

Unit 1: Computer Aided Design (CAD)

Hardware required for CAD: Interactive input output devices, Graphics software: general requirements and ground rules, 2-D curves like Line, Circle, etc and their algorithms, 2-D and 3-D transformations such as Translation, Scaling, Rotation and Mirror

Unit 2: Bezier and B-splines Curves

Equations and Applications, window and view port clipping algorithms, 3-D geometries, CSG, B-rep, wire frame, surface and solid modeling and their relative advantages, limitations and applications.

Unit 3: Computer Aided Manufacturing (CAM)

Numerical Control, Elements of a NC system, Steps in NC based manufacturing, Point to point, straight line and contouring control, Manual and Computer Assisted Part Programming, NC and APT programming, Adaptive control, Distributed Numerical Control.

Unit 4: Finite Element Methods

Introduction, Types of elements, Degrees of freedom, Field variable, Shape function, Boundary conditions, Meshing, Nodal displacements, Plain stress and plain strain problems, 1-D, 2-D and 3-D problems, Static, dynamic and thermal analysis, Preprocessors – solvers – postprocessor.

Unit 5: Flexible Manufacturing System

Introduction, Components of FMS, Group Technology, Part classification and families, Composite part, Types of FMS layouts, Advantages of FMS

Robotics: Robot configurations, Drives for robots, Sensors used in robotics, Programming technique, Programming languages, Applications, Latest development in robotics

Unit 6: Computer Aided Process Planning

Introduction, Retrieval and Generative CAPP systems, generation of Machining Data.

Computer Integrated Manufacturing: Introduction, Types of data, Types of interfaces, Computer network structures, Computerized production management systems, Inventory management, MRP, Operation scheduling, Process monitoring, Computer aided quality control, Testing/Inspection methods.

Texts:

1. Ibrahim Zeid, “CAD/CAM Theory and Practice”, Tata McGraw Hill Publication,
2. M. P. Grover, Zeemer, “CAD/CAM/CIM”, Prentice Hall, India.

Power Plant Technology

ME 704	Power Plant Technology	PCC	3-0-0	3 Credit
--------	------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Recognize the current power generation scenario across the globe and compare the different sources used by different nations for power generation. Discuss the most important energy source in India for power generation along with its current status. and the types of power plants
CO2	Describe the fuel handling and ash handling in thermal power plants.
CO3	Explain the working of steam turbine power plant, gas turbine power plant, thermal power plant, diesel power plant, hydroelectric power plant, nuclear power plant and non-conventional power generation plants like wind power plants, tidal power plants, solar photovoltaic power plants and fuel cells, solar thermal power plants. Write functions of their important components.
CO4	Describe different high pressure boilers used in power plants and write their advantages.
CO5	Study Rankine cycle with reheat, regeneration and reheat – regeneration, etc. and analyze their performance.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1				1	1					
CO2	1	1										
CO3	1											
CO4	1	1										
CO5	1	2										

Course Contents:

Unit 1: Sources of Energy for Power Plant

Fossil fuels, petroleum products, Hydel, Nuclear, Wind, Tidal and Geo-thermal energy etc.

Cycle for Steam and Gas Turbine Power Plant: Rankine cycle, Reheat cycle, Regenerative cycle, Reheat-regenerative cycle, Binary cycle, topping cycle, Cogeneration, Regeneration, and Intercooling.

Unit 2: High Pressure Boilers

Introduction, Advantages of high pressure boilers, Lamont boiler, Benson boiler, Loeffler boiler, Schmidt-Hartmann boiler, Velox boiler, super critical boiler, Design consideration for modern boilers, Introduction to IBR.

Unit 3: Thermal Power Plant

Introduction, general layout of modern thermal power plant, working, site selection and material requirements.

Fuel and Ash Handling: Introduction, out-plant and in-plant handling of coal, coal storage, coal crushing and pulverized coal systems, coal burning methods, overfeed underfeed stokers, pulverized fuels and their advantages, pulverized fuel burners, ash handling systems, different types of dust collectors, ash and dust disposal.

Unit 4: Diesel Power Plant

Introduction, field of use, plant layout, comparison of diesel power plant with other power plants, recent developments.

Gas Turbine Power Plant (GTPP): Introduction, classification and comparison with other types, types GTPP, advantages and disadvantages over other power plants, gas handling, present and future trends.

Unit 5: Hydro-Electric Power Plant

Introduction, general layout of hydro-electric power plant, Site selection, Classification, Run-off river plants with and without pondage, store reservoir plants, pump-storage plants, Advantages of hydro-electric power plant, Safety measures.

Nuclear Power Plant: Introduction, nuclear reactions, nuclear fuels, site selection, components of reactors, types of reactors, material requirement, effect of nuclear radiation, disposal of nuclear waste, safety requirement of nuclear power plant.

Unit 6: Economy Analysis of Power plants

Introduction, load calculation, load curve, diversity factor, load factor, plant use factor, meeting fluctuating load by various power plants, cost of electrical energy, performance and operating characteristics of power plants, load division among generators.

Non-conventional Power Generation: Solar Energy Collector Types, Low, medium and high temperature power plants, OTEC, wind power plants, tidal & geothermal power plants, solar photovoltaic power plants. Fuel cells.

Texts:

1. P. K. Nag, "Power Plant Engineering", Tata McGraw Publishing Hill Co.
2. El Wakil, "Power Plant Technology", Tata McGraw Hill Publishing Co.

References:

1. S. C. Arora, S. Domkundwar, "A Course in Power Plant Engineering", Dhanpat Rai and Sons, New Delhi.
2. Frederick T. Morse, "Power Plant Engineering", Affiliated East-West Press Pvt. Ltd. New Delhi.

Elective VI

Finite Element Analysis

ME 705A	Finite Element Analysis	PCE	3-0-0	3 Credit
---------	-------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the basic principle of Finite element methods and its applications
CO2	Use matrix algebra and mathematical techniques in FEA
CO3	Identify mathematical model for solution of common engineering problem
CO4	Solve structural , thermal problems using FEA
CO5	Derive the element stiffness matrix using different methods by applying basic mechanics laws
CO6	Understand formulation for two and three dimensional problems

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Introduction

Finite element analysis and its need, Advantages and limitations of finite element analysis (FEA), FEA procedure.

Unit 2: Elements of Elasticity

Stress at a point, Stress equation of equilibrium, 2-D state of stress, Strains and displacements, Stress-strain relationship for 2-D state of stress, Plane stress and plane strain approach.

Unit 3: Relevant Matrix Algebra

Addition, subtraction and multiplication of matrices, Differentiation and integration of matrices, Inverse of a matrix, Eigen values and eigen vectors, Positive definite matrix, Gauss elimination.

Unit 4: One-Dimensional Problems

Introduction, FE modeling, Bar element, Shape functions, Potential energy approach, Global stiffness matrix, Boundary conditions and their treatments, Examples.

Unit 5: Trusses and Frames

Introduction, Plane trusses, Element stiffness matrix, Stress calculations, Plane frames, examples.

Unit 6: Two-dimensional Problems

Introduction and scope of 2-D FEA, FE modeling of 2-D problem, Constant strain triangle, other finite elements (no mathematical treatment included), Boundary conditions.

Texts:

1. T. R. Chandrupatla, A. D. Belegundu, "Introduction to Finite Elements in Engineering", Prentice Hall of India Pvt. Ltd., 3rd edition, New Delhi, 2004.
2. P. Seshu, "A Textbook of Finite Element Analysis", Prentice Hall of India Pvt. Ltd., New Delhi, 2003.
3. R. D. Cook, D. S. Malkus, M. E. Plesha, R. J. Witt, "Concepts and Applications of Finite Element Analysis", John Wiley & Sons, Inc.

1. K. J. Bathe, "Finite Element Procedures", Prentice Hall of India Pvt. Ltd., 2006.

Elective VI**Mechanical Vibrations**

ME 705B	Mechanical Vibrations	PCE	3-0-0	3 Credit
---------	-----------------------	-----	-------	----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Understand the cause and effect of vibration in mechanical system
CO2	Formulate governing equation of motion for physical system
CO3	Understand role of damping, stiffness and inertia in mechanical system
CO4	Analyze rotating system and calculate critical speeds
CO5	Estimate the parameters of vibration isolation system
CO6	Estimate natural frequencies and mode shapes of continuous system

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	1	1	2	1	1					2
CO2	3	3	2	1	1							2
CO3	3	2	2	1	1							2
CO4	3	3	2	2	2							2
CO5	3	3	2	2	2		3					2
CO6	3	3	3	2								2

Course Contents:**Unit 1: Single DOF- Free Vibrations**

Basic concepts: Causes and effect of vibrations, practical applications, harmonic and periodic motions, vibration terminology, vibration model, Equation of motion -natural frequency, Energy method, Rayleigh method, principle of virtual work, damping model, viscously damped free vibration, Oscillatory, non-oscillatory and critically damped motions, logarithmic decrement. Coulomb's damping.

Unit 2: Single DOF- Forced Vibrations

Analysis of linear and torsional system subjected to harmonic force excitation, force transmissibility, Magnification factor, motion transmissibility, vibration isolation, typical isolator and mounts, critical speed of single rotor, undamped and damped.

Unit 3: Two DOF Systems

Introduction, formulation of equation of motion, equilibrium method, lagrangian method, free vibration response, Eigen values and eigen vector, Normal mode and mode superposition, Coordinate coupling, decoupling equation of motion.

Unit 4: Torsional Vibration

Simple system with one or two rotor masses, Multi DOF system: transfer matrix method, geared system, and branched system.

Unit 5: Multi Degree of Freedom System

Formulation of equation of motion, free vibration response, natural mode and mode shapes, orthogonality of model vectors, normalization of model vectors, decoupling of modes, model analysis, mode superposition technique. Free vibration response through model analysis. DF

Unit 6: Continuous Systems

Vibration of strings, longitudinal and transverse vibration of rods, transverse vibrations of beams, equation of motions and boundary conditions, transverse vibration of beams, natural frequencies and mode shapes.

Texts:

1. L. Meirovich, "Elements of Vibration Analysis", Tata McGraw Hill.

References:

1. S. S. Rao, "Mechanical Vibrations", Pearson education.
2. W. T. Thompson, "Theory of Vibration", CBS Publisher.

Elective VI Surface Engineering

ME 705C	Surface Engineering	PCE	3-0-0	3 Credit
---------	---------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Learn the importance and need of surface engineering
CO2	Describe various surface cleaning and modification techniques
CO3	Understand the concepts of surface integrity
CO4	Compare various surface coating technologies
CO5	Select appropriate method of coating for a given application
CO6	Apply measurement techniques and carry out characterization of coated surfaces.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Introduction

Definition, Significance, Role of surface Engineering in creating high performance product, Functional characteristics of a surface, Nature of surfaces: Deformed layer, Beilby layer, chemically reacted layer, Physisorbed layer, Chemisorbed layer; Classification of Surface Engineering Techniques.

Unit 2: Surface Preparation Techniques

Factors affecting selection of cleaning process, Significance of surface preparation, Classification of cleaning processes, Chemical cleaning processes; Mechanical Processes; Substrate considerations, Surface contaminants or soils, Tests for cleanliness.

Unit 3: Surface Integrity

Definition, Importance, Surface alterations, Factors in Surface Integrity: Visual, Dimensional, Residual stress, Tribological, Metallurgical; Measuring Surface Integrity effects: Minimum and Standard data set, Macroscopic and microscopic examination.

Unit 4: Surface Modification Techniques

Classification, Thermal treatments: Laser and electron beam hardening, Mechanical treatments: Short peening: Peening action, surface coverage and peening intensity, Types and sizes of media, Control of process variables, equipment;

Ion Implantation: Basic Principle, Advantages and disadvantages, equipment.

Unit 5: Surface Coating Techniques

Thermal Spraying: Types and applications; Chemical Vapour Deposition: Principles, Reactions, Types and applications; Physical Vapour Deposition: Basic principle, Evaporation, Sputtering, Ion Plating, Applications; Electroplating: Principle of working and applications; Types of Coatings: Hard, Soft, Single layer, Multi-layer.

Unit 6: Characterization of Coatings

Physical characteristics and their measurements: Coating thickness, Surface Morphology and Microstructure. Mechanical properties and their Measurements: Hardness, Adhesion, Friction and Wear.

References:

1. ASM Handbook, "Volume 5: Surface Engineering", ASM International.
2. K. G. Budinski, "Surface Engineering for Wear Resistance", Prentice Hall.
3. T. Burakowski, T. Wierschon, "Surface Engineering of Metals: Principles, Equipment, Technologies", CRC Press.
4. B. Bhushan, B. K. Gupta, "Handbook of Tribology: Materials, Coatings, and Surface Treatments", Tata McGraw Hill Publications.
5. ASM Handbook, "Volume 16: Machining", ASM International.

Elective VI**Human Resource Management**

ME 705D	Human Resource and Management	PCE	3-0-0	3 Credit
---------	-------------------------------	-----	-------	----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Describe trends in the labor force composition and how they impact human resource management practice.
CO2	Discuss how to strategically plan for the human resources needed to meet organizational goals and objectives.
CO3	Define the process of job analysis and discuss its importance as a foundation for human resource management practice
CO4	Explain how legislation impacts human resource management practice.
CO5	Compare and contrast methods used for selection and placement of human resources.
CO6	Describe the steps required to develop and evaluate an employee training program
CO7	Summarize the activities involved in evaluating and managing employee performance.
CO8	Identify and explain the issues involved in establishing compensation systems.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1					2						1	
CO2											3	
CO3										2		
CO4								2		2		
CO5									2	3		
CO6										1		3
CO7										2	2	
CO8											2	

Course Contents:

Unit 1: Introduction to Human Resource Management

Concept of management, concept of human resource management, personnel to human resource management, human resource management model, important environmental influences like government regulations, policies, labor laws and other legislation.

Acquisition of human resources: Human resource planning, Demand for man power, Weaknesses of manpower planning, job analysis, job specification, recruitment sources, recruitment advertising, the selection process, selection devices, equal opportunities: Indian and foreign practices, socializing the new employee

Unit 2: Development of Human Resources

Employee Training and Management Development: Training, Training and Learning, Identification of training needs, training methods, Manager Development, Methods for developing managers, evaluating training effectiveness

Career Development: Concept of career, value of effective career development, external versus internal dimensions to a career, career stages, linking career dimensions with stages

Unit 3: Motivation of Human Resources

Definition of motivation, Nature and Characteristics of Motivation, Theories of motivation: Maslow's Need Hierarchy Theory, Drucker Theory, Likert Theory, Herzberg Two Factor Theory, McClelland Theory, McGregor Theory X and Y, etc., Psychological approach.

Job Design and Work Scheduling: Design, Scheduling and Expectancy Theory, Job characteristics model, job enrichment, job rotation, work modules, flex-time, new trends in work scheduling.

Unit 4: Performance Appraisal

Performance appraisal and expectancy theory; appraisal process, appraisal methods, factors that can destroy appraisal.

Rewarding the Productive Employee: Rewards and expectancy theory, types of rewards, qualities of effective rewards, criteria for rewards.

Unit 5: Maintenance of Human Resources

Compensation Administration: Concept of Compensation Administration, Job evaluation, Pay structures, Incentives compensation plans.

Benefits and Services Benefits: Something for everybody, Services, Trends in benefits and services.

Discipline: Concept of Discipline, types of discipline problems, general guidelines, disciplinary action, employment-at-will doctrine, disciplining special employee groups

Safety and Health: safety programs, health programs, stress, turn out.

Unit 6: Labor Relations

Unions, Major labor legislation, goals of group representation.

Collective Bargaining: Objectives, scope, participants of collective bargaining, process of collective bargaining, trends in collective bargaining

Research and the future: What is research? Types of research, why research in human resource management, Secondary sources: where to look it up, Primary sources: relevant research methods, current trends and implications for human resource management.

Texts:

1. David A. DeCenzo, Stephen P. Robbins, “Personnel/Human Resources Management”, Prentice Hall of India Pvt. Ltd, 3rd edition, 2002.
2. Trevor Bolton, “An Introduction to Human Resource Management”, Infinity Books, 2001.

References:

1. Ellen E. Kossek, “Human Resource Management– Transforming the Workplace”, Infinity Books, 2001.
2. G. S. Batra, R. C. Dangwal, “Human Resource Management New Strategies”, Deep and Deep Publications Pvt. Ltd., 2001.
3. D. M. Silvera, “HRD: The Indian Experience”, New India Publications, 2nd edition, 1990.

Elective VI

Design of Heat Exchangers

ME 705E	Design of Heat Exchangers	PCE	3-0-0	3 Credit
---------	---------------------------	-----	-------	----------

Pre-Requisites: Heat Transfer

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the various design aspects of Heat Exchangers
CO2	Design and analysis of Shell and Tube Heat Exchanger used in process industries
CO3	Develop design procedure through programming and simulation
CO4	Understand the Mechanical design of Heat exchanger

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	1				1					
CO2	3	3	1				1					
CO3	3	3	1	1	3							
CO4	3	3	1	1								

Course Contents:

Unit 1: Introduction

Classification, overview of heat exchanger design methodology: design specification, thermo hydraulic design, and other considerations.

Unit 2: Basic Design Theory

LMTD Method, E-NTU method, P-NTU method, P method and P1-P2 method.

Unit 3: Heat Exchanger Design Procedures

Design of: double-pipe, shell and tube, tube-fin, plate-fin heat exchangers.

Unit 4: Selection of Heat Exchangers

Selection criteria, general selection guidelines of shell and tube heat exchangers, plate-fin heat exchangers.

Unit 5: Thermodynamic Modeling and Analysis

Modeling of heat exchanger based on I law, irreversibility.

Unit 6: Header Design

Flow mal-distribution, fouling and corrosion, advances in heat exchangers.

Texts:

1. R. K. Shah, Deusan P. Sekulic, "Fundamentals of heat exchanger design", John Willeyand Sons, 2003.
2. S. Kakac, "Heat Exchangers: Thermal Hydraulic Fundamentals and Design", Hemisphere, Tata McGraw Hill Publications.

References:

1. D. Q. Kern, A. D. Kraus, "Extended Surface Heat transfer", Tata McGraw Hill Publications.
2. W. M. Kays, A. C. London, "Compact Heat Exchangers", Tata McGraw Hill Publications.

Mechatronics Lab

ME 706	Mechatronics Lab	PCC	0-0-2	1 Credits
--------	------------------	-----	-------	-----------

Pre-Requisites: Mechatronics

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the various types of sensors and their applications
CO2	Design a pneumatic circuit for a given application
CO3	Design a hydraulic circuit for a given application
CO4	Write a PLC program using Ladder logic
CO5	Experiment PID controller for controlling temperature
CO6	Demonstrate the capacitance sensor for measuring level

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2							3			1
CO2	1	1	3	3	3		3		3			1
CO3	1	1	3	3	3		3		3			1
CO4	2		3	1	3		1		3			1
CO5	1	1	3	3	3	3	2		3			1
CO6	1	1	3	3	2		2		3			1

List of Practicals/Experiments/Assignments

1. Study and demonstration of various types of sensors
2. Speed control of various types of Electrical Motors
3. Minimum two circuits on Pneumatics to be developed on Pneumatic trainer kit
4. Minimum two circuits on Electro-Pneumatics to be developed on Electro-Pneumatic trainer kit
5. Minimum two circuits on Hydraulics and Electro-hydraulics to be developed on Hydraulic trainer kit
6. Programming of Microprocessor and Microcontroller
7. Programming on PLC
8. Demonstration of Process control such as temperature, level, flow, etc. control using PID controller

CAD/CAM Lab

ME 707	CAD/CAM Lab	PCC	0-0-2	1 Credit
--------	-------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Construct CAD part models, assembly model and drafting of machine elements using CAD software.
CO2	Evaluate stresses in components subjected to simple structural loading using FE software
CO3	Write NC programs for turning and milling
CO4	Describe case study of industrial robots

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

List of Practicals/Experiments/Assignments

1. Part modeling of machine elements using any one of the CAD software out of ProE, CATIA, Unigraphics or Autodesk Inventor Professional.
2. Assembly modeling of assembly or subassembly of engineering products using any one of the CAD software out of ProE, CATIA, Unigraphics or Autodesk Inventor Professional.
3. Drafting of Parts and Assembly of engineering assembly using any one of the CAD software out of ProE, CATIA, Unigraphics, or Autodesk Inventor Professional.
4. Minimum 4 structural analysis problems to be solved using a CAE software like Ansys, Hyperworks, etc.
5. Minimum 2 Jobs (Programs) on CNC Turning operations
6. Minimum 2 Jobs (programs) on CNC Milling operation
7. Case Study of an Industrial Robot

Seminar

ME 708	Seminar	PCC	0-0-3	2 Credit
--------	---------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	State the exact title of the seminar
CO2	Explain the motivation for selecting the seminar topic and its scope
CO3	Search pertinent literature and information on the topic
CO4	Critically review the literature and information collected

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1									1		
CO2		2								3		
CO3						1	1					1
CO4		2				1						

Course Contents:

Before the end of Semester VII, each student will have to deliver a seminar on a subject mutually decided by candidate and his/her guide. The student should select the topic for his/her seminar which is latest and relevant. The student, as a part of the term work, should submit the write-up of the seminar topic in duplicate, typed on A4 size sheets in a prescribed format and bound at the end of semester.

The performance of the student will be evaluated on the basis of the contents, the presentation and discussion during the delivery of seminar before the evaluation committee appointed by the Department.

Project Stage-I

ME 709	Project Stage-I	PCC	0-0-4	2 Credits
--------	-----------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	State the exact title of the project and problem definition
CO2	Explain the motivation, objectives and scope of the project
CO3	Review the literature related to the selected topic of the project
CO4	Design the mechanism, components of the system and prepare detailed drawings.
CO5	Evaluate the cost considering different materials/manufacturing processes

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1								1		
CO2									1	2	2	
CO3		1				1						
CO4			3	2	2		1		1	1	1	1
CO5	1		1					1			2	1

Course Contents:

The students in a group of not more than FOUR will work under the guidance of the faculty member on the project work undertaken by them. The completion of work, the submission of the report and assessment should be done at the end of VII Sem.

The project work should consist of any of the following or appropriate combination:

1. A comprehensive and up-to-date survey of literature related to study of a phenomenon or product.
2. Design of any equipment and / or its fabrication and testing.
3. Critical Analysis of any design or process for optimizing the same.
4. Experimental verification of principles used in applications related to various specializations related to Mechanical Engineering.
5. Software development for particular applications.

6. A combination of the above.

It is expected that the students should complete at least 40% of the total project work in VII Semester. The objective is to prepare the students to examine any design or process or phenomenon from all angles, to encourage the process of independent thinking and working and to expose them to industry.

The students may preferably select the project works from their opted elective subjects. The students should submit the report in a prescribed format, before the end of VII semester. The report shall be comprehensive and presented typed on A₄ size sheets and bound. Number of copies to be submitted is number of students plus two. The assessment would be carried out by the panel of examiners for both, term work and oral examinations.

Semester VIII

Elective VII

Biomechanics

ME 801A	Biomechanics	PCE	3-0-0	3 Credit
---------	--------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Explain various forces and mechanisms and define Newton's law of motion, work and energy, moment of inertia
CO2	Describe forces and stresses in different human joints
CO3	Discuss bio fluid mechanics in cardiovascular and respiratory system in human body
CO4	Differentiate between hard tissues and soft tissues
CO5	Understand concepts of implants and Identify different techniques used in biomechanics implants

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												

Course Contents:

Unit 1: Introduction

Review of principle of mechanics, vector mechanics-resultant forces of coplanar and non-coplanar and concurrent and non-concurrent forces, parallel forces in planes, equilibrium of coplanar forces, Newton's law of motion, work and energy, moment of inertia.

Unit 2: Biomechanics of Joints

Skeletal joints, forces and stresses in human joints, type of joints, biomechanical analysis of elbow, shoulder, spinal column, hip knee and ankle.

Unit 3: Bio-fluid Mechanics

Introduction, viscosity and capillary viscometer, Rheological properties of blood, laminar flow, cardiovascular and respiratory system.

Unit 4: Hard Tissues

Bone structure and composition, Mechanical properties of bones, cortical and cancellous bones, visco-elastic properties, Maxwell and Vigot model – Anisotropy

Unit 5: Soft Tissues

Structure and functions of soft tissue: cartilage, tendon, ligament and muscle, Material properties of cartilage, tendon and ligament and muscle

Unit 6: Biomechanics of Implant

Specification for prosthetic joints, biocompatibility, requirement of biomaterial, characterization of different type of biomaterials, fixation of implants.

Texts/References:

1. Y. C. Fung, “Biomechanics: Mechanical properties of living tissues”, springer-verlag, 2nd edition, 1993.
2. D. J. Schneck, J. D. Bronzino, “Biomechanics: Principle and Applications”, CRC Press, 2nd edition, 2000.

Elective VII**Failure Analysis and Design**

ME 801B	Failure Analysis and Design	PCE	3-0-0	3 Credit
---------	-----------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	State and compare different theories of failures
CO2	Define the fractures in materials and compare the different theories of fractures
CO3	Discuss the different modes of fractures, crack propagation and R curves, S-N curves
CO4	Define and identify fatigue failures
CO5	Describe creep failure, brittle fracture and ductile fracture
CO6	Identify Design Application of the Knowledge of Failure

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Theories of Failure

Maximum shear stress theory, Maximum normal stress theory, Maximum distortion energy theory, Maximum strain theory, Applicability of theories of failure.

Unit 2: Fracture

Type of fracture, Theoretical cohesive strength of metals, Griffith theory of brittle fracture, fracture single crystals, Metallographic aspects of fracture, Dislocation theories of brittle fracture, Ductile fracture, Notch effects, Fracture under combined stresses.

Unit 3: Fracture Mechanics

Strain energy release rate, Stress intensity factor, Fracture toughness, Plane strain toughness testing, Crack-opening displacement, J-Integral to solve energy of crack formation, R-curves, Toughness of material.

Fatigue Failure: Stress cycle, S-N curve, Description of fatigue fractured parts, Phases of fatigue fracture, Fatigue crack propagation, Effects of metallurgical variables, Temperature, Stress concentration, Size and surface factors, Fatigue under combined stresses.

Unit 4: Creep Failure

Creep curve, Structural changes and mechanisms during creep, Activation energy for steady-state creep, Fracture at elevated temperature.

Brittle Fracture: Transition temperature curves, Fracture analysis diagrams, various types of embrittlement, Fracture under very rapid loading.

Unit 5: Ductile Fracture

Condition for necking, Dislocation and void formation activities, Types of fractured parts. Assessment of Types of Fractures by Observation: Comparison between different fractured parts undergoing various type of fracture.

Unit 6: Design Application of the Knowledge of Failure

Design considering fatigue-Geber's parabola, Soderberg equation, Lubricating optimally to combat bearing failures. Selection of materials to prevent seizure, galling, etc. Wear reduction techniques, Fracture toughness consideration in design.

Texts/References:

1. F. Madoyag, "Metal Fatigue Design and Theory"
2. L. Sors, "Fatigue Design of Machine Components", Pergamon Press
3. S. T. Rolfe and J. M. Barson, "Fracture and Fatigue Control Structures", Prentice Hall.

Elective VII**Automobile Engineering**

ME 801C	Automobile Engineering	PCE	3-0-0	3 Credit
---------	------------------------	-----	-------	----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Identify the different parts of the automobile.
CO2	Explain the working of various parts like engine, transmission, clutch, brakes etc.,
CO3	Demonstrate various types of drive systems.
CO4	Apply vehicle troubleshooting and maintenance procedures.
CO5	Analyze the environmental implications of automobile emissions. And suggest suitable regulatory modifications.
CO6	Evaluate future developments in the automobile technology.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1										
CO2	1	2		2		1						
CO3	1	1		1	1							
CO4	2			3	1							
CO5		2			1	1	2					
CO6	1		2			2						

Course Contents:**Unit 1: Introduction**

Vehicle specifications, Classifications, Chassis layout, Frame, Main components of automobile and articulated vehicles; Engine-cylinder arrangements, Power requirements, Tractive efforts and vehicle performance curves.

Unit 2: Steering and Suspension Systems

Steering system; Principle of steering, Centre point steering, Steering linkages, Steering geometry and wheel alignment, power steering.

Suspension system: its need and types, Independent suspension, coil and leaf springs, Suspension systems for multi-axle vehicles, troubleshooting and remedies.

Unit 3: Transmission System

Clutch: its need and types, Gearboxes: Types of gear transmission, Shift mechanisms, Over running clutch, Fluid coupling and torque converters, Transmission universal joint, Propeller shaft, Front and rear axles types, Stub axles, Differential and its types, Four wheel drive.

Unit 4: Brakes, Wheels and Tyres

Brake: its need and types: Mechanical, hydraulic and pneumatic brakes, Disc and drum type: their relative merits, Brake adjustments and defects, Power brakes, Wheels and Tyres: their types; Tyre construction and specification; Tyre wear and causes; Wheel balancing.

Unit 5: Electrical Systems

Construction, operation and maintenance of lead acid batteries, Battery charging system, Principle and operation of cutout and regulators, Starter motor, Bendix drive, Solenoid drive, Magneto-coil and solid stage ignition systems, Ignition timing.

Unit 6: Vehicle Testing and Maintenance

Need of vehicle testing, Vehicle tests standards, Different vehicle tests, Maintenance: trouble shooting and service procedure, over hauling, Engine tune up, Tools and equipment for repair and overhauling, Pollution due to vehicle emissions, Emission control system and regulations.

Texts:

1. Kripal Singh, "Automobile Engineering", Vol. I and II, Standard Publishers.
2. G. B. S. Narang, "Automobile Engineering", Dhanpat Rai and Sons.

References:

1. Joseph Heitner, "Automotive Mechanics", East-West Press.
2. W. H. Crouse, "Automobile Mechanics", Tata McGraw Hill Publishing Co.

Elective VII

Engineering Tribology

ME 801D	Engineering Tribology	PCE	3-0-0	3 Credit
---------	-----------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Know about basic concepts and importance of tribology.
CO2	Understand the nature of engineering surfaces, their topography and learn about surface characterization techniques
CO3	Analyze the basic theories of friction and frictional behavior of various materials
CO4	Select a suitable lubricant for a specific application
CO5	Compare different wear mechanisms
CO6	Suggest suitable material combination for tribological design.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Introduction

Definition of tribology, friction, wear and lubrication; importance of the tribological studies.

Surface Topography: Methods of assessment, measurement of surface roughness-different statistical parameters (R_a , R_z , R_{max} , etc.), contact between surfaces, deformation between single and multiple asperity contact, contact theories involved

Unit 2: Friction

Coulomb and Amontons laws of friction, its applicability and limitations, comparison between static, rolling and kinetic friction, friction theories, mechanical interlocking, molecular attraction, electrostatic forces and welding, shearing and ploughing, models for asperity deformation.

Unit 3: Lubrication

Types of lubrication, viscosity, characteristics of fluids as lubricant, hydrodynamic lubrication, Reynold's equation, elasto-hydrodynamic lubrication: partial and mixed, boundary lubrication, various additives, solid lubrication.

Unit 4: Wear

Sliding wear: Abrasion, adhesion and galling, testing methods pin-on-disc, block-on-ring, etc., theory of sliding wear, un-lubricated wear of metals, lubricated wear of metals, fretting wear of metals, wear of ceramics and polymers.

Wearing by plastic deformation and brittle fracture. Wear by hard particles: Two-body abrasive wear, three-body abrasive wear, erosion, effects of hardness shape and size of particles.

Unit 5: Wear and Design

Introduction, estimation of wear rates, the systems approach, reducing wear by changing the operating variables, effect of lubrication on sliding wear, selection of materials and surface engineering. principles and applications of tribodesign.

Unit 6: Materials for Bearings

Introduction, Rolling bearings, Fluid film lubricated bearings, marginally lubricated and dry bearings, gas bearings.

Texts:

1. I. M. Hutchings, "Tribology, Friction and Wear Engineering Materials", Edward Arnold, London.
2. R. C. Gunther, "Lubrication", Baily Brothers and Swinfen Limited.
3. F. T. Barwell, "Bearing Systems, Principles and Practice", Oxford University Press.

References:

1. B. C. Majumdar, "Introduction to Tribology of Bearings", A. H. Wheeler & Co. Private Limited, Allahabad.
2. D. F. Dudley, "Theory and Practice of Lubrication for Engineers", John Willey and Sons.
3. J. Halling, "Principles of Tribology", McMillan Press Limited.
4. Cameron Alas Tair, "Basic Lubrication Theory", Wiley Eastern Limited.
5. M. J. Neale, "Tribology Hand book", Butterworth's.
6. D. D. Fuller, "Lubrication".

Elective VII

Heating Ventilation Air Conditioning and Refrigeration (HVAC and R)

ME 801E	HVAC and R	PCE	3-0-0	3 Credit
---------	------------	-----	-------	----------

Pre-Requisites: Ref. and Air conditioning

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the various methods of Refrigeration
CO2	Explain thermal analysis of vapour compression system
CO3	Understand the environmental aspect of refrigerants and alternate refrigerants
CO4	Comfort aspect of air-conditioning
CO5	Understand the ventilation and basic of duct design

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3		1						1			
CO2	3	3	1									
CO3	3		1		3		3					
CO4	1	1	1	3								
CO5	2	2	2									

Course Contents:

Unit 1: Review of Refrigeration and Air-Conditioning

Vapour Compression System: Ewings construction, Effect of evaporator and condenser temperature on cycle performance, effects of suction superheating, Liquid sub-cooling, liquid-vapour heat exchanger, estimation of compressor displacement, C.O.P. and power requirement, waste heat recovery opportunities

Unit 2: Compound Vapour Compression System

Multi-evaporator, multi-compressor systems and cascade system, Vapour Absorption System: Aqua-ammonia system, lithium bromide-water system, electrolux refrigerator, comparison with vapour compression cycle (descriptive treatment only), P-T- ξ chart, thermodynamic analysis and capacity control

Unit 3: Refrigerants for Vapour Compression System

Desirable properties, selection, Zeotrops and Azeotropes, necessity for replacement of CFC refrigerants, natural refrigerants

Unit 4: Air Conditioning Process Calculations

Sensible and latent heat loads SHF, GSHF, RSHF, outside conditions, indoor conditions, estimation of coil capacity required, bypass factor, evaporative cooling, Ventilation, Classification, Need, fresh air requirement in various applications.

Unit 5: Thermal Comfort

Thermal comfort: Heat transfer from human body by sensible and latent heat transfer. Metabolic heat generation, steady state model for heat transfer, effect of clothing and definition of effective temperatures, comfort conditions, human comforts, comfort chart

Unit 6: Distribution of Air

Principle of air distribution, duct design methods, friction chart, duct materials, methods of noise control. Basics of Air-conditioning controls

Texts:

1. C. P. Arora, "Refrigeration and Air Conditioning", Tata McGraw Hill Publications, New Delhi, 2nd edition, 2000.

- W.F. Stoeker, J. P. Jones, "Principles of Refrigeration and Air Conditioning", Tata McGraw Hill Publications, New York, 2nd edition, 1982.

**Elective VIII
Robotics**

ME 802A	Robotics	PCE	3-0-0	3 Credit
---------	----------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	List the various components of a typical Robot, grippers, sensors, drive system and describe their functions
CO2	Calculate the word to joint and joint to word coordinates using forward and reverse transformations
CO3	Calculate the gripper forces, drive sizes, etc.
CO4	Develop simple robot program for tasks such as pick and place, arc welding, etc. using some robotic language such as VAL-II, AL, AML, RAIL, RPL, VAL
CO5	Evaluate the application of robots in applications such as Material Handling, process operations and Assembly and inspection
CO6	Discuss the implementation issues and social aspects of robotics

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Introduction

Various basic components of a Robotic system, various configurations, work envelopes, Manipulators, sensors, controllers, etc.

Unit 2: Mechanical System in Robotics

Motion conversion, Kinematic chains, position analysis, forward and backward transformations, natural and joint space coordinates.

Unit 3: Drives for Robot

Electrical drives, Stepper motor, DC motors, AC motors, hydraulic and pneumatic drives, hybrid drives, drive selection for robotics joints.

Unit 4: Sensors in Robotics

Position sensor, velocity sensor, proximity sensors, touch sensors, force sensors, etc.

Unit 5: Robot Programming

Path planning, Lead through (manual and powered) programming, teach pendant mode, programming languages, AL, AML, RAIL, RPL, VAL pment in robotics

Artificial Intelligence for Robots: Knowledge Representation, Problem representation and problem solving, search techniques in problem solving

Unit 6: Robot Applications

Application of robot in: Material handling, assembly and inspection, process operations, etc.

Texts:

1. M. P. Grover, "Industrial Robotics: Technology, Programming and Applications", Tata McGraw Hill Publication.

References:

1. Saeed B. Niku, "Introduction to Robotics, Analysis, Systems, Applications", Pearson Education.
2. Richard D. Klafter, "Robotic Engineering: An Integrated Approach", Prentice Hall of India.

Elective VIII

Tool Condition Monitoring

ME 802B	Tool Condition Monitoring	PCE	3-0-0	3 Credit
---------	---------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the need for Tool Condition Monitoring (TCM)
CO2	Describe the different sensors used in TCM
CO3	Apply the TCM Technique to machines like Lathe, Drilling, Milling
CO4	Apply the TCM to EDM, ECM
CO5	Demonstrate the TCM using force , vibration and sound sensors

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	3	1	1	2	2						1
CO2	3	3	2	1	2	2	2					1
CO3	1	1	2	2	3	2						1
CO4	1	1	2	2	3	2	3					1
CO5	1	1			3	2	3					1

Course Contents:

Unit 1: Introduction

Need and role of monitoring system and different methods of tool condition monitoring.

Unit 2: Sensors

Role of sensors in manufacturing, Types of sensors, Principles of sensors for manufacturing.

Unit 3: Condition Monitoring

Condition monitoring of manufacturing systems using: force, vibration, sound and neural networks.

Unit 4: Acoustic Emission

Tool condition monitoring using acoustic emission: principle of working, types of AE sensors and applications to metal cutting processes.

Unit 5: Applications of Sensors

Applications of sensors in casting and forming, Process monitoring and use of sensors in forging, Monitoring of non-conventional manufacturing processes such as EDM, ECM.

Unit 6: Tool Condition Monitoring for CNC Machines

Tool condition monitoring for CNC machines like lathe, milling machines, drilling machines using sensors for workpiece and tooling.

Texts:

1. H. K. Tonshoff, I. Inasaki, "Sensors Applications", Vol. I, Sensors in Manufacturing, Wiley-VCH, New York, 2001.
2. D. M. Considine, G. D. Considine, "Standard Handbook of Industrial Automation", Chapman and Hall, 1975.

References:

1. S. D. Murphy, "In-process Measurement and Control", Marcel Dekker, 1983.
2. S. Soloman, "Sensors and Control systems in Manufacturing", Tata McGraw Hill International Editions, USA, 1987.

Elective VIII

Experimental Stress Analysis

ME 802C	Experimental Stress Analysis	PCE	3-0-0	3 Credits
---------	------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Explain the measurement of strain under static and dynamic loads
CO2	Describe the mechanical, optical pneumatic and electrical strain gauges for strain measurement
CO3	Analysis of measuring circuits and stains of different strain gauge rosettes.
CO4	Explain optical methods of stress analysis
CO5	Understand basic principles of photoelasticity and use it as an analysis tool.
CO6	Selecting coating techniques, coating materials.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		1										
CO2		2	2		2							2
CO3				3								2
CO4			1									
CO5					2							2
CO6					2							2

Course Contents:

Unit 1: Introduction

Need of stress analysis; experimental methods, Merits and demerits of experimental methods.

Unit 2: Basics of Elasticity

Stress at a point, stress equations of equilibrium, 2-D state of stress, Strains and displacements, Stress strain relationship for 2-D state of stress, Plane stress and plane strain approach.

Unit 3: Measurement of Strain

Strain gauges: Mechanical, optical, electrical, acoustical and semiconductor; Grid method of strain analysis.

Unit 4: Electrical Strain Gauges

Gauge construction, Strain gauge adhesives and mounting techniques, Gauge sensitivity and gauge factor, Strain gauge linearity, hysteresis and zero shift, Temperature compensation.

Environmental effects: moisture, humidity and hydrostatic pressure, high and cryogenic temperatures, The Wheatstone bridge, Calibration of strain gauge circuit, Strain analysis method: 3-element rectangular rosette, torque gauge.

Unit 5: Basics of Optics

Nature of light, Wave theory of light, Optical instruments, Plane and circular polariscopes.

Unit 6: Theory of Photoelasticity

Stress optics law, Effects of a stressed model in a plane polariscope, Effects of principal stress directions, Effects of principal stress difference, Effects of a stressed model in circular polariscope in dark and light field arrangements, 2-D Photoelasticity, Isochromatic and isoclinic fringe patterns, Materials for 2-D Photoelasticity, Introduction to moiré fringe technique and coating methods.

Texts:

1. J. W. Dally, W. F. Riley, "Experimental Stress Analysis", Tata McGraw Hill Publications, 3rd edition.

References:

1. C. Perry, H. R. Lissner, "The Strain Gage Primer", Tata McGraw Hill, 2000.
2. Abdul Mubeen, "Experimental Stress Analysis", Dhanpat Rai and Sons, 2001.
3. P. S. Theocaris, "Moire Fringes in Strain Analysis", Pergammon Press, 2002.

Elective VIII

Energy Conservation and Management

ME 802D	Energy Conservation and Management	PCE	3-0-0	3 Credits
---------	------------------------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand energy problem and need of energy management
CO2	Carry out energy audit of simple units
CO3	Study various financial appraisal methods
CO4	Analyse cogeneration and waste heat recovery systems
CO5	Do simple calculations regarding thermal insulation and electrical energy conservation

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	2	3		2	3			2	2		2
CO2	1	1	3	1	2	3			2	2		2
CO3	2	1	1							1		2
CO4	3	3			2	3						1
CO5			3			2						1

Course Contents:

Unit 1: Introduction

General energy problem, Energy use patterns and scope of conservation. Energy Management Principles: Need, Organizing, Initiating and managing an energy management program.

Unit 2: Energy Auditing

Elements and concepts, Types of energy audits, Instruments used in energy auditing. Economic Analysis: Cash flows, Time value of money, Formulae relating present and future cash flows - single amount, uniform series.

Unit 3: Financial Appraisal Methods

Payback period, Net present value, Benefit-cost ratio, Internal-rate of return, Life cycle costs/benefits. Thermodynamics of energy conservation, Energy conservation in Boilers and furnaces, Energy conservation in Steam and condensate system.

Unit 4: Cogeneration

Concept, Types of cogeneration systems, performance evaluation of a cogeneration system. Waste Heat Recovery: Potential, benefits, waste heat recovery equipment's. Space Heating, Ventilation Air Conditioning (HVAC) and water heating of building, Transfer of heat, Space heating methods, Ventilation and air conditioning, Heat pumps, Insulation, Cooling load, Electric water heating systems, Electric energy conservation methods.

Unit 5: Insulation and Heating

Industrial Insulation: Insulation materials, Insulation selection, Economical thickness of insulation.

Industrial Heating: Heating by indirect resistance, direct resistance heating (salt bath furnace), and Heat treatment by induction heating in the electric arc furnace industry.

Unit 6: Energy Conservation in Electric Utility and Industry

Energy costs and two part tariff, Energy conservation in utility by improving load factor, Load curve analysis, Energy efficient motors, Energy conservation in illumination systems, Importance of Power factor in energy conservation, Power factor improvement methods, Energy conservation in industries

Texts:

1. Callaghan, "Energy Conservation".
2. D. L. Reeg, "Industrial Energy Conservation", Pergamon Press.

References:

1. T. L. Boyen, "Thermal Energy Recovery", Wiley Eastern.
2. L. J. Nagrath, "System Modeling and Analysis", Tata McGraw Hill Publications.
3. S. P. Sukhatme, "Solar Energy", Tata McGraw Hill Publications.

Elective VIII

Modeling of Thermal System and Optimization

ME 802E	Modeling of Thermal Systems and Optimization	PCE	3-0-0	3 Credit
---------	--	-----	-------	----------

Pre-Requisites: Thermal Engineering

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the formulation and modelling
CO2	Explain thermal system analysis and optimization
CO3	Learn and implement packaged software to simulate thermal system simulation
CO4	Understand and use the optimization of thermal systems

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3				1		1				
CO2	3	3				1						
CO3	3				3	1	3	3	3			
CO4		1	3			2						

Course Contents:

Unit 1: Introduction

Preliminaries, Workable, Optimal and Nearly optimal designs, life cycle design, thermal system design aspects, concept creation and assessment, computer-Aided thermal system design.

Unit 2: Thermodynamics, Modeling and Design Analysis

Basic concepts and definition, control volume concepts, property relations, reacting mixtures and combustion, thermodynamic model-cogeneration system, modeling and design of piping system.

Unit 3: Exergy Analysis

Exergy, physical exergy, exergy balance, chemical exergy, applications, guidelines for evaluating and improving thermodynamic effectiveness.

Applications with Heat and Fluid Flow: Thermal insulation, fins, electronic packages.

Unit 4: Applications with Thermodynamics and Heat and Fluid flow

Heat exchangers, the trade-off between thermal and fluid flow irreversibilities, air preheater preliminary design, additional applications.

Economic Analysis: Estimation of total capacity investment, principles of economic evaluation, calculation of revenue requirements, livelized costs and cost of the main product, profitability evaluation and comparison of alternative investments.

Unit 5: Thermo-economic Analysis and Evaluation

Fundamentals of thermo-economics, thermo-economic variables for component evaluation, thermo-economic evaluation, additional costing considerations.

Unit 6: Thermo-economic Optimization

Introduction, cost-optimal exergetic efficiency for an isolated system component, optimization of heat exchanger networks, analytical and numerical optimization techniques, design optimization for the cogeneration-case study, thermo-economic optimization of complex systems.

Texts:

1. Yogesh Jaluria, "Design and Optimization of Thermal Systems", Tata McGraw Hill Companies, Inc.
2. W. F. Stoecker, "Design of Thermal Systems", Tata McGraw Hill, 3rd edition, 1989.

References:

1. B. K. Hodge, "Analysis and Design of Thermal Systems", Prentice Hall Inc., 1990.
2. I. J. Nagrath, M. Gopal: "Systems Modelling and Analysis", Tata McGraw Hill.
3. D. J. Wide, "Globally Optimal Design", Wiley Interscience, 1978.

Elective VIII

Utilization of Solar Energy

ME 802F	Utilization of Solar Energy	PCE	3-0-0	3 Credit
---------	-----------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Describe measurement of direct, diffuse and global solar radiations falling on horizontal and inclined surfaces.
CO2	Analyze the performance of flat plate collector, air heater and concentrating type collector.
CO3	Understand test procedures and apply these while testing different types of collectors.
CO4	Study and compare various types of thermal energy storage systems.
CO5	Analyze payback period and annual solar savings due to replacement of conventional systems.
CO6	Design solar water heating system for a few domestic and commercial applications.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1											
CO2	1	2				1						
CO3	2			1	1		2					
CO4	1	1										
CO5		2			1							
CO6			2	3		1	1					

Course Contents:

Unit 1: Solar Radiation

Introduction, spectral distribution, solar time, diffuse radiation, Radiation on inclined surfaces, measurement of diffuse, global and direct solar radiation.

Unit 2: Liquid Flat Plate Collectors

Introduction, performance analysis, overall loss coefficient and heat transfer correlations, collect or efficiency factor, collect or heat removal factor, testing procedures.

Unit 3: Solar Air Heaters

Introduction, types of air heater, testing procedure.

Unit 4: Concentrating Collectors

Types of concentrating collectors, performance analysis

Unit 5: Thermal Energy Storage

Introduction, sensible heat storage, latent heat storage and thermo chemical storage

Solar Pond: Solar pond concepts, description, performance analysis, operational problems.

Unit 6: Economic Analysis

Definitions, annular solar savings, payback period.

Texts:

1. J. A. Duffie, W. A. Beckman, "Solar Energy Thermal Processes", John Wiley, 1974.
2. K. Kreith, J. F. Kreider, "Principles of Solar Engineering", Tata McGraw Hill Publications, 1978.

References:

1. H. P. Garg, J. Prakash, "Solar Energy: Fundamentals and Applications", Tata McGraw Hill Publications, 1997.
2. S. P. Sukhatme, "Solar Energy Principles of Thermal Collection and Storage", Tata McGraw Hill Publications, 1996.

Elective IX

Plant Maintenance

ME 803A	Plant Maintenance	PCE	3-0-0	3 Credits
---------	-------------------	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Recognize troubles in mechanical elements.
CO2	Assemble, dismantle and align mechanisms in sequential order.
CO3	Carry out plant maintenance using on-line, shut down, corrosion, productive and preventive maintenance.
CO4	Analyze economics of power plants and list factors affecting the power plants
CO5	Explain the linkages between these different aspects and how they impact on overall maintenance effectiveness;

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		3	3		3	3	1	1	3			2
CO2	3			1	3	2	3					2
CO3	3	3	1	1	3		1	1	1			
CO4	1	1		3	3	2	1		3		1	3
CO5	3	2			3	3	2				1	3

Course Contents:

Unit 1: Introduction

Introduction to concept of maintenance, Type of maintenance; Preventive, Productive, corrective, online, shut down and their significance.

Unit 2: Preventive Maintenance

Preventive maintenance and its importance, Repair cycle, systematic recording, preventive maintenance, Programming and types of schedules, Manpower and machine planning, Lubrication methods and practice, Color code schedule.

Unit 3: Online Maintenance

On-line maintenance, attending to joints, Valves, Pumps and other equipment's leakages, Making shaft arrangement, stand by unit, repairing damage to insulation, etc. without stopping the plant, attending faulty equipment, Fault finding and trouble shoots.

Unit 4: Shutdown Maintenance

Shutdown maintenance, Economic aspects of timing, duration of Timing and duration of shut down maintenance, Execution by using PERT and CPM.

Unit 5: Maintenance of Mechanical Equipment

Maintenance of major equipment like boiler, furnaces, kilns, shells and tube heat exchangers, pump and compressor, Towers, Cooling vessels, Valves piping .

Unit 6: Plant Condition Monitoring

Plant condition monitoring systems, instrumentation, Data collection and analysis, life expectancy and maintenance scheduling. The economics of maintenance management.

Text:

1. Lindley R. Hinggin, L. C. Morrow, "Maintenance Engineering Hand book", Tata McGraw Hill Book Company.

References:

1. Duncan C. Richardson, PE, "Plant Equipment and Maintenance Engineering Handbook", McGraw Hill Education, New York, Chicago, 2014.

Elective IX

Design of Air Conditioning Systems

ME 803B	Design of Air Conditioning System	PCE	3-0-0	3 Credit
---------	-----------------------------------	-----	-------	----------

Pre-Requisites: Basic Air conditioning

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the cooling load calculation
CO2	Explain concept of ventilation and its implementation
CO3	Learn duct design applied to real life situation
CO4	Learn and differentiate the various modern air conditioning systems/units

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	2		2	1	1	1			1	
CO2	3	3				1	2					
CO3	3	3	3	2	2	1	1	1			2	
CO4		1	1	1		1	1	1				

Course Contents:

Unit 1: Introduction

Moist Air properties, Psychrometry of various air condition processes, SHF, dehumidified air quantity, HVAC Equipment

Unit 2: Human Comfort

Human comfort, environment comfort indices, clothing resistance, metabolisms, indoor air quality, ventilation air, inside design conditions, outside design conditions.

Unit 3: Heat Flow

Heat Flow in Buildings, Building Heat Transfer, Cooling Load Calculation, Ventilation load, Effective sensible heat factor and selection of air conditioning apparatus.

Unit 4: Air Diffusion

Room air diffusion, filtration, duct design, pressure drop, air distribution design, outlets

Unit 5: Air Conditioning Equipment

Fans, pumps and blowers, performance & selection

Unit 6: Air Conditioning Systems

Air conditioning systems; constant volume, VAV, terminal reheat systems, single zone and multi zone systems, dual duct system, fan coil unit, noise control.

Texts:

1. W. F. Stoecker, J. P. Jones, "Principles of Refrigeration and Air Conditioning", Tata McGraw Hill Publications.
2. C. P. Arora, "Refrigeration and Air Conditioning", Tata McGraw Hill Publications.
3. Manohar Prasad, "Refrigeration and Air Conditioning", New Age International, 3rd edition, 2011.
4. R. C. Arora, "Refrigeration and Air Conditioning", PHI Learning Pvt. Ltd., 2010.

References:

1. "Handbook of Air Conditioning System Design", Carrier Air Conditioning Co., 1965.
2. W. P. Jones, "Air Conditioning Engineering", Edward Arnold Publishers Ltd., London, 1984.
3. James L. Threlkeld, "Thermal Environmental Engineering", Prentice Hall, New York, 1970.

Elective IX**Process Equipment Design**

ME 803C	Process Equipment Design	PCE	3-0-0	3 Credit
---------	--------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the factors influencing design of pressure vessel
CO2	Calculate thickness and thickness variation for cylindrical storage tank
CO3	Estimation of thickness for thin and thick wall pressure vessels
CO4	Design of flange and gasket selection for cylindrical pressure vessels
CO5	Selection of various blade and baffle arrangement for agitators
CO6	Design of support for horizontal and vertical vessel

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1		1			1	1	1				1
CO2	2	2	1			1	1	1				1
CO3	2	2	2			1	1	1				1
CO4	2	2	2			1	1	1				1
CO5	2	2	1			1	1	1				1
CO6	2	2	2			1	1	1				1

Course Contents:

Unit 1: Design Considerations for Pressure Vessel

Selection of type of vessel, Methods of fabrication, Effect of fabrication methods, Various criteria in vessel design, Economic considerations, Types of process equipment, Constructional requirement and applications. , Fabrication and testing, Inspection and non-destructive testing of equipment.

Unit 2: Storage Vessel

Design methods of atmospheric storage vessel: storage of fluids, storage of non-volatile liquids, storage of volatile liquids, storage of gases, Optimum tank proportion, Bottom design, Shell design, Wind girder for open top tank, Rub curb angle, Self supported roof, Design of rectangular tank,

Unit 3: Pressure Vessel

Unfired process vessel with internal and external pressure, Operating condition, Selection of material, Design condition, Stresses, Design criteria, Design of shell subjected to internal and external pressure, Cylindrical vessel under combined loading,

Design of heads and closures: flat head and formed heads for vessel. Design consideration for reactors and chemical process vessels. Flange facings, Gaskets, Design of flanged joint, Flange thickness, and Blind flanges.

Unit 4: High Pressure Vessel

Design of thick walled high-pressure vessel, Constructional features, Materials for high-pressure vessels, Multilayer vessel with shrink fit construction, Thermal expansion for shrink fitting, stress in multi shell or shrink fit construction, autofrettage, Pre-stressing. Tall vessels and their design, Stress in shell, Determinations of longitudinal stresses, Longitudinal bending stresses due to eccentric loads, Determination of resultant longitudinal stresses.

Unit 5: Agitated Vessel

Type of agitators, Baffling, Power requirement for agitation, Design based on torque and bending moment, Design based on critical speed, Blade design, Hub and key design, Stuffing box and gland design, Turbine agitator design,

Unit 6: Support for Pressure Vessel

Bracket or lug support: Thickness of the base plate, Thickness of web (gusset) plate, Column support for bracket base plate for column or leg support. Skirt Support: Skirt design, Skirt bearing plate, and Anchor bolt design, Design of bolting chair. Saddle Support: Longitudinal bending moment, Stresses in shell at saddle.

Texts:

1. V. V. Mahajani, S. B. Umarji, "Process Equipment Design", Macmillan Publisher India Ltd.
2. L. E. Brownell, E. H. Young, "Process equipment design", John Wiley and Sons.
3. C. Bhattacharya, "Introduction to process Equipment Design".

Reference Book:

1. Dennis Moss, "Pressure Vessel Design Manual", Elsevier.
2. John F. Harvey, "Theory and Design of Pressure Vessels", CBS Publication.

Elective IX

Analysis and Synthesis of Mechanisms

ME 803D	Analysis and Synthesis of Mechanisms	PCE	3-0-0	3 Credit
---------	--------------------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Differentiate planar and spatial mechanism
CO2	Perform kinematic and dynamic analysis of planer mechanism with rigid bodies
CO3	Estimate element mass and stiffness matrices and write equations of motion for elastic linkage model
CO4	Synthesize, graphically, function generation and rigid body guidance with two, three and four accuracy points using pole method, centre point and circle point curves
CO5	Able to derive Euler-Savy equation and Freudenstein's equation
CO6	Synthesize, analytically, four-bar and slider-crank mechanism for prescribed angular velocities and accelerations using complex numbers

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1						1	1		1
CO2	3	3	2	1	3	1						
CO3	3	3	1	1						1	1	1
CO4	3	3	2	1	3	1	1					1
CO5	3	3	2	1								1
CO6	3	3	2	1	3	1	1					1

Course Contents:

Unit 1: Basic Concepts

Definitions and assumptions, planar and spatial mechanisms, kinematic pairs, degree of freedom.

Unit 2: Kinematic Analysis of Complex Mechanisms

Velocity-acceleration analysis of complex mechanisms by the normal acceleration and auxiliary point method.

Unit 3: Dynamic Analysis of Planar Mechanisms

Inertial forces in linkages, kineto-static analysis of mechanisms by matrix method, analysis of elastic mechanisms, beam element, displacement fields for beam element, element mass and stiffness matrices, system of matrices, elastic linkage model, equations of motion.

Unit 4: Curvature Theory

Fixed and moving centrodes, inflection circle, Euler-Savvy equation, Bobillier constructions, cubic of stationary curvature, Ball's point, applications of dwell mechanisms.

Unit 5: Graphical Synthesis of Planar Mechanisms

Type, number and dimensional synthesis, function generation, path generation and rigid body guidance problems, accuracy (precision) points, Chebychev spacing, types of errors, Graphical synthesis for function generation and rigid body guidance with two, three and four accuracy points using pole method, centre point and circle point curves, Burmester points, synthesis for five accuracy points, branch and order defects, synthesis for path generation.

Unit 6: Analytical Synthesis of Planar Mechanisms

Analytical synthesis of four-bar and slider-crank mechanism, Freudenstein's equation, synthesis for four accuracy points, compatibility condition, synthesis of four-bar for prescribed angular velocities and accelerations using complex numbers. Complex number method for synthesis.

Texts:

1. A. Ghosh, A. K. Mallik, "Theory of Machines and Mechanisms", Affiliated East-West Press.
2. R. S. Hartenberg, J. Denavit, "Kinematic Synthesis of Linkages", Tata McGraw Hill Inc.

Elective IX

Alternative Fuels for IC Engines

ME 803E	Alternative Fuels for IC Engines	PCE	3-0-0	3 Credit
---------	----------------------------------	-----	-------	----------

Pre-Requisites: IC Engines

Course Outcomes: At the end of the course, students will be able to:

CO1	State and define properties of petroleum fuels such as Specific gravity, Density, Molecular weight, Vapour pressure, Viscosity, Flash point, Fire point, Performance Number, Cetane Number, Octane number etc.,
CO2	Study the production method of various alternative fuels, their performance characteristics.
CO3	Understand need, advantages and environmental effects of traditional and alternative fuels.
CO4	Recognize current engine trends and future prospects (or) modification to use dual fuels and alternative fuels requirements.
CO5	Choose and Apply various pollution control methods on their emission characteristics.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1										
CO2		1	1									
CO3					1		2					
CO4					1	1						
CO5	2				1		1					

Course Contents:

Unit 1: Fuels

Introduction, Structure of petroleum, Refining process, Products of refining process, Fuels for spark ignition, Knock rating of SI engine fuels, Octane number requirement, Diesel fuels and Numericals.

Unit 2: Properties of Petroleum Products

Specific gravity, Density, Molecular weight, Vapour pressure, Viscosity, Flash point, Fire point, Cloud point, Pour point, Freezing point, Smoke point & Char value, Aniline point, Octane Number, Performance Number, Cetane Number, Emulcification, Oxidation Stability, Acid Value/Number, Distillation Range, and Sulphur content.

Unit 3: Alternative Fuels for IC Engines

Need for alternative fuels such as Ethanol, Methanol, LPG, CNG, Hydrogen, Biogas and Producer gas and their methods of manufacturing.

Unit 4: Single Fuel Engines

Properties of alternative fuels, Use of alternative fuels in SI engines, Engine modifications required, Performance and emission characteristics of alternative fuels in SI mode of operation v/s gasoline operation.

Unit 5: Dual Fuel Engine

Need and advantages, The working principle, Combustion in dual fuel engines, Factors affecting combustion in dual fuel engine, Use of alcohols, LPG, CNG, Hydrogen, Biogas and Producer gas in CI engines in dual fuel mode. Engine modifications required. Performance and emission characteristics of alternative fuels (mentioned above) in Dual Fuel mode of operation v/s Diesel operation.

Unit 6: Biodiesels

What are biodiesels Need of biodiesels, Biodiesel production methods, Properties of biodiesels V/s petro-diesel, Performance and emission characteristics of biodiesels v/s Petro-diesel operation?

Availability: Suitability and Future prospects of these gaseous fuels in Indian context. Environmental pollution with conventional and alternate fuels, Pollution control methods and packages.

Texts:

1. Osamu Hirao, Richard Pefley, "Present and Future Automotive Fuels", Wiley Inter-science Publication, NY, 1988.
2. V. Ganesan, "Internal Combustion Engines", Tata McGraw Hill Publishing.

References:

1. R. P. Sharma, M. L. Mathur, "A Course in Internal Combustion Engines", D. Rai and Sons.
2. O. P. Gupta, "Elements of Fuels, Furnaces & Refractory's", Khanna Publishers, 2000.
3. John B. Heywood, "Internal Combustion Engines Fundamentals", Tata McGraw Hill International Edition.

Elective X

Design of Piping System

ME 804A	Design of Piping System	PCE	3-0-0	3 Credit
---------	-------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the piping connections, fittings, piping codes, standards and piping representation.
CO2	Describe different piping layouts and understand the design of different piping system
CO3	Analyze and identify the suitable pipe installations
CO4	Calculate different stresses and reactions in given piping layout
CO5	Explain different process auxiliaries in piping systems
CO6	Design of piping in various systems such as refrigeration, steam power plant, underground piping system etc.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	1			1	1	1				1
CO2	1	2	1			1	1	1				1
CO3	1	2	1			1	1	1				1
CO4	2	3	2			1	1	1				1
CO5	1	2	2			1	1	1				1
CO6	2	3	2			1	1	1				1

Course Contents:

Unit 1: Process Piping

Scope of Piping; Code and Standards; Mechanical Design Fundamentals; Mechanical design of piping system; Wall thickness; Piping size selection; Steel and cast iron pipe; Steel and wrought iron pipe; Light wall pipe; Tubing; Pipe connection and fittings; Rail fittings; Piping elements and specialties; Pipe representation; Welded and flanged fittings; Valves.

Unit 2: Piping System Layout and Design

Piping layout; Equipment Layout; Process Piping Layout; Utility Piping Layout; Pipe flow sheets; Tube fastening and attachment; Non-ferrous tube fittings; Ducts and elbows; Pipe and tube design data; Design of steam piping; Design of oil piping; Design of cast iron pipe; Miscellaneous design and applications; Pipe line; Flexibility expansive forces in pipe lines; Expansion stresses and reaction pipe lines.

Unit 3: Pipe Installation

Selection of materials; Piping design; Basic principle; Piping sketches; Steam reducing and regulating valves; Selection of pipe size; Pipe hydraulics and sizing; Flow of water in pipes; Economical pipe selection; Selection of steam pipe size; Determination of steam pipe size; Development of plot plan; Flexibility analysis.

Unit 4: Process Auxiliaries

Piping; Explanation of code; Methods of fabrication; Nominal pipe size; Non-metallic piping and tubing; Pipe sizing by internal diameter; Choosing the final pipe size; Process steam piping; Pressure relief system; Pressure relief devices; Design of pressure relief system; Layout by scale model method.

Unit 5: Mechanical Piping Design

Piping drawings; Piping stress design; Internal or external fluid pressure stresses; Design of overhead piping; Design of underground piping; Erection of piping and support; Insulation; Drainage piping design; Design of natural gas pipe line.

Unit 6: Design of Piping System for the Following Applications

a) Refrigeration piping system, b) Cryogenic piping system, c) Transmission piping system, d) Steam power plant piping system, e) Underground steam-piping system, f) Underground petroleum piping, g) Submerged piping for petroleum products, h) Piping system sprinklers, i) Non-metallic piping; Selection and joining techniques; Cross Country Pipe Technology.

Texts/References:

1. J. M. Coulson, R. K. Sinnott, J. F. Richardson, "Chemical Engineering", Vol. VI, Maxwell McMillan International Edition.
2. Sabin Crocker, "Piping Handbook", Tata McGraw Hill Publication, 5th edition.

Elective X

Product Life Cycle Management

ME 804B	Product Life Cycle Management	PCE	3-0-0	3 Credit
---------	-------------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand the need and advantages of PLM
CO2	Describe the various PLM strategies
CO3	Describe the various steps in design and development of product
CO4	Understand the technology forecasting
CO5	Describe the importance of innovation in product design and development
CO6	Apply PLM to at least one product

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Introduction and Strategies to PLM

Need for PLM, opportunities and benefits of PLM, different views of PLM, components of PLM, phases of PLM, PLM feasibility study, PLM visioning, Industrial strategies, strategy elements, its identification, selection and implementation, change management for PLM.

Unit 2: Product Data Management (PDM)

Human resources in product lifecycle, Information, Standards, Vendors of PLM Systems and Components, PDM systems and importance, reason for implementing a PDM system, financial Justification of PDM, barriers to PDM implementation

Unit 3: Product Design

Engineering design, organization and decomposition in product design, product design process, methodical evolution in product design, concurrent engineering, design for 'X' and design central development model. Strategies for recovery at end of life, recycling, human factors in product design. Modeling and simulation in product design.

Unit 4: New Product Development

Structuring new product development, building decision support system, Estimating market opportunities for new product, new product financial control, implementing new product development, market entry decision, launching and tracking new product program, Concept of redesign of product.

Unit 5: Technology Forecasting

Future mapping, invoking rates of technological change, methods of technology forecasting such as relevance trees, morphological methods and mission flow diagram, combining forecast of different technologies, uses in manufacture alternative.

Unit 6: PLM Software and Tools

Product data security. Product structure, workflow, Terminologies in workflow, The Link between Product Data and Product Workflow, PLM applications, PDM applications

Texts/References:

1. Grieves, Michael, "Product Lifecycle Management", Tata McGraw-Hill, 2006, ISBN 007145230330.

Elective X**Advanced IC Engines**

ME 804C	Advanced IC Engines	PCE	3-0-0	3 Credit
---------	---------------------	-----	-------	----------

Pre-Requisites: IC Engines**Course Outcomes:** At the end of the course, students will be able to:

CO1	Define and Distinguish between Spark ignition and Compression ignition system. Describe Air- fuel supply systems in ic engines.
CO2	Identify and Demonstrate normal and abnormal combustion in combustion chambers of IC engines. According to which able to analyse and Design combustion chambers.
CO3	Recognize and discuss engine emissions formation, effects and various methods to reduce emissions and their measuring equipment's.
CO4	Understand combustion and emission characteristics of an alternative energy sources and suggest appropriate applications of alternative fuels such as bio diesels, natural gas, LPG, hydrogen, etc. and their Engine modifications for using these fuels.
CO5	Apply and interpret with the recent trends IC engine techniques such as HCCI, CRDI, GDI, etc. with latest measuring equipments.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2		1		1							
CO2		2	3									
CO3		1				2	2					
CO4		1		2	1		1					
CO5					2	2	1					

Course Contents:

Unit 1: Spark Ignition Engines

Mixture requirements, Fuel injection systems, Monopoint, Multipoint & Direct injection, Stages of combustion: Normal and Abnormal combustion, Knock: Factors affecting knock, Combustion chambers.

Unit 2: Compression Ignition Engines

Diesel Fuel Injection Systems, Stages of combustion, Knocking, Factors affecting knock, Direct and Indirect injection systems, Combustion chambers, Fuel Spray behaviour, Spray structure and spray penetration, Air motion, Introduction to Turbo charging.

Unit 3: Pollutant Formation and Control

Pollutant, Sources, Formation of Carbon Monoxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter, Methods of controlling Emissions, Catalytic converters, Selective Catalytic Reduction and Particulate Traps, Methods of measurement, Emission norms and Driving cycles.

Unit 4: Alternative Fuels

Alcohol, Hydrogen, Compressed Natural Gas, Liquefied Petroleum Gas and Bio Diesel: Properties, Suitability, Merits and Demerits, Engine Modifications.

Unit 5: Recent Trends/Developments

Air assisted Combustion, Homogeneous charge compression ignition engines, Variable Geometry turbochargers, Common Rail Direct Injection Systems, Hybrid Electric Vehicles – NOx Adsorbers, Onboard Diagnostics.

Unit 6: Multi-fuel Engines

Multi-fuel engines, HCCI, GDI, and Exhaust after processing devices.

Texts:

1. V. Ganesan, "Internal Combustion Engines", TMH, 2nd edition, 2002.
2. R. B. Mathur, R. P. Sharma, "Internal Combustion Engines", Dhanpat Rai & Sons 2007.
3. E. F. Obert, "Internal Combustion Engines".

References:

1. Duffy Smith, "Auto Fuel Systems", The Good Heart Willcox Company, Inc., 1987.

Elective X

Machine Tool Design

ME 804D	Machine Tool Design	PCE	3-0-0	3 Credits
---------	---------------------	-----	-------	-----------

Pre-Requisites: Machine design and Manufacturing processes-II

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand basic motion involved in a machine tool.
CO2	Design machine tool structures for conventional and CNC machines.
CO3	Design and analyze system for specified speeds and feeds.
CO4	Understand control strategies for machine tool operations.
CO5	Design of rotary and linear drive for machine tools.
CO6	Analyze machine tool structure for design accuracy.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	2	1	1	1				1	1	1
CO2	3	1	3	1	2	1	1		1	1	1	1
CO3	2	1	2	1	1	1			1	1	1	1
CO4	2	1	1	1	1	1	1			1	1	1
CO5	3	1	3	1	1	1	1		1	1	1	1
CO6	2	1	2	1	1	1	1		1	1	1	1

Course Contents:

Unit 1: Introduction

Kinematics of different types of machine tools, selection of cutting conditions and tools, calculations of cutting force on single point and multipoint tools, hole machining, calculation of power, accuracy requirements and standards.

Unit 2: Design of Rotary Drives

Design of spindle drives, AC motors with stepped drive, DC and AC variable speed drive motor characteristics and selection, principle of speed controllers, timing belts and other types of transmission belting, closed loop operation of mail drives, rotary indexing drives.

Unit 3: Design of Feed Drives

Feed drive using feed boxes, axes feed drive of CNC drives, DC and AC servomotors, characteristics controllers and their selection, Ball screws and friction guide ways, linear motion systems, design calculation of drives, closed loop operations of feed drive, linear indexing drives.

Unit 4: Control Elements

Single and multi-axis CNC controllers, hydraulic control, Pneumatic control limit switches, proximity switches, sequencing control using hardwired and PLC systems.

Design of machine tool structures: Static and dynamic stiffness, dynamic analysis of cutting process, stability, forced vibration, ergonomics and aesthetics in machine tool design.

Unit 5: Design of Spindle and Spindle Supports

Function of spindles, design requirements, standard spindle noses, design calculation of spindles, bearing selection and mounting.

Finite elements analysis of machine tool structures: Examples of static, dynamic and thermal analysis and optimization of typical machine tool structure like column and using a finite element analysis package.

Unit 6: Design of Special Purpose Machines

Modular design concepts, standard modules, example of design of typical SPM with CNC, transfer machines.

Texts:

1. N. K. Mehta, "Machine Tool Design", Tata McGraw Hill Book Co., 1991.
2. P.C. Sharma, "A Textbook of Machine Tools and Tool Design", S. Chand & Co. Ltd., 1 January 2005.

Elective X

Numerical Heat Transfer

ME 804E	Numerical Heat Transfer	PCE	3-0-0	3 Credit
---------	-------------------------	-----	-------	----------

Pre-Requisites: Heat Transfer

Course Outcomes: At the end of the course, students will be able to:

CO1	Learn the concept of Numerical Heat Transfer and its application
CO2	Explain boundary conditions and partial differential equations and formulation
CO3	Analysis the conduction problems using Numerical technique
CO4	Learn the converge methodology and techniques
CO5	Write programme based 1-D and 2-D conduction problem using NHT

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3		1			1	2	1				
CO2	3	1										
CO3	3	3	1					1				
CO4	3	3	1		2			1				
CO5				3	3	1	1	2				2

Course Contents:

Unit 1: Introduction

Basic approach in solving a problem by Numerical Methods, Finite difference method, Method of discretization, control volume approach, Numerical error, Grid independence test.

Unit 2: Partial Differential Equations

Classification of PDEs, Elliptic, Parabolic and Hyperbolic Equations, Initial and Boundary conditions, Initial and boundary value problems.

Unit 3: Numerical Methods for Conduction Heat Transfer (Part 1)

Application of heat conduction, steady and unsteady heat conduction, Dimensionality in conduction, Basic approach in Numerical Heat conduction, one dimensional steady state problem.

Unit 4: Numerical Methods for Conduction Heat Transfer (Part 2)

Two dimensional problems, Transient one dimensional problem, Euler, crank – Nicholson and pure implicit method, stability.

Unit 5: Numerical Methods for Incompressible Fluid Flow

Introduction, Governing equations, Navier Stokes Equations, Stream function velocity method, general algorithm inviscid flow.

Unit 6: Numerical Methods for Convection Heat Transfer

Introduction, Convection diffusion, Thermal boundary layer flow, transient free convection.

Texts:

1. P. S. Ghoshdastidar, “Computer Simulation of Flow and heat transfer”, Tata McGraw Hill Publications, New Delhi.
2. Suhas V. Patankar, “Numerical Heat Transfer and Fluid Flow”, Tata McGraw Hill Book Company.
3. Varsteeg, Malalasekera, “An introduction to Computational Fluid Dynamics The finite volume method”, Pearson Prentice hall.

References:

1. M. Necati Ozisik, “Finite Difference Methods in Heat transfer”, CRC Press.
2. D. A. Anderson, J. C. Tannehill, R. H. Pletcher, “Computational Fluid Dynamics and Heat transfer”, Hemisphere Publishing.

Elective XI**Tool Design**

ME 805A	Tool Design	PCE	3-0-0	3 Credits
---------	-------------	-----	-------	-----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Understand ASA and ORS systems of tool geometry.
CO2	Understand the geometry of single point and multi point cutting tool
CO3	Understand principles of locating and clamping systems, and Design jig and fixture for conventional and NC machining
CO4	Select and design progressive, compound or combination dies for press working operations
CO5	Select and design drawing, and bending dies.
CO6	Understand forging operations with single and multi-impession dies

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		1			1							1
CO2		1										1
CO3	2	2	3		1							
CO4	1	2	1	1	3		1					2
CO5		2	1		3							2
CO6	1	2	1		1				1			1

Course Contents:**Unit 1: Design of Single Point Cutting Tools**

Introduction, designation of cutting tools, ORS and ASA system, Importance of tool angles, design of chip breakers, machining forces and merchant's circle diagram. Taylor's tool life equation.

Unit 2: Design of Multipoint Cutting Tools

Drill: Nomenclature, design of drill, moment, thrust force and power required. Milling Cutters: Nomenclature, design of milling cutter, power required for milling. Broaches: Nomenclature, design of broach, broaching power, length of toothed portion.

Unit 3: Design of Jigs and Fixtures

Twelve degree of freedom, 3-2-1, 4-2-1 method of location, Redundancy, fool proofing, locating & clamping: locating devices, clamping devices, Quick acting devices, drill bushes, Drilling jigs: need, design principles, types of drilling jigs. Milling fixtures: essential features of a milling fixtures, types, Indexing of Jigs and Fixtures.

Unit 4: Press Tool Design

Press working equipment, press selection, types of dies, clearance, angular clearance, stripper plate, cutting forces, method of reducing cutting forces, die block design, punch, punch design, methods of holding punch, centre of pressure, scrap strip layout. Blanking die design, piercing die design, design of progressive dies.

Unit 5: Bending and Drawing Dies

Bending Dies: v-bending, bending forces, bend allowance, spring back and its prevention, design principles.

Drawing Dies: introduction, difference between bending, and drawing, metal flow during drawing, design consideration: radius of draw die, punch radius, draw clearance, drawing speed, calculation of blank size, number of draws, drawing pressure, blank hold pressure.

Unit 6: Forging Die Design and Mould Design

Forging dies, single impression dies, multiple impression dies,

Forging design factors: draft, fillet and corner radius, parting line, shrinkage and die wear, mismatch, finish allowances, webs and ribs.

Die design for drop forging and press forging: preliminary forging operation, fullering, edging, bending, flatterring, blocking, finishing, cutoff, die block dimensions.

Determination of stock size in closed and open die forging, Mould design: injection mould, mould base, design of simple two plate injection moulds, mould materials.

Texts:

1. P. C. Sharma, "A Text Book of Production Engineering", S. Chand & company ltd., New Delhi, 2001.
2. P. H. Joshi, "Jigs & Fixtures", Tata McGraw Hill Publishing Co. New Delhi, 2001.
3. M. H. A. Kempster, "Introduction of Jigs and Fixtures design", The English Language Book Society and Hodder and Stoughton, London, 3rd edition, 1982.

References:

1. Geoffery Boothroyd, Winston Knight, "Fundamentals of Machining and Machine Tools", Taylors and Francis, 3rd edition, 2006.
2. E. G. Hoffman, "Jigs and Fixtures", 5th Cengage Learning, 2004.

Elective XI

Advanced Refrigeration

ME 805B	Advanced Refrigeration	PCE	3-0-0	3 Credit
---------	------------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Analyse the compound vapour compression system
CO2	Design the refrigeration condenser and evaporator
CO3	Understand the global impact of refrigerants
CO4	Analyse the vapour absorption system
CO5	Learn the refrigeration piping design
CO6	Understand the refrigeration controls

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1		1			1	1	1				
CO2	2	3	2		2							
CO3			2			3	3	2				
CO4	3	3	1		1			1				
CO5	1	1		2	1							
CO6			1									

Course Contents:

Unit 1: Vapour Compression Refrigeration

Vapour compression refrigeration, actual cycle, second law efficiency, multistage compression with inter-cooling, Multi-evaporator systems, Cascade systems.

Unit 2: Characteristics of Compressors

Performance characteristics and capacity control of reciprocating and centrifugal compressors, screw compressor and scroll compressor.

Unit 3: Evaporator Design

Design, selection of evaporators, condensers, system balance, control systems, motor selection.

Unit 4: Refrigerants

History, Nomenclature, Refrigerants, alternative refrigerants, CFC/HCFC phase-out regulations, action with lubricating oil, retrofitting, refrigerant blends, effects on refrigeration components. Thermoelectric and nonconventional refrigeration systems, adiabatic demagnetization

Unit 5: Vapor Absorption Refrigeration

Vapor absorption refrigeration, Li-Br and aqua ammonia system, calculation of mass flow rate and system performance, energy balance, controls, analysis of rectifier and analyzer, single effect and double effect systems, vapour transformer.

Unit 6: Refrigeration Controls

Refrigeration controls, Expansion devices: design and selection, refrigeration system piping design

Texts:

1. W. F. Stoecker, J. P. Jones, "Principles of Refrigeration and air-conditioning", Tata McGraw Hill Publications.
2. C. P. Arora, "Refrigeration and Air-conditioning", Tata McGraw Hill Publications.
3. Manohar Prasad, "Refrigeration and Air conditioning".
4. R. C. Arora, Refrigeration and Air-conditioning, Prentice Hall.

Elective XI

Cryogenic Systems

ME 805C	Cryogenic Systems	PCE	3-0-0	3 Credit
---------	-------------------	-----	-------	----------

Pre-Requisites: Refrigeration

Course Outcomes: At the end of the course, students will be able to:

CO1	Learn the concept of low temperature and its application
CO2	Explain liquefaction systems and cryogenic heat exchangers
CO3	Do the analysis the cryo-coolers
CO4	Design and analysis separation and distillation column
CO4	Define and understand the cryogenic insulation and storage vessel

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1					3	2	1	1			
CO2	3	3							1			
CO3	3	3	1		1	1		1	1			
CO4	3	3	3		2			1	1			
CO5	1					2	1		1			

Course Contents:

Unit 1: Introduction

Introduction, Industrial applications, recent development, properties of cryogenic fluids- oxygen, nitrogen, air, hydrogen and helium. Behaviour of structural materials at Cryogenic temperature: Mechanical properties, thermal properties, thermoelectric properties.

Unit 2: Liquefaction of Cryogenic Gases

Ideal cycle, system performance parameters, Joule Thomson effect, adiabatic expansion, liquefaction systems; Simple Linde-Hampson system, Precooled Linde-Hampson system, Cascade system, Claude system.

Unit 3: Liquefaction Systems for Neon, Hydrogen and Helium

Precooled Linde-Hampson system for neon and hydrogen, Claude system for hydrogen, Helium refrigerated hydrogen liquefaction system

Unit 4: Cryogenic Refrigeration Systems

Ideal refrigeration systems, Philips refrigerator, Vuilleumier refrigerator, Solvay refrigerator, Gifford-McMohan refrigerator, Pulse tube refrigerator, Magnetic cooling

Unit 5: Separation of Gases

Principles of rectification, Rectifiers column, separation column design; plate calculation, Types of rectification columns

Unit 6: Insulation

Vacuum insulation, fibrous materials, Solid foams, Gas filled power, comparison, critical thickness. Vacuum Technology: Importance, Pump down time, Flow regimes, Components of vacuum systems, Vacuum pumps.

Texts:

1. Barron F. Randall, "Cryogenic Systems", Oxford University Press, New York
2. Guy, K White, "Experimental Techniques in low Temperature Physics", Clarendon Press, Oxford, 1987.
3. "Advanced Cryogenic Engineering", Proceedings of Cryogenic Engineering Conference, Vol 1-145, Plenum press, New York, 1968.

References:

Elective XI**Material Handling Systems**

ME 805D	Material Handling Systems	PCE	3-0-0	3 Credits
---------	---------------------------	-----	-------	-----------

Pre-Requisites: None**Course Outcomes:** At the end of the course, students will be able to:

CO1	Explain principles, objectives of material handling systems
CO2	Understand the design requirement of material handling systems like storing, hoisting, and conveying equipment's
CO3	Implement CIMS (Computer Integrated Manufacturing Systems) in material handling systems
CO4	Implement safety regulations in material handling systems

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1		2	1		2							2
CO2	1	3	1		3	2		1	1			2
CO3	1	1		1	2			1	1	1	2	2
CO4					2	1		1		1	1	2

Course Contents:**Unit 1: Introduction**

Principles of material handling, Objective and benefits of better material handling, material handling and plant layout, concepts of unit load containerization and palletisation.

Unit 2: Material handling Equipment's and Systems for Various Materials

Storing equipment's like pallets, bins, racks, decking, order picking, positioning equipment's. Hoisting equipment's like jacks, pulleys, hand trolleys, hoists, power hoist, various types of cranes and elevators. Conveying equipment's like belt, chain, roller, wheel, trolley, tray conveyors, gravity and vibratory type conveyors, screw conveyors. Mobile equipment's like hand trucks, fork lift trucks, powered industrial trucks and tractors, powered stackers, reach trucks, order pickers.

Unit 3: Material Handling in CIMS

Need, Comparison with conventional systems, Equipment like industrial robots and automatically guided vehicles etc.

Unit 4: Material Flow

Operation sequence, material flow pattern, stages of material flow at receiving, in process and at shipping, flow planning criteria & design of flow pattern.

Unit 5: Selection of Material Handling Equipment

Factors affecting selection of material handling equipment, Material handling equation, Choices of Material Handling Equipment, General Procedure for Selection, Basic Analytical techniques, Selection of suitable types of material handling systems, Functions and Parameters, affecting service, packing and storage material, Selection of Material Handling Equipment in Green Sand Moulding Foundry, Sugar Manufacturing Industry.

Unit 6: Safety and Training

Need, Environmental and human factors in material handling, Safety Regulations

Texts:

1. Immer J. R., "Material Handling", Tata McGraw Hill Publication.
2. James Apple, "Material Handling System Design", John Wiley
3. Theodore H., Allegre Sr., "Material Handling Principles & Practice", CBS Publishers & Distributors

References:

1. James Apple, "Plant Layout and Material Handling", John Wiley
2. O. P. Khanna, "Work Study", Dhanpat Rai and Sons
3. Work Study – I. L. O.

Elective XI

Advanced Methods in Engineering Design

ME 805E	Advanced Methods in Engineering Design	PCE	3-0-0	3 Credits
---------	--	-----	-------	-----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	Understand about engineering optimization and identify the optimization problems
CO2	Explain the theory of plates: its equations, boundary conditions and analyze the rectangular plate
CO3	Discuss the different modes of fractures, crack propagation and R curves
CO4	Define and identify fatigue failures
CO5	Describe design of composites and Hooks law for different materials
CO6	Explain design and reliability

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1												
CO2												
CO3												
CO4												
CO5												
CO6												

Course Contents:

Unit 1: Engineering Optimisation

Engineering applications of optimisation, statement of optimisation problem, classification of optimisation problem, Classical optimisation-Introduction, single variable optimisation, multivariable optimisation with no constraint, equality constraint, inequality constraint, Linear programming problem, unconstrained optimisation problem

Unit 2: Theory of Plates

The elasticity approach, assumptions of classical plate theory, moment curvature relations, equilibrium equations, governing bi-harmonic equation, boundary conditions, solution of problem, strain energy of plate, analysis of rectangular plate using Navier's and Levy's methods.

Unit 3: Fracture Mechanics

Introduction to linear elastic fracture mechanics, modes of fracture, stress intensity factor, crack initiation and crack opening phenomenon, stress distribution around the crack tip under various loading conditions, fracture toughness G_{Ic} , R-curves, critical strain energy release rate.

Unit 4: Fatigue Failure

Stress cycles, S-N curve, Goodman diagram, description of fatigue fractured parts, fatigue curve, fatigue crack propagation, low cycle fatigue, high cycle fatigue, mechanism of fatigue failure, effects of various variables on fatigue, fatigue under combined stresses.

Creep Failure: Creep curve, structural changes and mechanisms during creep, activation energy for steady-state creep, and fracture at elevated temperature.

Unit 5: Design of Composites

Basic concepts and terminology, classification, advantages and limitations, Hooke's law for anisotropic, monoclinic, orthotropic, specially orthotropic, transversely isotropic and isotropic materials, Hooke's law for 2-D unidirectional lamina

Unit 6: Design for Reliability

Reliability definition, failure, failure density, failure rate, hazard rate, mean time to failure, MTBF, maintainability, availability, pdf, cdf, safety and reliability, quality assurance and reliability, bath tub curve, stress strength interaction

Project Stage-II

ME 808	Project Stage-II	PCC	0-0-8	4 Credit
--------	------------------	-----	-------	----------

Pre-Requisites: None

Course Outcomes: At the end of the course, students will be able to:

CO1	State the aim and objectives for this stage of the project
CO2	Construct and conduct the tests on the system/product
CO3	Analyze the results of the tests.
CO4	Discuss the findings, draw conclusions, and modify the system/product, if necessary.

Mapping of course outcomes with program outcomes

Course Outcomes	Program Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1										
CO2			2	2	2	1	1					
CO3		1			1	2		1		1		
CO4			2	1	2	1	2			3		1

Course Contents:

Since Project Stage II is in continuation to Project Stage I, the students are expected to complete the total project by the end of semester VIII. After completion of project work, they are expected to submit the consolidated report including the work done in stage I and stage II. The report shall be comprehensive and presented typed on A₄ size sheets and bound. The number of copies to be submitted is number of students plus two. The assessment would be carried out by the panel of examiners for both, term work and oral examinations.
