- A*CCOUNT of experiments made by Mr. John M^c Nab, at Albany Fort, Hudfon's Bay, relative to the freezing of nitrous and vitriolic acids, p. 166.
- Account of an experiment to determine the effect of salt upon the expansion of water by cold, p. 311.
- Acid, vitriolic*, experiments on, p. 177. Its effect upon the freezing point of water, p. 305. *Nitrous acid*, its effect on the freezing point of water, p. 306. Effect of the *Muriatic acid* in lowering the freezing point of water, p. 307.
- Acidity*, observations and experiments on the principle of, p. 147, 313.
- Aerial Moisture*, devaporation of, p. 49.
- Air*, frigorific, experiments on the mechanical expansion of, p. 43. Air, fusceptible of heat, p. 56. Fixed air contains about half its weight of water, p. 152. On the conversion of a mixture of dephlogisticated and phlogisticated airs into nitrous acid by the electric spark, p. 261. Nitrous air contains water, which contributes to the formation of fixed air, p. 318. If phlogisticated and light inflammable air be presented to each other at the instant of their separation from solid or liquid substances, and before their particles have receded from each other, they readily combine and generate
- V O L . L X X V I I I . N n n

- generate volatile alkali, p. 381. The combination of the phlogificated and inflammable airs, and the formation of volatile alkali, depend chiefly, if not altogether, on the approximation of the parts of inflammable air, when phlogificated air is presented to them, p. 382. Nitrous air mixed with hepatic air will form volatile alkali, p. 384.
- Airs*, on the affinities of the phlogificated and light inflammable, p. 379. See *Air*.
- Albany Fort*, account of experiments made there, p. 166.
- Alkali, mineral*, its effect on the freezing point of water, p. 308. *Volatile Alkali*, its effect on the same, p. 309. On the formation of volatile alkali, p. 379. When iron, water, and sulphur, act upon each other in atmospheric air, volatile alkali is formed, p. 384. Volatile alkali formed by mixing nitrous air with hepatic air. p. 384.
- America, South*, account of some native iron found there, p. 37, 183.
- Arabs* and other Mahometan nations reckon their time by the lunar year, p. 414.
- Atmosphere*, correspondence of the heat of the, with the height of the barometer, p. 48.
- Attraction* of life, p. 29. Its cause can never be investigated, p. 35. Study of the laws of the attraction of life, or what has been called muscular motion, of considerable importance, *ibid*.
- Austin, William, M. D.* on the formation of volatile alkali, and on the affinities of the phlogificated and light inflammable airs, p. 379.
- Authorities* cited in Mr. Marsden's account of the era of the Mahometans, p. 425—428.

B.

- Baillie, Matthew, M. D.* on the transposition of the Viscera, p. 350.
- Barbery*, experiment on the, p. 158.
- Barker, Thomas, Esq.* Abstract of a register of the barometer, thermometer, and rain at Lyndon in Rutland; with the rain at Selbourn and Fyfield in Hampshire, and at South Lambeth in Surrey. Also some account of the annual growth of trees, p. 408.
- Barometer*, state of it at London throughout the year 1787, p. 192—216. Abstract of a register of the barometer, thermometer, and rain at Lyndon in Rutland, in 1787, p. 408.
- Blagden, Charles, M. D.* on the cooling of water below its freezing point, p. 125. On the effect of various substances in lowering the point of congelation in water, p. 277.
- Borax*, the effect of, on the freezing point of water, p. 293.

C.

- Castus Tuna*, a kind of Indian fig, an irritable vegetable, p. 161.
- Cavallo Tiberius*, Observations on small quantities of electricity, p. 1. On the temperament of those musical instruments in which the tones, keys, or frets are fixed, p. 238. Description.

Description of a new electrical instrument, p. 255.

Cavendish, Henry, Esq. account of experiments made at Albany Fort, p. 166. On the conversion of a mixture of dephlogisticated and phlogisticated airs into nitrous acid, by the electric spark, p. 261.

Celis, Michael Rubin de, on native iron found in South America. p. 37, 183.

Centers, on moveable, p. 95.

Corollary. If the freezing point of the solution of a salt in water in any known proportion be given, its degree of solubility may in general be ascertained, merely by trying the greatest cold it will produce with snow, p. 296.

Corollaries, mathematical, p. 68, 70, 71, 75, 76, 81, 82, 85, 87, 90, 91, 92.

Croonian Lecture on muscular motion, p. 23.

Cuckoo, observations on the natural history of, p. 219. The cuckoo makes choice of the nests of a great variety of small birds, p. 221. A cuckoo chooses the nest of a hedge-sparrow to lay her egg in, p. 223. Two cuckoos and a hedge-sparrow hatched in the same nest, p. 229. Why, like other birds, the cuckoo does not build a nest, incubate its eggs, and rear its own young, considered, p. 229. Substances found in the stomach of a cuckoo, p. 235.

D.

Darwin, Erasmus, M. D. frigorific experiments. See *Air*.

Dionæa muscipula, an irritable vegetable, p. 161. Observation on, p. 163.

Discoveries, two, made by the moderns, in the structure and physiology of the body, viz. the circulation of the blood; and the lymphatics, and absorption of the lymph, p. 33.

Dover Castle, temperature of the water in the New Well there, p. 111.

Drosera, observation on, p. 163.

E.

Electrometer, first constructed by Mr. John Canton, p. 3. Conical corks in electrometers preferable to pith balls, p. 5. Mr. Bennet's electrometer, p. 406.

Electricity, natural or artificial, methods of manifesting the presence, and ascertaining the quality, of small quantities of, p. 1. Mr. Volta's condenser of electricity described, p. 7. Mr. Bennet's doubler of electricity described, p. 8. Not an instrument to be depended upon, p. 10, 14. Remarks on the subject of electricity in general, p. 17. Experiment shewing the great length of time that a quantity of electricity will remain upon a body, p. 19. The air, or in general any substance, is a more or less perfect conductor of electricity, according as the electricity which is to pass through it is more or less condensed, p. 20. Brief proposal of an explanation of the production

of electricity by friction, which is dependent upon the proposition, viz. that bodies are always in some degree electrified; and also upon the principle of the capacity of bodies for holding electric fluid being increased by the proximity of other bodies in certain circumstances, p. 21. Description of a new electrical instrument, p. 255. Description of an instrument which produces the two states of electricity without friction or communication with the earth, p. 403.

Experiment, proving that the nerves are not employed in the motions excited by stimuli, p. 27. Frigorific experiments on the mechanical expansion of air, explaining the cause of the great degree of cold on the summits of high mountains, the sudden condensation of aerial vapour, and of the perpetual mutability of atmospheric heat, p. 43. Experiments on local heat, p. 103. Experiments relating to the variation of local heat in the earth itself, p. 110. On the Barbary, p. 158. Experiments on the cooling of Water below its freezing points, p. 125. Experiment on very hard pump-water, which generally congealed one or two degrees sooner than unboiled distilled water, when placed in a frigorific mixture, p. 127. Various experiments on the cooling of water, p. 129, 130. Experiments and observations relating to the principle of acidity, the composition of water, and phlogiston, p. 147. Additional experiments on the same, p. 313. Experiment on the *Ruta chalepensis*, p. 162. Experiments on spirit of nitre, p. 167. Experiments on spirit of vitriol, p. 168. Experiments on a new electrical instrument, p. 258, 259. Experiment on the conversion of a mixture of dephlogisticated and phlogisticated airs into nitrous acid, by the electric spark, p. 261. Experiments on the effect of various substances in lowering the point of congelation in water, p. 277. Experiment, proving that nitrous air contains water, and that this water can contribute to the formation of fixed air, p. 318. Experiments on liquor produced by burning, in a close copper vessel, inflammable air, got from Iron by means of the steam of water, and dephlogisticated air, expelled by heat only, from Minium, p. 320. Experiments on liquor produced by burning, in the same manner, inflammable air, obtained from Iron by means of the steam of water, and dephlogisticated air, expelled by heat only, from Manganese, *ibid.* Experiments on these liquids, made from Minium and Manganese, united, p. 321. Experiments on liquor, produced by burning inflammable air, obtained as before, and dephlogisticated air from Mercurius precipit. ruber, in a close tinned iron vessel, *ibid.* Experiments on the formation of volatile alkali, and on the affinities of the phlogisticated and light inflammable airs, p. 379. Experiments on the production of artificial cold, p. 395.

F.

Fig, Indian, Cactus Tuna, a kind of, p. 161.

Fluid, electric, on the hypothesis of a single, it is said, that every substance in nature, when

when not electrified, contains its proper share of electric fluid, which is proportionate to its bulk, or to some other of its properties; and that this equal or proportionate distribution of electric fluid takes place with the greatest part of natural bodies. This, however, is not the case; for every substance is always electrified, p. 17.

Forces, centripetal, p. 67.

Fordyce, George, M. D. on muscular motion, p. 23.

Franklin, Dr. an observation of his concerning the electric fluid in glass, p. 121. Proved erroneous, p. 122.

G.

Georgian Planet. See *Planet*.

Glauber's Salt, its effect in lowering the freezing point of water, p. 290.

Gray, Edward Whitaker, M. D. on the manner in which glass is charged with the electric fluid, and discharged, p. 121.

H.

Heberden, William, M. D. a table of the mean heat of every month for ten years in London, from 1763 to 1772 inclusively, p. 66. See *Tables*.

Hedge-sparrow, the nest of a, chosen by a cuckoo to lay her egg in, p. 223. An instance of two cuckoos and a hedge-sparrow being hatched in the same nest, p. 229.

Herschel, William, LL.D. on the Georgian Planet and its satellites, p. 364.

Hunter, John, M. D. on the heat of wells and springs in the island of Jamaica, and on the temperature of the earth, p. 53. See *Observations*.

I.

Ice of solutions of nitre, very different from common ice, p. 283.

Jenner, Edward, Esq. on the natural history of the cuckoo, p. 219.

Instrument, description of a new electrical, capable of collecting together a diffused or little condensed quantity of electricity, p. 255. Description of an instrument which, by the turning of a winch, produces the two states of electricity without friction or communication with the earth, p. 403.

Instruments, musical, of the temperament of, p. 238. See *Musical Instruments*.

Iron, native, found in South-America, p. 37, 183.

K.

Keir, James, Esq. letter to Joseph Priestley, LL.D. p. 323. See *Letter*.

Kingston, in Jamaica, supplied with water from wells, p. 58. The temperature of the air at Kingston admits but of small variation, p. 59.

Letter

L.

- Letter* from Dr. Withering to Joseph Priestley, L L D. relating to the principle of acidity, the decomposition of water, and phlogiston, p. 319. Another from James Keir, Esq. to the same, on the same subject, p. 323. A letter from Richard Walker, to Henry Cavendish, Esq. on the production of artificial cold, p. 395. Extract from a second letter from Mr. Walker to Henry Cavendish Esq. on the same subject, p. 402.
- Life*, attraction of, p. 29. See Attraction of life.
- Lusus Naturæ*, singular, described, p. 352.

M.

- Mahometans*, on the era of the, p. 414. The vulgar or practical reckoning of the Mahometans, p. 418. The political or chronological mode of reckoning among them, *ibid.*
- Upon the political or chronological mode of computation on which the Turkish, Moorish, and every systematic Mahometan calendar are founded, p. 419.
- Manganesæ*. See *Experiments*.
- Marsden*, William, Esq. on the era of the Mahometans, called the hejerà, p. 414.
- Medicago falcata*, observations on, p. 162.
- Medicine*, in the hands of the Greek physicians from the time of Hippocrates, or rather from the destruction of the Egyptian monarchy by Cambyfes, down to the time of the Crusades, p. 33.
- Meteorological Journal* for the year 1787 kept at the apartments of the Royal Society, p. 191. See *Tables*. Explanation of the instruments with which the meteorological observations were made, p. 217.
- Mimosa sensitiva* and *pudica*, irritable vegetables, p. 161.
- Minium*. See *Experiments*.
- Mixture*, powerful frigorific, p. 395. Frigorific mixtures recommended, especially in hot climates, p. 398, 399.
- Morgan*, William. See *Survivorships*.
- Motions*, all original, are by their nature perfectly unintelligible as to their cause, p. 35.
- Mountains*, coldness of the summits of, p. 47.
- Muriatic acid*, its effect on the freezing point of water, p. 307.
- Muscular motion*, Croonian lecture on, p. 23.
- Musical Instruments*, of the temperament of those in which the tones, keys, or frets, are fixed, as in the harpichord, organ, guitar, &c. p. 238.

N.

- Native Iron*, account of a mass of, found in South-America, p. 37, 183.
- Nicholson*, William, on an instrument which, by the turning of a winch, produces the two states of electricity without friction or communication with the earth, p. 403.
- Nitre*, spirit of, subject to aqueous and spirituous congelation, p. 166. The effect of nitre in lowering the freezing point of water, p. 281. The ice of solutions of nitre very different from common ice, p. 283. Nitre and common salt, the effect of a compound solution of, in lowering the freezing point, p. 299.
- Nitrous acid*, its effect on the freezing point of water, p. 306.
- Numbers*, On some properties of the sum of the divisors of, p. 388.

O.

- Observations on motion in general*, p. 23. On the heat of wells and springs in the island of Jamaica, and on the temperature of the earth below the surface in different climates, p. 53. Observations made at Brighthelmstone, with a view to ascertain the temperature of the sea as a bath, p. 64. On the manner in which glass is charged with the electric fluid, and discharged, p. 121. Observations and experiments relating to the principle of acidity, the composition of water, and phlogiston, p. 147, 313. Observations on the irritability of vegetables, p. 158. Observations on the natural history of the cuckoo, p. 219.

P.

- Parietaria*, observations on the, p. 162.
- Parnassia*, observation on the, p. 163.
- Phlogiston*, experiments and observations on, p. 147, 313.
- Planet*, on the Georgian, and its satellites, p. 364. The light of the satellites of this planet is, on account of their great distance, uncommonly faint, p. 376. The second satellite brighter than the first, but the difference not considerable, *ibid.* The situations of the orbits of these satellites do not materially differ, p. 378. They will be eclipsed about the years 1799 and 1818, *ibid.* Probably not less than those of Jupiter, *ibid.*
- Platina*, dust of, mixed with gold, found in the kingdom of Santa Fe de Bogotà, p. 41, 188.
- Priestley*, Joseph, LL.D. on the principle of acidity, the composition of water, and phlogiston, p. 147, 313.

Problems,

Problems.

If the ages of two persons be given, to determine the probabilities of survivorship between them from any table of observations, p. 332.

If the ages of two persons be given, to determine, from any table of observations, the present value of the sum payable on the contingency of one life's surviving the other, p. 341.

The ages of two persons being given, to determine the value of the sum payable on the extinction of one life in particular, should that happen after the extinction of the other life, p. 347.

Propositions, mathematical, p. 67, 68, 70, 72, 74, 75, 77, 84, 87, 93, 95, 96, 98.

Pure Iron, a mass of, in the shape of a tree with its branches, existing in South-America, p. 41, 187.

Q.

Quartz, stones of, found in South-America, p. 41, 187.

R.

Rain at Lyndon in Rutland, at Selbourn and Fyfield in Hampshire, and at South Lambeth in Surrey, in 1787, p. 408.

Refrigeration, a remarkable one at Glasgow, which Mr. Wilson perceived to take place on the surface of the snow and hoar-frost, p. 103.

Rochelle Salt, its effect in lowering the freezing point of water, p. 289. Compound solution of Rochelle salt, common salt, and Sal Ammoniac, its effect in producing cold, p. 302.

Rue, common, observations on, p. 162, 163.

Ruta Chalepensis, experiment on, p. 162. Observation on, p. 163.

S.

Sal Ammoniac, its effect in lowering the freezing point of water, p. 286. *Sal catharticus amarus*, its effect in producing cold, p. 291.

Sal Ammoniac and *common Salt*, their effect in lowering the freezing point of water, p.

301.

Salt, common, its effect in lowering the freezing point of water, p. 279. *Salt of tartar*,

its

- its effect on the freezing point of water, p. 307. See *Glauber's Salt*, *Rochelle Salt*.
Santa Fe de Bogotà, dust of platina, mixed with gold, found at, p. 41. 188.
Saxifraga, observation on, p. 163.
Sbeernefs, temperature of the water in the King's Well there, p. 111.
Six, James, Esq. on local heat, p. 103.
Smith, Edward James, M. D. on the irritability of vegetables, p. 158.
Spark, electric, decomposes hepatic air, and leaves a quantity of inflammable air equal in bulk to the hepatic air very nearly, p. 385.
Springs, in Jamaica, p. 60.
Stomach of a cuckoo, substances found in, p. 235.
Survivorships, on the probabilities of, between two persons of any given ages, and the method of determining the values of reversions depending on those survivorships, p. 331.

T.

Tables.

- A table of the mean heat of every month for ten years in London from 1763 to 1772 inclusively, p. 66.
 Tables, containing observations on the wind and weather, p. 113—120.
 Table, containing the result of Mr. M^c Nab's experiments on the nitrous acid, p. 169.
 Meteorological Journal for the year 1787, kept at the apartments of the Royal Society, for January, p. 192, 193. February, p. 194, 195. March, p. 196, 197. April, p. 198, 199. May, p. 200, 201. June, p. 202, 203. July, p. 204, 205. August, p. 206, 207. September, p. 208, 209. October, p. 210, 211. November, p. 212, 213. December, p. 214, 215. Greatest, least, and mean heights of the thermometer without and within, and of the barometer; also observations of the quantities of rain, during the foregoing months, p. 216.
 Table of octaves and fifths, p. 246.
 Table, shewing the probabilities of survivorship between two persons of all ages, whose common difference of age is not less than ten years, p. 337.
 Table, shewing the value of 100*l.* computed at 3*l.* per cent. by the Northampton Table of observations payable on the death of the younger person, if the elder survives him, p. 344.
 Table, shewing the value of 100*l.* computed at 5*l.* per cent. by the Northampton

- Table, payable at the death of the younger person, if the elder survives him, p. 345.
- Table, shewing the value of 100*l.* payable on the death of the younger person, if the elder survives him, according to the Sweden Table of Observations; calculated at 4*l.* per cent. p. 345.
- Table, relating to the Georgian Planet, p. 371.
- Of the annual growth of Oak, Ash, and Elm trees, p. 410, 411.
- Table of the number of days in two successive Mahometan years (623, 624), p. 421.
- Table exhibiting the correspondence of the years of the Hejerà with those of the Christian era, p. 428—431.
- Table containing the comparison of the commencement of thirty successive Mahometan years, with the same number of Gregorian years according to the division of the cycle, and appearance of the new moon, p. 432.
- Tartar*, salt of, its effect on the freezing point of water, p. 307.
- Thermometer*, state of it at London throughout the year 1787, p. 192—216. See *Barometer*.
- Titlark*, frequently selected by the cuckoo to take charge of its young one, p. 223.
- Trees*, some account of the annual growth of, p. 408.

V.

- Vegetables*, irritability of, some observations on, p. 158.
- Viscera*, account of a remarkable transposition of the, p. 350.
- Vitriol, Green*, the effect of, in lowering the freezing point of water, p. 292.
- Vitriol, White*, its effect on the same, p. 293.
- Vitriolic acid*, its effect upon the freezing point of water, p. 305.

W.

- Walker*, Richard, on the production of artificial cold, p. 395.
- Waring*, Edward, M. D. on centripetal forces, p. 67. On some properties of the sum of the divisors of numbers, p. 388.
- Water*, boiled, freezes sooner than unboiled, p. 128. Oil spread over the surface of water prevents it from freezing, when other water, exposed in a similar manner, has had a crust of ice formed upon it, p. 136. Water in freezing undergoes a considerable expansion, p. 142. Observations and experiments on the composition of water, p. 147, 313. Water consists of two kinds of air, dephlogisticated and inflammable, p. 147. Experiments on the effect of various substances in lowering the point of congelation

congelation in water, p. 277. When pure water is cooled below its freezing point the least particle of ice or snow brought in contact with it causes an instant congelation, p. 283.

Water-wagtail's nest chosen by a cuckoo to lay her egg in, p. 223.

Wine, Spirit of, its effect on the freezing point of water, p. 309.

Withering, Dr. letter to Dr. Priestley, p. 319. See *Letter*.
