# Python Basics

## Output

```
print("Hello")
```

## Line breaks

```
>>> print("What is green and fluffy?\nA seasick kitten")
What is green and fluffy?
A seasick kitten
```

## Combining outputs

```
print("11 divided by 4 =", 11//4, " remainder:", 11%4)
```

## Variables

```
answer = 3/5
print(answer)
```

## Inputting strings (text)

```
colour = input("What is your favourite colour? ")
```

## Inputting numbers

```
num1 = int(input("Enter a number: "))
```

## Changing the Case of Text

### Change to upper case

```
upper = name.upper()
```

### Change to lower case

```
lower = name.lower()
```

### Change to capitalise the first letter

```
capital = name.capitalize()
```

### Change to capitalise each word

```
title = name.title()
```

# Loops (Iteration)

## While loop

```
number = 1
while number <5:
    print(number)
    number = number + 1
```

## For loop

```
for counter in range(5):
    print("Hello World")
```

## For loop with alternative range counter

```
for counter in range(3,20,2):
    print(counter)
```

# Comparison Operators

Operator	Description
<	Less than
>	Greater than
<=	Less than or equal to
>=	Greater than or equal to
==	Equal to
!=	Not equal to

# If Statements

## Basic if statement

```
num = int(input("Please enter a number: "))

if num > 10:
    print("Too High")
else:
    print ("Thank you")
```

## Complex if statement

```
if num > 10:
    print("Too High")
elif num < 0:
    print ("Too Low")
else:
    print("Thank you")
```

# Maths in Python

## Addition

$3 + 5$

## Subtraction

$2 - 1$

## Multiplication

$10 * 4$

## Division

$30 / 3$

## Whole number division

```
>>> 16//3  
5
```

## Finding the remainder

```
>>> 16%3  
1
```

## Using Pi ( $\pi$ )

```
import math  
  
circle = math.pi  
  
print(circle)
```

# Random Library

## Importing the random library

```
import random
```

## Generate a random whole number

```
number = random.randint(1, 100)
```

## Generate a random decimal number

```
decimal = random.uniform(1, 10)
```

## Generate a random even number

```
even = random.randrange(0, 101, 2)
```

## Generate a random choice from string list

```
choice = random.choice(["Chicken", "Sheep", "Cow", "Goat"])
```

## Shuffle a list

```
random.shuffle(list)
```

# Time Library

## Import the time library

```
import time
```

## Show current time (unformatted)

```
starttime = time.time()
```

## Show current time (formatted)

```
now = time.strftime("%H:%M")
```

## Show current date (formatted)

```
date = time.strftime("%d/%m/%y")
```

## Creating a pause in the running of the program

```
time.sleep(1)
```

## Calculating with time

```
diff = endtime-startime
```

## Calendar Library

### Import the calendar library

```
import calendar
```

### Print the calendar for the whole year

```
calendar.prcal(2014)
```

### Print the calendar for a single month

```
calendar.prmonth(2015, 6)
```

# Functions

## Creating a basic function

```
def count(number):
    n = 1
    while n <= number:
        print(n)
        n = n + 1
```

## Running a function with an argument

```
>>> count(10)
```

## Running a function without an argument

```
>>> hello()
```

## Linking functions together

```
def get_firstname():
    firstname = input("Please enter your first name: ")
    return firstname

def get_surname():
    surname = input("Please enter your surname: ")
    return surname

if __name__ == "__main__":
    firstname = get_firstname()
    surname = get_surname()
    print("Hello", firstname, surname)
```

# Lists

## Creating a list

```
fruit = ["Apple", "Banana", "Strawberry"]
```

## Display the whole list

```
print(fruit)
```

## Display a single item from the list

```
print(fruit[2])
```

## Adding to the end of the list

```
fruit.append(newFruit)
```

## Remove an item from a list

```
fruit.remove("Banana")
```

## Inserting an item into a list

```
fruit.insert(1, AnotherFruit)
```

# Reading and Writing to a Text File

## Appending data to the end of a text file

```
fo = open("Python Test.txt", "a+")
fo.write("Python is a great language.\n")
fo.close()
```

## Writing several lines to a text file

```
fo = open("Python Test.txt", "a+")

again = "Y"

while again == "Y":
    name=input("Please type in a name: ")
    fo.write(name+"\n")
    again=input("Do you want to enter another name (Y/N)? ")
    again=again.upper()

fo.close()
```

## Displaying data (on screen) from a text file

```
fo = open("Python Test.txt", "r")

script= fo.read()

print(script)

fo.close()
```

# Reading and Writing Data to a .csv File

## Importing the .csv library

```
import csv
```

## Reading from a .csv file

```
myfile = open("students.csv", "rb")
reader = csv.reader(myfile)
for row in myfile:
    print(row)

myfile.close()
```

## Writing to a .csv file

```
myfile = open("students.csv", "a+")

student_num = input("Enter the student number: ")
name = input("Enter student's name: ")
tutor_group = input("Enter the tutor group: ")
gender = input("Enter M or F: ")

new_record = student_num + ", " + name + ", " + tutor_group + ", " + gender

myfile.write(str(new_record))
myfile.write("\n")

myfile.close()
```

## Searching for data in a .csv file

```
myfile = open("students.csv", "rb")

search_data = input("Please enter the data you are looking for: ")

reader=csv.reader(myfile)

for row in myfile:
    if search_data in str(row):
        print(row)
```
