

Product Catalogue

General Product Information

ROCKWOOL stone wool products are made of basalt, a volcanic stone.

ROCKWOOL stone wool products are non-combustible with a melting point of approximately 1000°C. They are particularly suitable for thermal insulation, fire protection and sound re duction/absorption.

Industrial Insulation

ROCKWOOL stone wool is inorganic and contains no nutri tious substance. Therefore it will not be attacked by microor ganisms. Stone wool will not rot and does not attract vermin.

No CFCs, HFCs, HCFCs or asbestos are used in the manufac ture of ROCKWOOL stone wool products.

Note: Above sizes are based upon the production capabilities of the Melaka manufacturing plant. For other manufacturing plant's production capabilites on sizes, please refer to your local sales repesentative

Applications

ProRox WM 950^{SA} is a lightly bonded stone wool mat stitched on galvanised wire mesh using galvanised wire. The wired mat is suitable for thermal and acoustic insulation of industrial applications reaching high temperatures, such as industrial pipe work, boiler walls, furnaces and smoke ducts.

Compliance

Product properties

ProRox WM 950^{SA} Wired Mats comply with the requirements as set by internationally recognized standards like CINI 2.2.02 and ASTM C592 Type I, II and III.

Advantages

- Suitable for high temperature application
- Flexible application
- Available in a wide range of thicknesses
- Suitable for use over stainless steel

	Performance							Standard
Thormal Conductivity	Mean Temp (°C)	50	100	150	200	250	300	ACTM COOF
Thermal Conductivity	λ (W/mK)	0.038	0.046	0.053	0.062	0.071	0.080	ASTM C335
Nominal Density	80 kg/m ³					EN 1602		
Maximum Service Temperature	mum Service Temperature 650°C				ASTM C411/C447			
Linear Shrinkage	Less than 2% (at max service temperature)					ASTM C356		
EuroClass A1 Reaction to Fire Surface burning characteristics; Flame spread = passed, Smoke development = passed				EN 13501-1 ASTM E84				
pH	рН 7-12.5				ASTM C871			
Less than 10 ppm Chloride Content Conforms to the stainless steel corrosion specification as per ASTM C795				ASTM C871 ASTM C692/C871				
Moisture Absorption	Less than 1% weight			ASTM C1104/C1104M				
Water Absorption	Less than 1 kg/m ²				EN 1609

Applications

ProRox WM 960^{SA} is a lightly bonded heavy stone wool mat stitched on galvanised wired mesh with galvanised wire. The wired mat is especially suitable for industrial installations such as high-pressure steam pipes, reactors, furnaces, etc. where high demands are made on the temperature resistance of the insulation.

Compliance

ProRox WM 960^{SA} Wired Mats comply with the requirements as set by internationally recognized standards like CINI 2.2.02 and ASTM C592 Type I, II and III.

Advantages

- Suitable for heavy duty applications which are exposed to high temperatures and high mechanical loads
- Resistant to high temperatures
- Flexible application
- Available in a wide range of thicknesses
- Suitable for use over stainless steel

Note

All steel components exposed to a corrosive environment should be cleaned, degreased and coated with a protective finish.

Installation guidelines

Assembly

Cut the wired mat to length, so that the mat fits the pipe with slight pre-stressing. The closing joints must be staggered at an angle of at least 30 degrees to each other. The closing joints of the mats (lengthwise and circular) must be wired together using steel wire (min. 0.5 mm) or secured with mat hooks. Stainless steel pipes and pipes with a temperature of > 400°C should preferably be insulated with ProRox WM 950^{SA}, in which both the mesh and the stitching wire is stainless steel. If the mats are assembled in multiple layers, both the lengthwise and circular joints must be staggered ('masonry bond').

Support construction

Given the limited pressure resistance of wired mats, in most cases a support is required for the board cladding. As a guideline, assume that a support is required every 3 to 4 metres.

Finishing

The insulation should be finished with a metal (e.g. aluminium) cladding. Where necessary, expansion joints are provided to cater for expansion of the pipes. Both the lengthwise and circular joints are fastened with sheet-metal screws: hard aluminium or stainless steel 1/2", 8/metre. Close the expansion joints with a steel tensioning wire. Connections to mountings, head and end caps etc. should be made watertight using a suitable sealant.
