

QUARTERLY RESIDENTIAL VACANCIES AND HOMEOWNERSHIP, FIRST QUARTER 2022

Release Number: CB22-58

April 27, 2022 — The U.S. Census Bureau announced the following residential vacancies and homeownership statistics for the first quarter 2022:

National vacancy rates in the first quarter 2022 were 5.8 percent for rental housing and 0.8 percent for homeowner housing. The rental vacancy rate was 1.0 percentage points lower than the rate in the first quarter 2021 (6.8 percent) and not statistically different from the rate in the fourth quarter 2021 (5.6 percent).

The homeowner vacancy rate of 0.8 percent was 0.1 percentage points lower than the rate in the first quarter 2021 (0.9 percent) and not statistically different from the rate in the fourth quarter 2021 (0.9 percent).

The homeownership rate of 65.4 percent was not statistically different from the rate in the first quarter 2021 (65.6 percent) and not statistically different from the rate in the fourth quarter 2021 (65.5 percent).

Table 1. Rental and Homeowner Vacancy Rates for the United States: 2018 to 2022

Year	Rental Vacancy Rate (percent)				Homeowner Vacancy Rate (percent)			
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
2022.....	5.8				0.8			
2021.....	6.8	6.2	5.8	5.6	0.9	0.9	0.9	0.9
2020.....	6.6	5.7	6.4	6.5	1.1	0.9	0.9	1.0
2019.....	7.0	6.8	6.8	6.4	1.4	1.3	1.4	1.4
2018.....	7.0	6.8	7.1	6.6	1.5	1.5	1.6	1.5

All comparative statements in this report have undergone statistical testing, and unless otherwise noted, all comparisons are statistically significant at the 90 percent significance level. For an explanation of how the rates are calculated, please see the Explanatory Notes at the end of the press release.

Explanations of confidence intervals and sampling variability can be found on the CPS/HVS website at: www.census.gov/housing/hvs

In the first quarter 2022, the median asking rent for vacant for rent units was \$1,255.

In the first quarter 2022, the median asking sales price for vacant for sale units was \$225,500.

1. Median asking rent and median asking sales price data for vacant units can be found in Historical Table 11A/B at <www.census.gov/housing/hvs/data/histtabs>
2. The data in figures 2 and 3 are not adjusted for price changes.

The rental vacancy rate was highest outside MSAs (6.7 percent), but there was no statistical difference between the rates in principal cities (5.8 percent) and the suburbs (5.6 percent). The rates outside MSAs and in principal cities were lower than the first quarter 2021 rates, but the rate in the suburbs was not statistically different from the first quarter 2021 rate.

The homeowner vacancy rate in the suburbs (0.6 percent) was lower than the rates in principal cities (1.0 percent) and outside MSAs (1.0 percent), but the rates in principal cities and outside MSAs were virtually the same as each other. The rate in the suburbs was lower than the rate in first quarter 2021, but the rates in principal cities and outside MSAs were virtually the same as the first quarter 2021 rates.

The rental vacancy rate in the South (7.1 percent) was higher than the rate in the Midwest (5.9 percent), and both were higher than the rates in the Northeast (4.9 percent) and West (4.5 percent). However, the rate in the Northeast was not statistically different from the West. The rates in the Northeast and Midwest were lower than their first quarter 2021 rates. The rates in the South and West were not statistically different from the first quarter 2021 rates.

The homeowner vacancy rate was lowest in the West (0.5 percent). The rates in the Northeast (0.8 percent) and South (0.8 percent) were virtually the same, and neither was statistically different from the rate in the Midwest. The rates in the South and West were lower than the rates in the first quarter 2021, while rates in the Northeast and Midwest were not statistically different from the first quarter 2021 rates.

Table 2. Rental and Homeowner Vacancy Rates by Area and Region: First Quarter 2021 and 2022

Area/Region	Rental Vacancy Rates (percent)				Homeowner Vacancy Rates (percent)			
	First Quarter 2021	First Quarter 2022	Margins of Error ^a		First Quarter 2021	First Quarter 2022	Margins of Error ^a	
			of 2022 rate	of difference			of 2022 rate	of difference
United States.....	6.8	5.8	0.2	0.3	0.9	0.8	0.1	0.1
Inside Metropolitan Statistical Areas.....	6.7	5.7	0.3	0.3	0.9	0.7	0.1	0.1
In principal cities.....	7.3	5.8	0.4	0.5	1.0	1.0	0.1	0.2
Not in principal cities (suburbs)	5.8	5.6	0.4	0.5	0.8	0.6	0.1	0.1
Outside Metropolitan Statistical Areas	7.7	6.7	0.8	1.0	1.0	1.0	0.2	0.2
Northeast.....	6.8	4.9	0.5	0.7	0.6	0.8	0.2	0.2
Midwest.....	7.9	5.9	0.7	1.0	0.8	0.9	0.2	0.2
South.....	7.5	7.1	0.4	0.5	1.1	0.8	0.1	0.1
West.....	4.9	4.5	0.4	0.6	0.8	0.5	0.1	0.2

^aA margin of error is a measure of an estimate’s reliability. The larger the margin of error in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval.

Approximately 89.4 percent of the housing units in the United States in the first quarter 2022 were occupied and 10.6 percent were vacant. Owner-occupied housing units made up 58.5 percent of total housing units, while renter-occupied units made up 30.9 percent of the inventory in the first quarter 2022. Vacant year-round units comprised 7.9 percent of total housing units, while 2.7 percent were vacant for seasonal use. Approximately 1.9 percent of the total units were vacant for rent, 0.5 percent were vacant for sale only and 0.7 percent were rented or sold but not yet occupied. Vacant units that were held off market comprised 4.9 percent of the total housing stock – 1.5 percent were for occasional use, 0.8 percent were temporarily occupied by persons with usual residence elsewhere (URE) and 2.6 percent were vacant for a variety of other reasons.

Table 3. Estimates of the Total Housing Inventory for the United States: First Quarter 2021 and 2022^a
(Estimates are in thousands, estimates may not add to total due to rounding)

Type	First Quarter 2021 (r)	First Quarter 2022	Difference Between Estimates	Margins of Error ^b		Percent of total (2022)
				of 2022 estimate	of difference	
All housing units.....	141,489	142,711	1,222	(X)	(X)	100.0
Occupied.....	125,901	127,574	1,673	235	313	89.4
Owner.....	82,558	83,422	864	487	670	58.5
Renter.....	43,343	44,152	809	576	778	30.9
Vacant.....	15,587	15,137	-450	331	421	10.6

Seasonal.....	3,754	3,835	81	228	247	2.7

^aThe housing inventory estimates are benchmarked to the 2010 Census.

^bA margin of error is a measure of an estimate's reliability. The larger the margin of error in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval.

^cA detailed breakdown of the 'other' vacant category can be found in Historical Table 18 <www.census.gov/housing/hvs/data/histtabs>

(r) Revised using vintage 2020 housing unit controls. See note below.

X Not Applicable. Since the number of housing units is set equal to an independent national measure, there is no sampling error, and hence no confidence interval.

1. Since first quarter 2003, the Current Population Survey/Housing Vacancy Survey estimates have been controlled to an independent set of housing unit estimates produced annually by the Census Bureau's Population Division from Census 2000 and 2010 and updated using building permit data, estimates of housing loss, and other administrative record data. Doing so makes the CPS/HVS estimates of housing units more comparable to other Census Bureau housing surveys controlled to these census-based estimates. The housing unit controls affect the estimate of vacant units in the sense that the estimates of total occupied and vacant units sum to the control total. Vacancy rates and homeownership rates are not affected by this change.

2. Beginning in the second quarter 2021, the housing inventory estimates are based on vintage 2020 housing unit controls that are projected forward through the current quarter 2021. The first quarter 2022 housing inventory estimates, shown above, reflect vintage 2020 housing unit controls, benchmarked to the 2010 Census. The CPS/HVS historical table series, from the first quarter 2010 through the first quarter 2021, has also been revised based on vintage 2020 housing unit controls. These revised estimates and additional information on terms and definitions can be found at: <www.census.gov/housing/hvs/data/histtabs>

3. For the methodology used in developing the housing unit estimates used for controls in the CPS/HVS, please see the Census Bureau's Population Division website: <www.census.gov/programs-surveys/popest.html>

Table 4SA shows the seasonally adjusted homeownership rates for the United States, from 2000 through the first quarter 2022. (Research has shown that seasonality for homeownership rates is present.) When adjusted for seasonal variation, the fourth quarter 2021 homeownership rate was not statistically different from the rate in the first quarter 2021 and virtually the same as the rate in the fourth quarter 2021.

Table 4SA. Homeownership Rates for the United States: 2000 to 2022, Seasonally Adjusted^a

Year	Homeownership Rates (percent), Seasonally Adjusted

The first quarter 2022 homeownership rate was highest in the Midwest (70.0 percent), followed by the South (67.4 percent), Northeast (61.8 percent), and West (60.2 percent). The homeownership rate in the Northeast was lower than the first quarter 2021 rate, while rates in all other regions were not statistically different from the first quarter 2021 rates.

For homeownership rates by race, the first quarter 2022 homeownership rate for non-Hispanic White Alone householders reporting a single race was highest at 74.0 percent. The rate for Asian, Native Hawaiian and Pacific Islander Alone householders was second at 59.4 percent and the rate for Black Alone householders was lowest at 44.7 percent. The homeownership rates for each race category were not significantly different from the first quarter 2021 rates.

Table 7. Homeownership Rates by Race and Ethnicity of Householder: 2018 to 2022

The first quarter 2022 homeownership rate for households with family income greater than or equal to the median family income (79.1 percent) was not statistically different from the first quarter 2021 rate (79.4 percent). The rate for those households with family income less than the median family income (51.6 percent) was not statistically different from the first quarter 2021 rate (51.7 percent).

Table 8. Homeownership Rates by Family Income: 2017 to 2022

Year/Quarter	Homeownership Rates (percent)

The second quarter 2022 data are scheduled for release on August 2, 2022. View the full schedule in the Economic Briefing Room: <<https://census.gov/economic-indicators/>>. More details can be found at <www.census.gov/housing/hvs>.

EXPLANATORY NOTES

The estimates in this release are based on a sample survey and therefore are subject to both sampling and non-sampling error. Sampling error is a result of not surveying the entire population. Non-sampling error occurs because accurate information cannot always be obtained.

The sample estimate and its standard error enable one to construct a margin of error. A margin of error is a measure of an estimate's reliability. The larger a margin of error is in relation to the size of the estimate, the less reliable the estimate. For example, the standard error on the estimated rental vacancy rate of 5.8 percent is 0.139 percentage points. The margin of error, at the 90 percent confidence interval, is calculated as 1.645×0.139 percent, or 0.229 percentage points. Thus, the 90 percent confidence interval is from 5.6 percent to 6.0 percent. If all possible samples were surveyed under essentially the same general conditions and the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the margins of error would include the average result of all possible samples.

In the first quarter 2017, the parameters used to calculate standard errors for rates and estimates were updated. The factors are evaluated, and updated if necessary, after approximately 15 months of data have been collected from a new Current Population Survey/Housing Vacancy Survey (CPS/HVS) sample following a decennial census. The current sample has been fully phased-in since July 2015.

Since the first quarter 2003, the CPS/HVS housing inventory estimates have been controlled to independent housing unit estimates based upon Census 2000 (2000-2009 data) and Census 2010 (2010-present data) and updated with building permit data, estimates of housing loss, and other administrative records data. In the second quarter 2021, the CPS/HVS revised the series of housing inventory estimates back to the first quarter 2010, based on the latest series of independent housing controls, the vintage 2020 time series. Housing inventory estimates from the second quarter 2000 through the fourth quarter 2009 are revised based on the vintage 2010 time series. Housing inventory estimates prior to the second quarter 2000 have not been revised. The CPS/HVS housing inventory data series are based on the independently produced vintage 2020 housing unit estimates that are projected forward through the current quarter. The vintage 2020 estimates are benchmarked to the 2010 Census. The same general procedure will be followed each year in revising housing inventory estimates with the most up-to-date independent housing estimates available.

For an explanation of the methodology used in producing the housing inventory independent estimates, please see: <www.census.gov/programs-surveys/popest.html>

Note: This time series is by the latest "vintage" year. For example, vintage 2020 means that all of the estimates in this time series are identified as belonging to "vintage 2020." The 2010 data are from the 2020 vintage, the 2011 data are from the 2020 vintage, and so on.

The CPS/HVS also began computing first-stage factors (used for weighting purposes) based on year-round and seasonal counts of housing units from Census 2000 for the first quarter 2003. From 1980 to 2002, the CPS/HVS first-stage factors were based on year-round estimates only. The effect on the data is slight and the change should improve the counts of year-round and seasonal units. For more information on the effects of these changes, please see the Source and Accuracy Statement at:

www.census.gov/housing/hvs/files/qtr122/source_22q1.pdf

Beginning in the first quarter 2012, the population controls reflect the results of the 2010 Decennial Census. This change has virtually no effect on vacancy and homeownership rates. Research has shown that the new 2010-based controls increased the rental vacancy rate in April 2010 from 10.43 percent to 10.45 percent - a difference of less than 1/10 of one percent. The homeowner vacancy rate remained the same at 2.63 percent, while the homeownership rate was up from 66.67 percent to 66.74 percent.

The question on race on the CPS was modified beginning in the first quarter 2003 to comply with new standards for federal statistical agencies. Respondents are now allowed to report one or more races. The question on Hispanic origin is asked separately, and is asked before the question on race.

First-stage factors for year-round vacant units have been corrected as of the second quarter 2004. Research has shown that this correction had no significant effect on the vacancy rates or homeownership rates.

The rental vacancy rate is the proportion of the rental inventory that is vacant for rent. In tables 1 and 2, the rates are computed using the following formula.

$$\text{Rental Vacancy Rate (\%)} = \left[\frac{\text{Vacant year - round units for rent}}{\left(\begin{array}{c} \text{Renter} \\ \text{occupied} \\ \text{units} \end{array} \right) + \left(\begin{array}{c} \text{Vacant year - round} \\ \text{units rented but} \\ \text{awaiting occupancy} \end{array} \right) + \left(\begin{array}{c} \text{Vacant year - round} \\ \text{units for rent} \end{array} \right)} \right] * 100$$

The homeowner vacancy rate is the proportion of the homeowner inventory that is vacant for sale. In tables 1 and 2 the rates are computed using the following formula.

$$\text{Homeowner Vacancy Rate (\%)} = \left[\frac{\text{Vacant year - round units for sale only}}{\left(\begin{array}{c} \text{Owner} \\ \text{occupied} \\ \text{units} \end{array} \right) + \left(\begin{array}{c} \text{Vacant year - round} \\ \text{units sold but} \\ \text{awaiting occupancy} \end{array} \right) + \left(\begin{array}{c} \text{Vacant year - round} \\ \text{units for sale only} \end{array} \right)} \right] * 100$$

The homeownership rate is the proportion of households that is owner-occupied. It is computed by dividing the number of households that are occupied by owners by the total number of occupied households (tables 4, 4SA and 5).

$$\text{Homeownership Rate (\%)} = \left[\frac{\text{Owner occupied housing units}}{\text{Total Occupied housing units}} \right] * 100$$

For the homeownership rate for a specific characteristic (tables 6, 7 and 8), use the owner and total number of units for that characteristic. For example, for the West region:

$$\text{Homeownership Rate (West) (\%)} = \left[\frac{\text{Owner occupied housing units (West)}}{\text{Total Occupied housing units (West)}} \right] * 100$$

RESOURCES

API

The Census Bureau's application programming interface, available at <www.census.gov/developers/>, lets developers create custom apps to reach new users and makes key demographic, socio-economic and housing statistics more accessible than ever before.

FRED Mobile App

Receive the latest updates on the nation's key economic indicators by downloading the FRED App <<https://fred.stlouisfed.org/fred-mobile/>> for both Apple and Android devices. FRED, the signature database of the Federal Reserve Bank of St. Louis, now incorporates the Census Bureau's 13 economic indicators.
