

2016 ICF DIRECTORY

REACHING NEW HEIGHTS

ICF construction underway at the Richmond Street Apartments student housing in Canada, encompassing 337,000 sq. ft. in 19 above-ground stories. Photo courtesy Nudura.

REPORT FROM THE CICFI

The Council of ICF Industries (CICFI) works with allied building industry associations – NRMCA, PCA, Concrete Canada, EPS-IA, NAHB and CHBA – to enhance the position of ICFs in the North American marketplace with the objectives of improving awareness and demand. A variety of presentations to construction professionals across North America are planned during 2016. Plus, work continues on the creation of an ICF industry approved training program for installers.

Marketing Initiatives

In order to grow the pool of ICF builders, the CICFI helped host the first annual ICF Summit at World of Concrete 2016 for over 120 attendees. We also, completed ICF presentations at the International Builders Show through the Building Systems Council of the NAHB. We are working closely with the NRMCA to support their 5 year/\$20 Million program and developing ICF mid-rise marketing and technical collateral materials for their use. We have submitted up-to-date information to RS Means with accurate cost comparisons for ICFs vs. other construction methods.

Technical Initiatives

The CICFI has engaged a consultant to assist a variety of ongoing issues relating to ASTM E2534 and the ACI and we will work to complete the changes needed to have ICF walls constructed with forms complying with E3624 recognized as an approved substrate for the attachment of gypsum wall board. With ACI, the priority is to publish the guide which has been written by Committee 560 Design and Construction with Insulating Concrete Forms. We participated in the industry-wide water intrusion testing program to determine the best practices for window installation and detailing in ICF walls. We also are working toward re-affirming the Canadian ICF standard and get it into the Canadian building code.

Founding Members: Logix, Nudura, Quad-Lock and Superform
Associate Members: BASF, Giraffe Bracing, Soprema, StyroChem

BUILDBLOCK

New BuildRadius ICF Wall & Pool Radius Forms

BuildBlock Building Systems has introduced BuildRadius, a family of radius forms for use in ICF walls and pool construction. These forms are designed to ease construction of energy-efficient ICF pools, southwest style homes, bay windows, circular staircases, and provide options when designing unique areas in ICF homes.

The forms create 2-foot, 4-foot, 8-foot, 12-foot, 16-foot and 20-foot arcs. Each of the BuildRadius block sizes interlocks into any BuildBlock 6-inch product line and uses the standard BuildBlock webs.

"This should deliver exceptional performance, simplified bracing and superb results. This is the fifth new product we have introduced this year with more to come this summer," says Mike Garrett, BuildBlock CEO.

ICF pools are growing in popularity because of increased energy efficiency which decreases costs for heating pools and extends the pool season. The benefits apply to both residential and commercial pools. Substantial heat is lost through the sides and floor of pools and ICFs deliver insulation performance. Additionally ICF pools can be built very quickly and efficiently reducing the number of materials, skilled labor and finishing products required.

BuildBlock continues to refine existing products and introduce new products into the market to build the most energy-efficient, cost-effective, and disaster resistant homes, buildings, and structures. For information visit: buildblock.com or 866-222-2575

Learn from our experience. The one-day training seminars provide builders and installers with basic NUDURA ICF installation skills. NUDURA is committed to providing the highest level of training, ensuring you get the knowledge you need to get the job done with efficiency and confidence.

The NUDURA Installation Course is led by a Certified NUDURA Installation Specialist and experienced ICF installer. Our trainers break down the ICF installation process, work through common building scenarios that arise in the field, and explain how NUDURA's unique line of accessory products help speed up the ICF installation process.

Visit nudura.com to learn more and register for a course near you.

FOX BLOCKS

Florida State Approved Fox Buck

The Fox Buck is a certified, fully integrated, continuous insulation window and door buck for commercial and residential ICF wall openings. Fox Buck completed 3rd party testing and obtained State of Florida product approval (FL 17775) for all of Florida, including the high wind areas Miami-Dade counties. To obtain certification and Florida code approval, the Fox Buck met and passed several tests related to wind and impact resistance, moisture and air infiltration, and fire related tests. The Fox Buck can be used in place of pressure treated wood bucks that tend to expand, contract, warp and move within the high moisture climates. Visit foxblocks.com.
